Q U E R I E S

ADDRESSED BY

THE CENTRAL BOARD OF COMMISSIONERS TO MANUFACTURERS.

---

QUERY 1.—Name of the parish or township and county in which the manufactory, mill, or workshop, or place of work, is situated?

A. 1.

Q. 2.—Names of the chief descriptions of work carried on thereat?

QUERIES.

Q. 3.—If the works have been erected at different times, specify the date of the erection of each material portion of the building, and the time at which it was first employed for its present purpose?

Q. 4.—Describe the power employed, whether steam or water, or both; and if the latter, whether regular or irregular, and what are the degrees of irregularity and the extent of the power?

Q. 5.—Is there any distinct or specific provision for the ventilation of your factory; if there is any such provision, describe its nature and effects?

Q. 6.—State whether the provision depends on the opening of windows, or other casual means?

Q. 7.—Is the ventilation regulated by the foreman, or overlooker or manufacturer, or is it controlled at the discretion of all or of any of the persons employed?

Q. 8.—Are any of the dangerous parts of the machinery fenced off, or, if not, why not?

Q. 9.—Have you any arrangements in your manufactory for the health or convenience of the workpeople, such as arrangements to enable them to change their clothes on entering the manufactory, or for washing or putting on additional clothing on leaving the manufactory, or any arrangements to ensure the personal cleanliness of those employed thereat; if you have, specify those arrangements, and the date of their introduction.

Q. 10.—What is the lowest age at which you employ children; have any of them been previously employed at any other trades, and if so, state at what trades?

Q. 11.—Does the nature of your work require the employment of children under twelve years of age, and why?

Q. 12.—Have the recent alterations in machinery rendered necessary the employment of a greater or less proportion of children under twelve years of age?

Q. 13.—Do you employ apprentices?

Q. 14.—If they have been apprenticed from parishes, state the names of the parishes from whence they have been received?

Q. 15.—Specify whether any of the children whom you employ, lodge, and maintain, are orphans; or if not, whether their parents or their natural or legal guardians visit them, and how often?

Q. 16.—Have such children any actual superintendence besides that of their master?

Q. 17.—What is the usual number of hours each day during which the persons of twenty-one years of age and upwards in your service are employed?

Q. 18.—What is the usual number of hours during which the persons under twenty-one years of age are employed, specifying the ages at which any difference may be made?

Q. 19.—What is the greatest number of hours that your works, or any of them, have been kept on in any one day during the last year?

(APP.—A. 1.)

A

Q. 20.

—  
 QUERIES.  
 —

Q. 20.—What is the total number of days that your manufacture was carried on during the last year?

Q. 21.—What is the total number of hours that your works were carried on during the last year?

Q. 22.—If different parts of your works have been carried on at different times during the same day, specify the times during which each department has been carried on?

Q. 23.—What is the average of the hours of work of each day of the week during the last year?

Q. 24.—What is the greatest number of hours that the same set of children in your employment have been kept to work during any one day of the last year?

Q. 25.—At what times and under what circumstances were the usual or regular hours of work exceeded?

Q. 26.—State whether you consider this or any excess beyond the regular hours of work avoidable; and if not avoidable, state why not?

Q. 27.—Have you at any former time usually worked your manufactory for a greater number of hours daily than you do at present?

Q. 28.—If so, do you now find that the cost of producing a given quantity is enhanced by the reduction in the hours of working?

Q. 29.—What do you believe to be the inducement to the manufacturer to have his work protracted, whether by children or by adults, to extra hours, or through the nights, without any intermediate change of hands, in contravention of any existing or general regulation or understanding of the trade?

Q. 30.—Do you find any increase in the cost of production from the limitation of hours of work; and if so, in what branches, to what extent, and in what proportion if any, to the diminution of hours, does that increased cost apply?

Q. 31.—What is the objection, if any, where extra hours are required, to have relays or fresh sets of children, or persons under twenty-one years, by whom those sets which have worked within the ordinary hours may be relieved?

Q. 32.—Has a system of relays or change of hands in the employment of children, when extra hours are required, been tried; and if so, how has it answered; if it has not been tried, why not?

Q. 33.—Have you employed a night set of hands as well as a day set; if so, explain how you arrange their work?

Q. 34.—State the reasons why, if not obliged by the nature of your work to work more than one set of hands, you conceive it to be your interest so to do?

Q. 35.—Does the same set of hands work uniformly by night, or do they change periodically with the day set?

Q. 36.—Specify what would be the effects produced on your manufacture by a prohibition of night-work?

Q. 37.—State your opinion as to the probable effects of a still further reduction of the working hours, and specify the grounds of such opinion?

Q. 38.—State what is the usual temperature in the different parts of your manufactory while at work, and what is the lowest temperature at which you consider the different processes of your works may be conducted?

Q. 39.—What is the highest degree of heat required for any portion of your manufacture?

Q. 40.—What number of hands are usually employed in that process?

Q. 41.—How many times have any of your works been worked at night during the last year?

Q. 42.—How many children have been employed at night-work? and

Q. 43.—During how many hours each night?

Q. 44.—How many children have been employed at once in night-work? and

Q. 45.—During what hours of the night?

Q. 46.—Are any processes of your manufactures indispensably continuous during twenty-four hours, and what are they?

Q. 47.—What is the maximum of the time during which it is indispensable for such processes to be continued?

Q. 48.—What are the ages and descriptions of persons usually employed in such processes?

Q. 49.

Q. 49.—State the reasons why you allege the continuance of the work to be indispensable in such processes?

Q. 50.—How are the works lighted at night?

Q. 51.—What provision is there for ventilation at night?

Q. 52.—What are the effects of night-work on the habits of the persons employed?

Q. 53.—State the times allowed for meals to each class of persons employed at your works?

Q. 54.—Do all or how many of the persons employed at your works leave them at meal-times?

Q. 55.—If they do not, state the reasons, and whether this practice is adopted for the convenience of the manufactory or the convenience of the workpeople?

Q. 56.—What would be the effect of any alteration by which the meals of the persons employed could be taken out of the manufactory?

Q. 57.—What are the means taken to enforce obedience on the part of the children employed in your works?

Q. 58.—Are corporal punishments inflicted on any persons employed in your works?

Q. 59.—By whom; by overlookers, by foremen, by parents, or by any others?

Q. 60.—Have corporal punishments been inflicted with your knowledge? or

Q. 61.—With your prior or subsequent sanction?

Q. 62.—Have you forbidden corporal punishments, or taken any steps for their prevention when you were informed of any instance of their infliction?

Q. 63.—Have any instructions been given by you to your foreman or your overlooker with relation to the punishment of children; state those instructions; if they are in writing, append a copy to these returns?

Q. 64.—Have complaints been made or any proceedings before magistrates been taken against you, or your overlooker or foreman, on the subject of any punishment alleged to have been inflicted in your establishment within the last three years; if so, state the number of cases in which this has occurred?

Q. 65.—Do the workpeople live in the houses of their employers; and if so, is any control or superintendence exercised for their moral and social improvement, or are any arrangements made to enforce domestic cleanliness; if so, specify their nature?

Q. 66.—What is the difference in skill and general character of those employed in the works who have been employed from infancy, as compared with those who have been taken into employment at later periods; refer to the names of those persons on the annexed lists whom you can adduce as instances?

Q. 67.—During the last ten years has the health of the people of the factory improved or deteriorated; state at length the evidence adduced to establish the fact of the improvement or the deterioration; state the cause to which the change is ascribed?

Q. 68.—Do you make any selection of persons or change of the employment of the same persons, to prevent or diminish the injurious effects of particular processes?

Q. 69.—State whether your mill is subject to the provisions of the present Act?

Q. 70.—Have you ever been informed against for infringing, and how often?

Q. 71.—Have you been convicted; did you pay the penalty; what was the amount of the penalty?

Q. 72.—State any circumstances connected with these convictions?

Q. 73. Do the mills in your neighbourhood strictly conform to the provisions of the Act; if not, what steps have been taken to enforce their obedience?

Q. 74.—Have the proprietors been taken before a magistrate?

Q. 75.—Have they been fined?

Q. 76.—Was evidence readily obtained; or, if not, why not?

Q. 77.—Have you reason to believe that the workpeople are afraid of displeasing their masters by giving evidence?

Q. 78.—Can you suggest any other scale of penalties, or any other means which would secure obedience to the present law, or any other legislative provisions for regulating the hours of labour and the general treatment of children employed in such works as yours?

Q. 79.—Have you any further observations to make with reference to the subject of the present inquiry?

Aberdeenshire.

No. 1.

T. Bannerman.

## ANSWERS.

## WRITTEN ANSWERS received to the QUERIES

## ABERDEENSHIRE.

ANSWERS of THOMAS BANNERMAN, and Co. North Parish of Saint Nicholas.

A. 1.—Bannermill is in the north parish of Saint Nicholas, town of Aberdeen, county of Aberdeen.

A. 2.—Cotton spinning only, No. 40, mule twist.

A. 3.—One thousand eight hundred and twenty-six.

A. 4.—Steam-engine, seventy-five horse-power.

A. 5.—The site of the mill spacious and open in every direction. The apartments large and lofty. Windows large, and all made to open. Staircase spacious, and the doors opening upon it, frequently opened. A draft from the rooms through the necessities into the great chimney. The rooms are never kept shut for heat's sake, but free use is made of steam to warm the air when required.

A. 6.—In the first operations there is applied to the cotton, in passing through the machines, a great draft of air, which frees the cotton of dust and impurities, and keeps the rooms clear of these; thus rendering the whole of the operations of the manufacture much more cleanly and healthy than they would otherwise be.

A. 7.—The windows are opened at the direction of the workpeople.

A. 8.—Yes, all, where they can be.

A. 9.—The people have working dresses which they are required to wash once a week. They leave their others when they go to work, in rooms appropriated to the purpose, where, when infectious diseases prevail, the clothes are subjected to a disinfecting fumigation. All the apartments are kept clean with soap and water by the "spare hands" (see No. 68). There are fire-cocks attached to a powerful force-pump in every floor of the mill, and every where abundant supplies of pure water at command. The stairs and staircase are of stone, and very spacious, that escape in case of fire may be sure and ready. Two necessities in every room of the mill. Personal cleanliness, health, and comfort depend very much upon the state of affairs at home, and upon the character of parents (see No. 65.) People who have looked ill when they entered the work we have remarked have improved in their appearance.

A. 10.—Nine. Parents often press for employment to younger ones. Children are employed herein manufactures of all kinds.

A. 11.—We think it does. At nine they have only their time occupied as it were, and are at easy employment. They are in the way of acquiring the necessary skill with their years. At twelve they have become able to earn more wages, and are gradually acquiring habits which render exertions which are apparently wonderful comparatively easy.

A. 12.—Not with us, but such is the case generally speaking.

A. 13.—No.

A. 17 & 18.—Twelve hours for all ages; but the reelers who do not require the prime mover to be in motion for their work have not worked on an average more than nine hours to nine and a half per day, because we have more of them than are required in summer; in winter they can do less owing to dull light, but we keep the full number at work all the year round, and they work on an average the shorter time.

A. 19.—Thirteen hours some days, but only to make up for short work of former days. Rather than light up for only half an hour for a few days at the beginning or end of winter, we lose the hour a day one week and make it up the next.

A. 20.—Three hundred and eight days. We never stop in dull times, nor work extra hours in brisk times.

A. 21, 22, 23, & 24.—Three thousand seven hundred hours; average per working day  $12\frac{4}{5}$  hours (See A. 27.); but this year's average will be only about eleven hours and a half.

A. 25.—When shifting or repairing machinery, but that in cases requiring perhaps only or five persons.

A. 26.—Certainly avoidable; but it might be sometimes at a great loss to the employer and the employed, as in the case of many machines and people being laid idle for want of a little extra work of one machine upon which the others were depending. A case of this kind might be provided for by some discretionary power in the magistrate, and the fine could perhaps be borne for the advantage to be gained.

A. 27.—Until the 6th of December last we worked twelve hours and a half for five days a week, and ten hours and a quarter on Saturdays, being two hours and a half a week more than at present. We made the change having hopes of being bettered by it.

A. 28.—We do produce as cheaply as before, without any reduction of wages; more so indeed, for in winter we save lighting, and at all times power, tear and wear, and other expences. The quantity of perfect work turned off depends very much upon the vigour and

and dexterity of the people, and upon exactness in each process. Without our speeding the machinery, the hands now earn as much wages as before, and do the same work in the less time, which they themselves never expected.

A. 29.—If a manufactory has but half the required proportion of machinery for one department which it ought to have as regards the others, this deficiency of machinery may be made up by working that half at night. Thus one man's smaller capital is made (in an unfair way in our opinion) to do the work of his neighbour's greater one. Also, by labour being compelled or forced for long hours, the employer of such labour produces of course cheaper than his competitor. Qualify this observation however by reference to A. 28 & 36.

A. 31.—In the case of a few hands only required for an extra hour at a time, those usually employed think it no hardship to be so employed. In our opinion the interference of two sets of hands with the same machines would be inadmissible. When extra hours work becomes a practice, and is required for any length of time, we know no objection to extra hands. We say required, however, and we doubt not that permission for such extra work would be a cloak for evasions of the law. (See A. 78, 79.)

A. 32.—Have no experience in the matter.

A. 33, 34, & 35.—Have never worked at night.

A. 36.—A total prohibition of night-work in cotton-spinning and in every other manufacture, where it is possible, would, in our opinion, be for the interest of the respective trades, and good in a moral point of view. Those manufacturers who practise night-work do injury to others, and gain only for themselves a little temporary relief at the expense of a public scandal. Indeed it has been remarked, that no establishment has prospered that has persevered in night-work.

A. 37.—In an airy situation and well-regulated establishment the work of adults and the occupation of children (for it is little more 'till they are about twelve years of age) for twelve hours a day, and nine on Saturday, while they are thus earning good wages, are seen to be in favour of their health and happiness. It is questionable if much leisure would improve morals. A great reduction of the working hours would greatly reduce wages, would lead to evasions of the law by both master and servant, adults would be employed longer than at present, with double relays (but only nominally so perhaps) of younger hands, and encouragement would be given to unlawful practices of various kinds. But the reduction of half an hour a day (if it appear the people even wish that) would not, in our opinion, affect trade materially, and, with no change in wages, would be a great boon to the workpeople, but accompanied with the provisions under A. 78, 79. No attempt need be made to remove the objections there are to having different hours for different ages.

A. 38, 39 & 40.—65° to 70° for all, always, and the same for the whole work.

A. 53.—Breakfast at nine, dine at two; for each three quarters of an hour for the whole of the people. Leave off at seven P. M. five days, and four P. M. Saturdays. They probably take refreshment then.

A. 54.—All are made to quit the manufactory at meal-times. There is an apartment in a detached building where those who like have their meals brought to them.

A. 55 & 56.—We think that quitting the mill for a time is of itself for the benefit of the people; the air too in it becomes refreshed in the meantime. If food were brought in, offensive effluvia would be given out, and the remains of the victuals would generate filth and vermin.

A. 57.—Threats of dismissal and forfeits.

A. 58, 59, 60, 61, 62, & 63.—Nothing of the sort is permitted nor takes place, nor is there any motive for such a practice with us. The people are all paid by us. When the wages of an overlooker depends upon the quantity of work he can cause to be done, he has a motive to force the labour of those under him.

A. 64.—No.

A. 65.—Do not live in houses of ours. There is a sick fund to which all the hands contribute, managed by themselves. The managers visit the sick. Each overlooker engages the persons to be under him. Thus there is full means of showing how much personal cleanliness and general character is regarded. A small library is in the work, formed lately by the contributions of the workpeople who choose to subscribe; managed also by themselves. They continue adding to it. A desire for instruction and improvement is thus communicated and kept alive among them, better than by any direct superintendence on our part. (See A. 9.)

A. 66.—The general character is better than it was. The bad have been weeded out. Few other changes take place. The great majority of the people have been in the work since it was started, and almost all the young spinners have been with us from infancy, and are more dexterous than the older.

A. 67.—Our work has been in operation six years only. There is no change with us. The workpeople appear very healthy, as seen by the books of their sick fund.

A. 68.—There is nothing of this sort needed. But we have always about thirty spare hands doing various pieces of light work, who take the place of others absent by leave or otherwise. They are chiefly occupied cleaning and washing the mill. Leave of absence is readily granted when asked.

A. 69.—Yes; so are all cotton works, but none else.

A. 70, 71, & 72.—No.

(APP.—A. 1.)

A 3

A. 77.

Aberdeenshire.

T. Bannerman.

Aberdeenshire.

T. Bannerman.

A. 77.—No doubt; but the fact of no informations being lodged in innumerable cases where the law is infringed proves that the hours which any cotton-work works at present are not so great a hardship as many people quite ignorant upon the subject believe them to be.

A. 78.—None but cotton-works being at present regulated by law, silk, linen, and woollen articles compete with those of cotton unfairly. Therefore,

1. Let manufactories of all kinds be put upon the same footing.
2. Stop night-work entirely both in steam and water-mills. The case of water-power defective at times differs little or nothing from the case of deficient machinery or capital See A. 29. 36.
3. For all ages let there be but twelve or eleven and a half working hours, five days a week, nine on Saturdays, between five A. M. and eight P. M., allowing the custom of the country and convenience of the manufacturers to settle meal-hours, for which should however be allowed one hour and a half a day at least; on Saturday three quarters only might be allowed. But,
4. Let the prohibition as to time of working be put upon the steam-engine or water-wheel strictly, and no working of the power be allowed beyond these hours on any pretence whatever; sixty-nine hours a week, or if thought advisable, sixty-seven or sixty-six.
5. Let the working and meal-hours of each mill when settled by the masters be painted in large characters and exposed on the outer gate of the manufactory, and the nearest great public thoroughfare, so that by the coming and going of the people infringements of the law may be notorious, letting it be explained by the same means that the prohibition applies to the steam-engine and water-wheel. This does not prevent the employment of hands in cleaning machinery, &c., which at times is absolutely necessary. But if the working of the power be shortened thus, the practice cannot be carried to excess.
6. Let there be no making up of lost time.

N. B. It is worthy of especial remark, that our reelers, who have worked on an average only nine hours per day, do not take advantage of this leisure to attend the school referred to by the Rev. A. Gordon in his evidence before the Factory Committee, although, as will be seen by the list, they require instruction as much at least as the other hands.

As many of the reelers as of the others have been ailing and upon the sick fund.

T. BANNERMAN, for T. B. & Co.

#### ANSWERS of ALEXANDER HADDEN and SONS, South Parish.

No. 2.

Alexander Hadden.

A. 1.—Alexander Hadden and Sons, worsted mill, situated in South Parish, City of Aberdeen.

A. 2.—Worsted, knit hosiery, and carpeting.

A. 3.—North end of mill erected in 1804, south end of mill erected in 1808, fulling-mill-house erected in 1819, machinery in a brick mill erected in 1813, machinery in old dwelling house erected about a century ago.

A. 4.—Three steam-engines, of which two are forty-five horse power each, and one of twenty horse power.

A. 5.—Ventilated by cross windows drawing down to admit free circulation of air.

A. 7.—Solely under the control of the overlooker in each room.

A. 8.—Those parts considered dangerous are fenced off.

A. 9.—The servants are in the practice of changing clothes at entering and leaving the manufactory. Water-closets were placed in each room at the erection of the works; and water for drinking and washing introduced into every room from the public waterworks erected three years ago.

A. 10.—Ten years. No previous employment to our knowledge.

A. 11, 12, & 13.—No.

A. 15.—All orphans employed at this factory are lodged and maintained by their natural guardians.

A. 16.—Solely under the superintendence of their parents, or natural guardians.

A. 17.—Twelve hours each day Saturday excepted, being eleven hours.

A. 18.—Same hours as stated above.

A. 19.—Thirteen hours, the extra hour to make up lost time in repairs or holidays, when no deduction of wages was made.

A. 20.—Two hundred and ninety days, at work; eighteen days lost at the erection of new steam-engine, during which time the servants were paid wages; one holiday, New Year's Day; two holidays, attending reform processions; two holidays, attending church.

A. 21.—Three thousand four hundred and eighty-eight hours.

A. 22.—No difference.

A. 23.—Eleven hours and three quarters.

A. 24.—Twelve hours, unless sixty days kept, thirteen hours to make up lost time.

A. 25.—To make up time for holidays and fast days as described in query 20.

A. 26.

A. 26.—Excess beyond hours at times unavoidable, as described in query 24, also for repairs.

A. 27.—Never.

A. 28.—No experience.

A. 29.—To compete with our opponents on the continent.

A. 30.—As the hours of labour are contracted so will the cost of production be nearly doubly enhanced.

A. 31.—A greater number of hands, and wages too low to maintain them.

A. 32.—Never tried by us.

A. 33.—About ten years ago we worked for three months with a night-set of hands, but not finding it to answer our purpose we abandoned it, and never since resumed it.

A. 34.—Working only twelve hours in a day we do not find it necessary to employ more than one set of hands.

A. 35.—Does not apply to us as we do not require night-work.

A. 36.—We do not work over night.

A. 37.—A reduction of working hours would occasion a corresponding reduction of wages, but that would be a small recompense to the manufacturer for the diminution of production after having expended a large sum on a plant of buildings and machinery; it would be giving a decided advantage to the manufacturer in foreign countries.

A. 38.—Usual temperature 60° to 65°; the lowest 55° to 60°.

A. 39.—Highest temperature 68° in any of the rooms.

A. 40.—Eight in one room.

A. 41.—Never.

A. 46.—None.

A. 53.—Breakfast and dinner forty minutes to each meal.

A. 54.—All are obliged to leave the works.

A. 55.—For their own convenience.

A. 56.—All leave the factory.

A. 57.—Remonstrance, with threats of dismissal, and when obstinate a fine imposed.

A. 58.—None permitted.

A. 62.—Uniformly forbidden it; only one instance of a foreman being discharged by us for beating a girl contrary to our instructions.

A. 63.—Regularly instructed not to use severity to the children.

A. 65.—They do not live in the houses of their employers, consequently on the control of their parents or guardians.

A. 66.—We generally remark that children entering a factory at or under twelve years of age become more expert than those at maturer age, and a master would readily discover the difference, seeing them at work.

A. 67.—We consider 1832 to have been the most unhealthy year of the last ten years, owing to cholera and typhus fever raging amongst the poorer classes to a greater extent than ever remembered; but in general our servants have been very healthy, which may be ascribed to the clean state of the mill, great height of floors, good ventilation, moderate heat, and little physical labour required.

A. 68.—We do not.

A. 69.—Worsted mills are not.

A. 70, 71, & 72.—Not applicable to our works—worsted mill.

A. 73, 74, 75, & 76.—No knowledge.

A. 77.—Certainly not, in our works.

A. 78.—We cannot suggest better regulations than we pursue in our mill to secure the general good treatment of the children where we have none under apprenticeship or engagement whatever; every person, young and old, has permission to leave the service upon eight days notice. All wages paid in cash weekly to each individual by the paymaster, and regular notices of the amount posted on the door of each room in the mill, that they may be aware what they have to receive.

A. 79.—In our manufactory we employ a great number of servants, of whom more than one half are out-door servants, and dependent on employment from the produce of the mill; we besides give partial employment to upwards of twenty thousand knitters in the county of Aberdeen.

A reduction of mill hours would necessarily oblige us to discharge a great many of those servants, and give much less employment to the knitters, besides a reduction of wages to all hands employed by us.

We have a large carpet manufactory giving employment to nearly three hundred people; any increase in price of production would stop the whole of this work, as the Americans are now establishing large manufactories of this sort, and drawing from this country not only the yarns but the raw wool in place of the manufactured goods as formerly. Our servants in that department are daily emigrating to that country.

13th May 1833.

ALEX. HADDEN & SONS.

Aberdeenshire.

Alexander Hadden.

Aberdeenshire.

ANSWERS of PATRICK PIRIE and Co. Aberdeen.

No. 3.

Patrick Pirie.

A. 1.—In Aberdeen and adjoining parish of Old Machar, and in the county of Aberdeen.

A. 2.—Manufacturing linen threads and linen cloth, spinning flax and tow yarn, and bleaching.

A. 3.—Part of the works about the year 1765, and part about 1790. Spinning-mill in Aberdeen, as also our bleaching-works, in 1816 and 1818; spinning-mill in Old Machar in 1822; and additions have been frequently made since these dates.

A. 4.—Steam-power for mills in Aberdeen, about sixty horse power. Water-power for bleaching-works and spinning-mill in the parish of Old Machar, about forty-five horse power. The water-power is irregular, in consequence of low water in the river Don during summer, as also the occasional frosts and floods.

A. 5.—Nothing beyond the construction of the windows, which are made with a sliding part for the purpose of ventilation.

A. 6.—Yes.

A. 7.—Partly by the overlooker, and partly at the discretion of the servants.

A. 8.—All parts considered dangerous are fenced off.

A. 9.—They are allowed some time for washing, dressing, &amp;c. previous to the bell being rung for their dismissal, and water is introduced into each floor.

A. 10.—About ten years of age.

A. 11.—They are not absolutely necessary.

A. 12.—Rather a greater proportion, but no material alteration has taken place lately.

A. 13.—Only a few lads from twelve to eighteen years of age to heckling, thread lapping, and as mechanics.

A. 14.—We have none from parishes.

A. 15.—None are lodged and maintained.

A. 17.—Ten hours and a half to thirteen hours and a quarter.

A. 19.—Fifteen hours and a half for one day only during the whole of last year.

A. 20.—Every day, with the exception of Sundays, and four or five holidays and fast days.

A. 21.—Three thousand two hundred and seventy-six to four thousand and seventeen hours.

A. 22.—Ten to eleven hours where hand labour is carried on, and ten to fourteen hours where machinery is employed.

A. 23.—Ten hours and a half where hand labour, and twelve hours and fifty-two minutes and a half where machinery is used.

A. 24.—Refer to query 19.

A. 25.—In the case of stoppage from accidents, &amp;c., and at the servants desire to make up time, in order to allow them to attend and see processions, &amp;c.

A. 26.—Not avoidable, without very considerable loss, occasionally.

A. 27.—About half an hour more in some departments.

A. 28.—Yes.

A. 29.—There is no law relating to linen manufactures, nor any general understanding of the trade here relative to hours.

A. 30.—I have not had sufficient experience to answer this question minutely.

A. 32.—Never by us, not having occasion to work extra hours to any extent.

A. 33.—Never.

A. 36.—To that part of our manufacture driven by steam-power it would be attended with no bad result; but where we employ water-power the effects might be highly injurious both to us and to our servants.

A. 37.—I do not consider myself competent to answer this question.

A. 38.—Our manufacture requires no heat beyond what is necessary for the comfort of the servants.

A. 39.—100° and 120° in our drying stoves.

A. 40.—From four to fourteen occasionally.

A. 41.—Not above thirty to forty nights in all.

A. 42.—From forty to fifty.

A. 43.—Nine hours and a half.

A. 44.—Not more than from twenty to thirty.

A. 45.—From eight P. M. to six A. M., with a stoppage of half an hour.

A. 46, 47, 48, &amp; 49.—No.

A. 50.—By coal gas.

A. 51.—The same as by day.

A. 52.—Have not had experience for a sufficient length of time to ascertain this.

A. 53.—In mill in Aberdeen forty minutes to breakfast and forty minutes to dinner. In mill in Old Machar, spinners, &amp;c. half an hour to dinner, and carders twenty minutes to breakfast. All other servants have generally one hour each to breakfast and dinner.

A. 54.—No.

A. 55.—Many of the servants at the mill in the country have a considerable distance to come, and there is in consequence a large and excellent kitchen attached to it, with boiler and hot table. There are women employed to cook the servants meals, who can thus have them

them hot, if they prefer it. There is also accommodation for the servants eating their meals in the kitchen if they wish it.

A. 57.—Fines and dismissal.

A. 58 & 59.—None are authorized.

A. 60.—Not prior to their being inflicted, and any that have come to my knowledge were very slight.

A. 61.—No.

A. 62.—Yes; I have always strictly forbidden all corporal punishments, and found fault with any overseer who was reported to me to have inflicted any.

A. 63.—There are strict general orders given that no corporal punishments shall be had recourse to.

A. 64.—No.

A. 65.—Part of our servants rent houses in the country which are the property of their employers, for the accommodation of their respective families.

A. 66.—Those accustomed to the work from infancy are almost invariably the more expert.

A. 67.—I am not aware of any change.

A. 68.—No part of our manufacture is so injurious as to require a change of servants.

A. 69, 70, 71, & 72.—No.

A. 73, 74, 75, 76, & 77.—I do not know.

A. 78.—No.

A. 79.—None.

PATRICK PIRIE jun.

Aberdeenshire.

Patrick Pirie.

ANSWERS of JOSEPH HOGARTH, Manager and Partner of FORBES, LOW, and Co.,  
Old Machar.

No. 4.

Joseph Hogarth.

A. 1.—Forbes, Low, and Company's cotton-mill, situated at Poynerhook, in the parish of Old Machar, county of Aberdeen, and within the royalty of the city of Aberdeen.

A. 2.—Cotton-spinning.

A. 3.—Built at one time, thirty years ago, for its present purpose.

A. 4.—Steam-engines.

A. 5.—By the windows.

A. 6.—By opening the windows.

A. 7.—Regulated by the foreman.

A. 8.—All.

A. 9.—When the people come to their work they change their wearing for their working dress, and reverse it when leaving the work; we have no other arrangement.

A. 10.—We employ none under ten years of age.

A. 11.—It does for piecers, from a difficulty of procuring girls much above that age to fill that situation.

A. 12.—We don't think it has.

A. 13.—No.

A. 15.—We neither lodge or maintain any.

A. 17 & 18.—Twelve hours and one half for five days, and eleven and one half for the other.

A. 19.—Twelve hours and one half.

A. 20.—All the year except Sundays.

A. 22.—There is no difference in any part of the work.

A. 23.—Twelve hours and one third.

A. 24.—We only employ one set of children, who work twelve hours and one half.

A. 25.—They have never been exceeded.

A. 27.—Never.

A. 28.—Though we have never made any alteration, it is evident, if we work shorter hours the cost must be enhanced in proportion.

A. 29.—The only inducement is to produce a greater quantity, whereby he reduces his general charges.

A. 30.—It must apply to every department of the work if the hours are diminished.

A. 31.—We have never worked extra hours; but we think there would be great difficulty in procuring two sets of workers.

A. 33.—We never had any night-work.

A. 37.—In the first place, if a further reduction of the working hours was made, the quantity produced would be lessened in proportion, so that we could not compete with our foreign opponents, and secondly, the workers wages would be so reduced that they could not exist on them.

A. 38.—The usual temperature is about seventy degrees for all the work.

A. 40.—We have no process that requires more heat.

A. 41.—We have no night-work.

A. 50.—The few hours we light in winter is by gas.

A. 51.—By the windows, same as by day.

A. 52.—We have stated we have no night-work.

(APP.—A. 1.)

B

A. 53.

Aberdeenshire.

Joseph Hogarth.

- A. 53.—Half an hour for breakfast, and one hour for dinner.  
 A. 54.—Those employed at frames driven by power do not go home to breakfast, but the others do, but they nearly all go home to dinner.  
 A. 55.—It is both for the convenience of the work and workers.  
 A. 56.—It would affect the machinery and work considerably.  
 A. 57.—By slight fines, and when that has not the effect, putting them from the work.  
 A. 58.—None allowed.  
 A. 60.—Never.  
 A. 62.—We have.  
 A. 63.—There has been verbal instructions given.  
 A. 64.—Never.  
 A. 65.—The workpeople do not live with their employers.  
 A. 66.—We consider those brought up from their youth much better than those taken in at an advanced period. The annexed list will point out those who have been longest with us, and to whom we allude.  
 A. 67.—The health of our workers has been very satisfactory. We don't think there has been any change for the last ten years. We may mention that when the cholera morbus prevailed in this city, none of our workers were affected by it.  
 A. 68.—We make no change.  
 A. 69.—We have stated that we work twelve hours and one half and eleven hours and one half.  
 A. 70 & 71.—Never.  
 A. 73.—We do not know what other mills do.  
 A. 74 & 75.—We don't know.  
 A. 76.—We never heard of evidence being required.  
 A. 77.—We have no reason to believe any thing of the kind.  
 A. 78.—We conceive it is the interest of masters to use their workers in such a way that no penalties are necessary. We can suggest nothing on this head.  
 A. 79.—None.

10th May 1833.

JOSEPH HOGARTH.

No. 5.

T. L. Hadden.

ANSWERS of THOMAS LEYS HADDEN, Partner of LEYS, MASSON, and Co.,  
 Grandholm Works, Old Machar.

- A. 1.—Parish of Old Machar, Aberdeenshire.  
 A. 2.—Flax and tow spinning, also weaving of linen by power.  
 A. 3.—Original mill built in 1793 and 1794; fire-proof addition in 1812; fire-proof building for hackling by power in 1822 and 1823; fire-proof mill for weaving and tow carding in 1826; addition to ditto in 1830.  
 A. 4.—Water and steam; two water-wheels, together equal to one hundred and fifty horses; and two-steam engines, one of sixty and one of fifty. The supply of water is so irregular that during the dry season the fifty-horse engine united with one of the water-wheels, and used as an auxiliary, does not supply the deficiency of water-power.  
 A. 5.—Windows on each side of the rooms.  
 A. 6.—On the opening of the windows.  
 A. 7.—By the foreman or overlooker.  
 A. 8.—All the dangerous parts are fenced off.  
 A. 9.—The workpeople change their clothes on beginning and leaving off work, and in each room there is an abundant supply of fine spring water, brought from a spring in the neighbourhood; introduced in 1829.  
 A. 10.—Ten years is the lowest age at which we would employ children, but in some few instances they may be under that age. They have not been at any other trade before if ten years of age or under.  
 A. 11.—No; when taken younger, chiefly to oblige poor parents who live in the neighbourhood of the works, and who cannot otherwise support them.  
 A. 12.—In some departments we have fewer children in proportion than formerly; the others remain as before.  
 A. 13.—None in the mills.  
 A. 14.—No parish apprentices in this country.  
 A. 15.—We employ orphans, but do not lodge nor maintain them. We do not lodge any of our servants; they live with their parents or friends, and in their families.  
 A. 16.—Their master while at work, and their natural guardians or other friends while at home.  
 A. 17.—Twelve hours and a half five days of the week, and ten hours and a quarter on Saturday.  
 A. 18.—See answer to query 17; all ages being required in all departments at the same time.  
 A. 19.—Thirteen hours and a half, being an hour beyond the usual time, in order to make up lost time.  
 A. 20.—Three hundred and ten days.

A. 21.

Aberdeenshire.

T. L. Hadden.

A. 21.—Power-hackling, three thousand one hundred and ten and a half; spinning-mills, three thousand six hundred and eighty-one; power-weaving, three thousand seven hundred and eighty-three.

A. 22.—During the dry season, while water is scarce, part of the work driven by one of the water-wheels is worked betwixt the hours of five o'clock in the morning and seven in the evening; and the rest of the work as usual, betwixt six o'clock in the morning and eight in the evening; but the same workpeople never reached both extremes in the same day.

A. 23.—Power-hackling, ten hours per day; spinning-mills, eleven and seven eighths hours per day; weaving-mill, twelve and one fourth hours per day.

A. 24.—Thirteen hours and a half.

A. 25.—When there was a plentiful supply of water, and only to make up for lost time.

A. 26.—Mills driven by water, or water and steam united, are liable to a deal of loss when the water gets low, and the proprietors are obliged, in order to fulfil contracts and engagements they may have entered into, as well as to enable them to pay their servants wages, to make up for the loss by working a few hours longer per week when there is a good supply of water; and as the work carried on within these mills is but a part of the establishment, unless the work lost by the scarcity of water could again be overtaken, it would cause a falling-off in the departments of bleaching, weaving, finishing, &c., and many of those employed in these branches would frequently have to be discharged.

A. 27.—No.

A. 28.—We find that when we lose a few hours by the waters getting low, our goods made that week come dearer.

A. 29.—Manufactories may be obliged to work extra hours to make up for lost time; but we can see no inducement for working through the nights without any intermediate change of hands, against which we know of no general regulation or understanding of the trade in which we are engaged.

A. 30.—Yes; in every branch where extensive machinery and great outlay (such as in flax and tow spinning or power-weaving) are required the fixed expence remains always the same; consequently, as you reduce the hours of work, the quantity of goods made is reduced in proportion, and the lesser quantity has to bear the whole fixed expence.

A. 31.—Relays of children under twelve years of age could not easily be procured here, far less young persons of twelve to twenty-one years of age.

A. 32.—Never tried here.

A. 33.—Not generally; we have tried it on a small scale in one department, eleven servants only being employed from eight o'clock in the evening to six in the morning.

A. 34.—We do not conceive it to be for our interest to work more than one set of hands so long as the hours of labour remain twelve hours each day.

A. 35.—The above small party of eleven are not changed; they work only fifty-six hours per week, and not at all during the day.

A. 36.—If the hours of day labour be not restricted to less than twelve hours each day, the prohibition of a separate night-set of hands would not be attended with any injurious effects to the manufacturer, excepting that it is absolutely necessary that those who use water, or water and steam united, be allowed in the dry season to employ during the night a part of those servants who would otherwise be employed during the day, or else these servants would be entirely thrown out of employment during the continuance of the drought.

A. 37.—If the working hours were reduced, the cost of production would be increased; the workpeople would get lower wages; and as there is but a proportion of the manufacturing population employed within the mills, a reduction of hours would reduce the quantity of yarns, at present barely sufficient to supply the weaving population in this country. A great many would therefore be thrown idle, as well as flax-dressers, bleachers, dyers, &c. &c.; and the foreigners would undersell us in all the foreign markets, where the German linens compete but too successfully with the linens of this country.

A. 38.—The temperature of the air in summer, and heated during winter to about sixty degrees of Fahrenheit. Our processes may be carried on at any temperature. The works are heated for the comfort of the servants, excepting one room where the warps are starched for the power-loom, which requires to be at eighty degrees of Fahrenheit.

A. 39.—We require heat in one room only, and there it is never required above eighty degrees of Fahrenheit.

A. 40.—There are sixty-five workers in this room.

A. 41.—Ninety times in the course of twelve months during the drought, including Saturdays, when they work but six hours—from five to eleven o'clock; but this was at different times, the ninety times not being ninety running.

A. 42.—On these occasions twenty-two under eighteen years of age.

A. 43.—Ten hours for five nights, and six on Saturday.

A. 44.—Sixty-six under eighteen years of age, this being during the dry season.

A. 45.—From eight o'clock in the evening till six o'clock in the morning, and on Saturday from five in the evening to eleven o'clock.

A. 46, 47, & 48.—None.

A. 50.—By gas.

A. 51.—The windows are opened.

A. 53.—Three quarters of an hour for breakfast, and three quarters of an hour for dinner.

(APP.—A. 1.)

B 2

A. 54.

Aberdeenshire.

T. L. Hadden.

A. 54.—They all leave the works at the meal-hours.

A. 56.—The meals are taken out of the works.

A. 57.—For bad behaviour, reprimand; put to work at which they are not so well paid, or dismissal; for good behaviour, promotion to the best-paid work.

A. 58.—No; forbidden.

A. 62.—Care is taken to prevent such an occurrence.

A. 63.—Being forbidden, no such instructions necessary.

A. 64.—None.

A. 65.—The workpeople do not live in the houses of their employers. There are a great many schools and also four Sunday-schools in the village adjoining the works, where the greater part of the servants reside.

A. 66.—The difference is generally very great in favour of early beginners. We can refer to many good workers, some of whom have been in our employment for ten years and upwards.

A. 67.—No perceptible difference for the last ten years, with the exception of last year, which was a very sickly one, owing to cholera and other complaints.

A. 68.—We never find this necessary.

A. 69.—It is not.

A. 77.—We have no reason to believe that they are afraid of displeasing their master, by giving evidence.

A. 78.—By passing an Act that would not reduce the working-hours to less than seventy-two per week, and to allow lost time to be made up never beyond one extra hour in any one day, limiting the age of children to twelve years, and allowing mills driven by water, or water and steam united, to work during drought part of their work during the night with the hands they would otherwise employ during the day. Such an Act might be attended to without ruining the master, or injuring or impoverishing the workers.

10th May 1833.

THOMAS LEYS HADDEN.

No. 6.

James Kilgour.

ANSWERS of JAMES KILGOUR, Partner of GORDON, BARRON, and Co., Old Machar.

A. 1.—Parish of Old Machar and county of Aberdeen, and in possession of Gordon, Barron, and Co.

A. 2.—Cotton-spinning and weaving by machinery.

A. 3.—The old mill erected in 1782 to 1785; new mill, centre division, 1792 to 1793; new mill, north and south division, 1802 and 1803; weaving and worping shops, 1826 and 1827; all used for the present purposes since built.

A. 4.—Water, irregular, from one hundred and twenty horse power to the whole extent of power, say two hundred horse power.

A. 5 &amp; 6.—None, except by opening the windows in the mills, but there are ventilators on the roof and at every window (on the roof) of the weaving-shop, also wooden ventilators on the roof of the dressing-shop.

A. 7.—By the overlooker of each floor, under the control of the general overseer of the mills and weaving-shops respectively.

A. 8.—All that could endanger life or break limbs are fenced off, and except through extreme carelessness no accident can possibly occur.

A. 9.—All may, and the greater part do, change their clothes on entering and leaving the manufactory. No term is specifically set apart for washing, but the practice of washing the hands and face before going out to meals is and always has been tolerated, and from the abundance of water brought to the door of the mills the workers very generally avail themselves of it.

A. 10.—Nine years of age, but at the urgent request of parents or near relations younger children have been taken in as an act of charity. None previously employed at other trades.

A. 11.—Yes, because wages sufficient to induce older hands to do the light work required of children could not be afforded.

A. 12.—The recent alterations in machinery have been generally simplifications of it, and have rendered it better adapted for the employment of children. Fewer grown-up people would be required. Improvements in machinery are made with a view to the greatest possible produce at the lowest rate of wages, and as far as practicable to supersede manual labour.

A. 13.—No.

A. 15.—All the children in our employment live with their parents or natural guardians.

A. 17.—The usual hours of the mill.

A. 18.—Seventy-four hours and five minutes per week. No difference made. N. B.—The works close at five o'clock on Saturday evening.

A. 19.—Occasionally fourteen hours and three quarters in some of the carding and preparation rooms, in consequence of an extension of the spinning-machinery, now nearly completed, when the practice will be abandoned. When lost time is making up it is done

at the rate of an hour per diem, but do not work over-hours throughout the whole establishment, except for reasons stated at A. 25. N. B.—If more than one hour over-time is wrought per diem it is only on alternate days.

A. 20.—From the 1st January to 31st December 1832, both days inclusive, 311 days.  
From the 5th May 1832 to 4th May 1833, ditto - 311 do.

No material stoppage, owing to the state of the river, since 1st January 1832.

|                                                   | Hours | minutes. |    |
|---------------------------------------------------|-------|----------|----|
| A. 21.—In the year 1832, 3,821 hours are          | -     | 12       | 17 |
| From May 1832 to May 1833, as above, 3,831 hours, | -     | 12       | 19 |
| Full time averages                                | -     | 12       | 21 |

} per diem.

A. 22.—Cannot reply to this question, having kept no such account; but in dry seasons different departments are worked at different times. The mill overseers will produce to the Commissioners an account of the mode of working during a short supply of water in the years 1826 and 1831. (See page 15.)

A. 24.—Fourteen hours and three quarters, for reasons stated at A. 19.

A. 25 & 26.—On account of scarcity of water, or back water on the wheels, or breakage of large machinery, never work before six in the morning or after ten at night. If this practice was not adopted, the wages would be very much curtailed. The workers would not, in fact, be willing to abandon the practice, but would endeavour to find employment at other establishments where the practice prevailed.

A. 27.—Seventy-five hours per week previously to 1826.

A. 28.—The difference of time is so trifling, that the enhanced cost could not be calculated; but in proportion as the hours of labour are shortened the cost of producing a given quantity would be increased.

A. 29.—To get the greatest produce of the machinery in order to lower the interest on the sunk property, and to enable him to sell in a low market at a safe price.

A. 30.—See answer to No. 28. The machinery being now driven at speed, no more produce could be got per hour or day; but a spinner or manufacturer must lower the rate of wages if he works fewer hours. He could not lay the extra cost of production on yarn or cloth, as foreigners would undersell him.

A. 31.—One objection to two sets of children is the expence and trouble of teaching them, as for the first six or twelve months they are of little use. It is generally supposed that a machine is not so well kept when two sets of hands work it, as one set leaves the cleaning to the other. Do not think two sets of hands of that description could be got here.

A. 32 & 33.—No.

A. 36.—Do not work at night.

A. 37.—If this question applies to the regular hours of work, I would say the effect would be to entail misery on the working-classes, as their employers could not afford sufficient wages (see answer No. 30); and if the hours of labour are much curtailed, it is my opinion masters and servants would combine to break or evade the law, or the former would be obliged to give up their establishments, and so drive the manufactures to foreign countries.

A. 38.—65° to 70°; lowest 65°.

A. 39.—86° to 90° for dressing warps for power-looms.

A. 40.—Seven grown-up men.

A. 41.—Only one night on the Danforth frames in the low floor of the new mill, and the preparation attached thereto. The spinning-hands did not work the day following. A proportion of the preparation hands did work the following day, being a Saturday. None of them under thirteen years of age. N. B.—The above circumstance took place owing to a change in the driving gear.

A. 42, 43, & 44.—In the above instance, ten children from ten to fourteen years of age for about nine hours and a half.

A. 45.—From eight to six o'clock, with a stop of half an hour or more.

A. 46.—No.

A. 47.—No particular time.

A. 50.—In winter mornings and evenings by gas.

A. 53.—Forty minutes each meal, breakfast and dinner; all classes alike.

A. 54.—From ninety to one hundred remain in the mill during the dinner-hour of two days in the week to clean machinery; all the rest are at liberty to go out during meal-times if they please.

A. 55.—Except for the cause stated in answer No. 54, for the convenience of the workers.

A. 56.—The loss of this convenience to both parties. N. B.—There is an apartment on the premises fitted up with boilers and hot plate, with tables and benches, for the accommodation of those who choose to take advantage of it during meal-times. A woman is paid to attend.

A. 57.—The children are not disobedient; the fear of losing their employment is sufficient guarantee for their correct conduct during the hours of labour.

A. 58, 59, 60, & 61.—No.

A. 62.—The overseers are all aware that they would be discharged if guilty of improper conduct or cruelty towards children under their charge.

(APP.—A. 1.)

B 3

A. 63.

Aberdeenshire.

James Kilgour.

Aberdeenshire.

James Kilgour.

A. 63.—No; only a general understanding has always existed to treat the children properly.

A. 64.—Never at any time.

A. 65.—Some do. A free school-house, fire and light, for instruction in the ordinary branches of education, and for religious instruction on Sunday, are provided by the masters. A person is appointed to clean daily about the houses, and the insides of them are white-washed every year. The whole management of the proprietors houses occupied by the workers is placed under the superintendence of a clerk in their employ. N.B.—A committee of the Board of Health visited these houses and others in the neighbourhood occupied by mill-workers, and found them more comfortable than the houses of those otherwise employed in the same rank of life.

A. 66.—All who have been employed from infancy can read, several can write, and know the simple rules of arithmetic, but occasionally some of them who come to the work at a later period of life cannot even read. Those employed in factories from childhood are more skilful than such as are brought in at a later period. There are very few instances to the contrary. It would be invidious to give individual instances in a paper open to the inspection of the workpeople.

A. 67.—I would say improved. The necessities and comforts of life have during that period been moderate in price, and the wages have not been reduced in proportion to the fall in the articles of food and clothing. The medical attendant Dr. Gordon, Old Aberdeen, can best answer this question. He has attended the workers many years.

A. 68.—If a worker is subject to an ailment which would be alleviated by a change of employment, such change is invariably made if in the power of the master to do so, or the individual is at liberty to leave the work. I take this opportunity of mentioning that all the workers can leave their employment upon giving fourteen days notice. Their masters give them the like.

A. 69.—The Act of 1 & 2 William the 4th, chapter 39.

A. 70. & 71.—Never.

A. 73.—I know nothing whatever respecting other establishments in the neighbourhood, but consider the respectability of the proprietors of those establishments such as to ensure their being properly conducted.

A. 74.—Never that I heard of.

A. 75.—Ditto.

A. 76.—I do not suppose evidence was ever required.

A. 77.—I have no reason to believe that any difficulty would be found in procuring evidence, or that any mill proprietor in this neighbourhood would think the worse of a servant for speaking the truth in a court of justice when called upon to do so.

A. 78.—I cannot, as all the children and others employed in factories in this neighbourhood are at perfect liberty to leave their work at their own request, or that of their parents or guardians. See Answer No. 68. I consider the common law of the land affords sufficient protection to both master and servant.

A. 79.—No account having been kept of the time lost by the water-wheels going too slow, owing to the state of the river, or of the time during which only a part of the establishment could be at work from the same cause, the loss of produce occasioned thereby cannot be shown.

The Commissioners are respectfully requested to examine the documents herewith produced, showing in the first place the loss of actual time in the year 1826 (being a dry summer), also during the years 1828 to 1832 both inclusive, a period when lost time was made up at the discretion of the employer, with the full concurrence of the servants. Secondly, a statement of the loss of produce in the year 1826, owing to the machinery going short of the regular time, independently of the deficiency by the wheel going slow, or by shifting the hands and working the different departments by turns on the same day. Thirdly, the arrangements for carrying those shifts into effect in the years 1826 and 1831 are submitted, and any further explanation required will be readily given.

Very considerable latitude ought to be allowed to mills driven by water-power to make up lost time, especially when occasioned by severe frost or by what is called a gorge of ice in the river, which frequently causes a total stoppage for several days at a time; the meal-times to be fixed by the masters to suit their own convenience and that of the workers, so as to enable the servants to earn sufficient wages for their support during partial stoppages occasioned by the state of the river or breakage of large gearing. The flood in 1829 seriously damaged the embankments of the canal, the intake sluices, damdyke, and other parts connected with the works at Woodside, caused a great deal of stoppage, and were repaired at a heavy expence. On that occasion, and when the reeling-shop was burnt in 1831, money was advanced to the workers, and repaid by small instalments when they returned to work; this would not have been done if the hours of labour had been shortened in the manner proposed by the present Bill, as the servants would not have been able to repay the advance. This step was not taken from a fear of losing the hands, but simply as an act of charity to give them support while out of employ, which they could not procure elsewhere.

While flax and other mills in our neighbourhood are permitted to work long hours, our hands would leave us unless we conformed, or paid wages for short hours that the state of trade would not allow us to do.

| 4th Floor | $\frac{1}{2}$ past 5  | 48 min.<br>past 2        | $\frac{1}{2}$ past 5  | 54 min.<br>past 5        | $\frac{1}{2}$ past 5  | 36 min.<br>past 8        | $\frac{1}{2}$ past 5  | 42 min.<br>past 11       | 36 min.               | past 8 for<br>the day.   | Stopt for the day.    |                          |
| 5th Floor | Stopt for the day.    |                          | 36 min.               | past 8 for<br>the day.   | $\frac{1}{2}$ past 5  | 42 min.<br>past 11       | $\frac{1}{2}$ past 5  | 54 min.<br>past 5        | $\frac{1}{2}$ past 5  | 48 min.<br>past 2        | $\frac{1}{2}$ past 5  | 42 min.<br>past 11.      |
| 6th Floor | $\frac{1}{2}$ past 5  | 54 min.<br>past 5        | $\frac{1}{2}$ past 5  | 36 min.<br>past 8        | Stopt for the day.    |                          | $\frac{1}{2}$ past 5  | 38 min.<br>past 8        | $\frac{1}{2}$ past 5  | 54 min.<br>past 5        | 38 min.               | past 8 for<br>the day.   |

Floors working to enter at  $\frac{1}{2}$  past 5 in the morning, to be out 3 hours and 6 minutes alternately, and to continue till 9 P. M. Preparation-rooms, owing to scarcity of water, began shifting about the 10th of May; from the 24th of May to the 24th of June inclusive each floor stopped  $2\frac{1}{2}$  hours alternately in the day, beginning at 6 A. M. and stopping at 9 P. M.; from the 24th of June to the 1st of July one floor always standing, the other five stopped 3 hours 6 minutes alternately in the day, beginning at  $\frac{1}{2}$  past 5 A. M. and stopping at 9 P. M.; from the 1st to the 8th of July wrought the same as the 24th of May and 24th of June; from the 8th to the 22d of July the same as the 24th of June and 1st of July. Commenced regular hours the 22d of July.

## ARRANGEMENT for SHIFTING, owing to Scarcity of Water, 3d August 1826.

|           | MONDAY.               |                          | TUESDAY.              |                          | WEDNESDAY.            |                          | THURSDAY.             |                          | FRIDAY.               |                          | SATURDAY.             |                          |

To begin work in the morning at  $\frac{1}{2}$  past 5, and dismiss in the evening at  $\frac{1}{2}$  past 8 o'clock, each department having  $2\frac{1}{2}$  hours licence within that time, with the exception of Saturday, which is only 1 hour and 55 minutes.

Woodside Works,  
16th May 1833. }

JAMES KILGOUR.

No. 7.

Stephen Pellatt.

ANSWERS of STEPHEN PELLATT, Manager for Messrs. RICHARDS, and Co.,  
Old Machar.

- A. 1.—Parish of Old Machar, county of Aberdeen.  
A. 2.—Flax-spinning, and linen-weaving by power.  
A. 3.—Old mill erected in the year 1806. The whole power (twenty-five horses) applied to flax-spinning. New mill erected in the year 1825, thirty-five horses power, of which since the period of its erection about one fifth of the power has been applied to linen-weaving, the rest to flax-spinning.  
A. 4.—Steam-power altogether; power very regular; extent of power seventy horses.  
A. 5.—No specific provision, and none necessary beyond what is mentioned in answer to Query No. 6.  
A. 6.—On the opening of windows.  
A. 7.—By the foremen or their managers only.  
A. 8.—All, so far as I know.  
A. 9.—On entering the mills, the girls, old and young, I may say almost universally, change their outer dress, or so cover themselves with working-dresses that they may be protected from the effects of dust, dirt, &c., in the course of working; accordingly, on dismissing for meals, these working-dresses are thrown off, and the girls pass through the streets to their homes with an appearance of cleanness, and decency of apparel, comparable (to say the least) with any other description of people in the same condition of life.  
A. 10.—Eleven or twelve; and out of between three and four hundred not more than half a dozen so young.  
A. 11.—No, it does not.  
A. 12.—No.  
A. 13 & 14.—None; the system is wholly unknown in the manufactories of Aberdeen.  
A. 15.—There are six orphans in the mills, having no natural or legal guardians; but, with the exception of one about twelve years old, they are all of an age to be capable of taking care of themselves.  
A. 17.—Thirteen hours and ten minutes for five days in the week, and nine hours and fifty minutes on Saturday.  
A. 18.—The same hours as stated in answer No. 17. No regard is had to age.  
A. 19.—Between 30th April 1832 and 30th April 1833 thirteen hours and ten minutes; never longer.  
A. 20.—Between the dates above given three hundred and ten days.  
A. 21.—For the same period three thousand nine hundred and seven hours and a quarter.  
A. 22.—Such has not been the case within the last twelve months, nor is it so at any time.  
A. 23.—Twelve hours and thirty-one minutes between 30th April 1832 and 30th April 1833.  
A. 24.—Thirteen hours and ten minutes.  
A. 25.—At no time, and under no circumstances.

A. 26.

A. 26.—If lost time, by breakage, &c., is not to be allowed to be made up, any excess beyond the regular hours is avoidable in our business.

A. 27.—Not with one set of hands. For a period of about five years prior to 1826 our old mill was worked night and day, but with a double set of hands of course.

A. 28.—As applicable to one set of hands, I am unable to give any answer to this question derived from practice in these works.

A. 29.—The expectation that the cost of production will be reduced by dividing interest on plant and all other fixed annual charges over a greater produce. But if the effects on deterioration by running fifteen to sixteen hours a day, and beyond, be strictly observed, I believe the advantage in the long run will be found to be more apparent than real.

A. 30.—Our hours of work are uniform. Practically we cannot speak to the effect of the limitation of work on the cost of production. Theoretically and actually, limitation of the hours of work augments the cost of production as a necessary consequence; *e.g.* if the fixed expences of a flax-spinning establishment form one third of the whole cost, the working time being twelve hours per day, then the fixed charges will augment inversely as the time of going is shortened, and the return of work is reduced.

A. 31.—None; and where the hours are really extra it seems the natural mode.

A. 32.—We practised it during the time of working the old mill at night, prior to the year 1826.

A. 35.—When we worked all night (prior to 1826) the night hands for one week became the day hands for the following, *i.e.* the sets changed week about.

A. 36.—We disused night-work in 1826, and after pursuing that system five years, I am of opinion there is no advantage in it to the proprietor.

A. 37.—I conceive a national injury will be inflicted on the country, and a personal injury on the capitalist and operative servant respectively, by a reduction of time, to say ten hours per day. To the country injury will result directly by an augmented cost of production on all the grand staple manufactures carried on therein; to the capitalist injury will be done, as well from that cause, as from rendering his capital relatively non-effective and unproductive; and to the operative from the reduction of wages, which seems inevitably implied by such a measure. sooner or later, and to one degree or other.

A. 38.—The temperature of the surrounding atmosphere at as low a temperature as the workpeople can endure cold. An elevated temperature is, in fact, uncongenial to flax-spinning and linen-weaving, with the single exception stated in Answer No. 39.

A. 39.—We use artificial heat to dry the chains in the starching machines of power looms. The temperature may be about 70°.

A. 40.—Ten to twelve persons is the number engaged in the apartment where the above process is conducted.

A. 41.—Not at all.

A. 46.—Not any.

A. 53.—Forty minutes are allowed for breakfast, and the same for dinner.

A. 54.—The whole are understood to leave, with the exceptions stated in reply No. 55. That is, the moving power is stopped, and we encourage none to remain. Some few, who live distant from the works, take their meals within the premises for their own convenience.

A. 55.—Twice a week two persons in each room remain during the meal hours to clean the great machinery, but these persons have liberty to go away to their meals after the work goes on.

A. 57.—Conviction that dismissal uniformly follows wilful disobedience is the moral power by which obedience and discipline are enforced within these works.

A. 58.—Never.

A. 59.—It is discountenanced and forbidden on principle.

A. 60.—Never.

A. 61.—Certainly never.

A. 62.—I have never, during twenty-one years management, had any occasion to interpose.

A. 63.—No; our foreman knows that our system is one of moral coercion, and that corporal punishment is not permitted.

A. 64.—Not one has ever been made, and the answer that is applied to the three years may be extended over the whole period of my management of twenty-one years.

A. 65.—These works being situate in the suburbs of Aberdeen, if not in Aberdeen itself, the workpeople live entirely in their own houses, and are subject to no control of ours out of work hours.

A. 66.—In regard to skill, the question is easily answered. Those who enter the works earliest become and continue the most skilful. In regard to the effect on character between those admitted into the works at a comparatively early period, as compared with those who have entered them at a later period of life, I cannot say I know any difference. At the same time I believe it is most difficult to come to any sound conclusion upon the effects of association in factories from the actual average of character found within them. In some the standard of moral character may be found better and higher than in the same condition of life out of the public works, and vice versa,—not arising, *de facto*, from the association

Aberdeenshire.

Stephen Pellatt.

association or the nature of employment, but dependent immediately on the personal character of the overseers and others placed over the operative people.

A. 67.—I know no change for or against within that period.

A. 68.—Never.

A. 69.—No.

A. 79.—None.

STEPHEN PELLATT,  
Manager for Messrs. Richards and Co.

No. 8.

Patrick Pirie.

ANSWERS of PATRICK PIRIE, of the Firm of WILLIAM PIRIE and Co.,  
Worsted Spinners, Old Machar.

A. 1.—Two mills in the parish of Old Machar, and one in the parish of Newhill, county of Aberdeen.

A. 2.—The spinning of worsted and woollen yarn.

A. 3.—Three mills, erected at different times; the first in 1823, employed for its present purpose in 1824; the second in 1829, employed in 1830; the third in 1831, employed in 1832.

A. 4.—Water power. In two works, driven by two wheels on the same waterfall, irregular. The extent of the irregularity may average about three months yearly when scarce of water, during which time we are compelled to work the smallest of these wheels at night, to which is attached about one third of the machinery; the power of these wheels about fifty-five horse; the power of the wheel in the parish of Newhills about fifteen horse, but this we never work at night.

A. 5.—No distinct or specific provision.

A. 6.—Depends entirely on the opening of the windows.

A. 7.—The overlooker chiefly; but any of the hands may open or shut the windows at pleasure, provided no injury be done by rain, &c.

A. 8.—Some parts are fenced off, but most parts are out of the reach of servants as much as possible.

A. 9.—The workpeople have all along been allowed to change their clothes on entering the works, and wash themselves, and put on additional clothing on leaving. The mills are whitewashed once a year, and are well ventilated.

A. 10.—None generally under ten. There are three at present betwixt nine and ten. None have been at any other trade.

A. 11.—Yes; on account of some of the machinery not being adapted for those of greater age.

A. 12.—We have made no alteration in our machinery, so as to require a greater or less number of children.

A. 13.—We do not.

A. 17.—Twelve and a half for five days in the week; only ten on Saturday.

A. 18.—Twelve and a half for five days, and ten on Saturday.

A. 19.—Upon three or four occasions seventeen hours, for reasons to be assigned in answer to question No. 25.

A. 20.—Every lawful day, unless when the works were stopt by floods, &c.

A. 21.—In consequence of the irregularity of our power, cannot precisely say; probably about seventy hours a week, or three thousand six hundred and forty a year.

A. 22.—When deficient in power by reason of drought, we work the largest of the two wheels we have on the same waterfall, from 6 A.M. till half past seven P.M. The other wheel, which propels about one third of the machinery, we usually work 'twixt the hours of half past seven P.M. till six next morning.

A. 23.—From the irregularity of our power, cannot exactly say; but suppose about twelve hours for five days, and ten hours on Saturday.

A. 24.—Upon three or four occasions seventeen hours.

A. 25.—The circumstances that occasion the regular hours to be at times exceeded arise chiefly from the changes in the state of the river. For instance, when it rises at a time we are working during night, so that there is sufficient power to drive all our machinery at the hour of the morning the night hands leave off, they continue to work, after being allowed time to wash and take breakfast, till noon or two P.M., when they go home, and remain till six o'clock of the morning of the following day, when they resume day work as usual after sixteen or eighteen hours rest. But my orders are to work no child or any servant more than they can bear.

A. 26.—This certainly might be avoided, but not without the loss of power, and consequently the production of the manufactured articles, as well as the loss of wages to the servants, of which we think it would be wrong to deprive them, particularly when they do not consider themselves overworked.

A. 27.—During part of last year the greater number of our servants breakfasted without stopping the work, on condition of being dismissed at five instead of six o'clock on Saturday; but finding no advantage accrue from this, it has been for some time discontinued.

A. 29.

Aberdeenshire.

Patrick Pirie.

A. 29.—Never having regularly practised extra hours, we cannot say; but we consider overworking children, or even adults, productive of no good.

A. 30.—Never having abridged or increased (unless to the extent as stated in answer to Question No. 27.) our hours of work, we cannot answer.

A. 31.—We do not require extra hours, but on such occasions as mentioned in answer to Question 25.

A. 32.—No. The reason is chiefly in consequence of the power being irregular.

A. 33.—We employ only one set of hands; but when the river is low we work a part during night, and their work is arranged as stated in answer to Question 22.

A. 34.—We do not work more than one set of hands.

A. 35.—When we are obliged to have recourse to night-work, the same hands have generally worked, as they preferred doing so; but they have it in their power to be periodically changed.

A. 36.—Very detrimental indeed; but for a full explanation we beg to refer to a printed memorandum as to the effect of a prohibition of night-work on our business affixed hereto.

A. 37.—I do not conceive myself competent to state this satisfactorily; but the effects of reducing the hours under seventy-two would, I think, be injurious to the trade and the country at large. The consequence would of course be a decrease of the articles at present produced; an addition of machinery, and consequently of capital, would be required to make up the deficiency in the production, and to supply the demand. All this, too, would be in favour of foreigners, by enabling them in some degree to compete with us.

A. 38.—There are various degrees of temperature in our manufactory. Some processes may be and are conducted at the lowest degree of temperature to which we are exposed in this climate. The temperature in our spinning-floors is about seventy to seventy-five degrees, often less.

A. 39.—There is one process in which a great degree of heat is applied to the wool; but the usual temperature, where the hands are attending this process, is about seventy-five degrees.

A. 40.—Nine.

A. 41.—Seventy-seven nights, of about one fifth of our hands attending about one third of our machinery in our mills in the parish of Old Machar. Our mill in the parish of Newhills is never worked during night.

A. 42.—Usually from twenty and twenty-four, whose ages may be from ten to fourteen years.

A. 43.—Ten hours for five nights; only five hours on Saturday.

A. 44.—From forty-five to fifty of the foregoing age on any particular or urgent occasion; but this has happened so rarely that I cannot call to mind the last instance of it.

A. 45.—From eight or nine at night till six o'clock in the morning.

A. 46.—No.

A. 50.—By gas.

A. 51.—Opening the windows.

A. 52.—Nothing injurious. See Mr. Irvine's (our surgeon) certificate appended hereto.

A. 53.—Half an hour for breakfast, and same for dinner, to those attending machinery, some who work by hand, an hour to each meal.

A. 54.—For the accommodation of those who live at a distance, we have a kitchen where their meals are comfortably prepared for them. Twelve women take their meals in the work.

A. 55.—These women remain during meal-hours, to clear away the wool from the carders, and mend the bands of the frames.

A. 56.—The stopping of the machinery for some time after the hour of working commences.

A. 57.—Attention, persuasion, and kind treatment in general. A few were fined during last year to the extent in all of ten or twelve shillings. Those who are incorrigible are dismissed.

A. 58.—Corporal punishment has always been forbidden, unless on one occasion, when it was sanctioned.

A. 59.—On three or four occasions by overlookers, without sanction, and once by a parent, with sanction.

A. 60.—Once on a boy for stealing or hiding some small pieces of machinery, whose father flogged him with a strap.

A. 61.—Once. See last answer.

A. 62.—Invariably, unless in the last case. Two men were dismissed for flogging boys a few years ago.

A. 63.—Verbal instructions have always been given to the foreman and overlookers not to inflict corporal punishment.

A. 64.—No complaint ever made against me. One complaint was made to me by the father of a child about twelve years of age against an overlooker. The matter being submitted to me, I adjudged the overlooker to pay to the father a fine of 1*l.*; but the father, not satisfied with this, went to law, lost his case, and had all expences to pay.

A. 65.—Some do. No control or superintendence exercised further than sanctioning and countenancing a Sunday school on the premises; a daily evening school is also adjacent.

Aberdeenshire.

Patrick Pirie.

A. 66.—We generally prefer those who have been employed in our work, and refer to the following in the lists:—No. 49, 79, 280, 158, 155, 151, 5, 20, 90, 94, 117, 118.

A. 67.—The health of our people has all along been so good that I cannot say there is either improvement or deterioration.

A. 68, 69, 70, 71, & 72.—No.

PATRIC PIRIE.

I hereby certify, that I have professionally attended the servants employed at the works of Messrs. William Pirie and Co., woollen manufacturers, Gordon's mills, for the last five years; that their general health has been as good as any class of labouring people enjoy; that of the great number of persons employed, the instances of disease have been comparatively few, certainly under what might have been expected. I cannot attribute the cause of dishealth in any individual case to their being employed in night-work, nor have I ever heard any complaint on that ground from any patient under my care, and that at present I have only one case under treatment.

Old Aberdeen, }  
10th May 1833. }

J. IRVINE,  
Surgeon to General Dispensary, Old Aberdeen.

*Memorandum as to the effect of the proposed Prohibition of Night Work upon the Business of William Pirie & Co., Woollen Manufacturers, Gordon's Mills, near Aberdeen.*

The gentlemen concerned in this company are the lessees of a valuable waterfall and other property upon the banks of the river Don, for the long period of one hundred years, at a very heavy rent. When the company took upon themselves the burden of this rent, when they erected expensive buildings, and filled them with machinery, excavated their reservoirs and watercourses, and embarked their whole capital in the undertaking, they fully calculated upon being obliged, at certain seasons, when the water should be low, to have recourse to night-work; and it is needless to say that no restrictive law was in operation at that period, and that none such could, by any foresight, have been contemplated. The experience of several years has shown that the average extent of night-work may be about three months in the year, of about one third part of the whole machinery which is attached to, and driven by, one particular wheel; and should the prohibition alluded to be carried into effect, this wheel, and the machinery attached thereto, would be thrown utterly useless upon their hands. It may appear at first sight that the effects of the bill, as regards this company, would be confined to three months in the year. This, however, is by far too limited a view of the consequences which would attend it. It would, of course, be quite impossible for the company to retain the same number of servants in their employment during the dry season as at present. They would have no alternative but to dismiss about one third of the present number. The servants so dismissed could not be expected to remain idle till the rise of the river should again admit of the company taking them into their employment. They would in the meantime find permanent engagements, which they would not be induced to abandon to enter the service of their former masters, and to be again dismissed when the supply of water should happen to fail.

It may be said that the employment of steam-power would obviate all the difficulties now pointed out. So indeed, in some measure, it might; but it must be recollected that steam cannot be procured and kept up, where this company's works are established, but at an enormous expence; and when, as has been already stated, they are legally bound for a heavy rent for the power they at present employ during so long a period of years, the hardship of encumbering them with the additional expence of steam must be apparent. The original cost of steam-engines would be very great, and the annual charges for upholding them, and for fuel, (upon which a large amount, both of sea and land carriage, would have to be paid,) are very heavy.

Again, it may be said that the prohibition of night-work is only intended to apply to persons under twenty-one years of age, above which there is no restriction. To this it may be answered, that the greater part of the machinery in use in the Company's mills was not intended to be worked by full-grown persons, and is not adapted for that purpose.

The usual working hours during the day are seventy-two hours per week; but when the memorialists are obliged to have recourse to night-work the class of hands employed for that purpose work only fifty-five hours per week, receiving for this the same wages as if they wrought the other seventeen. These hands thus enjoy seventeen hours a week more than the others for rest, recreation, and education. It may also be observed, that the whole time between Saturday night and Monday night is at their own disposal. Now, say that the memorialists require to work during the night with only one third of their machinery for twelve weeks in the year, this would only give ten hours of night-work in fourteen days upon the whole year to each individual; and yet for so trifling a consideration as this is the company called upon to make so serious a sacrifice of their property as the Bill in question would demand. That the health of the servants does not suffer by the night-work, as at present regulated in the company's mills, is satisfactorily established by the certificate of Mr. Irvine, the surgeon who attends them. Now, in the circumstances above explained, it may be fairly enough asked where the necessity exists for the measure in question?

tion? The working people themselves, even those very individuals whom the Bill is intended to benefit, can see none. On the very contrary, satisfied as they are with their present condition, the hands in the company's employment have most distinctly expressed themselves opposed to any change, in a Petition sometime ago presented by them to the Commons House of Parliament.

Upon the whole, therefore, the Company trusts that they have made it apparent that the enactment proposed would, in the peculiar circumstances in which they are placed, be very detrimental to their business; while on the other hand no case of necessity, or even of expediency, can be made out for its adoption.

Aberdeenshire.

Patrick Pirie.

## ANSWERS of ALEXANDER PIRIE junior, Newhills.

No. 9.

Alex. Pirie jun.

A. 1.—In the parish of Newhills and shire of Aberdeen.

A. 2.—Cutting, sorting, and bleaching rags, and making paper.

A. 3.—1770 was the first time the mill was employed for paper-making, and additions were made in 1802 and 1819.

A. 4.—Water is the power used for driving my machinery; less in summer or in strong frost, but there is at all times sufficient in the river for my purposes.

A. 5.—There is in some of the rooms distinct provision made for their ventilation (viz. fans driven by machinery), but not in all places; however, from the nature of the work carried on in many of the rooms, the air is always fresh.

A. 6.—In some of the rooms it depends on the opening of windows.

A. 7.—The foreman certainly attends that the air in the rooms be kept fresh and healthy, but any of the hands have liberty to open the windows at pleasure, if dry weather.

A. 8.—All the dangerous parts of the machinery are as far as possible carefully fenced off.

A. 9.—The workpeople have always a plentiful supply of water to wash themselves on going away to breakfast, dinner, or in the evening; and there are places for hanging up any extra clothing they may bring with them in winter or bad weather.

A. 10.—Ten years of age is the lowest at which I ever employ children, and I have no person in my works at present (1st January 1833) under fourteen or fifteen years. They were never to my knowledge employed at other trades.

A. 11.—No.

A. 12.—They have occasioned no difference.

A. 13.—I have employed apprentices, but do not at present.

A. 14.—They were never apprenticed from parishes.

A. 15.—There is only one girl in my work, who is an orphan, and she lives with an aunt.

A. 16.—This girl is under the care of her aunt.

A. 17.—Ten hours; a few hands work twelve hours.

A. 18.—Ten hours.

A. 19.—Twenty-four hours.

A. 20.—Every lawful day.

A. 21.—Part of the machinery is kept going the whole twenty-four hours of every lawful day.

A. 22.—The paper engines are worked uniformly all twenty-four hours; the machines are worked from six in the morning to four in the afternoon without stopping, and the rest of the work, with one or two solitary exceptions, from six to six in the daytime, with two hours stoppage for meals.

A. 23.—Twenty-four hours for the paper engines every lawful day.

A. 24.—Ten hours.

A. 25.—The usual number of hours for the persons employed at the paper machines, and in finishing the papers, were exceeded when making thin papers, and those hands are above twenty-one years of age. The usual hours in the other departments are almost uniformly the same.

A. 26.—This excess is certainly avoidable, but not conveniently so.

A. 27.—I have for a great number of years back worked my manufactory nearly the same hours as at present, and never a greater number.

A. 29.—The inducement to the manufacturer is quantity of work thrown off.

A. 30.—I have not for a very long period worked fewer hours than at present, and therefore cannot say.

A. 31.—I never work children above ten hours a day.

A. 32.—I never had occasion to try it.

A. 33.—I employ two men for night-work, at the engines and bleaching-house.

A. 34.—I only have one set of hands, with the exception of the two men mentioned in reply to No. 33.

A. 35.—These two men have the night and day work alternately every week with other two.

Aberdeenshire.

Alex. Pirie jun.

A. 36.—I only employ persons above twenty-one years for night-work; and to prohibit me from having those, would be to reduce the quantity of manufacture produced one half; and consequently the outlay of capital to produce the same quantity as at present would be greatly increased.

A. 37.—I do not think that the hours could be expected to be limited to a less number than what I presently work.

A. 38.—The highest temperature in any of the rooms in my works is seventy-five degrees Fahrenheit.

A. 39.—There is one process in paper-making which requires a great deal of heat; but where the workpeople stand the temperature is about seventy-five degrees.

A. 40.—I employ six hands above twenty-one years of age, and none under that in this process.

A. 41.—Every lawful night.

A. 42, 43, 44, & 45.—None.

A. 46.—None indispensably.

A. 47.—All processes, at which I employ hands, may be stopped at any time, unless the bleaching distillation, which must be continued twelve hours running.

A. 48.—The man is fifty-three years of age who takes charge of this process.

A. 49.—Because, by stopping, the whole contents of the retort would be lost.

A. 50.—By candles.

A. 51.—None, beyond what there is during the day.

A. 52.—I have never observed any difference.

A. 53.—One hour to breakfast and one hour to dinner to all except those employed at the paper-machines and engines, and bleaching-retort, and steam-boilers, who take their meals in the mill.

A. 54.—All have it in their power to go home to their meals, unless those stated in reply to No. 53.

A. 55.—Because, although not indispensable to work those without stopping, yet it would be highly inconvenient, and sometimes attended with loss, to stop them at meal-times.

A. 56.—Stopping the machinery.

A. 57.—Dismissal.

A. 58.—No.

A. 59.—By no person.

A. 60 & 61.—No.

A. 62.—I never thought it necessary to issue such orders.

A. 63.—If disobedient, to dismiss them on the spot; given by word of mouth.

A. 64.—No.

A. 65.—Most of them live in my houses; but no control or superintendence is necessary on my part, as a regard for their own character is sufficient to insure it.

A. 66.—I have scarcely a person in any particular process of my works who has not been bred to it from childhood.

A. 67.—I have found no difference; there can scarcely be any improvement.

A. 68, 69, 70, & 71.—No.

ALEX. PIRIE jun.

No 10.

Alexander Irvine.

## ANSWERS of ALEXANDER IRVINE, Peter Culter.

A. 1.—Peter Culter, county of Aberdeen.

A. 2.—Paper-making.

A. 3.—Having purchased the works in 1821, cannot specify dates of erection of buildings, to which various additions appear to have been made periodically. The work has been used for its present purpose upwards of seventy years.

A. 4.—The moving power water; supply regular; power about equal to that of an engine of thirty-horse power.

A. 5 & 6.—Doors and windows the only provision for ventilation.

A. 7.—The persons employed.

A. 8.—The dangerous parts are fenced off.

A. 9.—No apartments expressly set aside for the workpeople to change their clothes, but they have opportunities. Soap is allowed.

A. 10.—No children employed.

A. 11.—No children required.

A. 12.—No children employed.

A. 13 & 14.—No apprentices employed.

A. 15 & 16.—No children employed.

A. 17.—Ten to twelve hours.

A. 18.—Ten hours.

A. 19.—Part of the work twenty-four hours.

A. 20.—Three hundred and six days.

A. 21.—About three thousand eight hundred hours.

A. 22.

- A. 22.—So dependent upon circumstances that we cannot specify particular times.  
 A. 23.—Eleven hours for males, and ten for females.  
 A. 24.—No children employed.  
 A. 25.—Chiefly during the summer months.  
 A. 26.—Could be avoided, but we wish to increase our stock at the most favourable time for our manufacture.  
 A. 27 & 28.—We have not at any former period worked a greater number of hours daily than at present, excepting when we do night work.  
 A. 29.—We have always changed hands when we did night-work, and cannot therefore say.  
 A. 30.—We cannot say, from our own experience, that limitation of hours increases or decreases cost of production.  
 A. 31.—We know no objection.  
 A. 32.—No children employed.  
 A. 33.—Yes. We change hands at six in the morning and six at night.  
 A. 34.—When we find it necessary to do night-work we employ two sets of hands.  
 A. 35.—We change periodically.  
 A. 36.—Less work done; occasionally we would not be able to meet our demand.  
 A. 37.—A reduction of our hours we consider unnecessary. We have never heard a single complaint in reference to long hours. If hours are reduced, so must wages.  
 A. 38.—We can work at 34° of Fahrenheit, and the usual temperature is dependent on the weather, no fires being used unless for warming the workpeople when necessary.  
 A. 39.—We require no particular heat except in a stove-house, the temperature of which may be about 100°, but no person is at work in it at that heat.  
 A. 40.—One man, and he has occasionally to ascertain and regulate temperature.  
 A. 41.—No particular account kept; think not above two months.  
 A. 42, 43, 44, & 45.—No children employed.  
 A. 46.—Preparing engines for beating material into pulp.  
 A. 47.—Depends solely whether we are pressed for time in the execution of orders, or otherwise.  
 A. 48.—Men upwards of twenty-one years of age.  
 A. 49.—If not continuous when necessary, part of the works would be silent.  
 A. 50.—By oil.  
 A. 51.—No provision but that in answer to queries 5th and 6th.  
 A. 52.—We have never seen any injurious effect, and no workman ever said that any had followed.  
 A. 53.—Half an hour for breakfast, and half an hour for dinner.  
 A. 54.—All leave or may leave, excepting eight men employed at the machines.  
 A. 55.—These eight men are retained for the convenience of the manufactory.  
 A. 56.—If we allowed the eight men referred to to take their meals out of the manufactory their department would be silent.  
 A. 58, 59, 60, 61, 62, & 63.—No corporal punishment allowed, and none ever inflicted.  
 A. 64.—None.  
 A. 65.—The workpeople live in houses rented by themselves, are generally clean and healthy.  
 A. 66.—We have never had any employed from infancy.  
 A. 67.—The general health of our workpeople has been good.  
 A. 68.—No process in our works injurious to health.  
 A. 69.—We believe not.  
 A. 70, 71, & 72.—Never.  
 A. 78.—We cannot.  
 A. 79.—None.

Mills of Peter Culter, 15th May 1833.

ALEXANDER IRVINE.

Aberdeenshire.  
 Alexander Irvine.

## AYRSHIRE.

### ANSWERS from ARCHIBALD BUCHANAN, Catrine.

- A. 1.—Catrine Cotton Works, the property of Messrs. James Finlay and Co., Glasgow, are situated in the parish of Sorn and county of Ayr.  
 A. 2.—Throstle and mule spinning, weaving by power, bleaching, and finishing.  
 A. 3.—The erection of these works commenced in the year 1786 by the late Claud Alexander Esq., of Ballochmyle, and the late David Dale Esq., of Rosebank by Glasgow, and were carried on under the firm of Messrs. Alexander and Dale till 1801, when the present proprietors purchased them. The erection of the throstle or twist mill therefore commenced in 1786, and up to 1801 they had a good deal of mule-spinning wrought by hand. In 1801 a large addition was built to the mule-spinning factory, which, with the greater part of the old building, was re-constructed for and set to work by power. These works have undergone several alterations and additions, and now contain nine thousand one hundred and eighty

(APP.—A. 1.)

C 4

Ayrshire.  
 No. 11.  
 Arch. Buchanan.

Ayrshire.

*Arch. Buchanan.*

eighty throstle or twist spindles, and sixteen thousand two hundred mule spindles. Weaving by power was commenced in 1806, and the present number of power-looms is four hundred and fourteen, suitable buildings having been provided.

The bleaching and finishing works were erected in 1825, and now afford employment to fifty-five people.

A. 4. The power employed is water, laid upon two water-wheels of fifty feet diameter and eleven feet wide within the shrouding; they turn the whole spinning and weaving, and require about seventy tons of water per minute laid upon a fall of forty-six feet nine inches and a quarter. This is supplied by the river Ayr, an irregular stream, which, with the assistance of reservoirs which have been formed at its source and at the works, has afforded sufficient water power for about eight months of the year, and equal to that of about two hundred horses.

The deficiency in dry seasons is made up by two steam-engines of forty-horses power each, which work in connection with the water-power as required. In the bleaching and finishing work the power is supplied by a steam-engine equal to twenty-five horses.

A. 5.—The only room where any specific ventilation is applied (beyond what is regulated by the windows) is in the first process of opening and cleaning the cotton, which is performed in the attics; these are supplied by large fans of three feet diameter; and the fleu from the cotton being confined to them, it is thrown out from thence at the top of the building, leaving these rooms as free from dust or fleu as any within the works. The external air is supplied by the staircase and windows, and affords a strong continuous current of fresh air through all parts of the building to these fans, as the heated and foul air is displaced.

A. 6. There is a thermometer placed in every room under the charge of the master, who regulates the ventilation.

A. 7.—The ventilation is regulated by the overlookers and foreman, and the degree of heat entered in a book daily.

A. 8.—All the dangerous parts of the machinery are fenced off.

A. 9.—The workpeople have such convenience as they require for washing or change of clothing; they are generally of cleanly habits; the Scotch plaid is much worn, which they wrap round them in coming to or leaving the works in wet or cold weather, especially the females.

A. 10.—Nine years of age. We know of nothing they could be employed at previous to that age beyond household matters and school. No children are admitted into the works till they are acquainted with the elements of the English language, and which is a strong inducement to the parents to have them early at school.

A. 11.—The nature of our work does not necessarily require children under twelve years of age, but it is of the greatest importance to the children themselves and their parents, because in the period from nine to twelve they are trained to the business when they could do little else, which fits them for the more lucrative employments as their strength and fitness are developed.

A. 12.—With us it has reduced the number.

A. 13.—No.

A. 14.—None.

A. 15.—We neither maintain nor lodge any of our people. Eleven orphans under twenty-one years of age are employed under the protection of their relatives and natural guardians.

A. 16.—None besides their masters and relatives.

A. 17.—Twelve, and on Saturday nine hours, with the exception of mechanics and labourers, who work eleven hours for six days in the week.

A. 18.—We strictly conform to the Factory Bill of October 1831.

A. 19.—Twelve and a half when working up lost time, as per the Factory Bill of 1831.

A. 20.—Three hundred and six.

A. 21.—Three thousand five hundred and nineteen.

A. 22.—The works have been carried on in strict conformity to the Factory Bill of 1831, and any casual stoppage of any part has been so trivial as to be unworthy of notice.

A. 23.—Eleven and a half.

A. 24.—Twelve and a half.

A. 25.—In working up lost time in terms of the Factory Bill of 1831.

A. 26.—Not avoidable without a diminution of the people's wages, or loss to the proprietors.

A. 27.—About twenty-five years ago the regular hours of work were twelve and a half per day, or seventy-five hours per week; this was changed to twelve hours per day, or seventy-two per week, partly from a deficiency of water-power, and partly at the request of the workpeople, who generally preferred a diminution of wages to the extent of half an hour per day to longer work.

A. 28.—We do.

A. 29.—The inducement to a manufacturer to work long hours is evidently to get a larger produce from a given sunk capital in buildings, machinery, charges of management, &c., but they cannot work through the nights without an intermediate change of hands, let the law or general understanding of the trade be what they may.

A. 30.—We find an increase in the cost of production from any limitation of produce, and which extends to all branches to the extent of the interest and risk in sunk capital and fixed charges,

charges, independent of wages; and upon reduced produce higher prices must be paid if the people are to enjoy the same comforts.

A. 31.—The objections to this, in our opinion, are very great; first, because a double set of hands could not be collected and sufficiently trained for a series of years; second, supposing a relay of hands under twenty-one years of age could be got, the adults could not be supposed to work above fourteen hours in the day, allowing the least possible time for meals and refreshments, which would only give seven hours work to those under twenty-one, and the produce in that time could not afford more than half the present wages to the younger hands, which would be found totally inadequate to afford the means of support and comforts which that class now enjoy; and, third, since all our people are paid by the piece, we do not see a possibility of distinguishing the produce belonging to each, so as to pay for their individual exertions.

A. 32.—A change of hands for extra hours has never been practised by us, because, in our situation, we deemed it not only unprofitable but impracticable.

A. 33.—We never employed a set of night hands.

A. 35.—We have none.

A. 36.—A prohibition of night-work could do us no harm, never having practised it.

A. 37.—A still further reduction of the working hours would cause a still further reduction of profits and the wages of operatives, without a corresponding advance in the price of the article produced.

A. 38.—The usual temperature in carding, spinning, and weaving rooms is 60° to 70° of Fahrenheit's thermometer; these operations require no more heat than to keep the workers comfortable. In the dressing-room, where the warp-yarn is pacted and brushed in a wet state, a higher temperature is necessary, to get the work done with dispatch, and in this room the temperature is from 80° to 90°.

A. 39.—80° to 90° in the dressing room only.

A. 40.—The number of hands employed in the dressing-room is usually thirty-four; of these eleven are under twenty-one years of age, and are only employed there, being more convenient for master and servant, and we do not find their health injured.

A. 41.—No part of them.

A. 42, 43, 44, & 45.—None.

A. 46.—No.

A. 47, 48, & 49.—We have none such.

A. 50.—By coal gas, when day-light fails in winter.

A. 51.—We have no night-work.

A. 52.—We have none so employed.

A. 53.—The time allowed for meals is according to the Factory Bill of 1831.

A. 54.—All of them do.

A. 55.—They all leave the works, which is found most convenient for both parties.

A. 57.—The means we take is sending them home to their parents, and which is of very rare occurrence.

A. 58.—No corporal punishments are inflicted on any person employed in the works.

A. 59.—If at all, by parents at home.

A. 60 & 61.—No.

A. 62.—We have long specially forbidden such practice.

A. 63.—No other instructions than what are mentioned in answer to query 57, and they were given verbally.

A. 64.—None.

A. 65.—A large proportion of our workers are proprietors of the houses they live in, and these are kept in a high state of order and domestic cleanliness; others rent their houses from the company and feuars in the village, who have built or bought houses there as an investment. The former are greatly to be preferred, but the whole are in very respectable order, and those belonging to the company are looked after by the person who lets the houses and receives the rents. No control is exercised for moral and social improvement, beyond the prospect of their being discharged from the works should they persist in bad habits.

A. 66.—No children are employed in infancy, nor till they are nine years of age, and have acquired something of the elements of the English language. The difference of those employed at an early period and those taken in at later periods is about equal to those who have had the advantage of an early education, when compared to those who have received it in after life. All the overlookers and those who have grown up in the works can be adduced as instances.

A. 67.—During the last ten years we cannot mark any very decided improvement in the health of our people; their circumstances are, however, gradually becoming more comfortable, and many of them are saving money. On the 31st December last the people connected with the works had above 2,000*l.* at their credit with the company.

A. 68.—Our people are at liberty to change their employment at the end of every week, and to go to any room within the establishment where the master of that room can employ them, upon giving six days previous notice to the master they leave. All who come under the Factory Bill are paid by piece work, with the exception of learners and spare hands to supply any vacancy that may occur, from the master down to the person who sweeps the floor, both inclusive, and it is equally his interest to keep good hands as it is theirs to have a good master.

A. 69.—Our factories are subject and conform to the present Act.

(APP.—A. 1.)

D

A. 70.

Ayrshire.

Arch. Buchanan.

Ayrshire.

Arch. Buchanan.

- A. 70.—Never.
- A. 71.—Neither the one nor the other.
- A. 72.—We have none to state.
- A. 73.—We have no mills or factories in our neighbourhood; there are none of any consequence nearer than Glasgow, a distance of thirty-four miles.
- A. 74.—We do not know.
- A. 75.—Not to our knowledge.
- A. 76.—We have no information as to that.
- A. 77.—Not in the least with us, upon cause being shown.
- A. 78.—We can suggest nothing beyond the self-interest of the parties, which, when well considered, ought to be sufficient in all cases.
- A. 79.—Any further observations that we might suggest could not fail of appearing invidious, as applying more to other works than our own. Should it, however, be judged necessary to regulate the hours of labour, we are of opinion that could be most conveniently done by stopping the moving power, whether water or steam, at a given time in each day, and after having wrought the established hours, under a heavy penalty to those who exceed. This done, the time for meals may be left to the convenience of parties, the employer and the employed; if the meal hours were short, the works would be dismissed so much the sooner; and all circumstances considered, we are of opinion the twelve hours work in the day will be found the best for all parties, as well as the interests of the country; for it must be evident that, if we cannot produce our goods at or under the rates of our competitors, the trade will gradually leave us, and the most extensive branch of our manufacturing labour will ultimately be transferred to foreign countries, and lost to this nation.

Catrine, 4th June 1833.

ARCHIBALD BUCHANAN.

## BUTE.

Bute.

No. 12.

Robert Thom.

## ANSWERS of ROBERT THOM, Acting Resident Partner, Rothesay.

- A. 1.—Rothesay, county of Bute.
- A. 2.—Cotton-spinning.
- A. 3.—The first cotton yarn produced by machinery in Scotland was spun here in 1778 or 1779 in a small mill now turned into dwelling houses. What is now called the old mill was erected in a year or two afterward, and what is called the new mill was built in 1791.
- A. 4.—Water power, estimated at from fifty to sixty horses. Up to 1824 the power was very irregular, and had to be assisted by steam-engines during very dry seasons. In that year improvements in the mode of collecting water, &c. were completed, and the power has since been pretty regular, except in very long droughts.
- A. 5.—Yes.
- A. 6.—By opening windows, or the panes of windows made to open for this purpose.
- A. 7.—It is controlled at the discretion of all or of any of the persons employed.
- A. 8.—Yes.
- A. 9.—No person of dirty or irregular habits is taken into or allowed to remain in the works. Any of them may if they choose throw off or put on additional clothes on entering or leaving the works, but the climate here being so mild and uniform it is seldom necessary.
- A. 10.—None are employed under nine years of age, and very few under ten.
- A. 11 & 12.—The nature of the work requires a number of children under twelve years of age, and the machinery has been purposely made to employ such children, there being many poor widows with small families in the place, in consequence of the fathers being lost at sea and otherwise, who if not so employed would be destitute, but are thus enabled to live in comparative comfort.
- A. 13.—We occasionally teach boys to make machinery, but they are never bound apprentices.
- A. 15.—All the children employed are lodged and maintained by their parents or natural guardians.
- A. 17 & 18. The usual number of hours for all persons employed are twelve daily for five days in the week, and nine on Saturdays.
- A. 19.—Twelve hours.
- A. 20.—Two hundred and fifty-four days of twelve hours each, fifty-two days of nine hours each, and one day of eight hours and a quarter.
- A. 21.—Three thousand five hundred and twenty-four hours and a quarter.
- A. 22.—All carried on at the same time.
- A. 23.—The average of the hours for each day the works were kept going during the year is eleven hours twenty-eight minutes forty-six seconds; but there were the fifty-two Sundays and other six holidays in which no work was done; if those were included the average would only be nine hours thirty-nine minutes twenty seconds.
- A. 24.—Twelve hours.
- A. 25 & 26.—Not exceeded.
- A. 27.—Previous to the last Act of Parliament regulating the hours the works were kept going three hours in the week longer than at present.

A. 28.

A. 28.—In this case the wages were reduced in proportion to the time, but the cost of production was still enhanced by the interest of capital, insurance, and several other charges remaining the same on the smaller quantity now produced as was on the larger quantity formerly. This to a work such as ours, if the time be shortened one hour daily, would amount to an annual loss of 300*l.*, supposing the business to yield no profit beyond interest on the capital; should there be profit beyond this, then one twelfth of it would have to be added to the 300*l.* to show the total amount of loss occasioned to the proprietors by working one hour in the day shorter; the workpeople would at the same time lose about 600*l.* a year.

A. 29.—The inducement is to avoid the loss just stated above.

A. 30.—Answered partly in 28; but it may be added that to shorten or limit the hours one sixth part would increase the cost of production fully one fourth part.

A. 31.—The objection to relays or fresh sets of children for extra hours is, that they cannot be had without paying as much for a few extra hours as for the whole day, and the business cannot afford this; besides, two sets of hands injure the machinery by taking away individual responsibility; but we do not ask nor wish to work any longer hours on any occasion than at present.

A. 32.—It was tried by the subscriber, though not at Rothesay mills, and found as stated in A. 31.

A. 34.—I do not conceive it to be the interest of the proprietors of respectable works generally to work over night, or employ more than one set of hands, for the reasons stated in A. 31; but it is sometimes done when profits are great (which has not been the case for many years past), or by individuals in desperate circumstances.

A. 35.—We have but one set of hands.

A. 36.—None.

A. 37.—That it would be productive of much misery to the workers in the first place, and ultimately remove the trade to other countries where living is cheaper, taxes less, and where no such vexatious restrictions exist. It would in fact amount to a bounty to the foreign manufacturer, at the expence of the trade here. Were the competition confined to this country, there might be a reasonable hope that by lessening the production the price of the manufactured article would rise; but as a great part of the cotton yarn now spun in this country has to meet the competition of foreigners in foreign markets, as these foreigners already compete with us so successfully that for several years we can hardly realize prime cost, it seems clear that either the workers wages would have to be reduced, so that the yarn should not cost more than at present, or the trade given up to foreigners. Factory hands have heretofore been enabled, not only to live with comparative comfort themselves, but to help to relieve the distress of others; but were the Ten Hour Bill to pass, they would be plunged into the same poverty and misery as the hand-loom weavers, and their numbers being so great it is painful to contemplate the probable consequences. Not only would corn laws be then out of the question, but what property could be considered safe with a whole population reduced to desperation and beggary?

A. 38.—From 68° to 70° Fahrenheit.

A. 39.—70° of Fahrenheit.

A. 41.—No night-work.

A. 42, 43, 44, 45 & 46.—None.

A. 47.—No process carried on longer than twelve hours daily.

A. 49.—Not continued.

A. 50.—By gas in winter evenings and mornings.

A. 52.—No night work.

A. 53.—Three quarters of an hour to breakfast at nine, and the same to dinner at two.

A. 54.—All take their meals at home.

A. 57.—If they refuse orders, they are sent home to their parents or natural guardians.

A. 58.—No; the standing order is, that any person striking another in the work is dismissed.

A. 60 & 61.—No.

A. 62.—Yes.

A. 64.—Never any, though the subscriber has conducted such works for more than thirty years.

A. 65.—The workpeople live in whatever houses they please. The children are taught reading, writing, and arithmetic in an evening school at the mill at the expence of the proprietors, and no bad character is taken into or allowed to remain in the works. The same rule applies to cleanliness. (See query 9th.)

A. 66.—There is no marked difference observable; if there be a difference it is rather in favour of those who enter the work when young, whether in regard to health, activity, or education.

A. 67.—We are not sensible of any difference; the workpeople with us have always been and still continue to be healthy, as compared to any other of the working classes.

A. 68.—No; we do not find it necessary.

A. 69.—It is.

A. 70, 71, & 72.—No.

A. 73.—There are no other mills in Bute, save a small weaving-mill, and for any thing we know it conforms to the Act.

A. 74, 75, & 76.—Not to our knowledge.

(APP.—A. 1.)

D 2

A. 77.

Bute.

*Robert Thom.*

A. 77.—I have no reason to think so. The workpeople generally are of an independent spirit.

A. 78.—I am not aware of the provisions of the present Act being infringed in this country, and in as far as my personal observation goes, public opinion alone is now sufficient to protect the children or other workpeople. No one really using them ill would be able to obtain workers here.

A. 79.—In my opinion, all that is necessary to insure good usage to workers, young and old, would be for government to appoint a few respectable and independent men, in whom the public would have confidence, to inspect all works large and small, once a year or so, and publish the result. The public feeling is hostile to all vexatious restrictions on trade, and hence, probably, the want of informations against those who have infringed the present Act; but if individuals offending against humanity were held up to public notice, it would soon compel them to give up such conduct. Those offending might be fined, to pay the expence of such inspections.

ROBERT THOM, Acting Resident Partner.

## CLACKMANANSHIRE.

Clackmananshire.

No. 13.

*William Archibald.*

## ANSWERS of WILLIAM ARCHIBALD, Keillers Brae, Alloa.

- A. 1.—Keillers Brae, parish of Alloa, county of Clackmanan.  
 A. 2.—Blankets and worsteds.  
 A. 3.—Twenty years since first erected, and enlarged in 1824 and 1831.  
 A. 4.—Water power; regular, excepting in dry seasons; in such cases without water altogether, being supplied from a reservoir; six-horse power.  
 A. 5.—None.  
 A. 6.—By opening doors.  
 A. 7.—By all.  
 A. 8.—What is considered dangerous parts are fenced off.  
 A. 9.—None.  
 A. 10.—Nine years of age, and mine their first employment.  
 A. 11.—In the piecing department I require children under twelve years of age, as the girls generally leave from twelve to fourteen, and the boys likewise, unless they become apprentices.  
 A. 12.—No difference.  
 A. 13.—Yes.  
 A. 14.—None from parishes.  
 A. 15.—None are lodged with me; all are under the charge of their parents and guardians.  
 A. 16.—A foreman.  
 A. 17.—Eleven hours a day.  
 A. 18.—Eleven hours a day; no difference as to age.  
 A. 19.—Nineteen hours.  
 A. 20.—Three hundred and four days.  
 A. 21.—Three thousand eight hundred and twenty-four hours.  
 A. 22.—Carried on at the time.  
 A. 23 & 24.—Eleven hours.  
 A. 25.—Never exceeded by the same set of workers.  
 A. 26.—I consider this avoidable.  
 A. 27.—Not more than half an hour.  
 A. 28.—No.  
 A. 29.—A little more gain to the employer.  
 A. 30.—No, not having tried it.  
 A. 31.—I have no objection.  
 A. 32.—I have tried it, and found it to answer.  
 A. 33.—Yes; night set from three to nine o'clock A.M., and day set from nine o'clock A. M. to ten P.M.  
 A. 34.—I never resort to night-work but when I cannot fill up my orders with one set of hands during the day.  
 A. 36.—I would consider not to affect me at all.  
 A. 37.—A little less gain to the master. I consider ten hours labour for children quite sufficient, being convinced from personal experience, having had fatherless children sent from necessity whose means were unable to provide them with the necessary support, and consequently unable to undergo long fatigue; and more, long hours deprives factory children of all education.  
 A. 38.—About sixty degrees.  
 A. 39.—Not particular.  
 A. 41.—Sixty times in ten weeks.  
 A. 42 & 44.—Four.  
 A. 46. None.

A. 50.

- A. 50.—Gas.  
 A. 51.—None.  
 A. 52.—Generally very sleepy.  
 A. 53.—Two hours each day.  
 A. 54.—All leave if they please.  
 A. 57.—Advised to avoid mistakes in future, and if not attended to dismissed.  
 A. 58.—No, none.  
 A. 60 & 61.—No.  
 A. 62.—Yes.  
 A. 63.—No.  
 A. 64.—None.  
 A. 65.—The workpeople live in their own houses.  
 A. 66.—I have observed no difference.  
 A. 67.—I know no difference.  
 A. 68.—None.  
 A. 69.—I never saw a copy of the Act.  
 A. 70.—Never.  
 A. 71. & 77.—No.  
 A. 79.—I trust the Factory Bill introduced into parliament will speedily pass into law.

WILLIAM ARCHIBALD.

Clackmananshire.  
 William Archibald.

ANSWERS of ALEXANDER PATON Manager, and T. JOHN PATON Manufacturer,  
 Clackmanan.

No. 14.  
 Alexander Paton  
 and  
 T. J. Paton.

- A. 1.—The parish and town of Alloa in the county of Clackmanan.  
 A. 2.—Stocking yarns.  
 A. 3.—The works were first erected in 1812, and enlarged in 1819, and were first employed for their present purpose in 1814.  
 A. 4.—Water power is employed. The power may be estimated at ten horses during the greater part of the year, but in a very dry summer the power is diminished one half; and when the drought is very great and long continued, the stream has been dried up for two or three weeks together.  
 A. 5.—There is no distinct apparatus for ventilation.  
 A. 6.—The windows and doors are opened at the pleasure of the workers.  
 A. 7.—Controlled at the discretion of all.  
 A. 8.—Every part of the machinery which is considered dangerous is fenced.  
 A. 9.—As the heat of the works is regulated for the comfort of the workers, no additional clothing is necessary on leaving the works; and the nature of the employment is such that washing in the course of the day is unnecessary.  
 A. 10.—Nine years is the lowest age at which children are employed. None of them has been employed at any other trade.  
 A. 11.—Ten years is preferable to twelve. Were children not admitted under twelve years of age, it would be of great disadvantage to the manufacturer, because a long time is spent in teaching them, and in a very short time they must be advanced to the higher branches for which their years qualify them; and that, remaining a short time at the work at present done by children, it would be very imperfectly performed; and then parents are, in general, too poor to provide for them till they are twelve years of age.  
 A. 12.—A greater proportion, though in a small degree.  
 A. 13.—Yes.  
 A. 14.—None are apprenticed from parishes.  
 A. 15.—None of the children are lodged or maintained. There is only one orphan.  
 A. 16.—They are all under the care of their parents or natural guardians.  
 A. 17.—Eleven hours a day.  
 A. 18.—Young and old work eleven hours a day.  
 A. 19.—Thirteen hours.  
 A. 20.—Three hundred and three days.  
 A. 21.—Three thousand three hundred and sixty-nine.  
 A. 22.—The whole is carried on together.  
 A. 23.—Eleven hours seven minutes, counting working days.  
 A. 24.—Thirteen hours.  
 A. 25.—During the months of November and December, when the demand for goods was very brisk.  
 A. 26.—It is avoidable, with a certain loss to the manufacturer.  
 A. 27.—Never.  
 A. 28.—No reduction of hours has taken place, unless during bad trade; and the expence of manufacturing in these circumstances is greatly increased.  
 A. 29.—The children are never wrought more than two hours extra, and it would be impossible to find others to fill their places during two hours each day; and when the works are continued during the night a change of hands is uniformly made.  
 A. 30.—There is, first, the loss on the fixed capital vested in the trade; and if the hours

Clackmananshire.

Alexander Paton  
and  
T. J. Paton.

are much shortened it might be impossible to execute certain orders within the time specified, as many articles cannot be made till the orders are received.

A. 31.—Children cannot be got to work a short time each day.

A. 32.—It has never been tried, because the children never work more than two hours extra.

A. 33.—No night set has been employed.

A. 34 & 35.—There is only one set of hands kept.

A. 36.—It would prevent the market being overstocked with goods, would equalize the competition between manufacturers, and would contribute greatly to the comfort of the workers. Night-work is injurious to the whole trade.

A. 37.—Were the hours reduced below ten or eleven, it would greatly increase the expence of manufacture, would lower the wages of workers, and, instead of improving their morals, would have an opposite effect.

A. 38, 39, & 40.—No particular temperature is required for any of the processes.

A. 41, 42, 43, 44, & 45.—At no time were they worked during the night.

A. 46, 47, 48, & 49.—None.

A. 50.—With gas.

A. 51.—There is no other provision than the opening of windows and doors.

A. 52.—Generally destructive to health, and must induce irregular habits.

A. 53.—Young and old have one hour for breakfast and one hour for dinner.

A. 54, 55, & 56.—All leave them at meal-times.

A. 57.—When the children repeatedly refuse to submit to the regulations of the work they are turned off.

A. 58, 59, 60, & 61.—No.

A. 62.—Yes.

A. 63.—No instructions farther than to dismiss them when they do not obey.

A. 64.—No complaints lodged.

A. 65.—All the workpeople live in their own houses.

A. 66.—All have been employed from infancy.

A. 67.—Ever since the introduction of the woollen trade here the people employed at it have been considered as healthy as any other class of mechanics, as during the prevalence of any epidemic there are proportionably few of them affected. The cause may be the extreme regularity of their labour, none of it being oppressive. The apartments are large, compared with the number of workers. The atmosphere is not deteriorated by any dust or noxious vapour.

A. 68.—As no process is injurious that is unnecessary.

A. 69.—It is not subject.

A. 70, 71, & 72.—Never.

A. 73.—So far as I know, they do.

A. 74, 75, & 76.—Not to my knowledge.

A. 77.—I believe they are not.

ALEXANDER PATON, Manager.  
T. JOHN PATON, Manufacturer.

No. 15.

John Archibald.

ANSWERS of JOHN ARCHIBALD and SONS, Menstree by Stirling.

A. 1.—Our work is in the parish of Logie and county of Clackmanan.

A. 2.—Yarns, Scotch blankets, pladens, and shawls.

A. 3.—The west part of the factory was built in the year 1800, and the east part in 1810, and used for manufacturing yarns, blankets, &c. immediately after being built.

A. 4.—We employ steam and water power. The latter is irregular, and does not average more than half power for turning our machinery. The power is ten horses.

A. 5.—Yes; but it does little good.

A. 6.—It depends on opening two squares in a few of the windows of the west part of the factory which have hinges for the purpose of opening.

A. 7.—It is at the discretion of all.

A. 8.—The most dangerous parts of our work are fenced off.

A. 9.—None.

A. 10.—Nine years of age, and none of them have been employed at any other trade.

A. 11.—No.

A. 12.—No difference.

A. 13.—Yes.

A. 14.—None from parishes.

A. 15.—We have no orphans in our work; all the children in our work live with their parents.

A. 17.—Eleven hours and a half per day.

A. 18.—All persons in our employ work eleven hours and a half per day.

A. 19.—Twenty-two hours.

A. 20.—About three hundred.

A. 21.—We do not know.

A. 22.—All are carried on at the same time.

A. 23.

- A. 23.—About eleven hours and three quarters per day.  
 A. 24.—Thirteen hours and a half per day.  
 A. 25.—When we exceed the regular hours it is in the autumn and winter months, when we have an extra demand for goods.  
 A. 27.—No.  
 A. 29.—The only inducement we have to work extra hours are to supply an extra demand, and serve our merchants with goods, which they rely on us to manufacture with as little delay as possible.  
 A. 30.—Yes; the diminution of hours in our factory will increase the cost of production in proportion to the reduction from the present hours.  
 A. 31.—We have no objection.  
 A. 32.—A system of relays has not been tried, because we cannot get a fresh set of children for a few hours without paying them full wages for a day's work.  
 A. 33.—Yes; one set commences at one o'clock A.M. and continues until one o'clock P.M., then they are relieved by the other set, who works till one o'clock A.M., and so on.  
 A. 34.—The reasons why we conceive it to be our interest to work more than one set of hands are to serve the merchants who depend on us for goods, and who would send their orders elsewhere were they not attended to without delay.  
 A. 35.—They change periodically with the day set.  
 A. 36.—It would at times disappoint some of our merchants.  
 A. 37.—It would make us less able to compete with foreign manufacturers, and ultimately to a reduction in wages.  
 A. 38.—The usual temperature of our work is 65° Fahrenheit, and the lowest temperature at which we can conduct our work without disadvantage is 55°.  
 A. 39.—65° is the highest temperature required.  
 A. 40.—All our hands.  
 A. 41.—Once.  
 A. 42.—Fourteen children.  
 A. 43.—During one half of the night, and then relieved by another set of hands.  
 A. 44.—Seven children.  
 A. 45.—One shift commences at one o'clock A.M. and continues till P.M.  
 A. 46.—No.  
 A. 50.—Our works are lighted with gas.  
 A. 51.—The opening of squares of a window on opening the door.  
 A. 52.—We never observed any alteration in the habits of children in our factory produced by night work.  
 A. 53.—All our hands go to breakfast at nine o'clock and return at ten, and go to dinner at two and return at three o'clock.  
 A. 54.—All leave at meal-times.  
 A. 57.—We have no particular means to enforce obedience.  
 A. 58.—Yes.  
 A. 59.—By overlookers.  
 A. 60.—Yes.  
 A. 61.—With both.  
 A. 62.—We never forbade corporal punishment, nor took steps for its prevention.  
 A. 63.—No instructions have been given.  
 A. 64.—No.  
 A. 65.—None of the workpeople live in our houses, neither have we control for their moral or social improvements, or arrangements made for their cleanliness.  
 A. 66.—Those who have been from their infancy in our factory are in general better skilled in these works than those employed at latter periods, but little or no difference in their general character.  
 A. 67.—No difference.  
 A. 68.—No.  
 A. 69.—We are not acquainted with the provisions of the present Act.  
 A. 70, 71, 78, & 79.—No.

Clackmananshire.

*John Archibald.*

JOHN ARCHIBALD and SONS.

## ANSWERS of ROBERT ARCHIBALD and WILLIAM ARCHIBALD.

No. 16.

Robert Archibald  
and  
William Archibald.

- A. 1.—Tillicoultry parish, in the county of Clackmanan.  
 A. 2.—Woollen factory; carding, spinning, weaving, and dyeing.  
 A. 3.—The work has been erected at different times. I bought it in 1817, and I built an addition in 1821, and another addition in 1826; it was first employed as a waulk-mill in the year 1796.  
 A. 4.—The power is employed by water, irregular; eight months in the year plenty of water, and four months in the year scarcity of water; when the water is plenty seven-horse power, when light four-horse power.  
 A. 5.—There is a good ventilation in the factory, and has good effects.  
 A. 6.—Some of the windows open in the middle, and some of the windows open with iron panes; can open and shut at pleasure.  
 (APP.—A. 1.)

D 4

A. 7.

Clackmananshire.

Robert Archibald  
and  
William Archibald.

- A. 7.—The ventilation is controlled at the discretion of all.
- A. 8.—The dangerous parts of the machinery are fenced off.
- A. 9.—I have no arrangement for washing or changing clothes at my factory, and do not require it in this place.
- A. 10.—Nine years of age.
- A. 11.—Yes; I find them answering very well.
- A. 12.—The recent alterations in machinery has caused more children to be employed, but at about twelve years of age.
- A. 13.—Yes.
- A. 14.—From Logie parish, sent from their parents.
- A. 15.—The children I employ all lodge with their parents.
- A. 16.—No.
- A. 17.—In summer each day, except Saturdays, eleven hours; in winter twelve hours. All the Saturdays in the year ten hours.
- A. 18.—There is no difference in the number of hours under twenty-one years of age. There is no difference at any age from nine and upwards.
- A. 19.—Fourteen hours.
- A. 20 & 21.—I do not know.
- A. 22.—The different parts of the works have been carried on at different times during the same day, but I cannot specify the times during which each department has been carried on.
- A. 23.—In summer eleven hours, except Saturday, ten hours; in winter twelve hours, except Saturdays, ten hours.
- A. 24.—Fourteen hours.
- A. 25.—In the month of November or December the demand was for yarn.
- A. 26.—I consider this or any excess beyond the regular hours of work avoidable.
- A. 27.—No.
- A. 29.—I am not certain upon this point.
- A. 30.—No.
- A. 31.—No objection.
- A. 32.—I tried a system of relays in the employment of children about fourteen years ago; I believe I only tried the experiment for about two weeks in all.
- A. 33.—I have employed a night set of hands as well as a day set, but I do not now remember how their work was arranged.
- A. 34.—I now work my factory with one set of hands.
- A. 36.—The demand would be more in general.
- A. 37.—I believe the children would be better educated by means of attending a night school, if the work was stopped at seven o'clock in the evening; then the children can get about two hours and a half of education each night before they go to bed.
- A. 38.—On the 21st May 1833 I have a very fine temperature in the different parts of my factory; it is on average 60° while at work. I have not tried the experiment of the lowest temperature of the work; but the woollen requires a good warm temperature in winter.
- A. 39.—Sixty degrees is sufficient.
- A. 40.—No more hands than ordinary times.
- A. 41.—No night further than ten o'clock.
- A. 42.—No children employed after ten o'clock.
- A. 43 & 44.—None after ten o'clock.
- A. 45.—No hours after ten o'clock.
- A. 46.—No.
- A. 50.—By candle and oil.
- A. 51.—There is good openings in the windows for ventilations at evenings and mornings.
- A. 52.—I have no night work at present.
- A. 53.—They are allowed one hour, from nine to ten o'clock morning, to breakfast, and one hour, from one to two, to dinner. The weavers are allowed a few minutes to take tea, &c. The children are allowed to go out between four and five o'clock to take a refreshment; but the machinery is kept going on, and the children assist one another when they go their turn, and the spinners are allowed to take a refreshment about five o'clock.
- A. 54.—They all go out at breakfast and dinner; but those who work at the machinery between four and five o'clock afternoon do not at all at once go out and take their refreshment, as the machinery is going on.
- A. 55.—This practice is adopted for the convenience of the manufactory.
- A. 56.—I cannot say what would be the effect in large towns; but could desire no alteration in the meals taken by the persons in this village.
- A. 57.—They are punished sometimes by the overlookers with the palms of their hands, or with a belt; but when the crime is grievous a penalty is laid on them, and when the crime is very grievous they have been put away from the work for it.
- A. 58.—Yes.
- A. 59.—By overlookers.
- A. 60, 61, & 62.—Yes.
- A. 63.—Yes. The instructions are given verbally, such as I allude to in my answer to the 57th query.
- A. 64.—No.

A. 65.—None except one family. I have desired my employers to keep order, but I have made no arrangement to enforce domestic cleanliness, as I never saw it required.

A. 66.—Those that I employ to be weavers, who have been engaged in infancy, or who have been a number of years at the mill with me, are the best tradesmen by far than those who I have employed at a later period, such as James Young.

A. 67.—My employers are healthy. Some of my employers have been sent into work when they were weakly, and they have improved in health. I believe it is from the oil and wool.

A. 68.—No.

A. 69.—I do not know what are the provisions of the present Act.

A. 70 & 71.—No.

A. 75.—I do not know; never heard of any.

A. 77.—I never had the experiment of it.

A. 78.—No. But I think it would be better if there was a legislative provision for regulating the hour of labour, say from six o'clock in the morning to nine, then one hour for breakfast, then work from ten to two o'clock, then take one hour for dinner, then commence at three and work till seven o'clock in the evening; that is eleven hours per day, and on Saturday ten working hours.

A. 79.—No.

23d May 1833.

ROBERT ARCHIBALD.  
WILLIAM ARCHIBALD.

Clackmananshire.

Robert Archibald  
and  
William Archibald.

#### ANSWERS of JAMES DAWSON, Woollen Manufacturer, Tillicoultry.

No. 17.

James Dawson.

A. 1.—Parish of Tillicoultry and county of Clackmanan.

A. 2.—Manufacturing of blankets, plaidings, and tartan shawls.

A. 3.—Erected in the year 1821.

A. 4.—A water-wheel of about seven or eight horse power.

A. 5.—The works are ventilated at the discretion of the worker, by opening doors and windows to suit their own comfort.

A. 8.—Yes.

A. 9.—None.

A. 10.—I am not aware of having children under nine years of age. I am not aware of their being previously at any other trades.

A. 11.—Yes; because the work is easy, and they can do it as well at nine or ten as at twelve years of age.

A. 12.—As far as I am concerned, it has not.

A. 13.—Yes.

A. 14.—Tillicoultry, and under the care of their parents.

A. 15.—I lodge and maintain none.

A. 16.—Foreman.

A. 17.—Eleven hours in summer and twelve in winter; but no lost time from stoppages by machinery going wrong, and only ten hours on the Saturdays.

A. 18.—The same as the last, as the one cannot get on without the other.

A. 19.—Never exceeds twelve hours.

A. 20.—Every lawful day, except stopped by machinery going wrong or repaired, of which no account has been kept.

A. 21.—Not exceeding three thousand three hundred and fifty hours.

A. 22.—All parts are carried on at the same time.

A. 25.—Night-work three months in the year 1822; ditto 1825, three months; ditto 1826, three months; ditto 1828, not exceeding twelve months in eleven years.

A. 26.—Consider this avoidable.

A. 27.—Never.

A. 29.—I do not do this, nor am I aware of it being done in the woollen trade.

A. 30.—I am not aware of any restriction on the woollen manufacturer.

A. 31.—If required, there should be none.

A. 32.—Seldom work extra hours except when a night set is wanted.

A. 33.—Have employed a night set of hands as well as a day set. Commence with the night set at seven o'clock, and drop work at six in the morning, allowing one hour for refreshment out of the above betwixt twelve and one. Commence with the day set at six in the morning, and drop work at seven in the evening, allowing two hours for meals.

A. 34.—I require two sets of hands when working all night.

A. 35.—They change periodically with the day set.

A. 36.—The effect would be a less quantity of goods manufactured, and the receivable markets not so much glutted.

A. 37.—A diminution of workmen's wages, and the quantity produced by the same machinery stopped, in consequence of which the cost enhanced, thereby rendering it more difficult to compete in foreign markets.

(APP.—A. 1.)

E

A. 38.

Clackmananshire.

*James Dawson.*

A. 38.—In winter, requires heat for the comfort of the workers only, in summer have no heat but the common air.

A. 39.—No process of the kind.

A. 40 & 41.—None.

A. 42.—Five, sometimes six.

A. 46.—None.

A. 49.—Have none.

A. 50.—With oil and candles.

A. 52.—Injurious to general health.

A. 53.—Nine to ten for breakfast, one to two for dinner.

A. 54.—All at the same time.

A. 57.—If gentle correction does not do, they are turned off.

A. 58.—None but what is included in the above.

A. 59.—What is allowed them is by the men for whom they work.

A. 60.—Never by my orders.

A. 63.—None; but if they would not do their work, I would turn them off.

A. 64.—Never.

A. 65.—The workpeople live either in their own or friends houses.

A. 66.—It is reasonable to suppose that those employed in a manufactory from infancy should be better skilled in machinery than those going into one after up in years; this, however, depends upon the intellect of the individual.

A. 67.—The workpeople in woollen factories generally enjoy good health; I cannot say there is any difference.

A. 68.—I have no process of the kind.

A. 69.—If it be, I am not aware.

A. 70.—The following queries are unnecessary to answer. I may however state, I am not aware of any of the children in my mill, or in any other woollen factory with which I am acquainted, being any thing but well treated.

22d May 1833.

JAMES DAWSON.

No. 18.

*James Paton.*

## ANSWERS of JAMES PATON, Tillicoultry.

A. 1.—Parish of Tillicoultry, county of Clackmanan.

A. 2.—Carding, slubbing, spinning, and weaving; the goods finished are soft tartan shawls, blankets, and twilled flannels.

A. 3.—Our work was erected in 1825, and has been employed in the manufactory of woollen goods ever since.

A. 4.—Water is the power employed, and is generally irregular during four months in summer; ten horse is the extent of power, and in severe drought decreases so low as four horse.

A. 5.—The ventilation depends on the opening of doors and windows, which is at the discretion of all or any of the workmen.

A. 8.—Yes.

A. 9.—As no heat is required for the factory, change of clothes, either on entering or leaving the factory, is unnecessary. All the workers live out of the factory, and pay particular attention to their own cleanliness.

A. 10.—Nine years old is the lowest age at which we employ children. None of them have been previously employed at any other trade.

A. 11.—No.

A. 12.—The recent alterations in machinery have rendered necessary the employment of a greater number of children, but not under twelve years of age.

A. 13.—Yes.

A. 14.—No.

A. 15.—We lodge and maintain no children.

A. 17.—Such persons work eleven hours each day when the trade is slack, which is generally about six months in the year; and when busy twelve hours, with the exception of Saturdays, which is never more than ten hours.

A. 18.—As the work of one person in most cases depends on another, all employed work the same hours.

A. 19.—One spinning-frame was kept on for twelve days seventeen hours each day, with a change of hands.

A. 20.—Three hundred days.

A. 21.—About thirty-three hundred and seventy-five hours.

A. 22.—All the different departments usually go on together.

A. 23.—Eleven and one-fourth hours.

A. 24.—Four children were employed twelve days fourteen hours each day.

A. 25.—The spinners were not able to keep up with the slubbers, which was the cause of the extra hours.

A. 26.—Avoidable.

A. 27.

A. 27.—No.

A. 29.—We know of no inducement.

A. 30.—The cost of production is increased from the limitation of hours, the interest of capital expended on building and machinery being the same when a less quantity is produced as when a greater.

A. 31.—We know of no objection to a fresh set of children when the extra hours required are to any extent.

A. 32.—Have seldom required extra hours to any extent; but when resorted to have always employed a change of hands, and found it answer well enough.

A. 33.—No.

A. 36.—We conceive a prohibition of night-work would be an advantage to the trade.

A. 37.—The effect of a still further reduction of the working hours would be an increase of value in the manufactured article.

A. 38.—Our manufacture requires no heat in summer, and only as much in winter as keeps the workers comfortable.

A. 41.—At no time during the whole night.

A. 46.—None.

A. 50.—With oil, but are preparing for gas.

A. 51.—Doors and windows.

A. 53.—To adults, one hour to breakfast and one hour to dinner; to children, fifty minutes to breakfast, and one hour to dinner.

A. 54.—All leave at meal-times.

A. 57.—Our instructions to the workmen with whom the children work are to turn them away in case of disobedience, and use no punishment.

A. 60.—In cases of great carelessness, mischievousness, or bad conduct, the persons with whom the children work have been provoked to use corporal punishment, which we have always discountenanced.

A. 61.—None.

A. 62.—We have.

A. 64.—No.

A. 65.—The workpeople live in their own houses.

A. 66.—We know of no difference.

A. 67.—We cannot say that the health of the workers has either improved or deteriorated, only we have always been told by the parents of the children that if the children were delicate before they came to the factory their health very soon improved.

A. 68.—None, all processes being alike healthy.

A. 69.—Our opinion is that it is not.

A. 70.—No.

A. 73.—The mills in our neighbourhood we think not subject to the provisions of the Act.

A. 77.—No.

A. 78 & 79.—None.

JAMES PATON.

Clackmananshire.

James Paton.

#### ANSWERS of J. and G. WALKER, Tillicoultry.

No. 19.

J. & G. Walker.

A. 1.—In the parish of Tillicoultry and county of Clackmanan.

A. 2.—Manufacturing blankets, plaidens, and tartan shawls.

A. 3.—Erected in the year 1824; no alteration in building since.

A. 4.—Water is the power employed, and estimated about eight horses power; not very regular.

A. 5.—The work is ventilated; at the discretion of workers, by opening the doors to suit their own comfort.

A. 6.—We consider the above method quite sufficient.

A. 7.—Left entirely to the workers own discretion.

A. 8.—Yes.

A. 9.—None; we consider it unnecessary, as their houses are quite at hand.

A. 10.—Seldom under nine years of age, and none of them have been at any other trade.

A. 11.—Yes, because the work is easy, and they can do it as well at nine or ten years of age as at twelve.

A. 12.—As far as we are concerned, it does not.

A. 13.—Yes.

A. 14.—None from parishes.

A. 15.—The children whom we employ do belong to the village, and are always under the care of their parents at meal-times and during the night.

A. 16.—Every four children have a superintendent, besides their master, while at work.

A. 17.—The usual number of hours each day are eleven and a half.

A. 18.—The same as the last, as the one cannot get on without the other.

A. 19.—We never kept a correct statement as to that.

(APP.—A. 1.)

E 2

A. 20.

Clackmananshire.

*J. & G. Walker.*

A. 20.—We may have stopped about fourteen lawful days during the last year, from repairs and other incidents.

A. 21.—Can be calculated from the above statement.

A. 22.—All parts are carried on at the same time.

A. 23.—About eleven hours and a quarter per day.

A. 24.—Twelve hours.

A. 25.—In the summer season, when we are scarce of water.

A. 26.—Not avoidable. (See A. 25.)

A. 27.—Much the same as at present.

A. 29.—Nothing of the kind done by us.

A. 30.—We cannot answer that from experience, as our hours are always about the same.

A. 31.—For our part, we can see no objection to fresh sets of children where extra hours are required.

A. 32.—We have tried a system of relays on very rare occasions, but never found any satisfaction from it, for during the night season the work is seldom as well done.

A. 34.—We do not require more than one set of hands.

A. 35.—We have no night-work.

A. 36.—The machinery would last considerably longer.

A. 37.—We are of opinion that the present hours do well enough, as any fewer would diminish the earnings of the workers.

A. 38.—In winter, heated for the comfort of the workers, and in summer the usual temperature of the atmosphere.

A. 40, 41, 42, 43, 44, 45, & 46.—None.

A. 50.—With oil.

A. 51.—No night-work.

A. 52.—None employed.

A. 53.—Breakfast from nine to ten, and from one to two for dinner, and half an hour allowed at five for tea.

A. 54.—All, with the exception of the foreman and two children.

A. 55.—For the convenience of the manufacturer.

A. 56.—Our workers go all to their own houses.

A. 57.—If a gentle correction proves ineffectual they are turned off.

A. 58.—No corporal punishments.

A. 62.—Yes.

A. 63.—None but gentle correction.

A. 64.—None.

A. 65.—Our workpeople either live in their own or friends houses.

A. 66.—It must be admitted that those put to a business when young are generally more expert at it than those who go to it at a more advanced period of life.

A. 67.—We are not sensible of any difference; they are all generally healthy.

A. 68.—No.

A. 69.—We are not acquainted with any act relating to woollen manufactories.

A. 70.—Never.

A. 71.—No.

A. 73.—They do for ought we know.

A. 74 & 75.—Not to our knowledge.

A. 78 & 79.—None.

J. and G. WALKER.

Edinburgh.

No. 20.

*H. Henderson.*

## EDINBURGH.

ANSWERS of H. HENDERSON of the Firm of RICHARD WHYTOCK and Co. Damask and Carpet Manufacturers, 7, George Street, and Queensberry House, Canongate.

A. 1.—Canongate of Edinburgh.

A. 2.—Furniture, damask, and carpets, and dye-works.

A. 3.—The building, formerly the military hospital of Queensberry barracks.

A. 4.—Neither steam nor water power.

A. 5 & 6.—Generally at the pleasure of the workmen, by opening windows.

A. 7.—Discretion of all.

A. 8.—None dangerous.

A. 9.—None, but plenty of water at hand.

A. 10, 11, & 12.—The only young people employed are four boys, all above twelve, employed by the weavers as draw-boys, and three employed at rugs. The most of the looms having machinery no boys are required.

A. 13.—Only three apprentices, say two dyers and one weaver.

A. 14.—Not parish apprentices.

A. 16.—None.

A. 17.—Almost all on piece-work, so they work when they choose; the dyers work ten or eleven hours.

A. 18.

A. 18.—The draw-boys must keep time with the men.

A. 19.—Cannot say exactly, but it is very rare that there are any extra hours.

A. 20 & 21.—All the week days.

A. 22, 23, 24, 25, & 26.—No record kept to enable us to answer these queries.

[It is presumed as we employ no children except the few specified above, that answers to the following queries will not be expected from us.]

18th May 1833.

H. HENDERSON.

Edinburgh.

H. Henderson.

## ANSWERS of JOHN CRAIG, Cockpen, Prestonholm.

No 21.

John Craig.

A. 1.—Parish of Cockpen, county of Mid Lothian.

A. 2.—Flax and tow spinning.

A. 3.—Erected in 1827. A former mill, erected in 1793, was burnt down in 1827.

A. 4.—About 50 horse power, partly steam and partly water; the latter falls off considerably in summer.

A. 5.—None but high ceilings and open windows.

A. 6.—On the opening of windows, the upper sashes of which draw down.

A. 7.—The overlookers have orders to keep sufficient air.

A. 8.—Some of them, but not all.

A. 9.—None.

A. 10.—Ten years is the regulated age, but sometimes the parents send them as ten when they are believed to be younger.

A. 11.—Economy, and the wish of their parents.

A. 12 & 13.—No.

A. 15.—There are a few poor's-house children boarded by the overseers of Dalkeith in private families in our village whom we employ. We neither lodge nor board any of the children.

A. 16.—The poor's-house overseers and the people with whom they are boarded.

A. 17 & 18.—Twelve hours and a half.

A. 19.—Twelve and three quarters or thirteen hours, but that very rarely, and never for more than a week at a time.

A. 20.—Three hundred and eight days.

A. 21.—See the three former queries.

A. 22.—All work the same hours.

A. 23.—Twelve hours and a half or a trifle less.

A. 25.—When time had been previously lost by breakage of machinery.

A. 26.—Perfectly avoidable.

A. 27 & 28.—No.

A. 29.—No existing law applying to flax, diminishing the expence of production is the motive for long hours.

A. 31.—Our situation renders two sets impossible.

A. 32.—No.

A. 33.—Before we had any steam-engine, when very short of water, part of the mill has been stopped during the day, and that part run at night; this was found disadvantageous.

A. 35.—Altered weekly when we did it.

A. 36.—No change.

A. 37.—It would increase the expence of production, perhaps, by higher wages being paid for the same quantity of work, certainly by the whole interest of the capital being charged against less produce.

A. 38.—There is no artificial heat except in middle of winter.

A. 41.—Never.

A. 46.—No.

A. 50.—By gas.

A. 51.—The same as during the day, till the mill stops at eight o'clock.

A. 52.—No experience.

A. 53.—One hour for breakfast and half an hour for dinner, forty minutes of the breakfast hour employed in school by all under sixteen years old.

A. 54.—All.

A. 57.—Overlookers may fine from 1*d.* to 6*d.*, but the person fined may apply for redress to the manager.

A. 58, 59, 60, & 61.—No overlooker is allowed to inflict any corporal punishment. The manager of the mill in particular cases is allowed to strap the hands of the younger children in the counting-house.

A. 62.—Overlookers have often been fined for inflicting such punishment.

A. 64.—No.

A. 65.—The people either live in family or in private lodging-houses.

A. 66.—They are usually employed in different parts of the manufacture. Most of the spinners have entered between ten and twelve years of age.

A. 67.—No change, rather improved, if there be any difference.

A. 68.—No.

(APP.—A. 1.)

E 3

A. 69.

Edinburgh.

John Craig.

A. 69.—There is no act about flax mills.

A. 70, 71, &amp; 72.—No.

A. 73.—No mills in our neighbourhood except paper mills.

A. 77.—No experience.

A. 78.—First, give the whole penalty to the informer. Second, the time book as proposed in Mr. Sadler's bill. Third, a prohibition of any legal engagement beyond a month with children.

A. 79.—That there should be no interference whatever except about the hours of work and ages and engagements of the children. Any interference with the hours of meals would in many cases be very injurious to the workers.

Prestonholm, 1st May 1833.

JOHN CRAIG.

No. 22.

W. Bailey &amp; Co.

ANSWERS of WILLIAM BAILEY &amp; Co., Glass-makers, 25, Greenside Place.

A. 1.—In the parish of Duddingstone and county of Edinburgh.

A. 2.—Flint-glass manufactory in all its branches.

A. 3.—Erected 1829 and 1830, and immediately afterwards put into operation.

A. 4.—Steam power employed for the cutting department.

A. 5.—By windows, which can be opened at pleasure.

A. 6.—Upon windows, as stated above.

A. 7.—At the discretion of the persons employed.

A. 8.—The engine fly-wheel is fenced off, and no danger is apprehended from other parts of the machinery.

A. 9.—An abundant supply of water is always at hand for purposes of cleanliness and convenience, for making changes of dress.

A. 10.—No specific age as a rule, but generally at twelve; one boy spent a few months at the jewellery trade.

A. 11.—No.

A. 12.—Not aware of the nature of these alterations — not applicable to this work.

A. 13.—Several.

A. 14.—None so apprenticed.

A. 15.—The apprentices of this establishment are all boarded out, chiefly with their parents or guardians; none are orphans.

A. 16.—Being under the roof of their parents in nearly every case, the necessary direction is inferred.

A. 17.—Glass-cutters, allowing two hours for meals, work ten hours, and glass-makers about eleven hours, out of twenty-four, half of the time during the day, and the other half at night.

A. 18.—Same time as stated above in answer to Q. 17.

A. 19.—In flint-glass making the works are in constant operation day and night, from Monday morning till Friday, with double sets of men, sufficient time being allowed for meals, &c.

A. 20.—Every lawful day in the year.

A. 21.—Not exceeding 3,100.

A. 24 & 25.—The boys in this manufactory never exceed eleven hours per diem, but ten hours is the general attendance.

A. 26.—All irregular hours of work avoidable and avoided here.

A. 27.—At no former time.

A. 29.—Not sufficiently acquainted with works so conducted as to be able to state with certainty the inducement of the manufacturer.

A. 30.—Our working hours being regular, have not made the calculations required in this query.

A. 31.—We entertain no objection.

A. 33.—One set commences at seven A.M. and works till one P.M., at which hour these are relieved by another set who work till seven P.M., and so on till Friday, as stated in answer 19.

A. 34.—The nature of the work does oblige us.

A. 36.—In convenience to the workmen who prefer dividing the hours of labour, and as only half the number of hands would be employed, the produce must necessarily be materially affected.

A. 37.—The hours of labour in a flint glass manufactory being consistent with the comfort and convenience of all employed therein, in proportion as the hours become less the price of the manufactured article would be increased.

A. 38.—The usual temperature used for flaxing is very great; but the heat to which the workmen are exposed is not severely felt.

A. 40.—About seventy.

A. 41.—About two hundred.

A. 42.—About twenty-five boys from twelve to sixteen years of age.

A. 46.—It is indispensable keeping the furnace of a glass-house constantly alive.

A. 47.—From 1st January to 31st December.

A. 48.

- A. 48.—From twelve to sixty years of age.  
 A. 49.—A suspension of the works would be occasioned.  
 A. 50.—The furnace affords light sufficient.  
 A. 51.—By windows and other means.  
 A. 52.—No peculiar effects seem to be produced by the practice; they are in general healthy.  
 A. 53.—One hour for each meal if they choose to avail themselves thereof.  
 A. 54.—About forty leave.  
 A. 55.—Those who do not leave remain chiefly for their own convenience, being employed at piece-work.  
 A. 56.—Loss of wages and produce.  
 A. 57.—No children employed.  
 A. 58.—None.  
 A. 62.—Have not found it necessary to give any instructions to foremen or others in reference to punishments.  
 A. 64.—None whatever.  
 A. 65.—Some of them do; but being discreet sort of people, their domestic affairs have been left to their own management.  
 A. 66.—A boy of ordinary quickness, taken at twelve or thirteen years of age, generally can be made a clever glass-maker of; if taken at fifteen or sixteen, he is generally the reverse.  
 A. 67.—Our people have always been healthy, and they are so at present.  
 A. 68.—No.  
 A. 69.—Not applicable to glass-making.  
 A. 79.—None.

8th May 1833.

W. BAILEY &amp; Co.

Edinburgh.  
 W. Bailey & Co.

ANSWERS of CHARLES COWAN, of the Firm of ALEXANDER COWAN and SON,  
 Pennycuick.

No. 23.  
 Charles Cowan.

- A. 1.—Bankmill, Valleyfield, and Lowmills, all contiguous, in the parish of Pennycuick in the county of Edinburgh.  
 A. 2.—Manufacture of paper.  
 A. 3.—Part about 1760, or before it; about 1800 much extended; sold to government for a French prison in 1810, repurchased in 1818, and soon after rebuilt and adapted to the improvements in the manufacture by means of machinery.  
 A. 4.—Water only; at Bankmill about ten-horses power, Valleyfield thirty-five, and at Lowmill fifteen. Total, fifty-horse power.  
 A. 5.—No artificial means. The rooms are all large, and not in any case crowded.  
 A. 6.—The windows are made to open, and are frequently opened.  
 A. 7.—At the discretion of all the persons employed, as well as of those in charge.  
 A. 8.—It is.  
 A. 9.—We have no specific arrangements, except that cleanliness is inculcated and insisted upon, and is almost invariably complied with on all occasions.  
 A. 10.—Very rarely under twelve years; at present, none below that age; none, so far as I know, have been employed at any other trades.  
 A. 11.—Very rarely, and only now at the millwright department of the work.  
 A. 12.—Never had any from parishes, nor otherwise than that the parent or near relative became "cautioner" for the apprentice.  
 A. 13.—No orphans employed; all children or young persons reside with their parents.  
 A. 16.—It very rarely exceeds ten hours each day.  
 A. 18.—The preparation of the stuff or pulp goes on constantly, excepting on Sundays and during repairs, that is, night and day; all other processes only from six A.M. to six P.M., and very rarely longer.  
 A. 19.—Cannot say precisely at present, but I believe about 310 days.  
 A. 20.—About 3,100.  
 A. 21.—All about the same.  
 A. 22.—Never, I believe, more than twelve hours, and probably not above ten in any one day.  
 A. 25.—No.  
 A. 28.—It varies in different apartments. In the machine-houses, near the hot drying cylinders, it is about 80°; but in all places where persons are exposed to it, it ranges from 50° to 70°.  
 A. 30.—Two or three men in the machine houses.  
 A. 31.—The preparation of the stuff, as stated in No. 18, always goes on during the night as well as by day.  
 A. 32.—None.  
 A. 36.—That part where work goes on—see Nos. 18 and 31,—and by gas light.  
 A. 37.—None required.  
 A. 38.—Not in the least injurious.  
 A. 39.—An hour each at breakfast and dinner, viz. at each time.  
 A. 40.—None required.

(APP.—A. 1.)

E 4

A. 64.

Edinburgh.

Charles Cowan.

- A. 41.—Never.
- A. 43.—All, except a few who have the care of the machinery.
- A. 44.—For the convenience of both.
- A. 45.—The machinery would be needlessly stopped, and a waste would ensue, besides that the work would occupy longer time.
- A. 46 & 47.—Never.
- A. 48 & 49.—They were never dreamed of, and are assuredly quite unnecessary.
- A. 50 & 51.—No.
- A. 52.—Many do, and have gardens and piggeries attached, and none are kept who do not attend to personal and domestic cleanliness.
- A. 53.—There is but little difference now since the substitution of machinery for hand labour in the more laborious occupations.
- A. 54.—If any change, I should say it has improved, chiefly from the making of paper by hand over a hot vat being now but little practised.
- A. 55.—None of them injurious.
- A. 56.—In the preparation of the pulp (see Nos. 18 & 31.) They are men who remain in the mill for twelve hours at a time.
- A. 58.—They change alternately week about, and sometimes they prefer to remain twenty-four hours on at a time, resting of course twenty-four hours thereafter; this is their own choice.
- A. 59.—Our power of production would be diminished one half were the mill stopped, and the stuff in preparation would besides be injured.
- A. 60.—I believe not.
- A. 61.—No.
- A. 71.—The same observations I have made above will apply to the case of our paper-mill near Edinburgh, in the parish of Colinton, where about twelve men and thirty women are employed. At this place, Valleyfield, we have had for twelve years past an infant school, where the children of all the families remain from about two years old to ten or twelve, and which allows the mother and elder children to work during the day instead of being required to watch over an infant family. I would humbly suggest the propriety of considering whether proprietors of factories should not be required to promote the education of young children for some years before they are allowed to employ them.

2d May 1833.

CHARLES COWAN.

Fifeshire.

No. 25.

James Hendry.

## FIFESHIRE.

## ANSWERS of JAMES HENDRY, Abbotshall.

- A. 1.—Parish of Abbotshall, county of Fife.
- A. 2.—Flax spinning.
- A. 3.—Erected in the year 1807.
- A. 4.—Steam-engine of eight horses power.
- A. 5.—By windows.
- A. 6.—By opening windows.
- A. 7.—By overlookers.
- A. 8.—All fenced off.
- A. 9.—None necessary, having their parents house quite convenient and adjacent to the work.
- A. 10.—Eleven years; never any to my knowledge.
- A. 11.—To learn and clean.
- A. 12.—No alteration.
- A. 13.—No apprentices.
- A. 15.—Do not lodge and maintain any of my workers.
- A. 16.—Their parents and relations.
- A. 17.—Twelve hours.
- A. 18.—No difference made in the time; children and adults are employed daily.
- A. 19.—From twelve and a half to thirteen hours when making up time for a market-day.
- A. 20.—Three hundred and ten days, or as near to that as possible.
- A. 21.—Three thousand seven hundred and twenty, or as near to that as possible.
- A. 22.—The various departments go or stand together.
- A. 25.—When loss of time from breakage of engine or great gearing, or holidays, are to be made up.
- A. 26.—Not avoidable, unless the time lost be deducted from the workers wages; the workers prefer making up time to having short wages.
- A. 29.—No night-work.
- A. 30.—No limitation to hours at present.
- A. 31.—Do not work extra hours.
- A. 33, 34, 35, & 36.—No night work.
- A. 37.—It would reduce the workers wages considerably, and cause a positive loss to the owners or holders of mill property.

A. 38.

- A. 38 & 39.—No artificial heat necessary in a flax-spinning mill.  
 A. 40.—I employ thirty-four hands.  
 A. 41.—No night-work.  
 A. 50.—By gas.  
 A. 51.—Windows.  
 A. 53.—Half an hour.  
 A. 54.—All leave the work at meal-times.  
 A. 55.—Convenience of workpeople.  
 A. 56.—Cannot say what effect.  
 A. 57.—Dismissal from the work.  
 A. 58.—No.  
 A. 62.—I have.  
 A. 63.—Strict orders, verbally.  
 A. 64.—None.  
 A. 65.—The workers all live with their parents or relations.  
 A. 66.—More expert.  
 A. 67.—Health improved.  
 A. 68, 69, 70, 71, & 72.—No.  
 A. 73.—There is no Act for the regulation of flax-mills.  
 A. 74.—I know of none.  
 A. 77.—I do not think so.  
 A. 78.—Do not approve of penalties or any other legislative provisions for regulating the hours of labour of children in flax-spinning mills, but twelve hours per day.  
 A. 79.—No.  
 6th May 1833.

Fifeshire.

James Hendry.

JAMES HENDRY.

## ANSWERS of ANDREW TEMPLETON, Abbotshall.

No. 26.

Andrew Templeton.

- A. 1.—Parish of Abbotshall, county of Fife.  
 A. 2.—Flax-spinning.  
 A. 3.—Erected in 1821.  
 A. 4.—Steam.  
 A. 5.—Ventilation by windows.  
 A. 6.—On the opening of windows.  
 A. 7.—By myself.  
 A. 8.—All the dangerous parts are fenced off.  
 A. 9.—None required.  
 A. 10.—Eleven years.  
 A. 11.—It does, because there are many trifling acts to be done in the room which adults are not so suitable for; further, they are necessary to keep up the stock of workers.  
 A. 12.—I am not aware of any difference in this respect.  
 A. 13.—No.  
 A. 15.—I do not lodge any of my workers.  
 A. 16.—Their parents or guardians.  
 A. 17.—Twelve hours and one quarter of an hour, except on Saturdays, ten hours.  
 A. 18.—Same as those above twenty-one years.  
 A. 19.—Thirteen hours and a half, or thereby.  
 A. 20.—Three hundred and ten days, or as near to that as possible.  
 A. 21.—Three thousand seven hundred and twenty hours, or as near to that as possible.  
 A. 22.—The various departments of the work go or stand together.  
 A. 23.—Twelve hours.  
 A. 24.—Thirteen hours and one half.  
 A. 25.—Before or after holidays, or in consequence of any damage done to any material part of the engine or great gearing.  
 A. 26.—I do not consider it avoidable unless the workers were to suffer a reduction in their wages, and they generally prefer to work up lost time.  
 A. 27.—Never for a greater number of hours than before stated.  
 A. 29.—Do not work during night.  
 A. 30.—There is no limitation in the hours of work up to this date.  
 A. 31.—Do not require relays of hands.  
 A. 33.—Never.  
 A. 37.—A reduction in the worker's wages, and a certain loss to the owners of mill property.  
 A. 38.—No artificial heat required in flax-spinning.  
 A. 41.—Never.  
 A. 50.—Gas.  
 A. 51.—Same as during the day.  
 A. 53.—One half hour.  
 A. 54.—All leave at once.  
 (APP.—A. 1.)

F

A. 55.

Fifeshire.

Andrew Templeton.

- A. 55.—For the mutual convenience of workpeople and their employers.  
 A. 56.—No meals taken in our mill.  
 A. 57.—Dismissal.  
 A. 58.—No.  
 A. 62.—I have, while I kept an overlooker.  
 A. 63.—The instructions given were verbal.  
 A. 64.—Never.  
 A. 65.—No.  
 A. 66.—Much more expert than adults. I employ none who had not learned to spin when young.  
 A. 67.—Am not aware of any change in this respect.  
 A. 68.—There are none of our processes injurious to health.  
 A. 69.—No.  
 A. 73.—Flax-mills are not under any Act.  
 A. 74.—Cannot tell.  
 A. 75.—See last answer, but not with my knowledge.  
 A. 77.—I believe they would speak truth without reference to their master's feelings.  
 A. 78.—I entirely disapprove of penalties, as well as of legislation for regulating the hours of the labour of children in factories in this quarter of the country; I cannot speak as to other districts.  
 A. 79.—None.

ANDREW TEMPLETON.

No. 27.

W. & J. Yool.

W. and J. Yool, Ceres, Fife.

- A. 1.—Ceres, Fife, Scotland.  
 A. 2.—Spinning flax and tow.  
 A. 3.—In 1827 and 1833.  
 A. 4.—Water; twenty-five horse power; deficient about one third of the power generally for three to four months in summer.  
 A. 6.—Opening of windows.  
 A. 7.—Discretion of all.  
 A. 8.—All fenced off.  
 A. 9.—All live in houses not 200 yards from the work.  
 A. 10.—At nine; weavers, tailors, and farm-service.  
 A. 11.—They are pressed on us by their parents.  
 A. 12.—No difference.  
 A. 13.—None.  
 A. 15.—No orphans; parents and guardians see them daily.  
 A. 17, 18, 19, & 24.—Thirteen.  
 A. 30.—Both in the diminution of hours and also interest on capital.  
 A. 37.—A reduction of wages to the extent of the reduction of hours and interest on capital, which the workers neither could nor would submit to.  
 A. 38.—No artificial heat used.  
 A. 50.—By coal gas.  
 A. 53.—Half an hour to breakfast, and half an hour to dinner, which the workpeople think sufficient.  
 A. 54.—All go to their meals in their own houses.  
 A. 57.—Reprimand; if that will not do, dismissal.  
 A. 58.—None.  
 A. 64.—None of any kind.  
 A. 65.—In the houses of their employers; no control over them, all living under the care of their parents or guardians.  
 A. 66.—From the short time we have been in the trade cannot say.  
 A. 68.—It is not required, but are often employed at different parts of the work.  
 A. 69.—No.  
 A. 79.—None.

W. and J. Yool.

No. 28

George Moon.

ANSWERS of GEORGE MOON, Fife.

- A. 1.—Hospital mill, parish of Cults, county of Fife.  
 A. 2.—Flax tow-spinning.  
 A. 3.—Built in 1821.  
 A. 4.—By water from the river Eden; very irregular, from drought in summer and frost in winter; sometimes reduced to one third of the ordinary supply; power required about ten horse power.  
 A. 5 & 6.—None except the opening and shutting of windows, which is found to answer the purpose quite well.  
 A. 7.—The overseer in each room has the charge of opening and shutting of the windows.

A. 8.

Fifeshire.

George Moon.

A. 8.—The wheels of the carding-engine which are considered most dangerous are covered in. The machinery of the spinning-frames are not considered so, and cannot be covered up.

A. 9.—Being in a country situation, and all living either in the place or in the adjoining village of Springfield, it is not the custom here for the workers to change their clothes at meal-times. Private places are placed within the work.

A. 10.—None are employed under ten years of age, with one exception.

A. 11.—In the spinning-department unless they are begun by ten or twelve years of age, they seldom make so expert hands, and as it takes them a long time to learn to spin, they have low wages, which girls more advanced would not work at. It is in fact, the nursery from which the other departments of the work are supplied.

A. 12.—Within the last ten or fifteen years the improvements in flax and tow spinning machinery has been such, that the labour attending a spinning-frame has been greatly reduced.

A. 13.—No.

A. 14.—Nothing of the kind known here.

A. 15.—There are four; their father was an overseer and died; their grandmother has the charge of them, and they have never received any parochial relief, and they have been able to support themselves, their grandmother, and two younger ones, who have been at school for the last year.

A. 16.—Their grandmother.

A. 17 & 18.—Seventy-five hours per week, or twelve hours and a half per day for all ages.

A. 19.—No record kept; when there was any additional time it was always at the request of the workers, for the purpose of enabling them to get away on particular occasions, and at same time have their full wages.

A. 20.—308 days; during part of the dry season one half of the work was wrought during the day, and the other half at night.

A. 21.—No record.

A. 22.—For several months during the last summer the spinning was carried on during the daytime, and the carding during the night; the water being so short that in many instances it would not drive one half of the machinery; but no set of hands were employed more than twelve hours per day.

A. 23.—Twelve hours and a half per day when there was a sufficient supply of water.

A. 24.—No record kept.

A. 25.—See A. 19. To make up time to allow the hands when they requested it themselves, that they might attend sermons on their particular days, go to markets, Cupar races, &c. &c.

A. 26.—Avoidable where there is a regular moving-power, but not so in water-mills; most of the excess beyond regular hours is occasioned by the workers themselves requesting it for their own convenience, and that they may draw full wages.

A. 27.—No.

A. 28.—Yes, if the hours are reduced, the cost must be enhanced.

A. 29.—The reasons may be various, but I know of no such practice.

A. 30.—In tow-spinning wages is about one half of the actual cost of the process. If the rate of wages is reduced in proportion to the time, and the hours reduced one fifth, or ten hours per day, the increased cost will be twelve and a half per cent. on the process of manufacture, but if the people cannot live on such wages, and we shall have to pay as high wages as at present, the increased cost will be twenty-five per cent.

A. 31.—See A. 25. There are in practice many objections to employing relays, or fresh sets of children even in towns, but in most situations in the country they could not be obtained.

A. 32.—Not by me.

A. 33.—See A. 22. During some months in summer the hands were divided into two sets, the one working by day, and the other by night.

A. 34.—I employ only one full set of hands, but divide them as above. See A. 33. Without making this arrangement during a short time in summer I must abandon the work.

A. 35.—The same set works uniformly during the night.

A. 36.—Absolute ruin to all water-mills where they have a short supply during summer. It would deprive the landlord of his rent, reduce the value of the surrounding property, both land and buildings, which have been erected for the accommodation of those employed, deprive me of a great part of the capital invested in these works, deprive the workers of their employment, force them to leave a healthy and comfortable home under the roof of their parents house, and force the moral, healthy, and contented population employed in the country mills to leave their houses and seek employment in large towns where steam-power is used.

A. 37.—Increased cost of the article produced. See A. 30.

A. 38.—No artificial heat is required.

A. 41.—No record kept, but only when absolutely necessary during summer from want of water.

A. 42.—Two of thirteen years of age, three of fourteen years, four of eighteen years, and five about twenty-one; twenty-one workers and an overseer.

A. 43.—Varying according to the supply of water.

(APP.—A. 1.)

F 2

A. 45.

Fifeshire.

George Moon.

- A. 45.—Varying between the hours of five in the evening and five in the morning.
- A. 46.—No.
- A. 50.—By coal gas.
- A. 51.—The same as during the day, see A. 5.
- A. 52.—Being only for a short time during summer, I know of no effect it has upon them.
- A. 53.—Half an hour for breakfast, half an hour for dinner, and a quarter of an hour for tea.
- A. 54.—The mill is stopped, and they may go out or remain in as it suits them. They have a place to take their victuals in if they choose.
- A. 55.—It is entirely optional with themselves.
- A. 56.—I know of no effect it would have ; but they are the best judges of what is best for their own comfort.
- A. 57.—Reprimand, fines, or dismissal.
- A. 58.—There have been some of the children struck by the manager and overseer, but contrary to my instructions.
- A. 60 & 61.—Never.
- A. 62.—The moment it came to my knowledge, I most strictly have again forbidden it. I reside at a considerable distance from the work.
- A. 63.—No instructions of the kind were ever given by me, and where it has been done it was contrary to my instructions.
- A. 64.—Never.
- A. 65.—Partly in houses belonging to me, and partly in the adjoining village of Springfield. The superintendence as to morals, cleanliness, &c. lies with the manager, who resides at the work.
- A. 66.—Generally speaking, those make the best hands that begin early ; see A. 11.
- A. 67.—The work has only been in my possession little more than four years and a half. They are healthy. No case of cholera either at the work or in the village of Springfield.
- A. 68.—No injurious process in this work.
- A. 69.—No.
- A. 70, 71, 72, 73, 74, 75, & 76.—Not subject to the provisions of Sir John C. Hobhouse's Act, it having been proved to Parliament in 1831 that the flax-mills in Scotland require no legislative enactment.
- A. 77.—Our workpeople are too independent and too honest to refuse giving evidence when called upon in a court of law, whether it be against their masters or any body else.
- A. 78.—The common law of Scotland has hitherto been found quite sufficient to settle all disputes between master and servant, and has been very seldom appealed to either by proprietors or workers at flax-spinning mills.
- A. 79.—Let us alone.

GEORGE MOON, Tacksman of Hospital Mill.

No. 29.

W. Drummond.

## ANSWERS of WM. DRUMMOND, Cupar.

- A. 1.—Cupar mills, parish of Cupar, and county of Fife.
- A. 2.—Spinning of tow from flax.
- A. 3.—Erected about thirty years ago.
- A. 4.—Water power, irregular. In the summer and autumn months seldom work above eight hours a day, and during that time lose about two horses power. There are a washing mill and snuff mill on the same fall, and the spinning is frequently stopt in order to afford these mills a supply of water. Wheel of spinning-mill equal to about eight horses power.
- A. 5.—A row of large windows on each side of the flats, hung both upper and lower sashes, and at the command of the workers and overseers.
- A. 6.—Depends on the opening of windows.
- A. 7.—At the discretion of all the persons employed.
- A. 8.—All the dangerous parts of the machinery are fenced off, so far as practicable.
- A. 9.—Most of my people live with their parents at the work, and the remainder at Cupar within less than a quarter of a mile. There is a room kept for them at the work, with a fire in winter.
- A. 10.—None under ten years of age.
- A. 11.—To make good spinners girls must begin early, and their wages, until they are fit to keep on a frame, are low. The employment is so light that no injury can arise from beginning early.
- A. 12.—They have not, but the machinery being so much more perfect they have not now half the labour they had formerly.
- A. 13.—I do not.
- A. 14.—No parish apprentices. I have occasionally had families recommended by the Kirk Session, but no allowance was ever made by the Session to any worker after being employed by me.
- A. 15.—I do not lodge any persons at the work but such as are of age. In the few instances in which orphans have been sent, they were lodged with and attended to by relations in Cupar, distant about a quarter of a mile or nearly from the work.

A. 16.

Fifeshire.

W. Drummond.

A. 16.—See the answer to the last query. The members of our Kirk Session have always shown kind attention to such families; but, as I said before, few orphans have been sent.

A. 17.—Thirteen hours in spring and winter, excepting in time of keen frost or during floods, when a good deal of time is lost to the master. In summer and autumn the mill frequently stands during different hours in the day until the lead fill, and likewise that the washing-mill and snuff-mill may be supplied. Average work from seven to eight hours a day at these periods.

A. 18.—All attend the same hours.

A. 19.—Never exceeded thirteen hours.

A. 20.—Besides holidays and playdays the mills stand idle for about a week annually while the lead is cleaning, and occasionally from accidents arising to the machinery or alterations. As nearly as I can estimate we had only 300 working days last year.

A. 21.—Owing to the irregularities alluded to I cannot specify the number of hours.

A. 22.—All the work in the spinning-mill is carried on at the same time.

A. 23.—Taking the whole year I do not think it will average ten and a half hours.

A. 24.—Thirteen.

A. 25.—At no time exceeded to my knowledge.

A. 26.—Avoidable, and never allowed but to gratify the wishes of the servants, so as they may make up time and enable them to get away for a half or a whole day for some purpose of their own without loss of wages.

A. 27.—No.

A. 28.—There can be no question that the price will be enhanced if the hours of working are lessened and the same wages paid.

A. 29.—That he may manufacture, as I conceive, at less cost, but never practised by me.

A. 30.—I consider the permanent expence equal to a half of the cost on productions. If the working hours are reduced from thirteen to ten hours, and if the same rate of wages are paid, but which may not be the case, the cost of production will be increased upwards of 25 per cent.

A. 31.—In country situations impracticable, and many strong objections present themselves to it even in towns.

A. 32.—Never tried by me. Even if hands could be found I could not with an irregular water power afford to pay fair remunerating wages to two sets.

A. 33.—I never have employed a night set.

A. 34.—My spinning mill does not require to be carried on during the night.

A. 35.—No night-work.

A. 36.—No night-work.

A. 37.—Cost obviously increased. See answer to No. 30. If we are only at present with our protecting duties nearly on a level with the foreign manufacturer, it seems evident that were such a change as contemplated carried through our relative situation would be wholly changed.

A. 38, 39, 40.—No particular temperature required.

A. 41, 42.—On no occasion.

A. 50.—With coal gas from the public works at Cupar from September to end of March.

A. 51.—The same as during the day. See No. 5.

A. 52.—No night-work.

A. 53.—Half an hour for breakfast, and half an hour for dinner.

A. 54, 55, & 56.—All.

A. 57.—Reprimand, light fine, or dismissal.

A. 58.—Never.

A. 62.—The men servants are always informed when they enter the service, that if they strike a child they will be instantly dismissed.

A. 63.—No corporal punishment would be tolerated by the servants in my work. If such were attempted I am satisfied they would all leave instantly.

A. 64.—Never.

A. 65.—I give the greater number of the servants houses to live in, and the remainder reside in Cupar near by. I never have occasion to find fault with the manner in which they are kept. As to their morality I annex copy of the clergyman's certificate.

A. 66.—I believe all my female workers have begun early. Spinners must always be taught when young.

A. 67.—The workers are generally healthy, and I can conscientiously affirm that they are more so than the generality of persons in the same rank of life in Cupar. They are subject to no particular complaints, and when cholera was raging in Cupar, and although a person died in a house at the work, but who was not employed in the mill, and although this person's family came in daily contact with the workers, not one of them was seized with this disease.

A. 68.—No particular processes injurious.

A. 69.—It is not.

A. 70, 71, 72, 73, 74, 75, & 76.—Not applicable to flax and tow mills, these having been taken out of Sir John C. Hobhouse's Bill by the House of Commons.

A. 77.—Not in the slightest. The reverse is the case.

A. 78.—As regards flax and tow mills, the present law is the "common law," and as no breach of that law has come under my observation, I of course cannot suggest the propriety

(APP.—A. 1.)

F 3

of

Fifeshire.

W. Drummond.

of making any change or imposing any new penalties. In Scotland it has been found sufficient, in times too when a very inferior class of persons, both masters and servants, were engaged in the trade to what there is at present, and no legislative interference was considered necessary, therefore it may humbly be presumed it is still less necessary now. No law will change the nature of a bad master, nor will the proposed bill find out a more comfortable means of subsistence to those sought to be prohibited from working at mills.

A. 79.—No one acquainted with this trade will assert that the manufacturers profits are so large as to enable him to submit to a reduction of 20 per cent. on the commodity he brings to market, and as it is evident the change proposed (apart from all the vexatious provisions in the bill) will have this effect, it must follow that wages must be reduced greatly, or, if the works are carried on, no one under twenty-one can be employed. The young workers cannot exist if wages are much reduced, and a positive injury is sought to be inflicted on a set of industrious and willing people, all of whom are voluntary and free servants, and, if uncomfortable, entitled to leave on a very brief warning.

WM. DRUMMOND.

No. 30.

George Moon.

## ANSWERS of GEORGE MOON, Cupar.

A. 1.—Russell Mill, parish of Cupar, Fife.

A. 2.—Flax tow-spinning.

A. 3.—Built in 1799; first occupied by me in 1811, extended in 1818, 1822, 1824, and 1826.

A. 4.—Water-power from the river Eden; very irregular from drought in summer and frost in winter; sometimes reduced to one third of the ordinary supply; assisted when short of water by a steam-engine of twenty horses power.

A. 5 &amp; 6.—Ventilators were originally put into the ceiling of the carding-room, but found to be detrimental; the opening and shutting the windows is found to answer the purpose quite well.

A. 7.—The overseer in each room has the charge of opening and shutting the windows; the workers may also do so.

A. 8.—The wheels of the carding-engines which are considered most dangerous are covered in; the machinery of the spinning-frames is not considered so, and cannot be covered up.

A. 9.—Being in a country situation, and all living in the immediate neighbourhood, it is not the custom here for the workers to change their clothes on going to or leaving the work. A sufficient number of private places are provided for the men, boys, and girls.

A. 10.—None are employed under ten years of age; when any have been employed under that age it has been from charity more than any other cause.

A. 11.—In the spinning-department, unless they are begun by ten or twelve years of age, they seldom make so expert hands; and as it takes a long time to train them to spin they have low wages, which girls more advanced would not take. It is, in fact, the nursery from which the other departments of the work are supplied.

A. 12.—Within the last ten or fifteen years the improvements in flax and tow spinning machinery have been such that the labour of attending a spinning-frame has been reduced two-thirds, and this operation is generally performed by the youngest hands; but there is no difference in the relative numbers of those above or under twelve years of age.

A. 13, 14, 15, &amp; 16.—None.

A. 17 &amp; 18.—During last year twelve hours per day. Since last January it has been seventy-five hours per week, or twelve hours and a half per day, on an average, for all ages.

A. 19.—No record kept. When the people work more than twelve hours and a half per day it is for their own convenience and at their own request, to make up for the time occupied in occasionally going to hear sermon in the village on week days, as they prefer making up the time than lose the wages; also to get early away on pay-days.

A. 20.—Three hundred and eight days, and five holidays, viz. New-year's ball, national fast, parochial sacrament days, and the jubilee for reform, none of which were made up.

A. 21.—Three hundred and eight days at an average of twelve hours per day is three thousand six hundred and ninety-six hours.

A. 22.—All at the same time.

A. 24 &amp; 25.—No record kept.

A. 26.—Avoidable where there is a regular moving-power if the servants choose to work regularly or want their wages, but they prefer to get away at one time, and make it up by a quarter or half an hour per day at other times, and get full wages.

A. 27.—I have wrought twelve, twelve and a half, and thirteen hours per day.

A. 28.—Yes, it is.

A. 29.—The reasons may be various, but I know of no such practice.

A. 30.—In tow-spinning the wages is about half of the whole cost of spinning, hence if a mill spin one thousand two hundred sple. weekly, working seventy-five hours per week, the cost for wages may be taken at - - - - - £15 0 0

Outlay of capital, rents, insurance, &amp;c. &amp;c. - - - - - 15 0 0

£30 0 0

The

The same machinery working sixty hours per week will only spin nine hundred and sixty sple. and if the wages continue at the same rate they will amount to - £12 0 0  
But the outlay of capital, rents, &c. will remain the same, say - 15 0 0

£27 0 0

Fifeshire.

George Moon.

1,200 sple. costs 30*l.* being 2*l.* 10*s.* per 100 sple.

960 — costs 27*l.* being 2*l.* 16*s.* 3*d.* per 100 sple.

being an increase of 12½ per cent. on the cost of spinning, and supposing the wages to remain at the same rate.

A. 31.—There are many objections to this mode in practice, but although practicable in large towns, yet in country situations they cannot be procured.

A. 32.—Not by me.

A. 33.—Not at this work.

A. 34, 35, & 36.—No night-work.

A. 37.—Increased cost of the article produced. See answer to question 30.

A. 38.—No artificial heat is required. During winter it is warmer in the mill than in the open air, and in summer it is kept cooler by a current of air from the windows.

A. 41.—No night-work here.

A. 46.—None.

A. 47, 48, & 49.—No work of the kind.

A. 50.—By coal gas during the winter season, when the days are not sufficiently long to accomplish the day's work; that is between September and April.

A. 51. The same as during the day. See No. 5.

A. 53.—Half an hour for breakfast, half an hour for dinner, and generally a quarter of an hour for tea.

A. 54.—All.

A. 56.—All take their meals out of the mill.

A. 57.—The overseers are ordered when necessary to report what faults may have been committed by any person in their department, either to the master or manager, on every pay-day, when the person offending is either reprimanded, fined, or dismissed, according to the nature of the offence. If a very bad fault, a report is immediately made.

A. 58.—None.

A. 63.—No instructions but to prevent it.

A. 64.—Never.

A. 65.—Partly in houses belonging to me, and partly in the adjoining village of Springfield. No particular control is found necessary to enforce domestic cleanliness. The houses are annually whitewashed, and the people keep themselves clean and comfortable. As to morality, I refer to two certificates sent herewith\*, which were obtained for the purpose of being laid before Parliament.

A. 66.—Generally speaking, those that begin early make the most expert hands; see query 11.

A. 67.—The people here have always been healthy. When cholera was so fatal in Cupar, the only case in this whole neighbourhood was the manager (aged 58), who was attacked and confined to the house about a week, and notwithstanding of his family living with him and regularly attending their work, not a single worker caught the infection. I annex a medical certificate.

A. 68.—No process in this work injurious to health.

A. 69.—No.

A. 70, 71, 72, 73, 74, 75, & 76.—Not subject to the present Act. When Sir J. C. Hobhouse's Bill was before Parliament it was proved to the satisfaction of both the Government and the House of Commons that the flax-mills in Scotland required no legislative enactments, no complaints having been made from the Scotch flax-mills until after Sir J. C. Hobhouse had given notice of his Bill.

A. 77.—Our workpeople are too independent and too honest to be actuated by such feelings. If they are called upon in a court of law they will give true evidence, whether it be against their masters or anybody else.

A. 78.—The common law of Scotland has hitherto been found quite sufficient to regulate all matters and settle all disputes between master and servant, and has in very few instances been appealed to either by mill-owners or their servants, and will in future regulate these matters much better than any new law such as that proposed, which if made law will destroy that good and cordiality that at present exists.

A. 79.—None, except that you let us alone.

GEO. MOON, Proprietor.

#### \* COPIES of CERTIFICATES.

Cupar, 17th January 1832.

I do hereby certify, That the spinning-mill at Russel Mill, in this parish, was established by Mr. George Moon in the year 1811; that to my personal knowledge the persons employed in that manufactory have been distinguished by correct moral conduct; that no

(APP.—A. 1.)

F 4

charge

Fifeshire.

charge against any of them has been brought before the kirk session, and that none of them have come upon the poor funds of the parish, except one family, which had been but a short time at the work, and had been afflicted with two deaths among the children, and that they received only the sum of fifteen shillings and sixpence to assist them in defraying the expences of the funerals.

(Signed) LAURANCE ADAMSON, D.D.,  
First Minister of Cupar.

Cupar, 11th January 1832.

I hereby certify, That since my connection with the parish of Cupar, six years ago, I have repeatedly visited, and once examined, according to the usages of our church, the people employed in the spinning-work of Mr. Moon at Russel Mill. On these different occasions I have uniformly found them, of all different ages, most respectful and exemplary in their deportment, and as far advanced in intellectual and religious attainment as the generality of the class of the community to which they belong. Some I have even found entitled to rank among the very foremost in that class. This I attribute very much to the respect which the parents and guardians of the young in that establishment pay to the general customs of the country in regard to their education, and also to a very excellent regulation observed by Mr. Moon of having a teacher brought to the work for six months in the year, and making it imperative upon the parents and guardians of the children to have them placed so many hours a day under his charge. I can also say, that for the last six years none of the people connected with the work have at any time applied for parochial relief.

(Signed) JOHN BERRILL, Minister.

Cupar, Fife, 12th January 1832.

I do hereby certify, upon soul and conscience, That I have been for nearly twenty years the medical adviser and attendant on the workpeople employed at the spinning-mill of Russel Mill, belonging to Mr. George Moon, where are seldom fewer than two hundred people of both sexes engaged; that during this time I have had frequent opportunities of observing the effects which mill-spinning has on the general health and constitutions of those employed at it, and I can with confidence say, that the spinners of this manufactory have uniformly enjoyed as good, if not a better, share of health than most other classes of the community, and that, with the exception of certain diseases which they are liable to in common with all other ranks of society, they are generally free from all kind of ailment. It is but justice to the proprietor of this establishment to add, that the healthy condition of the workpeople is in some respects to be attributed to his judicious and benevolent superintendence, and the readiness with which he at all times executed any suggestion which had for its object the preservation of the health of those placed under him.

(Signed) CHARLES GRACE, M. D.

Cupar, Fife, 13th January 1832.

These are to certify, That, for the period of eight years past, I have furnished the medicines used at Russel Mill, as well for Mr. Moon's family as those employed under him at the fore-mentioned work; and that, taking the average of three years, the whole sum amounts to 2*l.* 5*s.* sterling per annum, being the value of the medicines according to the charges usually made at this place.

(Signed) ADAM WISEMAN,  
Surgeon and Apothecary.

No. 31.

James Kirkland.

## ANSWERS of JAMES KIRKLAND, Dunfermline.

A. 1.—Dunfermline parish, Fifeshire.

A. 2.—Spinning of linen-yarn.

A. 3.—The spinning-mill was erected in 1828, and employed for that purpose in 1829. The preparing and carding house was erected in 1831, and employed for these purposes in 1832.

A. 4.—Steam-power, ten horse.

A. 5.—Ventilation by windows.

A. 6.—One part (the spinning) by a part of the window sliding aside. The other part (the preparing and carding) by nearly the whole window opening.

A. 7.—Controlled at the discretion of all.

A. 8.—No; because there are no dangerous parts therein.

A. 9.—In 1832 a small house was set apart for the workpeople, and a good fire put on every day in the winter season, where they might go and change their clothes if they pleased, or wash, having a woman servant to attend them.

A. 10.—Ten years of age is the lowest; I have workers (females) who have been household servants both in town and country.

A. 11.—None but as mechanics.

A. 12.—No parish apprentices.

A. 13.—No children of this description.

A. 16.

- A. 16.—Thirteen hours and a quarter each day, except Saturday ten and a quarter.  
 A. 17.—Same as above. The operations of spinning are combined together that no difference can be made.  
 A. 18.—Not more than the above hours.  
 A. 19.—Cannot say exactly; about three hundred days.  
 A. 20.—Cannot say; something less than the hours stated above.  
 A. 21.—Cannot say.  
 A. 22.—Never more than thirteen hours and a quarter.  
 A. 23.—Never.  
 A. 25.—No.  
 A. 26 & 27.—Not having had any limitation of hours of work, cannot say from experience, but think to take off two or three hours each day would add one fifth or sixth of increased cost, because capital lies dormant.  
 A. 28.—Temperature from 60° to 70°.  
 A. 29.—Nothing above 60°.  
 A. 39.—All have half an hour to breakfast, the same to dinner, except the mechanics, who have half an hour more each meal.  
 A. 40.—None, but the fear of being paid off.  
 A. 41.—Never.  
 A. 43.—They all leave the work at meal-times except tea-time, when it is brought to them.  
 A. 44.—Some have their victuals brought to the neighbourhood for the convenience of the workpeople.  
 A. 45.—If at tea-time, the mill would stand.  
 A. 46.—Never.  
 A. 49.—No punishment allowed.  
 A. 50.—No complaints have been made.  
 A. 51.—Yes, because from ten to twelve years of age they are more apt to learn to use their fingers than after that age.  
 A. 52.—The workpeople live in their own houses, or with their parents.  
 A. 53.—Those who have been employed from infancy are more steady, attentive, and expert at their work than those who have been taken in at a later period.  
 A. 54.—I do not know any change; they all seem in good average health.  
 A. 55.—Each keep their own place.  
 A. 56.—Not employed at night.  
 A. 69.—The workpeople in this place are as independent as their masters.  
 A. 70.—The less legislating with regard to flax-mills the better; they can do without it; both employed and employers would be better not to be interfered with.  
 A. 71.—In my opinion, if the hours of working are reduced it will ultimately reduce the rate of wages to the workers, which they are not calculating on, and which they can ill afford to bear; it will also increase the cost of production of linen yarn, because capital must lie dormant, and it will set many of the hand-loom weavers idle, because the supply of linen yarn at present is not able to keep pace with the demand.

JAMES KIRKLAND.

Fifeshire.

James Kirkland.

## ANSWERS of THOMAS KINNELL, Dunfermline.

No. 32.

Thomas Kinnell.

- A. 1.—Dunfermline, county of Fife.  
 A. 2.—Flax and tow spinning.  
 A. 3.—Erected and first employed for its present purpose, August 1830.  
 A. 4.—Sixteen-horses power. Steam.  
 A. 5 & 6.—The windows are made to open from the top.  
 A. 7.—Regulated by the overlooker.  
 A. 8.—The dangerous parts are fenced in.  
 A. 9.—The greater part of the workers have a dress that they put on on entering the mill. They are not so dirty as to require washing.  
 A. 10.—Very few apply before ten years of age.  
 A. 11.—They are useful for some purposes, and besides they are generally keen to learn.  
 A. 12.—I do not know what was required previous to the recent alterations in machinery.  
 A. 13.—We do not employ apprentices.  
 A. 15.—The orphan we employ is visited by parish minister.  
 A. 16.—I am not aware of any others.  
 A. 17.—Thirteen hours per day.  
 A. 18.—No difference is made.  
 A. 19.—Thirteen hours.  
 A. 20.—Three hundred and four days last year.  
 A. 21.—Three thousand nine hundred. We allow them one hour less per week than thirteen hours per day.  
 A. 22.—The whole is always in motion.  
 A. 23.—Seventy-five hours per week, twelve hours and a half per day.

(APP.—A.1.)

G

A. 24.

Fifeshire.

Thomas Kinnell.

- A. 24.—Thirteen hours per day.  
 A. 25.—We make up no time.  
 A. 26.—It is certainly avoidable.  
 A. 27.—No.  
 A. 53.—A quarter of an hour to breakfast, one half hour to dinner.  
 A. 54.—The most of them do not leave.  
 A. 55.—For the convenience of both parties.  
 A. 56.—Some have bothies, they would require more time to go home.  
 A. 57.—If they offend repeatedly, they are fined.  
 A. 58.—No.  
 A. 62.—Distinctly.  
 A. 63.—Repeatedly.  
 A. 64.—None.  
 A. 65.—None of ours.  
 A. 66.—If a person is advanced in years, they never learn some parts of the work, spinners particularly.  
 A. 67.—Only two years and a half in the trade.  
 A. 68.—We do not require to do so.  
 A. 70.—Never.  
 A. 74.—I never heard of any.  
 A. 77.—I do think so.  
 A. 78.—I do not want any government interference at all; but if any measure is enacted, let it be fixed for all ages, let the age to be taken in be what it may.

3d May 1833.

THOMAS KINNELL.

No. 33.

John Malcolm  
and  
John Wilson.

## ANSWERS of JOHN MALCOLM and JOHN WILSON, Dunfermline.

- A. 1.—Dunfermline, county of Fife.  
 A. 2.—Flax-spinning.  
 A. 3.—The whole erected in the year 1824.  
 A. 4.—By steam or water, but chiefly by a steam-engine of six-horse power.  
 A. 5.—Four ventilating apertures in the roof.  
 A. 6.—The windows are frequently opened for the purpose of ventilation.  
 A. 7.—At the control of any of the persons employed.  
 A. 8.—All parts that we consider dangerous are fenced off.  
 A. 9.—None.  
 A. 10.—We have none under ten years of age, and never wish any under twelve. Our children are all girls, except one boy.  
 A. 11.—The nature of our work does not require the employment of children under twelve years of age.  
 A. 12.—They have not.  
 A. 13.—We employ no apprentices.  
 A. 15.—All the children we employ lodge with their parents or relations.  
 A. 16.—They have the superintendence of their parents or relations.  
 A. 17, 18, & 19.—Eleven hours on the Saturdays, and thirteen hours and a quarter on the other days of the week.  
 A. 20.—Three hundred and two days; but full wages were paid to the workers for three hundred and thirteen days.  
 A. 21.—Three thousand eight hundred and eighty-nine hours, or thereby.  
 A. 22.—The different parts of our works are usually carried on at one and the same time.  
 A. 23.—Twelve hours and a half.  
 A. 25.—At no time and under no circumstances are our regular hours of work exceeded.  
 A. 26.—We consider that all excess beyond the regular hours may be avoided.  
 A. 27.—We have not.  
 A. 29.—We do not know, as we have never practised it, but we suspect it is done for the purpose of being enabled to undersell their neighbours; besides, the extra quantity of yarn spun has a very injurious effect on the market in bad times.  
 A. 30.—Most unquestionably the cost of production would be increased were the same wages paid and the hours limited.  
 A. 31.—The employing two sets of workers would be attended with a deal of trouble to the employers, and with ruinous low wages to the employed. We are certain the workers themselves would be better pleased to work twelve hours for 1s. than eight hours for 8d.  
 A. 32.—We have never tried two sets, because if the hours of labour were reduced the wages of the workers would be reduced in proportion, and are afraid we could not procure workers on these terms.  
 A. 33.—We have never employed a night set.  
 A. 34.—We disapprove of night-working altogether, as being disadvantageous both to the interest of the employers and to the health and morals of the workers.  
 A. 36.—We have no night-work.

A. 37.

A. 37.—Any reduction in the working hours would cause either a proportional reduction in the workers wages or a proportional advance in the price of yarn; at present we are barely able to compete with foreign yarn, and were we obliged to raise the price of our yarn, foreigners would supplant us in the market both at home and abroad.

A. 38.—The temperature ranges from 64 to 72°; the work does not require so high a temperature, but the workers seem to like heat, which shows that their work is not very laborious.

A. 42.—None.

A. 46.—None of the processes are continuous.

A. 50.—In the dark mornings and evenings our mill is lighted with gas.

A. 51.—The same provision as during the day.

A. 53.—Half an hour to breakfast and half an hour to dinner; but sometimes a quarter of an hour is only taken to breakfast, in which case the workers get a quarter of an hour sooner away at night.

A. 54.—Part of our workers take their meals in the mill, which is brought to them by their friends, and part go home to their meals.

A. 55.—The workers are allowed to take their meals anywhere that is most convenient to themselves.

A. 57.—Admonition and remonstrance, and if that will not do we levy a small fine from them, and if both fail we give them our regular warning of fourteen days and part with them.

A. 58.—Never.

A. 59.—By none that we know of.

A. 60.—Never, to our knowledge.

A. 61.—Our overseers are strictly enjoined never to inflict corporal punishment.

A. 62.—We have forbidden corporal punishments, and we never knew of any being inflicted at our mill.

A. 64.—No complaints have ever been made before any magistrate against us or our foreman.

A. 65.—None of our workers live in the houses of their employers.

A. 66.—We seldom or never begin with workers under eleven years of age, and we have found from experience that those who begin at the age of eleven, twelve, thirteen, or fourteen make better workers than those who begin after fourteen.

A. 67.—We know of no difference.

A. 68.—We have no processes injurious to health, so far as we know.

A. 69.—We know of no act on the subject.

A. 70.—Never.

A. 71.—We have not.

A. 74.—They have not.

A. 75.—Never.

A. 76.—We never had any action against us.

A. 77.—We have no reason to believe they would be afraid.

A. 78.—In flax-mills the working hours might be limited to twelve, and night-work prohibited altogether; apprenticeships might be limited to two years, and none taken who could not read or write, or that were under twelve years of age.

A. 79.—The more free any trade is of legal restrictions or interference between masters and servants so much the better; and when servants are at liberty to part with their masters, as all ours are, on giving fourteen days notice, there cannot be much to complain of by either party.

JOHN MALCOLM.

JOHN WILSON.

#### ANSWERS of JOHN RUTHERFORD, Dunfermline.

No. 34.

John Rutherford.

A. 1.—Parish of Dunfermline, Fifeshire.

A. 2.—Flax-dressing, spinning and twisting, reeling, bleaching and dyeing.

A. 3.—Extended at different times, but owing to the death of the late proprietor, his successors cannot distinctly state these. The earliest date is 1816.

A. 4.—Steam. Twenty-eight-horse power.

A. 5.—No provision.

A. 6.—Except what depends on the opening of windows.

A. 7.—Opening and shutting of the windows, at the discretion of the workers themselves.

A. 8.—Dangerous parts fenced off.

A. 9.—The bothy or schoolhouse at hand is in the option of the workers for changing their clothes, while there is no want of water for washing themselves, and such has always been the case.

A. 10.—Ten or eleven years; viz. the thread-reelers (who have generally shorter hours than the rest of the workers). All girls.

A. 11.—Were grown-up persons to be substituted at the thread-reels for those at ten or eleven, (who are perfectly well adapted for the work, and from the nature of it may accomplish as much as the former,) it would be at considerable additional expence.

(APP.—A. 1.)

G 2

A. 12.

Fifeshire.

*John Rutherford.*

- A. 12.—No necessity at machines for any under twelve.  
 A. 13.—One or two as flax-dressers, and one mechanic; all above eighteen.  
 A. 14.—None apprenticed from parishes.  
 A. 15.—None at all, orphans or others, lodged and maintained.  
 A. 17.—Thirteen hours and a quarter, and ten and a quarter on Saturday.  
 A. 19.—Fourteen hours and a quarter.  
 A. 20.—Three hundred and four days, including days not whole.  
 A. 21.—Three thousand six hundred and thirty-six hours.  
 A. 22.—No part carried on at different times.  
 A. 23.—Twelve hours and three quarters.  
 A. 24.—Fourteen hours and a quarter.  
 A. 25.—The occasional excess alluded to was the wish of the workers themselves, that they might get off the sooner on Saturday beyond the two hours, and latterly three hours allowed them at any rate.  
 A. 27.—Never.  
 A. 28.—Hours never reduced.  
 A. 29.—The inducement is obvious, it being so much more convenient to continue the same set of hands, besides that it would be undoubtedly cheaper.  
 A. 30.—As yet no limitation of the hours of work.  
 A. 31 & 32.—No extra hours required.  
 A. 33.—But one set, and that a day set.  
 A. 36.—No night-work.  
 A. 37.—That as the hours so should consequently be the production or profits is evident.  
 A. 38.—Scarcely above the ordinary temperature of any room in a dwelling house.  
 A. 39.—No particular heat at all, it being all longstaple spinning.  
 A. 41.—None at all.  
 A. 42.—No night-work.  
 A. 46.—None that require waiting on, and  
 A. 47.—For the general processes the time indifferent.  
 A. 50.—With gas.  
 A. 53.—A quarter of an hour at breakfast, three quarters of an hour at dinner, while what is called "four hours" is brought to them within the manufactory during work.  
 A. 54.—Most of them.  
 A. 55.—Many of them living at a distance, it would not be very convenient for each to take their meals at home; they are therefore brought to them and taken in the bothy or schoolhouse.  
 A. 56.—Here it may suffice to state one point; were works caused to stop that "four hours" might be taken in the afternoon, the consequence would be so much waste inevitable (from one cause or other) every time that the engine starts.  
 A. 57.—Premiums.  
 A. 58.—No corporal punishments.  
 A. 64.—No.  
 A. 65.—A considerable number; the houses in good habitable condition, and scattered in groups through the neighbourhood, subject, therefore, to no special control.  
 A. 66.—Generally the case in point of skill, viz. the superiority of those who have been bred spinners from (comparatively speaking) more tender years to those grown up, while in point of general character the difference appears as much in favour of the former as the latter, whether referring to the morals of the persons in question or their particular temperament, supposed to be affected by the nature of the employment.  
 A. 67.—See the annexed list, which renders any statement superfluous; it is referred to with confidence.  
 A. 68.—No.  
 A. 69.—No—(flax-spinning).  
 A. 77.—No.  
 A. 78.—The present factory not subject to the Act in question; and it is humbly submitted that the annexed list should render unnecessary any legislative interference whatever.  
 A. 79.—No.

Harry Brae Spinning-mill, }  
 3d May 1833.

JOHN RUTHERFORD.

No. 35.

*Laurence Wilson.*

## ANSWERS of LAURENCE WILSON, Dunfermline.

- A. 1.—Parish of Dunfermline, county of Fife.  
 A. 2.—Making yarns from flax.  
 A. 3.—The mill was erected in 1815.  
 A. 4.—Water; irregular in very dry weather, sometimes to the extent of a fifth of the power required. Twelve-horse power required to drive the whole machinery.  
 A. 5.—The ventilation is by opening the whole or a part of every window.  
 A. 7.—Ventilation usually regulated by the overlookers.

A. 8.

A. 8.—The dangerous parts of the machinery are placed outside of the walls of the mill.

A. 9.—The nature of the work does not require those employed to change their clothes either on entering or leaving the work, and no arrangements of the kind mentioned are necessary.

A. 10.—I never wish to take children under eleven or twelve years of age. I have in a very few instances departed from this, when their parents were employed in the mill with them. I employ only girls in the mill, and none have been at any trade before, except a few who have been at other mills of the same kind.

A. 11.—It does not.

A. 12.—I do not think that the recent alterations in machinery have made any difference of the age necessary; but it has made this difference, that fewer children are necessary for the same quantity of machinery.

A. 13.—I only employ apprentices as flax-dressers.

A. 14.—I have no parish apprentices.

A. 15.—I maintain none of the children employed by me; I provide lodging for a few who are too far from home to go there every night; their parents or relations provide victuals for them; I have one orphan, but her relations provide for her.

A. 16.—The greater number go home every night; the few who lodge at the work go home on Saturday evening, and their parents provide food and clothing for them.

A. 17.—The whole number of every age work the same number of hours; viz. last year, on an average, eleven hours and a quarter.

A. 19.—Fourteen hours is the greatest number that the mill has been kept on in any one day during last year, and that for a few days only in order to make up lost time. This is done with the girls' consent, to keep their wages entire.

A. 20.—Three hundred and four days.

A. 21.—Three thousand three hundred and fifty-two hours.

A. 22.—The whole departments of the work are carried on at the same time.

A. 23.—The average for the last twelve months is about eleven hours and a quarter each day.

A. 24.—Only one set of children are employed, and fourteen hours is the greatest number they have been kept any one day. (See query 19.)

A. 25.—The regular hours are only exceeded to make up for short stoppages, such as any thing going wrong with the machinery, or when the children propose it themselves to get away to a merry-making; but when the mill is standing for a whole day they do not make up that time, and they in that case receive no wages.

A. 26.—The excess beyond the regular hours may be avoided by deducting the wages for the time the mill is standing; but these stoppages all parties rather incline to make up, as it keeps their wages entire.

A. 27.—I never have.

A. 29.—I consider one set of children perfectly able to work the hours I require of them, and I never work the mill through the night.

A. 30.—I can give no answer to this query, never having tried the experiment.

A. 32.—I never have had occasion to try two sets of children.

A. 34.—Does not apply to this manufactory.

A. 37.—A limitation to ten hours will have the effect of raising linen yarns so high that we will be undersold in our own market by German hand-spun yarns. It will also have the effect of reducing the wages of the workers, who, I believe, will be very unwilling to agree to it, and would rather work the present hours than take lower wages.

A. 38.—No particular temperature is necessary in flax-spinning mills. I heat the mill by means of a flue, so as to keep the workers comfortable in cold weather.

A. 41.—No night-work ever done.

A. 46.—None.

A. 50.—By gas.

A. 53.—Nine o'clock morning for breakfast, and two o'clock afternoon for dinner.

A. 54.—All the persons employed leave the mill at meal times, and the whole machinery stops.

A. 57.—When they will not do their duty, after being repeatedly told by the overlooker, they are fined a small sum, and if still disobedient they are dismissed from the work.

A. 58.—No.

A. 63.—My instructions to the overlooker are, to mark them for a fine, or if that has no effect to let me know, when they are generally dismissed from the work.

A. 64.—No complaint has ever been made to a magistrate against me or any of the overlookers.

A. 65.—The mechanic overlookers and foreman flax-dresser are married, and live at the work. The girls who do not go home every night lodge under the same roof with the overlookers, and a person is appointed to keep their rooms clean, and make ready their meals for them.

A. 66.—Those who come to the mill from eleven to twelve years of age I have generally found to give more satisfaction than those who come at an earlier or later period. I never like to take any for spinners who are above fourteen, for if they do not begin early to that department of the work they never can do it well.

A. 67.—The health of all those employed here has always been remarkably good, so much

Fifeshire.

Laurence Wilson.

so that during the period of seventeen years (when the works commenced) only one death has taken place amongst the workers, and that was a girl, about two months ago, and she was complaining when she came to the work.

A. 68.—I do not, as I consider no part of the processes employed injurious to the health.

A. 69.—I know of no act to which flax-mills are subject.

A. 79.—As there is no act regulating the hours of labour for flax-mills, one for that purpose would have the good effect of putting all in the trade on an equal footing, but ten hours I think too short; they would require to be from eleven to twelve hours; also a regulation as to age no one can object to, but to bind us down to short hours for all below twenty one years of age, is in this country giving us no advantage, for very few comparatively remain at a mill after that age. Boys (when boys are employed) leave early, and go to trades, and the girls marry, or go to be servants in private families; at all events, do not plague us with the vexatious and worse than useless provisions in the bill lately before Parliament. If it pass with all those clauses, it will drive every one out of the trade, and the trade out of the country. It puts the proprietors of mills completely in the power of their servants, who, by their stupidity or maliciousness, may in a few months make their masters liable to penalties that will reduce them to ruin and a prison.

LAURENCE WILSON.

No. 36.

Thomas Philp.

## ANSWERS of THOMAS PHILP and Co., Dysart.

A. 1.—Burgh of Dysart, county of Fife.

A. 2.—Heckling, and flax and tow spinning.

A. 3.—Erected in 1825 and 1826, and commenced working in July 1826.

A. 4.—Steam-engine, fourteen-horse power.

A. 5.—No specific provision.

A. 6.—The upper sashes of the windows fall down.

A. 7.—It is regulated by those of the workers who are nearest the respective windows according to their own feelings.

A. 8.—What we consider the dangerous parts of our machinery are all fenced off.

A. 9.—We have no specific arrangement for this purpose; the workpeople generally throw an old gown over their dress to keep it clean while working, and in cold weather put on cloaks or shawls when they go out.

A. 10.—Nine years; we are not aware of children under that age being employed at any trade in our neighbourhood.

A. 11.—No.

A. 12.—Not in our experience.

A. 13.—A few at heckling.

A. 14.—None.

A. 15.—All the children we employ are lodged and maintained by their parents or guardians.

A. 17.—Twelve hours.

A. 18.—Twelve hours for all ages.

A. 19.—Twelve hours and twenty minutes.

A. 20.—Three hundred and one days, from the 30th April 1832 to 1st May 1833.

A. 21.—Three thousand six hundred and twelve.

A. 22.—Our whole works begin and end at the same time.

A. 23.—Eleven hours thirty-two minutes twenty-three seconds.

A. 24.—Twelve hours and twenty minutes.

A. 25.—In making up time, but when lost time amounts to half a day we never make it up.

A. 26.—Any excess of work that we do in any one day is so trifling, we consider it would be no great loss to avoid it altogether.

A. 27.—Previous to the year 1831 we worked thirteen hours, since then twelve hours daily.

A. 28.—We do not find the cost enhanced, chiefly because wages were reduced in more than an equal proportion.

A. 29.—The only inducement we should suppose to be to have his work carried on regularly; and should any accident happen to the big gearing or to the engine, which a few hours work at night might rectify, we think it better that a few mechanics should work a few hours at night than the whole workers be idle a whole or part of a day.

A. 30.—The increased cost of production must be in a greater proportion than the shortening the hours of labour, as a great number of minor expences cannot be reduced.

A. 31.—The difficulty of getting learned hands in sufficient numbers, in our opinion.

A. 32.—We never considered it necessary, and therefore never tried the system.

A. 33.—No.

A. 37.—We consider that it would give the continental manufacturer such an advantage over us, as to drive us out of the foreign market upon which we so much depend, the more so as they have cheaper raw material than we have, our whole supply being imported from the Continent.

A. 38.—The usual temperature of the atmosphere.

- A. 41.—No times.  
 A. 42, 43, & 44.—None.  
 A. 46.—No.  
 A. 47.—No maximum.  
 A. 48.—We have none such.  
 A. 50.—By gas.  
 A. 52.—We have no night-work.  
 A. 53.—Half an hour for dinner and half an hour for breakfast.  
 A. 54.—All leave except two, who are kept for oiling; and we leave the work when the others come back.  
 A. 55.—Some may at times stop about the work at meal-hours, but it is solely to suit themselves.  
 A. 56.—We find no bad effect.  
 A. 57.—A system of small fines, scarcely ever exceeding 1*d*.  
 A. 58.—No.  
 A. 59.—By none.  
 A. 60 & 61.—No.  
 A. 62.—We have forbidden corporal punishments, and have at times, when it was proved that one worker had struck or abused another, fined to the extent of 6*d*., or, in case of refusal to pay the fine, dismissed the party offending.  
 A. 63.—None other than the prohibition of corporal punishments, and the infliction of small fines for disobedience or other faults.  
 A. 64.—No.  
 A. 65.—All our workpeople live either in their own or their parents or guardians houses.  
 A. 66.—We consider children under ten years of age rather as a tax on than any advantage to our work.  
 A. 67.—Since we first began working our mill we do not know any sensible difference in the health of our workers, except perhaps in the number of cholera cases last year.  
 A. 68.—We have no such processes.  
 A. 69, 70, & 71.—No.  
 A. 72.—We never were convicted.  
 A. 73.—None of the mills in our neighbourhood are subject to the provisions of the Act.  
 A. 74 & 75.—No.  
 A. 76.—Never required.  
 A. 77.—We have every reason to believe that our workers would give unbiassed evidence either for or against their masters.

Dysart, 7th May 1833.

THOS. PHILP & Co.

Fifeshire.

Thomas Philp.

#### ANSWERS of JOHN WALKER, Spinning-master, Blebo Mills.

No. 37.

John Walker.

- A. 1.—Parish of Kemback, county of Fife.  
 A. 2.—Flax tow spinning.  
 A. 3.—The principal building was erected in 1799 for spinning flax yarns; soon after both flax and tow yarns were spun in it, and about 1810 the spinning of flax ceased, and tow only has been spun in it since. New additions and alterations have made almost yearly.  
 A. 4.—Both steam and water power are employed. The water is very irregular; at times being many times more than sufficient for the work, while at other times it is not half enough; and to make up the deficiency a steam engine of eight-horse power is applied to assist, both powers being then jointly applied. The water-wheel is about fourteen-horse power.  
 A. 5.—None, except as answered to query 6.  
 A. 6.—On the opening of windows.  
 A. 7.—By the overlookers, and occasionally by the workers themselves.  
 A. 8.—All, when danger is apprehended, as far as can be done.  
 A. 9.—There are separate and necessary conveniences for men and women at the work; but washing and shifting clothes are not required, the apartments in which the people reside being close to the mill.  
 A. 10.—I never to my knowledge employed any under ten years of age. I do not like them under twelve; but when I have had families at the work with a number of children, I have found it necessary at times to take one of a family into the mill under this age, to enable the family to live more comfortably. I have had many who have been previously employed at trades and services of different kinds, but these were necessarily not children of the lowest age.  
 A. 11.—Unless girls have been introduced into the spinning department at or under twelve years of age, they seldom become expert spinners; and it is therefore necessary for the success of the work that a certain number of this age be kept up in this department; and as an education of several years is necessary before a girl can become an expert spinner, and young girls can be had at lower wages than those of more advanced ages can be had at, the cost of production is therefore less when the younger girls are employed. These young girls,

(APP.—A. 1.)

G 4

Fifeshire.

*John Walker.*

girls, however, have not the charge of spinning-frames, but others, who have been bred up as they, and are necessarily fifteen years of age and upwards before they are fit for this charge, the younger girls being merely their assistants. The workers in the other departments of my work are, with few exceptions, grown-up people, steadiness and attention being qualifications more necessary here than expertness.

A. 12.—They have not; but the machinery being much improved, children, as well as those of a more advanced age, have less to do.

A. 13 & 14.—I do not employ apprentices.

A. 15.—None but who have either father or mother. Parents occasionally visit their children; and children, whose parents are within a proper distance, are with them on Saturday evening and Sunday; those at greater distances less frequently.

A. 16.—I have no children under twelve years of age whose parents do not reside here, and they live with their parents, and are consequently under their superintendence.

A. 17 & 18.—My present number of working hours is for a week at an average of thirteen hours a day, and it is necessary that the whole of my work be carried on at one and the same time; consequently all the workpeople of all ages are employed during all the working hours, and with me they have always been so employed.

A. 19.—Thirteen hours for the last four months, and twelve for the preceding fourteen months, were the regulated working hours; but the workpeople, when they wish a day or part of a day to themselves to go to public markets or other amusements, apply to work extra time for the time to be taken up on these occasions, and this time is made up as found to be most convenient and agreeable to the workpeople; but no statement has been kept of what portion of this extra time may have been made up on any one day.

A. 20.—Three hundred and ten days, at an average of twelve hours and one third per day; the days for amusement noticed in preceding answer are included in this number, they having been made up by the extra work. There were two other days not included in the above on which no work was done, time made up, nor wages withheld; viz. the national fast and parish fast.

A. 21.—Three thousand eight hundred and twenty-three hours.

A. 22.—All parts of my work are carried on together, and for the same length of time.

A. 23.—Twelve and a third hours.

A. 26.—This might be avoided in my work, if I were inclined to pay my servants for no work, or, if the servants were inclined to want their wages for the sake of a play-day; but neither are so inclined, and the workers choose rather to work extra, and to keep their wages full. Excess beyond the regular hours of working is unavoidable in mills driven by irregular water power. (See A. 36.)

A. 27.—I never worked my factory for a greater number of hours daily than at present, and for many years for only twelve hours a day. I commenced spinning-master in 1803, and for many years the working hours in my mill, as well as in all mills in this quarter, were but twelve. In course of time, however, the working time was increased to twelve and a half and thirteen hours a day, and wages were increased accordingly. I did not raise the wages, because I had not lengthened the time of working, but my workpeople asked the same wages from me as were paid at mills working thirteen hours a day; I told them the wages paid by me were as high, in proportion to the time employed at my work, as in the mills where thirteen hours working was carried on, that they could live comfortably with the wages received from me, and that twelve hours work was long enough, but they insisted to have the wages, and they would give the long hours; I of course gave the high wages, and got the long hours work. Eighteen months ago a number of spinning-masters in Fife agreed to reduce the working hours to twelve daily, and I was one of them. We reduced the hours accordingly, but did not reduce the wages. Others, however, continued to work the long hours at the same wages as formerly. This continued twelve or thirteen months but a demand for workers taking place, those who wrought the long hours raised their wages, and my people, who were still employed the short hours, insisted for having wages equal to those working the long hours, and I was in consequence obliged a second time to lengthen the hours and raise the wages.

A. 28.—I do; for although the wages of the workers were reduced in proportion to the shortening of the time of work, and I very much doubt if they could live comfortably on lower wages, yet there are other expences necessarily attending the work which do not vary, whether the work be carried on during longer or shorter hours, such as rents, premium of insurance, interest on capital in machinery, putting in machinery of a new and improved construction, &c. &c.

A. 29.—To increase his profits, or to save himself from loss, by being enabled to manufacture the article which he manufactures at less cost. That children or adults have been worked through the night without any intermediate change of hands is unknown to me.

A. 30.—In my factory I find the permanent expences (see answer to query 28) fully half of the cost of production when the work is carried on thirteen hours per day, and therefore a good deal more when carried on only twelve; but say twelve, and the permanent expences only half, and say the whole expences are 5*l.*, and the produce two hundred sps. Suppose now the working hours were reduced from twelve to ten, or to five-sixths of twelve hours, the quantity will be one sixth less, and the expence the same; thus,—

Twelve

|                                                              |   |   |   |   |                             |
|--------------------------------------------------------------|---|---|---|---|-----------------------------|
| Twelve hours work produced                                   | - | - | - | - | sps. 200 cost 5 <i>l</i> .  |
| Deduct from this one sixth of quantity of yarn, the cost re- | - | - | - | - |                             |
| maining the same                                             | - | - | - | - | 33½                         |
|                                                              |   |   |   |   | <hr/>                       |
|                                                              |   |   |   |   | sps. 166⅔ cost 5 <i>l</i> . |

Fifeshire.

John Walker.

But to make the quantity one hundred and sixty-six and two thirds spun in the day of ten hours equal to the quantity of two hundred sps. spun in the day of twelve hours, one fifth of another day of ten hours must be employed. One fifth of the quantity one hundred and sixty-six and two thirds is thirty-three one third, and one fifth of the price is 1*l*. Add then - 33½ cost 1*l*.

Were the time reduced from twelve to ten hours a day - - sps. 200 cost 6*l*.

Thus by altering the working hours from twelve to ten hours a day the cost of production is increased one fifth or twenty per cent.; but the present working hours are thirteen, and, if reduced to ten, three hours are taken off in place of two, as in the above statement; and the quantity produced corresponding to the time employed in the production, and three hours being half more than two, the additional cost incurred in reducing the working hours from twelve to ten being twenty per cent., half of this sum, on account of reducing it from thirteen to ten being ten per cent., must be added to twenty per cent., making together thirty per cent. of additional cost when the working hours are reduced from thirteen to ten each day. Now, supposing the wages of the workers were reduced thirty per cent., this would still leave fifteen per cent. to be added to the cost of production, because workers wages being but half the cost of production, the permanent expences make up the other half. Sixty in place of thirty per cent. would therefore require to be deducted from the wages of the workers to enable the spinning-master to produce the article at the same cost; and in this event a girl's wages of 5*s*. per week would be reduced to 2*s*. To suppose that this could be done is absurd. Little or no reduction in this way, therefore, would or could take place. The additional cost must then fall on the spinning-master; but his profits have been little or nothing for years bygone, he cannot then afford thirty per cent. additional on the cost of production, and he cannot get a higher price for his yarns from the manufacturer. As the manufacturer cannot afford this, for his profits are on a par with the spinner, nor again can the manufacturer get a higher price for his manufacture from the merchant, for the merchant must sell these manufactured goods in a foreign market, where the manufactured linen cloth of other foreigners comes in competition with ours, and these foreigners are not limited to any specified number of working hours. Prohibit the working hours to ten each day for those under eighteen years of age, and we lose the linen trade, and foreigners will get possession of it and keep it.

A. 31.—My work being in the country, and at too great a distance from town or village for my people to live in and attend it, I am under the necessity of finding accommodation for all in my own houses; and these houses are no more than sufficient for the accommodation of those who are unavoidably employed the whole working hours.

A. 32.—I never tried a system of relays or change of hands in the employment of children. I had it not in my power to do so; and even were factories in large towns to do so, it must be attended with considerable additional trouble and expence. Children would require more than half wages; their present wages are barely sufficient; and half the quantity of victuals is not; and there are no poor rates in Scotland to help them.

A. 33.—I never did.

A. 34 & 35.—No night-work.

A. 36.—The prohibition of night-work would not directly affect me, I having no night-work. It would put on a more equal footing those who have a steady and invariable power, such as steam; it would hurt many, and in some cases completely ruin those who depend entirely on water power. When the water comes irregularly, and in summer is reduced to say half the quantity requisite, and when the mill-masters are accustomed to keep half their work going through the day, and the other half in the night, and to divide their people to work accordingly, were night-work prohibited they would lose the night-work, and half their people would be thrown idle, and only half the work performed which but for this prohibition would have been performed, and the prohibition would also have a ruinous effect on those whose works are dependent on a supply from dams above them, over which they have no control, and whose supply depends entirely on those people above them opening their sluices at what times and letting down the water in what quantities they please. In this case those having works so situated must wait the time and the quantity of water coming to them, and make the most of both. Any prohibition as to time would in this case absolutely ruin them.

A. 38, 39, & 40.—No artificial heat.

A. 50.—By oil burned in argand lamps from September till April.

A. 51.—Letting down windows from the top, if required.

A. 53.—Half an hour for breakfast and the same time for dinner, and this is found to be sufficient, the people employed residing close to the work; and this short time is more agreeable to all concerned, as their work is over sooner at night.

A. 54.—All, except a few who leave the work half an hour before the rest, and return when the rest leave it, that they may clean the machinery when it is standing.

(APP.—A. 1.)

H

A. 57.

Fifeshire.

John Walker.

A. 57.—Firmness and kindness, and when these fail, dismissal.

A. 58.—On none, and I dare not. Generally many mills are in want of workers, and on application they would willingly take mine in. My workers can at any time leave me on giving three months previous notice of their intention to do so; but if corporal punishments were inflicted on any, they would leave me immediately.

A. 59.—By none.

A. 60 & 61.—Not for many years.

A. 62.—My people know that corporal punishments are not allowed by me, and as they never are inflicted, I do not require to take steps to prevent them.

A. 63.—When any of the workers misbehave, the overseers are instructed to let me know, and they are either reprimanded, fined, or dismissed, according to the nature of the offence. No written instructions.

A. 64.—Never.

A. 65.—There are families in the place, part of whose fathers and children work in the factory, and they have each a house for themselves. In these families one or more girls also lodge when it is found convenient to do so. The rest of the women live in apartments, four to six in each; a bed and bed-clothes for every two, and properly cleaned sheets are regularly furnished them. Their apartments are annually washed with whitening or white lime, and occasionally visited to see that all be right. All my people go to church, and many besides attend a Sunday-school in the neighbourhood. When any improper conduct or uncleanness is noticed in any of my people, I am very soon informed of it by those among whom they lodge, their character and comfort in such cases being at stake.

I annex copy of the certificate of the minister of this parish respecting the morals of my people.

Kemback, 30th January 1833.

That Mr. J. Walker, mill-spinner at Blebo Mills, has resided in this parish during the period of twenty-eight years; that he exercised a most praiseworthy inspection over the character of the persons employed in his mill, dismissing those whom he finds addicted to disorderly and dissipated habits; and that, so far as I have known or heard, fewer instances of irregularity have taken place in his mill than could have been expected among so great a number of workpeople as he finds it necessary to employ.

It may be proper to add, that the spinners of the mill have rarely applied to me for relief from the session funds.

(Signed) JAMES M'DONALD.

A. 66.—As to difference in skill (see A. 11.), and as to general character, those who have been employed in public works from infancy are more likely, I believe, to acquire steady and industrious habits than such, particularly in large towns, who have been allowed to go idly about for a greater number of years, and necessarily mix with youth of idle and disorderly habits; and fewer of these profligate youth will, I believe, be found in the great manufacturing towns of Glasgow, Dundee, and Aberdeen, in proportion to the number of the inhabitants in those towns, than in Edinburgh. I am satisfied that the general character of those who have been employed in public works from infancy is preferable, as compared with those who have been taken into employment at later periods. When I happen to have suspicious or bad characters about the work, I take the first favourable opportunity to get free of the first of these, and I, with very little ceremony, dismiss the last. I am happy however to say, that I have no such with me at present, so far as I know; and if I were to give a preference to any, it would be to those who have been longest with me, as in proportion to the length of time they have served me I can with the more confidence say as to their real character.

A. 67.—I cannot say that the health of my people has either improved or deteriorated during the last ten years. Mine have generally been very healthy. Attention is now given to keep all the spinning-mills much more cleanly than I recollect of them being kept, and also the houses of the workpeople immediately connected with spinning-mills in the country. Spinning-mills, too, are now made more roomy and airy. These circumstances, no doubt, conduce to the health of the people employed in spinning-mills.

I annex copy of certificate by the doctor who visits my workpeople:

Ceres, 31st January 1832.

I have attended the workpeople employed in Mr. Walker's spinning-mill, of Blebo Mills, for the last thirteen years, and I have found distress amongst them fully as little as among the same number of individuals in any other avocation. They are less liable to the vicissitudes of the weather, wet, heat, and cold; their employment is exercise rather than hard work, and their pay enables them to procure the necessaries of life better than the generality of people in their rank.

(Signed) J. C. ANGUS, Surgeon.

A. 68.—Except in the case of two or three individuals I have never had occasion during the long time that I have been a spinner (nearly thirty years) to do so; and these were asthmatic subjects, who were in the dustiest part of the mill, the carding department, and complained of the dust. But I have few complaints of this kind. Two carders now in my employment,

employment, and who have served me, Isabel Scott twenty-six years, and Eppie Kirk twenty-five years, and who never have been in any other department in my work, are to this day as healthy as any in the work.

A. 69.—I am not sensible that flax-spinning mills in Scotland are subject to the provisions of the present or of any other act of parliament.

A. 77.—The workpeople are as independent of their masters as their masters are of them. I have no reason, therefore, to believe that the workpeople would be afraid of displeasing their masters by giving evidence.

A. 78.—The common law of Scotland is, I believe, sufficient for the protection both of servants and masters in the public works of Scotland. Were the provisions proposed in Lord Ashley's Bill to become law, the kindly feelings which generally subsist between masters and servants would be extinguished, and instead jealousies, spies, and informers would be introduced; the workpeople would become restless, discontented, and unhappy, and the masters would, too, be sufferers in consequence.

A. 79.—We have no poor's rates in Scotland, nor is any aid received from the parishes, unless in extreme cases, and that a mere pittance; a father of a family has to provide for himself and his family until the family be able to provide for themselves, and he will suffer much before he degrades himself to seek parish relief, for a degradation it is considered to be, and long may this feeling exist here; he knows his wellbeing depends alone on his exertions; he is industrious, frugal, and provident; not satisfied with providing for the wants of the day, but laying up against occasional want of employment and sickness; and far better clad, too, on the Sabbath-day than working classes will be found, I believe, in almost any other country; nor does he cease, after his children are able to provide for themselves, to take a fatherly interest in them. Unless in the case of orphans without father or mother, and foundlings, I believe the parishes here take no charge; and there are consequently very few parish apprentices, and I strongly suspect that the evils complained of respecting children in English factories mainly originate in the English poor laws. If Lord Ashley's Bill pass into a law with the limitations proposed, both masters and servants will find it their interest to disregard it, and those who comply with it will be the exception to the general rule, and the Act will become a dead letter. In Scotland it occasionally happens that a girl gets married at fifteen, and has a child at sixteen years of age, and then she has the charge of herself, her child, and her own house. But if she should be in a factory, and has the two other charges left her, she is not, however, to have the charge of herself, although she be at liberty on giving warning to leave the factory thereafter in the space of two weeks, or one, two, or three months, according to the regulations; she is nevertheless, to the astonishment of herself and of every body else, declared to be a child at eighteen, and put under the tutorage of an act of parliament till twenty-one, as not being till then capable of taking care of herself!!! One does not work for the love of working, but from necessity and the desire of bettering his condition, and any hindrance to him in these is clearly an act of injustice. Sympathy for the distressed, and particularly for children who work long hours in large factories, is a natural feeling, and whoever should free them from this would be hailed as a benefactor of the human race. But let him first beware that the means he adopts for this purpose do not, in place of relieving them, put them in a far worse condition. Let first the cause which necessitates them so to work be removed, and then there will be no necessity for passing laws to shorten their working hours, or other enactments respecting them.

JOHN WALKER.

Fifeshire.

John Walker.

#### ANSWERS of JOHN ARTHUR, Kinghorn.

No. 38.

John Arthur.

A. 1.—Kinghorn, county of Fife.

A. 2.—Spinning of flax and tow.

A. 3.—The flax-mill buildings remain unchanged since 1814, the period at which they were purchased. The erection of the tow-mill only took place last year.

A. 4.—The tow-mill is wholly steam power. The flax-mill is partly steam and partly water. The average supply of water does not exceed three horse power. We have at each mill a steam-engine of sixteen horse power.

A. 5.—No distinct provision for ventilation.

A. 6.—On the opening of windows, which are all hung from the upper sash on purpose.

A. 7.—Under the control of the overlooker.

A. 8.—All the most dangerous parts of the machinery fenced off.

A. 9.—No arrangements thought necessary.

A. 10.—In a very few instances we have employed children under nine out of charity to their parents; we have none at present under that age; none of these were previously employed at other work.

A. 11.—No; except when there is a scarcity of hands.

A. 12.—No change.

A. 13.—No.

A. 17.—Twelve hours and a quarter for the first five working days of the week, and eleven hours and a quarter on the Saturdays.

A. 18.—No difference from the above.

(APP.—A. 1.)

H 2

A. 19.

Fifeshire.

John Arthur.

A. 19.—Thirteen hours and a half, which does not occur above six or eight times in a year.

A. 20.—Two hundred and ninety-nine days.

A. 21.—Three thousand seven hundred and forty-nine hours, or thereby.

A. 22.—All carried on together.

A. 23.—Eleven hours and forty-five minutes, or thereby.

A. 24.—Thirteen hours and a half.

A. 25.—Only when a few hours were lost by a stoppage of the machinery; when it went the length of a day it was optional on the part of the workers either to make up the time or have the day's wages deducted.

A. 26.—It is avoidable, at a sacrifice on the part of the masters of the value of the work done, after deducting the wages and fuel.

A. 27.—Yes; half an hour longer.

A. 28.—Enhanced in proportion to the diminution of time, or nearly so.

A. 29.—The hope of more gain.

A. 30.—An increase in the cost of production in all the branches, but with regard to the extent and the exact proportion, from a difference of only a twenty-fifth part, we do not feel competent to give a decided answer.

A. 31.—We have no experience upon these points.

A. 32.—We never tried relays of hands, not judging it necessary for the length of the working hours, the longest day not exceeding thirteen hours and a half, and that only upon very rare occasions. (See A. 19.)

A. 33.—No.

A. 36.—We have no night-work.

A. 37.—Our opinion is, that were the hours to be reduced to ten, and eight on Saturday, it would enhance the cost of production so much as to render it impossible to compete with the foreign manufacturer, who is already treading on our heels; it would lessen the value of capital embarked in machinery to a most injurious extent; it would diminish the necessary supply of yarns to such a degree as either to throw many weavers out of employment, or compel their masters to resort to other countries for the goods they require. But were the legislature to limit the hours to an average of eleven per day, it would be entirely satisfactory to the workpeople; it would not materially increase the cost of production; it would not deteriorate in such an unwarrantable degree the value of capital sunk in spinning factories; it would not lessen the supply of yarns in such a dangerous ratio; and one advantage would result from the change, provided the other provisions of the bill were capable of being complied with; it would place the selfish and the generous, the unfeeling and the compassionate, the considerate and the inconsiderate, among the masters, upon an equal footing.

A. 38.—We have no artificial temperature, no particular degree of heat or cold being necessary for our manufacture, and consequently it varies with the different seasons.

A. 41.—Not any.

A. 50.—With gas.

A. 51.—Nothing but the windows.

A. 52.—No experience.

A. 53.—All alike; half an hour to breakfast, and three quarters of an hour to dinner.

A. 54.—They all go to their homes at meal-times, except a very few, who stay occasionally.

A. 55.—It is their own free choice, and for their own convenience.

A. 56.—It would not disturb the work, but occasionally inconvenience the people.

A. 57.—Dismissal from employment.

A. 58.—No.

A. 63.—Yes; they have been told we do not approve of blows, and they are prohibited from inflicting corporal punishment. (See A. 57.)

A. 64.—Nothing of the kind.

A. 65.—No.

A. 66.—There is a certain department of the work, viz. the spinning, where they never acquire the same dexterity as when taught young. As to character, from the education and religious instruction they receive, they are at least equal, if not superior, to those who are employed at later periods.

A. 67.—The health of the workpeople has improved; no death has occurred among them for some years, which may be ascribed partly to the regular visits of a medical man and the healthy nature of the employment, and partly to the increasingly improving behaviour of the people.

A. 68.—Not necessary.

A. 69.—No.

A. 77.—We have no experience on this point.

A. 79.—With regard to the penalties in Lord Ashley's Bill, the framers of it must have been utterly unconscious of their practical working, or they never would have had the temerity to have proposed them for the adoption of parliament; they are so extravagant and partial and unjust, that the persons and property of the masters would be placed completely at the mercy of any unprincipled or malicious servants, without any means of redress, although the accusations turn out false and spiteful, and the injuries sustained by the workers proved to be the result of design and an intention to defraud.

JOHN ARTHUR.

## ANSWERS of WILLIAM SWAN, Proprietor of the Upper Mill at Kinghorn.

Fifeshire.

No. 39.

William Swan.

A. 1.—Town of Kinghorn, parish of Kinghorn, and county of Fife.

A. 2.—Spinning of flax and tow yarn.

A. 3.—The mill, and greater part of its appendages, were erected in the year 1793; and except for a few years, when cotton yarn was spun at it, since that time has been employed as at present.

A. 4.—Steam power employed regularly to the extent of about twenty-four horse power, and an irregular water power; in winter never exceeding six or seven horse power, and in summer barely sufficient to supply injection water.

A. 5.—There is no distinct or specific provision for ventilation.

A. 6.—The windows of the mill on both sides draw down at top, and this, with the casual opening of the doors, answers every good purpose of ventilation.

A. 7.—The ventilation is regulated by the overseer of each flat, at the discretion of the persons employed.

A. 8.—Most parts of machinery may be considered dangerous, and cannot of course be entirely fenced off; but the side wheels, and other parts which are considered most dangerous, are fenced off with boxes.

A. 9.—There cannot be said to be any special arrangement for the purposes mentioned. As the workpeople all lodge in the immediate neighbourhood, they are not much exposed to the inclemency of the weather going to and from the mill; but the female part of the workers generally change their outer garment when they come to or leave the work, and boxes are placed in various parts for the purpose of keeping their spare clothes. It may here be mentioned, that in point of health, domestic comfort, and personal cleanliness, they will bear a comparison with any class of operatives in the country whose employment is within doors, and I am sure they would take it as an affront to be likened to the squalid, ill-fed, and ill-clothed part of the population who may be seen in every town prowling the streets in idleness, vice, and wretchedness.

A. 10.—Ten is the lowest age at which we are willing to admit children; but many applications are made for admission at an earlier period. The circumstances of the working classes generally are such as to compel parents to look out for employment for their children as soon as they are able to provide for themselves.

A. 11.—Although the nature of our work does not properly require the employment of children under twelve years of age, yet it is found by experience that unless they begin early they do not acquire such expertness and proficiency as often distinguish them in after life.

A. 12.—I am not aware of any material difference in this respect. Only a small portion of our machinery is of the most recent construction. The number at present employed under twelve years of age is only seven.

A. 13.—None within the mill; the only apprentices employed belong to the heckling and mechanics departments.

A. 14.—Parish apprentices are unknown here.

A. 17.—The usual number of working hours for five days in the week is twelve and a half each day, and eleven hours on Saturday, beginning at a quarter to six o'clock A.M., and ending at half past seven o'clock P.M. On Saturday they leave off at six o'clock.

A. 18.—There is no difference in the hours of work to any class of workers.

A. 19.—The mill which now belongs to the respondent formerly belonged to Charles Arthur and Company, of which firm he was a partner, but took no share in the management. Only came into his possession in the month of June last year; since that time it has undergone considerable alterations, and many stoppages have consequently occurred, so that the hours of employment are not on record. The preparing machinery being the most deficient, that department was wrought for a time one or two extra hours, in order that the workers at the spinning machinery might not be thrown idle. This state of things only lasted a few weeks. The workers were of course paid wages for the extra hours labour.

A. 26.—The excess above mentioned could only have been avoided by throwing the spinners and others idle, thereby depriving them of wages for the time.

A. 27.—The hours of working were at no time longer than at present, and they have been the same for many years past.

A. 28.—In answer to this question it may be stated, that the value of a mill depends upon its productiveness; of course the cost of production must be enhanced by a reduction in the hours of working it.

A. 29.—In machinery a very large capital is embarked, which becomes valuable only as it is wrought or employed; in any case it soon wastes, and requires to be renewed, but were it allowed to stand idle it would soon become valueless; any abridgment, therefore, of the hours of labour, must lessen the production, and be followed with loss to the concern. Hence the inducement to the manufacturer to have his work continued.

A. 30.—The limitation of the hours of work must unquestionably increase the cost of production, and will be found to affect every branch of the trade. So far as the spinning of yarn alone is concerned, if you reduce the time of going to ten hours per day, you lessen the production about one fifth part. Now, supposing that it requires four fifths of the present production to pay wages, and the every day contingent expences, which cannot be lessened, where, I would ask, is the return for capital to be found? Although wages were to undergo

Fifeshire.

*William Swan.*

a proportionate reduction, which the operatives cannot afford, it is clear that the millowner would not thereby be compensated.

A. 31 & 32.—Relays or fresh sets of children or persons under twenty-one years of age could not be procured in this place, and that system of change has never been tried at this work.

A. 33, 34, 35, & 36.—We have no night-work, and consequently no double set of hands.

A. 38, 39, & 40.—The mill is not heated by any artificial means, and any particular temperature is not much studied; but by the means referred to in A. 5. and A. 6. a salubrious or comfortable temperature is generally kept up.

A. 41, 42, 43, 44, & 45.—No night-work.

A. 46, 47, & 48.—None.

A. 50.—With coal gas.

A. 51.—A small opening of the windows at top is sufficient for the purpose.

A. 52.—No night-work.

A. 53.—Half an hour for breakfast, and three quarters of an hour for dinner.

A. 54.—With the exception of two or three persons, all leave the work together at meal-times.

A. 55 & 56.—Those who do not leave with the rest of the workers stop for the purpose of oiling and cleaning the machinery when standing; but the same time for meals is allowed to them, which they take either before or after the mill stops, as suits their convenience; and all take their meals at their respective lodgings.

A. 57.—The ordinary means adopted by parents towards their children, viz. persuasion, gentle chastisement, or dismissal from the work.

A. 58 & 59.—None.

A. 60 & 61.—Neither with my knowledge or sanction.

A. 62 & 63.—Corporal punishments have been forbidden by verbal instructions.

A. 64.—Never at any time.

A. 65.—Very few of the workpeople live in houses belonging to the proprietors; but in general they either occupy houses in the town of Kinghorn as tenants, or they lodge with householders; and the young people are in general either with their parents or relations, and as far as I know enjoy as much comfort as narrow circumstances can supply.

A. 66.—The circumstance of a person being long employed at the work infers general good character; and, besides, those who have been employed from infancy are always the most expert and ready-handed.

A. 67.—During the last ten years the health of the people at this factory has been as good as that of any equal number of the community, as may be attested by the medical attendant; and it may be mentioned that during the prevalence of cholera last year not one of our people fell a victim to it.

A. 68.—None of the processes are considered injurious to health, consequently there is no selection of persons or change of employment for any purposes referred to.

A. 69.—I do not understand that this mill is under the provisions of any particular act.

A. 70.—Never.

A. 77.—Having had no experience of this kind, I cannot speak to the point; but I am of opinion the workpeople would not be afraid of giving evidence if they were properly called upon to do so.

A. 78.—As we are not under any special Act of Parliament, I suppose this question has reference to the Bill intended to be brought forward by Lord Ashley for regulating factory labour. With regard to that bill, its provisions and penalties, I hesitate not to pronounce many of them despotic and unjust in a high degree, and quite uncalled for and inapplicable to the flax-mills of this district. It seems to proceed upon the assumption that mill proprietors and managers are tyrannical and cruel taskmasters; and that the parents of children employed at factories are reckless, unfeeling, and indifferent to the present welfare and future happiness of their offspring. The reverse of this is the fact, so far as my knowledge and experience go; but I would not object to the Bill if it only went to prohibit the employment of children under a certain age; and to limit the hours of labour (or rather of attendance, which would be a more proper name for it) to twelve hours per day for all the workpeople. A simple measure of this kind would do good; but the Bill as proposed by Lord Ashley would be intolerable, destructive of every kind feeling which now exists betwixt master and servant, and fraught with ruin to many manufacturing establishments.—N. B. A medical practitioner is retained at the expence of the workpeople themselves, aided by an allowance annually from the proprietor, who gives daily attendance; and a teacher is employed for the instruction of the younger portion of the workpeople.

4th May 1833.

WILLIAM SWAN.

No. 40.

*James Archibald.*

## ANSWERS of JAMES ARCHIBALD, Kirkaldy.

A. 1.—Parish of Kirkaldy, county of Fife.

A. 2.—Spinning flax into yarns.

A. 3.—In the year 1815.

A. 4.—Steam.

A. 5.—By windows.

A. 6.

Fifeshire.

*James Archibald.*

- A. 6.—By the opening of the windows.  
 A. 7.—At the discretion of the overlooker.  
 A. 8.—They are.  
 A. 9.—None.  
 A. 10.—Ten years of age.  
 A. 11.—It does, 1st, because there are many trifling acts to be done, such as carrying bobbins and cleaning, to which little exertion is required; 2dly, because it is necessary to keep up a supply of workers by learning young persons.  
 A. 12.—I do not think it does.  
 A. 13.—No.  
 A. 15.—Lodge and maintain none.  
 A. 17.—Twelve hours each day.  
 A. 18.—No difference in the hours of employment of children and adults.  
 A. 19.—Cannot answer positively.  
 A. 22.—The various departments of the work go or stand together.  
 A. 23.—Twelve hours.  
 A. 25.—Before or after holidays, or in consequence of breakage.  
 A. 26.—Not avoidable, unless the time lost be deducted from the amount of wages.  
 A. 29 & 30.—No night-work.  
 A. 31.—Do not work extra hours, and no relays of hands necessary.  
 A. 36.—Cannot say.  
 A. 37.—Reduce the workers wages, and cause a positive loss to proprietors of mill property.  
 A. 38.—Use no artificial heat.  
 A. 46.—None.  
 A. 50.—By gas.  
 A. 51.—No particular provision. See A. 6.  
 A. 53.—From nine to half past nine, and from two to half past two.  
 A. 54.—All.  
 A. 55.—Both.  
 A. 56.—No meals taken in the mill.  
 A. 57.—Dismissal from the works.  
 A. 58.—No.  
 A. 62.—Yes.  
 A. 63.—Instructed him not to use corporal punishments.  
 A. 64.—No.  
 A. 65.—They do not.  
 A. 77.—No.

JAMES ARCHIBALD.

## ANSWERS of JAMES AYTOUN, Abbotshall Spinning-mills, near Kirkaldy.

No. 41.

*James Aytoun.*

- A. 1.—Parish of Abbotshall, near Kirkaldy, county of Fife.  
 A. 2.—The spinning of flax, tow, and hemp.  
 A. 3.—Thistle Mill erected in 1821, Rose Mill in 1825; both employed since these periods as spinning factories.  
 A. 4.—Steam power in both; Thistle Mill-engine fourteen horse power; Rose Mill twenty-two horse, but not fully occupied.  
 A. 5.—Chimneys, or wide tubes, were made in the wall, opening into the carding room of Rose Mill; but the draught produced such an uncomfortable degree of cold, that they were soon shut up.  
 A. 6.—The only other means of ventilation in either mill is by occasionally opening windows; but from the extent of the flats, and frequent opening of doors, other means are not required.  
 A. 7.—Entirely regulated for the general comfort by the overlookers of the several rooms.  
 A. 8.—The most dangerous parts of the work are the carding-engines, which have the wheelwork and revolving parts entirely boxed in, and only the belts connecting them with the driving machinery aloft left exposed. The spinning machinery have their wheels so placed within the frame-work, that they can only be dangerous from gross negligence on the part of the workers, or disobedience to express regulations as to the proper times for cleaning.  
 A. 9.—No regulations of the kind referred to are necessary at this work, where the employment is neither dirty nor unhealthy; the people generally come and go in their working dresses, which are little different from those in use when off work.  
 A. 10.—About ten years of age; none of the younger workers previously employed at any other trade, except two or three for a short time at the weaving.  
 A. 11.—The dexterity necessary for managing a spinning-frame can only be acquired by beginning young; the time spent in gaining it, the waste made in the attempt, and consequent

(APP. A.—1.)

H 4

Fifeshire.

James Aytoun.

consequent necessity for a low rate of wages, would effectually prevent grown-up persons from attempting it. Children can also be employed in many petty operations which would not afford wages to older people.

A. 12.—Not aware of any late difference.

A. 13.—None within the factory.

A. 14.—Scotland is happily without the reproach of parish apprentices.

A. 15.—No unprotected orphans are known to be at the work.

A. 16.—None to superintend.

A. 17 & 18.—Twelve working hours a day for old and young at the factory.

A. 19.—Twelve and a half hours, including extra half hours to make up for occasional stoppages.

A. 20.—Every lawful day throughout the year, with the exception of the parish fast day, Hansel Monday, a jubilee day for the passing of the reform bill, and partially on two fair days; also excepting interruptions from accidents to the machinery.

A. 21.—No time-book kept by which this can be ascertained farther than is above given.

A. 22.—All departments of the work go on together.

A. 23.—A little under twelve hours.

A. 24.—Twelve and a half hours when making up lost time.

A. 25.—After occasional interruptions from accident or otherwise, which are made up by an extra half hour's work per day, no deductions being made from the wages at such times.

A. 26.—It might certainly be avoided; but the servants are more inclined to make up time lost by accidental interruption, than to suffer a proportional reduction of wages.

A. 27.—Till within the last twelve months, the regular working hours were twelve and a half; about that time they were reduced to the present rate of twelve, in consequence of an agreement between the greater part of the mill-spinners in Fife, and which the respondent and some others still adhere to.

A. 28.—As a matter of course, whatever limits the quantity produced within a given time enhances the cost of production. The proposed Ten Hour Bill would reduce the produce about one fifth part; the same deduction made from the wages of the operatives would be grievously felt by them, and masters could not afford to pay the present rates; even a proportionate reduction of wages would not make up the loss they would sustain, as many of their expences would remain the same.

A. 29.—It is believed that there is not amongst the flax-spinners in Scotland generally any wish to extend the working hours beyond twelve per day, still less for night-work, but from unavoidable necessity, such as the irregularity of water power, or accident.

A. 31, 32, 33, 34, & 35.—Can best be answered by manufacturers in districts where night-work and relays of hands have been in use. But, as matter of opinion, such relays necessarily implying working the machinery double time, and consequently encroaching upon the night, they are to be deprecated, whether as regards the comfort, the health, or the morals of the workers, tending to an excess of population as well as of manufactured produce; and in case of glutted markets would be attended with the most serious evils to both masters and servants. It is very desirable that all spinning establishments should be upon an equality. In many situations relays of hands could not be obtained; and those making use of them, supposing they were thereby to work twenty hours per day, would have an undue advantage over the rest of the trade.

A. 36.—Included in the last answer.

A. 37.—Lessened product and increased cost, ending in probable ruin to many spinning establishments, and certain reduction in the workers means of subsistence.

A. 38, 39, & 40.—In the flax and tow spinning operations temperature is of no consequence, other than as it affects the comfort of the workers. The different flats are always kept warmer than the air outside in winter and cooler in summer by the ventilation before referred to.

A. 41, 42, 43, 44, & 45.—Never wrought at night after the regular hours. As there are two mills worked by different steam-engines, in case of any extraordinary accident to the machinery of either, night-work might be resorted to by transferring to the other those who were thrown out of employ while repairs were being completed (probably though the law should forbid it), so that the workers might receive wages to subsist them, but it would never be resorted to from choice.

A. 46, 47, 48, & 49.—No part of the process requires to be continuous during the twenty-four hours.

A. 50.—Lighted within the regular hours of working, morning and evening, by coal gas from the public works.

A. 51 & 52.—No continued night-work, therefore no need of extraordinary ventilation; only a slight vapour rises from the gas, which easily escapes by a partial opening of the windows.

A. 53.—Half an hour to breakfast at nine o'clock, another half hour at two for dinner, being the regular meal-hours with most workpeople.

A. 54, 55, & 56.—All leave the work together at meal-times. The workers prefer the half hour to a longer period, as affording them more time for recreation or instruction in the evenings.

A. 57.

A. 57.—No compulsory measures are employed. In cases of disobedience they are dismissed from the work, or subjected to a slight pecuniary fine; but it is optional either to pay this or to leave the work.

A. 58, 59, 60, 61, & 62.—Corporal punishment has never been in use at these works. Overseers are instructed to report misdemeanors, which are only followed by reprehension, slight fine, or dismissal, by the master, as found needful.

A. 63.—Included in last answer.

A. 64.—No complaint.

A. 65.—Most of the workers live in houses belonging to the proprietor, close by the mills, or lodge with families in the neighbourhood, but are entirely out of his control farther than being obliged to observe a set of printed regulations in regard to cleanliness about their houses and doors, in common with all his other tenants. A school is kept at the proprietor's expence for the young people at the work, where they are instructed gratis in reading, writing, and arithmetic, and which is voluntarily well attended in the evening after the regular working hours are over.

A. 66.—No exceptions can be made as to skill or general character, other than is produced by a longer or shorter period of service or advance in life. In a moral point of view, the people at these and other works in the neighbourhood stand as high in the scale as any others in the country who earn their bread by daily labour.

A. 67.—Since the commencement the works have been uniformly healthy, as can be established by the certificate of a medical gentleman produced in some late parliamentary inquiries. As an additional proof of this, during the late prevalence of cholera only one case occurred amongst the workpeople, and that very doubtful; the sufferer had from his earliest infancy been in a state of both mental and bodily weakness. Certificate by Dr. Johnson of Kirkaldy referred to.

A. 68.—Frequent transfers are made from one part of the operation to another, but without reference to their unhealthiness; all are alike in this respect.

A. 69.—Not subject.

A. 70, 71, 72, 73, 74, & 75.—No complaints, informations, or convictions against the respondent or any of his neighbours, that ever he heard of, for any misconduct in regard to treatment of their workers.

A. 76 & 77.—Had the workpeople just grounds of complaint, they have too great a choice of employment for dread of their masters to prevent them giving evidence; there would therefore be no occasion to tempt them to act the infamous part of informers by the prospect of pecuniary reward in sharing penalties.

A. 78.—No penalties or penal enactments, further than the existing laws provide for the safety of every subject, ought to be introduced; they would only tend to disturb the harmony at present subsisting between master and servant at such works, and give rise to jealousies and vexatious disputes, which could not in the end advance the interests of either party. For the same reason, till a desire is shown on the part of the masters to extend unreasonably the working hours, and so long as parents and children are contented with them, any legislative interference for their restriction must be ungracious and uncalled for.

A. 79.—Any legislative enactment between master and servant is beset with difficulty. To regulate the age at which children should come into flax-spinning mills would be no hardship on masters, though, were it fixed at twelve years, it would be cruel and oppressive upon many parents in destitute circumstances, who, it ought to be remembered, have in this country no parochial aid but in extreme cases, and then not so much as to keep soul and body together. If mill-work be not afforded to many of them, they have no alternative but to beg or steal; hence arises the great prevalence of juvenile crime in towns where manufactories are not established.

The respondent has been connected with spinning-mills for a period of forty years (with the exception of a short interval), and cannot remember an instance of any of the people working to him having been legally convicted of any serious offence. He has seen no evil arise from twelve regular working hours per day, or seventy-two per week; and to him it appears obvious that, if there must be a bill, the hours should be regulated by so many per week, particularly as regards mills worked by water power, which is from different causes irregular. He has never seen parents in this country inclined to have their children over-worked; they are always disposed to take their part, and the management of their hours of work may be safely entrusted to them.

Upon the whole, I hope the flax-mills in this country will be let alone.

6th May 1833.

JAMES AYTOUN.

#### ANSWERS OF ALEXANDER BOSWALL, Leslie.

A. 1.—East Prinlaws, Leslie, parish of Leslie, county of Fife.

A. 2.—Flax-spinning.

A. 3.—Erected in 1823, and first employed in 1824.

A. 4.—Water power; pretty regular; the extent about twelve horse power.

A. 5.—No distinct provision.

A. 6.—Ventilation is caused by opening of the windows.

A. 7.—At the discretion of the workers.

(APP. A, 1.)

I

A.8.

Fifeshire.

Alex. Boswall.

- A. 8.—As far as practicable.  
 A. 9.—No particular arrangement.  
 A. 10.—Ten years of age, and none at this age have been at other employments.  
 A. 11.—Not below eleven or twelve years of age.  
 A. 12.—About the same proportion.  
 A. 13.—None.  
 A. 17.—Twelve hours each day.  
 A. 18.—No difference; twelve hours each day.  
 A. 19.—From twelve to fourteen hours; never exceeding, and this for the making up of lost time.  
 A. 20.—Three hundred and seven days.  
 A. 21.—Three thousand six hundred and ninety-six hours.  
 A. 22.—All carried on at one time.  
 A. 23.—Twelve hours.  
 A. 25.—From 29th December 1832 to 12th January 1833 beyond twelve hours each day, under contract for delivery of yarns.  
 A. 26.—Perfectly avoidable.  
 A. 27.—Yes; previous to the last eighteen months twelve hours and a half daily.  
 A. 28.—In proportion to the reduction of time the cost has been enhanced.  
 A. 29.—No night-work here, therefore cannot answer this question.  
 A. 31.—No objections if extra hours were wanted.  
 A. 32.—Never been tried, because not required.  
 A. 33.—Never.  
 A. 36.—Cannot say what the fearful effects would be.  
 A. 37.—Were a further reduction of hours made, the workers and all other persons connected with the manufactory would be injuriously affected, and consequences would follow which it is not possible to contemplate without serious apprehension, by allowing foreign manufacturers to compete and eventually drive us out of the market altogether.  
 A. 38.—No artificial heat required.  
 A. 50.—Gas.  
 A. 51.—No particular provisions, except from the windows, at the discretion of workers.  
 A. 52.—No night-work.  
 A. 53.—Three quarters of an hour for dinner and three quarters of an hour for breakfast; but to get off sooner on Saturday they only take half an hour for breakfast.  
 A. 54.—The whole leave.  
 A. 55.—Answered above.  
 A. 56.—All taken out of the manufactory.  
 A. 57.—If threats wont do, dismissal from the work.  
 A. 58.—None.  
 A. 63.—No instructions.  
 A. 64.—No complaints have been made.  
 A. 65.—All live in houses of their own.  
 A. 66.—Always best skilled when young.  
 A. 67.—From inquiry I find health to be greatly improved.  
 A. 68.—No injurious process.  
 A. 69.—Not subject.  
 A. 70.—Never.  
 A. 74 & 75.—Never. Does not apply to me.  
 A. 77.—Have no reason to believe that workers are afraid to speak their minds to their masters; at least I have never found this to be the case, but quite the reverse.  
 A. 78.—Would neither suggest nor recommend legislative interference betwixt master and servant.  
 A. 79.—No further observation. "But to be prosperous we must be free."

East Prinlaws, 8th May 1833.

ALEX. BOSWALL.

No. 43.

John Fergus.

## ANSWERS of JOHN FERGUS, Leslie.

- A. 1.—Parish of Leslie, county of Fife.  
 A. 2.—Flax-spinning.  
 A. 4.—There is a water-wheel of about twenty horses, and a steam-engine of fourteen horse power. The water power is irregular, varying in degree according to the season.  
 A. 5, 6, & 7.—We have flues for heated air in cold weather, but there is no provision for ventilation except opening the windows, which is regulated by the overseers in each room, according to the state of weather, &c. The people themselves are averse in general to much ventilation, and I observe that they rather prefer the rooms kept warm.  
 A. 8.—No. There are no parts of the machinery dangerous; no accident could happen unless by some great carelessness of the people themselves, and it is impossible to fence off every part where such accident might happen consistently with carrying on the work.  
 A. 9.—None in the mill.

A. 10.—I have none at present under eleven years of age; I am not aware that any of them have been engaged in other trades previously.

A. 11.—No. The work is better done by children above twelve years of age.

A. 12.—From the improved construction of machines, children can now sometimes do the work of an adult.

A. 13.—No, except mechanics.

A. 15.—There is one family orphans, but they live in family with the grandfather.

A. 17.—Twelve.

A. 18.—Twelve; we can make no difference.

A. 19.—Twelve and a half.

A. 20.—Three hundred and six days of twelve hours, and two half days of six hours.

A. 21.—Three thousand six hundred and ninety-six as nearly as I can ascertain.

A. 22.—No difference.

A. 24.—Twelve and a half.

A. 25.—To make up time for two half holidays given to the people on occasion of the markets in the village of Leslie, at their own desire.

A. 26.—I consider any excess beyond regular hours avoidable, except where irregular water power is used. Making up time is generally excused from some repair being needed, and a stop made in consequence, but this very generally arises from the steam-engine being over-burthened, in bad and insufficient state, or some other cause which might be provided against.

A. 27.—I did at one time work twelve and a half hours; never more.

A. 28.—The quantity of yarn produced by the mill was reduced exactly in proportion to the shortened time; and the wages remaining the same, (excepting reellers, who are paid by piece-work,) the cost of production was exactly so much increased at the time.

A. 31 & 32.—In country situations we cannot command more than one set of hands.

A. 33, 34, & 35.—No night-work.

A. 36.—I believe no bad effect whatever would result.

A. 37.—If the working hours be reduced to such a point as to deprive the manufacturer of fair return for his capital, the effect will be to lower wages, unless, as is more probable, any such enactment be open to evasion by that part of the trade who are disposed to evade it.

A. 38.—There is no artificial heat.

A. 46.—None.

A. 50.—By gas light.

A. 53.—One half hour for breakfast, and three quarters of an hour for dinner.

A. 54.—To the best of my knowledge the whole of them go home to meals.

A. 57.—None, excepting occasionally a small fine.

A. 58.—Never are, or never were.

A. 64.—Never.

A. 65.—Chiefly in houses belonging to myself. They are not allowed to accumulate any filth about their dwellings, which is regularly removed. There is a school attached to the work, but there is no control over the people, who may send their children or not, as they please.

A. 66.—I cannot reply to this.

A. 67.—I have had the mill only five years, during which time the health of the people has been as good as that of the neighbourhood generally.

A. 68.—We have never had occasion to do so.

A. 69.—Not subject.

A. 73.—None of the mills in my neighbourhood are subject to the provisions of any act of parliament for regulating hours.

A. 77.—None whatever.

A. 78.—If a ten hour bill is carried it will, in my opinion, be quite inefficient; the trade could not go on under it; it would be inoperative. The legislature should enact such a measure as it would be disgraceful to evade, and that respectable manufacturers would desire to see carried into effect. The age at which children should be admitted to a factory should not be under twelve; there should be no night-work for persons under eighteen, and working hours for the same set of hands should not exceed twelve per day and ten on Saturday. No time lost from any accident to the machinery should be "made up;" but mills where irregular water power is used should be allowed their time by the week, say seventy hours per week.

JOHN FERGUS.

#### ANSWERS by JAMES HAGGART, Leslie.

A. 1.—Parish of Leslie, Fife.

A. 2.—Flax and tow spinning.

A. 3.—Part erected in 1796, and part in 1819; always employed as a spinning-mill.

A. 4.—Water; regular; eighteen-horse power.

A. 5.—No specific provision.

(APP.—A. 1.)

I 2

A. 6.

Fifeshire

John Fergus.

No. 44.

James Haggart.

Fifeshire.

James Haggart.

- A. 6. On the opening of windows.  
 A. 7.—All or any of the persons employed.  
 A. 8.—All fenced off.  
 A. 9.—No particular arrangements.  
 A. 10.—Ten years of age.  
 A. 11.—Does not require children under twelve years of age.  
 A. 12.—None.  
 A. 13.—None.  
 A. 15.—No orphans.  
 A. 17 & 18.—Twelve hours each day.  
 A. 19.—A small part of the work was kept going for a few days thirteen hours.  
 A. 20.—Three hundred and nine days.  
 A. 21.—Three thousand seven hundred and eight hours.  
 A. 22.—All carried on at one time, except a small part, which was kept going for a few days in breakfast hour.  
 A. 23.—Twelve hours.  
 A. 24.—Thirteen hours.  
 A. 25.—To make up time lost by unavoidable stoppages, or voluntarily by the workers themselves, to have shorter hours on particular occasions.  
 A. 26.—Unavoidable, because machinery may break, and the workers choose to make up time to have full pay.  
 A. 27.—Wrought previous to Martinmas 1831 thirteen hours.  
 A. 28.—Enhanced.  
 A. 29.—Cannot say what may be the inducement.  
 A. 30.—In proportion to the diminution of hours the cost is increased.  
 A. 31.—Do not require extra hours.  
 A. 33.—I have not employed a night set.  
 A. 34.—Work only one set of hands.  
 A. 35.—No night-work.  
 A. 37.—If working hours are reduced, workers wages must be reduced in proportion. Capital expended on building and machinery will be less productive, and foreigners will be more able to compete with us, and may ultimately be ruinous to our trade.  
 A. 38.—Does not apply to my work.  
 A. 50.—Oil lamps.  
 A. 51.—No particular provision.  
 A. 52.—No night-work.  
 A. 53.—Three fourths of an hour to breakfast, same to dinner.  
 A. 54.—All leave the works.  
 A. 57.—No means, except the orders of the overseer, and if they do not obey they are dismissed  
 A. 58.—None.  
 A. 65.—All live in houses of their own.  
 A. 66.—Generally best skilled when employed young.  
 A. 67.—Improved greatly; find a great deal fewer have been absent on account of sickness than formerly. Mills are kept cleaner; workers are more cleanly themselves; have good wages; are well clothed and well fed.  
 A. 68.—No injurious process.  
 A. 77.—I believe they would not.  
 A. 78.—Would suggest no penalties, nor would approve of any legislative interference for regulating the hours of labour and general treatment of children.  
 A. 79.—No farther observation, only leave the trade, masters and workers, to themselves.

JAMES HAGGART.

No. 45.

Mr. Law.

## ANSWERS of Mr. LAW, Balgonie Spinning-mill, Markinch.

- A. 1.—No. 1, Markinch parish, county of Fife.  
 A. 2.—Flax heckling, and flax and yarn spinning.  
 A. 3.—Erected and employed for its present purpose about twenty-five years ago.  
 A. 4.—Water; the power regular to the extent of twenty-six horse power.  
 A. 5.—Ventilation is effected by opening the windows from the top.  
 A. 7.—By overlooker, in compliance with the feelings of those employed in the flat.  
 A. 8.—The most dangerous are fenced off.  
 A. 9.—There is no specific arrangement, but the females generally clean themselves before leaving the work at meal-hours and night.  
 A. 10.—Ten years of age; to the best of my knowledge, none of them have been at any other trade.  
 A. 11.—Cannot employ more than two or three under twelve years of age; being light work, they are able for it, and it saves wages.  
 A. 12.—None in my employ.  
 A. 13.—In the heckling department, but have none at present, and would not take them under sixteen years of age.

A. 14.

- A. 14.—None.
- A. 15.—I have only two under twelve years of age; they live with their parents.
- A. 17.—Twelve hours, except the hecklers, who being on piece-work generally work considerably under that time.
- A. 18.—Twelve hours.
- A. 19.—Fourteen hours, and only four persons employed.
- A. 20.—In consequence of standing for repairs, cannot positively say.
- A. 22.—Flax-preparing department; two hours extra for about twenty days.
- A. 23.—Twelve.
- A. 24.—Twelve.
- A. 25.—About the month of June, for want of a sufficient quantity of flax-preparing machinery to keep forward the spinning department.
- A. 26.—It was and is still avoided by a sufficiency of machinery mentioned above being got.
- A. 27.—No.
- A. 28.—I think there is no profit by working more than twelve hours at most.
- A. 29.—No inducement, unless an idea that he will get more work done for a less proportion of wages.
- A. 30.—Have neither increased nor diminished the hours of labour.
- A. 31.—No objections, unless the expence.
- A. 32.—Never tried that mode of working.
- A. 33.—No night hands employed.
- A. 36.—No alteration, as it is not tried.
- A. 37.—Think the hours should not be less than eleven hours, as the manufacturer could not be fairly remunerated for his capital, neither could he pay wages sufficient to maintain workers.
- A. 38.—No particular temperature is required.
- A. 39.—According to the state of the atmosphere.
- A. 41.—Never worked at night.
- A. 49.—Do not allege they should continue.
- A. 50.—Burning oil in lamps.
- A. 51.—Lowering the windows at top.
- A. 52.—Know of none, not practising it.
- A. 53.—Forty-five minutes each meal.
- A. 54.—All, except a few, for their own convenience.
- A. 57.—Dismiss them from the work.
- A. 58.—No.
- A. 63.—The only instructions given is to manage the children without corporal punishment of any kind.
- A. 64.—None.
- A. 65.—Do not live in the houses of their employers.
- A. 66.—I consider those employed from infancy equal in skill and morals to those coming to work at more advanced years.
- A. 67.—These who have come here from other factories have improved; thinks it is in consequence of free ventilation of country air.
- A. 68.—No parts unhealthy.
- A. 69.—Not subject.
- A. 77.—I think none in my employ are the least afraid to give evidence.
- A. 78.—Thinks the law should be, the time of labour not less than eleven hours (see No. 37); but not to work above twelve hours a day, as children get too fatigued, and there is no time for education, or any other improvement necessary for youth.

Fifeshire.

Mr. Law.

## ANSWERS of SCOTT and TAYLOR.

No. 46.

Scott & Taylor.

- A. 1.—Mill for tow-spinning, parish of Markinch, county of Fife. Mill for flax-spinning, parish of Falkland, county of Fife.
- A. 2.—Tow and flax spinning.
- A. 3.—Tow-mill at Martinmas 1822. Flax-mill twenty-three years ago.
- A. 4.—Water; regular in winter, but irregular in summer, if it be a dry season. A third of the labour is generally lost at the tow-mill in summer. The highest power on the mills is about four horses.
- A. 5.—Doors and windows at the control of any individual in the mills.
- A. 8.—All the dangerous parts are boxed in.
- A. 9.—In the tow-mill the workers have gowns which they put over their dress on coming into the factory, and throw off on leaving it; in both mills they have an opportunity of washing themselves in a small stream close by if they choose.
- A. 10.—Generally about nine or ten. None.
- A. 11.—No.
- A. 12.—Machinery same as when mills commenced.
- A. 13.—No.
- A. 15.—All live with their parents.
- (APP.—A. 1.)

Fifeshire.  
 —  
 Scott & Taylor.

A. 17, 18, & 19.—From twelve hours and a half to thirteen, excepting as explained in A. 4, as to summer. The feeders and carders are employed only nine hours per day in the tow-mill on an annual average.

A. 20.—Three hundred and four in each mill.

A. 21.—Three thousand eight hundred in each mill.

A. 22.—All work together, excepting as explained in A. 18, as to feeders and carders.

A. 23.—Twelve and a half.

A. 25.—Never exceeded the hours stated in answer to A. 18, excepting on the application of the workers to enable them to attend a fair, or such like.

A. 26.—It is avoidable by refusing their request.

A. 27.—No.

A. 29.—To produce the article as cheap as possible, in order to sell with the greater profit.

A. 31, 32, 33, 34, & 35.—Not applicable to our works.

A. 37.—A further reduction of the working hours would in our opinion enhance the value of the article produced, so that the manufacturers of other countries not under the same regulations would undersell us in the market.

A. 38.—The temperature of the atmosphere. No other temperature required except fires in winter for the comfort of the workers.

A. 41.—Never.

A. 50.—From four till half past eight P. M. in winter by oil lamps.

A. 51.—Ventilators in ceiling, which are opened if required.

A. 52.—Answered in forty-one, if connected with that question; if not, no difference known.

A. 53, 54, & 55.—At the desire of the spinners they breakfast in winter about eight A. M. before the mill is set agoing: half an hour is allowed for dinner. In summer they breakfast in the mill, spare hands looking after their work; an hour and a half or nearly two hours is allowed for dinner, in order that the water may accumulate.

A. 56.—On account of the irregular supply of water, if the summer breakfast hour were taken it would cause the workers to work so much later at night, which they themselves do not wish.

A. 57.—No correction required farther than a threatening word or look.

A. 58, 59, 60, & 61.—No corporal punishments inflicted.

A. 62.—Strictly forbidden.

A. 64.—None.

A. 66.—Those who enter young are better and more active workers than those who enter late. There is no difference in "general character," if by this term be meant moral character.

A. 67.—This question is answered by referring to the list, on which all are healthy. The workers are not stationary.

A. 69.—No.

A. 73.—Unknown.

SCOTT and TAYLOR.

No. 47.  
 James Peter.

ANSWERS by JAMES PETER, for NEILSON and COMPANY, Wemyss.

A. 1.—Parish of Wemyss, county of Fife.

A. 2.—Spinning, bleaching, and weaving.

A. 3.—The spinning works were erected in 1790.

A. 4.—Wholly water power.

A. 5.—The windows all drawn down in the upper sash, which the people use as they find necessary.

A. 6.—The opening of windows.

A. 7.—Generally at the discretion of the overseer, who has orders to leave them open at the diet hours.

A. 8.—The dangerous parts of the machinery are fenced off.

A. 9.—These arrangements are all attended to in their own families.

A. 10.—Ten years are the age at which children are admitted to these works; when any have been taken younger it has been on account of the poverty of the family.

A. 11.—Not absolutely; only they are more easily learned when young.

A. 12.—No; it has not required any such.

A. 13.—We employ no mill apprentices.

A. 15.—All our children are with their parents or natural or legal guardians.

A. 16.—We have no children requiring at home any superintendence, having no orphans.

A. 17.—The hours of work are twelve hours for all ages, exclusive of the hours of meals.

A. 19.

Fifeshire.

James Peter.

A. 19.—The people, when making up a half holyday, work from a quarter to half an hour, or at the discretion and conveniency of the people themselves.

A. 20.—The number of days the mill has gone the last year is 310 days.

A. 21.—Take 310 days, and multiply by 12, the work hours will give 3,720 working hours.

A. 22.—All the different parts of the work are carried on at the same time.

A. 24.—We have only one set.

A. 25.—When making up a holiday.

A. 26.—Quite avoidable, if the people choose to forego their holiday, or submit to a reduction of wages for the time.

A. 27.—For about seven years previous to 31st October 1831 the hours of work were increased from twelve to thirteen hours, at the request of the people, for the additional wages.

A. 28.—Having made no reduction in our wages when we reduced the working hours, the cost of producing was increased one twelfth.

A. 29.—The inducement I suppose must be profit, but never having had night-work at Kirkland, cannot say if it is profitable or not.

A. 30.—The limitation of the hours of work increase the cost of production in proportion to the extent of the limitation. The cost of production is also increased by the sunk capital laid idle by the limitation.

A. 31.—In the country relays are impossible where there are no more inhabitants than the works can employ; besides, it would be impolitic, as encouraging the increase of a pauper population.

A. 33.—No night-work at Kirkland.

A. 34.—One set of hands are perfectly adequate for all the work required of them.

A. 35.—No night-work.

A. 37.—As the present hours of work, which are twelve, exclusive of meals, are barely adequate to remunerate the spinner, a reduction of the hours, without a corresponding reduction of wages, and an additional price to make good the loss on sunk capital, would be very ruinous to the spinner.

A. 38.—The temperature depends on the state of the weather, as no artificial heat is used.

A. 39.—Our manufacture requires no degree of heat.

A. 41.—Never worked in the night-time.

A. 46.—None.

A. 47.—No process necessary to be continued.

A. 48.—No process to require any such.

A. 50.—By gas.

A. 51.—Opening the upper frame of the window when required.

A. 52.—No night-work.

A. 53.—Half an hour to breakfast, and three quarters of an hour to dinner.

A. 54.—All leave the works at meal-times.

A. 56.—Meals not taken in the manufactory.

A. 57.—By imposing small fines, or dismissal.

A. 58.—No corporal punishments.

A. 59.—Parents may inflict, but no other.

A. 60.—Not with my knowledge.

A. 62.—I have strictly prohibited them.

A. 63.—No corporal punishments allowed; of course, written instructions not considered necessary.

A. 64.—There was never an instance, to my knowledge, of any such proceedings.

A. 65.—Part live in the houses of their employers, and part in the neighbouring villages. The houses of their employers are from time to time whitewashed by the orders of their employers, who pay the expence of such washing and cleaning.

A. 66.—Those employed from childhood, and brought up at the works and neighbourhood, have been found greatly more skilful and steady than those taken into employment at later periods of life.

A. 67.—The state of the health of the people is generally good; during the last ten years it may be said to have improved rather than deteriorated.

A. 68.—The people go to such operations as require them.

A. 69.—Not subject to any act.

A. 79.—Yes; let us alone; any interference betwixt master and servant will be attended with injurious consequences to both. A restriction of hours of work must be attended either with a reduction of the servant's wages or the master's profits, and neither can afford it.

JAMES PETER.

Forfarshire.

No. 48.

George Cummins.

## FORFARSHIRE.

ANSWERS of GEORGE CUMMINS, Partner of Andrew Duncan and Son, Inchmill.

- A. 1.—Town of Arbroath, parish of St. Vigean's, and county of Forfar.
- A. 2.—Spinning of flax, and flax-tow yarns; also the mill-washing and bleaching (chemically) of yarns.
- A. 3.—The principal buildings of Inchmill were erected at three different periods. The main building was erected in 1810, at which time it was chiefly used as a flour-mill, there being then and for some years afterwards only eight spinning-frames therein. In the year 1813 it was occupied entirely as a flax and tow-spinning mill. In 1822 a large addition was made thereto; and again, in 1832, considerable enlargements and alterations were made. The bleaching-work was erected in 1824.
- A. 4.—Steam; viz., three engines of forty-six horse power.
- A. 5.—There is no specific provision for the ventilation of the mill, except the opening of the windows, which are large and numerous.
- A. 7.—The principal foreman, as well as the foremen of the different flats or apartments, have particular instructions to see that a sufficient supply of fresh air is at all times admitted, and the masters occasionally look to this themselves; but the persons employed not unfrequently regulate the ventilation themselves.
- A. 8.—Such parts of the machinery as are considered dangerous, and can conveniently be done, are fenced off.
- A. 9.—On entering the mill, most of the hands, except the boys and men, change their clothes, which are put into presses erected for that purpose, and their working clothes are laid aside when they go to meals or retire for the evening. There are water-closets in the principal apartments, which were much improved during last year. This work being nearly surrounded by running water, and a chemical bleaching-work immediately adjoining it, ample means are always at hand for washing, &c.
- A. 10.—No child under ten years of age is knowingly employed at this work; they are preferred at eleven or twelve. None of them, it is believed, have previously been employed at any other trade.
- A. 11.—The employment of children under twelve years of age in this work is not indispensable; but to form a good spinner, it is desirable that the individual should begin young, say from twelve to fourteen.
- A. 12.—The improvements in machinery have reduced the proportion of children employed. The machines are of a finer description, and grown-up persons are preferred to take charge of them when they can be got.
- A. 13.—One only in the turning department, or mechanics (millwrights) shop.
- A. 14.—No parish apprentices here.
- A. 15.—A few of the children that we employ are orphans, but none of the hands at this work are lodged and maintained by us. The parents, &c. of the children have no occasion to visit them, as they are always at home at meal-times, and all night.
- A. 16.—Orphans are, for the most part, we believe, under charge of a relation.
- A. 17 & 18.—The appointed working hours at this mill are twelve per day; but to allow the hands several holidays throughout the year they voluntarily go half an hour per day longer, except on Saturdays, and this applies to all the persons employed, whether above or under twenty-one years of age. Occasionally also, in order that they may be paid their wages when the mill is stopped from breakages, they agree to work for a few days half an hour or so longer.
- A. 19.—Fourteen hours, but that only for a day or two, and at the express wish of the hands themselves, who, in making up lost time, or to get an extra holiday, sometimes prefer going two or three days for an hour and a half longer than six or nine days for half an hour.
- A. 20.—Three hundred and three days.
- A. 21.—Three thousand seven hundred and sixty-two hours and fifteen minutes.
- A. 22.—All the parts of this work are carried on at the same time.
- A. 23.—Monday, twelve hours thirteen minutes; Tuesday, twelve hours twenty-eight minutes; Wednesday, twelve hours twenty-two minutes; Thursday, eleven hours twenty-eight minutes; Friday, twelve hours twenty-one minutes; Saturday, eleven hours twelve minutes; average per week, seventy-two hours and four minutes.
- A. 24.—Fourteen hours, but that only for a short time, twelve hours and a half being the regular hours, as mentioned in A. 17.
- A. 25.—In September last the mill went fourteen hours daily for two days, and eight days thirteen hours and a half to make up for a week lost, in consequence of the fly-wheel shaft of one of the engines breaking. In the month of March last, in consequence of the breakage of part of the machinery, which stopped the greater portion of the work nearly a week, the mill for some days was kept going thirteen hours and a half each day (except Saturday), by which means the hands were paid full wages.
- A. 26.—The hands could not be paid any wages during stoppages caused from the breakage of the machinery, if a portion, at least, of the lost time were not allowed to be made up.

A. 27.

Forfarshire.

*George Cummins.*

A. 27.—This work has never been kept going a greater number of hours daily than at present, except occasionally for a short space to make up time, as already mentioned; but that a diminution of the hours of working would enhance the cost of production is just as obvious and undeniable as any proposition can be.

A. 28.—In the spinning of flax the profit or loss is determined in a great measure, almost entirely indeed, by the number of spindles of yarn that can be thrown off.

A. 30.—The charge for spinning is so much per spindle, and as the interest on the capital laid out and a considerable portion of the current expences would be the same if eight hundred spindles were produced daily as for one thousand, it is plain that it must be an object with the mill-spinners to increase the quantity as much as possible. It is this which tempts many of the proprietors and occupiers of mills (particularly in the country) to go very long hours, and sometimes all night; and we have great doubts whether any legislative enactment would entirely suppress the practice in remote localities.

A. 31.—The great objection to having relays or fresh sets of children is, that any amount of wages could not in that case be paid to each, that would suffice to maintain them. They would therefore be little else than paupers, and, from the want of encouragement, there would be no inducement to acquire expertness in the performance of their work, nor to attend to it in a satisfactory manner.

A. 32.—The system of relays has never been tried at this work.

A. 33, 34, & 35.—No night set of hands being employed at this work it does not appear that any answer to these queries is requisite.

A. 37.—Referring to the observations contained in A. 27. and A. 30, it is only necessary here to add, that besides reducing the quantity of yarn spun, the effect of a reduction of the working hours would unquestionably be to lower the wages of all the persons employed in and about a mill. The spinners and reelers are paid at a certain rate for every dozen spindles produced, and nobody can pretend to say that as many spindles would be spun in ten hours as twelve. The wages of the children who are employed in the preparation departments would of course suffer a corresponding diminution, and till more mills and machinery could be made about a sixth part (supposing the reduction of working hours to be from ten to twelve) of all the hecklers, weavers, dressers, warpers, winders, bleachers, &c. would be thrown out of employment for want of yarn. But as the erection of new mills, and the putting up of more machinery to supply the deficiency that would thus be created, could only be accomplished by the great capitalists, the great body of the smaller proprietors of mills would be severely and irremediably injured by such an alteration in the hours as that recently contemplated; nor is the rate of profit such as to induce even the most extensive millowners to invest more capital in the trade, and in the case referred to it would be an investment without the shadow of a return, being a mere matter of necessity to supply a portion of that property withdrawn from them.

A. 38, 39, & 40.—As no artificial heat is either employed or required in this work, it does not appear necessary to reply to these queries, as the temperature varies with the seasons and according to the state of the external atmosphere.

A. 41, 42, 43, 44, & 45.—No night-work at this mill, with the exception of occasional jobs required to be done when the mill is standing, and then the millwrights alone are employed. The foreman and millwrights are also employed part of the night once a quarter in cleaning the boilers.

A. 50.—With gas.

A. 53.—All the hands employed at this work are allowed half an hour to breakfast and half an hour to dinner at least.

A. 54, 55, & 56.—The persons employed at this work are all at liberty to leave the mill at meal-times, but occasionally two or three voluntarily remain in or about the work, and have their meals brought to them.

A. 57.—The children are told that if they do not attend to their work they will be dismissed.

A. 58, 59, 60, 61, & 62.—Corporal punishments are not inflicted on any persons belonging to this work. There are no written instructions to that effect, but the principal foreman and overseers are expressly enjoined not to strike any of the hands, nor maltreat them in any way whatever.

A. 64.—No such complaints have ever been made.

A. 65.—The principal foreman only, and two or three more of the people employed at the work, live in a house adjoining thereto (but without the gate), belonging to the proprietor; but none of the hands live within the gate.

A. 66.—In spinning there can be no doubt whatever that an individual who has begun between the age of ten to fifteen will become a much more expert hand than one who commences at a later period of life. In the other departments of the work the necessity of a very early beginning is not so essential. With regard to the difference in the general character of those who have been employed from infancy, as compared with those who have been taken into employment at later periods, it is almost impossible to form a correct opinion. On the whole, we should think there is not much difference between them, or, if there be that it is in favour of those who have entered the mill in early life, they who resort to this occupation when grown up being less likely to relish the employment than those who have been inured to it from infancy, and consequently there is a greater chance of their being unsteady, the more especially as it may be taken for granted that such individuals have previously tried some other occupation, and been dissatisfied therewith.

Forfarshire.

George Cummins.

A. 67.—So far as it has come under our observation, we should certainly say that the health of the people employed at this work has not deteriorated during the last ten years, but medical gentlemen of some standing in the town would be better able to speak to this fact. No separate account being kept of the mortality of persons employed in mills in Arbroath, it would be a difficult matter to ascertain the number of deaths among such individuals, as compared with the other inhabitants, but it may be fairly inferred that the health of the people employed at this work has undergone a change for the better from the circumstance, that in 1819, when typhus fever prevailed in the town, it was almost impossible to carry on the mill in consequence of the numerous cases amongst the hands, while scarcely a single case has occurred within the last ten years that we recollect of, though typhus has frequently visited the town within that period, and last year, when cholera prevailed, no case occurred amongst the people employed at this work, nor, we believe, at any of the other mills. The cause of this improvement in the health of the people is not so easily accounted for. It may proceed in part from the substitution of gas for oil lamps, and the general improvements which have taken place of late years in spinning-mills.

A. 68.—No such selection of persons nor change of employment in flax-spinning being requisite, of course none is made.

A. 69.—This mill not being subject to the present Act, no answer is necessary to the subsequent queries to seventy-seven inclusive.

A. 78.—It is not our opinion that any legislative enactment whatever for regulating the hours of labour in mills and factories would ever be effectual, more especially in the country, where, from the want of a local magistracy and other causes, the law would soon become a dead letter; and in towns, though at first it might be generally acted up to, it would soon be evaded by many, and in the course of a few years would be in a great measure imperative. With regard to the treatment of children also, it is extremely doubtful how far any legislative provisions would be efficacious in improving their condition. Compulsory humanity is at best of ambiguous utility. It appears to us, indeed, that the only effectual way of meliorating the condition of the children of the labouring classes in manufacturing districts is to improve the condition of their parents; and it is quite evident that an abridgment of the hours of labour, unaccompanied by some other tangible advantages, would not effect this desirable object. How it may be effected is a question the reply to which would lead to a train of observations foreign to the subject of the present inquiry. There is one thing, however, which we would strongly recommend (if a law should be found indispensable), that the age at which children shall be admissible into spinning-mills should be not under eleven years. Our reason for suggesting this is, that at that age children would not only be abler to undergo the fatigue, but before entering a mill at all they would have ample time for acquiring a plain education. For some years we employed a teacher to instruct the children belonging to the mill in reading, writing, and simple arithmetic; but the attendance became so inefficient, in consequence of the school being at some distance from the mill, that it was discontinued. We have engaged another teacher however, and we are about to convert an apartment within the gate into a school-room, which we trust will be more successful; but it is unreasonable to expect that children who have been confined for twelve or even ten hours will enter a school very cheerfully. We repeat, therefore, that the children should be grounded in the elementary branches of education before they are allowed to enter a mill, and to accomplish this the legislation would do well to provide the means for some general plan of national education. With regard to penalties, it must be obvious to the most indifferent observer that many of those contained in Lord Ashley's Bill are nothing else than direct invitations to the hands to mutilate themselves in order to obtain money. Besides, it is utterly impossible, from the very nature of spinning by machinery, so to fence in every part that might be called dangerous as to prevent occasional accidents. Moreover, the effect of all such penal clauses would unquestionably be the utter destruction of every sympathetic feeling between the employed and their employers. Let a person properly qualified be appointed to say what parts of the machinery ought to be fenced in, and let any accident arising from a non-compliance with his injunctions be visited by a pecuniary fine, to be applied towards raising a fund for the maintenance of the sick, and those who may be accidentally disabled in the performance of their ordinary work.

A. 79.—Availing ourselves of the permission herein allowed, we beg leave respectfully to state, that although in the answers to the foregoing queries regarding the hours of labour in this mill we have represented the working time of all and sundry to be twelve hours and a half per day, yet, in point of fact, many of the hands do not work twelve hours. Most of the reelers go to their meals from forty to fifteen minutes before the mill is stopped at breakfast and dinner time; the spreaders in like manner go away before the prescribed hours, and are, besides, allowed from thirty to forty-five minutes at noon, and as long in the afternoon, for recreation. The shifters also are not prevented from going away before the ordinary time after their frames are shifted, and the boys who are employed in the carding department are always at liberty from ten to fifteen minutes before the engines are stopped; the tow-feeders and shakers have also occasional intervals of relaxation during the day; so also in the evenings, although half past seven is the appointed time for remaining in the mill, many of the persons employed leave it from thirty to fifteen minutes sooner; in short, the gate is always open during the working hours, and if any of the hands require to go out they are not prevented. We think it proper also to state that the firemen or engine-men are obliged to be at the work about half an hour before the mill starts in the morning. All the individuals employed at this work are at liberty to quit it on giving four weeks notice;

notice; and in the event of their obtaining a situation which is to improve their condition in life, not the slightest obstacle is interposed to their immediate discharge from the employment, provided they do not go to another mill, in which case one month's previous intimation is required. There has been no wish, in answering these queries, or in preparing the accompanying list, to disguise facts in the slightest degree. It is not contended that it is desirable to work very young persons twelve or twelve hours and a half per day, but, from the rapidly increasing population in the manufacturing districts, the reduced rates of profit on all the great branches of national industry, owing to the long period in which peace has reigned throughout the world, enabling our neighbours on the continent as well as the Americans to compete with us in many of our staple manufactures, owing also to many disadvantages under which this country labours as compared with our rivals\*, it is a matter for very grave consideration how far any material reduction in the hours of working would be expedient; it may also be justly questioned how far the interference of the legislature between master and servant is consistent with sound policy. The limitation of the age at which children should be admitted into mills, elsewhere stated, would certainly be an improvement, and any other rational modification of the existing system we should be ready to adopt; but, considering that the average amount of working hours in the flax-spinning mills in this quarter at least does not exceed seventy-two per week, that no artificial heat is required for carrying on any of the processes therein, that there is no night-work, and that in this part of the country wet-spinning is never practised, it is humbly submitted, that in any report which may be drawn up regarding flax-mills these facts should not be lost sight of.

With regard to the general health of the people employed, we cannot vouch for complete accuracy in the accompanying list, though considerable pains have been bestowed upon it. But, all things considered, we should certainly say, that so far as our observation has gone the persons employed in flax-mills as now conducted will be found on an average to be almost if not altogether as healthy as any given number of individuals taken promiscuously from any trade or employment carried on within doors.

13th May 1833.

GEORGE CUMMINS.

Forfarshire.

George Cummins.

ANSWERS of R. GORDON, Resident Partner of Aberdeen, Gordon, & Co., Burnside Spinning-mills, Arbroath; Edward Caird, Manager.

No. 49.

R. Gordon  
and  
Edward Caird.

- A. 1.—Two spinning-mills, called Burnside Mills, parish of Arbroath, county of Forfar.  
 A. 2.—Flax and tow spinning.  
 A. 3.—One of our mills was erected in 1810, and purchased by us in 1814; the other was erected by us in 1822.  
 A. 4.—By three steam engines of twenty-four, sixteen, and twelve horse power.  
 A. 5.—The windows in the manufactory are amply sufficient for ventilation.  
 A. 7.—Regulated generally by the persons employed, subject to the control of the foreman, whose duty it is to attend to the proper ventilation of the rooms.  
 A. 8.—They are, as far as is practicable.  
 A. 9.—The different rooms in the manufactory are kept clean and well aired; the spinners, spreaders, &c., have all either boxes or stools to sit upon. In all the departments there is provision in these boxes, &c. for keeping clean any articles of wearing apparel the workers may change on leaving or entering the work. When they thus change part of their clothes, either the nature of their work allows them to do so, while attending to it, or, if not, the machines are stopped to allow them to do so. A supply of water is kept in each room of the largest mill, where all have an opportunity of washing their hands at any time.  
 A. 10.—Ten years; we are not aware of any of them having been employed at any other trade previous.  
 A. 11.—It does not; we would prefer the age of entry at twelve years, but the parents of many of them find it necessary to send them to work at an earlier age.  
 A. 12.—A less proportion, and the recent alterations and improvements have made the labour of waiting on the machines considerably lighter.  
 A. 13.—No, with the exception of two as millwrights.  
 A. 14.—Never had any from parishes.  
 A. 15.—All the children employed are lodged and maintained, whether orphans or otherwise, by their parents, relatives, or guardians.  
 A. 17 & 18.—Twelve hours.  
 A. 19.—Twelve hours and a half.  
 A. 20.—Three hundred and seven, which, with six holidays, makes three hundred and thirteen, the number of working days in the year from May 1832 to May 1833.

\* A question having been put to the writer of these remarks by Mr. Stuart, one of the Factory Commissioners, in regard to the data upon which the opinion was formed that the manufacturers of this country laboured under disadvantages as compared with those on the continent, he stated, that this information was not derived from personal observation; but that he conceived individuals who lived in a country where the raw material grew, who were not oppressed by excessive taxation and a grievous corn law, and who could obtain labour cheap, might naturally be expected to produce certain descriptions of manufactured goods, and amongst the rest, linens at a much cheaper rate than could be done in this country; and that, with regard to America, his information was derived from a pamphlet published by Mr. Kirkman Finlay.

Forfarshire.

R. Gordon  
and  
Edward Caird.

A. 21.—One mill three thousand seven hundred and fifty, the other three thousand seven hundred and forty-five, in the year as above.

A. 22.—No difference in working the several departments, except that which is referred to in answers to queries No. 17 & 18.

A. 23.—Monday, twelve hours twenty-two minutes and a half; Tuesday, twelve hours twenty-two minutes and a half; Wednesday, twelve hours sixteen minutes and three quarters; Thursday, eleven hours and fifteen minutes; Friday, twelve hours and twenty-two minutes; Saturday, eleven hours eighteen minutes and a half.

A. 24.—Twelve hours and a half.

A. 25.—When time is lost by holidays, or any necessary stoppages, it is made up by working one half hour per day for five days in the week.

A. 26.—Any extra work beyond the regular hours might be avoided by the workpeople either giving up their holidays, or submitting to a relative deduction of wages, but they prefer making up the time; so that our hours of working are and have been uniformly twelve hours per day on an average, with the exception of Christmas-day, which is excluded from this average, as it is not made up, nor any deduction made from the wages on that account.

A. 27.—We never at any former period worked our manufactory a greater number of hours than at present.

A. 29.—The inducement to work extra hours must proceed from the obvious principle of making the capital employed produce the greatest returns.

A. 30.—The cost of production arises from wages paid to workpeople, rent or interest of capital, deterioration of machinery, expense of power, and other furnishings. Now, as the quantity produced is in exact proportion to the hours of work, the increase of cost of production will rise in a corresponding ratio to the limitation of the hours of work. If our hours were reduced from twelve to ten, the increase in the cost of production would thus be sixteen and a half per cent., unless a corresponding decrease of wages were to take place. As we have generally found that the article of wages amounts to about one half of the cost of production, and as the other articles in it would scarcely be affected by the difference of these two hours, the reduction of wages, in order to make the cost of production the same as at present, would require to be to the extent of thirty-three per cent., which we would be sorry to see, as the wages are at present no more than sufficient to maintain the workers comfortably.

A. 31.—We make no deviation from the ordinary hours.

A. 33.—We consider the system of night-work most pernicious to the comfort and morals of the workpeople, and have never carried on any process of our manufacturing during night. Occasionally a few of our millwrights are employed in repairing, when necessary, the engines and great gearing, which can only be done when the work is standing.

A. 37.—The effects of such a reduction of working hours as is contemplated would, in our opinion, greatly decrease the value of capital employed in manufactories; would reduce the wages of every class of workpeople who are either employed in the manufactory or dependent on the produce of yarn; would create a scarcity of work for flax-dressers, and especially for weavers; it would also tend to destroy that feeling which induces the manufacturer to carry on his work at a loss to himself in times of stagnation of trade, in the hope of being remunerated when an improvement should take place, the chance of which would be so materially altered by such a reduction of hours.

A. 38.—As the manufactory is not heated artificially, the usual temperature is in common with the atmosphere, except in winter, when the gas light tends to raise the temperature a little. The lowest possible temperature would not affect any process in our works.

A. 39.—No heat is required in the process of manufacturing linen yarns.

A. 41.—None at all, and never were.

A. 46.—None.

A. 50.—By coal gas.

A. 51.—By the windows, same as by day.

A. 53.—Breakfast, nine o'clock to half past nine in the morning; dinner, two o'clock to half past two in the afternoon.

A. 54.—All do not leave the work at meal-times; five or six men and boys are employed in oiling and cleaning the engines and great gearing, which can only be done when standing; these persons are allowed to go to their meals either before or after the others, as best suits themselves. Some of the workpeople prefer having their meals sent to them, but this is entirely to suit their own convenience.

A. 57.—We find our servants generally very willing to work, and therefore obedience is not coercive. The harshest measures resorted to (if such deserves the name) is dismissal.

A. 58.—Corporal punishment is very seldom resorted to; where refractory boys need correction for gross carelessness or insolent language they receive correction in such moderation from the foremen (who are almost all parents) as they would in like circumstances inflict on their own children; any more than this is strictly forbidden.

A. 64.—No complaints have ever been made to, nor have any proceedings before magistrates ever taken place against us or any of our foremen.

A. 65.—They all live either in their own houses or those of their parents or guardians, and are not subject to our control beyond working hours. Provision is made for the education of all who choose to attend. A schoolmaster is employed by us during five evenings in the week to teach them reading, writing, and arithmetic at no expence to the workpeople.

workpeople. Their attendance at school is matter of choice on their part, or between that of the young persons and their parents.

A. 66.—We have never remarked any particular difference in point of skill between those employed early in life and at a later period, except in the case of those attending spinning-frames, who are always trained to it early, say from ten to fifteen years. For any other process skill depends on capacity and attentive habits of industry more than upon any particular age of entry.

A. 67.—We are not aware of any material change in the general state of the health of our workpeople during the last ten years. They are generally healthy, and the fact that this is the case at present we think may be sufficiently adduced from the annexed list. We have reason to believe their health has been improved since the introduction of gas light (instead of oil) and other improvements, which are obviously conducive to this end.

A. 68.—No.

A. 69.—No particular act refers to flax-spinning.

A. 77.—We have no reason to believe so.

A. 78.—A scale of penalties for accidents such as contemplated in the Bill now before the House of Commons we would object to in the strongest terms. In fact, any law on the subject which would have the effect of impressing the workpeople with the idea that their masters alone were responsible for any accidents which might befall them, and removing that salutary dread of danger with which they are inspired, would infallibly increase the number of casualties, which at present is very small, while it might lessen that degree of sympathy which the masters at present feel and exercise when any unfortunate accident occurs. At all events, if any rule is to be laid down, government ought to appoint an inspector, whose duty it shall be to examine the mills of a district, and if his instructions are not attended to, there may be some justice in making the owners responsible; but nothing could be more unjust than to leave them at the mercy of justices of the peace, or others, who would have to decide under excited feelings on a subject regarding which no two persons would exactly agree. In fact, the manner of guarding the machinery is not the same in any two works. The amount of penalty is not of so much importance to the mill proprietor as the justice of the principle upon which it is imposed, and the fairness of the tribunal to which he is rendered amenable.

A. 79.—Being convinced that the people employed in the mills in this neighbourhood are fully as well fed, clothed, and educated, and as contented as the same class of people not so employed, and never having received any complaint, or had any subject of dispute with our servants, we cannot allow the necessity for legislative interference. If, however, an act must be passed, we would strongly advise that it should consist of few provisions, and be for a limited period. With regard to time, as we have been in the practice of working only twelve hours per day, our opinion as to the effect of shortening it may be seen from our answers to queries Nos. 30 & 37. Whatever enactment is made professedly for the benefit of one class should apply to all, for these reasons, that in large towns, where the population often outstrips the demand for servants, all under the prescribed age, say eighteen, would be excluded, with the exception of a few learners, to the injury of the parents and children themselves, who might well complain that while those who had just outreached the prescribed age would be allowed to provide for their own support, those under that age, although perhaps only a few months, would be compelled to live in idleness and dependance, or if they should be employed it would necessarily be at a lower rate of wages; and whatever time for work shall be fixed upon, that it should be a certain number of hours per week, to be performed between certain hours each day, suppose between six in the morning and eight in the evening, leaving all minor arrangements to the parties interested, and putting an end to night-work under all circumstances. To improve the condition of the parents would, in our opinion, be the best means of ameliorating that of their children.

13th May 1833.

R. GORDON.  
EDWARD CAIRD,

Forfarshire.

R. Gordon  
and  
Edward Caird,

#### ANSWERS of Messrs. KENNY jun. and SON, Arbroath.

No. 50.

W. Kenny jun.  
and Son.

A. 1.—Parish of St. Vigean's, township of Arbroath, and county of Forfar.

A. 2.—Spinning flax and tow into yarns.

A. 3.—The work was erected in 1825 for the special purpose of spinning, and we entered in 1827.

A. 4.—Steam, ten horse power.

A. 5.—We have no specific provision for the ventilation of our work except the opening of windows.

A. 6.—Entirely on the opening of windows.

A. 7.—The ventilation or opening of windows is quite at the discretion of the workpeople, or by any of them as they feel inclined.

A. 8.—The dangerous parts of the machinery are all covered up as far as possible.

A. 9.—We have no particular accommodation for the convenience of the workers for washing or changing their clothes; they have seats, that they may not always have to stand.

A. 10.—We have a few children as low as eight or nine years of age, but are unwilling to take them so young, as we can always get them older; but frequently the parents use every

(APP.—A. 1.)

K 3

means

Forfarshire.

*W. Kenny jun.  
and Son.*

means possible to get them employed even at that age, and some families would really have ill getting on were they denied work. None of them have been at any other trade.

A. 11.—Our work does not require children under twelve years of age.

A. 12.—Since we entered with the work we have always employed the same number of children, but alterations made previous to that time enabled spinners to do with a less number.

A. 13.—We do not.

A. 14.—We never receive any parish apprentices.

A. 15.—We have no children lodged or maintained by us; if any, they are orphans; they are sent by their friends but never visited by them at the work, as they have an opportunity of seeing them two or three times every day when they go home to meals.

A. 16.—While at work they have none, but we never take any charge of them after work-hours.

A. 17.—Our hours for all are twelve and a half, with the exception of spreaders, &c., who are eleven hours in consequence of having so much walking; but in going twelve hours and a half we consider this only equal to twelve, as of all the holidays which we have throughout the year we never make up any time, but pay the full wages as if no holiday had occurred, and this is preferred by the workers to making up time for such things.

A. 19.—Thirteen hours and a half, and this making up time, but it will not occur three times in a year.

A. 20.—Three hundred and three days.

A. 21.—Three thousand seven hundred and sixty-one hours.

A. 22.—Our work was never carried on at different times, that is, different parts of it.

A. 23.—We go the first five days of the week twelve hours and a half each, and Saturday twelve hours, but this still allows for the holidays half an hour each day except Saturday. Were we to calculate the average, adding the holidays, it would be twelve hours and eight minutes.

A. 24.—The greatest number of hours that the same number was ever worked was thirteen hours and a half during any one day.

A. 25.—When we have at any time exceeded the regular hours of work it has been to make up time lost by the breakage of machinery, or sometimes the workers ask it as a favour that they might make up some time in order that they may get away sooner on some day to come, for example; were a half holiday at hand, and they wishing to have the whole day, then they would ask liberty to make up the half day.

A. 26.—We cannot get this avoided, as we cannot calculate on the machinery always keeping right, and we do not think the workpeople would like to be tied down, so that every day should stand for itself.

A. 27.—We never have.

A. 28.—We never worked longer than we do at present, therefore cannot speak from experience.

A. 29.—We do not consider that there is any inducement at all for the spinner to continue his work during the night, even though he had a change of hands, as we consider that in the end it would not pay him, as he requires to provide food for those employed during the night with expences of light, but more especially from the work being so very indifferently performed.

A. 30.—Were the hours of work limited to ten, which is the present proposal, the cost of production would be considerably increased, as the expences could not be lessened in proportion. We could not use much less coals or any less oil, as the machinery requires to be oiled every time it is started; the interest of capital would still be the same, all of which would cause it to fall doubly, and the wages, which may be regarded as the moveable part of the property, making the cost of production increased nearly thirty per cent.

A. 31.—No objection whatever when there are extra hours; but as to employing grown-up people during the ordinary hours, very often the nature of the work required will not afford wages to such.

A. 32.—We never work extra hours.

A. 33.—We never work night-work.

A. 34.—As we only work during the day, we never require a change of hands; and were we to employ two sets of hands for ordinary hours, we could not give them more than half the present wages.

A. 35.—No night-work.

A. 37.—As to the probable effects of a great reduction of the working hours, our opinion is, that for some time it would have a good effect, as it would diminish the quantity of yarns produced, which would tend to raise its price, thereby giving the hands the same or perhaps more wages for the short hours; but it would tend to bring such a lot of machinery into use, that when a stagnation of trade took place, it would fall with a redoubled force on the workpeople; we may add, that it will bring the water-mills to a complete stand.

A. 38.—The temperature of our work depends entirely on the state of the weather, as no artificial heat is used.

A. 39.—Any temperature answers our purpose.

A. 40.—We generally employ about forty to forty-five.

A. 41.—We have never worked during the night at all, except in repairing the machinery, when those only were employed who were competent to do so.

A. 42.

- A. 42, 43, 44, & 45.—No night-work.  
 A. 46.—None of them are indispensably continuous during twenty-four hours.  
 A. 47.—This depends a good deal on the quality of the machinery employed, as the most improved machinery will produce a given quantity in less time than that made some time ago.  
 A. 48.—Persons of all ages may be employed in such processes, unless after they get too old. Still a few very old people may be employed at certain parts of the work.  
 A. 49.—Only that it may be able to afford wages to those employed, and other expences.  
 A. 50.—By gas light.  
 A. 51.—The same as during the day.  
 A. 52.—As we never worked night-work we cannot say, but think it must have a very bad effect.  
 A. 53.—Half an hour is the usual time allowed for each meal.  
 A. 54.—All may leave the work at meal-times if they choose, though they do not all go.  
 A. 55.—If they do not go it is for their own convenience, or it may be that they stop to clean.  
 A. 56.—In our opinion, were the time for meals lengthened, and the people had to stay longer at night for such time given them, they would not thank us for it, as any time given, in order to have their approbation, must be taken off at night.  
 A. 57.—When they do not obey they are dismissed from the work.  
 A. 58.—It may possibly occur, but not with our knowledge.  
 A. 59, 60, & 61.—If it ever takes place it is on the boys, but so seldom that it can scarcely be said to be inflicted at all, and when done it is by no means with any kind of severity; but our orders are always to abstain from it, and we must say that we have not seen a single instance of its infliction, or heard of it, for more than two years.  
 A. 62.—Our orders are always to dismiss, rather than have recourse to any such thing.  
 A. 63.—Our instructions are always to deal with them very leniently.  
 A. 64.—No complaints were ever made.  
 A. 65.—The workpeople live in their own houses, and we exercise no control over them after working hours.  
 A. 66.—Those who are employed from infancy are much more expert at their work than those taken in at later periods; those we now have have all been taught from their youth. We cannot say any thing as to their general character.  
 A. 67.—We know no difference in the health of the people employed by us during the last six years, which was the time of our entry.  
 A. 68.—No. Those who are employed at the worst parts of the work have much more time to themselves, being allowed to go out frequently during the day.  
 A. 69.—We know of no act regulating the flax-spinning trade.  
 A. 70.—No.  
 A. 73.—We cannot say any thing of the neighbouring mills, as we do not know of any regulation in regard to hours.  
 A. 74.—Never heard of such a thing.  
 A. 77.—We have no reason to think so.  
 A. 78.—Let the legislature settle the number of hours to be worked and the age of the children to be employed, and leave the masters and servants to agree about all other circumstances, and this will be far better than all the penalties anent the matter, as in this quarter the masters are very anxious to have every servant under them humanely treated.  
 A. 79.—No.

11th May 1833.

W. KENNY jun.

Forfarshire.

W. Kenny jun.  
and Son.

## ANSWERS of SAMUEL RENNY junior, Arbroath.

No. 51.

S. Renny junior.

- A. 1.—Arbroath, county of Forfar.  
 A. 2.—Flax and tow spinning.  
 A. 3.—Erected in 1807 for its present purpose. I entered to the property in 1826.  
 A. 4.—Steam-engines of ten horse power.  
 A. 5 & 6.—A sufficient number of windows for ventilation.  
 A. 7.—Regulated by the overseer and workers.  
 A. 8.—All the parts that are considered to be dangerous.  
 A. 9.—The arrangement for health and convenience are presses for the garments of those in the preparing-room and reeling-rooms; and for those in the spinning-room there is a part to each allotted in the waste boxes, under their own control, being the most convenient for this class of girls. There are stools and boxes to sit on, and are used by the workers when they wish. These conveniences and arrangements they had when I entered into possession of the mill in 1826.  
 A. 10.—Ten years of age, and not previously employed at any other trade.  
 A. 11.—It does not require children under twelve years of age.  
 A. 12.—Less proportion.  
 A. 13.—An apprentice in mechanics shop.  
 A. 14.—I have never employed children from the parish.  
 A. 15 & 16.—Two of the children whom I employ are orphans, under the charge of the people with whom they reside, who visit them occasionally at the work.

(APP.—A. 1.)

K 4

A. 17.

Forfarshire.

*S. Renny junior.*

A. 17 & 18.—Employed twelve hours and three quarters, and eleven hours on Saturdays. No difference made as to ages. The fireman about half an hour longer.

A. 19.—Thirteen hours and three quarters.

A. 20.—Carried on three hundred and eight days—say three hundred and eight days.

A. 22.—All carried on at same time.

A. 23.—Twelve hours and forty-six minutes on Monday, Tuesday, and Friday; twelve hours and forty minutes on Wednesday; eleven hours and forty-four minutes on Thursday; ten hours and twenty-four minutes on Saturday.

A. 24.—Thirteen hours and three quarters.

A. 25.—The usual time, as stated, is twelve hours and three quarters. The difference of one hour more was to make up for any day, or part of a day, arranged with the workers; also for some small necessary repairs to the machinery.

A. 26.—This could be avoided by a deduction from the wages, but have made up lost time, it being the practice of the trade.

A. 27.—I have, in the year 1828, after making alterations in the machinery, which forced the whole to stand for three weeks, during which time the workers received full wages. About three days only of this time was made up by working three quarters to an hour longer each day.

A. 28 to 37.—Never having exceeded the ordinary hours of work, excepting as stated, I am not prepared to give an opinion, as answered to these queries.

A. 38.—No artificial heat used.

A. 39 & 40.—No heat used in the process of spinning linen yarns.

A. 41.—None.

A. 50.—No night-work, but gas used after dark till mill stops.

A. 51.—By the windows.

A. 53 to 56.—For breakfast from nine to half an hour after nine, for dinner from two to half an hour after two; a few of the workers leave half an hour earlier, to return in order to clean and oil the machinery; on Saturdays the spinners do not go home to breakfast (for the purpose of extra cleaning), but cause it be brought to them; at other times several of the workers do not go home at meal-times, but remain for their own convenience only.

A. 57 to 63.—When obedience is refused they are by me ordered to be dismissed from the work; corporal punishments are not nor have been inflicted on any, excepting on a few of the boys, and this by the overlooker himself, to save the boys from dismissal, which has often had the desired effect; when done it was in a very lenient manner, and the punishment by the overlooker given in same manner as boys receive punishment at schools.

A. 64.—None, nor at any time whatever.

A. 65.—Do not live in the houses of their employers; have no control or superintendence over them but when at their work.

A. 66.—Cannot point out any difference.

A. 67.—Not having been ten years in the trade, I cannot answer this question, but since 1826 I know of no difference.

A. 68.—No difference made.

A. 69.—I am not aware of any act which refers to flax-spinning.

A. 70, 71, 72 & 77.—No.

A. 78 & 79.—If the legislature settled the working hours and age of admission, all other arrangements would be best settled betwixt master and servant.

13th May 1833.

SAMUEL RENNY JUN.

No. 52.

Charles Smart  
and  
John Lumgaw.

ANSWERS of CHARLES SMART and JOHN LUMGAW jun., of Union-street Mill, Arbroath.

A. 1.—Parish of St. Vigean, county of Forfar.

A. 2.—Spinning flax and tow yarns.

A. 3.—The flax-spinning machinery was erected in 1824, and the tow in 1831.

A. 4.—A steam-engine of six horse power.

A. 5 & 6.—The mill is ventilated by the opening of windows.

A. 7.—The windows are opened daily, or at any time on the requisition of the work-people.

A. 8.—The dangerous parts of the machinery are fenced off.

A. 9.—The workpeople have for a number of years been provided with a press, and boxes for holding clothes, some of which most of them regularly change on leaving and returning to the manufactory.

A. 10.—The age of the youngest at present in our employment is above ten years. Was not previously employed in any other trade.

A. 11.—There are some kinds of work which children under twelve years of age are quite as capable of performing as older persons, and the inducement to employ such is the low rate of wages at which they can be procured.

A. 12.—A less proportion.

A. 13.—In training spinners we do not engage them for more than a few months.

A. 14.—We have no apprentices from parishes.

A. 15.

A. 15.—We do not lodge and maintain any workpeople, and do not consider ourselves as having any control over them except during working-hours.

A. 17 & 18.—With the exception of spreaders and feeders, who work at an average an hour less each day, and of the reellers, who have their time in some measure at their own command, the regular hours for all ages are twelve hours and a half for the first four days in the week, thirteen hours for the fifth, and eleven hours for Saturday.

A. 19.—Thirteen hours, with the exception specified in A. 36.

A. 20.—Three hundred and thirteen working-days, from which deduct about seven holidays, leaves three hundred and six days.

A. 21.—Three hundred and thirteen days, at an average of twelve hours each, give three thousand seven hundred and fifty-six hours.

A. 22.—With the exceptions specified in A. 17 & 18, all departments are carried on at the same times.

A. 23.—Twelve hours is the average on the whole year, the additional two hours each week being required to compensate the holidays, on account of which no deduction is made from wages.

A. 24.—Thirteen hours.

A. 25.—When any accident occurs to the machinery, or on occasion of any extra holiday, the lost time is sometimes made up at the rate of half an hour each day.

A. 26.—The extra hours work could be avoided, provided the hands were willing to submit to a proportionate deduction from their wages when any stoppage takes place.

A. 27 & 28.—We have never worked the manufactory for a greater number of hours daily than at present.

A. 29.—Where the hands are paid by weekly wages, they require to be paid in full, even when the mill is standing through accidents to the machinery.

A. 31 & 32.—The extra time required by us on any occasion is so little that we consider a fresh set of hands altogether unnecessary.

A. 33.—We have never employed a night-set of hands.

A. 36.—The only times at which night-work is required is when any accident has occurred to the machinery, or when repairs have to be made, which, if not done during the night, would cause the work to stand during the day. If night-work in the repair of machinery were prohibited, it might frequently happen that a whole day's work would be lost, the wages being either deducted from the workpeople, or paid by the employer, occasioning a total loss to one or other of the parties during the period the machinery stands. In these repairs, only the mechanics, assisted by the foremen, are necessarily employed, and in such cases as much time is allowed for sleep during the day as compensates for the extra night-work.

A. 37.—It is not probable, from the present rate of wages, that any reduction would willingly be submitted to by the workpeople, even although the hours of labour were considerably shortened. The masters would in many instances, though at considerable cost, increase the speed of the machinery, and thus render the labour of the workpeople more continuous than at present. If the reduction of hours were to make any considerable increase in the cost of production, it seems doubtful whether, from the competition of linen factories abroad and cotton manufactures at home, the flax-spinning establishments could continue to be carried on with advantage.

A. 38, 39, & 40.—Nothing more than the ordinary temperature of the atmosphere is required. A high temperature would be a disadvantage in flax-spinning.

A. 50.—By gas.

A. 51.—The same as during the day.

A. 53.—Spreaders, two intervals of an hour each; feeders, usually the same; reellers are not restricted, provided they keep forward their work; all other hands two intervals of half an hour each.

A. 54, 55, & 56.—On Saturdays and sometimes on Wednesdays the spinners remain during the breakfast hour to clean their spindles. If this were prohibited, either the frames would require to stand during working-hours, or the hands to continue in the mill after the machinery has stopped.

A. 57, 58, 59, 60, 61, 62, & 63.—When we find the hands continue to be disobedient, our practice is to dismiss them from the work, and never to inflict corporal punishments to enforce obedience.

A. 64.—No.

A. 66.—Cannot refer to the list for confirmation of any opinion on this subject.

A. 67.—Having kept no returns of absent time in consequence of sickness, we are without the means of forming a correct opinion.

A. 68.—No selection is required on account of the injurious effects of particular processes.

A. 69.—We are not aware of any Act to which our mill is subject.

A. 79.—We would have no objection to shorten the hours of labour if the workpeople wished it and would submit to a proportionate deduction of wages, which we do not think they are in general inclined to do. We do not think that by the older hands any legislative enactment for shortening the hours is in general wished for, and are not aware of the length of time the children are wrought being usually complained of by the parents. Cannot see how the treatment of children so much complained of in some factories is to be materially improved by a Bill merely for regulating the hours of labour.

Charles Smart  
and  
Charles Lumgaw.

CHARLES SMART.  
JOHN LUMGAW jun.

Forfarshire.

No. 53.

H. Smith.

## ANSWERS of H. SMITH for JOHN W. MORTON.

A. 1.—Brothock Mill, in the parish and town of Arbroath, and Pool Mill, parish of St. Vigean's, county of Forfar, distant from each other about one quarter of a mile.

A. 2.—Flax and flax-tow spinning.

A. 3.—Brothock Mill erected in 1805, and Pool Mill in 1825; both have only been in the possession of the present proprietors since 1828, and have since their erection been employed solely spinning flax and tow.

A. 4.—Steam-engines of eighteen and six horses power.

A. 5.—No specific provision.

A. 6.—Windows the only means used for ventilation.

A. 7.—By the overseer of each room.

A. 8.—All machinery is less or more dangerous; what is considered most dangerous is fenced off in the usual manner. Few accidents have hapened, and none very serious.

A. 9.—In the Brothock Mill there are closets, and in the Pool Mill a press, where some keep their change of clothes; others have bags of their own, and keep them where most convenient for themselves. The same practice has existed, to the best of my knowledge, since the present proprietors took possession.

A. 10.—Seldom or never below ten. I am not aware of any of the children having been employed at any other trade.

A. 11.—No; they are always preferred above twelve; and were it not for the importunity of their parents, and the occasional scarcity of children farther advanced, children under twelve would not be employed. (This scarcity occasioned by the erection of new mills.)

A. 12.—The recent alterations in machinery require fewer hands, whatever their age may be, and their work is rendered lighter from the more perfect operations of the machinery.

A. 13.—No; a few of the children are employed under an understanding with their parents that they shall remain twelve, eighteen months, or two years, as a compensation for the trouble and expence of teaching them their work. All the other servants can quit on a month's notice.

A. 15.—All the servants employed lodge with their parents or friends, or board where they think proper, unless when they have houses of their own.

A. 16.—They are under the superintendence of overseers or foremen.

A. 17.—First four days of the week, twelve hours and three quarters; fifth day, twelve and a half; and Saturday, eleven hours; this arrangement being most agreeable to the servants.

A. 18.—Same as the above, without any distinction.

A. 19.—Thirteen.

A. 20.—Brothock Mill three hundred and five; Pool Mill two hundred and ninety-four. Pool Mill stopped betwixt two and three weeks in July 1832, repairing engine. Servants paid half wages (with the exception of the men who were employed about the repairs) during that time, with liberty to employ themselves in any way they thought proper.

A. 21.—Brothock Mill three thousand six hundred and eighty-four; Pool Mill three thousand five hundred and eighty-eight.

A. 22.—All the machinery is worked the same time.

A. 23.—Brothock Mill, Monday, twelve hours thirty-eight minutes; Tuesday, twelve hours twenty-one minutes; Wednesday, eleven hours fifty-seven minutes; Thursday, eleven hours ten minutes; Friday, eleven hours forty-four minutes; Saturday, ten hours forty-six minutes. Pool Mill, Monday, twelve hours seventeen minutes; Tuesday, twelve hours six minutes; Wednesday, twelve hours three minutes; Thursday, eleven hours nine minutes; Friday, eleven hours thirty minutes; Saturday, ten hours four minutes.

A. 24.—Thirteen.

A. 25.—To make up for holidays, markets, and stoppage from accidents to the machinery, two hours and a half extra are worked every week, distributed through the week as mentioned in A. 17. The holidays and markets alone in 1832 amount to about eight days, of twelve hours each.

A. 26.—Quite avoidable by depriving the servants of holidays and markets.

A. 27.—No.

A. 29.—Either to increase his profit in good trade, or to reduce the expence of production in bad.

A. 30.—With flax-spinning machinery (under regular management) the additional cost of production will be increased in proportion to the reduced hours of work.

A. 31.—Relays of children from nine to twelve years of age might be very successfully employed in towns or populous places; beyond the age of twelve I am afraid the wages that could be afforded for the limited time of work would be no inducement to people of that class to accept of such employment: with country mills I should consider it impracticable.

A. 32.—Not having worked longer than the time before specified, I did not consider a change of hands necessary.

A. 33.—Never employed any hands under night, unless mechanics in repairing machinery, a usual and necessary practice.

A. 37.—Any reduction of the working-hours must be followed by a corresponding reduction of the return for capital employed and of the wages of the servants. Suppose a mill to produce three hundred spindles per day, of twelve hours work, leaving a certain profit, if the

the hours of work were reduced to ten, the quantity produced will be one sixth less, or two hundred and fifty spindles, and the profit one sixth less also. I admit that the building of new mills to supply the deficiency of yarn caused by the reduction of the present working-hours may cause an increased demand for labour, and keep up for some time the rate of wages, just as the scarcity of yarn from the same cause may for a time yield a higher profit to the spinner, but both at no distant period will fall back to a worse state than at present.

A. 38.—No artificial heat is required or used.

A. 46.—No.

A. 50.—By gas.

A. 51.—Same as through the day, by the windows.

A. 52.—No night-work, unless, as stated before, by mechanics repairing the machinery in case of accidents, or to prevent stoppage. I am not aware of any bad effects. They rest the following day.

A. 53.—Mechanics are allowed an hour to meals; all the other servants half an hour.

A. 54.—All may leave at meal-times; some prefer to remain and have their meat sent to them; but it is quite optional; the fireman and a few others go half or three fourths of an hour sooner to meals, so as to be back to clean the machinery while standing.

A. 56.—I know no necessity for any of the servants taking their meals at the work; a few may have a distance to go, and prefer it on that account; but the mills being central, and the town small, none live very far from their work.

A. 57.—Fining or dismissal.

A. 58.—Very seldom.

A. 59.—By foremen.

A. 60.—Yes, but never severe.

A. 61.—Neither.

A. 62.—I have always discouraged corporal punishment.

A. 63.—As I have stated before, I have recommended to the overseers to fine or dismiss refractory servants, and not have recourse to any other punishment; I considered no farther instructions necessary, as none of the servants would remain to be treated with harshness.

A. 64.—None.

A. 65.—No accommodation is afforded by the proprietors for lodging any of their servants.

A. 66.—I never remarked any great difference; some will acquire a proficiency at their work in all departments in less time than others of the same age will, and that occurs at all ages; it is generally considered, however, that those who begin young become the best spinners. I do not think their general character or health is affected by the age at which they are employed.

A. 67.—I know no difference of the general health of those employed; I consider them as healthy as other people; at same time I am convinced that every improvement in machinery has improved, and will continue to improve, the condition of those employed. The introduction of gas-lights in place of lamps is also a great improvement in their cleanliness and comfort.

A. 68.—No.

A. 77.—No, nor have they the smallest cause if they state nothing but the truth.

A. 78.—I think the Bill should apply to children below a certain age only, say twelve, limiting their work to six hours per day. In that case a change of young hands could easily be obtained; it would bring them up to habits of industry, and be beneficial to their parents, without hurting their health or preventing their education. All servants above that age should be allowed to dispose of their time and services as they or their parents think proper. If servants above that age are to be controlled by an Act of Parliament, it should include all ages, otherwise there may be advantage taken by some spinners over others by employing a set of hands above the age, and working extra hours. This is not the worst effect of the distinction. When bad trade occurs, and every means than can be obtained resorted to for cheap production, every mill that can get hands above the limited age will employ them, to the exclusion of a number of the most useful class of hands from twelve to twenty-one years of age, on purpose that they may be enabled to carry on their works by working extra time, and thereby lessening the cost of spinning. Many mills spin for hire, particularly in this town and neighbourhood. If the trade become again as depressed as it was very lately, and the price of hire-spinning fall back to three-pence (and in some cases to two-pence halfpenny), and the working-hours are reduced below twelve per day, I should consider the stopping of a great many works perfectly unavoidable, and consequently in this small town hundreds would be thrown out of employment, or compelled to work at such low wages as would not afford a subsistence.

H. SMITH.

#### ANSWERS of DAVID DOVE, Master, Brechin.

A. 1.—Parish of Brechin and county of Forfar.

A. 2.—Flax and tow spinning.

A. 3.—Part of the present building was erected in 1786 for scutching flax, and converted to its present purpose in 1800; and an addition was added in 1806.

A. 4.—Driven by water-power, of about ten-horse, and occasionally a steam-engine, which has not been required or in use for three years past.

(APP.—A. 1.)

L 2

A. 5.

Forfarshire.

W. Smith.

No. 54.

David Dove.

Forfarshire.

David Dove.

A. 5.—The mill is ventilated by drawing down the window-sashes from the top.

A. 7.—The ventilation is regulated at the discretion of the workers, as they find it for their own convenience or comfort.

A. 8.—All parts of the machinery considered dangerous are fenced off as far as can be done without interrupting the working of the same.

A. 9.—No arrangements for changing clothes or washing in the mill, the people having sufficient accommodation for that purpose in the lodging-house, which is close at hand.

A. 10.—The lowest age employed at present is eleven. I have occasionally had them at nine years of age, which I consider too young. None at the above ages have been at any other trade previously.

A. 11.—Children under twelve years of age are by no means necessary.

A. 12.—The recent alterations in machinery have not rendered necessary a greater number of children under twelve years of age, but have lessened the labour greatly of those employed.

A. 13.—I do not employ apprentices. The hands are generally at liberty to leave the work on giving one month's previous notice.

A. 15.—I have no orphan children in my employ; about one third are the children of parents who have houses from me, and have them under their own charge; the rest are within reach of their parents or guardians, and visit them every week.

A. 17.—Twelve hours daily for all ages.

A. 19.—Thirteen hours.

A. 20.—The total number of working days for one year previous to 4th May current was 306½ days.

A. 21.—The total number of hours for the same period was 3,693.

A. 22.—The work is not carried on in different portions at different times of the same day, but the different processes are carried on at once.

A. 23.—The average of each day of the week for a year previous to 4th May current was eleven hours fifty minutes.

A. 25.—The regular hours of work were exceeded in making up time for fairs and other amusements, at the request of the workers.

A. 26.—Any excess beyond the regular hours of work may be avoided by the workers allowing a deduction from their wages for the time lost, but they prefer making it up, except in the case of mechanics repairing any breakage in the machinery.

A. 27.—The mill was once worked thirteen hours a day, but it was given up more than seven years ago. I considered this too long for children.

A. 28.—As the foregoing article refers to a period seven years back, I cannot now state the exact difference in the cost of production.

A. 29.—The inducement to manufacturers to work extra hours must be with a view to a greater profit in a given time. This is often done when not called for by a demand for goods, and continued by many when the market is glutted with goods. As I have no night-work I cannot speak to that point.

A. 30.—There cannot be a doubt that a diminution in the hours of work will increase the cost of production in proportion, unless there is a corresponding reduction in wages, which I do not think the workers can at present well spare. There are other items besides the price of labour, that cannot be reduced.

A. 31.—Relays of hands are totally out of the question in many situations, and where the population would allow of an additional number, they could not exist without getting something like a full day's wages for each day; besides, in establishments distant from towns, lodging and accommodation must be furnished for the hands; this would require the erection of double the accommodation.

A. 33.—I have no night-work.

A. 37.—The present accredited working-hours may be reduced one hour a day, to eleven hours each day, without much detriment to either party. If reduced beyond that, a considerable reduction of wages must take place, which would diminish the comforts of the working-people, already sufficiently spare by the present rate of wages; this reduction would also have the effect of driving away a number of hands from the factories altogether to seek other employment.

A. 38.—The nature of my work requires no particular temperature, the hands opening or shutting the windows as it suits themselves.

A. 46.—None.

A. 47.—No part of the process necessary beyond the regular working-hours of the day-time.

A. 50.—The works are lighted in the evening by lamp-light.

A. 51.—Ventilated in the evening by drawing down the tops of the windows.

A. 53.—All classes are allowed half an hour to their meals by their own choice, to shorten the time at night.

A. 54.—All leave the work to meals, except two boys, who go to meals half an hour earlier, and return when the mill stops to sweep about parts of the machinery, which would be inconvenient while the same was working.

A. 55.—This is answered by the first part of the foregoing, except that the hands are allowed to leave the mill that they may take their meals in their lodging-houses with more comfort.

A. 57.—They are threatened to be turned away, with the loss of their week's wages, if they are disobedient to the overseers, and do not do their duty.

A. 58.

A. 58.—Corporal punishments are prohibited, except that the children are told that when they use opprobrious names or other extreme insolence they will not be protected.

A. 59, 60, & 61.—Corporal punishments are forbidden, except in the foregoing allusion.

A. 62.—If any complaint is made, the overseers are particularly warned not to use corporal punishments, except in cases of extreme insolence.

A. 64.—None whatever.

A. 65.—The workpeople live in the houses of their employer, who does not interfere with heads of families in the regulation of their children, except in admonishing them to keep them orderly on Sabbath. A lodging-house for the boys and a different one for the girls is frequently visited, to see that their beds and other things are in proper order. I have frequently attempted a system of teaching after working hours; it did not succeed well, owing to bad attendance.

A. 66.—I cannot distinguish any sensible difference between the capability of those employed early and those employed later in life on their general behaviour.

A. 67.—I cannot perceive any perceptible difference during the last ten years.

A. 68.—I do not change the hands in the different kinds of work, as it would take a long training to make them equally fit for all kinds of work.

A. 69.—I am not aware of the nature of any particular act for regulating factories.

A. 70, 71, & 72.—I have never had any complaint brought against me, nor been before any magistrate, for infringing any act relating to factories, during the space of thirty years.

A. 73.—I am not particularly acquainted with the internal arrangements of the neighbouring mills.

A. 77.—I have no reason to think the workpeople would not give evidence before a magistrate without fear or dread of their masters.

A. 78.—As I do not know the nature of the existing Act relating to factories, and have now no time to possess myself of it, I cannot speak to this article.

A. 79.—I would humbly suggest to the Committee that the working hours of factories be not reduced below eleven hours a day and nine hours on Saturday, for the reasons mentioned in my answer to article 37, allowing three quarters of an hour to each meal, and the works to be stopped at meals. Allowing an hour to each meal would cause the workers continue half an hour longer at night. I look upon the extension of the time at night as most injurious to health, particularly when the lights are in use in winter.

I would also beg leave to state that mechanics be allowed to work beyond the regular hours in repairing breakage of machinery, &c., and also allowance for making up lost time occasioned by the irregular supply of water, breakage of machinery, or other causes not exceeding one hour each day for five days in the week.

Another objection to extra working hours is,—it can be done where the population is condensed, and hands more numerous than necessary, but not where the population is thin, which is now the case in country districts, by the cottages being swept off to throw the land into large farms. Those situated in the latter case, and who are not inclined to work extra hours, have a disadvantage compared with those who work thirteen, thirteen and a half, or even fourteen hours a day, to the extent of four or five per cent. on the wages they pay to their workers. The equalization of the hours of labour would put all on an equal footing, and be conducive to health.

Respecting the penal clauses annexed to the proposed bill (say heavy penalties for accidents to people employed when taking all the care they can to prevent them), I think few will be disposed to submit to them; they will rather stop their factories. I would suggest in place of those that the sheriff of the county or any local magistrate be empowered to appoint competent persons to inspect the different factories, and see that the machinery is properly fenced off and boxed in, and, if not, order such alterations as are necessary for the safety of the workpeople.

Arrotts Mill, 15th May 1833.

DAVID DOVE.

Forfarshire.

David Dove.

#### ANSWERS of THOMAS GRAY, Brechin.

A. 1.—Brechin, county of Forfar.

A. 2.—Flax and tow spinning.

A. 3.—Entered by me in 1831, since which the works have been increased three fourths.

A. 4.—Water; irregular.

A. 5.—None.

A. 6.—Opening of windows.

A. 7.—Discretion of all.

A. 8.—In progress.

A. 9.—Since the commencement hot water, &c. has always been prepared at the diet and evening hours.

A. 10.—Would not wish under twelve years.

A. 11.—No.

A. 12.—Less.

THOMAS GRAY.

No. 56.

W. G. Baxter.

ANSWERS of W. G. BAXTER, Managing Partner of Baxter, Brothers, and Company, Dundee.

- A. 1.—Dundee in the county of Forfar.  
 A. 2.—Preparing and spinning of flax and tow.  
 A. 3.—The erection of our first mill was completed about the middle of 1821, that of the other about the middle of 1826, and both mills commenced spinning at their respective dates of erection.  
 A. 4.—Steam power alone is employed, of sixty horse power.  
 A. 5.—We have no distinct or specific provision for the ventilation of our works.  
 A. 6.—The provision for ventilation in our works depends alone on the opening of the windows, which however are large and numerous.  
 A. 7.—The hands have the regulation of the opening and shutting of the windows at their own disposal. From the nature of the work carried on, a free communication with the external air is rather advantageous than otherwise.  
 A. 8.—All the dangerous parts of the machinery are fenced off.  
 A. 9.—We have no particular arrangements such as are pointed at in this query, with the exception of water-closets in each flat, through which a regular supply of water is constantly running. Generally speaking, however, the females employed change their clothes on entering and leaving the works; and although no particular arrangements have been made for that purpose, there are places which have always been used by them for depositing the clothes which are changed.  
 A. 10.—Nine years is the lowest age at which children have been employed at our works. Should any have been employed below that age, it is owing to the misrepresentation of the parents. So far as we know, none of the children have been previously at any other trade.  
 A. 11.—The nature of our work does not require the employment of children under twelve years of age; on the contrary, we consider that it would be for our advantage that none under that age were employed, and it is only at the urgent solicitation of their parents that children of a more tender age are ever taken in.  
 A. 12.—No recent alterations in machinery have rendered it necessary to employ a greater or less proportion of persons under twelve years of age, but recent improvements have enabled us to carry on with a less number of hands than formerly.  
 A. 13.—No apprentices are employed at our mills.  
 A. 15.—We lodge and maintain none of our hands.  
 A. 17.—All the hands at our mills are employed an equal length of time; say thirteen hours five days in the week, and eleven hours and a half on Saturday.  
 A. 19.—The greatest number of hours during which our works have been kept on in one day during last year is thirteen and three quarters.  
 A. 20.—Our work during last year was carried on during 308 days.

A. 21.

Forfarshire.

*W. G. Baxter.*

A. 21.—The total number of hours which our works were carried on during last year was 3,990 hours.

A. 22.—The whole of our works are carried on at the same time, and only during the hours above specified.

A. 23.—The average of the hours of work of each day of the week during the last year is twelve hours and fifty-five minutes nearly.

A. 25.—Making up, at the request of the hands, for two additional holidays.

A. 26.—This, or any excess, is easily avoidable; and we consider that it would be for the advantage of the manufacturer that no excess beyond the regular hours should ever take place.

A. 27.—Yes; in 1822 and 1823 we worked fourteen hours a day, from that time until lately thirteen hours and a quarter five days a week, and eleven hours and a half on Saturday.

A. 28.—Since the period at which, as above stated, we worked longer hours, the cost of production has decidedly decreased; but so far from this decrease arising or being in any way affected by the diminution of the hours of working, we consider that a reduction of the time of working would have a most decided tendency to increase the cost of production. This will appear very clear from the simple fact, that in the event of the time being lessened a proportional decrease must take place in the amount of production, so that the manufacturer, with the same amount of capital invested in the trade, is receiving a return diminished in a like ratio; in other words, the diminished production is effected at the same expence as was formerly employed in producing the original quantity. The cause of the present reduced cost of production arises solely from the great improvements which have taken place in machinery since the period above referred to, when it may be said flax-spinning was yet in its infancy.

A. 29.—We consider that a manufacturer has no inducement to work either during the night or extra hours.

A. 31.—The objection to employing relays or fresh sets of children where extra hours are required is contained in Answer No. 29, where it is stated that we consider that it is not for the advantage of the manufacturer to work extra hours, and the small wages that we could afford to pay them would not procure them the necessaries of life.

A. 32.—The system of working by relays or fresh sets of children has not been tried, and the reason why it has not is contained in the previous answer.

A. 33.—We have never employed a night set of hands.

A. 35.—We have never worked during the night.

A. 36.—Never having worked during the night, we can give no answer to this question.

A. 37.—In Answer No. 28. we have already stated that a limitation in the hours of working will decidedly have the effect of increasing the cost of production in a proportional degree. In foreign markets a keen competition is at present carrying on betwixt us and the continental manufacturer, so that any increase in the cost of our manufactures would give a most decided and dangerous advantage to the foreigner, tending ultimately to exclude us altogether from foreign markets.

A. 38.—The temperature of a flax-spinning mill where the ventilation by the windows is properly attended to is rather lower in summer and higher in winter than the surrounding atmosphere. For the purposes of the work carried on, the cooler we can keep the mills the better.

A. 41.—None of the works have ever been going at night.

A. 50.—During the winter season it is necessary for the purpose of working our regular hours to have our works lighted, which is done by gas.

A. 51.—We have no night-work.

A. 53.—The time allowed for meals at our works are the same for all classes of persons, being for breakfast half an hour, and for dinner the same.

A. 54.—All the people employed at our works leave them at meal-times if they choose.

A. 55.—They seldom remain in the works, but if they do it is always for their own convenience.

A. 56.—As they only remain for their own convenience, any alteration would have no effect.

A. 57.—The hands are made aware of what they are expected to do, and how they are to conduct themselves. Any contravention is punished by a small fine; should this not have the desired effect, they are then dismissed.

A. 58.—Corporal punishment is never inflicted in our works.

A. 62.—Our express orders are that no corporal punishment shall be inflicted.

A. 63.—Our instructions to all overseers on entering our service are that no corporal punishments shall be inflicted; and that if a small fine, not exceeding 3*d.* in one week, has no effect, that the defaulter shall then be dismissed.

A. 64.—No.

A. 65.—All our workpeople live in their own houses, and we have no control over them after working hours. We have an evening school kept up at a considerable expence, where they are learned to read and write without any charge.

A. 66.—As to skill, they never make expert hands if taken in much above twelve years of age. As to their general character, we experience no difference.

A. 67.—During the last ten years the increased attention which is paid to the cleanliness of the mills and the diminution of labour by the improvements in machinery has a tendency

Forfarshire.

W. G. Baxter.

to improve the condition of the workpeople; but as to any improvement or deterioration in their health, it is impossible for us to speak with any degree of certainty.

A. 68.—We do not consider that any part of our works is particularly injurious, and consequently we have no occasion to make any change or selection.

A. 69.—No.

W. G. BAXTER.

No. 57.

William Boyack.

## ANSWERS of WILLIAM BOYACK, Dundee.

- A. 1.—Dundee, county of Forfar.  
 A. 2.—Flax and tow spinning.  
 A. 3.—One mill in 1819; one mill in 1824; one mill in 1828; one mill in 1830.  
 A. 4.—Steam.  
 A. 5.—Hung windows.  
 A. 6.—On the opening of windows.  
 A. 7.—By the overlooker or workers, for general comfort.  
 A. 8.—All the dangerous parts are fenced off.  
 A. 9.—Water-closets regularly supplied with water; also a supply of water in every department for drinking, and a well at every work, from which they are supplied with pure spring water, to which all have access.  
 A. 15.—Lodge or maintain none.  
 A. 17.—Twelve hours and a half, except on small work, one quarter of an hour longer.  
 A. 18.—No difference of time with regard to age.  
 A. 19.—Fifteen hours and a half.  
 A. 20.—Three hundred and six days.  
 A. 22.—All the same time.  
 A. 25.—When the steam-engine or great machinery require repair, or the workpeople a holiday.  
 A. 26.—Avoidable.  
 A. 27 & 28.—Yes.  
 A. 29.—Higher wages to his servants, and greater profit to himself.  
 A. 30.—Yes; cannot say to what extent.  
 A. 31.—No particular objection.  
 A. 32.—Has never been tried, except to work the whole night.  
 A. 33.—In one mill, about ten years ago, night-hands wrought two hours and a half less than those employed during the day; also in 1827 for a few weeks, in consequence of the flax-dressers making an outstand for a rise of wages.  
 A. 35.—They changed seldom.  
 A. 36.—Less goods manufactured.  
 A. 37.—A greater expence on production.  
 A. 38.—No increased temperature of the air in the rooms is necessary.  
 A. 40.—About three hundred altogether in the process of flax and tow spinning.  
 A. 41, 42, & 43.—None.  
 A. 44.—The number varies according to the extent of the work.  
 A. 45.—From eight P.M. till five A.M.  
 A. 46.—None.  
 A. 47.—No fixed time.  
 A. 49.—Not indispensable.  
 A. 50.—Gas.  
 A. 51.—Same as during the day.  
 A. 52.—Not aware of any change on the habits of the people.  
 A. 53.—Half an hour for each meal, betwixt nine and ten and two and three o'clock.  
 A. 54.—All have liberty to do so except the engine-man, although a considerable number do not.  
 A. 55.—For the convenience of the workpeople.  
 A. 56.—The same effect as into it.  
 A. 57.—Admonishment or dismissal.  
 A. 58.—Not with my knowledge.  
 A. 62.—Strictly forbidden.  
 A. 64.—One case against a foreman, who was declared by the judge "not guilty."  
 A. 65.—Live in their own or lodging houses.  
 A. 66.—Those from infancy are superior in skill and equal in character.  
 A. 67.—They are rather improved, as the mills are now more clean and airy than they were ten years ago.  
 A. 68.—No change is made; none of the processes are considered injurious.  
 A. 69.—No act.  
 A. 77.—I have no reason to believe that they are afraid.  
 A. 78.—No law.  
 A. 79.—I have only farther to observe, that all the people employed by me who choose to attend school are taught reading, writing, and arithmetic, free of any expence.

WILLIAM BAYACK.

## ANSWERS of Messrs. BROWN and ALLAN, Seabraes, Dundee.

Forfarshire.

No. 58.

*Brown & Allan.*

- A. 1.—Dundee, county of Forfar.  
 A. 2.—Flax-spinning.  
 A. 3.—In 1829, wholly.  
 A. 4.—Steam, seven and a half horse power.  
 A. 5.—Windows hung.  
 A. 6.—Windows let down, and friction of machinery.  
 A. 7.—As the workers find it suitable for themselves.  
 A. 8.—No places of danger where persons are employed.  
 A. 9.—Water-closets and presses for clothes from commencement.  
 A. 11 & 12.—No.  
 A. 13 & 14.—None.  
 A. 16.—No.  
 A. 17.—See list. Thirteen hours.  
 A. 18.—No difference.  
 A. 19.—See list. Fourteen, occasionally making up lost time.  
 A. 22.—All at same time.  
 A. 24.—Fourteen hours in making up lost time, at the workers request, to save wages.  
 A. 25.—When any stoppage took place from machinery going wrong, or a holiday.  
 A. 26.—Not without reduction of wages.  
 A. 27.—No.  
 A. 28.—Never altered the hours.  
 A. 29.—Quantity of production.  
 A. 31.—Never tried.  
 A. 33.—Night-hands two hours less, when tried; very short time.  
 A. 34.—One set only; night-work would not pay.  
 A. 35.—See 34th. Work only by day.  
 A. 36.—Less quantity produced.  
 A. 37.—Less profit both to masters and workers.  
 A. 38.—Does not require any regulation.  
 A. 40.—See list for employ of hands.  
 A. 41, 42, 43, 44, & 45.—None.  
 A. 46.—No.  
 A. 48.—List of names is referred to.  
 A. 49.—None; does not apply to our establishment.  
 A. 50.—Gas.  
 A. 51.—No night-work.  
 A. 52.—Have had no experience.  
 A. 53.—One hour to all.  
 A. 54.—All leave.  
 A. 56.—Never had any any alteration.  
 A. 57.—Dismission for obstinate disobedience.  
 A. 58.—No.  
 A. 59.—By none.  
 A. 60 & 61.—Never.  
 A. 62.—Yes, from the beginning.  
 A. 64.—No.  
 A. 65.—They live in hired houses with their parents, or in lodgings about town.  
 A. 66.—No difference of moral character.  
 A. 67.—Have only been since 1829, and have no experience.  
 A. 68.—No injurious effect from process that we are aware of.  
 A. 69.—Flax-spinning has no Act.  
 A. 70 & 71.—Never.  
 A. 72.—None.  
 A. 77 & 79.—No.

BROWN and ALLAN.

## ANSWERS of JOHN SMITH, Manager, for Andrew Brown, Dundee.

No. 59.

*John Smith.*

- A. 1.—Parish of Dundee, county of Forfar.  
 A. 2.—Flax-spinning.  
 A. 3.—The whole mill built at one time, 1805, and employed at and since that time for flax-spinning.  
 A. 4.—Steam solely; engine of thirty-two horse power.  
 A. 5.—No distinct provision for ventilation.  
 A. 6.—The provision depending entirely on the opening of the windows.  
 A. 7.—The ventilation is always regulated by the overseer of each department, who has particular orders to that effect.

(APP.—A. 1.)

M

A. 8.

Forfarshire.

John Smith.

A. 8.—All the parts of the machinery which are considered dangerous are fenced off or inclosed.

A. 9.—There are no particular arrangements; each department has two water-closets constantly supplied with fresh water, drinking-pans supplied three or four times every day with spring water, likewise a supply of water that those who incline can take advantage of washing; the hands change their clothes at entering, and again before leaving the work.

A. 10.—None below nine years, and very few at that age; are not fit for any other employment before that age.

A. 11.—The work they have to learn being very light, from ten to twelve is a very proper time to begin.

A. 12.—Very little difference.

A. 13.—No apprentices.

A. 15.—Not aware of any orphans in the work.

A. 17.—Twelve hours and three quarters, and eleven and a half on Saturday.

A. 18.—Same number of hours.

A. 19.—Fourteen hours and three quarters.

A. 20.—The mill was standing eight months previous to the 27th July 1832; from that date to the 2d May 1833, a period of forty weeks, the mill has gone two hundred and thirty-four days.

A. 21.—During the same period of forty weeks, total number of hours two thousand nine hundred and forty-six.

A. 22.—All carried on during the same time.

A. 23.—And during the same period average hours of each day of the week is seventy-three hours thirty-nine minutes.

A. 24.—Fourteen hours and three quarters.

A. 25.—With few exceptions, always at the request of the workpeople.

A. 26.—Avoidable, being generally requested.

A. 27.—The hours per day previous to 1826 were fully an hour longer for some years; before that the same as at present.

A. 29.—Do not work during the night.

A. 30.—Should think an increase of cost.

A. 31.—None whatever.

A. 32.—Never had occasion for a change of hands.

A. 33.—No night set of hands needed.

A. 34.—The nature of the work requires but one set of hands.

A. 36.—None.

A. 37.—The working hours have been the same for years back; could not say what effects a reduction might have.

A. 38.—The temperature varies from forty to sixty-eight degrees Fahrenheit, but a much lower temperature suits the nature of the work better; a high temperature is very much against the working of flax; cannot be too cool.

A. 39.—Always keep as low a temperature as possible.

A. 50.—With gas.

A. 51.—Windows and doors.

A. 52.—Have no night-work, therefore cannot give an answer.

A. 53.—Thirty minutes to breakfast, and thirty minutes to dinner.

A. 54.—Perhaps about two thirds may leave the work.

A. 55.—Not requested to remain; solely for their own convenience.

A. 56.—Nothing, I should think, but inconvenience to those who choose to remain.

A. 57.—Nothing but the overseer moving constantly about amongst them, and by injunction and dismissal.

A. 58.—Corporal punishments not allowed.

A. 63.—Any new overseer taken in is always instructed to that effect.

A. 65.—Do not live in houses belonging to the employer.

A. 66.—Those taken in young make the most expert hands.

A. 67.—Cannot state any difference.

A. 69.—Do not know of any Act.

JOHN SMITH, Manager.

No. 60.

J. &amp; W. Brown.

## ANSWERS of JAMES and WILLIAM BROWN, Dundee.

A. 1.—Parish of Dundee, county of Forfar, Scotland.

A. 2.—Flax-spinning.

A. 3.—One work erected about 1792; turned into a spinning-mill in 1800. Another erected in 1825, and a third in 1828.

A. 4.—Steam power solely; about sixty-one horses.

A. 5.—None other than doors and windows.

A. 6.—On the opening of windows chiefly.

A. 7.

Forfarshire.

J. &amp; W. Brown.

A. 7.—Controlled at the discretion of all. Each three or four persons have two windows, which they open and shut as they find agreeable.

A. 8.—All parts that are considered in the least dangerous are fenced off.

A. 9.—Each room has a water-closet in a private corner, supplied with water regularly by the steam-engine. No apartment is kept, nor wished for, for changing clothes in. Fresh water is supplied once or twice a day for drinking. Presses or boxes with lids are afforded for containing articles brought in; and seats are supplied to almost all the persons employed. All these have been enjoyed by them less or more for many years.

A. 10.—Perhaps one or two in a hundred have been employed at eight years of age; but, generally speaking, very few under ten, as such are not suitable for the work. Some of the grown-up persons have been at other trades before commencing spinning.

A. 11.—The nature of the work does not require children under twelve years of age.

A. 15.—We know of no orphans; but if there be any, if young, they are under the superintendence of the kirk session.

A. 17.—Twelve and a half for five days a week, and eleven and a half on Saturday. Those on piece-work make their hours to suit themselves without compulsion.

A. 18.—Twelve and a half for five days, and eleven and a half on Saturday. No difference, excepting those employed in preparing-rooms. Get off thirty to sixty minutes a day earlier occasionally.

A. 19.—Twelve and a half; two days thirteen hours and a half.

A. 20.—Three hundred and eight the highest number; part of the works some days less.

A. 21.—Not exactly known, but at the highest not exceeding 3,840. Part of the works not 3,800.

A. 22.—All carried on at one time each day, and all the year round.

A. 23.—Somewhat under twelve hours and a half.

A. 24.—Twelve hours and a half; two days thirteen hours and a half each.

A. 25.—Never exceeded, except as above, when done at the request of the workers, to make up for play-time.

A. 26.—Avoidable.

A. 27.—Previous to 1826 the working time was one hour a day longer for some years, before which it was as at present.

A. 28.—Doubtful regarding this.

A. 29.—Profit is the inducement to prolonging working time.

A. 30.—The working time of flax-mills not being under limitation, no answer can be given to this question.

A. 31.—We know of none, excepting the lowness of the wages that could be afforded.

A. 32.—Not tried in our case for ten years back. Previous to that two sets of hands employed, working night and day, which answered very well both for employer and worker.

A. 33.—Night set commenced at seven or eight o'clock every night, and continued ten hours without intermission; day-set as usual.

A. 34.—Merely in the way of pushing business; at least that was the case ten years ago, when night-work was carried on.

A. 35.—Uniformly during night at the period when night-work was carried on.

A. 36.—Nothing important.

A. 37.—A slight rise in the expence of production.

A. 38.—Varies from 40° to 66° Fahrenheit. May be conducted under freezing point.

A. 39.—If above 55°, hurtful.

A. 50.—By gas.

A. 51.—Windows at top and bottom.

A. 53.—Thirty minutes for breakfast and thirty for dinner.

A. 54.—About three fourths leave; the others remain in voluntarily, preferring such.

A. 55.—Solely for the convenience of the workpeople.

A. 56.—Inconvenience to those who choose to remain in.

A. 57.—An overseer is employed in each room, who keeps constantly moving about, and who never requires to use any other means than injunction.

A. 61 and 62.—Any ever inflicted were so trifling as not to merit notice. For years past they have been totally forbidden.

A. 63.—No punishment is allowed to be inflicted except dismissal.

A. 65.—None in the houses of their employers.

A. 66.—In general they are more expert workers when commenced under fifteen years of age than later.

A. 67.—No change observable; but a change for the worse would speedily come about were care not taken to ventilate the rooms, especially during the burning of gas.

Dundee, 7th May 1833.

JAMES and WILLIAM BROWN.

Forfarshire.

No. 61.

John Brown.

## ANSWERS of JOHN BROWN, Dundee.

- A. 1.—Parish of Dundee, county of Forfar.
- A. 2.—Flax-spinning.
- A. 3.—Erected in 1825 and 1826.
- A. 4.—Wrought by steam-engines.
- A. 5.—No provision for ventilation, except by means of windows.
- A. 6.—Depends on the opening of windows.
- A. 7.—The overseers of the different rooms sometimes direct the windows to be opened; but if the workpeople find them disagreeable, they shut them again.
- A. 8.—All the places where there is danger, and which it is possible to fence off, are fenced off.
- A. 9.—There are water-cocks and pitchers and water-closets in each room, and the workpeople are in the habit of washing themselves in the evening, and they shift their clothes every time they commence work and leave off. This, however, is altogether voluntary on their part, there being no regulations to that effect, and those habits have existed since the mill was erected.
- A. 10.—We make no inquiries as to age, but judge from the appearance of the child if they be fit for learning the employment. It happens that there are none in the mill under ten years of age.
- A. 11.—There is no department of the work in which children under twelve years of age are preferable to those above that age.
- A. 12.—They have not.
- A. 13.—None.
- A. 15 & 16.—No children lodged and maintained at this work.
- A. 17.—The average duration of working time at this mill is twelve hours and a half per day.
- A. 18.—The working hours are the same for all ages, except the engine firemen and mechanics.
- A. 19.—Thirteen hours and thirty-five minutes is the longest time the workpeople have been employed in any one day during the last year.
- A. 20.—The total number of days on which the manufacture was carried on in 1832 was three hundred and seven.
- A. 21.—Three thousand eight hundred and fifty-one hours.
- A. 22.—All the departments of the work have been carried on for the same space of time, except that sometimes the tow-preparing has been continued for half an hour longer per day. No account of this has been kept, but it has not exceeded ten times during the year.
- A. 23.—Twelve hours and three quarters for Monday, Tuesday, Wednesday, Thursday, and Friday, and eleven hours and a half for Saturday.
- A. 24.—There has never been more than one set of children employed, and these have been employed all the working hours stated above.
- A. 25.—The usual working hours have been exceeded in making up time for extra holidays, and a very little for stoppages for repairs.
- A. 26.—It is possible to avoid any excess of working time, but that is caused in general by the workpeople themselves taking extra holidays.
- A. 27.—The mill was set to work in 1826, and the working time has always been the same.
- A. 28.—No experience.
- A. 29.—I think that their inducement for working long hours is the consequent addition to the profits.
- A. 30.—The hours of work having been always the same at my work, I am unable to give a decided answer to that question.
- A. 31.—If two sets of children were employed, and only one set of grown-up people, the working hours of the children would be so short that sufficient wages could not be afforded them.
- A. 32.—I have not heard of that system having been tried in Dundee, and I do not think it would be successful, for the reason stated in the answer to the last question.
- A. 33.—I have not employed a night-set of hands.
- A. 34.—I do not work more than one set of hands, and it would be a flourishing state of trade indeed that would induce me to do so.
- A. 36.—As I conceive night-work to be a mill kept working all night, and as this is not practised by me, any prohibition of it would have no effect on me.
- A. 37.—In my opinion, a reduction in the working time of those employed in flax-spinning would have a beneficial effect on their health, adults as well as children; indeed I think the confinement is more hurtful to the former than to the latter. As to the effects of such a measure on the mercantile profits, I do not think they would be considerable if the measure was universal. Ours is a rapidly increasing trade, and if this increase were delayed for a short time, it would enable us to throw the additional expence on the consumer, as the prices of our articles are kept low in foreign countries by the competition among ourselves, and not by the competition with the manufacturers of other countries.

A. 38, 39, & 40.—There is no artificial heat employed in my mill; indeed, the lower the temperature can be kept, consistent with the comfort of the workpeople, the better are the operations carried on.

A. 41.—There has been no night-work at my mill. By night-work I understand work carried on all night, by a different set of hands from the day hands.

A. 50.—By gas.

A. 51.—No provision, except opening the windows.

A. 52.—During the short time that persons are employed by artificial light at present, I am not aware that there is any difference in their habits; but I am of opinion that if a night set of hands were employed their morals would be deteriorated, as the superintendence is not so strict as during the day.

A. 53.—Half an hour for breakfast and half an hour for dinner for all classes, except mechanics.

A. 54, 55, & 56.—With the exception of about twelve individuals, they all go home to their victuals; and the only reason why these twelve do not also go home is the want of convenience there, and distance from their lodgings.

A. 57.—With females no means are taken to enforce obedience, except the fear of losing their employment.

A. 58.—With boys punishment with a strap on the hand is sometimes used, but seldom, and always voluntary on their part.

A. 59.—By the overseers of the rooms.

A. 60.—It is with my knowledge and sanction that the above punishments have been inflicted, considering them more mild than the alternative of being discharged, and their parents agreeing with me in that opinion.

A. 62.—No other corporal punishments allowed, except the above.

A. 63.—The manager has given verbal instructions to the overseers of the rooms to punish the boys in the manner narrated in answer to query 58.

A. 64.—No complaints have been made nor proceedings entered into before magistrates, but an overseer of a room has been discharged from the works by the manager for using harsh measures with the boys.

A. 65.—None live in the employers houses, and we consider all control and superintendence on our part to be at an end after they leave the works.

A. 66.—For the class of spinners, it is of great advantage that they begin early; indeed, it is hardly possible to teach them after they exceed twelve years of age. For the other classes of girls, it is of advantage that they be of more advanced age. The boys, again, generally leave the mill about fifteen or sixteen years of age, and betake themselves to other trades.

A. 67.—I am not aware that there is any difference in the health of the workpeople during all the time that this mill has existed.

A. 68.—The workpeople when they enter the work are allowed to select their own employment, and they generally continue at it while at the work.

A. 69.—Not subject.

A. 77.—I am not aware of their being afraid of displeasing their masters by giving evidence.

A. 78.—No law having as yet applied to any works in this neighbourhood, I have no experience as to what would secure obedience to any proposed law.

A. 79.—If this query refers to the Bill proposed by Lord Ashley, of which I have seen a copy, in that Bill I think there are many objectionable clauses, which would require alteration.

JOHN BROWN.

#### ANSWERS of JAMES CARMICHAEL, Dens Mill, Dundee.

No. 62.

James Carmichael.

A. 1.—Dundee, Forfarshire.

A. 2.—Spinning flax and tow.

A. 3.—Employed as a flax spinning-mill since 1805.

A. 4.—Six-horse steam-engine; very regular.

A. 5.—None.

A. 6.—Opening of the windows.

A. 7.—Regulated by foreman, or any of the workers who please.

A. 8.—Fenced off where it is thought necessary.

A. 9.—None.

A. 10.—Ten years of age. Do not know of any of them having been previously employed.

A. 11.—No; but have taken some in under that age, merely to oblige the other part of the family.

A. 12 & 13.—No.

A. 15.—Parents or guardians may visit their children as often as they choose, but seldom do so.

A. 16.—No one but the foreman to account to.

A. 17.—Thirteen hours five days, and eleven hours and a half on Saturdays.

(APP.—A. 1.)

M 3

A. 20.

Forfarshire.

*James Carmichael.*

- A. 20.—About three hundred days.  
 A. 21.—About three thousand six hundred and forty hours.  
 A. 22.—Work all going.  
 A. 23.—About seventy-six hours.  
 A. 24.—Fourteen hours, and then for the purpose of getting away to a fair, &c., and was always at their own request.  
 A. 25.—Have not known the hours less than twelve hours for these twenty-eight years past. Cannot say the time of lengthening the hours; a quarter of an hour was added at one time, and a quarter at another, &c.  
 A. 26.—There is no justifiable excuse in going beyond the regular hours.  
 A. 27.—No; I cannot say I have.  
 A. 28.—If in thirteen hours I spin thirteen spindles at 6*d.* per spindle, that is 6*s.* 6*d.*; if I only spin ten hours at 6*d.* per spindle, that is only 5*s.* Coals, oil, and deterioration is not equal to half of this loss.  
 A. 31.—Do not spin extra hours, and do not know.  
 A. 33.—Have employed a set of night-hands nine years ago for a few weeks, but disliked it, and do not recollect how I arranged the hands.  
 A. 34.—See no reason for working more than the regular hours.  
 A. 36.—See no reason why night-work should be allowed, excepting any millwright work, or cleaning boilers, which otherwise would stop the mill next day.  
 A. 37.—Shall readily agree to eleven working hours, providing all mills are restricted to the same, and think ultimately it would not be much against the spinning interest, as a small addition of machinery would make the quantity of spindles lost by the short hours.  
 A. 38.—No statement of temperature; being unnecessary.  
 A. 50.—By gas.  
 A. 51.—None, excepting the windows.  
 A. 53.—Half an hour to breakfast, and same to dinner.  
 A. 54.—All may leave the work, foreman excepted.  
 A. 55.—For the conveniency of the mill the foreman has to stop.  
 A. 56.—Have no such persons, except the above foreman.  
 A. 57.—If they do not give satisfaction, a week's notice, and discontinue their service.  
 A. 58.—Not tolerated, nor ever done.  
 A. 62.—My foremen are strictly prohibited from using corporal punishment.  
 A. 65.—Workpeople find their own lodgings.  
 A. 66.—My general observations have been, that those who are employed early, say from ten to fourteen years of age, make the best spinners; and if the master spinner is confined to girls of twenty-one years of age, a sorry account of their dexterity will be felt.  
 A. 67.—I consider the health of the spinners and those employed at mills is greatly improved. Mills are now built more capacious, the machinery greatly improved in cleanliness, carding-engines being well boxed in, &c. Of late years the new mills have all well-kept water-closets.  
 A. 68.—Make no change of any person employed, to prevent injurious effects, as I do not find it necessary.  
 A. 69.—Do not know what Act is alluded to.  
 A. 77.—Do not think the workpeople would be afraid to give evidence if they only abide by the truth.  
 A. 78.—Cannot suggest any improvement, as I do not know the present law.

JAMES CARMICHAEL.

No. 63.

*William Hackney.*

ANSWERS of WILLIAM HACKNEY, of the Firm of Chalmers and Hackney, Dundee.

- A. 1.—Dundee, Forfarshire.  
 A. 2.—Preparing and spinning flax and flax tow yarns.  
 A. 3.—There are two mills, one of which has been in use as a spinning-mill about forty years. The other was built twelve years ago, and four years after one additional floor was added, making four floors, besides attics.  
 A. 4.—The old mill is wrought by a steam-engine of fifteen-horse power; the new mill by two engines, one about twenty-five horse power, the other about seventeen.  
 A. 5.—There is no specific plan for ventilating the rooms, except by opening the windows at the top and bottom, which are so placed that a current of air can be obtained at all times.  
 A. 7.—The ventilation is regulated by the overlookers of the different floors; and as no particular temperature is required, they of course consult the comfort of those in the room.  
 A. 8.—The dangerous parts of the machinery are fenced off.  
 A. 9.—There are water-closets in each floor of the new mill, and at the other work one water-closet. There is no provision for washing in the different floors but a well in the court. There is no place allotted for the workpeople changing their clothes, but the want of it has not been observed to be an inconvenience; and the rooms being of the usual temperature, they do not require to put on additional clothes on leaving the work.  
 A. 10.—In some instances children have been employed at ten and eleven years of age. These very seldom have occurred, and only at the entreaty of the parents. We consider it a dis-

a disadvantage to have any children employed under twelve years. We are not aware of any of them having been employed at other trades.

A. 11.—It does not; it is a disadvantage, as stated above.

A. 12.—The improvements in machinery have rendered fewer hands necessary. With regard to age, as answered at 10 and 11, none are required under twelve.

A. 13.—No apprentices employed.

A. 15.—No children lodged nor maintained.

A. 17.—No distinction in the hours of employment for those of different ages.

A. 19.—For three days the work was kept on sixteen hours a day, but this was done at the request of the workers, as they wished an extra play-day, and they preferred working three successive Saturdays sixteen hours a day rather than make up the time by an hour a day.

A. 20.—Three hundred and six days.

A. 21.—About three thousand seven hundred and ninety hours.

A. 22.—All parts of the work are carried on about the same time, except the carding-room, which averages half an hour less per day.

A. 23.—The working hours are twelve and a half for each day, except Saturday, which is twelve hours, making seventy-four hours and a half a week, which are adhered to as nearly as possible; in some cases where time has been lost by stoppages it has not been made up.

A. 24.—All the workers continue the same length of time, excepting those in the carding-room as above.

A. 25.—When the usual time of working is exceeded, it is in consequence of some previous stoppage of the machinery, or from the cause stated at No. 19, the hands getting at their own request an additional play-day to those allowed them; this occurs at the fair times and at the new year, when at each of those periods they get two days instead of one.

A. 26.—Any excess beyond the regular hours might be avoided, but the manufacturer in that case could not indulge his workers with any extra time for play if he and they did not have it in their power to make it up after, as they might agree; and in cases where time was lost by stoppage of the engine or other machinery he would consider it a hardship to pay wages for that time if it was not made up, and the majority of the hands would rather make up the time than want the payment.

A. 27.—In 1821 and 1822 the working hours were longer than now, being about thirteen hours and a half a day, or eighty-one hours a week; the wages then were high, twenty per cent. above the present rates.

A. 28.—Since the above period the improvements in machinery, fall of wages (about twenty per cent.), and the reduction in the price and freight of coals (about twenty-five per cent.), have reduced the cost of production fully as much as the above reduction of the working hours raised it; but under the same circumstances the cost must be greatly increased by reducing the working hours, and the increased cost would be in a much greater ratio than the hours reduced, even although there were to be a corresponding reduction of wages.

A. 29.—The object of the manufacturer in continuing his work a greater length of time than is general is to obtain a greater gain. A manufacturer working thirteen hours and a half a day instead of twelve hours and a half will produce the same quantity for 12,500*l.* capital as the others for 13,500*l.*, and at less proportional expence for wages and tear and wear of machinery.

A. 30.—The hours of flax-mills are not limited. Rest of question answered at No. 28.

A. 31.—If only those under fourteen years of age were to be considered as children, there would be little objection to having relays of them; the principal one would be, that their wages divided betwixt two would be insufficient to support them both; but an arrangement might be made to reduce the hours of that class an hour per diem by allowing them one half hour in the morning and half an hour at night; but if all persons under twenty-one years of age are to be rated as children, the objections to relays of that description are various. In a place like Dundee, where so many are employed under twenty-one, it would be long before a sufficient number of hands could be got, and although they were, they could not be paid half wages; if they are employed, the employer must support them, and even for full work the hands have not much more than is necessary for that purpose.

A. 32.—A system of relays has not been tried here for the reasons stated above at 31.

A. 33.—Once, for a short period, the tow-spinning at one of our works was carried on during the night by a fresh set of hands, commencing about half past eight o'clock and working till five in the morning, getting some refreshment during the night. The trade being profitable at the time induced a trial of it, but it was abandoned, being carried on at a great disadvantage in comparison with day-work.

A. 34.—We work only one set of hands.

A. 36.—Do not consider night-work being prohibited would be a disadvantage to the trade.

A. 37.—The effects of the reduction of the hours of working are various. In the first place the quantity produced is lessened, and the manufacturer's reimbursement for his capital invested depends on this; next, the quantity produced after the reduction of time is done at a much greater expence than before in proportion; and, in addition, the foreign

Forfarshire.

William Hackney.

manufacturer, who is not fettered with limitations, obtains an advantage over the manufacturer here, and in time this may become serious for the trade.

A. 38.—There is no artificial mode of heating the mills, (it is not required in spinning flax,) but the temperature is more even than it would be in a dwelling house, the windows and quick motion of the machinery keeping it cool in summer, and in winter the air is heated by the friction of the machinery.

A. 50.—Lighted by gas in the mornings and evenings in winter.

A. 53.—Half an hour at breakfast and half an hour at dinner to all; the workers might have longer time, but they prefer this arrangement as it lets them away earlier.

A. 54.—With the exception of a few to clean and oil the machinery, and who go when the others return, the whole number might leave the work at meal-times; many of them do not go, but have victuals brought to them; this is their own choice; the proprietors would prefer them all leaving the work; probably about a fourth remain.

A. 57.—The only means taken to enforce obedience are entreaty, and pointing out the propriety of what is wanted; when these fail, dismissal.

A. 58.—No corporal punishment inflicted.

A. 62.—Corporal punishment forbidden.

A. 64.—No complaint made, nor any proceedings taken in any way.

A. 65.—The workpeople find lodgings for themselves.

A. 66.—With the exception of spinners, it is of little consequence at what periods they are taken in to work; all the time keeping in view that those under twelve are too young; and again, for various employments those from twelve to sixteen answer as well as older, and are had for less money. Spinners would require to begin to work from twelve to fourteen; it requires time to learn, and older hands do not acquire it well. The number of spinners required in a mill are about one third of those employed. The general character of those that are engaged about mills early and those that are older before working at them is much the same.

A. 67.—With regard to the general health of those employed here now, and what it was ten years ago, it appears to be improved, and their comforts increased. We believe the general health of those employed to be equal to that of other classes in similar circumstances, and when sick they are well attended to, being generally contributors themselves to the hospital as well as their employers.

A. 68.—There is no system for changing the employment of persons to relieve them from what might be considered injurious, but if it is seen that any particular employment is unsuitable, a change is made, if not very inconvenient.

A. 69.—Our mills are not subject to the provisions of the present Act.

A. 73.—There are no cotton-mills or other mills that are affected by the existing Act in this neighbourhood.

A. 78.—There are no penalties connected with our trade, except what are obtained by common law; and, with the exception of limiting the age at which children are admitted at spinning-mills, it might be as well to let the trade continue as it is.

WILLIAM HACKNEY.

No. 64.

John Crichton.

## ANSWERS of JOHN CRICHTON, Dundee.

A. 1.—Dundee, county of Forfar.

A. 2.—Flax and tow.

A. 3.—In 1832, wholly.

A. 4.—Steam, sixteen-horses power.

A. 5.—Windows hung.

A. 6.—Windows let down.

A. 7.—As the workers find it suitable.

A. 8.—No places of danger where hands are employed.

A. 9.—Water-closets, and convenience for shifting clothes.

A. 11, 12, & 13.—No.

A. 19.—Thirteen hours.

A. 20.—Twenty days.

A. 21.—Two hundred and fifty-four hours.

A. 23.—Twelve hours forty-five minutes.

A. 25.—Had none.

A. 26.—Yes, by a reduction of wages.

A. 27.—No.

A. 28.—No alteration.

A. 29.—Quantity.

A. 31 & 32.—Never tried.

A. 35.—Work by day only.

A. 37.—Less profit, both as regards masters and workers.

A. 38.—Requires no regulation.

A. 41.—None.

A. 50.

- A. 50.—Gas.  
 A. 51.—No night-work.  
 A. 53.—One half hour.  
 A. 54.—All leave.  
 A. 57.—Dismission.  
 A. 58.—No.  
 A. 65.—Lodge with their parents, or with others about town.  
 A. 66.—No difference of morals, but more expert in their employ.  
 A. 68.—Know of no injurious effects from any process of our work.  
 A. 69.—Do not know what Act.  
 A. 77 & 79.—No.

Forfarshire.

*John Crichton.*

JOHN CRICHTON.

## ANSWERS of ALEXANDER DICK, Lower Dens Mill, Dundee.

No. 65.

*Alexander Dick.*

- A. 1.—Situated in Dundee, parish of Dundee and county of Forfar.  
 A. 2.—Solely flax-tow spinning.  
 A. 3.—The whole of the work was erected in the year 1830.  
 A. 4.—By a steam-engine only of sixteen-horse power.  
 A. 5.—No distinct provision.  
 A. 6.—Entirely on the opening of the windows, which are all hung, except in the attic flat, and they can be as easily opened as if they were hung.  
 A. 7.—The ventilation is regulated by the discretion of any person employed in the mill; in fact, any person employed in the mill is at perfect liberty to open or shut the windows at pleasure.  
 A. 8.—The dangerous parts of the machinery are fenced off where it can be done consistently with its being worked; but now, from the improved state of machinery, and the substitution of belts for wheels and pinions, the danger is very much reduced.  
 A. 9.—There are water-closets in the work. The practice of the workers changing their clothes when they go out of the mill is not followed in flax-spinning mills, except amongst some of the girls, who change their gowns and dress their hair; the work is not considered so dirty as to require their changing their clothes or washing their persons before leaving their work, and the few girls who wish to show their taste by the substitution of a newly-washed gown for a dirtier one do so whilst the work is going on, and they are not found fault with for doing so. The whole work is swept out and the machinery dusted down at certain periods of the day; the windows are cleaned and the walls whitewashed as occasion requires.  
 A. 10.—In some cases children are taken in to work as low as ten or eleven years of age, but this has occurred so very seldom that it need not be noticed; it was only done in very particular cases, to give relief to their parents. I do not like to employ children under twelve years of age. I have never had any workers who have previously been at any other trade except spinning-mills.  
 A. 11.—The nature of the work requires no person under twelve years of age, and I do not like to employ any under that age.  
 A. 12.—I believe any recent alterations in machinery have not affected the employment of hands of any particular age; certainly not in my case. I do not like to employ any young person under twelve years of age.  
 A. 13.—I never employ apprentices, but I frequently take in girls to learn spinning, upon a verbal understanding with their parents that they are to remain at the work for two years, and to be paid as they become expert and useful; but if their parents think they are underpaid, they of course feel themselves at liberty to remove them.  
 A. 14.—I believe that in Scotland the practice of apprenticing from parishes is unknown, at least so far as my knowledge consists.  
 A. 15.—None of the children are regularly visited in the work, either by their parents, natural or legal guardians, because it is quite unnecessary; those of them who have parents or guardians live with them, and any of those who are orphans and have no protector, I generally see that they are lodged with some decent person who will attend to them.  
 A. 16.—No actual superintendence, excepting what is stated in answer to the preceding question.  
 A. 17.—Thirteen hours per day, except on Saturdays; on these days eleven hours and a half only; but previous to the 29th April last thirteen hours and a quarter per day, except on Saturdays, eleven hours and a half.  
 A. 18.—The same hours as for hands above twenty-one years of age, excepting in the preparing-flat, where they are almost all under twenty-one years of age, and these generally get away from a quarter to half an hour earlier.  
 A. 19.—Fourteen hours and a quarter, but that for a very limited period, and was done to make up prospective holidays or lost time.  
 A. 20.—From the 1st January 1832 to 31st December last there were six or seven holidays; the mill was worked all the rest of the time, excepting Sabbaths of course.

(APP.—A. 1.)

N

A. 21.

Forfarshire.

Alexander Dick.

A. 21.—From 1st January 1832 to 31st December last the mill has been worked, as nearly as I can calculate, three thousand nine hundred and eighty-seven hours and three quarters.

A. 22.—Every part of the work is carried on at same time; it cannot be otherwise, except that in the preparing flat the workers are generally allowed to go away from a quarter to half an hour earlier, as before stated.

A. 23.—Twelve hours and nine tenths per day from 1st January 1832 to 31st December last.

A. 24.—This question is answered in A. 18. and 22.; but say fourteen hours and a quarter.

A. 25.—When the mill happens to be stopped for an hour or two, from any derangement about the steam-engine or otherwise, the workers are allowed their full wages, and make up the time at the rate of a quarter of an hour or so per day; and at certain occasions, say the new year and annual fairs, they get two days instead of one. One of the days I pay them for without compensation, the others they make up time for beforehand; but this is, I believe, their unanimous choice.

A. 26.—Any excess beyond the regular working hours is their own choice, as explained in the preceding answer.

A. 27.—I believe I have never done so.

A. 29.—I have never worked my mill beyond the regular hours, except to the trifling extent already stated, which I have explained in answer 25.

A. 30.—My opinion is, that to reduce the working hours, the expence of production would be increased.

A. 31.—The extra working beyond the usual working hours has so very seldom occurred, and when it did occur it was to such a very trifling extent, that any fresh set of hands were quite unnecessary.

A. 32.—Never had any system of relays or change of hands in my work, as they never were required.

A. 33.—Never worked night-work, and of course no arrangement required as to hands.

A. 37.—In my opinion, it would open a door for perpetual discord betwixt master and servant, when they are under the present system in perfect unison. It would prevent the British manufacturer from competing against foreigners in foreign markets; and for other reasons.

A. 38.—I have never ascertained the temperature in my works, but no artificial heat is required, and the workers are all at perfect liberty to regulate the temperature by opening or shutting the windows without the least control.

A. 39.—No artificial heat required; on the contrary, a cold temperature is best suited for the spinning of flax.

A. 40.—I generally employ about sixty hands within the walls of my work.

A. 46.—No process; it is not required. It is all done during the ordinary working hours.

A. 50.—By gas light from the public gas-works.

A. 51.—None, excepting the windows, as before explained.

A. 53.—From nine to half past nine A.M. for breakfast, and from two to half past two P.M. for dinner, for all classes.

A. 54.—All leave the work at meal-times; they all live in the immediate neighbourhood of the work.

A. 55.—They all leave the work as above stated.

A. 56.—They all leave the work to get their meals.

A. 57.—Any offence is punished by levying a fine, varying in amount from one penny to a sixpence, according to the nature of it, which is deducted from their wages. The fine seldom exceeds three-pence; but we generally repay such fines by premiums to the amount levied, if their future conduct at all merits it.

A. 58.—No corporal punishment is allowed by any person whatever.

A. 60 & 61.—If corporal punishment has been inflicted at any time by any of the overseers, I have uniformly discouraged and forbidden it.

A. 63.—The overseers of the respective flats, upon an offence being committed, mark a fine on a slate kept by them respectively; and the manager of the work, after satisfying himself as to the nature of the offence, exacts the whole, or modifies it, as to his judgment seems best.

A. 64.—No complaint against any one to my knowledge connected with my work, except about two years ago, an Irish boy having threatened to strike his overseer with some weapon, the overseer struck him. The boy's parents complained to a police officer, who came to the work and inquired into the case, which when he had done he would have nothing to do in the matter.

A. 65.—My workpeople live with their parents, natural or legal guardians, or otherwise; and, besides, it is imperative on all the younger ones to attend an evening school attached to the mill, and attend one of the established churches twice on Sabbath, where sitting accommodation is provided for them at my expence, and attending the mill school on Sabbath evening. The grown-up hands may do all this, but it is not imperative upon them to do so; but I do every thing in my power to encourage it.

A. 66.

A. 66.—Workers employed in spinning-mills, at least in some departments of it, require to go in when young to become proficient. When they enter to the work when old they seldom become so expert as those who have gone young.

A. 67.—I have no reason to suppose that the health of the workpeople employed has deteriorated since I started my work in 1830; they are all in general quite healthy.

A. 68.—I do not consider any process carried on in my work more injurious to health than another. They have no complaint; they are generally quite healthy.

A. 69.—I am not aware of any act of parliament affecting flax spinning-mills.

A. 77.—I shall be most happy that my workers give any evidence that may be required.

A. 78 & 79.—I have nothing to suggest. I consider that any legislative interference betwixt master and servant is quite uncalled for. I believe there is no complaint amongst the workers generally employed in flax spinning-mills; certainly there is no complaint amongst mine. I have, besides the work in Dundee, to which these answers apply, another flax spinning-mill in Perthshire, propelled by water power and a water-wheel; and I would take the liberty to say, that the provisions of Lord Ashley's Bill would be ruinous to me, as well as to many other mill proprietors similarly situated, and dependent on a water-wheel power.

6th May 1833.

ALEXANDER DICK.

Forfarshire.

Alexander Dick.

ANSWERS of DANIEL DUFF, South Tay Street Spinning-mill, Dundee.

No. 66.

Daniel Duff.

A. 1.—Town of Dundee and county of Forfar.

A. 2.—Flax and tow spinning.

A. 3.—Erected in 1830, and used as a spinning-mill from the first.

A. 4.—Two steam-engines fifteen horse power.

A. 5.—Not any farther than the opening of the windows.

A. 6.—Just on the opening of windows.

A. 7.—Any one is at liberty to put up the window when they wish fresh air.

A. 8.—All the dangerous parts are fenced off.

A. 9.—I have arrangements for supplying them with plenty of fresh water, both for drinking and for washing, and any one is at liberty to change their clothes if they choose.

A. 10.—One boy nine years of age.

A. 11.—The nature of the work does not, but the simple nature of it adapts it for children.

A. 12.—The recent alterations in machinery do not render it necessary to employ a greater proportion of children under twelve years, but these alterations make it much easier for them.

A. 13.—No apprentices in the spinning-mill.

A. 15.—Margaret Stormont and David Douglass are two orphans in my employ.

A. 16.—Margaret Stormont under the care of her aunt, and David Douglass under the care of his brother-in-law.

A. 17.—Twelve hours and a half per day.

A. 18.—All my hands work the same number of hours, say twelve hours and a half per day.

A. 19.—Fourteen hours and a half is the greatest number, but only kept on a day or two for that time.

A. 20.—Three hundred and seven days.

A. 21.—Three thousand eight hundred and thirty-seven hours and a half.

A. 22.—All carried on at one time.

A. 23.—The average of Monday, Tuesday, Wednesday, and Thursday, twelve hours and a half; Friday, thirteen hours and a half; and Saturday, eleven hours and a half.

A. 24.—Fourteen hours and a half the greatest number.

A. 25.—Chiefly in the month of December last, caused by breakage of machinery and repairing ponds.

A. 26.—It could be avoided, but the hands generally rather choose to make up the time than lose their wages.

A. 27.—No.

A. 29.—We do not practise night-work.

A. 37.—The probable effects of a reduction of the working hours will be to reduce the quantity and the wages, for you cannot give so much for spinning four spindles as for spinning five spindles.

A. 38.—Temperature has little to do in flax or tow spinning.

A. 50.—Lighted with gas.

A. 53.—Half an hour.

A. 54.—All are at liberty to leave the work at meals excepting the fireman.

A. 55.—Some do not go, merely for their own convenience, or rather from laziness.

A. 56.—It would have the effect of making them clean themselves at each meal, for they generally clean themselves before they go out.

A. 57.—We make examples now and then, by dismissing some from the work when they disobey.

A. 58.—I never allowed corporal punishment.

(APP.—A. 1.)

N 2

A. 63.

Forfarshire.

Daniel Duff.

A. 63.—No specific instructions have been given.

A. 64.—There is one case in which one of the foremen struck a boy, and the boy's friends instituted legal proceedings against him.

A. 65.—No, they do not live in the houses of their employers.

A. 66.—Those who are taken in young are a great deal more expert at their work and do it much better than those who are taken in at a later period.

A. 67.—It is only about two years and a half since I commenced, and during which time have not observed any sensible alteration on their health.

A. 68.—I do not require to do that.

A. 69.—No.

A. 79.—Nothing further than the Bill be eleven hours each day for five days of the week, and ten hours for Saturday, and all mills both in town and country be brought to that standard. I would do away with the penalties in Ashley's Bill, and in their stead make all mill masters form themselves into a society to support those who may be rendered, by accident at their works, unable to support themselves.

DANIEL DUFF.

No. 67.

David Edward.

## ANSWERS of DAVID EDWARD, Logie Mill, Dundee.

A. 1.—Dundee, county of Forfar.

A. 2.—Flax and tow spinning.

A. 3.—Work erected at once, and was first employed in April 1829.

A. 4.—Steam, thirty horse power.

A. 5.—The upper part of the windows are made to slip up and down.

A. 6.—On the opening of the windows, as above.

A. 7.—Occasionally by the overlooker, generally by the hands.

A. 8.—The parts deemed such are so.

A. 9.—There is in each room a water-closet, and hot water can be had in each room by the opening of a water-cock, for the purpose of washing. The hands (those who require) generally change their clothes on entering, and many of them wash themselves on leaving the work. There are no compulsory arrangements for insuring the personal cleanliness of those employed, and I do not consider that there is a necessity for any. These arrangements were introduced when the work was sent a going.

A. 10.—Ten is the lowest at which any are presently employed—know of none having been employed otherwise.

A. 11.—Not absolutely.

A. 12 &amp; 13.—Have had no means of ascertaining. No.

A. 15.—None lodged and maintained, and the accompanying list will show the number of orphans, if any.

A. 17.—Thirteen hours for five days in the week, and eleven hours and a half on Saturday, making seventy-six hours and a half weekly.

A. 19.—Thirteen hours and a half.

A. 20.—Three hundred and four.

A. 21.—Twenty-three thousand two hundred and forty-two, nearly.

A. 22.—All carried on at same time.

A. 23.—Twelve hours and twenty-five minutes.

A. 24.—Thirteen hours and a half.

A. 25.—Fair and new year times.

A. 26 &amp; 27.—Avoidable, mechanics excepted.

A. 29.—Necessity may induce him.

A. 30.—Have had no limitation.

A. 31.—Not required.

A. 32.—No, not found necessary.

A. 33.—No night-work.

A. 37.—Would increase the cost of production in the first place, and might in the long run have a tendency of driving the trade out of the country.

A. 38.—I should think less than the temperature in the shade in summer, and considerably higher in winter, and there is no necessity for a lower temperature than the above.

A. 39.—In no degree above the natural temperature.

A. 40.—No artificial heat.

A. 41.—Not once.

A. 50.—With gas.

A. 51.—Same as at day.

A. 53.—From nine to half past nine for breakfast, and from two to half past two for dinner.

A. 54.—All; at least they have it in their option, unless one person in each of the spinning and preparing rooms whose duty it is to oil part of the machinery, &amp;c. when the engine is stopped, and these have half an hour for each meal, either immediately before or after the time above named.

A. 55:

- A. 55.—Answered in part: have known some remain at times for their own convenience.  
 A. 56.—The meals are taken out of the factory.  
 A. 57.—Threaten dismissal.  
 A. 58.—No.  
 A. 64.—One case of an overlooker.  
 A. 65.—No.  
 A. 66.—Have not had sufficient experience in the trade to answer.  
 A. 67.—Have not had ten years observation.  
 A. 68.—No.  
 A. 69.—Not aware of being subject to any act.  
 A. 77.—Have no reasons for believing any thing of the kind.  
 A. 78.—Cannot, because unacquainted with the present law; but would beg to suggest, if an act is found necessary, that three quarters of an hour at least be allowed for each of both meals, that no one should be employed under twelve years of age, and that informers should receive nothing for informing.

DAVID EDWARD.

9th May, 1833.

Forfarshire.

David Edward.

## ANSWERS of JAMES FORBES, Dundee.

No. 68.

James Forbes.

- A. 1.—Dundee, Forfarshire.  
 A. 2.—Tow preparing, spinning, and reeling.  
 A. 3.—The mill was built in 1831–32, and commenced working 9th July 1832.  
 A. 4.—A steam-engine of sixteen horse power.  
 A. 5.—Hung windows.  
 A. 6.—The opening of windows.  
 A. 7.—By the overlooker in the room.  
 A. 8.—The dangerous parts are fenced off.  
 A. 9.—There is a necessary in each room, the soil-spout of which is daily washed down with water (the cistern for water-closets not being put up yet). The workpeople have no room set apart for washing and shifting their clothes, but they have access to clean water in the court, and there is drinking water at hand in each room.  
 A. 10.—The youngest girl in the work is ten years and five months. Not aware of any of the children having been employed at other trades. There is one boy, besides, ten years of age.  
 A. 11.—No.  
 A. 12.—The improved machinery renders fewer hands necessary.  
 A. 13.—No; every hand is at liberty to leave on a week's notice.  
 A. 17.—Thirteen hours during the first five days of the week, and eleven hours and a half on Saturday, being seventy-six hours and a half per week.  
 A. 18.—The same as above. No distinction in the hours of employment for those of different ages.  
 A. 19.—For three successive Saturdays the work was kept on fifteen hours and a half.  
 A. 20.—The mill has not been a year in operation.  
 A. 22.—All parts of the work are carried on during the same time.  
 A. 25.—The regular hours have never been exceeded except in the case stated in A. 19., which was done at the workpeople's request, who wished an additional holiday after New Year's Day.  
 A. 26.—Avoidable.  
 A. 27.—No.  
 A. 29.—Additional profits to himself, or wages to his labourers.  
 A. 30.—There is no limitation of hours.  
 A. 31.—I know of no objection.  
 A. 32 & 33.—Never had occasion to try.  
 A. 37.—One effect would be to increase the cost of the production of any given quantity of goods.  
 A. 38.—No artificial modifying of temperature is required.  
 A. 50.—By gas; *i. e.* in the mornings and evenings of winter during the ordinary work-hours.  
 A. 53.—From nine till half past nine A. M., and from two till half past two P. M., except one boy in each room who stays to oil the machinery, and who gets his half hour for meals either before or after the others.  
 A. 54.—All of them may leave, but several of them remain at the place.  
 A. 55.—For the workpeople's own convenience.  
 A. 56.—It would make no difference.  
 A. 57.—A verbal reprimand and threat of dismissal.  
 A. 58.—Never.  
 A. 60 & 61.—I have heard of one case only, in which an overseer, who had only been two days in my employ, struck a boy; the manager reprimanded the overseer, and forbade him to do so in future.

(APP. A.—1.)

N 3

A. 63.

Forfarshire.

*James Forbes.*

A. 63.—No written instructions. The manager and overlookers know it to be a standing regulation that no corporal punishment be inflicted.

A. 64.—Never.

A. 65.—The workpeople find their own lodgings.

A. 66.—As to general character, I am not aware of any difference. Those who begin young, say from twelve to fifteen, are more expert at their work than those who begin older; and the former are likewise more attached to the mill they learn at, and consequently steadier in general.

A. 67.—The factory has not been in existence one year.

A. 68.—There are no particular changes made. If any individual complains, or is found inadequate for one department, he or she generally gets the first offer of any other place more suitable, if fit for it.

A. 69.—No.

A. 77.—I have no reason to believe that they are so. An individual (William Urquhart) who gave evidence before the Committee of Parliament on the factory question is one of my overlookers.

A. 78.—I do not think any legislative provision is required with respect to flax-mills in this neighbourhood.

JAMES FORBES.

No. 69.

*John Gray.*

## ANSWERS of JOHN GRAY, Dundee.

A. 1.—One mill in Dundee and two in the parish of Monyfieth, six miles from Dundee, but so near each other as to be considered one.

A. 2.—Spinning flax and tow of flax.

A. 3.—I do not know the date of erection, but one of the mills was erected more than forty years ago.

A. 4.—In Dundee, steam alone, nine horse power; at Monyfieth it is chiefly water, but occasionally assisted by steam in summer by a six horse power—the water equal to about twelve or fifteen horse power.

A. 5.—No specific provision for ventilation.

A. 6.—The windows all open for ventilation.

A. 7.—Chiefly by the overseer.

A. 8.—Yes, they are fenced off.

A. 9.—Most of the young women change part of their clothes when they enter or leave the mills; the men and boys do not.

A. 10.—None under ten years of age. None have been at any other trade.

A. 11.—It is convenient to employ a few children under twelve years of age, but not absolutely necessary to do so.

A. 12.—I am not aware that they have.

A. 13.—I do not employ apprentices.

A. 17.—The regulated hours are twelve and a half working hours each day.

A. 18.—There is no difference in the hours.

A. 19.—Thirteen hours and a half.

A. 22.—No different parts are carried on by themselves except occasionally the pre for an hour or so at a time.

A. 23.—Intended twelve hours and a half.

A. 24.—Thirteen hours and a half.

A. 25.—When the people wish to halt a little sooner than usual for any purpose they work a little longer than usual on the preceding days.

A. 26.—There is certainly no absolute necessity for exceeding the usual hours, except to induce the people to attend regularly at the specified time of beginning to work.

A. 27.—Never more, but sometimes less.

A. 28.—The cost of producing a given quantity is certainly enhanced by reducing the hours of working.

A. 29.—If a manufacturer works his people more hours each day than his neighbour does without paying them more wages than in proportion, he can thereby produce his manufactured article cheaper.

A. 30.—If the hours of work are limited to a shorter period, the cost of production would be greater.

A. 31.—None that I know.

A. 32.—Never tried by me.

A. 33.—Never.

A. 34.—I do not consider it my interest to work more than one set of hands.

A. 37.—I am of opinion that if the hours were shortened the cost of production would be greater.

A. 50.—By oil lamps at Monyfieth, by gas in Dundee.

A. 53.—Half an hour for breakfast and the same for dinner.

A. 54.—The whole leave at meal-times.

A. 55.—If otherwise, for the convenience of the workpeople themselves.

A. 56.

A. 56.—Do not know.

A. 57.—None other than dismissal.

A. 58.—Never.

A. 65.—In the country they all live in houses belonging to me, and all must be kept clean, or otherwise removed.

A. 66.—I have little experience as to this, but I think they are better when learned young.

A. 67.—The mills have been only three years in my possession, but I think the condition of the working people is improved; the mills are more airy and kept cleaner. None of my people have died, and only one slight accident happened to one of them from entire carelessness.

A. 68.—None.

A. 69.—Subject to no particular act.

A. 73.—No cotton or woollen mills in this neighbourhood.

A. 77.—No reason whatever.

A. 78.—No penalties necessary.

A. 79.—None, except that no interference of the legislature seems necessary in this neighbourhood, except perhaps to reduce the hours of labour in all flax and tow mills from twelve and a half to eleven hours per day.

JOHN GRAY.

Forfarshire.

*John Gray.*

ANSWERS of WILLIAM GRAY, Proprietor of Anchor Spinning-mill, Dundee.

No. 70.

*William Gray.*

A. 1.—Parish of Dundee.

A. 2.—Flax-spinning.

A. 3.—Part built in 1821, and part in 1824.

A. 4.—Steam-power.

A. 5 & 6.—None, but by opening windows.

A. 7.—At discretion of the persons employed.

A. 8.—All that can possibly be fenced off are so where considered dangerous.

A. 9.—None but boys, for holding any clothes they change in going into and leaving the mill.

A. 10.—Ten years of age.

A. 11.—No occupation where children below twelve years are preferable to those above twelve years.

A. 12 & 13.—No.

A. 15 & 16.—No children lodged and maintained by me.

A. 17 & 18.—Twelve and three quarters working hours.

A. 19.—Fifteen hours and a half, making up time at request of hands for a holiday or fair-day.

A. 20 & 21.—All the year, except a few days repairing engine.

A. 22.—None.

A. 23.—Twelve hours and three quarters.

A. 24.—Fifteen hours and a half before a holiday.

A. 25.—Before or after a holiday or fair.

A. 26.—It is at request of the hands.

A. 27.—At one time the hours of work was thirteen hours and three quarters per day.

A. 28.—Enhanced a little no doubt, but never calculated how much.

A. 29.—Know of no such a case.

A. 30.—No knowledge of, not having considered the case.

A. 31.—Do not know, never having had relays or night-workers.

A. 32.—Never tried by me.

A. 33.—Never.

A. 37.—To produce less yarn, therefore expence of production increased.

A. 38.—The lower the temperature the better, consistent with the comfort of the hands.

A. 49.—No such process.

A. 50.—By gas for the few hours required in winter.

A. 51.—None but windows.

A. 52.—Have none employed all night.

A. 53.—Half an hour for breakfast and half an hour for dinner.

A. 54, 55, & 56.—All leave work, as the engine stands half an hour.

A. 57, 58, 59, 60, & 61.—Left to the manager and overseers, but no authority or instructions given for corporal punishment; if absent twice, a deduction for such absent time is made at end of the week.

A. 62.—Never have had any complaints of punishments, and not aware of any.

A. 65.—All live at their own homes.

A. 66.—Found best to begin at twelve to fourteen years of age.

A. 67.—Not aware of any difference.

A. 68.—None.

WILLIAM GRAY.

Forfarshire.

ANSWERS of JOHN HALLEY, Flax-spinner, Dundee.

No. 71.

*John Halley.*

- A. 1.—Parish of Dundee, county of Forfar.
- A. 2.—Spinning of flax and hemp tows.
- A. 3.—Erected in 1828.
- A. 4.—Driven by steam entirely; engine twenty horse power.
- A. 5, 6, & 7.—No distinct provision made for ventilation but by the windows, which are under the control of the workpeople; the work requires no artificial heat, they may therefore keep the temperature as low as on the outside.
- A. 8.—All parts considered dangerous are fenced off.
- A. 9.—No particular arrangements except water-closets; but the greater number keep a shift of clothing for the work, and as there is necessarily plenty of water about the work they may and do keep themselves clean.
- A. 10.—Children of ten years of age may be employed, but the nature of the work does not require any below twelve years; if taken in younger, it is from motives of charity, or from having older members of the same family along with them at the work.
- A. 12.—The recent alterations in machinery have not affected the employment of the younger children.
- A. 13 & 14.—Employ no apprentices.
- A. 15 & 16.—Do not lodge and maintain any of the children.
- A. 17 & 18.—Employed twelve hours and forty-two minutes for five days, and eleven hours and a half on Saturdays.
- A. 19.—Thirteen hours and a quarter.
- A. 20.—Three hundred and seven.
- A. 21.—Three thousand eight hundred and sixty-two.
- A. 22.—All parts of the work go together.
- A. 23 & 24.—Twelve hours and a half.
- A. 25.—Accidental stoppage of the moving power, or continuing to absent themselves after a holiday, when they prefer making up a day to the loss of wages; about two days only have been made up during the last year by extra hours.
- A. 26.—All irregularity in time is to be avoided as far as possible, as it is accompanied with loss to the employer.
- A. 27 & 28.—Have made no alteration since starting.
- A. 29.—Does not seem to apply to the flax-spinning trade, in which no night-work is done.
- A. 30.—Having made no alterations, cannot say.
- A. 31, 32, 33, 34, 35, & 36.—No extra hours are required with me.
- A. 37.—I am of opinion the shortening the hours of labour would materially increase the cost of that labour, the money for wages forming a small proportion of the general expence.
- A. 38, 39, & 40.—No artificial means used to alter the temperature, the nature of the work not requiring it.
- A. 41, 42, 43, 44, & 45.—No night-work.
- A. 46, 47, 48, & 49.—None of the branches of flax-spinning indispensably continuous for a certain number of hours.
- A. 50.—Lighted by gas when necessary.
- A. 51.—Same provision for ventilation by night as by day.
- A. 52.—Cannot state the effects of night-work on the habits of the persons employed in it, never having practised it.
- A. 53.—From nine to half past nine in the morning for breakfast, and from two to half past two, afternoon, for dinner.
- A. 54, 55, & 56.—All the workpeople are at perfect liberty to leave the work at the above times for their meals (except the fireman); if they do not it is for their own convenience.
- A. 57.—No coercive means taken; refractory hands must be dismissed.
- A. 58, 59, 60, & 61.—Corporal punishments altogether disallowed.
- A. 62.—Having had no complaints about any punishments inflicted, have taken no particular steps to prevent it, otherwise I certainly would have done so.
- A. 63.—No written instructions have been given with respect to the punishment of children, but neither directly or indirectly has any encouragement been given the overlookers to use them harshly.
- A. 64.—No complaints have been made or proceedings taken before a magistrate against me or any of my foremen for any unkindness towards any of the workpeople since starting.
- A. 66.—Spinners employed from an early age generally acquire the greatest degree of skill. Preparers may be taken at any age. Cannot state any difference betwixt the general moral character of those who entered a mill very young or otherwise, but would consider it rather in favour of the former.
- A. 67.—Within the last ten years the health and convenience of the workpeople has been particularly studied in all the erections made for spinning flax in this neighbourhood. Water-closets have been provided, the free admission and circulation of air promoted, and the

the height of the rooms so as to let the dust go off freely; their condition must therefore be much improved.

A. 68.—It is not necessary to change the employment of sets of hands in this branch of trade.

A. 69.—No.

A. 79.—I consider all legislative enactments between employer and employed very impolitic, and will prove vexatious and detrimental to all parties.

JOHN HALLEY.

Forfarshire.

John Halley.

ANSWERS of J. B. HELDRUM of Chapelshade Mills, Dundee.

No. 72.

J. B. Heldrum.

A. 1.—Dundee.

A. 2.—Flax-spinning.

A. 3.—They have been erected at different times, partly in 1820 and partly in 1825.

A. 4.—Steam-power.

A. 6.—Opening of windows.

A. 7.—By the overlooker.

A. 8.—They are all fenced as far as possible.

A. 9.—Arrangements are made to enable them to change their clothes at commencing and stopping work, and places are assigned for holding their clothes.

A. 10.—Ten years, and they have not generally been previously employed.

A. 11.—It does not.

A. 12.—They have not.

A. 13.—No.

A. 15.—Very few. They reside with their parents or relatives.

A. 17 & 18.—Twelve hours and a half.

A. 19.—Thirteen hours and a half.

A. 20.—Three hundred and seven days.

A. 21.—Three thousand eight hundred and sixty-two hours.

A. 23.—Twelve hours and a half.

A. 24.—Thirteen hours and a half.

A. 25.—Making up time the days after new year and fair.

A. 26.—This excess avoidable.

A. 32.—No relays have been tried.

A. 37.—Would require more machinery, and accordingly more capital.

A. 38.—A few degrees above the atmosphere.

A. 39.—Atmospheric.

A. 41.—Have not been worked at night.

A. 50.—By gas-light.

A. 51.—Opening windows in the evenings.

A. 52.—No night-work.

A. 53.—One hour per diem.

A. 54.—The majority leave the works at meal-times.

A. 55.—For the convenience of the people.

A. 57.—Dismissal.

A. 58.—They are not.

A. 60.—They have been inflicted on rare occasions, but are not sanctioned.

A. 62.—Yes.

A. 63.—Yes; dismiss, but do not strike.

A. 65.—In one house a few reside, which is whitewashed occasionally.

A. 67.—No apparent alteration.

A. 68.—No.

A. 69.—It is not subject.

7th May 1833.

J. B. HELDRUM.

ANSWERS of PETER HINMOND, Dundee.

No. 73.

Peter Hinmond.

A. 1.—Town and parish of Dundee, county of Forfar.

A. 2.—Spinning flax-tow.

A. 3.—One mill was erected in 1822, and the other in 1831; and both have been employed since these dates as at present.

A. 4.—A steam-engine of ten horse power in the oldest mill, and one of forty horse in the new.

A. 5.—No specific provision for ventilation.

A. 6.—No ventilation is required in the process of spinning flax-tow, but the mills are ventilated by opening windows and by the operation of the machinery.

A. 7.—The opening and shutting of the windows is controlled at the discretion of all.

A. 8.—All the dangerous parts of the machinery in both mills are fenced off.

A. 9.—Arrangements have been made in both mills for the convenience of the work-people,

(APP.—A.1.)

O

Forfarshire.

Peter Hammond.

people, and particularly with regard to personal cleanliness, such as water-closets, kept clean by a regular supply of water. Provision has been made for containing a change of clothes, and a constant supply of water is kept for washing or other purposes, there being a pump-well in the court of both mills, and has been so from the commencement of the work.

A. 10.—By the annexed list the lowest age at which children have been employed is eight years and a quarter, but this is on account of those who bring them deceiving the manager by saying they are older than they are, merely to get them taken in, as they are well aware they would not be taken so young if it was known, as our intention is to take none under ten years of age.

A. 11.—No; and the reason is, that older hands answer the purpose much better.

A. 12.—From the recent alterations in machinery fewer workpeople are required at all the processes, and particularly in reference to children under twelve years of age. Indeed it would be a saving to the mill-spinner to have none under that age in his employ; but masters are often compelled to take them in, otherwise they would lose the services of their parents, who in many cases will not engage, unless their children also are employed.

A. 13.—No.

A. 15.—I lodge and maintain none, and their guardians visit them at pleasure.

A. 17.—Thirteen hours per day for five days, and eleven hours on Saturday.

A. 18.—There is no difference of time for those under twenty-one years of age.

A. 19.—Fourteen hours and a quarter on an occasion of making up time for a day of recreation.

A. 20.—Three hundred and seven days and a half.

A. 21.—About three thousand nine hundred and ninety-seven hours.

A. 22.—All the processes are carried on at the same time.

A. 23.—Twelve hours and fifty-three minutes.

A. 24.—Fourteen hours and a quarter.

A. 25.—About a week in August and about a week in December, making up time for a day after a fair held in August and for the day after New Year's Day; the fair and New Year's Day being allowed them for recreation gratis, they choose to make up time for the day after on both occasions, and thus have two days to themselves at the same time.

A. 26.—This is entirely in the option of the hands, it being solely for their accommodation that time is made up.

A. 27.—From 1822 to 1826 the usual time of working was about fourteen hours.

A. 28.—Yes, as there is less work done and the wages is not reduced in proportion.

A. 29.—I do not consider that any intermediate change of hands is at all requisite when the working hours are not beyond the practice in my works, and I have never used working by night, and do not believe that this is practised in any work in this neighbourhood.

A. 30.—The price of production is enhanced, inasmuch as the outlay of capital, and expence of maintaining the works, such as fire, oil, repairs, &c. being the same, there is less yarn spun by one fourteenth part, for want of which the trifling reduction that could be made on the wages would hardly be known.

31 & 32.—Never go extra hours except at the times and for the reasons mentioned in A. 25, and at such times the extra time is so short that it is not worth while to employ a fresh set, and, besides, the miserable pittance they could obtain by it would not support them.

A. 33.—No.

A. 34.—It is quite unnecessary, as one set of hands will do all that I require in the time mentioned as well as two sets.

A. 37.—From the diminished quantity of work done the price of the manufactured article would be much enhanced, as the work done in the short hours would cost nearly the same expence as at present; and this would have the tendency to drive the trade out of this country, as the spinners here would be unable to compete with the foreigner; and as flax-spinning mills are already erecting on the Continent, it would be very difficult to compete with them should the spinning trade here be any more trammelled.

A. 38.—No artificial heat is required in the process of manufacturing, but the rooms are kept comfortable.

A. 39.—No heat required at all.

A. 40.—None.

A. 50.—No night-work, as already stated, but in winter when it gets dark in the evening before the regular working hours are completed the works are lighted with gas.

A. 51.—No night-work.

A. 53.—From nine to half past nine A.M. for breakfast, and from two to half past two P.M. for dinner, for all the servants employed at the works.

A. 54.—They may all leave if they choose, except the man in charge of the engines and the cleaners and oilers.

A. 55.—If they do remain it is solely for their own convenience, and they are allowed to adopt either way they think proper, except those mentioned in A. 54.

A. 56.—Any alteration would make no difference to me as the time allowed for meals is wholly at their own disposal.

A. 57.—They are threatened with dismissal.

A. 58.—No.

A. 60, 61, & 62.—It is my express injunctions to the manager and overseers that no corporal punishments be at any time inflicted on the servants, whether old or young, and I have found my instructions in this respect always adhered to, with one exception which happened lately, one of my overlookers having slightly struck one of the hands, which infringement was followed up by the overseer's instant warning of dismissal being given, one week's warning being necessary, according to the regulations of the work.

A. 63.—My instructions are that no punishment whatever be inflicted on children.

A. 64.—On one occasion some time ago my manager found it necessary to turn a man from the work for misconduct, and it was alleged by the man that he had used violence in so doing, and for which a complaint was lodged before the sheriff court, where the matter underwent strict investigation, and it was decided that the manager had done nothing amiss.

A. 65.—All live in their own houses.

A. 66.—We find those who go into the works about eleven or twelve years of age become the most skilful and efficient hands. Those who are taken in at a more advanced age do not obtain the same degree of proficiency. I could scarcely give an example, as none of my servants are engaged for longer time than one week, and they are frequently shifting from one mill to another as suits their convenience.

A. 67.—It is my decided opinion that the health of the factory people has been much improved within the last ten years, owing to the improvements in machinery and the great height of the ceiling in the different flats; as well as the great attention to cleanliness which is now paid.

A. 68.—None of the processes carried on in my works have injurious effects.

A. 79.—I am decidedly of opinion that any legislative enactment relative to mill-spinning would be highly injurious and quite unnecessary, for the workpeople are only engaged for one week, and if they do not like the employment they can then leave it. I may here remark, that I keep a school within the works at my own expence for the instruction and moral improvement of the younger branches of the servants; a teacher and assistant are paid by me, as well as books for the use of those who attend; the school is open for this purpose four evenings every week and also on Sunday evening.

PETER HINMOND.

Forfarshire.

Peter Humond.

#### ANSWERS of WILLIAM JOHNSTON, Dundee.

No. 74.

W. Johnston.

A. 1.—Dundee, county of Forfar.

A. 2.—Flax and tow spinning.

A. 3.—The whole work erected in the year 1832, and the machinery first used in the month of September same year.

A. 4.—Steam-engine of twenty horse power.

A. 5.—Hung windows.

A. 6.—Opening of windows and action of machinery.

A. 7.—By the overlooker and the workers for the general comfort.

A. 8.—All the dangerous parts are fenced off.

A. 9.—Water-closets and washing-basins abundantly supplied with clean spring-water pumped up regularly by the engine, also clothes presses for holding a change of clothes on the original plan, and executed as soon as the mechanics could get it done.

A. 10.—Ten or eleven years; there is one only eight years old, who has been employed at the earnest request of her mother, to keep her off the street; her employment is to carry bobbins in the spinning-room.

A. 11.—No.

A. 15.—No orphan under eighteen years of age is employed by me.

A. 17.—Twelve hours and a half for five days of the week, and eleven hours and a half on Saturday.

A. 18.—Twelve hours and a half; it would be inconvenient to make any difference, the one party's work depending upon the other.

A. 19.—Fifteen hours and a half for one day.

A. 20.—Has not been carried on for a complete year.

A. 22.—Before all the machines were set a-going part of the roving or preparing has gone from one to three hours extra, not exceeding sixteen nights in all, and not likely to occur again (eleven hours of the above time to make up for a play-day at the special request of the workers).

A. 23.—For seven months from twelve hours and a half to thirteen hours.

A. 24.—A few of the children, only for one day, fifteen hours and a half. (See A. 22.)

A. 25.—From seven o'clock to nine or ten o'clock P.M., on account of the machine-makers not keeping their time.

A. 26.—It is avoidable, but by avoiding it altogether more loss than benefit might be occasioned to all parties.

A. 29.—Have not been induced to do so, and can hardly say what might cause a continuation of work. Perhaps very large profits might have the effect, on the same principle that smuggling is carried on.

A. 30.—Not long enough in the trade to be able to answer.

(APP.—A. 1.)

O 2

A. 31.

Forfarshire.

W. Johnston.

A. 31.—It would be attended with great trouble and expence, and I think adults would be preferred.

A. 32.—No relays have been tried with me, and I have not thought of doing so. I do not think it would be either pleasant or profitable.

A. 34.—I do not conceive it to be my interest to work more than one set of hands.

A. 37.—A reduction of the working hours would diminish the quantity of yarns, and of course increase the cost of production.

A. 38.—The temperature varies with the season, but I think never under 55° or above 75°; the action of the machinery keeps the air in constant motion.

A. 39.—No heat required.

A. 40.—From ninety to one hundred.

A. 47.—No maximum of time.

A. 48.—All ages from ten or eleven years to fifty, both males and females.

A. 49.—It is not indispensable.

A. 50.—With gas.

A. 51.—The same as during the day.

A. 53.—From nine to half past nine for breakfast, and two to half past two for dinner.

A. 54.—All may leave; some do not.

A. 55.—Some prefer having their meals brought to them for their own convenience.

A. 56.—None are obliged to take their meals in the manufactory.

A. 57.—Threat of dismissal.

A. 58.—No.

A. 62.—Expressly forbidden.

A. 63.—Positive instructions have been given verbally to the foreman or manager not to inflict or allow to be inflicted any corporal punishment.

A. 64.—None.

A. 65.—Never live in the houses of the employers in this town.

A. 66.—From the short time I have been in the trade, I cannot answer this question.

A. 68.—There is no selection made, and I do not think it necessary to make any.

A. 69.—I am not aware of any act applicable to it.

A. 77.—I do not think they are, or that they have any reason to be so.

A. 78.—There should be no penalties and no legislative provisions for regulating the hours of labour; I think they would be very inconvenient, and would be first petitioned against by the workpeople themselves if they had trial of their operation.

A. 79.—I would further observe, that the condition of the workpeople employed at spinning-mills in Scotland is much improved within these few years past in morals and otherwise; the construction of the buildings recently erected is also much improved, and these improvements have been progressive, and are still going on. I would therefore consider it impolitic to make laws for their regulation at present.

6th May 1833.

WILLIAM JOHNSTON.

No. 75.

James Low.

## ANSWERS of JAMES LOW, Dundee.

A. 1.—Dundee in the county of Forfar.

A. 2.—Spinning flax and tow into yarn.

A. 3.—Erected and commenced spinning in 1829.

A. 4.—Steam is the only power employed.

A. 5.—The mill is ventilated by the windows being placed directly opposite each other, the tops of which are lowered at all times when the weather will permit.

A. 7.—By the manager, overseer, or workpeople.

A. 8.—Yes, the whole.

A. 9.—A well of spring-water at the mill, to which all have access.

A. 10.—Only one at nine years.

A. 11.—No.

A. 13.—No.

A. 15.—Neither lodge nor maintain any.

A. 17.—In summer twelve hours and fifty-five minutes, in winter twelve hours and fifty minutes, and these hours are common to all the hands at the work.

A. 19.—Thirteen hours and a half.

A. 20.—Three hundred and four days.

A. 21.—Three thousand nine hundred and twenty-seven hours.

A. 22.—No difference of time.

A. 23.—Twelve hours fifty-five minutes.

A. 25.—Making up time for stoppages occasioned by repairing the engine or great machinery, or for holidays.

A. 26.—Avoidable.

A. 29.—Have no experience of this.

A. 31.—No particular objections.

A. 32.—Never tried it.

A. 33.—No.

A. 37.—Less profit.

A. 38.

- A. 38.—No particular temperature required.  
 A. 50.—By gas.  
 A. 51.—Same as through the day.  
 A. 53.—Half an hour from nine to ten for breakfast, and half an hour from two to three for dinner; all classes the same.  
 A. 54.—All if they choose, except the fireman.  
 A. 57.—Admonition and dismissal.  
 A. 58.—Not by my orders.  
 A. 63.—None.  
 A. 64.—No.  
 A. 65.—Don't live with the employer.  
 A. 66.—The difference is considerable.  
 A. 68.—No process particularly injurious.  
 A. 69.—No Act in existence.  
 9th May 1833.

Forfarshire.

James Low.

JAMES LOW.

## ANSWERS of ALEXANDER MILNE, Dundee.

No. 76.

Alexander Milne.

- A. 1.—Dundee, county of Forfar.  
 A. 2.—Spinning flax and hemp.  
 A. 3.—Built in the year 1821, and a new gable and vent in the year 1831.  
 A. 4.—Steam-engine sixteen horse power.  
 A. 5.—Ventilated by scews on the north side.  
 A. 6.—The windows are opened when required.  
 A. 7.—At the discretion of all or any of the persons employed.  
 A. 8.—Such as have been considered very dangerous.  
 A. 9.—No arrangements particularly for this purpose.  
 A. 10.—The lowest age ten years, unless a guardian in attendance; not employed at any other trade.  
 A. 11.—Does not require children under twelve years of age.  
 A. 12.—Cannot say, having no recent alterations in my machinery.  
 A. 13.—No apprentices.  
 A. 15.—None of the children employed by me are orphans.  
 A. 17.—Twelve and a half hours each day.  
 A. 18.—Twelve and a half hours.  
 A. 19.—Not keeping the memorandums of the time for a year, cannot say.  
 A. 22.—All are carried on at the same time.  
 A. 25.—When proposals were made to gratify their own curiosity.  
 A. 26.—They are avoidable.  
 A. 27.—Some years ago.  
 A. 28.—No, I do not find it enhanced.  
 A. 29.—No inducement to have his work protracted in either of the cases.  
 A. 30.—I do not find any increase of cost.  
 A. 31.—I do not consider extra hours advisable.  
 A. 32.—Never having a change when extra hours cannot say.  
 A. 36.—I have no night-work.  
 A. 37.—A reduction of the wages in proportion to the hours taken off.  
 A. 40.—One attending the steam-engine.  
 A. 53.—Half an hour each for breakfast and dinner.  
 A. 54.—The whole but four.  
 A. 55.—For oiling the machinery and taking charge of the work.  
 A. 56.—Their meals are taken out of the mill.  
 A. 57.—Nothing that I know of particularly.  
 A. 58.—No corporal punishments.  
 A. 63.—I never gave any instructions for punishment.  
 A. 64.—Never any proceedings against any in the establishment.  
 A. 65.—The workpeople live in houses of their own.  
 A. 66.—Those that are employed from infancy are the most skilful; Janet Chisholm, Ann M'Reay, Jean Henderson, Ann Henderson, Agnes M'Reay, Mary Logan, Betty Hood, &c.  
 A. 67.—Not sensible of any deterioration.  
 A. 68.—The persons are employed as their strength and abilities best befit.  
 A. 77.—No, they are not afraid.

ALEXANDER MILNE.

## ANSWERS of JOHN and WILLIAM MORTON, Dundee.

No. 77.

J. & W. Morton.

- A. 1.—Dundee, county of Forfar.  
 A. 2.—Spinning flax and tow into yarns.  
 A. 3.—Erected for the purpose of spinning in 1819.  
 A. 4.—Steam alone.  
 (APP.—A. 1.)

O 3

A. 5

Forfarshire.

J. & W. Morton.

- A. 5 & 6.—The rooms are ventilated by pulling down the windows at the top.
- A. 7.—The ventilation is under the control of the foreman, but the workers in the several rooms adjust it according to their own convenience.
- A. 8.—All the dangerous parts of the machinery are fenced.
- A. 9.—There is no place appropriated for the changing of clothes; when it is done, the outer clothes being only changed, it is done in the common rooms.
- A. 10.—None under eleven years of age at present.
- A. 11.—The nature of the work does not require children under twelve years of age.
- A. 12.—No alteration in flax and tow machinery have taken place to require any particular age or size of workers.
- A. 13.—None.
- A. 15.—No orphans employed; the relations of the workers have access to them at all times.
- A. 16.—All the workers are under the superintendence of their respective foremen.
- A. 17.—All ages continue in the mill the same length of time, viz. twelve hours and forty minutes a day, or seventy-six hours a week.
- A. 19.—Fourteen hours.
- A. 20.—Three hundred and seven days.
- A. 21.—Three thousand nine hundred and eight hours.
- A. 22.—All parts of the works go on at the same time.
- A. 23.—Twelve hours and .647 of an hour.
- A. 24.—Fourteen hours.
- A. 25.—To make up for time lost by casualties befalling the machinery and for time spent by the workers in extra holidays; chiefly the latter.
- A. 26.—It may be avoided by denying the workers the extra holidays they take, or by not paying them wages for these days.
- A. 27.—No.
- A. 31.—Never employed relays or fresh sets of workers.
- A. 38.—The process of manufacture requiring no specific temperature, it is regulated by the comfort of the workers.
- A. 40.—Fifty.
- A. 41.—No night-work.
- A. 50.—Lighted by gas in winter.
- A. 53.—One half hour for breakfast and the same for dinner.
- A. 54.—All.
- A. 57.—Every moral means that can be thought of to produce the effect.
- A. 58.—No corporal punishments.
- A. 64.—No complaints have been made.
- A. 65.—None of our workpeople under our superintendence unless when at their work.
- A. 66.—Those who have been brought up to the business from early life are the most expert.
- A. 67.—We cannot state any difference.
- A. 68.—We have had no occasion to make any changes of the nature alluded to.
- A. 69.—It is not subject to the provisions of the present Act.

JOHN and WILLIAM MORTON.

No. 78.

J. Ogilvy.

## ANSWERS of J. OGILVY, Parish of Inverkeillor.

- A. 1.—Lawton Mill and Millfield Mill are situated in the parish of Inverkeillor, county of Forfar.
- A. 2.—Spinning of flax and tow.
- A. 3.—Lawton Mill was erected in 1784, and converted into a spinning-mill in 1813. Millfield Mill was built in 1825.
- A. 4.—At Lawton Mill both water and steam are employed; at Millfield Mill water only. The supply is very irregular in the summer season, and the mill is occasionally stopped for want of water by frost and excess of water in the winter to the extent of at least one eighth part of the year. The extent of the power of Lawton Mill is six-horse power, and Millfield Mill ten-horse power.
- A. 5.—None.
- A. 6.—The provision for ventilation depends on the opening of windows and doors.
- A. 7.—The ventilation is partly regulated by the foreman, but the workers are allowed to open the windows nearest them when they please.
- A. 8.—All the dangerous parts of the machinery are carefully fenced off.
- A. 9.—I do not require any arrangement for the washing or changing of the clothes of the workpeople in the mills, as they nearly all go home to their own parents houses, who take particular care of their cleanliness.
- A. 10.—I take in children at nine years of age, although I rather prefer them a year or two older; they are generally sent to school for two or three years before they begin to work.
- A. 11.—No.

A. 13.

A. 13.—Yes.

A. 14.—All the apprentices taken into the works live with their parents in the neighbourhood.

A. 15.—None of the children I lodge are orphans; they generally see their parents every two weeks.

A. 16.—Yes; the overseer and cook superintend them.

A. 17.—About twelve hours and a half is the average each day, or thirteen hours for five days, and ten hours and a half for Saturday.

A. 18.—The same number as above, as the work is all carried on together.

A. 19.—Thirteen and a half hours.

A. 20.—Lawton Mill was carried on three hundred and four days, and Millfield Mill was carried on two hundred and seventy-five days.

A. 21.—Lawton Mill was carried on three thousand eight hundred and nine hours, and Millfield Mill was carried on three thousand four hundred and thirty-seven hours.

A. 22.—The different parts of the work are carried on together.

A. 23.—The average of the hours of work of each day of the week, including holidays, is at Lawton Mill twelve hours and one fifth, at Millfield Mill eleven hours and one sixtieth.

A. 24.—Thirteen hours and a half.

A. 25.—Before a market-day, as the workers are allowed only three fourths of that day.

A. 26.—This excess cannot be avoided in my case, as I pay for all holidays.

A. 27.—No.

A. 31.—Country mills having to board and lodge almost all their hands it would be inconvenient and expensive, and in some cases impossible, as hands could not be got at such wages as could be afforded under these circumstances.

A. 37.—My opinion as to the effects of a reduction of the working hours is, that there will be less work performed, and consequently a reduction of wages, and that the time will not be beneficially employed by the workers.

A. 38.—The spinning of flax and tow requires no particular temperature.

A. 41.—My works have not been worked by night during the last year.

A. 50.—With oil during the winter.

A. 51.—Same provision as stated in A. 6.

A. 53.—The time allowed for meals is half an hour.

A. 54.—All the hands leave the works at meal-times.

A. 57.—They are fined for any flagrant breach of obedience.

A. 62.—I have always forbidden corporal punishments.

A. 63.—I have given instructions to the foreman to threaten and fine the children for misconduct; if that would not do, to part with them altogether.

A. 64.—None.

A. 65.—Part of the workpeople live in a house under my charge, and the foreman has a control over them with regard to keeping regular hours, and they have accommodation for cleanliness.

A. 66.—I do not consider that there is much difference in skill and general character of those who have been employed for a number of years; and the children who have entered lately, by referring to the list, you will see that the latter can nearly all read and write, while many of those advanced in years cannot write. In this quarter I think people pay more attention to the education of their children now than formerly.

A. 67.—I know no difference in the health of the people of the mills during the last ten years; they have generally been healthy.

A. 68.—If any of the hands are troubled with asthma or shortness of breath, they are generally put to work as free from dust as possible.

A. 73.—I know nothing of the management of the mills in this neighbourhood; I hear of no complaints amongst the workers.

A. 78.—I consider the penalties proposed in the Bill by far too high, and that there should be a scale of penalties for the workers; also I think any legislative provisions for regulating the hours of labour unnecessary; that can be best settled between master and servant.

A. 79.—I would further observe, that mills worked entirely by water (where the supply is irregular) should be allowed at least an hour each day more time than mills worked by steam. If the proposed Bill pass into a law, it will entirely ruin the mills on Lunan water.

JOHN OGILVY.

Forfarshire.

J. Ogilvy.

#### ANSWERS of WALTER JUST, Parish of Kinell.

No. 79.

Walter Just.

A. 1.—Parish of Kinell, county of Forfar.

A. 2.—Spinning flax and tow into yarns.

A. 3.—The principal building was erected in 1807, an engine-house and engine added in 1825. Never employed for any other purpose.

A. 4.—Water and steam. The former irregular, say about five hours per day short for four months in summer, if a dry season, in which case, and when there is any interruption from ice or back-water, the engine is used; power seven horses.

(APP.—A. 1.)

O 4

A. 5.

Forfarshire.

*Walter Just.*

A. 5.—None.

A. 6.—Only ventilated by the windows and doors.

A. 7.—The ventilation is regulated by the overlooker, who is instructed to encourage the free admission of air at all times when not prevented by the state of the weather.

A. 8.—All machinery may be considered more or less dangerous; that which is most so is fenced off. No serious accident ever occurred at this work.

A. 9.—The houses where the workers are boarded and lodged are within a few yards of the mill, to which they have free access at all times, where every accommodation is afforded for their cleanliness and comfort, and has been so from the commencement of the work.

A. 10.—For two years past have not employed any children under nine years of age, but have done so formerly, at the solicitation of their parents. None of them previously employed at other trades.

A. 11.—No.

A. 12.—No alteration has taken place in the machinery that bears on this question.

A. 13.—No apprentices; but there is generally an understanding that those who enter to learn spinning are to remain for three years, when they get board and lodging, and in other cases six months. The other hands are generally engaged six months.

A. 14.—No apprentices or learners from parishes.

A. 15.—Two of them are orphans. Parents or relatives seldom visit the children, but the children have an opportunity of visiting them at least once a week.

A. 16.—An overlooker is appointed for each department of the work.

A. 17.—Thirteen hours and a half for five days of the week, and eleven on Saturday.

A. 18.—No difference.

A. 19.—The number of hours in any one day is never increased, unless at the particular request of the workers to make up lost time for holidays or fairs, so as they may be allowed to go away to their own amusements, which may sometimes be to the extent of half an hour or an hour for two or three days at a time.

A. 20.—Three hundred and six days.

A. 21.—Four thousand hours.

A. 22.—Not carried on at different times.

A. 23.—Thirteen hours and a half each day, except Saturday, eleven. The average of hours for each day worked during the year is thirteen hours and five minutes.

A. 24.—Fourteen and a half.

A. 25.—Only at the request of the workers, as stated in A. 19.

A. 26.—Quite avoidable, unless to make up for lost time, for the reasons stated above.

A. 27.—No.

A. 29.—Not having practised night-work or any extra work, cannot give an opinion.

A. 30.—No limitation of hours has taken place.

A. 31.—Country mills having to lodge and board almost all their hands, it would be inconvenient and expensive, and in some cases almost impossible, as hands could not be got at such wages as could be afforded under these circumstances.

A. 33.—Never employed any hands at night-work.

A. 37.—A reduction of wages equal to the reduction of hours would be difficult to effect, from the increase of machinery at present, and consequent demand for hands; and even could this be effected it would operate against the mill-proprietor, as it would require a greater quantity of machinery to produce the same quantity of yarns, and consequently a greater capital to carry on the same trade.

A. 38.—No artificial heat required.

A. 50.—The lights used in winter evenings are inclosed oil-lamps in the preparing department, and open ones in the others.

A. 51.—The same as stated in A. 6.

A. 53.—Half an hour for breakfast and half an hour for dinner.

A. 54.—The whole.

A. 57.—Slight corporal punishments are resorted to when admonitions fail; refractory persons are dismissed.

A. 58.—Very seldom.

A. 59.—By foremen or overlookers.

A. 60.—Yes, but never severe.

A. 61.—No.

A. 62.—No instance of the infliction of corporal punishment has occurred to that extent that I considered it necessary to interfere.

A. 63.—My instructions to the foremen and overlookers (being all married men) are to preserve the same subordination amongst the children in the mill, and by the same means, that they do in their own families.

A. 64.—No case of the kind ever occurred.

A. 65.—The workers all live in the houses of their employers, and are under the control of the foreman, and reprimanded for any breach of morality; a female superintendent is kept to preserve their cleanliness and comfort in every respect.

A. 66.—In point of skill and expertness at their work those learned young are generally most proficient, although there may be some exceptions. I do not consider it has any effect on their general character or health; Nos. 21 &amp; 23 on the list may be taken as instances, both having been employed since they were seven years of age, are both good spinners, and in

in good health, and have saved from their earning a sum to enable them to leave the work to get education for themselves, which otherwise they would not have been able to obtain.

A. 67.—So far as my observation goes, there is no alteration in the health of the workers for the last ten years. They may be generally considered healthy.

A. 68.—No selection.

A. 69.—No.

WALTER JUST.

Forfarshire.

Walter Just.

ANSWERS of JOHN ANDSON, Parish of Kirkden.

No. 80.  
John Andson.

A. 1.—The spinning-mill of Friockheim, parish of Kirkden, county of Forfar.

A. 2.—Spinning of linen yarn.

A. 3.—The mill was erected and set a going in the year 1800, and the steam-engine in the year 1822.

A. 4.—Steam and water; but owing to the low rates of spinning of late years, the steam-engine is not very often applied, owing to the additional expence of coals, carriages, &c. &c., being seven miles distant from the sea-port. The steam-engine is six horses power, with an eight horse boiler, and the water-wheel is about ten horses power. The water is very irregular, during several months there will not exceed two thirds power, and sometimes not more than half power.

A. 5.—The mill is ventilated by the opening of the windows.

A. 7.—Generally by the overlooker, but sometimes by the hands nearest.

A. 8.—All what I conceive to be dangerous parts are fenced off.

A. 9.—As proper discipline requires that no one should have any occasion to go out of the mill during working-hours, fresh spring water for drinking is brought in several times each day for the convenience of the workers; I could not specify what time this was introduced, but it has been practised here for several years. There are two conveniences of another nature on the outside of the mill-house, with a communication to each by a door struck out of the wall of the mill. The most of the females who are engaged in the more dusty departments of the work, put on additional clothing during the time of their work, so that when they leave the manufactory at meal-times and in the evening, they may be more clean and tidy in their apparel: this is done of their own accord.

A. 10.—Ten years. I am not aware of any of them having been employed at any other trade previous to entering this manufactory; there have been instances of some who were not quite ten years old when they entered the manufactory, but at present all are above that age.

A. 11.—In one department of the manufactory, namely, superintending the spinning-frames, it is necessary that the hand be trained at an early age, say about eleven or twelve, otherwise the individual seldom becomes an expert worker.

A. 12.—I am not aware of any alterations in machinery which can effect any difference in the proportion of children under twelve years of age.

A. 13 & 14.—No.

A. 15.—I do not at present employ any orphans; all the children whom I employ reside with their parents in the vicinity of the work, and I do not have any control over them except during mill-hours; the adults who have no parents in the neighbourhood reside in lodging-houses at a convenient distance from the work.

A. 17.—The flax-dressers, whose work is very laborious, and who are paid piece-work, and who are masters of their own time, usually work eleven hours a day; all other description of hands young and old, when water is plentiful, usually work thirteen hours.

A. 19.—Twenty-three hours, but two sets of hands were employed.

A. 20.—I think three hundred and twelve is the exact number of days the mill was on, but on some of these days the mill did not go above half time.

A. 21.—Owing to the irregularity of the water during the summer half year, the working-hours for a long time were very uneven, so that I cannot give a correct state of the total number of hours.

A. 22.—The flax and tow spinning is carried on generally during the ordinary working-hours in the day-time, and during the time night-work was continued it was only the former which was carried on.

A. 23.—The average of Saturday will be lower than any of the other days of the week, as it is the common practice to go an hour longer on Friday, for the purpose of letting the hands away an hour earlier on Saturday evening; but owing to the reasons stated in A. 21. I could not say exactly the average number of hours for each day of the week throughout the year, owing to the irregularity of time for want of water during the summer months; however, after having maturely considered the matter, I am prepared to say upon oath, that to the best of my knowledge the average number of hours work of my day-hands during each working-day of the year, including any out of door or field labour which they may have been put to, does not exceed eleven hours and three quarters.

A. 24.—Fourteen hours.

A. 25.—Generally, for a short period, when the water became plentiful, after the mill had probably for weeks or months suffered a loss of nearly one third part of each day's work for want of water, or on the evenings of Fridays for making up time owing to the shorter hours of Saturdays.

(APP.—A. 1.)

P

A. 26.

Forfarshire.

John Andson.

A. 26.—With water-mills, where the moving-power is not regular, I consider an occasional excess beyond the regular working-hours almost indispensable; but the practice of working an hour extra on Friday in order to get the work stopped earlier on Saturday could be dispensed with; it is done merely to suit the workers, and no bad effects seem to be produced by it.

A. 27.—No.

A. 28.—I never wrought longer than at present.

A. 29.—If this is done I know of no other motive but that of making a certain given capital produce the greatest possible return.

A. 30.—Not having made any alteration in my working-hours I cannot speak from experience; but I should consider, that if the wages were to remain at the same rate as at present, the cost of production would increase nearly in proportion to the limitation of the time, because the difference in the other items of expenditure would be comparatively trifling.

A. 31.—I do not think there could be any objection.

A. 32.—I never tried a system of relays or change of hands excepting for night-work.

A. 33.—When the night-hands come in to the manufactory at the expiry of the day-work, they just step into the places of those who have been working all day; and they again in their turns are relieved in the morning by the day-hands.

A. 34.—My chief reason for so doing was to furnish more constant employment to nearly two hundred weavers, who receive their work from me, and who had been for months one, two, and sometimes three days a week idle for want of yarn, and by employing a night-set of hands, in addition to the ordinary day-workers, I was enabled to increase considerably the quantity of yarns, and by that means I had it in my power to furnish the weavers with nearly constant employment, and at a time when they would have with difficulty got work elsewhere.

A. 35.—It was only for the short period of six weeks that I employed a night-set of hands. The night-set of hands did not change with the day-set.

A. 36.—As there is very little gain produced to the manufacturer by persevering in night-work, and as it is very seldom attempted, and even when tried it is only to a very limited extent; on that account I would not conceive the prohibition of it of great moment to the manufacturer; and the effect of it upon the trade at large would scarcely ever be known.

A. 37.—In the first place it would lessen the capital of the mill proprietor, by injuring the value of his property; and as the quantity of machinery in Angus-shire is not more than sufficient, with the present hours, to give full employment to the weavers, flax-dressers, &c., I am of opinion, that the probable effect of shortening the hours would be to throw out of employment a considerable number of flax-dressers and weavers; and the wages of the hands employed at mills would naturally fall in proportion to the reduction of the working hours, although the rate which they presently earn, in general, is not more than what is necessary for their subsistence.

A. 38.—The temperature of my manufactory does not much exceed that of an ordinary dwelling-house, and no artificial heat is required for any of the processes of flax or tow spinning.

A. 41.—About thirty-five nights from May 1832 till May 1833.

A. 42.—Only one, the rest were all adults.

A. 43.—Ten hours.

A. 44.—All those employed at night-work were adults, save one.

A. 45.—Generally from eight o'clock P.M. to six o'clock A.M.

A. 46.—There are none.

A. 49.—This has no reference to my manufacture.

A. 50.—By oil.

A. 51.—The same as by day.

A. 52.—Owing to the short time I persevered with night-work no effects on the workers could have been thereby produced.

A. 53.—Half an hour to breakfast and half an hour to dinner; and the friends of the workers for the most part bring in to the manufactory refreshment between five and six o'clock in the afternoon, for which purpose the mill-door stands open. At all other times it is understood to be shut.

A. 54.—Every individual employed at my works leave it at meal-times.

A. 56.—I conceive that arrangements might easily be made in every manufactory whereby the workers might be permitted to go home to their respective lodging-houses at meal-times, as the victuals when brought to the manufactory must often be out of season, and consequently will not have the same nourishing effects as when eaten comfortably at their own homes.

A. 57.—In general the people employed at my manufactory, both children and adults, perform their work with alacrity and cheerfulness, and therefore do not require coercion.

A. 58.—In the case of sullen and obstinate individuals, for gross carelessness or insolence, chastisement is administered similar to what is commonly inflicted at public schools; but this is seldom found necessary.

A. 59.—By the man who was overseeing the flat at the time the individual was in fault.

A. 60.—Yes.

A. 61.—With both.

A. 62.

A. 62.—I never needed, as the punishment practised at my work never exceeds what a wise parent would naturally inflict for the proper training of his offspring.

A. 63.—Any instructions which I ever gave to my foreman or overlooker were verbal. They were generally to keep up a proper state of discipline, and inflict suitable and salutary chastisement where it was merited.

A. 64.—I do not recollect of any complaint having ever been made to me on the subject of punishment during the last three years, and no proceedings before magistrates against me or any of my overlookers or foremen on the subject of punishment ever took place.

A. 65.—The children employed at my work all reside with their parents, and the adults at their homes or lodging-houses, so that I have no control over them except during work-hours. It, however, may be proper to mention, that a number of the workers attend, of their own accord and at their own expence, or the expence of their parents, the village school in the evening, for reading, writing, &c. &c.; and a Sunday-school is taught by the principal men in my employment for the benefit of all the young people who work in the mill.

A. 66.—In some departments of the business, but particularly in the spinning department, the difference in skill between those employed from infancy and those commencing the work at a more advanced age is very considerable. I have frequently had instances in support of this, but I cannot refer to any on the list, as the spinners presently with me were all trained at an early age; and I can state with every degree of confidence, that the general character of those who have been employed at the mills from the age of ten years are in every respect as decent and intelligent as those who have entered the factory at a more advanced age.

A. 67.—I do not think any change has taken place in the health of the people employed at my factory during the last ten years; but from the list descriptive of the people employed, I suppose it will be manifest that the general health of the workers employed at my factory is not inferior to that of any other class of His Majesty's subjects.

A. 68.—I do not consider any of the processes carried on in my factory to be attended with injurious effects.

A. 69.—It is not subject.

A. 70.—Never.

A. 71.—Never was convicted.

A. 72.—Never took place.

A. 77.—I have no reason to believe so.

A. 78.—I cannot admit that any legislative interference with the hours of labour in factories is at all necessary. I consider that in this respect the power of the children ought not to be taken out of the hands of the parents; and in the case of adults or grown up persons, they should be allowed to work when and where they please; and as to the imposing of penalties on the mill-masters in cases of accidents, I consider this idea could only have been suggested by a selfish and hard-hearted man. The proprietors of spinning-mills surely are not devoid of common humanity; and besides, when accidents do occur, the mill-master generally procures the best medical advice, and commonly allows the person who has received the injury full wages till he is able to resume work, although the mill-owner is not by law obliged so to do.

A. 79.—I would only remark, that if a Bill is to be passed for limiting the hours of work in mills and factories to ten or eleven hours a day, I trust the legislature will make provision for those works which are chiefly driven by water, in order that they may be permitted to make up to a certain extent for the deficiency of time during the dry period of the year. This is nothing more than strict justice, as by adopting this regulation the works in town and country would be placed on an equal footing. But if this is not done, if country mills are to be limited to ten hours a day, and not permitted to make up lost time, I consider the measure will be in the highest degree mischievous, and attended with destructive consequences.

JOHN ANDSON.

#### ANSWERS of Messrs. KINMOND and HILL, Lochee.

A. 1.—Burnside Mills, Lochee, parish of Liff, county of Forfar.

A. 2.—Flax and tow spinning.

A. 3.—The works were all erected about twelve years ago by Watt and Brown, the former proprietors; now in our possession, since September 1832.

A. 4.—Two steam-engines; one of twenty, and one of seven horses power.

A. 5.—There is no specific provision for ventilation.

A. 6.—Both mills are ventilated by sash and other descriptions of windows, and by the action of the machinery; but ventilation is not required further than the workpeople may wish for their own comfort.

A. 7.—The ventilation of both mills is regulated by the overlooker, agreeably to the wish of those employed.

A. 8.—All the dangerous parts of the machinery in both mills are fenced off.

A. 9.—Arrangements have been made in both mills for the personal cleanliness of the hands, such as water-closets; there are convenient places for containing their clothes, and a constant supply of spring water kept for the sake of promoting their cleanliness.

(APP.—A. 1.)

P 2

A. 10.

No. 81.

Messrs.  
Kinmond and Hill.

Forfarshire.

Messrs.

Kinmond and Hill.

A. 10.—The lowest age of children employed is about ten years.

A. 11.—The nature of our work does not require the employment of children under twelve years of age; on the contrary, we consider that it would be for our interest that none under that age were admitted, and it is only at the solicitation of parents that so young children are employed.

A. 12.—The recent alterations in machinery do not require the service of a greater number of children under twelve years of age.

A. 13.—No apprentices are employed at our mills.

A. 15.—We lodge and maintain none.

A. 17.—The usual number of hours each day, during which persons of twenty-one years of age and upwards are employed in our service, is thirteen, excepting on Saturday, when it is eleven hours and a half.

A. 18.—There is no difference of time for the service of those under twenty-one years of age.

A. 19.—The greatest number of hours during which our works have been kept going in any one day, since we have been the proprietors, is fifteen and a half for two days, which extra time was at the request of the hands themselves, in order to make up for a day of recreation.

A. 20.—Our works have not been going a whole year.

A. 22.—The spinning and preparing in the different branches are all carried on at the same time.

A. 23.—The average number of hours of each day's work during the week, since our entry, is twelve hours forty minutes.

A. 24.—The greatest number of hours during which the same set of children were employed in any one day last year was fifteen and a half, and for the reason stated in A. 19.

A. 25.—The usual number of hours service was exceeded on 22d and 29th December last, in order to make up time for a holiday given on 14th January last.

A. 26.—The extra time mentioned was at the particular request of the workpeople, rather than lose their wages.

A. 29.—From the short time we have been in business, we do not consider ourselves competent to answer this question; we have no night-work.

A. 30.—A diminution of hours would increase the cost of production; but from our limited experience we cannot say to what extent.

A. 31.—Extra hours have not been required, except in the case mentioned. We could not afford to keep two sets of hands; and the scanty pittance of wages which could be allowed would be insufficient for their maintenance.

A. 32.—We have not required longer hours than what has been already stated, and consequently have never had occasion for a set of extra hands.

A. 34.—The expence would be great, and the people in our employment have never complained to us as to the hours of work being too long.

A. 37.—From the depressed state of the manufacturing trade, and the miserable returns for the investment of capital on mills, any diminution in the present hours of working would be felt very severely by the proprietors, and would, from the consequent reduction of wages, operate very much against the interest of the workpeople.

A. 38.—The rooms are comfortable, and no artificial heat is required in the process of spinning.

A. 50.—As already stated, we have no night-work; and when we required to light for making up our regular working-time (as mentioned above) in the winter season, we used oil with argand lamps, but intend to use gas next winter.

A. 51.—No night-work, as stated already.

A. 53.—From nine to half past nine o'clock A.M. for breakfast, and from two to half past two P.M. for dinner, for all the hands.

A. 54.—All may leave the work for meals, except the person in charge of the engines. Those who choose may take their meals in the work.

A. 55.—They seldom remain in the work, but may do so if convenient for themselves.

A. 56.—As it is for their own convenience that any remain, any alteration would have no effect.

A. 57.—They are threatened with dismissal, but this is seldom required.

A. 58.—No.

A. 62.—Our express orders are that no corporal punishment be inflicted.

A. 65.—The workpeople live in their own houses.

A. 66.—From the short time we have been in business we are not competent to answer this question.

A. 68.—None of the processes in our works have injurious effects.

A. 69.—We are not aware of any law relative to flax-spinning in Scotland.

A. 77.—No; as the evidence taken before a Committee of the House of Commons can testify.

A. 78.—No; as this must refer to cotton-spinning.

A. 79.—Nothing further than that we think any legislative enactment on the subject would be injurious both to masters and servants.

KINMOND and HILL.

## ANSWERS of ROBERT MATTHEWS, Lochee.

Forfarshire.

No. 82.

*Robert Matthews.*

- A. 1.—Lochee, parish of Liff and Bennie, Forfarshire.  
 A. 2.—Flax and tow spinning.  
 A. 3.—Cannot say when erected; used by me since November last.  
 A. 4.—A steam-engine of sixteen horses power.  
 A. 5.—Windows.  
 A. 6.—Opening of windows.  
 A. 7.—By the overseer of the flat.  
 A. 8.—The dangerous parts fenced.  
 A. 9.—Water-closets are erected in each flat for the convenience of the hands.  
 A. 10.—The lowest age at present is nine, and to the best of my knowledge have never been at any other employment.  
 A. 11.—No.  
 A. 12.—Recent alterations in machinery render fewer hands necessary under twelve years of age.  
 A. 13.—No.  
 A. 17.—Thirteen hours for five days, and twelve hours for one day, each week.  
 A. 18.—No difference in the hours to any.  
 A. 20.—Have not occupied it for a year.  
 A. 22.—At one time.  
 A. 23.—Twelve hours and five sixths a day on average.  
 A. 24.—Thirteen hours.  
 A. 29.—More yarns.  
 A. 31.—Additional expence in two relays or sets of workpeople.  
 A. 32.—Not by me.  
 A. 33.—Never wrought over night.  
 A. 37.—The consequent increase of cost of production, because of the workpeople's inability to live on lower wages than the present.  
 A. 38.—Usual temperature of the atmosphere all over the work.  
 A. 41.—Never.  
 A. 53.—Half an hour for breakfast, and half an hour for dinner.  
 A. 54.—The whole, with two or three exceptions.  
 A. 55.—Those who do not leave the work remain to take charge of the machinery.  
 A. 57.—Dismissal.  
 A. 58.—No.  
 A. 65.—Generally stay with their parents, or in lodging-houses.  
 A. 66.—The longer they have been at such work the better skilled.  
 A. 67.—No deterioration in health can be proved.  
 A. 68.—In flax-mills there is no peculiar danger in any particular department.  
 A. 69.—No; being a flax-mill.  
 A. 70 & 71.—Never.  
 A. 73.—On flax-mills here.  
 A. 79.—Any interference by law with the arrangements between mill-masters and their servants would be attended with effects detrimental to the interests of the working-classes.

ROBERT MATTHEWS.

## ANSWERS of ARCHIBALD FOOTE, of the Firm of Aberdeen, Gordon, &amp; Co. Logie Mill.

No. 83.

*Archibald Foote.*

- A. 1.—Logie Mill, parish of Logie Pert, Forfarshire.  
 A. 2.—Heckling, spinning, bleaching, and weaving of flax. The answers only apply to spinning and weaving.  
 A. 3.—A small spinning-mill was erected in the year 1800, which was replaced by the present one in 1816, and a farther addition was made in 1822.  
 A. 4.—Water-power from the North Esk. Upon an average from three to four days in the year are lost on account of back water, occasioned by floods in the river; and there is sometimes a scarcity of water for a few months in summer, and during severe frosts in winter. Average power about twenty-four horses.  
 A. 5.—There is no provision for ventilation beyond the windows.  
 A. 6.—The windows are suspended by weights in the usual manner; and unless when the weather is very close, as much air can be admitted by them as the workpeople can endure.  
 A. 7.—There is nothing to prevent the workpeople from moving the windows at their pleasure; but it is the duty of the foremen to see that proper ventilation is preserved.  
 A. 8.—Such parts of the driving machinery as are likely to come in contact with the workers, and the more dangerous parts of the different machines are fenced off by wooden boxes.  
 A. 9.—There is some provision made in the different rooms for keeping any articles of wearing apparel which the hands may choose to put on while at their work, or when leaving it. The foremen attend to the cleanliness and clothing of the children under them. There is no particular place for washing within the mill, but there is ample provision for doing so in the bothy, one hundred yards from the mill-door, and abundance of water everywhere. This has always been the case.

(APP.—A. 1.)

P 3

A. 10.

Forfarshire.

Archibald Foote.

A. 10.—Our wish has been not to admit children under ten years of age. In a few instances, at the request of parents, they have been employed a year or so younger. We never knew of them coming from other trades.

A. 11.—There is nothing in the nature of our work which requires the employment of children under twelve years of age.

A. 12.—We do not find that any improvements which have taken place on machinery have altered the proportion of people employed at different ages.

A. 13.—None to whom this inquiry extends, except millwrights.

A. 14.—No parish apprentices.

A. 15.—We employ six orphans at present. The parents or guardians of all the children visit them when they think proper. We cannot say how often. Those hands who sleep in their employers houses disperse themselves amongst their friends on Saturday, and return before work commences on Monday.

A. 16.—It is the duty of every foreman to give advice to the children under him at all times; and the woman who has charge of the bothey has particular charge of those who sleep in their employers houses.

A. 17 & 18.—The stated time of work for all ages is twelve hours and forty minutes for five days of the week, and ten hours and a half and eight hours and a half alternately on Saturday; average twelve hours eight minutes; the eight minutes go to make up for lost time.

A. 19.—For one day, 14th July 1832, fourteen hours.

A. 20.—From 1st May 1832 to 1st May 1833, three hundred and ten days.

A. 21.—From 1st May 1832 to 1st May 1833, three thousand seven hundred and fifty-six hours.

A. 22.—No department of our work is ever carried on while other parts are standing.

A. 23.—Average working time, Monday, twelve hours and thirty-seven minutes; Tuesday, twelve hours and eleven minutes; Wednesday, twelve hours and forty minutes; Thursday, twelve hours and forty-nine minutes; Friday, twelve hours and twenty minutes; Saturday, nine hours and thirty-five minutes.

A. 24.—One, the 14th July, as above, fourteen hours.

A. 25.—The longest day happened on a Friday; the intake sluice was repaired on Saturday, and the work was not on. The mill stops at nine A. M. on the days of the Montrose fairs, &c., and it is usual to work thirteen hours for a few days to make up time.

A. 26.—Avoidable, if the workpeople choose to give up some of their days of recreation, or submit to a reduction of wages; they have always received about an average weekly pay when any stoppage occurred, from whatever cause.

A. 27 & 28.—There has been no increase or diminution in our hours of labour for many years.

A. 29.—If a manufacturer is resolved to increase his own gains, without regard to the means he employs for doing so, he will most likely work longer hours than his neighbours; it is clearly his interest to get the greatest quantity of work from the same set of hands, for the current wages of the country.

A. 30.—We invariably find the quantity of work obtained to correspond exactly with the number of hours of labour; if, for instance, we produce from a given quantity of machinery twelve hundred spindles of yarn in twelve hours, we produce from the same machinery ten hundred spindles of yarn in ten hours, and as the waste of capital on buildings and machinery must continue the same, and the expence for power, furnishings, &c. is not materially affected by an hour or two more or less work, it is manifest, that the cost of production must rise in exact proportion as the hours of work are shortened, making a variation of about eight per cent. for each hour; no doubt wages, which constitute about half the cost of production, would be reduced, but to what extent this might be carried it is impossible to tell; they would require to be reduced one sixth part for every hour's diminution of labour, to keep the cost of production steady; and there is no other saving which the manufacturer can make.

A. 31.—It is impossible to employ two sets of hands, either young or old, so long as to entitle them to wages worth naming, unless the work is continued over night, and this we have always considered one of the most pernicious practices both for the health and morals of the children when systematically adopted.

A. 32.—We never heard of any change of hands being tried, unless where night-work had been adopted; we never tried it, for the reasons above stated.

A. 33.—We never employed a night-set of hands.

A. 37.—The sure effects of any reduction of hours must be a corresponding decrease on the value of capital employed in manufactories, a reduction of wages to every class of workpeople, a scarcity of employment for flax-dressers and weavers (the latter class is often out of work and very inadequately paid at present), and, what is perhaps worse, if any material reduction is made, the British manufacturer, after all his endeavours, may be under-sold by foreigners, and the trade banished from the country. For the grounds of this opinion we refer to our answer to Q. 30.

A. 38, 39, & 40.—No artificial heat is required; when the thermometer stands above 60° of Fahrenheit we consider it fully too warm; it must vary with the weather from 40° to 70°, and perhaps a little higher.

A. 46, 47, 48, & 49.—Any process may be stopped at any time, without injury to the work.

A. 50.—By coal gas.

A. 51.

A. 51.—The same as by day.

A. 52.—Never having adopted night-work we cannot speak from experience; our opinion is quite against it.

A. 53.—Three quarters of an hour for breakfast, and the same for dinner, making an hour and a half for meals per day; this, however, is frequently reduced, to save time at night, to forty minutes each meal, or an hour and twenty minutes per day.

A. 54.—There is nothing to prevent them, and they almost all invariably do so.

A. 55.—In a very bad day some of the people may prefer having their meals brought to the mill; but this is entirely for their own convenience.

A. 56.—It is the practice here, and has no bad effect.

A. 57, 58, 59, 60, 61, & 62.—If admonition fails, a fine is sometimes exacted, which in no case exceeds 6*d.* in one week; and as tickets are given along with the wages, stating the amount, and the reason for any deduction, the parents are made aware of the behaviour of their children. Corporal punishment is not sanctioned by us; we are not aware of any instance of its infliction, although it may have been applied to boys by the overseers; we never had any complaint on the subject. The last resource is notice to leave the work at the end of a month, the regular term of agreement.

A. 63.—The foremen are instructed to proceed as above; no written instructions have ever been given.

A. 64.—Never.

A. 65.—The greater part of the workpeople live in their own, their parents, or friends houses, and the rest in the houses of their employers during the week (going to their friends on Saturday), where they have fuel and cooking utensils, and a regular supply of clean bed clothes provided gratis, and every encouragement is given to promote domestic cleanliness; the whole is under the charge of a woman, whose duty it is to report any instance of misconduct to the manager. A Sabbath-school is carried on during part of the year; a school-house and regular teacher have been provided, who keeps a day and evening school. A library was instituted three years ago, and contains three hundred and fifty volumes, and is managed by persons annually chosen by the workpeople. A savings bank, and deposit and friendly society connected with it, has also been long in existence; funds about 400*l.*

A. 66.—No person ever thinks of learning to attend a spinning-frame unless when young; most of them are begun by the time they are fourteen years of age; a person of good hands and tolerable activity may learn any thing else in a flax-mill, although much older. I cannot point out any person in the list whose inferior skill can be accounted for only in consequence of learning late in life, although we know well that they who learn young have most facility in performing their duty. Almost all those whom we have had long, and who were early trained to habits of industry, have turned out well; their general character is fully equal to the other class.

A. 67.—We are not aware that any alteration has taken place in the general health of the people about our work during the last ten years. We append a certificate from the medical man who attends them, as to the general state of health amongst them:

“ I hereby certify that I have attended Logie Works since the year 1821, and during that period I have found the people employed there generally as healthy as any other class of our working population.

“ Montrose, 14th May 1833.

“ D. NIDDINS, Surgeon.”

A. 68.—No change is ever made for this purpose.

A. 69.—There is no Act applying to flax-mills.

A. 77.—We have no reason for believing any such thing.

A. 78.—We are not prepared to point out what scale of penalties it may be proper to adopt in order to secure obedience to any law which is or may be enacted. The amount of penalty is not an object of so much importance to the mill-owner as the justness of the principle upon which it is imposed, and the fairness of the tribunal to which he is rendered amenable. A scale of penalties for accidents, such as is contemplated in the Bill now before the House of Commons, we would object to in the strongest terms; in fact, any law on the subject which shall have the effect of impressing the workpeople with the idea that their masters are alone responsible for any accident which may befall them, and removing that salutary dread with which they are inspired, will infallibly increase the number of casualties, which at present is very small, while it may lessen that sympathy which the masters at present feel and exercise when any unfortunate thing occurs. If interference must be had, Government ought to appoint an inspector; if his instructions are not attended to, then there may be some justice in making the owners responsible; but nothing could be more unreasonable than to leave them at the mercy of justices of the peace, or others, who would have to decide under excited feelings, on a subject upon which no two persons of experience would exactly agree; the practice of guarding the machinery is not the same in any two works.

A. 79.—Although we cannot allow the necessity for legislative interference in our case, a Bill may be required to put an end to cases of oppression, and if so, in order to be impartial and effective, we think it should consist of a few simple provisions, fixing the lowest age at which children could be employed, and the greatest number of hours during which work could be carried on during one week, applying to all ages, putting an end to night-work, and leaving the details as much as possible to the arrangement of parties.

ARCHIBALD FOOTE.

Forfarshire.

ANSWERS of WILLIAM JAMESON, Manager, for Richards &amp; Co., Logie Pert.

No. 84.

William Jameson.

A. 1.—Parish of Logie Pert, county of Forfar. The mill is situated on the river North Esk, five miles from Montrose.

A. 2.—Flax and tow spinning.

A. 3.—The mill was erected eleven years ago, to contain sixteen spinning-frames; enlarged in 1826 to contain thirty-one spinning-frames; remains so at present.

A. 4.—Water-wheel. No steam. About twenty horses power. Some interruptions take place from frosts in winter and drought in summer, but not to much extent.

A. 5.—The ventilation is by windows and doors, which are constantly open to a certain extent in fine weather.

A. 7.—The overseer of each room attends to the opening and shutting the windows, according to the weather, as he is always in the room.

A. 8.—They are all fenced off with wooden covers.

A. 9.—There is a public washing-house, with a boiler, for the use of all the hands, within ten yards of the mill, adjoining the public kitchen and lodging-house; and there are necessities in each floor of the mill; these were made at the erection of the mill. The hands all live within a very short distance of the mill, and do not change their clothes at meal-times.

A. 10.—No children are employed under eleven years of age, and very few indeed so young, as will be seen on reference to the schedule of ages. Some of the older hands may have been employed as domestic servants, or at out-door work, such as the bleach-field, but we are not aware of any trades.

A. 11.—The employment of children under twelve years of age is not from our choice, but generally to assist the parents employed about the works.

A. 12.—The recent alterations in machinery have not rendered it necessary for us to employ more young children than formerly.

A. 13.—None.

A. 15.—There are no orphan children about the works; the great proportion of the children in our mill live with their parents, and the others go home to their parents every Saturday afternoon.

A. 16.—There are, as before stated, no orphan children, but there is a public kitchen and lodging-house for such children as do not live with their parents, where a cook and housekeeper is provided for their superintendence.

A. 17.—The usual hours of work for five days in each week are thirteen hours and a half, but on Saturdays we work alternately, one Saturday eight hours and forty minutes, the other eleven hours and forty minutes.

A. 18.—No difference is made on account of the ages.

A. 19.—The longest time the hands are ever employed is just preceding the fair days, which happen twice a year, when the hands voluntarily work fourteen hours, to get a holiday on the fair day; we have never worked extra hours to make up lost time by breakage of machinery or scarcity of water.

A. 20.—Three hundred and eight days; the total number of working-days was three hundred and twelve; but we lost about four days in repairing the machinery and water-courses.

A. 21.—Three thousand nine hundred and thirty-nine hours, which at three hundred and eight days gives an average per day of twelve hours forty-seven minutes, and at three hundred and twelve days an average of twelve hours thirty-seven minutes and a half.

A. 22.—The whole works are carried on at the same time; no difference is made.

A. 23.—Thirteen hours is the nominal time, but the real average time is given in A. 21.

A. 24.—The greatest number of hours has been fourteen, but this has been explained to arise from preparing for a holiday at the fair days, but only in these cases. See A. 19.

A. 25.—In the case of a breakage of the machinery which happened at this mill, and the hands were thrown idle for four days, the older hands were brought into Montrose and worked in our mill there during two nights, as they did not work at all during the day; for this they were paid extra wages.

A. 26.—No excess is necessary from the nature of the work, and is never resorted to but for the accommodation of the hands themselves, and with their ready concurrence.

A. 27.—In the year 1825 we worked fourteen hours per day for one summer only, and discontinued it the same year; for which we paid extra wages.

A. 28.—The cost of producing a given quantity is now lower than at the above date, because our wages are reduced since then; but the cost of production must always be increased by the reduction of working-time, unless wages are reduced in a still greater proportion, because the charges for plant and management tell more seriously on a diminished production.

A. 29.—The only inducement to the manufacturer to contravene any existing law can be his profit; but we are not aware of any existing law for the regulation of flax-mills.

A. 31.—If we required to work extra hours, an insuperable objection to relays or fresh sets of children would lie in our local situation, as the population is so limited that we have sometimes a difficulty in keeping one set, and could not possibly get a relay.

A. 32.—The experiment has not been tried by us, and cannot, for the reason given in the last reply.

A. 33.—We have never employed a night-set of hands, as we have no night-work.

A. 37.

A. 37.—The effect of a reduction in the working hours must ultimately be a reduction of wages to the hands employed, because the quantity of yarn produced from a given amount of plant being less, we could not afford to pay the same wages to the hands.

A. 38.—No artificial temperature is required in our mills, which can be carried on equally well in all temperatures, and no arrangements are made to produce artificial heat.

A. 40.—There is no difference in the temperature, or the hands employed.

A. 41.—Not any; but some of the hands were employed two nights in another mill under peculiar circumstances, as explained in A. 25.

A. 43.—In the case referred to above the hands worked ten hours the first night and nine hours the second, for which they were paid extra.

A. 44 & 45.—In the cases referred to above there were seventy hands employed two nights, the first from eight o'clock till six in the morning, and the second from eight o'clock till five.

A. 46.—None. The various processes of flax and tow spinning can be abandoned and resumed at any time.

A. 50.—With gas.

A. 51.—The same as during the day, viz. windows and doors.

A. 53.—We allow forty minutes for breakfast and forty minutes for dinner to all classes of hands employed at the works.

A. 54.—The whole hands are allowed to leave the works at meal-times; if any remain it is by choice.

A. 55.—The workpeople are allowed to please themselves entirely.

A. 56.—Every person has the power of taking their meals out of the manufactory; none are required to take them in.

A. 57.—We find the children obedient in general, and do not require any means to enforce obedience beyond occasional small fines or ultimate dismissal.

A. 58.—They are not, to the best of our knowledge.

A. 62.—Corporal punishments are forbidden, and we have never heard an instance of their infliction.

A. 63.—The overlookers are strictly forbidden to punish any children, and it has never been considered necessary to issue any written instructions to that effect.

A. 64.—None from the commencement of the works.

A. 65.—This question is very general: many of the people live in our houses, and some in their own. A general lodging-house is also provided for those who do not live as above, where a housekeeper and cook is kept to attend to their domestic comforts and cleanliness; and in general the fullest arrangements are made to promote their moral improvement, for which purpose we have a school-house and schoolmaster provided; and it will be seen in the schedule that every person but one can read, and almost all can write. That single exception arises from a natural defect in her speech.

A. 66.—We uniformly find that those spinners who begin young become the most skilful and handy; and there are very few instances among those who begin at an adult age where the spinners are so skilful and active as those who begin young. We never attempt them, and cannot refer to any instances in the annexed list. In other branches of the manufacture we prefer them from sixteen to twenty years of age, except the weighers in the carding-room.

A. 67.—The general health of the people employed at these works has always been good, and we are not aware of any change in their health since the establishment of the works eleven years ago. We consider them uniformly healthy.

A. 68.—No change or selection is necessary in varying the employment of the hands from any effects of particular processes, as no injury whatever is produced from any process.

A. 69.—We are not aware of any act referring to flax-spinning mills, and we do not yet see any occasion for one.

A. 71 & 72.—These questions cannot apply to our mill, where the moral regulations are of such a nature as to invite the fullest investigation and inquiry, and we deny in the strongest manner its application to our establishment.

A. 73.—We know of no mills in our neighbourhood but flax-mills, and we know of no law for the regulation of them.

A. 74, 75, 76, & 77.—These questions are ambiguous, and leave a doubt whether they apply to the proprietors of "mills in your neighbourhood" or the "proprietors" of these works; if the latter, we conceive the questions cannot be noticed by them without compromising the high and honourable station they fill in society, and in that feeling we pass them over unanswered. If to the proprietors of "mills in our neighbourhood," we answer that we never heard of any one of them being subjected to a penal or moral degradation.

A. 78.—We know of no law empowering a scale of penalties for securing obedience to its provisions. The proprietors and manager of these works have sufficient penetration to discover that the interests of masters and servants are too closely interwoven to require penal regulations to stimulate them to treat their hands well; and they refer the Commissioners to a personal investigation of their works, to show at least that in their case all legislative provisions or penal regulations are unnecessary and uncalled for.

A. 79.—The replies given to the foregoing string of questions embody our general opinions on each subject brought under our notice, and we have nothing further to add to them.

14th May 1833.

WILLIAM JAMESON.

Forfarshire.

William Jameson.

## ANSWERS of JOHN BUCHAN, Finhaven Spinning Mill, Montrose.

Forfarshire.

No. 85.

*John Buchan.*

A. 1.—Finhaven Spinning Mill is in the parish of Oathlaw, county of Forfar, and situated on the river South Esk.

A. 2.—Flax and tow-spinning.

A. 3.—Erected in the year 1822; enlarged by an additional flat in 1825.

A. 4.—Water-wheel about sixteen horses power; some interruption is occasioned by out-breakings in the dam-dyke and leads in time of speats, and by frost in winter.

A. 5.—The windows draw up and down at pleasure.

A. 6.—Opening of windows.

A. 7.—The persons working nearest the windows regulate the ventilation.

A. 8.—They are all properly fenced in.

A. 9.—The dwelling houses being close at hand, there is no place kept in the mill for changing or washing clothes.

A. 10.—None below nine years, and not at that age, unless to oblige parents who may be at the work.

A. 11.—The nature of the work does not particularly require the employment of children under twelve years of age, although they might be very usefully employed under that age in some departments.

A. 12.—No difference.

A. 13.—Only one as a turner.

A. 17.—The whole of the persons employed work thirteen hours a day.

A. 18.—No distinction is made.

A. 19.—Not more than thirteen hours, unless to shorten the hours of another day to answer the workpeople's own purpose.

A. 20.—Three hundred and seven.

A. 21.—Three thousand nine hundred and seventeen hours.

A. 22.—The whole works go regularly, unless any part be stopped by breakage or want of hands.

A. 23 & 24.—Thirteen hours.

A. 26.—Quite avoidable, provided those employed were willing to give up attending the fairs, but they are always anxious to have these days, and to make up time beforehand for them.

A. 29.—The proprietor knows of no law applying to flax-mills.

A. 30.—The cost of the production must be invariably increased by the limitation of the hours of work, as the capital employed and expence of management remain the same, while the profit is diminished.

A. 31.—This situation would not admit of it.

A. 32.—Have never heard of the experiment being tried, and in the country, where the masters have in general to erect houses for the workpeople, it could not be.

A. 33.—When a scarcity of water occurs, that there is not power to drive the whole machinery, the one half might be worked through the day and the other through the night, but that has not been done here since 1826.

A. 34.—More than one set of hands cannot be kept here.

A. 36.—It would be attended with a very great loss in a dry season when there was not water to drive more than one half of the machinery, and would throw the one half of the operatives out of employment.

A. 37.—If a reduction of the working hours were to take place, a corresponding reduction of wages would necessarily follow, and a number of flax-dressers and weavers thrown out of employment.

A. 38.—No particular temperature is necessary for carrying on the work.

A. 39.—No particular degree of heat is required for any portion of the work.

A. 41.—No night-work during the last year.

A. 50.—By gas-lights.

A. 51.—The same as during the day.

A. 52.—There has been no night-work here since 1826.

A. 53.—One half hour.

A. 54.—The dwelling houses being close at hand, the persons employed at the work go all home to their meals.

A. 55.—They invariably leave the work.

A. 57.—Small fines and dismissal.

A. 58.—None.

A. 62.—They are strictly forbidden, and no complaint has ever been made.

A. 65.—The workpeople live in the houses of their employer, and the manager, who lives beside them, looks strictly after their moral conduct; he also gives instruction to the children after work-hours, and keeps a school for their religious instruction on Sabbath-evenings. Cleanliness is strictly enjoined, and enforced if necessary.

A. 66.—Persons of adult age seldom or ever arrive at any proficiency, particularly as spinners, which is the most important part of the work; it is therefore of the very greatest importance they should be employed young.

A. 67.—Know no difference; they have, upon the whole, been very healthy.

A. 68.—No.

A. 69.—Know of no act applying to flax-mills.

JOHN BUCHAN.

## ANSWERS of WILLIAM CRAWFORD, Crawford and Smith's Works, Montrose.

Forfarshire.

No. 86.

*William Crawford.*

- A. 1.—Montrose, county of Forfar.  
 A. 2.—Flax and tow spinning.  
 A. 3.—In the summer of 1822.  
 A. 4.—Steam-engine of twenty-horse power.  
 A. 5.—From the opening of windows on both sides.  
 A. 6.—Only from the opening of windows.  
 A. 7.—At the pleasure of the persons employed.  
 A. 8.—All are fenced off so far as can be.  
 A. 9.—The engine is drove slower for ten to fifteen minutes in order to enable the work-people to shift their clothes, and water is kept in each flat that they may wash, which has always been the case.  
 A. 10.—We do not require any nor wish to have them below twelve years of age, and so far as we know have not been employed at any other trade.  
 A. 11.—It does not.  
 A. 12.—We do not think it has made any difference.  
 A. 13.—Only as a mechanic.  
 A. 14.—None from parishes.  
 A. 15.—All the orphans we employ live either with their living parent or relations.  
 A. 16.—Either their living parent or relations.  
 A. 17.—Twelve hours fifty-five minutes per day.  
 A. 18.—Twelve hours fifty-five minutes per day.  
 A. 19.—Thirteen hours fifty minutes when making up lost time.  
 A. 20.—Three hundred and eleven days.  
 A. 21.—Four thousand and seventeen hours.  
 A. 22.—All at the same time.  
 A. 23.—Twelve hours and three quarters.  
 A. 24.—Thirteen hours and fifty minutes.  
 A. 25.—At Whitsunday and Martinmas, making up time for going off at the markets.  
 A. 26.—It could be avoided, but it is the general wish of the workpeople to make up their time.  
 A. 27.—No.  
 A. 28.—We think it would.  
 A. 29.—We do not see any inducement, as the workpeople could not stand a continuance of extra hours or night-work.  
 A. 30.—Not having had the experience of a limitation of hours of work, could not say to what extent an increase of the cost of production might be.  
 A. 31.—As we do not work extra hours we cannot say what objection might be offered by those who do so to have fresh sets of children.  
 A. 32.—We have never tried it, not working extra hours.  
 A. 33.—No.  
 A. 34.—The workpeople here would not work unless employed the whole day.  
 A. 37.—If the hours were reduced, the people would not gain a sufficient livelihood, as the wages would also be reduced; it would also greatly limit the profits of the manufacturer, and would reduce much the value of their works.  
 A. 38.—We do not require to use any artificial heat.  
 A. 39.—Natural heat.  
 A. 40.—None.  
 A. 49.—There is no part of our work the continuance of which is indispensable.  
 A. 50.—With gas in winter evenings and mornings.  
 A. 53.—Half an hour to breakfast, and forty minutes to dinner.  
 A. 54.—Every one if they choose.  
 A. 55.—Some at times do not, for their own convenience.  
 A. 56.—No bad effects.  
 A. 57.—Dismissal in case of disobedience.  
 A. 58.—No.  
 A. 62.—Yes.  
 A. 63.—No punishments allowed, and any instructions on that subject given verbally.  
 A. 64.—Never one.  
 A. 65.—No.  
 A. 66.—Few are very good spinners unless they learn from twelve to sixteen years of age. Other parts of the work can be learned in a short time.  
 A. 67.—We have not observed any difference in the health of our people during the last ten years; they are generally very healthy.  
 A. 68.—No.  
 A. 69.—We are not aware of what act is referred to, as we know of no act that refers to mills in Scotland.  
 A. 79.—The only observation we have to make is, to say that we think the hours of labour should not be shortened for the reasons given in A. 37.

11th May 1833.

WILLIAM CRAWFORD.

Forfarshire.

No. 87.

John Herd.

## ANSWERS of JOHN HERD, for Messrs. Duke and Alexander, Montrose.

- A. 1.—Montrose, county of Forfar. The work is situated on the river North Esk.  
 A. 2.—Tow-spinning.  
 A. 3.—Erected in 18 , and converted into a tow-spinning mill in 1823.  
 A. 4.—Water-wheel about four horse power; some interruption is occasioned by frost in winter, by which eight or ten days are lost in the course of a year.  
 A. 5.—None.  
 A. 6.—The ventilation depends on the opening of the windows and doors.  
 A. 7.—The persons working nearest the windows usually regulate the ventilation.  
 A. 8.—They are properly fenced off.  
 A. 9.—There is a house situated at the end of the mill, and used as a bothy or lodging-house, where they have every necessary accommodation.  
 A. 10.—We have never employed any under ten years of age.  
 A. 11.—No, although they might be employed.  
 A. 12.—No, as far as we have observed.  
 A. 13.—None.  
 A. 15.—We have no orphans employed at our work.  
 A. 17.—The whole of the persons employed by us work thirteen hours and a half a day for five days in the week, and eleven hours on Saturday.  
 A. 18.—No distinction is made.  
 A. 19.—Fourteen hours.  
 A. 20.—Three hundred and ten days.  
 A. 21.—Three thousand nine hundred and twenty-six hours.  
 A. 22.—The whole works are carried on together.  
 A. 23.—About twelve hours and three quarters.  
 A. 24.—Fourteen hours.  
 A. 25.—Previous to fair-days.  
 A. 26.—This excess could be avoided provided those employed were willing to give up attending the fairs, but they are always anxious to attend.  
 A. 27.—Never.  
 A. 29.—His profit; we are not aware of any existing law applying to flax-mills.  
 A. 30.—The cost of production must be invariably increased by a limitation of the hours of work, as the capital employed and expence of management remain the same, while the produce is diminished.  
 A. 31.—Our situation would not admit of it.  
 A. 32.—We have never heard of the experiment being tried.  
 A. 33.—Never.  
 A. 37.—To reduce wages and profits, as the quantity produced must be reduced in proportion as the hours of labour are limited.  
 A. 38.—No particular temperature is necessary for carrying on our work.  
 A. 50.—By oil-lamps.  
 A. 51.—The same as during the day.  
 A. 53.—Half an hour for breakfast, and forty minutes for dinner.  
 A. 54.—All.  
 A. 55.—They invariably leave the work.  
 A. 57.—Small fines and dismissal.  
 A. 58.—No.  
 A. 62.—They are strictly forbidden, and we have never had a complaint on the subject.  
 A. 65.—The workpeople live in a bothy, as stated in A. 9.; and the manager lives with his wife and family in the same house, and superintends their domestic arrangements.  
 A. 66.—We rarely find that persons of adult age ever arrive at any proficiency, particularly as spinners, and it is therefore of importance they should be employed young. We cannot point to any particular case at present.  
 A. 67.—They have been invariably healthy.  
 A. 68.—No.  
 A. 69.—We know of no act applying to flax-mills.

JOHN HERD.

No. 88.

J. & G. Paton.

## ANSWERS of JOHN and GEORGE PATON, Montrose,

- A. 1.—Parish of Montrose, county of Forfar.  
 A. 2.—Manufacture of flax and tow yarns.  
 A. 3.—There is only one work; it was erected in 1828 and 1829, and first employed in the spring of 1829.  
 A. 4.—Steam-engine.  
 A. 5 & 6.—It is ventilated by the windows, which may be opened at the pleasure of those employed.  
 A. 7.—It is regulated by the overlooker.  
 A. 8.—The dangerous parts are boxed in.

A. 9.

A. 9.—In each room of the mill-house there is a supply of water for the people washing themselves, which has existed since its erection. They change their outer clothing on entering and leaving the work, although there are no separate apartments provided for that purpose. All are provided with boxes for keeping their clean clothes.

A. 10.—Sometimes at nine years of age. One boy attended a tobacconist, and a girl was employed sewing.

A. 11.—It does not, and if it were not required by the parents it would be no inconvenience to us that they could not be employed under twelve years.

A. 12.—Since the work was erected there has been no alteration in machinery such as to render the employment either of a greater or less proportion of children under twelve years of age necessary.

A. 13.—Learners are employed, but no apprentices.

A. 15.—They are not.

A. 17 & 18.—Persons of all ages are employed the same number of hours, viz. twelve hours and three quarters for five days of the week, and twelve on Saturday.

A. 19.—Thirteen hours and a half is the greatest, and this occurred only in a single instance. The usual rate at which extra time is made up is half an hour daily.

A. 20.—Three hundred and ten days year ending 9th May 1833.

A. 21.—Three thousand eight hundred and eighty-seven hours forty-five minutes; year ending 9th May 1833.

A. 22.—All parts of the work are carried on at the same time.

A. 23.—Twelve hours twenty-five minutes and a quarter.

A. 24.—Only one set of children is employed.

A. 25.—When a part of the steam-engine was broken, and occasionally when the people choose to work extra hours at one time that they might be at liberty at another. The whole extra time worked during year ending 9th May amounts to nine hours and fourteen minutes.

A. 26.—It may be avoided.

A. 27.—We have not.

A. 29.—We have no experience in this.

A. 33.—We never have.

A. 37.—There has been no reduction in the working hours since the work was first employed. The cost of production in wages would not only increase in proportion to the reduction in the working hours, but the charges of interest, deterioration, &c. would also tell very heavily on the diminished quantity produced in consequence of such reduction.

A. 38, 39, 40.—There is no artificial heat required.

A. 46.—There are no such processes about the work as are here referred to.

A. 53.—Mechanics one hour; mill-hands thirty minutes to breakfast, and the same to dinner.

A. 54.—They may all leave the work at meal hours, with the exception of the fireman.

A. 55 & 56.—It is necessary for the fireman to be always in attendance.

A. 57.—Small fines or dismissal.

A. 58.—They are not.

A. 65.—They do not.

A. 66.—In our short experience no difference has been observed.

A. 68.—The different processes are so similar that this has not been done.

A. 69.—It is not.

A. 78.—As there is no law applicable to this factory we have no suggestions to make.

A. 79.—In regard to the present inquiry we have only to remark, that if the result should show that legislative interference is really necessary, we hope such a measure as the one proposed will not be extended to flax factories, where, in its present shape, it is certainly not required, as the hours of labour would be thereby reduced to an extent altogether uncalled for, and penalties would be thereby imposed on the proprietors of a nature the most unjust and oppressive.

JOHN and GEORGE PATON.

#### ANSWERS of WILLIAM TAMNON, Manager for Richards and Company, Montrose.

No. 89.

*William Tamnon.*

A. 1.—Montrose, county of Forfar.

A. 2.—Flax and tow spinning.

A. 3.—This mill was erected by Mr. Ford in 1805, enlarged in 1813 or 1814; the mill was unemployed for several years after that time, and was bought by this company in 1817, by whom it has been since worked under the present manager.

A. 4.—Steam; two engines; one twenty-five horse power, and the other fourteen horse power.

A. 5.—The ventilation is by windows and doors, which are constantly open to a certain extent in fine weather.

A. 7.—The overseer of each room attends to the opening and shutting the windows, according to the weather, as he is always in the room.

A. 8.—They are all fenced off with wooden boxes.

A. 9.—Water-pipes with clean water are provided in each floor of the mill, where the workpeople can wash themselves, and cupboards and chests also for holding their clean clothes,

(APP.—A. 1.)

Q 3

Forfarshire.

William Tamnon.

clothes, which they are allowed to put on before their meal-time commences; in addition, there are regular water-closets in each floor of the mill, which were built at its first erection.

A. 10.—We have only one of nine years of age, and she is kept out of charity; there are only four at ten years of age, and they are all the children of persons employed about the works. There are about 260 persons employed altogether in this mill, and but a small proportion under twelve. Some of them may have been domestic servants, but we are not aware of any having been at trades.

A. 11.—The employment of children under twelve years of age is not from our choice, but generally to assist the parents employed about the work.

A. 12.—The recent alterations in machinery have not rendered it necessary to employ more young children than formerly.

A. 13.—None.

A. 15.—Some may be orphans, but if they are young they are looked after by the kirk session or elders. They mostly live with relations, and we neither lodge nor maintain them.

A. 17.—The usual hours of work for five days in each week is thirteen hours and twenty minutes; but on Saturdays we only work ten hours and a half. This arrangement is made at the request of the hands themselves.

A. 19.—The longest time the hands are ever employed is just preceding the market or fair days, which happen twice a year, when the hands voluntarily work fourteen hours twenty minutes to get a holiday on the fair-days. We have never worked extra hours to make up lost time by breakage of machinery.

A. 20.—The total number of working days was 312 days; but we lost two days by a breakage of the main shaft of the large engine. A part of the hands thus thrown idle were transferred to work on the machinery driven by the small engine for one night, but in no case have the same hands worked night and day.

A. 21 & 22.—It has been already stated in A. 4. that this mill contains two steam-engines, each driving separate machinery; the total number of hours worked by each engine would have been three thousand nine hundred and fifty-eight hours forty minutes, being an average of twelve hours forty-one minutes and a quarter per day. The breakage explained in A. 20. lost twenty-one hours thirty-five minutes to the large engine, of which we recovered only nine hours on the small engine by working one night with hands which had not worked during the day. In addition to the above the large engine was worked two nights, one ten hours, the other nine hours, by the Craigs Mill hands.

A. 23.—Thirteen hours is the nominal time, but the maximum average is, as above stated, twelve hours forty-one minutes and a quarter.

A. 24.—The greatest number of hours has been fourteen hours twenty minutes, but this has been explained to arise from preparing for a holiday at the fair-days, and in no other instance. Vide A. 19.

A. 26.—No excess is necessary from the nature of the work, and is never resorted to but for the accommodation of the hands themselves, and with their ready concurrence.

A. 27.—In the year 1825 we worked fourteen hours per day for one summer only, for which we paid extra wages; we discontinued it the same year.

A. 28.—The cost of producing a given quantity is now lower than at the above date, because our wages are much reduced since then; but the cost of production must always be increased by the reduction of working time unless wages are reduced in a still greater proportion, because the charges for plant and management tell more seriously on a diminished production.

A. 29.—The only inducement to the manufacturer to contravene any existing law must be his profit; but we are not aware of any existing law for the regulation of flax-mills.

A. 31.—If we required to work extra hours we could not get a relay or fresh set of children under twenty-one years of age, because the population of Montrose is too limited to produce them, the numbers required to be a relay for a mill of our extent being so large.

A. 32.—The experiment has not been tried by us, and cannot be, for the reason given in last answer.

A. 33.—We have never employed a night set of hands, as we have no night-work.

A. 37.—The effect of a reduction in the working hours must ultimately be a reduction of wages to the hands employed, because the quantity of yarn produced from a given amount of plant being less, we could not continue to pay the same wages to the hands.

A. 38.—No artificial temperature is required in our mills, which can be carried on equally well in all temperatures. No arrangements are made to produce artificial heat.

A. 40.—There is no difference in the temperature nor in the hands employed.

A. 41.—The only times in which any of our works have been employed at night have been fully explained at A. 19, 21, 22, &c.

A. 42.—The circumstances under which we worked night-work have been often referred to as mere casualties, and not part of a regular system. We cannot trace the number of hands correctly, but it never was one half of them: in the case where the Craigs hands worked two nights here the number of hands was seventy.

A. 43.—Never exceeding ten hours, including twenty minutes for refreshment.

A. 46.—None. The various processes of flax and tow spinning can be abandoned and resumed at any time.

A. 47.

- A. 47.—We do not require continuous work, as explained above.
- A. 50.—With gas.
- A. 51.—The same as during the day, viz. windows and doors.
- A. 52.—We have no night-work, except in the cases referred to in A. 21 & 22.
- A. 53.—Half an hour for breakfast, and forty minutes for dinner.
- A. 54.—The whole hands are allowed to leave the works at meal-times; if any remain it is by choice.
- A. 55.—The workpeople please themselves entirely.
- A. 56.—Every person has the power of taking their meals out of the manufactory. None are required to take them in.
- A. 57.—We find the children obedient in general, and do not require any means to enforce obedience beyond occasional small fines or ultimate dismissal.
- A. 58.—They are not, to the best of our knowledge.
- A. 62.—Corporal punishments are forbidden, and we have never heard an instance of their infliction.
- A. 63.—The overlookers are strictly forbidden to punish any children, and it has never been considered necessary to issue any written instructions to that effect.
- A. 64.—Never, from the commencement of the works.
- A. 65.—None of them.
- A. 66.—We uniformly find that those spinners who begin young become the most skilful and handy, and there are very few instances among those who begin at an adult age where the spinners are so skilful and active as those who begin younger; we never attempt them, and cannot refer to any instances in the annexed list. In other branches of the manufacture we prefer them from sixteen to twenty years of age, except the weighers in the carding-room.
- A. 67.—The health of the people employed at these works during the last ten years has been always good, and we are not aware of any change in their health during that time; we consider them uniformly healthy.
- A. 68.—No change or selection is necessary in varying the employment of the hands from any effects of particular processes, as no injury whatever is produced from any process.
- A. 69.—We are not aware of any Act referring to flax spinning-mills, and do not yet see any necessity for one.
- A. 73.—We know of no mills in our neighbourhood but flax-mills, and we know of no law for the regulation of them.
- A. 78.—We know of no law empowering a scale of penalties for securing obedience to its provisions. The proprietors and manager of these works have sufficient penetration to discover that the interests of masters and servants are too closely interwoven to require penal regulations to stimulate them to treat their hands well, and they refer the Commissioners to a personal investigation of their works, to show at least that in their case all legislative provisions or penal regulations are unnecessary and uncalled for.
- A. 79.—The replies given to this string of questions embody our general opinions on each subject brought under our notice, and we have nothing further to add to them here.
- Montrose, 14th May 1833. WILLIAM TAMNON.

Forfarshire.

William Tamnon.

## ANSWERS of JOHN ROXBURGH, Strathmartin.

No. 90.

John Roxburgh.

- A. 1.—Parish of Strathmartin, county of Forfar.
- A. 2.—Spinning flax; nothing else.
- A. 3.—Originally a bleachfield, but turned into a flax tow-spinning mill in 1806, and afterwards in 1824 into a flax-mill.
- A. 4.—Partly steam, partly water; the latter very irregular; and the former being insufficient of itself to propel the whole machinery, the loss in the summer months has been very considerable, equal to a fourth part of the production. Extent of power, steam and water, ten horses.
- A. 5 & 6.—No specific provision other than the windows, or casual means, which are under the control of all or any of the people.
- A. 8.—All parts of the machinery considered dangerous are fenced off.
- A. 9.—No particular provision is made or thought necessary in the mill, as the dwelling houses are situated within one hundred yards of it, where these conveniences are provided for them.
- A. 10.—Only one at present as low as eleven years of age, and whether any of the others had been at other trades I cannot say.
- A. 11.—The nature of the work does not require the employment of children under twelve years of age.
- A. 12.—The recent alterations in machinery have not caused any difference in respect of the employment of young children.
- A. 13.—I employ no apprentices.
- A. 15.—None of the children at present employed are orphans, and the parents reside at the work.
- A. 16.—The children are under the superintendence of their parents.
- A. 17.—The usual number of hours each day that the persons above twenty-one years are employed is thirteen.

(APP.—A. 1.)

Q 4

A. 18.

Forfarshire.

*John Roxburgh.*

- A. 18.—Those under twenty-one the same.  
 A. 19.—Beyond the regular time, say thirteen hours, twenty to thirty minutes are sometimes added, which is deducted from Saturday.  
 A. 20 & 21.—Three hundred and five days. No record kept of the hours, many being lost for want of water.  
 A. 22.—All must go or stand together.  
 A. 23.—No record kept, but it will not exceed eleven.  
 A. 25.—The usual hours exceeded at night only when time is lost by day.  
 A. 26.—By water-power irregularity is unavoidable.  
 A. 27 & 28.—Some years ago the hours were rather longer, but at that time wages were rather higher; therefore the difference is not great in the cost of production.  
 A. 29.—Surely nothing but a view to profit could induce a spinner to work extra hours or by night without any change of hands; but no such practice obtains here.  
 A. 31.—Require no extra hours.  
 A. 33.—No night-work done here.  
 A. 37.—Of opinion that a reduction of the hours of work would increase the cost of that work in the same proportion as the time is shortened.  
 A. 38.—No particular degree of heat is required. The lower the temperature the better for the work.  
 A. 50.—By oil-lamps.  
 A. 51.—Same as by day.  
 A. 53.—One half hour for breakfast, same for dinner, to all.  
 A. 54, 55, & 56.—All leave the work at meal-times.  
 A. 57.—If they will not attend to their work, no other means are resorted to but dismissal.  
 A. 58.—Are not allowed.  
 A. 62.—Positively forbidden them.  
 A. 64.—No complaints have been made or proceedings taken before a magistrate against me or any of my foremen on the subject of any punishment alleged to have been inflicted on any person about this work within the last twenty-seven years.  
 A. 65.—They do, and care is taken to enforce cleanliness when necessary, and care is also taken to prevent immorality.  
 A. 67.—No alteration, so far as I observe.  
 A. 79.—Cannot see the propriety of any legislative interference, when the servant, if dissatisfied with the situation, may leave it at fourteen days notice.

JOHN ROXBURGH.

Lanarkshire.

No. 91.

*Hugh Cogan.*

## LANARKSHIRE.

## ANSWERS of HUGH COGAN, of the Firm of John Bartholomew and Co.

- A. 1.—Barony, parish of Glasgow.  
 A. 2.—Cotton-spinning and weaving by power.  
 A. 3.—Cotton works in 1800, the old works, since a good deal remodelled, in 1831, and the new cotton work wholly erected in 1823; weaving factory about 1795.  
 A. 4.—Steam-power only. Cotton-mill engine sixty horse power, weaving engine twelve horse power; in all, seventy-two horses.  
 A. 5.—The card-rooms are ventilated by funnels in two or three places from each room; also the scutching-rooms; which carry off the dust so as not materially to affect the air in the lower part of the room in which the workers move.  
 A. 6.—In the spinning-rooms and weaving-work by the windows only.  
 A. 7.—In the card and preparing rooms, where the fanners which supply the funnels go by power, the ventilation goes constantly on whilst the engine goes, and the people are at work; in the spinning-rooms an opening pane in each window is regulated by the spinners themselves.  
 A. 8.—All fenced off.  
 A. 9.—We have never considered this necessary. A number of the hands, females, viz. in order to appear clean out of doors, change their upper garments when they come into the work, substituting a working-dress there, which dress is generally cleaned weekly.  
 A. 10.—Rarely under ten years; they generally begin with us.  
 A. 11.—Not absolutely, although for some parts of the work younger hands answer fully better.  
 A. 12.—There is no difference in our experience.  
 A. 13.—No.  
 A. 17 & 18.—Twelve hours, and nine on Saturday.  
 A. 19.—Never longer than twelve hours.  
 A. 20.—At New Year's day and the annual city fair two or three holidays are always allowed, and there are also three sacramental fast-days yearly, during which we shut our works; in whole, we scarcely exceed three hundred working days during the year.  
 A. 22.—Our works always go the full time, and the whole go together.

A. 23.

A. 23.—Eleven hours and a half.

A. 24.—No different sets of children, and the children are always employed along with the other workers.

A. 25.—Never exceeded.

A. 27.—At one time we averaged twelve hours per day; never more.

A. 28.—Gradual improvements in machinery render it difficult to answer this question.

A. 29.—Saving of rent, or return from the large capital necessarily invested in such premises.

A. 31.—The objection is not insurmountable; the employment of two sets of hands in completing the same work obviously renders it difficult to fix upon the proper individual when faults are found to exist.

A. 32.—Never by us.

A. 37.—Any important additional reduction of the time would enhance materially the cost of production by increasing the rental on the quantity produced, even although the wages of those hands who are paid by the day were reduced in proportion to the diminished time, and such a change increases the difficulty of competing with foreigners.

A. 38 & 39.—We never require to exceed 75°; our more usual temperature, however, is about 65°.

A. 50.—Gas.

A. 51.—The same as during the day.

A. 52.—We observe no bad effects; of course we (as before observed) employ none during the night.

A. 53.—Three quarters of an hour; but no fine imposed, unless habitually late.

A. 54.—Almost all.

A. 55.—Never for the convenience of the manufactory.

A. 56.—We very rarely permit any meal being taken within the walls, and when allowed, it is altogether for the convenience of the worker.

A. 57.—We use no coercion; if a hand is found unfit for his work, we part with him as soon as possible.

A. 58.—Never.

A. 65.—Very few of them.

A. 66.—Every thing depends on the workers, as a general rule; the old Scotch saying, "Learn young learn fair," holds true in this as in every thing else.

A. 67.—The general arrangement of machinery recently put up, the more elevated ceilings, and more airy rooms of such works have all conspired during the last twelve or fifteen years to improve the healthfulness of such works.

A. 69.—Yes.

A. 73.—We never trouble ourselves with the operations of others, however near to us.

A. 77.—We have always been on the best footing with our workers, and we have no reason to think that they would decline giving any evidence on our account.

A. 78.—We must leave this to the collective wisdom of the nation after they have the result of the present inquiry before them.

HUGH COGAN.

#### ANSWERS of PETER BOGLE, Parish of Barony, Glasgow.

No. 92.

Peter Bogle.

A. 1.—Bridgeton, parish of Barony and county of Lanark.

A. 2.—Cotton-spinning.

A. 3.—The work was erected in 1823, and commenced operations in 1825, for its present purpose.

A. 4.—Steam-engine of thirty-two horse power.

A. 5.—The provision for ventilating the factory is by means of opening panes in the windows, and its effects are such as to air the rooms properly.

A. 6.—By an opening pane in each window.

A. 7.—The ventilation is regulated by the workpeople and the overlookers.

A. 8.—All dangerous parts of the machinery are fenced off.

A. 9.—Every arrangement for the health and convenience of the workpeople is strictly attended to; but as the nature of their work is such as to require no change in their clothing, (with the exception of substituting a clean for a soiled apron upon their leaving the work,) we have no arrangements for that purpose. With regard to an arrangement for washing their persons we have none, as it is distinctly understood that they wash themselves at home. For those who are incidentally employed in cleaning the machinery there is a place appropriated to wash their hands, which is open to all. These arrangements have been since the commencement of the work.

A. 10.—None are employed under nine years of age. The only trade we know of that the children have been employed at is hand-loom weaving.

A. 11.—The nature of the work does not require the employment of children under twelve years of age.

A. 12.—The recent alterations in machinery enable us to employ a greater proportion of young people, but we consider it by no means requisite that they should be under twelve years of age.

(APP.—A. 1.)

R

A. 13.

Lanarkshire.

Peter Bogle.

A. 13.—No apprentices employed.

A. 15.—We do not lodge and maintain any of the children.

A. 17.—Twelve hours and ten minutes during five days of the week, and on Saturday eight hours and ten minutes. Working the additional ten minutes on five days is at the especial request of the workers, which enables them to complete their day's work on Saturday before going to dinner.

A. 18.—Twelve hours and ten minutes during five days of the week, and on Saturday eight hours and ten minutes. All work the same hours.

A. 19.—Our mill was never at work during the period specified more than twelve hours and ten minutes.

A. 20.—Three hundred and seven days and a half.

A. 21.—Three thousand five hundred and forty-two hours.

A. 22.—All the parts of the work are carried on at the same time.

A. 23.—Eleven hours and a half per day.

A. 24.—Twelve hours and ten minutes.

A. 25.—Upon two occasions, when reform processions took place, the workers got leave to attend them on condition of making up the lost time, which they did by working some additional hours on the following Saturdays; but the lost time was not all exacted, as we disapprove of keeping the work open extra hours.

A. 26.—As we have no other mode of exacting regular attendance, we make the workers work up the time lost by their absence in working extra hours. In this respect we consider it unavoidable.

A. 27.—No.

A. 28.—Although since our commencing business the hours of working have been all along the same; still we are satisfied that if the daily hours of labour were reduced, the cost of production would be proportionably increased.

A. 29.—One great inducement to the manufacture in having his work done by one set of hands is to enable him to make each person responsible for the quality of the work produced by him; and as the work is of such a nature that it cannot be laid aside to make room for a new set of workers, and resumed again by the former set, but must be continued in the process by the set following, it would be impossible to make such a distinction between the work of the two sets of hands as that each would be responsible for his own. There is another great inducement for continuing the same set of hands; from the nature of the machinery it would be subject to great damage and liable to much tear and wear if neglected to be properly cleaned and oiled, and it must be evident that there would be very great difficulty in getting two sets of hands to take the same care of it that one would.

A. 30.—We are of opinion that the limitation of the hours of work would increase the expence of production in all branches of trade where there is a capital sunk in public works.

A. 31.—The chief objection to having relays of the people described is the difficulty of making each set responsible for the quality of work, as, from the nature of cotton-spinning, the work of each set cannot be laid aside, and resumed on their return. Another great objection to changing hands is the additional tear and wear it would cause to the machinery from the difficulty of getting two sets of hands to take the same care of it as one would.

A. 32.—As we work no extra hours, this question is inapplicable to us.

A. 33.—We never have worked through the night.

A. 36.—The prohibition of night-work would give us great satisfaction, as it would put the trade on an equal footing.

A. 37.—It would be extremely prejudicial to the trade, as it would give a decided advantage to the foreign manufacturer, and cause a reduction in the workers wages at home.

A. 38.—Usual temperature 76° and 80°; we consider 76° as low as the nature of the process will allow.

A. 39.—78°.

A. 40.—There is no process in the work that requires an increased temperature.

A. 47.—We have no process that requires continuous attention.

A. 50.—No night-work; during the winter in the morning and evening lighted with gas.

A. 51.—No night-work, but the provision when the work is lighted in the morning and evening during winter is the same as during day.

A. 52.—As we have no night-work, we cannot give a positive answer.

A. 53.—Three quarters of an hour to breakfast, and three quarters of an hour to dinner, to all the workers.

A. 54.—It is understood that all the workers should leave the mill at meal-times, but at the special request of a few who live at some distance these are allowed to take their meals in the work.

A. 55.—Those who take their meals in the work do so entirely for their own convenience.

A. 56.—The effect would be that those persons who take their meals in the work would be obliged to take them in the fields, or pay some one else for the privilege granted by us.

A. 57.—Admonishment, and if that has not the desired effect, dismissal.

A. 58.—No corporal punishment allowed in the work.

A. 62.—Corporal punishment is strictly forbidden, and any person punishing a child is dismissed from the work.

A. 64.

A. 64.—No complaint was ever made either against ourselves or servants, consequently no proceedings have ever been instituted.

A. 65.—Our workpeople live in houses of their own; we therefore have no control over their domestic arrangements.

A. 66.—Those who have been employed in the works from infancy are decidedly superior in skill, but we have observed no difference in general character between them and those who have entered the work at a later period of life.

A. 67.—We believe that during the last ten years there has been no material change in the general health of the people, which has all along been uniformly good.

A. 68.—From the uniform nature of our work, we do not consider it necessary.

A. 69.—We consider it so.

A. 70.—Never.

A. 73.—We believe they do, but know of no steps taken to enforce obedience.

A. 74.—We do not recollect of having heard of any such case.

A. 77.—We have no reason to believe that the workers would be afraid of giving evidence; we are perfectly satisfied that evidence could easily be obtained.

A. 78.—We can suggest no other scale of penalties, or any other means which would secure greater obedience to the present law, which we believe is well attended to in this district.

A. 79.—The only observation we would make with reference to the subject of the present inquiry is, that any farther restriction of the present hours would hold out a greater inducement to people to evade the law by solely employing workers above the interdicted age.

PETER BOGLE.

Lanarkshire.

Peter Bogle.

#### ANSWERS of J. K. CLARK, for the Barrowfield Weaving Company, Glasgow.

No. 93.

J. K. Clark.

A. 1.—Barony parish of Glasgow and county of Lanark.

A. 2.—Power-loom; cotton cloth only of light fabrics.

A. 3.—The large body of the work was entirely built in 1824.

A. 4.—Two steam-engines of fourteen horse power each.

A. 5.—We have large ventilators in the roofs and gables.

A. 6.—The ventilation depends on these ventilators, but in addition we have it in our power to open several windows hinged for the purpose.

A. 7.—The ventilators are regulated entirely by the operatives, and for the purpose only of the comfort of the workers. The work is entirely one story, and lighted from the roof.

A. 8.—Any parts of the machinery that are dangerous are out of the way or fenced off.

A. 9.—Every worker has access to troughs of cold and hot water for washing themselves. This convenience the work has always. The mill is swept three times each day, and the floor washed with hot water every alternate Friday. These arrangements have long existed in the work. The sweeping always, and the washing for three years, being when we put in a deal in place of a brick floor.

A. 10.—We do not know that any in the work are under twelve years of age, and we do not know that any have been employed at other trades.

A. 11.—We do not require hands under twelve years.

A. 12.—No alterations that have taken place in machinery cause us to employ a greater or less proportion of children under twelve years.

A. 13.—No apprentices.

A. 15.—All the workers come from their own, their parents, or guardians dwelling house, to the work, and are in no shape under our control excepting during working hours.

A. 17.—Our work continues twelve hours each day excepting Saturdays, which are nine hours.

A. 18.—Same time for young persons as adults.

A. 19.—We never have wrought more than twelve hours per day during the last year, or nine hours on Saturdays.

A. 20.—Three hundred days of work during last year.

A. 21.—Three thousand four hundred and fifty hours of work during last year.

A. 22.—All the departments of our work continue during the whole of the twelve hours.

A. 23.—Eleven hours and a half is the average of work for each day of the week during last year.

A. 24.—We have no sets of workers.

A. 25.—We have never exceeded the hours.

A. 26.—We do not require to exceed the hours.

A. 27.—Previously to the present Time Act we wrought a half hour longer each day, and on Saturdays two hours and three quarters longer, than at present.

A. 28.—The cost of our cloth is enhanced by our hours being shortened.

A. 29.—The wish for unfettered hours by the manufacturer is simply to produce more cloth at one expence.

A. 30.—The cost of our cloth is increased just in proportion as our hours of work are diminished, in so far as regards our cost from capital sunk in buildings and machinery.

A. 31.—No objection to relays of young persons.

(APP.—A. 1.)

R 2

A. 32.

Lanarkshire.

J. K. Clark.

- A. 32.—Young persons no more than adults will take any less than full employment.
- A. 33.—We have had no experience of night-work.
- A. 37.—We are perfectly certain our set-wage hands will not accept of less wages per day, though our time should be reduced one, two, three, or four hours; our quantity being lessened, with the same invested capital, will cause our cloths to cost us more.
- A. 38.—We never heat our work but to render it comfortable to the persons employed, the machinery requiring no extra heat.
- A. 39.—No degree of heat required to the apartment farther than for comfort.
- A. 40.—No process requiring the apartment to be heated above comfort.
- A. 50.—In winter we light with gas mornings and evenings.
- A. 53.—The time for meals is, to all the hands, three quarters of an hour to each for breakfast and dinner.
- A. 54.—They are all allowed and desired to go to their houses to meals.
- A. 55.—When they do not, it is entirely a toleration to the worker.
- A. 56.—Every worker must be the better for going home to his meals rather than remain in the factory.
- A. 57.—No means are required to force obedience by the young persons. They know they will be dismissed the work if refractory.
- A. 58.—There is no corporal punishment here.
- A. 62.—We do not know of punishments being practised in the works in or near to Glasgow.
- A. 64.—We never were complained upon for inflicting punishments; we never heard of such complaint against any manufacturer.
- A. 65.—The workers do not live in houses belonging to us, but in houses rented from proprietors in the neighbourhood.
- A. 66.—We do not think we can throw any light on this subject, as we do not employ very young persons.
- A. 67.—We do consider our factory exceedingly healthy, and we consider that it is more so since we put away the brick floor three years ago, and put in a deal floor.
- A. 68.—We have no injurious processes in our manufacture.
- A. 69.—We are entirely regulated by the present Act.
- A. 70.—We never were informed against.
- A. 73.—We consider it invidious to speak of our neighbours; but we think, when an act is passed, that the legislature ought themselves to look after the enforcement of its provisions. We consider it speaks highly for our countrymen that, although there may have been infringements of the running Act, no one has been found an informer, notwithstanding the bounty offered, so far as we have heard.
- A. 74 & 75.—No person we ever heard of has been summoned before a magistrate, and of course never heard of any being fined.
- A. 76.—Never heard of any evidence being required.
- A. 77.—We do not think any worker would be deterred from giving evidence by fear of the master.
- A. 78.—We have a great dislike to penalties and to private informers, and also to legislative enactments, upon the principle already acted upon. We think that other methods might be discovered to protect young persons against tyranny without enactments that force us to reduce the hours of adults equally with those to which the law limits the employment of children.

J. K. CLARK.

No. 94.

John Ewing.

## ANSWERS of JOHN EWING for the Mile-end Spinning Company, Glasgow.

- A. 1.—Village of Mile-end in the Barony parish of Glasgow.
- A. 2.—Cotton spinning.
- A. 3.—The work containing the carding and spinning machinery was erected about twenty-two or twenty-three years ago; the other operations carried on in an addition made about fourteen years ago.
- A. 4.—Steam-power.
- A. 5.—There is an opening pane of glass in every window, thirty-six windows in each room of the carding and spinning departments; besides, there is a ventilating chimney in every spinning-room.
- A. 6.—Opening of windows.
- A. 7.—At the control of those employed.
- A. 8.—Fenced off.
- A. 9.—We have a pump-well on the premises, where they are permitted to wash.
- A. 10.—Nine years; the children are almost wholly employed by the operative spinners.
- A. 11.—I should think not under eleven or twelve years.
- A. 13.—We do not employ apprentices.
- A. 17 & 18.—Sixty-nine hours weekly.
- A. 19.—Twelve hours and a half.
- A. 20.—The whole year, with the exception of nine or ten days.
- A. 21.—Sixty-nine hours weekly, with the exception of the above nine or ten days.

A. 22.

- A. 22.—Wholly carried on at the same time.
- A. 23.—Eleven hours and a half each day; during the last year nine or ten days excepted, when the mill did not work.
- A. 24.—Twelve hours and a half.
- A. 25.—In order to make up lost time, but this was of rare occurrence.
- A. 26.—It may be avoided only by not making up the time lost by accidents or otherwise.
- A. 27.—Yes; before we were limited by Act of Parliament we wrought it twelve hours and a half each day.
- A. 29.—In order to bring his manufacture into the market at a cheaper rate and in greater quantity.
- A. 33.—We have never employed a night-set of hands.
- A. 37.—It must either increase the cost of the article manufactured, or reduce the wages of the persons employed.
- A. 38.—The average heat is not more than 75° or 76°, although it may occasionally be a little higher or a little lower; the lowest heat necessary may be 70° or 72°.
- A. 39 & 40.—We require no higher degree of heat than is mentioned above for the carding and spinning departments, where one hundred and ninety hands are employed; a lower degree of heat is sufficient for the other processes.
- A. 50.—With gas, morning and evening from the middle of September till the latter end of March.
- A. 53.—Forty minutes to breakfast, and the same to dinner.
- A. 54, 55, & 56.—They all leave the work at meal-time.
- A. 57.—Dismissal in case of disobedience.
- A. 58.—No corporal punishment permitted.
- A. 64.—No complaints.
- A. 65.—They do not live in the houses of their employers.
- A. 66.—I am unable to answer this query, but it must be more difficult to learn a grown-up person than one who has commenced learning in childhood.
- A. 67.—There is neither improvement nor deterioration that I am aware of.
- A. 68.—It has been done when the worker requested it, but this is of rare occurrence.
- A. 69.—It is.
- A. 73.—I cannot positively say, but I believe they generally conform to the Act.

JOHN EWING.

Lanarkshire.

John Ewing.

## ANSWERS of H. HOULDSWORTH &amp; SONS, Anderston, Glasgow.

- A. 1.—Anderston, in the barony parish of Glasgow, county of Lanark, Scotland.
- A. 2.—Cotton-spinning.
- A. 3.—Two mills; one erected in 1801, the other in 1805.
- A. 4.—Steam-power; three engines, equal to a power of eighty horses, sixty of which are employed in spinning, the remaining twenty horses in driving a machine-shop and foundry.
- A. 5.—All our windows have openings, the greater number equal to eighteen inches square, and others two panes. The largest of our mills has twenty-four windows in each room of one hundred and two feet long by thirty-eight feet broad. The number of workers employed in each of these rooms is twenty-four to twenty-eight. The ventilation is ample, provided the workers attend to our instructions to keep the windows open, but which they seldom do. We, therefore, are about to erect in a new mill we are at present building in the country a pump or fanner to be constantly worked by the moving power, which will draw its supply of air from the heated rooms through the necessary pipes.
- A. 7.—Overlookers as well as operatives are strictly enjoined to keep the windows open.
- A. 8.—All the parts of the machinery which are considered by the proprietors as dangerous to the workers, and which can be fenced off consistently with the good working of the machines, are so fenced off.
- A. 9.—We have no apartments allotted to the workers for the changing of their clothes on entering the manufactory, or of washing themselves; but the workers are in the habit, of their own accord, of making changes in their habiliments on entering and leaving the factory.
- A. 10.—We seldom employ any hands under eleven or twelve years old. The children under these ages are employed by the spinners, and are frequently taken in without our knowledge. When we observe any child whom we suspect is below nine years old, its parents are questioned, who almost universally state the age to be upwards of nine. Their employment is to clean the dust and cotton flowings off the machinery, which they effect in five or ten minutes four or five times each day. They also carry messages to the overlookers, and perform other little necessary duties, which would otherwise have to be done by the spinner or one of his assistants, which would interfere with his produce, and consequently with his wages. Children at nine, or below that age, are frequently put to the loom, and as draw-boys or assistants to hand-loom weavers, and frequently leave these employments to get into cotton-mills.
- A. 11.—The nature of the work does not require children under twelve years of age; but as every operative spinner requires one irregular hand to clean and send messages, a child of

(APP.—A. 1.)

R 3

nine

No. 95.

H. Houldsworth  
& Sons.

Lanarkshire.

H. Houldsworth  
& Sons.

nine or ten is nearly as useful for this purpose as one of twelve or above, and the lower rate of wages is the only inducement for their employment. These young children generally get at first from 1s. to 1s. 6d. each week, and after one or two years experience will get 2s. to 2s. 6d. per week.

A. 12.—We are of opinion that the improvements in mule-spinning machinery require a less proportion of children under twelve years.

A. 17.—Twelve hours per day and nine on Saturday.

A. 19.—Twelve hours and a half.

A. 20.—Old mill three hundred and three days, and new mill three hundred days.

A. 21.—New mill three thousand four hundred and one hours and three quarters, and old mill three thousand four hundred and forty-eight hours and thirty-three minutes.

A. 22.—On the 17th, 18th, 21st, 22d, 23d, and 24th January 1833 the new mill card-room worked half an hour more each day than what is noted — short of preparation.

A. 23.—Eleven hours and a half.

A. 24.—Twelve hours and a half.

A. 25.—At various times, when a stoppage took place from a shaft breaking, the engine going wrong, or a holiday allowed the workers at their request, on which occasion half an hour additional per day was sometimes worked up during the following ten days, a whole hour for ten days being allowed by the Act.

A. 26.—It is our opinion that the moving power driving cotton machinery should be limited, under all circumstances, to a stated time daily, and no lost time, from whatever cause, worked up; otherwise any legislative measure will be as inoperative as the present and previous Acts have been, and any other clause a new Act may contain will not only be ineffectual, but will greatly lessen the advantages which the promoters intend, by affording the avaricious opportunities of evasion, by working longer time, and thereby obtaining an advantage over those who are anxious to conform to the law.

A. 27.—Previous to the Regulation Act we worked our mills seventy-two hours per week.

A. 28.—We consider our cost of production has been enhanced by the reduction in the hours of labour.

A. 29.—Owing to the great cost of cotton-mills the interest on the capital alone is considerable, which, added to the incidental expences, form a sum nearly equal to the whole wages paid to the workers in any one year; therefore any additional yarn produced by working extra hours must benefit the master by reducing the cost per lb.

A. 30.—The interest on our capital and incidental expences amount, on an average, in our mill, to about 8½d. per lb.; if our working hours were reduced to eleven per day, these charges would be 9.45d. per lb., if to ten hours, 11.55d. per lb. Thus by reducing our hours of labour to nine hours per day, our cost would be increased 3d. per lb. on yarn worth 2s. 6d., or ten per cent. This supposes the wages of our workers reduced in proportion to the hours worked, which reduction probably might not wholly be effected.

A. 31.—We only see one objection to this, that in towns there would be a difficulty in preventing the same children from working in two factories on the same day.

A. 32.—Not been tried by us, for we have never heard of the children being fatigued with their work. On the contrary, when, by any accidental stoppage, the workers are not required in the mill, we have the greatest difficulty in keeping out the young children. If there be any symptoms of fatigue in those employed by us, it is by the adults, and not by the children.

A. 34.—We have never employed more than one set.

A. 36.—It would only affect us by stopping those who do practise it, and to that extent relieving the markets of the extra produce.

A. 37.—As previously stated in A. 30, our cost of production would be materially increased, and consequently the price of the article produced would be increased also, and thus we would be giving a bonus to foreigners to increase their manufactories. Gradually as this change took place abroad would we find it necessary to reduce the workers wages, and then the price of the manufacture in order to force sales; and the ultimate result would be great misery among the working classes in this country, and an increased demand for labour abroad, where no legislative enactments fetter the community.

A. 38.—The usual temperature in our mills is sixty-four to seventy-four degrees. The comfort and feelings of the workers, particularly the children, is our principal guide; they being thinly dressed, and having no labour beyond locomotion, require a temperature that will enable them to use their fingers with freedom and facility in order to piece the broken threads, but without producing perspiration, which would spoil the work. Heat is not essentially necessary in any of the processes in our manufacture beyond that which the hands require. The difficulty of regulating the heat is the principal cause of its being higher than is necessary.

A. 39 & 40.—The spinning department, in which two thirds of the workers are employed, requires the greatest heat from the causes above stated, the operation of the other processes being less delicate, and the workers generally not less than fourteen years of age.

A. 50.—Gas is our light when required.

A. 51.—The same as in the day, that is, by openings in the windows; it is in contemplation however to effect this object by opening a communicating pipe after the mill is stopped at night from the pipe through which the foul air is drawn by the fanner, as explained in

A. 5.,

A. 5., and the chimney of the steam-boilers; the heat which the chimney has acquired through the day will produce a strong draft from the room during the whole night.

A. 52.—Have had no experience.

A. 53.—All hands in our mills have half an hour for breakfast and one hour for dinner.

A. 54.—Our orders are that none remain during meal-hours.

A. 57.—Finding fault, and if that fails discharging them; flogging or whipping is not permitted for any fault with their work.

A. 60.—When any worker who is under the age of legal correction commits violence upon others to the effusion of blood, or commits any other offence which would subject him to legal punishment, we sometimes strap them, or order the door-keeper to do so in our presence, rather than discharge them, provided the circumstances of his parents are such as to render it probable by our doing so he would acquire idle and other bad habits.

A. 61.—Neither.

A. 62.—Yes; and in severe cases uniformly dismiss an adult person who takes upon himself to strike another in the mill or out of it, if it be in consequence of any thing done in it.

A. 63.—None, except general instructions to see that no child be improperly used.

A. 65.—We have houses in which some of our workpeople reside, but they are not required to do so; and we pay a medical man to attend such as are unable to pay one themselves. An inspector visits these houses always weekly, and if required oftener, to enforce cleanliness, and should they be found fault with frequently for uncleanness or improper conduct without effect they are dismissed.

A. 66.—The piecers, who in after-life are spinners, are the only description of hands that require to begin early in life; they acquire a facility from commencing when young that a grown-up person, or one even at fifteen or sixteen, can seldom if ever acquire; if a child begins at nine or ten it will earn its own subsistence at eleven or twelve.

A. 67.—We have no data here except our own belief, and we are not aware of any difference whatever except what may arise from more attention being now paid to the internal management of our mills.

A. 68.—No; we may observe however, that last year, when cholera was raging all around us, in one of our buildings, containing at that time sixty-two families, or about four hundred and fifty persons, all going in at one door, and those the poorest of our workers, not a single case occurred.

A. 69.—Yes.

A. 73.—Some of them, we believe, do not, and we are not aware that any steps have ever been taken in consequence of disobedience. The interests of those willing to conform to the law would have induced them to put a stop to the illegal practice of others working longer time than the law allows, had it been possible in practice to have carried on their works without being themselves daily exposed to the same consequences from violation of the minor clauses of the Act by their workpeople, contrary to general orders; this circumstance alone has induced avaricious men to commit the most flagrant violations openly and with impunity.

A. 77.—We are of opinion that the workpeople would be more afraid to give evidence in favour of than against their masters.

H. HOULDSWORTH and SONS.

#### ANSWERS of CHARLES KIRKWOOD, for the Barrowfield Weaving Company, Glasgow.

No. 96.

Charles Kirkwood.

A. 1.—Barony parish of Glasgow and county of Lanark.

A. 2.—Power-loom; cotton-cloth only, of light fabrics.

A. 3.—The large body of the work was entirely built in 1824.

A. 4.—Two steam-engines of fourteen horse power each.

A. 5.—We have large ventilators in the roofs and gables.

CHARLES KIRKWOOD.

ANSWERS of ROBERT JOHNSTON, Messrs. May and Dennistoun, Glasgow.

Lanarkshire.

No. 97.

Robert Johnston.

- A. 1.—County of Lanark, barony parish of Glasgow, and burgh of Calton.
- A. 2.—Spinning of cotton-yarn.
- A. 3.—There has been no alteration in the works since possession by the present proprietors.
- A. 4.—The machinery is driven by a steam-engine of eight-horse power.
- A. 5.—There is a provision for ventilation.
- A. 6.—It depends on the opening of the windows.
- A. 7.—It is left to the workers themselves, who are at liberty to open the windows when they think proper.
- A. 8.—There are no parts in the works considered dangerous.
- A. 9.—There is a pipe which conveys water into the court at which the workers have access at all times for the purpose of washing themselves; there is no place allotted to the workers for changing their clothes on entering or leaving their work, but they are at liberty to change their upper garments at their stations in the work.
- A. 10.—Nine years; none of them have ever been employed at other trades.
- A. 11.—Yes; for above twelve years they are too big for the nature of their employment.
- A. 12.—The recent alterations in machinery have not caused any change in the number of children employed.
- A. 13.—We do not employ apprentices.
- A. 15.—We do not at any time lodge and maintain children; the children we employ are either under the care of their parents or guardians.
- A. 16.—Yes, the manager of the works.
- A. 17.—Twelve hours for five days of the week, and nine on Saturday.
- A. 18.—There is no difference of time with respect to the ages of the persons employed.
- A. 19.—Twelve hours and a half.
- A. 20.—Three hundred and seven days.
- A. 21.—Three thousand three hundred and eighty-four.
- A. 22.—All the different parts of our work are carried at one and the same time.
- A. 23.—Eleven hours.
- A. 24.—Twelve hours and a half.
- A. 25.—When the engine goes wrong or any part of the machinery gives way, the whole work is necessarily at a stand, or when the workers ask liberty for a few hours, the time thus lost is made up by working one half hour each day every alternate week till the loss of time is made good; under no other circumstances do we work extra time.
- A. 26.—We do not think that the above can well be avoided; the low price of yarns requires as much production as possible, otherwise the proprietors will be losers; besides, the workers at piece-work themselves generally request that their lost time should be made up.
- A. 27.—Yes; previous to the present Act being in force.
- A. 28.—Yes, it must necessarily be so.
- A. 29.—It is always desirable to have as few changes of hands as possible; manufacturers who have to employ an intermediate change of hands often find that the work previously done by the hands going out is spoiled by those coming in, as almost every workman has his own method of working; under these circumstances the manufacturer is induced to have no intermediate change of hands.
- A. 30.—There must necessarily be an increase in the cost of production from the limitation of hours of labour in all the departments of the work; the expence of working two hours longer each day is trifling in comparison to the loss that would be sustained in consequence of less production from working two hours shorter time.
- A. 31.—We have no objection whatever.
- A. 32.—No; it never was wished for by the children or their parents, as far as we know.
- A. 33.—No, we never at any time wrought all night.
- A. 37.—The value of factory produce is at present so low as barely gives the proprietor interest on his capital; on a still farther reduction of the hours of labour there would be a corresponding reduction in the quantity produced; and as there will be no rise in the value of produce, as other countries are making rapid progress in the art of spinning, some of them being already able to export, the probable effects would be, that a great number of proprietors will be entirely ruined.
- A. 38.—From 70° to 80°; we do not think that we could do with a lower rate of temperature, especially during the winter season.
- A. 39.—Eighty degrees.
- A. 40.—Forty-nine degrees.
- A. 50.—With gas.
- A. 51.—The same as during the day.
- A. 52.—As we do not work all night, we are not able to judge of the habits of persons so employed.
- A. 53.—From nine to a quarter to ten for breakfast, and from two to a quarter to three for dinner.
- A. 54.—Yes, they generally leave the works at meal-times.
- A. 57.—First threatened, then dismissed if found incorrigible.
- A. 58.—No corporal punishment is allowed to be inflicted on any person in the works.

Lanarkshire.

Robert Johnston.

A. 62.—No corporal punishment has ever been inflicted on any person in the works; there never was any necessity for forbidding it.

A. 66.—There is a material difference in point of skill in those who have been brought up from infancy to the work from those who have commenced when advanced in life; they never made such good workmen; we refer particularly to spinning; in the other departments of the work it is not so material; we cannot speak as to character, neither can we refer to any person on our list, as they have all been put to the work in early life.

A. 67.—There is no difference, as far as we can observe.

A. 68.—We do not require to do so, as there are no processes carried on in the works which are deemed particularly injurious to health.

A. 69.—Yes, we consider ourselves subject to the provisions of the present Act.

A. 70.—No, we never have been informed against.

A. 77.—We have no reason to think that they are.

A. 78.—No, we think the present Act perfectly sufficient of itself if properly enforced.

ROBERT JOHNSTON.

No. 98.

George Macleroy.

ANSWERS of GEORGE MACLEROY, for James Oswald & Co., Barrowfield Cotton Works, Glasgow.

A. 1.—Barony parish, Glasgow.

A. 2.—Cotton-spinning—mule-twist.

A. 3.—Different times. First in 1802, secondly in 1811, and latterly in 1831.

A. 4.—Steam; first thirty and at present sixty horse power.

A. 6.—It depends on the opening of doors and one pane in each window, which at all times admits a sufficient quantity of fresh air.

A. 7.—The doors and panes in the windows are opened and shut at the pleasure of all the workers, subject to the control of the overlooker.

A. 8.—All the dangerous parts of our machinery are fenced off, excepting belts and light gearing. The former, from the manner and situation in which they work, cannot be completely fenced off. Accidents from belts are very rare, and I am not aware of any having occurred here. Accidents from small wheels, &c. are also uncommon, are uniformly the result of foolish temerity or carelessness on the part of the sufferers, and are seldom or never attended with fatal consequences.

A. 9.—Nothing farther than whitewashing the walls, and keeping two women constantly sweeping and washing the rooms and stairs, besides giving the workers a plentiful supply of good water.

A. 10.—None are employed under nine years with the knowledge of the masters, and none of them have been previously employed at any regular trade.

A. 11.—No; there are however forty persons in this work at present under that age.

A. 12.—The recent alterations in machinery have caused the employment of a greater proportion of young people, but I do not consider it necessary that they should be under twelve years of age.

A. 13.—There has been only one employed within these last seven years.

A. 17.—Twelve hours and ten minutes per day for five days, and eight hours twenty minutes on Saturday.

A. 18.—All work the same time.

A. 19.—Twelve hours and forty minutes.

A. 20.—Three hundred and two days and three quarters.

A. 21.—Not more than three thousand four hundred and seventy-seven hours.

A. 22.—All departments work the same time.

A. 23.—Nearly eleven hours and a half.

A. 24.—Twelve hours and forty minutes.

A. 25.—At the close of winter the works are generally stopped half an hour sooner to save lighting at night; this seldom continues longer than a week, and the lost time is made up during the following week or fortnight by working not more than half an hour extra per day. The works have been stopped also on extraordinary public occasions at the request of the workers, and the time lost on some of these occasions was afterwards wrought up in the same manner.

A. 26.—We do not work beyond the regular hours except when making up time, which we cannot cease doing without increasing the cost of production; all other excesses beyond the regular hours of work are avoidable.

A. 27.—Yes; half an hour more per day before the passing of the present Bill.

A. 28.—Yes.

A. 29.—The inducement is to produce a greater quantity at less expence, thereby enabling those who adopt this system to undersell their neighbours who only work the usual hours, and who, even though willing, are unable to procure a second set of workers to carry on their works at night; proprietors whose factories are situated in populous districts having a decided advantage over others whose works are situated in places where the population is limited.

A. 30.—If the wages of workers who are paid by the day are allowed to remain the same, the cost of production will be enhanced nearly in proportion to the reduction of hours. Suppose,

Lanarkshire.

George Macleroy.

Suppose, for example, that we produce per fortnight, of yarn, 16,500 lbs.; by reducing our working hours from twelve to ten per day, this would be a loss of two hours, or one sixth part of our time; but as it is said the spinners will throw off a larger quantity in these ten hours than they do in the same time at present, the reduction in quantity may be called one seventh instead of one sixth part: one seventh part of 16,500 lbs. will be 2,357 lbs.; and the quantity thrown off when working ten hours would at the utmost be 14,143 lbs. We pay no more for the spinning of these 14,143 lbs. than we paid formerly for the same quantity; but as our picking, carding, ware-room, and all other hands, except reelers, winders, and warpers, are paid by the day, the expence of production in these departments would be increased exactly in proportion to the diminution in the quantity produced one seventh part. Adding one seventh part to the expence of these departments would enhance the cost of production about seven per cent. If we take into account feu duties, insurance, and all other fixed charges, the increased cost would be eight or nine per cent. for production alone, keeping out of view the loss of interest upon a large capital by the limitation of its productiveness. Besides, there is every reason to conclude that if the spinners universally produce an increased quantity in a given time, the work will be inferior to what it is at present. The preparation machinery in all cotton-mills is calculated to produce a stated quantity of prepared rove for a certain number of mules, which work a given time and speed, and spin a particular size and quality of yarn; so that if the spinners produce a greater quantity in a given time, the masters will either be under the necessity of increasing the quantity of their preparation machinery, or of driving this machinery at a proportionally quick speed. The adoption of the latter alternative will make the yarn much inferior in quality, and thereby lessen its value, and at the same time increase the quantity of waste and the tear and wear of the machinery. The former alternative could be adopted by very few without building additions to their premises.

A. 31.—As we seldom work more than six or eight hours extra in the year, we do not find it necessary to employ two sets.

A. 36.—I believe the effect would be beneficial, as it would put the whole trade upon the same footing, and give to all the power of production proportioned to their capital.

A. 37.—The effects of a still further reduction of the working hours would be (as is shown in A. 30) to render less productive the immense capital sunk in our trade, and reduce the profits of the manufacturer, to depress the shipping and all other interests which are in any degree dependent on the cotton trade, and expose us to the growing danger of foreign competition.

A. 38.—The usual temperature of the wright-shop, mechanic-shop, reeling, winding, and warping rooms, are sixty to seventy degrees, and the lowest temperature fifty-five to sixty degrees; the usual temperature of the picking-room is seventy to seventy-six degrees, and the lowest temperature sixty-five degrees; the usual temperature of the card-rooms (average in four rooms) seventy-eight degrees, and the lowest temperature seventy degrees; the usual temperature of the spinning (average in eight rooms) is eighty-one degrees and a half, and the lowest temperature seventy-five degrees.

A. 39.—About eighty-five degrees for fine spinning. The spinning is often reduced twenty numbers coarser, and in consequence of this the average degrees in the apartment will not be above eighty-three.

A. 40.—Thirty-two, and occasionally about fifty hands.

A. 41.—At no time.

A. 46.—No.

A. 50.—With gas in winter from sunset till half past seven.

A. 53.—Forty minutes to breakfast and the same to dinner to all classes.

A. 54.—Nearly all leave the work at meal-times.

A. 55.—A few of the workers remain during meal-times for the convenience of the manufactory, but none are obliged to do so except the porter at the gate.

A. 56.—If all the hands were prohibited from taking their meals in the work, those who live at a distance of one or two miles would be obliged to pay for accommodation in some public house, or take their food in the open air.

A. 57.—Dismissal in cases where repeated reproofs are disregarded.

A. 58.—No, I never knew of any thing of the kind.

A. 64.—Never.

A. 65.—No.

A. 66.—Those who have been employed in factories from infancy are generally the most skilful workmen, and I believe their general character is equally good, and in some instances better, than that of persons who have been taken into employment at later periods. Nos. 1, 41, 42, and 58, on the annexed lists, may be adduced as instances.

A. 67.—As a regular bill of health has never been kept here, it is impossible for me to give a definite answer to this query.

A. 68.—Yes, when it can be done conveniently, but applications for a change of employment are seldom made by the workers.

A. 69.—Yes.

A. 70.—Never.

A. 73.—I believe they do, except in regard to whitewashing.

A. 74.—Not with my knowledge.

A. 77.—Not the smallest; their masters wish them to give all the evidence they can, and on the present occasion have given them every opportunity of doing so.

Lanarkshire.

George Macleroy.

A. 78.—A heavier scale of penalties, say 50*l.* to 100*l.* for each offence, in my opinion, would render the observance of the present law more strict, and is not likely to be objected to by the respectable portion of the trade. I should also recommend that local magistrates no longer have cognizance of offences against the Act, and a government commission be appointed, whose duty would be to enforce obedience to the law, and procure information from all quarters respecting the condition of the operatives. I would likewise suggest that the masters have the employing of all piecers and others who are at present employed by the workmen, in order to ensure the better observance of the law in regard to the admission of persons under the age, and to facilitate investigation in cases where a breach of those provisions which have a reference to the general treatment of children may have taken place. I would also suggest the propriety of having the commission above alluded to appointed every three years.

A. 79.—The appointment of a parliamentary commission was absolutely necessary, in order to remove the false impressions which the wrought-up evidence brought before the late committee upon Mr. Sadler's Bill had produced upon the public mind. The "billey roller" had become notorious, in the history of the factory system, as an instrument of cruelty, and the evidence of its application as familiar to the ears of Englishmen as the Turkish bastinado. The present inquiry will lay the whole subject open to the view of all parties so plainly and impartially, that the calumniators of the factory proprietors will find it difficult to explain or defend the motives by which they were actuated in propagating such absurd and extravagant exaggerations. Those individuals are themselves aware that an exposure must very soon be made, and are now advising the workpeople in factories to resist the commission by refusing to give evidence when called upon. It will be seen, from the answer to No. 30, that three results must follow a further reduction of the working hours; an increase in the cost of production, a diminution of the profit or interest upon the capital in trade, and a necessity, either of increasing the quantity of preparation machinery, or of turning off a number of the spinners where such increase cannot be made.

To prove that factory work is not more unhealthy than many occupations which are far worse paid, I shall only refer to the following Nos. on the annexed list, Nos. 1, 2, 15, 77, 231, 300, 345, 370, 453, and by examination it will be found that many who have wrought longest in factories are the most healthy persons in our employment.

The interference of the legislature in restricting or limiting the power of production in a manufacturing community must be looked upon as a serious evil, except such interference is rendered necessary by the existence of abuses which the parties themselves are unable or unwilling to rectify. The present inquiry will discover whether such abuses exist in the factory system as call for measures which will still further depress the commerce of the country; if such measures must be adopted, they ought to be applied to all, and strictly enforced. The inquiry, I believe, will satisfy the government of the inexpediency of still further lessening the productiveness of capital by shortening the hours of work, and at the same time prove the necessity of a strict enforcement of the present law, particularly as regards the duration of labour.

GEORGE MACLERoy.

No. 99.

Dun. M'Phail.

ANSWERS of DUNCAN M'PHAIL, for Dugald M'Phail & Co., William-street Factory, Glasgow.

A. 1.—Barony parish, county of Lanark.

A. 2.—Weaving cotton cloth, chiefly for printing.

A. 3.—The first factory was built in 1821, and filled with machinery in 1822 and 1823; the Greenhead factory was built in 1824, and filled with machinery in 1825, 1826, 1827; and the William-street factory was built in 1825, and filled in the following year; additions made thereto in 1831, and now in process of filling.

A. 4.—Steam-engines of sixteen, twenty-two, and twenty-five horse power, as regular as engines are in general, but liable to accidents.

A. 5.—An open pane, eight by seven inches, hinged in each and every window in the mill; the garret windows hinged for lifting at pleasure.

A. 6.—Depends on the opening of these panes.

A. 7.—Ventilation in the preparation, and weaving by the workers themselves, as they feel inclined to suit themselves.

A. 8.—All the parts considered dangerous are fenced off.

A. 9.—It is not customary in this district with workers to change clothes in clean factories such as ours, and for such washings as they need we have always water in each flat of the mill.

A. 10.—We do not want or need any hands below twelve years of age, but through entreaty of parents we admit a few younger, and find now that one had been admitted as young as nine years, but not employed at any machinery.

A. 11.—The nature of our employment does not require the employment of children under twelve years of age; we suffer loss and damage in general by admitting them under that age.

A. 12.

Lanarkshire.

Dun. M'Phail.

A. 12.—Any alterations in machinery known to us have been made and are making to curtail labour, thereby to dispense with or lessen the labour of children.

A. 13.—None.

A. 15.—None; we neither lodge nor maintain orphans or others for factory use.

A. 17 & 18.—Twelve hours for five days and nine hours upon Saturdays.

A. 19.—Twelve hours and a half.

A. 20.—Three hundred and five days, or so.

A. 21.—Fifty weeks and five days, each week sixty-nine hours, or three thousand five hundred and ten hours in all.

A. 22.—All at once, from half past five morning till seven o'clock evening, or from six in the morning till half past seven o'clock in the evening, Saturdays excepted, only working nine hours.

A. 23.—Average time of working daily eleven hours and a half, including Saturdays.

A. 24.—Twelve hours and a half, the odd half an hour being for accidents of the engine.

A. 25.—Only six times, as far as we can recollect, from engine accidents as above.

A. 26.—All excess may be avoided but for the mutual interest of employer and employed; lost time by accident of engine is generally made up to the extent of ten hours for such accident, but the time lost by holidays, fast-days, &c. is not made up.

A. 27.—Previous to Hobhouse's Bill the weavers wrought twelve hours and a half daily for five days weekly, and eleven hours on Saturdays, or seventy-three hours and a half in all.

A. 28.—No doubt of that; we pay those on set wages for nine hours work on Saturdays, same as we did formerly for eleven hours work.

A. 29.—We never wrought night-work, and can say little about it.

A. 30.—Machinery driven by power as ours is, produces in proportion to the time driven, and when we pay the same set wages for short time as formerly for longer time we lose the benefit of labour for the time lost, besides the interest of capital invested and lying idle.

A. 31.—The law forbids more than one hour of extra time to be made up in one day, and it would be absurd to think of fresh hands for one hour, and impossible to get them.

A. 32.—None had occasion to try any.

A. 33.—None.

A. 37.—It is evident that if the capital is set idle the capitalist will be ruined, as it will produce no interest, while in many cases he has to pay interest on that capital; equally evident that in proportion to the time shortened, less than the surrounding neighbours or nations, he is crippled to that extent.

A. 38.—We don't require high temperature in weaving, except in dressing the yarns; in weaving no heat is wanted except in winter, or cold and damp weather.

A. 41.—None after half past seven o'clock, or to eight o'clock when any accident took place with the engine.

A. 50.—By gas lighted till half past seven o'clock in winter.

A. 52.—Cannot say, never having any work past eight o'clock or so.

A. 53.—Three quarters of an hour to breakfast, and three quarters of an hour to dinner.

A. 54.—All if they choose; as the engine is always stopped at meal-times none is required to stay in.

A. 55.—If any remain it is for their own pleasure and convenience.

A. 56.—No persons are required to take their meals in our factories.

A. 57.—To be dismissed from the works.

A. 58.—None, to our knowledge.

A. 62.—Corporal punishment is not practised, consequently neither forbidden or allowed; we punish all by dismissal from the works.

A. 63.—None given for corporal punishment; we do not allow it, but for bad conduct we dismiss them.

A. 64.—None has ever occurred.

A. 65.—A few families; but as they are within the bounds of the Calton police, and under their superintendence, we do not interfere.

A. 66.—As to character we find no difference, but in skill we find those early trained to any branch of our business more expert than those grown up in years before they begin.

A. 67.—This factory is not of ten years standing, consequently cannot compare, but can give, as a proof of the health of the workers, that only one person employed in it took the cholera last year, and cases of fever.

A. 68.—We have no particular processes complained of as injurious to health, consequently no changes of that kind.

A. 69.—Subject to Hobhouse's Bill, regarding time, &c.

A. 70.—Never informed against.

A. 73.—Cannot tell.

A. 77.—No reason to believe such a thing.

A. 78.—We obey the present law, and have nothing to suggest.

(APP.—A.1.)

S 3

A. 79.

Lanarkshire.  
 —  
 Dun. M'Phail.

A. 79.—We wish to have the present law put in force on those working thirteen and fourteen hours daily as they do in England; to be left in the command of our own property; but if further legislation must take place, to put us in no worse condition than our rivals in Europe and America.

28th May 1833.

DUN. M'PHAIL.

ANSWERS of HENRY MONTEITH, Blantyre Works.

No. 100.  
 Henry Monteith.

A. 1.—Parish of Blantyre, county of Lanark.

A. 2.—Cotton-spinning, power-loom weaving, and dyeing turkey-red yarn.

A. 3.—Water-twist mill, erected in 1786 for cotton-spinning; mule-twist mill, erected in 1789 for cotton-spinning; weaving factory, erected in 1810 for power-loom weaving; and yarn dye-work, erected in 1794, and since, for dyeing.

A. 4.—Steam and water regular; the only irregularity arising from heavy floods, which affect the water-power perhaps three or four days in the course of the year, and at these times stop about one third of the works; the power is about two hundred and five horses.

A. 5.—In the spinning-mills and weaving factory the windows are made to open for the purpose of ventilation.

A. 6.—Opening the windows and doors occasionally.

A. 7.—The managers and overlookers frequently open the windows, but the workers generally shut them when the former are out of sight.

A. 8.—The dangerous parts of the machinery are fenced off.

A. 9.—The village expressly built for their accommodation; being close to the mills, the workers do not require to change their clothes; there is a supply of soft water in the rooms for washing their hands, and spring water for drinking.

A. 10.—In the mills the lowest age at which children are taken in is nine; in the weaving factory ten; in the dye-work children are seldom employed; at present there happens to be two of ten years of age, one of eleven, and one of fourteen. They usually come from school.

A. 11.—In the spinning-mills it is better to have children below twelve years of age, because they can clean the machinery with greater facility to themselves, and because they more easily acquire expertness in the operations. In the weaving factory they are employed at light work, sitting in the heddlings-room and going messages, but for the weaving we object to them under twelve or thirteen years of age; in the dye-work they can easily be altogether dispensed with.

A. 12.—In the spinning-mills the number is greater; in the weaving factory for the last twelve years there has been little if any variation.

A. 13.—In the spinning-mills none; in the weaving factory one apprentice as a mechanic.

A. 14.—None.

A. 15.—All the children employed live with their parents, friends, or relations.

A. 16.—None except that of their parents, and relations.

A. 17.—For five days in the week twelve hours for those employed in the mills, factory, and dye-work, and eleven hours and a half for the mechanics; on Saturdays nine hours.

A. 18.—All the workers, of whatever age, work the same hours.

A. 19.—Twelve hours for five days and nine hours on Saturday each week. In the weaving factory last year, when the dam broke down, and the works were short of power on several occasions, a request was made by some of the workers to give them from one to two hours extra at night, to make up their work. This was acceded to, but any one was of course at liberty to go away that liked. This extra time might extend to eleven or twelve nights in all; there were no children allowed to remain during these extra hours.

A. 20.—In the spinning-mills three hundred and two days eleven hours, in the weaving factory three hundred and seven days, and in the dye-works two hundred and ninety-four.

N.B.—Turkey-red dyeing is generally stopped for a time during the severe winter weather.

A. 21.—In the spinning-mills three thousand four hundred and eighty-three hours, in the weaving factory three thousand five hundred and forty-three, and in the dye-work three thousand two hundred and thirty-four.

A. 22.—None, with casual exceptions last year, principally arising from reform processions.

A. 23.—In the mills eleven hours eight minutes, in the weaving factory eleven hours and a half, and in the dyework eleven hours.

A. 24.—Twelve hours.

A. 25.—In the spinning-mills at no time; in the weaving factory in the months of November and December, as stated in A. 19.

A. 26.—In the mills and factory there is at no time any necessity for irregularity; as masters we are always opposed to it. If it is ever permitted (as mentioned in A. 19.) it is at the desire of the workers to make up for an accident. In the dye-work, from the nature of the processes, it is sometimes essential, but not to any extent.

A. 27.

A. 27.—Before the passing of the present Factory Act the mills were worked twelve hours and a half. The hours were then from six morning to eight evening, three quarters of an hour being given for breakfast, and three quarters for dinner,

Lanarkshire.

A. 28.—The change in our hours has not been so great as to make it possible to form a sufficiently correct estimate.

Henry Monteith.

A. 29.—To produce the greatest possible return from a given sunk capital.

A. 31.—We do not think relays of workers would do well; all workers are to a certain extent responsible for their own machinery; they have an interest in keeping it clean and in good order; but were fresh sets of hands employed, and the work not well done, they would blame the previous set, and keep the manager in a constant broil with his workers; besides, it would lead to disputes, for if one worker wished to injure or perhaps ruin another, the best opportunity he could have would be to get working at his machine when he could do it with impunity. In works situated like ours in the country it would be quite impossible to obtain a full double set of children; were all children under twelve years of age prohibited from working more than eight hours, this we think we could accomplish, but were the age raised to fourteen it would be impracticable.

A. 32.—It has not been tried here, because we do not consider it advantageous even if practicable.

A. 33.—Never employed a night-set of hands.

A. 34.—We do not conceive it to be our interest.

A. 37.—The effects would be a reduction of the wages of the worker already low enough, and the enhanced cost of the article produced, diminishing the consumption, and giving additional advantages to our foreign rivals. We consider these effects too obvious to make it necessary for us to specify the grounds on which we expect them to follow.

A. 38.—In the mills from 70° to 80°, and in the weaving factory from 60° to 70°; in the turkey-red stoves the heat is occasionally 150°, but it is never beyond 90° when the people are engaged in it; even at 90° they are only employed for about ten or fifteen minutes in the course of the day.

A. 39.—No degree of heat beyond the above is required.

A. 40.—Four hundred and thirty-six in mills, three hundred and thirty-five in factory, thirty or forty in dye-work stoves.

A. 46.—The fires of the stoves and boilers at the dyework must be kept up, which is done by the watchman.

A. 47.—No process going on requiring extra time, except some accidental thing for the mechanics or dyers.

A. 48.—All grown persons.

A. 50.—By gas.

A. 51.—The windows and doors.

A. 53.—Forty-five minutes to breakfast, and an hour to dinner. It is proper here to state, that the only point in which we infringe the present Act is in regard to the Saturday dinner-hour. The Act requires that it should be before three o'clock; were we to adhere to this (allowing the nine hours work for Saturday), the works would not close till half past four. Instead of this, our people prefer not stopping at all to dinner, and finishing for the day at half past three. This is a great boon, particularly to that part of the workers who wish to spend Saturday afternoon and Sunday with their friends in Glasgow, eight miles off.

A. 54.—In the mills about sixteen persons; in weaving factory, at times, about seven remain to oil the machinery, along with the person who has this charge, during the meal hours; but when the other workers come in they go out, and remain out the regular time for meals.

A. 55.—Oiling and cleaning the machinery cannot be done during the time that the works are going; the persons employed at these operations go home when the works are again set agoing, and get the same time to their meals that the other workers get.

A. 56.—The meals are all taken at home.

A. 57.—Admonition, and if that has not the desired effect they are discharged from the works.

A. 58.—None.

A. 59.—Parents may do as they like at home, but no punishment is allowed in the works.

A. 62.—It has never occurred; we would allow nothing of the kind.

A. 63.—Punishment has never been contemplated; it has never been thought necessary to give any instructions.

A. 64.—Never.

A. 65.—Nearly the whole of the workpeople live in houses belonging to the company. Day and night watchmen are appointed to prevent irregularity; scavengers to sweep the streets, and carry off any filth or offal. The whole furniture is taken out, and the dwelling houses cleaned and whitewashed at stated periods at the expense of the proprietors. The proprietors provide a chapel and school-house for the population of the village, and contribute along with them for the support of a clergyman of the Church of Scotland and of a schoolmaster, both of whom devote their whole time and attention to the improvement and instruction of the population. Regular examinations of the school take place by the clergymen of the presbytery, and premiums for excellence are given by the proprietors, who

Lanarkshire.

Henry Monteith.

likewise make it a rule to encourage charitable and other beneficial institutions among the people under their charge.

A. 66.—The great mass of the persons have been brought up to the work from their infancy; they are certainly more expert than those introduced at a later period.

A. 67.—The medical gentlemen who attend the workpeople say they are as healthy, if not more so, than the agricultural labourers in the surrounding parishes, and that they have always been so; we know of no change for the better or the worse.

A. 68.—There are no injurious processes, and therefore there is no necessity to make any change or selection.

A. 69.—The mills and factory, but not the dye-work. It will be observed that many of the queries and answers cannot be applied to the dye-work, but to the mills and factory only.

A. 78 & 79.—The present law is perfectly sufficient were it enforced, which we think can only be done efficiently by the appointment of a stipendiary protector or inspector; perhaps some of the penalties might be advantageously increased.

June 1833.

HENRY MONTEITH.

No. 101.

Robert Dick.

ANSWERS of ROBERT DICK, for John Dennistoun &amp; Co., Bridgeton Mills, Glasgow.

A. 1.—Borough of Calton of Glasgow, county of Lanark.

A. 2.—Cotton-spinning.

A. 3.—The greater portion of these works was erected upwards of thirty years since, and part upwards of forty years since.

A. 4.—Steam-power only.

A. 5 & 6.—All the windows in our works, with the exception of those in the picking-house building, open, and have in addition opening panes in at least every alternate window for the purpose of ventilation.

A. 7.—The ventilation is regulated by the foreman and by the heads of departments.

A. 8.—All our shafts are fenced off, and no other part of our machinery can be reckoned dangerous.

A. 9.—Many of our workpeople bring with them a change of clothes, but we have no dressing or washing rooms for their use.

A. 10.—Nine years of age; we are not aware of any of them having been previously employed at other trades.

A. 11.—We do not think it does.

A. 12.—We are not aware of any change in the proportion of children employed under twelve years of age caused by recent alterations in machinery.

A. 13.—No.

A. 15.—We do not lodge and maintain any of the children employed by us.

A. 17, 18, & 19.—Twelve hours and five minutes during five days of the week, and eight hours and thirty-five minutes on Saturday.

A. 20.—Three hundred and five days and a half.

A. 21.—Three thousand five hundred and ten hours.

A. 22.—All parts of our works must be carried on at the same time.

A. 23.—Eleven hours and twelve minutes per day.

A. 24.—Twelve hours and a half and five minutes.

A. 25.—We have at various times exceeded the usual hours of work to make up for time lost in consequence of stoppage of steam-engine, or breaking of machinery, or our workers having left their employment, at their own request, to attend meetings, &c.

A. 26.—We are of opinion that all excess beyond the regular hours of work is not only avoidable, but should be put a stop to.

A. 28.—As our hours of working never exceeded what they now do, we cannot from experience state the effect that a reduction in the hours of working would have on the cost of production.

A. 29.—The manufacturer who protracts his hours of labour beyond that of his neighbour has a decided advantage in so doing, inasmuch as he produces a greater quantity without increasing his capital invested in machinery or the wages which he pays, his capital invested in machinery remaining the same whether he works six or twenty hours daily.

A. 33.—We employ a day-set of hands only.

A. 37.—By a reduction of the present hours of labour we are of opinion that our trade would in the course of a very short period be entirely ruined, or our workers reduced to great misery, owing to the astonishing progress made in cotton-spinning throughout the other countries of Europe and in the United States of America during the last few years, where the trade is unfettered by legislative enactments, and many local advantages, such as low wages, cheap cotton, &c.

A. 38.—The usual temperature is about 70°, but it varies from 65° to 75°.

A. 39.—There is no portion of our works require a higher degree of heat than another.

A. 53 & 54.—With two exceptions, the whole of our workers leave for breakfast at nine o'clock A. M., and resume work in forty minutes thereafter, and for dinner at two o'clock, and again commence work at fifteen minutes to three, on five days of the week; on Saturday they leave for and return from breakfast at the same period as on the other five working days,

days, and continue at work till a quarter past three o'clock, when they leave for good and all.

A. 55.—The two exceptions above named are the spinning-master and engine-man; the former leaves the work for his meals immediately on the return of the other workers, and the latter takes his breakfast at the works, but leaves for dinner with the other workers.

A. 56.—By employing a person to clean and oil the steam-engine at the time for breakfast, the engine-man could take even that meal at home.

A. 57.—Threats of or dismissal from employment.

A. 58.—No.

A. 62.—We have not considered it necessary to give any positive instructions in this matter, as we believe no corporal punishments are ever inflicted or required.

A. 64.—No, never.

A. 65.—The workpeople do not live in our houses.

A. 69.—It is.

A. 70.—No, never.

A. 73.—So far as we know, the mills in our neighbourhood conform to the provisions of the Act, but in several places in England cotton-spinners avowedly do not.

A. 77.—We feel quite certain that the workpeople in this city and neighbourhood would at once give evidence, whether it pleased their employers or not.

A. 78.—We would suggest that all informations should be lodged on oath, and that fines should be increased to not less than 50*l.* for any breach of the law, one half to go to the informer, and that no child under eleven years of age be admitted as a worker in any cotton factory, and that one hour be allowed for breakfast and the same time for dinner; and that the hours be in all eleven and a half for five days in the week, and nine hours on Saturday, making the total number of hours of work per week sixty-six and a half.

25th May 1833.

ROBERT DICK.

Lanarkshire.

Robert Dick.

#### ANSWERS of HENRY DUNLOP, Burgh of Calton.

No. 102.

Henry Dunlop.

A. 1.—In the burgh of Calton, neighbourhood of Glasgow.

A. 2.—Cotton-spinning.

A. 3.—The whole was erected in 1818, with the exception of a small addition made in 1828.

A. 4.—Steam-power only.

A. 5.—There are fifty-six windows in each flat, and each window has an opening pane; and in the picking-room the dust is carried off by means of fanners.

A. 6.—It depends on the opening panes of the windows principally; but there is a staircase at each end, which tend also to ventilate the rooms when the doors are open.

A. 7.—The opening panes are used at the discretion of all the persons employed, but the workers generally incline to keep the rooms warmer than they require to be.

A. 8.—The most dangerous parts of the machinery are either fenced off, or placed out of the reach of the persons employed.

A. 9.—There are no arrangements of the description here specified.

A. 10.—The rule is, that none under nine years of age shall be employed. None of the children have previously been employed at other trades.

A. 11.—The work might be carried on without any children under twelve years of age if a sufficient supply of children above that age could be procured.

A. 12.—There have been no alterations in the machinery to affect the employment of children under twelve years of age at this factory.

A. 13.—We employ no apprentices in cotton-spinning, but have generally two employed as machine-makers.

A. 14.—No apprentices from parishes.

A. 15.—There are none of the children lodged or maintained by the masters.

A. 17.—Twelve hours on five days of the week, and nine on Saturday; the average being eleven hours and a half each day.

A. 18.—They are employed the same number of hours as those above twenty-one years of age. There is no difference at any age.

A. 19.—Never above twelve hours and a quarter.

A. 20.—Two hundred and ninety-seven hours and three quarters from 1st May 1832 till 30th April 1833. An accident happened to the steam-engine which occasioned the loss of eight days work.

A. 21.—Three thousand four hundred and twenty-seven hours.

A. 22.—Have kept no account of partial stoppages, and therefore cannot answer this question.

A. 23.—Ten thousand nine hundred and eighty-four hours, being nearly eleven.

A. 24.—Twelve hours and a quarter.

A. 25.—The regular hours of working were only exceeded to make up time lost for repairs of engine, and the extra time worked was not above four hours during the whole of last year.

A. 26.—It might be a hardship for masters as well as workers to be prevented making up, to a certain extent, time lost from unavoidable accidents.

(APP.—A. 1.)

T

A. 27.

Lanarkshire.

Henry Dunlop.

A. 27.—The average number of hours of working was at one time half an hour longer than at present.

A. 28.—The cost of production is certainly enhanced by the reduction in the hours of working; but improvements have been made in the machinery and method of working, which have diminished the cost of production.

A. 29.—The inducement is to obtain a higher rate of profit, and that must be in proportion to the ability of the workers to continue their exertions. If the hours are too long, they must become inattentive in consequence of fatigue, and would make bad work.

A. 30.—It is difficult to ascertain to what extent the cost of production is increased by the limitation of the hours of work, because wages, which form one half of it, fluctuate from various causes; but the other branches, namely, charges and interest on capital, are certainly increased nearly in proportion to the diminution of the hours of work.

A. 31.—Relays of children could only in very few situations be procured, for it is sometimes difficult at present to find sufficient numbers for even one set.

A. 32.—A system of relays has never been tried at this factory, because the hours of labour were never too long for one set.

A. 33.—Have never worked during the night.

A. 36.—It would be a considerable advantage to those proprietors of factories who do not work during the night.

A. 37.—To enhance the cost of production and endanger our foreign trade, the extent of which depends upon our being able to sell cheap.

A. 38.—Spinning-rooms from 70° to 80°; carding-rooms from 70° to 75°. The lowest required for spinning, 70°; carding, 65°; picking, 60°.

A. 39.—The highest degree of heat required is 75° of Fahrenheit; and that only where the finest yarn is spinning.

A. 40.—One hundred and twelve hands.

A. 47.—No such processes.

A. 50.—The works, in the short days of winter, are lighted morning and evening with gas.

A. 53.—Forty minutes for breakfast, and fifty minutes for dinner.

A. 54.—A few occasionally take their meals in the factory.

A. 55.—Those who take their meals in the factory do so for their own convenience.

A. 56.—It would occasion some slight inconvenience only to those workers who lodge at a distance from the factory.

A. 57.—Dismissal.

A. 58.—No corporal punishments are allowed by the manager.

A. 59.—Slight corporal punishments are inflicted occasionally by parents and overlookers upon children.

A. 60.—None, excepting such as were trifling.

A. 61.—Without the manager's sanction.

A. 62.—Only in two instances have had occasion to find fault with older workers striking children, and in one of these instances the mother was chastising her son.

A. 63.—No instructions in that respect have been given to foreman or overlookers; the practice of the work does not require any.

A. 64.—Never any such complaint.

A. 65.—The workpeople do not live in the houses of their employers, and there is no interference with them out of the walls of the factory. A missionary of the established church gives religious instruction in the factory once a week, and all the workers who choose may attend.

A. 66.—With very few exceptions the workers have been employed from childhood in cotton-spinning, and there is no marked distinction between them and the few who have been taken into employment at later periods.

A. 67.—There is no change in respect to health during the last ten years.

A. 68.—Have no processes particularly injurious to health, and therefore make no changes on that account.

A. 69.—It is.

A. 70.—Never.

A. 73.—The mills in the neighbourhood conform strictly to the Act so far as regards the number of hours for employment, and, as far as they can, the ages at which children are admitted.

A. 74.—Have only heard of one instance of a proprietor being taken before a magistrate for working over-time.

A. 76.—The offence was admitted; it was making up time lost on account of an accident.

A. 77.—Have no reason to believe that they are.

A. 78.—I would suggest that the law should be rendered as simple as possible; that it should merely regulate the hours of work for children, and the earliest age at which they should be employed; and that agents should be appointed by government in various districts to see that the law was carried into effect. The penalties are at present sufficiently high.

HENRY DUNLOP.

## ANSWERS of W. HAMILTON, Glasgow.

Lanarkshire.

No. 103.

W. Hamilton.

- A. 1.—Calton of Glasgow, Barony parish, county of Lanark.  
 A. 2.—Cotton-spinning and power-loom weaving.  
 A. 3.—Erected at one time, in 1825.  
 A. 4.—Steam-engine of fifty horses power.  
 A. 5.—Ventilation by an opening pane in each window.  
 A. 7.—At the control of the workers.  
 A. 8.—All fenced off.  
 A. 9.—Allowed to change their clothes in the flats.  
 A. 10.—Nine years of age. Never employed before.  
 A. 11.—No.  
 A. 12.—Not aware of any material alteration in machinery since 1825.  
 A. 13.—No.  
 A. 15.—Some orphans as per list. Have no means of ascertaining the latter part of the question correctly.  
 A. 17 & 18.—Twelve hours.  
 A. 19.—Twelve hours and fifteen minutes.  
 A. 20.—Three hundred and six days.  
 A. 21.—Three thousand four hundred and seventy-nine hours.  
 A. 22.—All carried on at the same time.  
 A. 23.—Eleven hours and twenty-two minutes.  
 A. 24.—Twelve hours and fifteen minutes.  
 A. 25.—Once caused by the engine going wrong.  
 A. 26.—Avoidable, but for the loss sustained.  
 A. 27.—Never.  
 A. 29.—The only inducement is the extra production, thereby lessening the cost.  
 A. 30.—Never wrought more than twelve hours per day.  
 A. 31.—No objection, except what is stated at A. 34.  
 A. 32.—Never had occasion to try it.  
 A. 33.—Never employed night-workers.  
 A. 34.—The machinery would be kept in better order, and the work in general better done, by one set than two.  
 A. 37.—By a further reduction the produce will be lessened in nearly the proportion of time taken off, and of course the interest and profit upon sunk capital reduced to the same extent.  
 A. 38.—Usual temperature from fifty to eighty degrees; for spinning forty to seventy degrees; for weaving fifty to sixty degrees; for dressing seventy to eighty degrees.  
 A. 39.—Eighty degrees.  
 A. 40.—Ten people required.  
 A. 50.—By gas.  
 A. 51.—Same as during day.  
 A. 53.—Three quarters of an hour to breakfast, and the same to dinner, to all persons.  
 A. 54.—All leave.  
 A. 57.—Fear of being turned off.  
 A. 58.—No.  
 A. 63.—Verbal instructions have been given not to inflict corporal punishments.  
 A. 65.—No.  
 A. 66.—Difference in skill much in favour of those employed from infancy.  
 A. 67.—Have observed no difference since 1825.  
 A. 68.—No.  
 A. 69.—It is subject.  
 A. 70.—Never.  
 A. 73.—Conform as far as we can judge.  
 A. 77.—Never had an opportunity of judging upon this question.  
 A. 78.—The present Bill is quite sufficient if properly enforced.

W. HAMILTON.

## ANSWERS of JOHN and WILLIAM CLARK, Glasgow.

No. 104.

J. & W. Clark.

- A. 1.—St. George's parish of Glasgow, county of Lanark.  
 A. 2.—Power-loom; cotton cloth only, of light fabrics.  
 A. 3.—The works have been erected at different times; first erection in 1822, the second in 1823, third in 1829, and fourth in 1832.  
 A. 4.—Steam-engine of sixteen horse power.  
 A. 5.—First erection is ventilated by openings on the head of the side walls, the buildings being only of one story, and entirely lighted from the roof. The later erections are ventilated by openings on the highest part of the roofs or ceilings, all the length of the buildings. All of them can be opened or shut at pleasure. These ventilators are thirteen feet above the floor, which is of deals. No garrets. The work all on one floor.  
 A. 6.—The ventilation depends entirely on the ventilators described above.  
 A. 7.—The ventilation is regulated by the manager only, and for the purpose only of the comfort of the workers.

(APP.—A. 1.)

T 2

A. 8.

Lanarkshire.

J. & W. Clark.

A. 8.—Dangerous parts of the machinery are out of the way or fenced off.

A. 9.—There are pegs on the wall of a part of the work appropriated for the purpose, upon which the workers hang their cloaks and hoods on entering the factory, and which they resume on leaving. There is a small apartment to which all have access, where there is a trough for holding water, with a steam-pipe into the same, to heat it when wished; also a pump for cold water. This convenience the work has always had. The mill is always swept three times each day, and the floor washed with hot water and soda every alternate Saturday. These arrangements have always existed in the works.

A. 10.—We employ none under twelve years of age. None have been previously employed at other trades.

A. 11.—We do not require hands under twelve years.

A. 12.—No alterations that have taken place in machinery cause us to employ a greater or less proportion of children under twelve years.

A. 13.—We do not employ apprentices.

A. 15.—All the workers come from their own, their parents or guardians, dwelling-houses to the work, and are in no shape under our control, excepting during working-hours.

A. 16.—We do not lodge or maintain any workers, so that this question has no application to us.

A. 17.—Our work continues twelve hours each day, excepting on Saturdays, when it is nine hours.

A. 18.—Same time for young persons as adults, whatever age.

A. 19.—We never have wrought more than the twelve hours per day during the last year, or nine hours on Saturdays.

A. 20.—Three hundred days of work during last year.

A. 21.—Three thousand four hundred and fifty hours of work during last year.

A. 22.—All the departments of our work continue through the whole of the twelve hours.

A. 23.—Eleven hours and a half is the average of work for each day of the week during last year.

A. 24.—We have no sets of workers. All the workers continue their work the same length of time, viz. that fixed by the existing Act.

A. 25.—We have never exceeded the hours.

A. 27.—Previous to the present Act (called Mr. Hobhouse's Act) we wrought half an hour longer each day, and on Saturdays two hours and three quarters longer than at present.

A. 28.—We find that, by our hours being reduced, the cost of our cloth is enhanced.

A. 29.—The inducement for the manufacturer to be allowed to continue his work to what hours he judges right is simply to produce more cloth at the same expence of on-cost, viz. house-rent, capital vested in machinery, &c.

A. 30.—If a Bill were to pass to force us to stop our works entirely, the value of our buildings and machinery would be nothing. If we were reduced only to half the time we at present work, these buildings and machinery would be just half of the value we consider them at present. In the proportion to the reduction of the hours of working is the cost of the work on our goods increased.

A. 31.—We know no objection to relays. We consider that the best protection to young persons would be to prevent them from working entirely under (say) twelve years. Between that age and fifteen years to be allowed to work only six or seven hours, viz. half time of what adults would if unfettered by legislative enactment, so that we would be forced to have two sets of persons betwixt twelve and fifteen years of age. After fifteen years they should be free, except for night-work. Many of our best hands, and who make the largest wages, are not above fifteen years of age.

A. 32.—Relays would do well; but no young person, any more than adults, will take any less than full work. But if restricted by law to six or seven hours a day, we could then by relays go with adults whatever hours were found proper; but, as at present, we are obliged to reduce the hours of adults to the standard by law for young persons.

A. 33.—We employed a day and night set of hands about ten years ago, when all the factories in and about Glasgow were standing except our own. Each set wrought twelve hours, less the time for meals.

A. 34.—We would not think of working through the night now under almost any circumstances. We consider it in our business quite unnatural and uncalled-for in a competition with other countries, and should rather be glad to see it prohibited.

A. 36.—A prohibition of night-work in our trade we conceive could do no harm.

A. 37.—The more our hours are reduced we must of course produce just in the proportion less with the same invested capital, and having to compete with other countries who are unrestricted, we are just in so much a worse condition for that purpose. We conceive it very impolitic to curtail the hours of working in the way already done, and much worse to propose further restrictions, unless by at once reducing the hours of young persons to the half of that of adults.

A. 38.—We heat our work only to render comfortable the persons employed; the manager giving more or less heat by the steam-pipes erected for that purpose to suit the comfort of the workers, as they may wish him.

A. 39.—No degree of heat above comfort required.

A. 40.—No process that requires the heating of the apartment above comfort.

A. 53.—The time for meals is to all the workers three quarters of an hour to each for breakfast and dinner.

A. 54.

- A. 54.—They are all allowed and desired to go to their houses to meals.
- A. 55.—When they do not it is entirely a toleration to the worker.
- A. 56.—Every worker must be the better for going home to his meals rather than remain in the factory.
- A. 57.—No means are required to force obedience by the young persons; they know that they will be dismissed the work if refractory.
- A. 58.—No corporal punishments in the work.
- A. 62.—We do not think that any practice of corporal punishments takes place in the weaving factories in or near Glasgow.
- A. 63.—No instructions were ever given by us to inflict punishments.
- A. 64.—No complaint was ever made against us or (that we ever heard) against any power-loom establishment for punishments being inflicted.
- A. 65.—The workers do not live in houses belonging to us, but in houses rented from proprietors in the neighbourhood.
- A. 66.—We find that hand-weavers and their families are very soon capable of producing quantity and quality of cloth with older employed hands; we know no difference in regard to character.
- A. 67.—We know no difference in the general health for the last ten years; our work we consider to have been particularly healthy: when the cholera raged all around us we had only one case, and that of a person who had just newly entered to our employment.
- A. 68.—There are no injurious effects from any particular process in our manufacture, and consequently no selection or change of persons employed.
- A. 69.—We are entirely regulated by the present Act.
- A. 70.—We never were informed against.
- A. 73.—We believe the works on this (the north) side of the city conform very correctly to the present Act. We have never heard of a prosecution against any one in Glasgow.
- A. 77.—We do not think that any person would be deterred from giving information if there was room.

A. 78.—We conceive that any enactment that goes to the restriction of the hours of work in factories is an unfortunate interference, and in the case of weaving-factories, which are so exceedingly comfortable, quite unnecessary. We conceive that young persons ought to be protected in every situation of life, whether in or out of public works; but the method taken already, and which is contemplated to be further extended, is very injurious in its effects on trade. We think that other methods might be devised, such as a surveillance by public officers of the treatment of persons under fifteen years of age.

A. 79.—We would just remark, in conclusion, that however humane the motives are of those persons who already have been the means of restricting, or of those who propose further to restrict, the hours of work in factories, still we consider that such restrictions are an infringement on the boasted liberty of the subject in this country, though the only instance of such; and moreover fail to accomplish the object intended, inasmuch as there is nothing to prevent the workers in factories from taking in work into their houses, such as persons employed by hand-manufacturers work at, as clipping, winding, pirn-filling, &c., to be done after hours. We consider also that a great mistake has been made in the age to which the legislative care has been extended, viz. eighteen years. Our weavers between fifteen and seventeen years of age we consider as good as any who are further advanced, and they make wages on their own account equal to those who are older. We do not see the necessity of extending the protection to persons between fifteen and eighteen to be more necessary than to persons above twenty-one years of age.

JOHN & WILLIAM CLARK.

#### ANSWERS of JOHN KING, Glasgow.

- A. 1.—Glasgow, Lanarkshire.
- A. 2.—Steam-loom weaving factory, for the manufacture of cotton shirtings.
- A. 3.—The factory was erected in 1825, commenced working in June 1826, since which time it has been altogether employed for its present purpose.
- A. 4.—A steam-engine of thirty horse power.
- A. 5, 6, & 7.—In the square flats there is a hinged pane in the frame of each window, also one sashed window, and one in the centre fitted so as to be lifted out at pleasure. In the garret flat the windows are skylights, and open with hinges. The opening and shutting of the whole is entirely under the control of the workers.
- A. 8.—All the dangerous parts of the machinery are completely enclosed.
- A. 9.—No arrangements are made for washing within the factory. The workers reside within a short distance, which renders any preparation for that purpose unnecessary, as they can wash and clean themselves more conveniently in their own houses. Wooden pins are placed at the end of the flats for the girls to hang up their mantles and shawls; and as mantles are in general use, the workers in wet weather commence their work dry and comfortable.
- A. 10.—No general rule. On inspecting the list of the workers, I observe only two of them are under twelve years of age; neither of them were previously employed at any other occupation.

A. 11.—No.

(APP.—A. 1.)

T 3

A. 12.

Lanarkshire.

J. & W. Clark.

No. 105.

John King.

Lanarkshire.

John King.

A. 12.—No alterations in the machinery have been made since the erection of the factory.

A. 13.—No.

A. 15 & 16.—All the children employed in the factory live with their parents or relatives, and are under their superintendence.

A. 17.—Twelve hours for five days of the week, and nine hours on Saturday.

A. 18.—All the workers attend the same hours.

A. 19.—Only sixty-five minutes of lost time was made up during last year; this was done on four separate days. On every other day the works were not kept on above twelve hours for five days of the week, and nine on Saturday.

A. 20.—Three hundred and two days three hours and forty-five minutes.

A. 21.—Three thousand four hundred and fifty-four hours and thirty-seven minutes.

A. 22.—Every part of the work is regularly carried on during the whole day.

A. 23.—Eleven hours and two minutes.

A. 24 & 25.—None were ever kept at work longer than twelve hours, except as answered in A. 19.

A. 26.—In this factory there is no necessity for exceeding the regular hours of work. In case of any necessary stoppage the lost time may be made up in terms of the present Act.

A. 27.—From the commencement of the manufactory in 1826, the hours of work were twelve hours thirty-five minutes for five days of the week, and nine hours thirty-five minutes on Saturday. About three or four months prior to the passing of the present Act the hours were reduced to twelve hours for five days of the week, and nine hours forty-five minutes on Saturday, and since the Act was passed the hours have been in conformity thereto.

A. 28.—I found no decrease in the quantity; of course the cost of production is not enhanced.

A. 29.—No manufacturer can have any inducement to continue his work through the night with the same set of hands that were employed during the day, as the strength and spirits of the workers would thereby be entirely exhausted. Those who continue extra hours with the same hands, contrary to the existing law, do so for the purpose of obtaining an increased quantity of cloth, and thereby lessening the cost of production.

A. 31, 32, 33, 34, 35, & 36.—I offer no opinion as to these queries, as no extra hours are required in this factory, and I have had no information from any other quarter.

A. 37.—The workers in steam-loom factories, even the youngest of them, are perfectly able to work twelve hours a day without any diminution of energy, and therefore any further reduction of the working-hours would be followed by a decrease of produce in exact proportion to the time reduced. Consequently there would be an increase of expence to the manufacturer in producing that reduced quantity, and a loss of profit on the difference below the former average; and the effects would be equally injurious to the workers, as the amount of their wages would be reduced in the same proportion.

A. 38.—No heat is required in the weaving-flats during summer, and none in winter except for the comfort of the workers. The temperature in winter is kept up by steam-pipes, the regulation of which is left to the workers themselves.

A. 39.—The dressing-flat is the only part of the factory in which a high temperature is necessary, and the heat is regulated by the dressing master to suit the work. The temperature of this flat varies from eighty to ninety.

A. 40.—Eighteen.

A. 53.—Three quarters of an hour for breakfast, and the same for dinner.

A. 54.—Every person leaves the works at the meal-hours, except a few females.

A. 55.—These females remain from choice, and are permitted by the manager to do so. No person is ever required to remain for the convenience of the manufactory.

A. 56.—In my opinion it would be conducive to the health and comfort of the workers, in all factories, were they regularly to go out to their meals.

A. 57.—No means are used to enforce obedience on the part of the young workers. The fear of losing their work is found to be sufficient inducement to ensure good behaviour.

A. 58 to 64.—No corporal punishments are sanctioned, and none have ever been inflicted.

A. 65.—They live in their own houses.

A. 66.—From having few very young persons employed I cannot speak particularly as to the difference of their skill and character, but I have found that those who have remained longest in the factory sustain the best character and are the most expert at their work.

A. 67.—I am not sensible of improvement or deterioration in the health of the workers since the commencement of the manufactory. I have, however, considered them in general healthy, and in confirmation of this opinion I affix a certificate which is as follows:—

“Glasgow, 27th May 1833.

“I certify of having acted as medical attendant upon the workers employed in Mr. John King's steam-loom factory, Ayton Place, for one year, ending in October 1830. During that period I found the workers in general particularly healthy, indeed fully as much so as the general population of this city. My services were not required for any of the workers under sixteen years of age; with the exception of a young boy who kept the factory gate, and who was attacked by a slight inflammatory fever.

“On Soul and Conscience,  
JAMES WILSON, Surgeon.”

“James Hardie, J. P.”

A. 68.

A. 68.—All the workers continue regularly at the employment for which they are engaged, as none of the processes are injurious to health.

A. 69.—Subject to the provisions of the present Act in every point.

A. 70, 71, & 72.—Never.

A. 73, 74, 75, & 76.—I believe that all the mills in the neighbourhood conform strictly to the provisions of the Act.

A. 77.—I have no reason to believe so.

A. 78.—I consider any other scale of penalties than those contained in the present Act unnecessary in Scotland. But in order more effectually to secure obedience to the law, I would suggest the appointment of district committees, consisting of occupiers of factories, to see that the provisions of the Act are complied with.

A. 79.—It is my decided opinion, that no further law to restrict the hours of labour in steam-loom factories ought to be made. It is unnecessary as it regards the younger workers, as those who are employed under twelve years of age are subjected to no bodily exertion, and it often happens that their time is not wholly occupied; while those further advanced, who may be employed in the weaving-flats, have for a considerable time the charge only of one loom, and are not entrusted with the management of two looms till they are fourteen or fifteen years of age. In all the operations attention is the principal requisite, and the youngest workers are equally capable of attending twelve hours each day as those at the age of twenty-one, without exhausting their strength or endangering their health. If a Bill should be passed to restrict labour in factories to ten hours a day, the capital which every manufacturer has invested in machinery will be reduced one sixth part in value; he will at the same time lose a sixth part of his annual profits, and his workers will be deprived of one sixth of their present wages. This must be the result unless attended by a corresponding rise in the price of goods and of workers wages, in which case such a law will assuredly operate as a tax on steam-loom cloth, for the encouragement of foreign manufactures.

JOHN KING.

Lanarkshire.

John King.

ANSWERS of ROBERT MARSHALL, parish of Gorbals, Glasgow.

No. 106.

Robert Marshall.

A. 1.—Parish of Gorbals, and county of Lanark.

A. 2.—Spinning and weaving cotton only.

A. 3.—The weaving-mill was erected in 1822, and the spinning in 1823.

A. 4.—By steam-engine, calculated at twenty-five horse power.

A. 5.—An opening pane in the middle of each window, by which a current of air may be introduced.

A. 6.—On opening the pane.

A. 7.—Regulated by the workers at their respective windows.

A. 8.—All the great gearing is out of the way.

A. 9.—The girls in the weaving-mill do not change their clothes. Some of those employed, particularly in the card-room of the spinning-mill, change theirs. In both mills they have at all times free access to water either to drink or wash themselves, which has been the case ever since we took the works.

A. 10.—None below nine years; and had not to our knowledge been at any other trade.

A. 11.—It does not.

A. 15.—None of the workers are lodged or maintained by us.

A. 16.—All the children from nine to twelve years of age live with their parents or relations, and some of them work along with them at the factory.

A. 17.—Regulated by the Bill passed in 1831, viz. twelve hours for five days of the week, and nine hours on Saturday.

A. 18.—All ages are employed as in answer to query No. 17.

A. 19.—Being regulated by Bill before mentioned, in making up lost time by necessary stoppages not more than thirteen hours, and never more than ten days at a time, Saturdays not included.

A. 20.—For one year ending the 1st May current three hundred and five days.

A. 21.—Three thousand four hundred and ninety-five hours.

A. 22.—All carried on at the same time.

A. 23.—Eleven hours and twenty-seven to twenty-eight minutes per day.

A. 24.—Not more than thirteen hours, and that only when making up time lost by repairs of engine or great gearing.

A. 25.—During the year the whole time made up was four hours and fifty-six minutes for the whole works; and the spinning-mill made up besides this, in February, ten hours, and in March ten hours; all for time lost by repairs of engine or great gearing.

A. 26.—Not avoidable, because we pay a very high rent and get no abatement for time lost.

A. 27.—Previous to passing the Bill in 1831 the weaving-mill wrought twelve hours and a half five days of the week, and eleven hours and a half upon Saturdays. The spinning-mill was regulated by a Bill passed in 1825, limiting the time to what Mr. Hobhouse's Bill now does.

A. 28.—Certainly we do, because our capital in machinery is less employed, it being impossible to turn that machinery to any other purpose.

A. 29.—Over and above the net wages paid to workers for piece-work, the general expence of

(APP.—A. 1.)

T 4

Lanarkshire.

Robert Marshall.

of the factory, tear and wear of machinery, &c., fall to be charged upon the gross produce, therefore the less that produce is, the greater the average expence, the general or fixed expence of the factory being no way lessened by the working-time being shortened. In other words, if our produce be reduced from, say, one hundred to ninety-five, the latter must necessarily then bear the expence the former did, consequently the cost of production is enhanced.

A. 29.—There can be no inducement otherwise than perhaps the difficulty of procuring two sets of hands; but never having attempted this, cannot answer positively.

A. 30.—There is certainly an increase in the cost of production in all branches of our manufacture to the proportion of time reduced, because machinery is doing so much less work, and the interest on it and all fixed expences are consequently lost to the extent of the time shortened.

A. 32.—Never been tried by us, because our lease is for a given number of hours per day, and no more.

A. 33.—Never employed a night-set.

A. 34.—Because each worker may be thought best acquainted with his or her own work.

A. 37.—We think it very probable that a still further reduction of working-hours will be followed by a reduction of wages, because machinery will not otherwise remunerate the proprietors.

A. 38.—Sixty-five to sixty-eight is the usual temperature in the cotton-mill; the temperature of the weaving-mill is just that of the weather, except during the winter, when it is made comfortably warm by steam.

A. 39.—Eighty to eighty-two degrees the dressing-flat of the weaving-mill.

A. 40.—Ten men and five boys.

A. 50.—By gas in the mornings and afternoons, when necessary.

A. 52.—Unknown to us.

A. 53.—Three quarters of an hour between nine and ten for breakfast, and the same time between two and three for dinner.

A. 54.—Almost all.

A. 55.—For their own convenience entirely.

A. 56.—There is no reason why all do not leave the factory at meal-hours who choose to do so.

A. 57.—Threat of being turned off, conditional warnings away, and failing these, discharge them.

A. 58.—Not to our knowledge or belief.

A. 59.—By neither overlookers nor foremen.

A. 64.—None.

A. 65.—With us they do not; we have no houses, and they are so dispersed that we have no control whatever after they leave the mill.

A. 66.—The spinners are all brought up to the trade from their youth, and generally the weavers are so likewise.

A. 67.—We know no difference.

A. 68.—We do not.

A. 69.—We adhere strictly to the provisions of the present Act.

A. 70.—Never.

A. 73.—To the best of our knowledge they conform to the provisions of the Act.

A. 74.—Never heard of one.

A. 79.—None; but it is our opinion that the less legislative interference there is in matters of trade between master and man, the better for both. With the working-hours as they are just now the cotton trade is very barely a saving trade, if it be even that; and we do not think, with working-hours still more shortened, that we shall be able to compete with other countries upon equal terms, where the hours of work are uncontrolled.

ROBERT MARSHALL.

No. 107.

Robert Thomson.

## ANSWERS of ROBERT THOMSON, Glasgow.

A. 1.—Gorbals (quoad Sacra), Lanark.

A. 2.—Spinning of cotton on mules.

A. 3.—Our establishment has two factories, one erected in 1802, with an addition made thereto in 1823; the other in 1815.

A. 4.—Steam entirely.

A. 5 & 6.—No provision, except from the opening of windows or parts of windows; in the old factory there are one or two panes of glass that open in each window. In the new, every window opens from top to bottom, as in an ordinary house. In this house there are two staircases, broad passages, and high roofs, and the ventilation is excellent.

A. 7.—Every worker may open the window nearest him or her, at pleasure, and the foreman only interfering when the rooms get too hot.

A. 8.—All the parts that can endanger life or limbs are fenced off. We have never had a serious accident.

A. 9.—There is a place at each work where the adults are allowed, and the children ordered to clean their faces, hands, and feet. No specific place allotted for changing clothes, out-door coverings are put off in the rooms; there is a necessary in each flat, kept clean, and seldom offensive; in the old mill, those immediately opposite it, sometimes complain of

Lanarkshire.

Robert Thomson.

of the smell, but not oftener than the same complaint would be made of a water-closet in a dwelling house.

A. 10.—Nine years; some have been in printfields and other works which are not restricted by law.

A. 11.—It does not, so far as we (the proprietors) are concerned; we have no objections to a peremptory law excluding all under twelve; as it is, we must take them in earlier, otherwise would not fill the works.

A. 12.—They have reduced hands of all ages, except in the spinning department.

A. 13.—None.

A. 15.—It will be seen from the schedule that there are several orphans, but there are few, it will be noticed from same document, who do not live with some relative.

A. 17.—Twelve hours, except Saturday, nine hours only.

A. 19.—To make up lost time by accidents to the engine, &c., we have worked twelve hours and a half and thirteen hours for a day or two continuously, but not more than six days during the year, to the best of our belief.

A. 20 & 21.—In one mill we worked, during 1832, two hundred and eighty-nine days eleven hours, in the other two hundred and eighty-seven days six hours, counting twelve hours to the day, consequently in 1832 the total number of hours work was in one mill three thousand four hundred and seventy-nine, and in the other three thousand four hundred and fifty.

A. 22.—All are alike.

A. 23.—Eleven hours and six minutes.

A. 24.—Twelve hours, except in case alluded to in A. 19.

A. 25.—In case of accidents to engine only.

A. 26.—Perfectly avoidable. We do not consider making up the time lost in one day during another a material point to an employer.

A. 27.—Not, except on Saturdays, during the recollection of the present proprietors. Before 1825, we worked twelve hours each alternate Saturday.

A. 28.—The reduction in time has been so small, and the improvements in machinery so great, that we are not sensible of any increased cost.

A. 29.—The inducement to work long hours is to lessen the cost of production.

A. 30.—The greater part of the machinery has a maximum of speed, and if it be driven for ten hours in place of twelve it will produce one sixth less; nearly one third of the cost of spinning a pound of cotton into twist is a fixed charge amounting to a certain sum yearly, consequently the greater number of pounds you produce your fixed charge is less on each pound, and your cost of production. It should be added however, that in many of the processes the workers do more in proportion to the time they are employed when working short hours, as we have experienced when working half or three quarter time.

A. 31, 32, & 33.—Never having worked extra hours, have never tried the plan; never have worked at night.

A. 34.—Our time being twelve hours, the children would object, or their parents for them, to work six hours only, because they would get half pay only.

A. 37.—It would increase the cost of production, even though wages were reduced.

A. 38 & 39.—We never wish the temperature to be over seventy degrees Fahrenheit, and no greater degree of heat is necessary. It is sometimes higher, from causes difficult or impossible to control, but in a general way is seldom above seventy.

A. 40.—Temperature the same throughout.

A. 47.—No maximum.

A. 50.—By gas after dark.

A. 53.—All the same. Three quarters of an hour for breakfast, same for dinner.

A. 54 & 55.—Almost all. Those who do stay to take their meals in the works do it for their own convenience, and against our wishes. It ought to be mentioned, that some of the workers are occasionally detained five or ten minutes after the engine stops for breakfast and dinner, to clean or mend, which cannot be done while the engine is going. This, however, is not essential. In fact, it is a practice which the workers on piecework have introduced chiefly of their own accord. The workers, as a whole, have their full three quarters for breakfast and dinner.

A. 57.—No means but turning them away.

A. 58.—Never.

A. 62.—Absolutely. We have turned men off for striking a child, but such cases rarely occur; we may add, almost never.

A. 63.—No written instructions; but they have orders never to allow a blow to be inflicted on any child; in fact, corporal punishments are not practised in cotton factories in this district, to the best of our knowledge.

A. 64.—Never.

A. 65.—They do not in towns; we do not know of any instance where they do in Glasgow.

A. 66.—Nearly the whole have begun as children, either with us or elsewhere; we are not aware of any difference between the very few we employ who have come from other employments and the others.

A. 67.—We are not sensible of any difference.

A. 68.—The only process that can be more injurious than the others is the pulling-house, where

(APP.—A. 1.)

U

Lanarkshire.

Robert Thomson.

where eight or ten persons are employed; it is the only place where dust and flyings cannot be avoided; they are higher paid than the others, and are seldom willing to change.

A. 69.—Under Hobhouse's Bill.

A. 70.—Never.

A. 73.—It is our belief that in this district the law is adhered to strictly, generally speaking.

A. 74, 75, & 76.—We believe we have heard of two instances of informations, but cannot say so of our own knowledge, neither do we know the result.

A. 77.—It is our belief that the workpeople in this district are as independent of their masters as they can be in the relation in which they must stand. We think, however, that no one in employment will come forward without some reluctance against his employer, from the natural fear of losing his work.

A. 78.—In a general way, we do not think it possible by legislative enactment to make the situation of the factory-workers much better than it is; as a body, we believe them to be better off than any other class holding the same status in society. If there is to be further legislation, however, our opinion is, that the proposed penalties under Lord Ashley's Bill will never be enforced, exactly for the reason that the punishment of forgery by death (and other crimes which might be enumerated) has been found impracticable. There is no enactment now in existence so severe as the power of imprisoning a master for twelve months; it will never be enforced, and if it were, the result would be the shutting up of his works during his incarceration. In our own case, should such a misfortune occur, we must shut up our works, and this would infallibly deprive two thousand persons of their daily bread. We think small penalties, rigorously and summarily enforced, (if there are to be penalties,) would answer better; and for the purpose of carrying these into effect we think a magistrate (stipendiary) for each district should be appointed, who should sit one day a week to hear all complaints, and should be able to convict without appeal. The hour of sitting might commence at three o'clock on Saturday, when the people are all idle.

A. 79.—Our opinion is, that no change should be made in the present law so far as cotton factories are concerned. The concern to which I belong have a weaving factory employing one hundred and forty persons, besides the two alluded to above; but as it has only been begun by them within six months, and is not yet in full operation, I am not qualified to answer queries in this branch, and have therefore restricted my answers to the two spinning factories.

18th May 1833.

ROBERT THOMSON.

No. 108.

Messrs.  
MacLellan & Turner.

ANSWERS of MACLELLAN and TURNER, Chief Town, Glasgow.

A. 1.—County of Lanark, parish Govan.

A. 2.—Power-loom weaving.

A. 3.—Used first for its present purpose in 1812, and built all at one time.

A. 4.—By steam, fourteen horse power regular.

A. 5.—Opening panes in windows to admit air.

A. 6.—Opening panes.

A. 7.—At the discretion of the persons employed.

A. 8.—All fenced off.

A. 9.—The workers are allowed to take in cloaks or mantles, and to wash themselves.

A. 10.—The youngest person at present employed by us is twelve years of age now, so far as we know.

A. 11.—None.

A. 12.—We have made no recent alterations in our machinery, but our speed is increased.

A. 13.—No.

A. 15.—One, lodging with her brother.

A. 16.—Yes, the foreman or manager.

A. 17, 18, & 19.—Twelve hours.

A. 20.—Three hundred and eight days.

A. 21.—Three thousand five hundred and twenty hours and three quarters.

A. 22.—All at one time.

A. 23.—Eleven hours six minutes.

A. 25.—None.

A. 26.—We have had no excess.

A. 27.—One hour each day.

A. 28.—The cost is not greater than formerly, owing to our having increased our speed.

A. 29.—We never had two sets of hands, nor wrought night-hours.

A. 32.—We have not tried it.

A. 36.—We think it would produce a good effect.

A. 37.—We consider the present Time Bill very good; but any further reduction of working hours would be injurious to the employers, and materially lessen the wages of the workers.

A. 38.—In weaving we have no forced heat further than is required for the comfort of the weavers.

A. 39.—Eighty degrees.

A. 40.

- A. 40.—Eleven, all males.  
 A. 47.—No process of our manufacture continued during night.  
 A. 48.—No persons of any age.  
 A. 50.—By gas in winter evenings and mornings.  
 A. 52.—We think they must be bad.  
 A. 53.—Three quarters of an hour for breakfast and the same time for dinner.  
 A. 54.—All leave.  
 A. 56.—We think it refreshing to the workers to go out to meals.  
 A. 57.—Dismissal from works.  
 A. 58.—Never, on any account.  
 A. 62.—Strictly forbidden, and we believe never any instance occurred in our work.  
 A. 63.—No written instruction; but our foreman is ordered to use every worker well, and not to inflict corporal punishment upon any account.  
 A. 64.—None whatever.  
 A. 65.—We have no houses for our workpeople.  
 A. 66.—We prefer workers who have been taken in at later periods to those who commenced in infancy, as the steadiest workers are those who began work betwixt the ages of fourteen and eighteen years.  
 A. 67.—We cannot state that there has been any difference in the health of our workers for the last ten years.  
 A. 68.—We never alter our workers.  
 A. 69.—Yes.  
 A. 70.—Never.  
 A. 73.—We believe they do.  
 A. 74.—We do not know of any.  
 A. 77.—We have no reason for thinking so.  
 A. 78.—The present Bill, when strictly enforced, is quite sufficient.

22d May 1833.

MACLELLAN &amp; TURNER.

Lanarkshire.

Messrs.  
Maclellan & Turner.

ANSWERS of ALEXANDER ALLEN, for John Miller, Wellington Factory, Glasgow.

No. 109.

Alexander Allen.

- A. 1.—Lanark county, Govan parish, Govan Street, Hutchesontoun, now within the city of Glasgow.  
 A. 2.—Cotton-spinning and weaving, the one made to balance the other, so that all the yarn spun is wove.  
 A. 3.—The old mill, a fire-proof building, was erected in 1814-15, the new erection in 1825; they were employed at all times for the same purpose.  
 A. 4.—Steam-engine.  
 A. 5.—Windows are suspended on sash-weights, open at pleasure; in the garret the sky-lights move on hinges.  
 A. 6.—Does depend on the windows or doors.  
 A. 7.—Persons may open their own windows, yet it would be improper to say that one could at all times keep a window open; there is never any questions.  
 A. 8.—Larger wheels are fenced.  
 A. 9.—In some of the departments, and indeed most of them, people may put off part of their clothes, and put on others, and indeed do so; there is a constant supply of water to be had, and flagons to carry it to the various passes.  
 A. 10.—Nine years, according to the Act of Parliament; few are taken in at that age; we seldom know if they have been employed before; those at or above nine seldom are.  
 A. 11.—The spinners require such as rove-piecers, which a very weak child may do; some other parts, as packing cops, can be done without injuring a child; they learn the other departments early.  
 A. 12.—If the throstle-frames come into general use, more children will be employed.  
 A. 13.—We do not.  
 A. 17.—We conform to the Act, and never work above twelve hours on the five days, and nine on Saturday.  
 A. 18.—There is no difference made; indeed it does not well appear how it can be made. No spinner can work without piecers, nor can one part of a work go, and the other stand.  
 A. 19.—Twelve hours and one half.  
 A. 20.—Working-days in a year, three hundred and thirteen; stopped, fair, fasts, New Year, eight days and a half; repairs on engine fourteen days and a half; reduced time nine days and three quarters; making in all, days wrought, two hundred and eighty and a quarter; any former year the stoppages for repairs never exceeded three or four days.  
 A. 21.—Hours wrought, three thousand two hundred and twenty-three; lost time made up, three hours and a quarter; making in all three thousand two hundred and twenty-six hours and a quarter.  
 A. 22.—All regularly carried on in general; the only exception is, that when one department gets a-head it must stop till the preparation come up to it.  
 A. 23.—Ten hours and eighteen minutes.  
 A. 24.—The twelve hours upon five days of the week, and nine upon Saturday, appointed by Act of Parliament, have never been exceeded during last year but twice, at one time for

(APP.—A. 1.)

U 2

three

Lanarkshire.

Alexander Allen.

three days, and at another for four days; the works were continued during twelve hours and a half. See A. 21.

A. 25.—In consequence of the engine being stopped during the usual working hours for repairs.

A. 26.—Working beyond the regular hours is avoidable in all cases except the mechanics, who are sometimes employed in after-hours for repairs.

A. 27.—Previous to the passing of the last Act of Parliament for regulating the cotton factories, the time wrought was twelve hours and a half for five days of the week, and from ten to ten hours and a half upon Saturday.

A. 28.—Yes.

A. 29.—It does not appear that either children or adults could continue to work through the nights. The practice of night-work is little known here.

A. 30.—If the hours be limited, the quantity produced must also be diminished; if the day-wages and general charges be not reduced, the increase of cost seems certain.

A. 31.—The objection to a change of hands on the same machinery is quite plain; every one knows that it requires a little practice to work on a machine which the person has not been accustomed to; two sets of hands never do so well.

A. 32.—Not here, the regular hours only being wrought.

A. 33.—Not employed here.

A. 37.—That the probable effects would be to raise the value; the same capital is laid out in buildings and machinery; the general charges cannot be reduced to the same proportion, and the day-wages, if not reduced, will also operate, so that it must either injure the worker or manufacturer.

A. 38.—60°, weaving, the lower the better; 65° to 70°, spinning; 75° to 80°, dressing.

A. 40.—Winders, warpers, and dressers. Weaving department about thirty.

A. 41.—None at extra hours, beyond what has been stated in A. 27.

A. 50.—In ordinary cases, with gas from the Glasgow Company.

A. 53.—Three quarters of an hour to breakfast and the same to dinner for all mill-workers; mechanics an hour to each.

A. 54.—They have liberty to do so unless mechanics, who get an hour after, or cleaners, who sometimes work in the meal-time, and go to meals after.

A. 55.—Mechanics work because they may do any thing when the machinery stands; cleaners too may get at places which they could not reach when the machinery is moving.

A. 56.—Here the meals are all taken out; no encouragement is given to sending food to the workers.

A. 57.—They are turned away, and others tried.

A. 58.—No allowance is granted for such by the proprietor; if any do it, he or she must consider themselves responsible for the consequences.

A. 59.—Parents may, if they please.

A. 62.—Never forbid it; so seldom heard of it that it did not seem to require prevention.

A. 64.—There has been one; but the case was dismissed as vexatious, and urged on by ill-will. The person was acquitted, and paid one shilling as court dues.

A. 65.—There are some houses belonging to the proprietor, but the inhabitants are at the same liberty as in any other property. No interference with domestic arrangements is used.

A. 66.—It is generally found that those who begin young learn best, but it is also found that some old hands get careless; there are so many other qualifications in a good hand that it is difficult to point to individuals, nor from the constant change of hands do we always know how long they have worked.

A. 67.—Making a deduction from the cause of intemperance, it should seem the difference is not great; cannot state any other cause.

A. 68.—Never do make such changes.

A. 69.—Have always conformed to the Sixty-nine hours Act since it was passed.

A. 70.—Never.

A. 77.—Think they are not; some are always ready to look out for opportunities of finding fault.

30th May 1833.

ALEXANDER ALLEN.

No. 110.

John Somerville  
& Sons.

## ANSWERS of JOHN SOMERVILLE &amp; SONS, Glasgow.

A. 1.—Parish of Govan, county of Lanark.

A. 2.—The weaving of stout domestics.

A. 3.—The present works were built in 1832, and were set agoing on the 15th December last.

A. 4.—Steam-power solely.

A. 5.—Yes, the opening of windows, which, being made to open and shut like those in dwelling houses, always create an excellent circulation.

A. 6.—It depends entirely on the opening of windows.

A. 7.—The ventilation is regulated chiefly by the manager, but any worker may open or shut the windows if found too cold or warm.

A. 8.—Yes, they are all fenced off.

A. 9.

Lanarkshire.

*John Somerville  
& Sons:*

A. 9.—We have no arrangements connected with the changing of the clothes of the workers at entering, or the putting on of additional clothes on leaving the mill. They nearly all live in the vicinity of the work, and we leave it to their good sense and the state of the weather to regulate the quantity of clothing. There has always been a well, besides a collection of steamed water within the premises, where they have opportunities of washing themselves. The walls of the factory are whitewashed annually, and the floors are cleaned several times every day.

A. 10.—The lowest age is nine years. The children have been employed at no other trade previous to entering the factory.

A. 11.—We have a very few below twelve years, for the purpose of giving in yarns. The work is done sitting, and is not at all fatiguing.

A. 12.—No.

A. 13.—We do not employ apprentices.

A. 15.—We have several young persons in our employment who have no parents; the youngest are fourteen and seventeen years, and are under the care of relations; the others are either under the care of relations, or have arrived at a sufficient age to take care of themselves.

A. 16.—No other superintendence but that of the master when engaged in the work.

A. 17.—Twelve hours.

A. 18.—They all work twelve hours.

A. 19.—Never more than thirteen hours, and that has occurred very seldom, the extra hour being occasioned by making up lost time.

A. 20.—The works were destroyed by fire last year, and were carried on for a very short period.

A. 22.—The different parts of the works are all carried on at the same time.

A. 23.—Nine hours on Saturday, and twelve hours on the other days.

A. 24.—Thirteen hours, but the instances were very rare, being caused by accident.

A. 25.—In consequence of something unforeseen going wrong with the engine and great gearing.

A. 26.—We consider it unavoidable. From the present construction of machinery some parts will go wrong and create a stoppage, notwithstanding the greatest diligence and attention.

A. 27.—At one period we wrought the weaving department twelve hours and a half, but reduced them to twelve hours, in accordance to the wishes of the workers, being previous to the passing of the last Act.

A. 28.—We cannot say that the reduction of half an hour in working has made any very material difference in the cost of production.

A. 29.—We cannot conceive what inducement a manufacturer could have to work extra hours or during night without a change of hands, as without new hands the labour must be very unprofitable.

A. 30.—We have not found any material increase on the cost of production from working half an hour less. We think there is little profit in working more than twelve hours on account of workers getting fatigued; at the same time we have no doubt but that if the working hours are reduced to ten or eleven hours a considerable increase in cost will ensue.

A. 32.—Having never wrought more than thirteen hours on any one day, and that seldom, we did not require relays or change of hands.

A. 33.—Have never employed a night-set of hands.

A. 37.—A further reduction of the working hours will be detrimental to the working classes as well as to their employers. To compensate for the decrease of produce and increased expence in the cost of production consequent to further limitation, and to be enabled to compete with foreigners (who are under no restrictions), the masters will be compelled to reduce the wages of the workpeople, and thereby curtail their comforts, and create poverty and much dissatisfaction.

A. 38.—In all parts of the work, except that where dressing of yarns is carried on, the temperature is the same as in dwelling houses.

A. 39.—In a part of the factory, where the process of dressing yarns is conducted, the temperature may sometimes be as high as from eighty to ninety-two.

A. 40.—Sixteen men.

A. 46.—No processes of our manufacture are indispensably continuous for twenty-four hours.

A. 50.—By gas.

A. 52.—We cannot give an opinion on the effects of night-work, from never having wrought our factory during night.

A. 53.—From forty-five to sixty minutes.

A. 54.—About one fourth on an average may remain in the mill.

A. 55.—They are all at liberty to go away. When they take their food in the mill it is to save themselves the trouble of walking home for it. Of course it is entirely to suit their own convenience.

A. 56.—As far as health is concerned, we do not think it would have any good effect. The time occupied in meals is very short, and when the weather is dry they generally walk about the neighbourhood, and enjoy themselves in the open air.

Lanarkshire.

*John Somerville  
& Sons.*

A. 57.—That of giving them a fortnight's warning to leave the factory, if found disobedient or careless.

A. 58.—No.

A. 62.—Yes; we never were informed, and do not believe there ever was an instance of corporal punishment having been inflicted in our work.

A. 63 & 64.—No.

A. 65.—We have no dwelling houses of our own for the workpeople.

A. 66.—Our works having only been in operation since 1830, we cannot answer this question from want of the necessary experience.

A. 67.—From the same reason as given to the previous question we must decline stating any thing positive connected with the improvement or deterioration of the health of the workpeople; but it is our impression, and the firm opinion of Mr. M'Bride our manager, who has been connected with factories for upwards of thirty years, that from the measures adopted by masters in having the mills well ventilated, walls whitewashed, and floors regularly cleaned, as well as from a growing taste on the part of the workers themselves, their character has very much improved, as regards personal comfort and cleanliness, and that their general health is better than any other class of workpeople.

A. 68.—No; on account of having no processes in the work that have injurious effects.

A. 69.—It is.

A. 70.—Never; have always obeyed the laws.

A. 73.—They all conform, as far as we know.

A. 77.—No; they have a regular committee for the purpose of receiving evidence against masters in the event of their infringing the Act.

JOHN SOMERVILLE and SON.

No. 111.

*Alexander Couper.*

ANSWERS of ALEXANDER COUPER, for Couper, Maitland, and Co., Inner High Church.

A. 1.—Inner High Church, Lanark.

A. 2.—Cotton-spinning and weaving cotton goods by power.

A. 3.—The weaving-mill was erected and first employed in 1824, and the spinning-mill was erected in 1825, and commenced working the following year.

A. 4.—Thirty-six horse power steam-engine.

A. 5.—In the spinning-mill there is a portion of each window that opens and shuts at pleasure; and in the weaving-mill, which is constructed of one floor on the ground, there are ventilators on the roof, and three doors in the side-walls, which are opened when necessary, and cause a general circulation of fresh air.

A. 6.—On the openings and doors, as above stated.

A. 7.—In the weaving-mill the ventilation is regulated by the foreman, and in the spinning-mill by the pleasure of the workers.

A. 8.—All dangerous parts of machinery are fenced off which can possibly be done, and we have had no accident of any consequence.

A. 9.—Since we commenced work our spinning and weaving mills have been kept both clean and well aired, and there is always in each floor a plentiful supply of fresh spring-water for drinking, and the workers always put on some additional clothing in cold weather in going or coming from their work.

A. 10.—We have five children ten years of age, and who have been employed at no other trades, two of whom are employed by their parents.

A. 11 & 12.—We do not require any children under twelve years of age.

A. 13.—No.

A. 15.—We have thirteen orphan children whose ages average sixteen years, seven of whom live with their relations, and the remainder in lodgings, who are occasionally visited by their relations and guardians.

A. 16.—They are of course under the superintendence of those with whom they live, as stated in A. 15.

A. 17.—Twelve hours every lawful day except Saturday, and only nine on that day.

A. 19.—Not in any case more than twelve hours.

A. 20.—Three hundred and three days.

A. 21.—Three thousand four hundred and eighty hours.

A. 22.—All parts are carried on at one time.

A. 23.—Eleven hours twenty-five minutes per working day.

A. 24.—Twelve hours.

A. 25.—Never in any case.

A. 26.—It is quite avoidable, except in making up lost time. Authorized by the present Act.

A. 27 & 28.—Yes.

A. 29.—To reduce the cost of his manufacture.

A. 30.—In our weaving department we have experienced the cost of production has increased in exact proportion to the time reduced.

A. 31.—We are not aware of any objection, provided one set works so long as to enable them to gain wages sufficient for their support.

A. 32.—We are not aware that it has been tried; and if it was, the wages would be too small to support the worker.

A. 34.

A. 34.—If two sets of hands were employed under the present Act, they could not support themselves, which would force them to evade the law by working in two mills in one day.

A. 35.—We have no night-work.

A. 37.—In the first place there would be an immediate reduction of wages, and also of any profits that exist at present. Secondly, it would give to our foreign rivals another advantage over us to the many already obtained, besides holding out a stimulus both to the master and operative to evade the laws.

A. 38.—We do not require any more heat than is necessary for the comfort of the workers, except in our dressing department, which is usually about 80°.

A. 39.—80°.

A. 40.—Twenty-five hands.

A. 50.—We are lighted by gas during the legal working hours when dark.

A. 51.—The same as during the day.

A. 52.—We have no night-work.

A. 53.—Breakfast from nine o'clock till a quarter before ten o'clock; dinner from two o'clock till a quarter before three o'clock.

A. 54.—They all leave together.

A. 57.—Dismissal from employment if incorrigible.

A. 58.—Never.

A. 66.—We universally prefer those that have been brought up in our works.

A. 67.—During our experience we cannot say that we have observed any alteration.

A. 68.—No.

A. 69.—It is subject to the provisions of the present Act.

A. 70.—Never.

A. 73.—To the best of our knowledge, all the mills in our neighbourhood conform to the provisions of the present Act, similar to ourselves.

A. 74.—Not to our knowledge.

A. 77.—No.

A. 78.—We can suggest no penalty, as we consider that any law on this subject is an improper interference, as the youngest persons in our works can manage their own affairs, and do so with as much correctness as the oldest. For instance, our piecers, the youngest in our employment, (but whose wages are paid by the spinners,) turned out lately, and would not work another day till their wages were advanced, from which we think that they are more capable of regulating their treatment and hours of labour than any law can.

A. 79.—We shall be happy that our mills be inspected, and answer any further questions.

ALEXANDER COUPER.

Lanarkshire.

Alexander Couper.

#### ANSWERS of A. STONACH & Co., Burnside Mill, Glasgow.

No. 112.

A. Stonach & Co.

A. 1.—St. John's parish, Glasgow, county Lanark.

A. 2.—Cotton-spinning and preparing.

A. 3.—Year 1811 and 1822.

A. 4.—Steam-power.

A. 5.—Opening in the windows.

A. 6.—On the opening of the windows by the workpeople.

A. 7.—By the workers themselves.

A. 8.—All are fenced off.

A. 9.—They are all required to come cleanly, and as well clothed as circumstances will permit.

A. 10.—We employ none under ten years of age.

A. 11.—It does not.

A. 12.—We do not think it has.

A. 13.—None.

A. 15.—We have only three orphans in our employ, and none of them under sixteen years of age, and they either live with their relations or in lodgings.

A. 16.—Generally their relations.

A. 17.—We regularly adhere to twelve hours for five days in the week, and nine on Saturdays, for all ages.

A. 19.—Thirteen hours.

A. 20.—Two hundred and ninety-five days.

A. 21.—Three thousand three hundred and ninety-one hours.

A. 22.—All at one time.

A. 23.—Twelve hours for five days and nine on Saturday.

A. 24.—Thirteen hours.

A. 25.—Only in making up time caused by the stoppage of the engine, &c. from accident or other repairs.

A. 26.—It is not avoidable, as machinery, such as steam engine and main gearing, will get out of repair.

A. 27.—Not since the passing of the different acts for regulating factories.

A. 28.—If we wrought longer hours with the same set of hands we would produce a greater quantity, and the cost would be considerably less.

(APP.—A. 1.)

U 4

A. 29.

Lanarkshire.

*A. Stonach & Co.*

A. 29.—It enables them to produce a greater quantity with the same outlay of capital in machinery and building, &c., and in many cases the same wages paid to the workpeople, which enables them to undersell those who strictly adhere to the Act.

A. 30.—From the same reasons as stated above the limitation of the hours of working must increase the cost of production, particularly in the preparation, interest of capital, &c.

A. 31.—We know of no objection, but as we never wrought extra hours do not require them.

A. 32.—As we never work extra hours, have never tried it, but think it practicable for such as do to have two sets of hands under twelve years of age.

A. 33.—We have no night-work.

A. 36.—We would consider it an advantage to the trade.

A. 37.—First, from the consequent fall of wages; second, the cost of producing being enhanced, as stated in A. 30. America and other nations will undersell us, as they have no restriction in the hours of labour.

A. 38.—The heat is regulated by the workers themselves.

A. 39.—It requires all the same.

A. 50.—No night-work, but when light is required gas is used.

A. 51.—Same as with day-light.

A. 53.—Forty-five minutes for breakfast, and same for dinner.

A. 54.—The whole leave the works at meal-hours.

A. 55.—If any remain it is to suit their own convenience, as we do not allow it.

A. 56.—We consider it for their own advantage.

A. 57.—Reprimand or dismissal.

A. 58.—None.

A. 62.—We do not allow corporal punishment, and never had any complaints of its being inflicted.

A. 65.—None.

A. 66.—We find those employed from infancy generally more useful; but in general character we know no difference.

A. 67.—We cannot say that we know any change.

A. 68.—We have no injurious process, and do not require to change.

A. 69.—It has always been.

A. 70.—We were once informed against under the Act of 1825, by the Association of Operative Spinners, for having wrought half an hour too late on a Saturday; but as we had not exceeded the nine hours, the information was withdrawn.

A. 73.—As far as we know, they do.

A. 77.—We do not think so.

A. 78.—We would suggest proper legal enactments to enforce the present law on all parties, and to employ no children under twelve years of age.

31st May 1833.

ANDREW STONACH.

Perthshire.

No. 113.

*A. Stevenson.*

## PERTHSHIRE.

## ANSWERS of ALEXANDER STEVENSON, Stanley Mills, Auchtergaven.

A. 1.—Stanley Works, parish of Auchtergaven, county of Perth.

A. 2.—Cotton-spinning, power-loom and hand-loom weaving.

A. 3.—The works became the property of Denniston, Buchanan, & Co. about ten years ago; the Brick Mill was erected about fifty years and part of the East Mill about thirty-three years ago; the other part of the East Mill and all the other buildings were erected by the present proprietors.

A. 4.—The power employed is water, and regular; some interruptions have occasionally happened in consequence of excess of water, repairs to the water-house, and the like; the whole of the water-wheels may be estimated at about two hundred horse power, or rather more.

A. 5 & 6.—With the exception of the mechanics shop and the room above it, which have places that can be thrown open in the centre of the window-frames, the whole of the windows in the works have sashes that are hung, and can be let down at pleasure; the garret windows or sky-lights can be opened to admit fresh air when necessary.

A. 7.—The ventilation is regulated by the overlookers of the different departments, and any of the workers have it in their power to admit fresh air opposite to the machine they work at, if they consider it necessary.

A. 8.—All the dangerous exposed parts of the machinery are fenced off.

A. 9.—The whole of the floors of the rooms in the throstle-mill are washed with hot lime and water every week; in the other parts of the works the floors are washed, part once every fortnight and part once every month, with warm water and ashes; the ceilings and side-walls of all the rooms are whitewashed once a year; we are of opinion that in cotton and other factories the washing of the floors frequently has as great a tendency to promote health and cleanliness as the whitewashing of the ceilings and side-walls. The greater part of the female

female workers change some part of their clothes when they commence work, and in each room there are buckets of fresh water where the workers may wash if they find it necessary.

A. 10.—Nine years.

A. 11.—Some of the machines and parts of machinery are so constructed that children of nine to twelve years of age will work with more ease than those of a greater age.

A. 12.—The improvements in machinery have not, in our opinion, rendered necessary the employment of a greater proportion of children under twelve years of age, but rather the contrary; we have reason to believe that thirty years ago the proportion under twelve years was greater than at present.

A. 13.—No.

A. 15.—Refer to the list of workers; some of the orphans therein referred to were sent to the works by the kirk session of Perth, and are looked after by their overseers; we do not take any charge of any of them.

A. 17.—Twelve hours, and nine hours on Saturday. The mill-hours are the same to all ages; it could not be otherwise, as the whole of the different processes or branches must go on simultaneously.

A. 18.—Twelve hours, and nine hours on Saturday.

A. 19.—Twelve hours and a half, and nine hours on Saturday. The reelers have occasionally, when their work fell much behind, worked thirteen hours in the day. The reels are not driven by power, but are worked by women; it has been the practice in some mills to give out the yarn to be reeled in the reelers houses. The lappers and bundlers of yarn have also, under the same circumstances, occasionally worked thirteen hours in the day; this work has no connexion with the water-power.

A. 20 & 21.—An abstract of the time-book for the last twelve months is annexed hereto, which will meet these queries. (*See p. 162.*)

A. 22.—All the different parts of the works are carried on at the same time.

A. 24.—No difference between children and grown-up people.

A. 25.—Making up loss of time occasioned by excess of water.

A. 26.—If the time lost is not worked up, the workers would get no wages for the time so lost; the interest of proprietors would be affected, so far as the diminished production might be estimated.

A. 27 & 28.—The usual hours of working have always been the same; say twelve hours, and nine hours on Saturday.

A. 29.—We have no experience in the matter; but it must be obvious that the spinner or manufacturer who works the same machinery day and night doubles the production from the same sunk capital, and of course is enabled to bring his goods into the market with more advantage than those who work their machinery only during the day.

A. 30.—If the hours of work were to be diminished, the production would in most cases be diminished in proportion, and of course the expence of production increased.

A. 31.—We are of opinion that in country mills fresh sets of children could not be procured, but if it were otherwise, all the wages they would get for three or four hours work could not support them.

A. 32.—No, it was never considered to be necessary.

A. 33, 34, & 35.—The mills were never worked during the night.

A. 36.—The prohibition of night-work in factories would place proprietors on an equal footing with each other, and benefit the trade in general.

A. 37.—We are of opinion that if the working hours were reduced, we shall suppose to ten, it would in most cases occasion a reduction of wages in proportion, say one sixth part; and the proprietors of factories would be placed in a worse situation than they are at present, inasmuch as the sunk capital would be the same, and the production reduced one sixth part.

A. 38.—The usual temperature is from fifty-five to sixty-five degrees.

A. 39.—The highest is from seventy-five to eighty degrees, but only where warps for webs are dressed.

A. 40.—About twenty.

A. 46, 47, & 48.—None of the processes work more than twelve hours per day, and nine hours on Saturday.

A. 50.—With gas for about six months in the year.

A. 53.—Three quarters of an hour for breakfast and the same for dinner; we understand that the workers prefer this to half an hour for breakfast and one hour for dinner.

A. 54.—The workers leave the works at meal-times; if any have their victuals sent to them in the works, it is to suit their own convenience.

A. 57.—The same as is commonly used by parents to children, and what is practised in public schools.

A. 58.—No.

(APP.—A. 1.)

X

A. 62.

Perthshire.

A. Stevenson.

Perthshire.

A. Stevenson.

A. 62.—Nothing of the kind was ever contemplated by either of us.

A. 63.—No; misdemeanors are punished by turning the offenders away.

A. 65.—Most part of them live in the houses of their employers; the houses are occasionally whitewashed at the expence of the proprietors, who use every means in their power to enforce cleanliness; and employ servants to clean the streets of the village. The proprietors have erected at their own expence and endowed a chapel of ease, in connexion with the church of Scotland, where the young people under fifteen years of age are accommodated gratis; the grown-up people pay 5s. a year seat-rent. They provide also a school-house, allow the teacher a yearly salary and a free house, restricting him to a low rate of fees. There is a day-school, and a night-school for the young people employed during the day in the works. There is also a Sunday-evening school, directed and superintended by the minister of the chapel, and usually attended by between three and four hundred young people.

A. 66.—Boys who come to the works at the age of nine to twelve years generally make more expert workers when they grow up than those who commence at a more advanced age.

A. 68.—Very rarely, if ever; changes from one process to another sometimes take place in the way of promotion.

A. 69.—Yes.

A. 70.—No.

A. 78.—We do not consider any legislative enactments to be necessary, where proprietors of factories act in obedience to the existing law, for the regulation of cotton-works.

A. 79.—It is in our opinion an erroneous idea to suppose that as much might be produced in ten hours as is now done in twelve; the regularity in cotton factories is now so great, particularly in the processes of spinning, that any diminution of time would occasion a corresponding diminution in production.

20th May 1833.

ALEXANDER STEVENSON.

## 1. STANLEY MILLS. — Time wrought from 23d April 1832 till 20th April 1833.

ALEX. STEVENSON.

## ANSWERS of DANIEL M'LAURIN, Blackford.

Perthshire.

No. 114.

Daniel M'Laurin.

- A. 1.—Parish of Blackford, county of Perth.  
 A. 2.—Manufactures wool into cloth, blankets, &c.  
 A. 3.—Erected in 1802, and enlarged in 1825.  
 A. 4.—Water-power.  
 A. 5.—No distinct or specific plan for ventilation, it not being necessary.  
 A. 6.—The workers have the power of opening windows or shutting them at their pleasure.  
 A. 7.—Is under the control of the workers generally.  
 A. 8.—Any part not requiring to be open is fenced off.  
 A. 9.—None of the arrangements here mentioned are adopted, the workers houses being quite at hand.  
 A. 10.—Nine years and upwards; none were at other trades.  
 A. 11.—It does require children under twelve years, as they are got for less wages, and suit better; older would require to stoop to their work, and are not so active.  
 A. 12.—No more are required in my line.  
 A. 13.—I do not employ apprentices, as I find journeymen more agreeable.  
 A. 15.—Have none but who are under the guardianship of their parents.  
 A. 16.—They have superintendence besides their master.  
 A. 17.—The number of hours in my mill is eleven each day, and all persons, young and old, work the same.  
 A. 18.—Same as above stated.  
 A. 19.—Never make any variation of the hours of labour.  
 A. 20.—Two hundred and ninety-five days.  
 A. 21.—I have no record of the hours.  
 A. 22.—The whole is carried on together.  
 A. 23.—Eleven hours bring the full time, the average will not be above ten hours, as I do not work up extra for stoppages.  
 A. 24.—Eleven hours.  
 A. 25.—Never exceed the regular hours except during repairs, and then the children are not employed.  
 A. 26.—I consider it quite avoidable in all spinning factories beyond the regular hours, and conceive it would be an advantage to the trade if none were permitted, as it gives unprincipled masters an undue advantage.  
 A. 27.—The hours here has ever been the same.  
 A. 28.—If the wages were the same, and the hours of labour reduced, the cost of production would be more.  
 A. 29.—Greedy avarice of unprincipled men to get the most they can for the least possible payment.  
 A. 30.—I have no experience here.  
 A. 31.—The increased expence it would occasion is the only objection.  
 A. 32.—I think the woollen and cotton trade would be much improved if no extra hours or night work were permitted, although I am aware some difference of opinion exists on that head.  
 A. 33.—I have tried night-work, but never found it profitable, and have discontinued it long ago.  
 A. 36.—I think it would greatly benefit the trade by preventing so much over-production, by which the markets are glutted with goods.  
 A. 37.—If the hours were shorter than eleven working hours, being the specified time, as the average (owing to stoppages that cannot be avoided) will not exceed ten hours, a reduction of wages will take place.  
 A. 38.—From sixty-five to seventy-five degrees the best, and kept as near to that as possible.  
 A. 39.—Not higher than the above.  
 A. 40.—None than already stated.  
 A. 41.—None. Hours in summer from six in the morning to seven in the evening, allowing two hours for meals; and seven to eight in winter, and never later, but getting repairs done.  
 A. 46.—None are of necessity continuous in the spinning and weaving line.  
 A. 50.—The machinery department without the weaving with candle.  
 A. 51.—None but what is through the day.  
 A. 52.—As my work does not go through the night, I cannot state the effects.  
 A. 53.—One hour to breakfast and one to dinner.  
 A. 54.—They all leave the work, excepting those who get it sent for their own convenience.  
 A. 57.—None but the fear of dismissal.  
 A. 58.—None.  
 A. 62.—All punishment is strictly prohibited.  
 A. 65.—All live in their own and parents houses.  
 A. 66.—They are more active and understand the business better in all woollen-mills.  
 A. 67.—I have found the operatives very healthy.  
 A. 69.—I know of no Act.

Perthshire.

*Daniel M'Laurin.*

A. 73.—So far as I know, my neighbours were equally ignorant as myself with regard to any Act.

A. 74.—Not that I know of.

A. 75.—Not to my knowledge.

A. 76.—Evidence could easily be obtained if required.

A. 77.—I have no reason to believe so.

A. 78.—None but the fear of having others substituted in their place will ever, in my opinion, prove effectual; and I should suppose eleven hours to be better than ten, as, owing to the necessary stoppages which will occur, the average will not be above ten hours work.

DANIEL M'LAURIN.

## ANSWERS of DAVID GRIMOND, Blairgowrie.

No. 115.

*David Grimond.*

A. 1.—Situated in the parish of Blairgowrie, county of Perth.

A. 2.—Flax-spinning.

A. 3.—Part of the work was erected in the year 1815, and another part in 1820.

A. 4.—Propelled by a water-wheel of six horses power. The supply of water is very irregular in the drought of summer and in the frost in winter.

A. 5.—No distinct provision.

A. 6.—Entirely by opening part of the windows.

A. 7.—The ventilation is regulated by any person employed at the work.

A. 8.—All which are thought dangerous are fenced off.

A. 9.—No use for this question, as my workers can be in their own houses a few minutes after the work is stopped.

A. 10.—I do not want to employ any below twelve years of age, but at times their parents wish to get some employed as young as ten years, but it seldom occurs.

A. 11.—Not younger than ten years.

A. 12.—None.

A. 13.—Young girls are sometimes taken in to learn spinning for the term of two years, and during that time they are paid according to their expertness at their work.

A. 14.—I believe that in Scotland the practice of apprenticing from parishes is unknown.

A. 15.—All children employed at my work are maintained and lodged with their parents.

A. 16.—None with me, but their parents.

A. 17.—Thirteen hours per day.

A. 18.—No difference of hours as to age.

A. 19.—Only thirteen hours per day, excepting making up for lost time.

A. 20.—I work six days per week, except on sacramental occasions and other holidays.

A. 21.—The above question answers this.

A. 22.—Every part of the work is carried on at the same time; it cannot be managed otherwise.

A. 23.—Thirteen hours per day.

A. 24.—They all work the same hours.

A. 25.—For making up lost time.

A. 26.—Because the workers would not be entitled to their wages, which they do not like to want.

A. 27.—Never more than thirteen hours per day, except when making up for lost time.

A. 28.—I believe it will not be the case in general, unless a considerable reduction takes place in the workers wages.

A. 29.—This question is fully answered before this inquiry.

A. 30.—I have had no limitation of time, and of course cannot answer this question; at the same time I think that it will be severely felt both by master and servant.

A. 31.—I have no occasion for an extra set of children.

A. 32.—I have never had an occasion to employ two relays of children.

A. 33.—I employ no night-hands.

A. 34.—I conceive it not to be my interest to work hands at night, and of course do not employ them.

A. 37.—If this restriction of the hours of labour be restricted to ten hours per day, the effects of this will be a corresponding reduction of wages, and a proportionable reduction of the masters remuneration of his capital sunk and his yearly rent.

A. 38.—I have never ascertained the temperature of my work, but no artificial heat is required, and the workers are at perfect liberty to regulate the temperature by opening and shutting the windows without the least control.

A. 39.—No artificial heat is required.

A. 40.—I generally employ twenty-one hands.

A. 41.—I never work during the night.

A. 50.—Lighted by oil with patent lamps.

A. 51.—The same as by day.

A. 53.—One half hour for breakfast and the same for dinner; the houses being contiguous to the mill, no more time is required.

A. 54 & 55.—All at one time, for their own convenience.

A. 56.

- A. 56.—I know of none.  
 A. 57.—I have no means but by the overseers attention to them, and I find it sufficient.  
 A. 58.—No corporal punishment allowed by me.  
 A. 62.—I never allowed it, and of course could never have forbidden it.  
 A. 64.—None occurred.  
 A. 65.—My workpeople in general live with their parents, and are under their parents superintendence.  
 A. 66.—I find the young persons, through the course of time, to be the best workers.  
 A. 67.—There have been no cases of bad health among my people; since the commencement of my work there has not been one death amongst them.  
 A. 68.—I make none.  
 A. 69.—I am not aware of any Act of Parliament affecting flax-spinning mills.  
 A. 73.—I have no knowledge about it.  
 A. 74.—Never on the flax-spinning concern.  
 A. 76.—Never heard any thing regarding this.  
 A. 77.—I shall be most happy that my workers give any evidence that may be required.  
 A. 78.—I can suggest no other plan than this,—do not legislate on the subject, but leave the business to be settled betwixt master and servant.  
 A. 79.—I have to observe, that if the Ten Hours Bill is to be carried into effect, it will be complete ruin to the flax-spinners in Scotland, and particularly to those propelled by water.

DAVID GRIMOND.

## ANSWERS of JAMES GRIMOND, Oak Bank Spinning Mill, Blairgowrie.

No. 116.

James Grimond.

- A. 1.—Parish of Blairgowrie and county of Perth.  
 A. 2.—Flax and flax-tow spinning.  
 A. 3.—The mill built in 1825, and working commenced in March 1826; additional machinery has periodically been placed in the mill since the commencement of the work.  
 A. 4.—By water-wheel; the power is equal to eighteen or twenty horse power; working very irregular and precarious, especially from frosts and floods.  
 A. 5.—No distinct provision.  
 A. 6.—It depends on opening windows, which are opened at the discretion of the workers, uncontrolled by any manager.  
 A. 8.—All dangerous machinery fenced off as far as practicable.  
 A. 9.—The workers are allowed to go out *ad libitum*, and there are small houses adjoining the work; no change of clothes is necessary, the work being clean; some of the workers, however, have frocks which they wear over their clothes while in the mill; they are allowed to wash when out if they think proper.  
 A. 10.—I have employed a few at the age of nine years, but very few under, and these only when urged to do so by their parents, and when others of the family of maturer years were at the work; I employ none under twelve years of my own choice, and do not wish them younger; none of these young persons have been at other trades previously.  
 A. 11.—No.  
 A. 12.—I know of no difference in this respect.  
 A. 13.—No, except for one year, to learn them to spin; this is by a verbal agreement, and they receive payment according to their work and merits.  
 A. 15.—I have no orphans at my work; the parents, unless employed at the work, do not visit them there.  
 A. 16.—Requires no answer, excepting as already stated.  
 A. 17.—The usual number of hours is thirteen each day.  
 A. 18.—All ages work the same number of hours.  
 A. 19.—For one day my workers wrought sixteen hours. This was at their own request, to enable them to attend at the elections, and for two days afterwards they wrought none. Lost time is never made up excepting at the request of the workers, and which is often not more than half made up, while full wages are paid.  
 A. 20.—Three hundred and six days have been paid for.  
 A. 21.—I have paid as for three thousand nine hundred and seventy-eight hours, although these have not truly been wrought, as stated in A. 19, as I keep no account of time lost not made up and paid for.  
 A. 22.—All parts are carried on at the same time.  
 A. 23.—The average is thirteen hours, in so far as the workers have been paid for time, but the average would be much less if an account of lost time paid for were kept. Besides, there is a loss of one quarter of an hour daily by the workers coming too late in the morning and at meal-hours, and not coming together, but each at his own convenience, of which no account is kept.  
 A. 24.—Answered in A. 19. I may here add, that except on the one day referred to my work has seldom been kept on for more than thirteen hours and a half, and this only at the request of the workers.  
 A. 25.—Answered in A. 19 partly, and also preceding fairs and festivals, and subsequent to frosts and floods. The stated hours are never exceeded except at the request of the workers.

Perthshire.

James Grimond.

A. 26.—Any excess beyond the stated hours is certainly avoidable; but in cases of frosts or floods it would be desirable to be allowed to make up the stated number of working hours, though later in the evening of the same day, which is not provided for in Lord Ashley's Bill.

A. 29.—The inducement appears to be gain or profit; but I have not practised this, except, as above stated, at the request of the workers.

A. 30.—My stated hours having been always the same, I do not feel myself qualified to answer this question.

A. 31.—I know of no objection to relays at stated hours where night-work is practised.

A. 32.—Never required relays.

A. 34.—I have not considered it to be for my interest to work two sets of hands.

A. 36.—Having never had night-workers, I cannot speak as to the effects of its being prohibited.

A. 37.—The effect would be a decrease of wages to the worker, a diminution of profits and a bar to our competing with foreigners in the same branch of trade.

A. 38.—My work is wrought at its natural temperature.

A. 39.—No artificial mode of heating is used.

A. 40.—I usually employ about sixty hands in the mill. I also employ from sixteen to twenty hecklers, who do not work in the mill. Are all adults, and are paid by piece-work; and are not restricted to stated hours.

A. 46.—No continuous process necessary.

A. 50.—By patent oil-lamps.

A. 51.—By the windows, the same as during the day.

A. 52.—Not experienced in this.

A. 53.—Breakfast at nine and dine at two in summer, and are allowed one hour to breakfast and half an hour to dinner. In winter the work is not commenced till after breakfast, and the same time is allowed for dinner as in summer.

A. 54.—All are at liberty to leave, but some from choice take their dinner in the mill.

A. 55.—When the workers take dinner in the mill, it is not for my convenience, but their own.

A. 56.—It would make no difference in my work.

A. 57.—Remonstrance, and when that fails of effect, dismissal; I have no other means to enforce obedience.

A. 58.—Never.

A. 62.—Expressly prohibited.

A. 63.—I have given instructions to my manager and overseers to inflict no punishment whatever on children: these instructions were verbal.

A. 64.—None.

A. 65.—Several of the workpeople live in houses which are my property, but in families over whom I can exercise no control; the others generally live with their parents in the village of Blairgowrie.

A. 66.—I do not consider there would be any difference if they entered to the work at twelve years of age; but if they entered only for the first time at an older age, say eighteen or nineteen, in many instances they would not become such expert workers, especially in spinning.

A. 67.—I know no difference; they are generally healthy.

A. 68.—No change is practised, nor is such change considered necessary, in flax-mills.

A. 69.—Not in so far as I know.

A. 77.—I do not believe my workers would be afraid to give evidence for or against me.

A. 78 & 79.—I consider all legislative interference betwixt master and servant unnecessary and impolitic, and that it would cause much jarring betwixt them which does not now exist; but on the contrary, in so far as I know, both parties are contented and happy. I have no hesitation in stating it as my opinion, that if Lord Ashley's Bill is passed into a law, it will prove ruinous to spinners, especially to those whose mills are propelled by water, their working hours being so contingent from frosts and floods. If an Act is to be passed on the subject, it should provide for these contingencies; and also be simple in its nature, prohibiting children under twelve years from being unduly wrought at mills, or perhaps prohibiting them from being introduced to mills at all under that age.

16th May 1833.

JAMES GRIMOND.

No. 117.

Thomas Gillies.

## ANSWERS of THOMAS GILLIES, Dunblane.

A. 1.—At Springbank, near Dunblane, in the parish of Dunblane and county of Perth.

A. 2.—Manufacturing of woollen yarns, principally for Scotch carpeting and woollen shawls, and weaving same and other coarse cloth, such as plaidings, blankets, &c. &c.

A. 3.—The work commenced about twenty-six years ago. Considerable additions were made in 1819, 1823, and 1832.

A. 4.—Water; twenty-four horse power; quite regular.

A. 5.—The works are ventilated at the pleasure of the workmen, by opening doors or windows when they please for their convenience.

A. 8.—Yes, they are.

A. 9.

A. 9.—No arrangements are made for changing of clothes or putting on additional ones on leaving the manufactory, but a house is allowed for the children to wash themselves at pleasure.

A. 10.—Rarely under nine years of age. I am not aware of any being employed at any other trade beforehand.

A. 11.—Yes; the work being light, they are more capable of performing it at nine or ten than those of maturer years.

A. 12.—In this there has been no alteration at my works.

A. 13.—No apprentices have ever been employed.

A. 15.—All the children lodge with their parents or relatives.

A. 17.—Twelve hours, excepting Saturdays, which are ten.

A. 18.—All work the same hours; the work could not go on otherwise.

A. 19.—Never more than twelve hours, except part of the carding-engines, which have wrought about thirteen hours for two months, the children attending, which are paid extra.

A. 20.—Three hundred and eight days or so.

A. 21.—About three thousand five hundred and eighty hours.

A. 22.—All parts of the work proceed together.

A. 23.—About eleven hours and twenty minutes.

A. 25.—The reasons which caused me to exceed the usual hours are stated in my answer to Q. 19., and is devoted to the carding of wool for country purposes, so as not to interfere with regular hours of the workmen.

A. 26.—It may be avoided by not doing the work, or encroaching upon the workmen's hours.

A. 27.—Not unless for some special purpose, and then only a few days.

A. 28.—It must follow as a matter of course; when the quantity produced is less its value increases.

A. 29.—I have never done this, neither am I aware of its being done in this neighbourhood in any of the woollen-mills.

A. 30.—There is no prohibition on the woollen manufacturer.

A. 31.—Were it necessary, there could be none.

A. 34.—I have never found it necessary to employ more than one set of hands.

A. 35.—I have never wrought during the night.

A. 37.—A reduction of the wages of the workers, and the quantity produced by the same machinery lessened, in consequence of which the value raised thereby, rendering it more difficult to compete with the foreign manufacturer.

A. 38.—Heated in winter for the comfort of the workers; in summer no extra heat.

A. 39.—There is no part of the work requires such a process.

A. 49.—Have none.

A. 50.—Oil during winter.

A. 51.—I only work till eight o'clock at night.

A. 53.—From nine to ten for breakfast, and from two to three for dinner.

A. 54.—They are at liberty to go.

A. 55.—If they stay, it is to suit their own comfort.

A. 57.—If gentle discipline does not do, they are dismissed from the work.

A. 58.—None but what is referred to above, which deserves not the name of corporal punishment.

A. 59.—What is referred to is by the men with whom they work.

A. 60.—Never by my commands.

A. 63.—None; but if they are obstinate in doing their work they are turned off.

A. 65.—All the workers live in their own or relations houses.

A. 66.—It is obvious that those employed in a manufactory from infancy should be better acquainted with machinery than those going into one at a more advanced period; however, this must greatly depend on the talents of the individual.

A. 67.—The workpeople at my mill enjoy generally good health, and I cannot say there is any difference. For this see description list.

A. 68.—Have no process of the kind.

A. 69.—I am aware of no Act regarding woollen factories, which renders it unnecessary for me to answer the remaining queries; however, I beg to state that I am not aware of the children in my own work, or in any other woollen mills with which I am familiar, being any thing but well used.

THOMAS GILLIES.

Perthshire.

Thomas Gillies.

#### ANSWERS of ROBERT HASTIE, Dunning.

No. 118.

Robert Hastie.

A. 1.—Dunning, Perthshire.

A. 2.—Woollen-yarn manufactory.

A. 3.—About twenty-seven years ago.

A. 4.—Water; irregular; very much so in drougthy summers.

A. 5.—Nothing but windows.

A. 6.—Entirely on the doors and windows.

A. 7.—Yes, and free to all.

(APP.—A. 1.)

X 4

A. 8.

Perthshire.

Robert Hastie.

- A. 8.—Yes.  
 A. 9.—No.  
 A. 10.—About eleven years of age, and have not been previously employed.  
 A. 13.—No.  
 A. 15.—Their parents visit them twice or thrice a year if distant, but those who live in the vicinity see them almost daily.  
 A. 16.—Yes.  
 A. 17 & 18.—About twelve hours.  
 A. 19.—Twelve hours only.  
 A. 20.—Every lawful day when there was no stoppage from machinery going wrong.  
 A. 21.—About three thousand hours.  
 A. 23.—About twelve hours.  
 A. 24.—About ten hours.  
 A. 25.—Not at all.  
 A. 26.—Yes, entirely avoidable.  
 A. 27.—No.  
 A. 29.—The love of gain.  
 A. 30.—No.  
 A. 31.—None.  
 A. 34.—No true interest in night-work.  
 A. 37.—Ten hours work, exclusive of one to each diet, is my practice, and I have no experience otherwise.  
 A. 38.—The common temperature of the atmosphere.  
 A. 39.—Just common temperature.  
 A. 53.—From nine o'clock to ten in the morning for breakfast, and the hour from two P.M. to three o'clock for dinner.  
 A. 54.—Yes, all.  
 A. 56.—No meals are taken in my manufactory.  
 A. 57.—Kind demonstration; hire.  
 A. 58.—No.  
 A. 65.—The married people live in houses of their own; the unmarried live with me.  
 Admonition and good example.  
 A. 66.—Better experience.  
 A. 67 & 68.—No.  
 A. 69.—I suppose so.  
 A. 70.—No, it was impossible.  
 A. 73.—I know nothing of the practice of other mills.  
 A. 78.—True piety, uprightness, urbanity, &c.

ROBERT HASTIE.

No. 119.

James Smith.

## ANSWERS of JAMES SMITH, Manager of Deanston Cotton Works.

A. 1.—Deanston Cotton Works, situated in the parish of Kilmadock, Western District of the county of Perth, the property of James Finlay and Company, Glasgow, and under the immediate management of James Smith, one of the partners of the Company.

A. 2.—Iron-founding, machine-making, cotton-spinning, and power-weaving.

A. 3.—The first part of the works being what is called the "Large Mill," with "Little Mill," was erected in 1785, and has ever since been employed as a cotton factory, with an interval of six years from 1802 till 1808, when the works were stopped, and the population nearly all dispersed. The works were re-established under the present company in 1808. The buildings for foundry and machine-shop were built at various times from 1811 to 1825. The new mill at present in progress filling with machinery for preparing and spinning cotton was built in 1829.

A. 4.—The power employed consists of three water-wheels of about seventy horse power each, which is pretty regular, but may occasionally in very dry seasons have an under-supply of water during two or three weeks. There is also a smaller water-wheel which is chiefly employed in turning for the machine-makers.

A. 5, 6, & 7.—All the windows are of the sort called the "Scotch windows," having two moveable sashes; the upper one, comprehending about half the area of the window, is used for ventilation, and adjustable by a catch, or by being hung by balance-weights, and the extent of opening is regulated by the superintendent of the apartment, who has instructions to have his room at all times well aired. In cold dry weather it is difficult to keep the rooms properly aired, as the people feel the currents from the windows irksome, and they generally prefer for their own comfort and feeling a close atmosphere in such weather; besides, in the weaving departments the cold dry air increases the breakage. In the new mill an additional provision for ventilation has been made by having vents in each pillar or abutment of the building, having a communication at the ceiling and floor of each apartment, and terminating in the open air at the top of the building. In the dressing-room, where there is considerable heat and moisture, a fanner is constantly kept in motion to discharge the hot and loaded air. The room in which the first process of cleaning the cotton is performed

Perthshire.

James Smith.

formed is completely ventilated and freed from dust and flue by fanners attached to the machines, and which blow the whole to the external air.

A. 8.—All parts considered dangerous from their nature, or from the risk of the people coming in contact with them whilst following their occupations, are fenced off.

A. 9.—In the old mill there is a small apartment attached to each room where there is a plentiful supply of water for washing, and where the people shift their clothes and lay aside their cloaks, and they have generally little boxes near their machines where they keep their outgoing clothes, and they have slippers or dry shoes for shifting in wet weather, and are in the cold season provided with cloaks, mantles, or warm shawls to protect them from the external air, which arrangements have always existed more or less, but have been of late years more improved. The only arrangements to insure personal cleanliness are general instructions to the overlookers to admonish those who are not inclined to be cleanly, and by exciting emulation amongst the associates.

A. 10.—Nine years of age, hardly any of them having been previously employed at any other trade.

A. 11.—The nature of the work requires the employment of children under twelve years of age, because some parts of it are more conveniently performed by children of the size at that age, and because, unless children of such age were employed, they would acquire habits of idleness, and their parents in general could ill spare the money they earn. By this early employment they are fitted for more lucrative situations as their age and strength advance. Children from nine to fourteen years do not suffer in health or growth from such employment; those brought up about the establishment are able to read well before they enter to work, and after beginning to work their education is extended by attending an evening-school four nights a week after work hours.

A. 12.—The recent improvements in spinning machinery certainly tend in some degree to the greater employment of children under twelve years of age, but the extension of power-weaving has created a demand for a higher-aged class, say from fifteen to thirty.

A. 13.—No apprentices are employed in the cotton factory, but a few in the foundry and machine-making.

A. 14.—No parish children are received as apprentices, as no such class exists in Scotland. The apprentices employed as above are chiefly the children of the workpeople or of some of the working classes in the neighbourhood, and are generally above twelve years of age before they are engaged, although most of them have been previously employed in the cotton factory.

A. 15 & 16.—A few orphans are casually left, either by persons employed about the establishment, or by poor persons in the neighbourhood; they are boarded with respectable persons, educated at the school of the establishment, and are looked after by the manager, and occasionally by some of their relatives.

A. 17.—Twelve hours daily, excepting Saturday, when they work nine only.

A. 18.—Twelve hours daily, excepting Saturday, when they work nine only, and no difference is made at any age.

A. 19.—For thirteen hours, which was wrought for five days only, to make up time lost by accident to wheels. Lost time is seldom wrought up, and if so, it is always at the option of a majority of the workpeople themselves.

A. 20.—Three hundred and five days.

A. 21.—Three thousand four hundred and ninety-one hours.

A. 22.—Occasionally small parts of the work which are short of produce to supply other parts have been wrought for an hour, and always at the free option of the workpeople.

A. 23.—Eleven hours and a half nearly.

A. 24.—There is no difference of the time of employment of children and grown people.

A. 26.—Extensive working beyond the regular hours is certainly avoidable under proper regulations, especially at an old-established factory; yet a little occasional working in that way is convenient for the general progress of the work, and especially in starting new machinery, when the different parts cannot be got forward together.

A. 27.—About twenty-five years ago twelve hours and a half per day were wrought; at that period the time was reduced to twelve, at the desire of the people, and continued so till the passing of Sir Robert Peel's Act of 1825, since which the spirit of the Act has been strictly complied with.

A. 28.—When the hours were at first reduced from twelve and a half to twelve, and latterly to sixty-nine hours per week, by Sir Robert Peel's Act, the cost of producing a given quantity was in some degree enhanced by the diminution of produce; but the gradual advancement which has been taking place in produce from the various machines for many years past in a short time obscured the loss by diminished time, and the produce in all departments was as high the year following the introduction of that Act as at any former period; no alteration having been made either in the day's wages or piece-work prices, the cost of production was not of course enhanced, but the exertion of the people was no doubt increased.

A. 29.—The only inducement to the manufacturer to have his work continued for longer hours than is allowed by law is that of increasing his produce, whereby his interest on sunk capital and general expences, which are not thereby increased, fall lighter upon an increased produce; and his profits, if any, are proportionally increased.

A. 31.—As children under twelve years of age have generally been found to enjoy health and cheerfulness, relays have not been thought of; but there can be no doubt that working

(APP.—A. 1.)

Y

by

Perthshire.

James Smith.

by such relays might be accomplished, although it is probable that the individuals so employed would have less money for their labour, and which would press hard upon themselves, and their families are much aided in their living and education by the employment of the members above nine and under fourteen years of age. In many cases widows with their children are by this means saved from starvation, for the pittance of parochial relief allowed in Scotland is very inadequate to their support.

A. 32.—Extra hours have never been wrought here in such a way as to require a relay of young hands.

A. 33.—During the years 1829 and 1830, in consequence of a deficiency of power previous to the erection of the present improved water-wheels, the throstle-spinners and power-weavers were employed during the whole night, but which night-work was continued longest with the throstle-spinners, as that employment is best suited for night-work. At this time all hands under sixteen were employed during the day, and none but the older hands during the night. The people did not like the night employment so well, and several of the more delicate seemed to suffer in their health. No difference could be discovered in their professional or moral conduct. They began to work at half past six in the evening, and stopped at ten for half an hour to take a refreshment, and again at two in the morning for a similar purpose. They left off working at five in the morning. The quantity of work produced was not proportionally so great as by day-work, and the prices allowed for the work done were higher.

A. 35.—In the night-work related in A. 33. throstle-spinners and power-weavers wrought during the night for some time alternately fortnight about, but the throstle-spinners wrought steadily throughout the whole of the winter months.

A. 36.—We have no night-work.

A. 37.—There can be no doubt that any material farther reduction of the working hour would diminish the produce, and consequently the wages of the workpeople and the profit<sup>s</sup> of the proprietor, but more especially the latter, as the interest of sunk capital, and many heavy charges incident to such establishments, and not diminishable by shorter hours of working, would press heavily on the diminished produce; and as the item of cost arising from such charges amounts to as much as the item arising from wages, the loss to the manufacturer would be considerable. If any law shall be enacted so diminishing the working hours, the generally decreased produce by the whole trade may cause a temporary deficiency of supply to meet the existing consumption, and wages and profits may thereby be kept up for a time, but the facility of extension will soon meet the demand, when wages and profits may probably fall. Were the consumption in the trade confined to our own country, no just or benevolent person would grudge moderately diminished hours of working to the working classes, giving them thereby a proportion of the benefits arising from the generally improved system of society; but as the manufacturers of this country are now met by a serious competition in several foreign countries where labour is unrestricted, and living, and consequently wages, are lower, and especially in America, where the raw material is brought cheaper to the manufactory by a sum amounting to one half of the whole wages paid in this country, there is serious reason to apprehend that we could no longer continue to maintain our ground in foreign markets, to which at least two thirds of our produce is exported, and even our home market would be liable to invasion by foreign goods, were it not for the legal protection. The artizan of this country if oppressed, can easily emigrate and transfer his skill and labour to aid the manufacturers of a foreign country; but the buildings and machinery of the manufacturer must remain to waste in uselessness, and the numerous ramifications of the community depending on the cotton trade, whether as artizans or agriculturists, would suffer in one common ruin.

A. 38.—The usual temperature in the preparation, spinning, and weaving departments is 65° of Fahrenheit; and the temperature is regulated, more with reference to the comfortable feelings of the people, than from the nature of the processes carried on.

A. 39.—The highest temperature ranges from 78° to 86° of Fahrenheit, and this in the dressing-room only, where it becomes necessary to promote the evaporation of the moisture of the paste on being put upon the yarn. In this department one hundred gallons of water are evaporated daily, and a fanner is kept in motion at one end of the room for the purpose of throwing off the moist and heated air. The hands in this room are generally as healthy as in any other apartment of the works; asthmatic people have often been benefited by living in its atmosphere, and a number of young children constantly employed in the apartment enjoy good health, and many who wrought there in their youth are now strong grown people.

A. 40.—Twenty-seven hands.

A. 50.—By gas, the works having been so lighted for one thousand hours last season.

A. 51.—The same as during the day.

A. 53.—Half an hour to breakfast and half an hour to dinner to all classes, excepting the mechanics, who have an hour to each meal.

A. 54.—Those persons who live in cottages adjoining the works go home to their meals, and some of those from a distance have their meals at the cottages; the whole number living in that way is one hundred and ninety-four. One hundred and eighty of the people reside half a mile from the works, and three hundred and sixty-one one mile, and a few at distances of from one and a half to two miles, amounting altogether to five hundred and forty-one who have their meals carried for them to the works, and which they take generally within the works

works. In fine weather they take a walk in the open air for a quarter of an hour after their meals.

A. 55.—Altogether for the convenience of the workpeople residing at a distance, as they could not undergo the travel and exposure to weather necessary to enable them to take their meals at home, and to spend a whole hour in idleness about the works they do not like; they therefore applied to be allowed only half an hour for dinner, getting half an hour sooner from their work in the evening in lieu thereof.

A. 56.—If they could be so taken at their homes by having all the people to reside near the works, the advantages in health, comfort, and economy would be considerable. Methods of supplying them from a general soup-kitchen at the works have been tried, but they have always preferred having their food from their own homes, even carried and cold.

A. 57.—The only means are persuasion, and occasionally slight fines, holding out dismissal as the sure fate of those who repeatedly disobey. In cases of great obstinacy dismissal for a few weeks or months generally works a cure, and the employment of praise to those that do well more than blame to the negligent is inculcated to the overseers. Those conducting themselves with propriety, and being careful and expert in their business, are the first to be promoted to better situations.

A. 58.—Never.

A. 62.—In the course of twenty-five years two or three cases of corporal punishment have come to my knowledge after their inflictions, and in every case the person so inflicting was pointedly reprimanded and admonished.

A. 63.—The overlookers have always been informed that no corporal punishment would be allowed on any account whatever, and children and grown-up people entering the works for the first time are always told, that if at any time they shall consider themselves ill-used or oppressed, they will receive instant consideration and redress, if found proper, on application to the foreman, and failing their satisfaction with his judgment, will be heard by the manager.

A. 64.—Never.

A. 65.—One hundred and eighty-four of the workers live in houses adjoining the works belonging to the proprietors, where attention is paid to promote domestic cleanliness. No public-house is allowed in this village, but ale and porter are allowed to be sold in one shop. A general observation of their moral conduct is exercised, all deviations from correct conduct are taken notice of, and incorrigible characters entirely removed. A person is employed to keep the streets, dungsteads, necessaries, &c. in order, and he exercises a general superintendence over the people, especially the children, who are prevented by mild and gentle means from committing any serious mischief. One hundred and eighty of the workers reside about half a mile distant in houses rented by the proprietors, and subset to the people. No public-house is allowed here, but shops for the supply of all necessary commodities are encouraged in both places; the conduct of the people is watched over in the latter as well as in the former place. Three hundred and seventy-one of the workers live chiefly in the village of Doune, which is about a mile distant, and in this village, containing about one thousand five hundred inhabitants, there are about twelve public-houses, being rather a large number for such a small place; but this is rendered somewhat necessary to accommodate the public at the great cattle fairs held there. The same general watchfulness is kept over the people residing there, but as they are less under immediate control, it is more difficult to preserve them all so strictly correct either in domestic cleanliness or in moral conduct. Premiums have sometimes been given to those who kept the cleanest houses, but the general mode of inducing improvement is by occasional visiting, and by bestowing praise upon those who keep the most cleanly houses.

A. 66.—It has generally been found that those who have been taken into the work at an early age prove more skilful, not only in their particular occupation, but they can more easily turn their hand to any of the employments; they are also more steady and industrious in their habits, but it is fair to state that many have come in at later periods of life, even at from twenty to thirty years of age, and have become skilful steady hands.

A. 67.—During the last ten years the health of the people has upon the whole improved, arising chiefly from the population having been in a more comfortable state as to lodging and sustenance. When we have had any accession of population in consequence of extension, we have generally more sickly people amongst the new comers for a year or so, as they are generally sickly when they come.

A. 68.—There are no processes carried on here particularly injurious to health; the people generally choose for themselves such employments as best suit their desires, their health, and their wants as to money; and this is in some degree regulated by the interests of the proprietor, who selects those best suited for the different employments. Every overlooker is allowed to select his own workers, and on the other hand every worker is allowed to engage with the overlooker he may like best. If individuals are found not to have health in any particular employment, they are allowed, and sometimes even induced, to exchange to some employment more suited to their state. Leave is always given, when it can be done with propriety, to take a day, a week, or even a month's recreation, and if they feel unwell or unfit for their work an assistant is always allowed them.

A. 69.—The works are strictly subject to the provisions of the present Act, with the exception of the half hour to dinner instead of a full hour, as explained in A. 55.

A. 70.—Never.

A. 73.—There are no cotton-mills within fourteen miles; there are some small woollen-mills

(APP.—A. 1.)

Y 2

Perthshire.

James Smith.

A. 1.

Perthshire.

James Smith.

mills which are not subject to the present Act, and where long hours are wrought, and very young children, sometimes as low as six years old, are employed.

A. 77.—Some workpeople may be afraid to give evidence displeasing to their masters; but there are always plenty with minds sufficiently independent to lead them to state the truth on all points, and they are upon every occasion admonished to speak the truth, being at the same time told that no improper feeling towards them will be allowed to exist on account of what evidence they may have given.

A. 78.—I can suggest nothing better than the present law, with a modification allowing shorter time for meals in country situations, where it may be necessary, with the option of the people. The same should, however, be made to apply to all trades carried on in factories, and the appointment of special officers to watch over the observance of it in different districts would be of great benefit to the people, and the respectable classes of manufacturers.

JAMES SMITH.

No. 120.

David Rattray.

## ANSWERS of DAVID RATTRAY, Bramble Bank.

A. 1.—Parish of Rattray and county of Perth.

A. 2.—Flax and tow spinning.

A. 3.—The whole work was erected in 1828 and 1829.

A. 4.—Propelled by a water-wheel of eight horse power; irregular in time of floods and frosts.

A. 5.—No distinct provision than what is stated in answer to the following question.

A. 6.—The mill is ventilated by drawing the windows on one side, and by ventilating panes on the other.

A. 7.—The ventilation is regulated by the foreman or any other person at the work at pleasure.

A. 8.—The dangerous parts are all fenced off where this can be done consistently, and I conceive little or any danger of accidents happening.

A. 9.—No particular arrangements, as the nature of flax-mills do not require the changing of clothes; if at any time any of the girls choose to wash themselves during work-hours they may do so at the river side without being found fault with, as there is none of the doors of my mill locked in work-hours.

A. 10.—I have not been in the practice of employing children under twelve or thirteen years of age, except in a very few cases where I have been solicited by parents employed at the work to take some in under that age, against my inclination and profit; however this has very seldom occurred. None of them have been employed at any other trade.

A. 11.—Does not require any under that age.

A. 12.—Any recent alterations in machinery have not rendered necessary the employment of children under that age, nor am I at all willing to employ them at that age.

A. 13.—I have no apprentices; I at times employ girls to learn the spinning, with a verbal understanding that they are to remain at my work for some time after learned; during the time they are learning they are paid according to merit.

A. 15.—The workers I employ are all lodged with their parents in houses from me beside the mill, except a few who have an apartment to themselves, also beside the mill and my dwelling house; there is no such thing as parents or guardians visiting them in time of work; it is not at all considered necessary.

A. 16.—No actual superintendence further than what is stated in answer to the last question.

A. 17.—Thirteen hours per day is the stated time for work, except Fridays fourteen hours, and Saturdays twelve.

A. 18.—No difference is made as to age.

A. 19.—Fifteen and one half hours is the longest time in any one day that my mill has been worked, and this was done at the request of the workers, for the purpose of them getting away sooner when they had any object in view, such as election days or the like.

A. 20.—From the first of January 1832 to the thirty-first December 1832 inclusive, three hundred and six days.

A. 21.—The whole number of hours employed in working the mill were three thousand nine hundred and seventy-eight.

A. 22.—Every part of my work is carried on at the same time.

A. 23.—The average number of hours is thirteen per day.

A. 24.—Only one set of workers employed.

A. 25.—This is answered by question nineteen.

A. 26.—An excess beyond the regular hours is the choice of the workers, for the purpose of keeping whole their wages,

A. 27.—Never done so.

A. 28.—As I have never done so, can give no answer.

A. 29.—I am not aware of the inducements of those who are in those practices; I do not practise it myself except as mentioned in A. 19.

A. 30.—I decidedly think, that to reduce the hours of work, the cost of production would be increased.

A. 31.

A. 31.—There is no need of a change of hands in my mill, as my extra hours of working are so very trifling.

A. 32.—Never required to adopt the practice.

A. 33.—Never work night-work, nor require any arrangements amongst workers for that purpose.

A. 34.—Because I always considered one set of hands sufficient.

A. 37.—My opinion is, that to reduce the hours of work would enhance the value of the production, and thereby prevent the British manufacturer from competing with foreigners in a foreign market, and may therefore be the mean of taking machinery to other countries.

A. 38.—Never ascertained the temperature of my mill; no artificial heat is required.

A. 39.—No artificial heat is required; a cold temperature is best for flax and tow spinning.

A. 40.—I generally employ twenty-eight or thirty hands, exclusive of hecklers.

A. 46.—No process; it is not required but in the ordinary hours of the day.

A. 50.—By patent lamps and lanterns filled with oil.

A. 51.—None, except by the windows, as before explained.

A. 53.—From nine to half past nine A.M., and from two to half past two for all classes.

A. 54.—All leave the work at meal-time.

A. 57.—I know of no means but by making complaints to their parents.

A. 58.—No corporal punishment is allowed to be inflicted by any person at my work.

A. 60 & 61.—If such punishments have been inflicted, it was without my knowledge or sanction.

A. 63.—I have given instructions to my foreman, that whatever offences are committed by the workers, such as disobeying orders or leaving their work without leave asked and granted, to keep a state of such conduct on a slate, so as I may have an opportunity of exacting satisfaction such as the nature of the offence requires.

A. 64.—No such complaints have been lodged against me or any of my overseers, so far as I know.

A. 65.—The workpeople have free houses from me, as stated in A. 15; those who have parents I take no charge of, but for the few who have not their parents beside them, they are furnished by me with clean bedding-sheets once a month, and I enforce domestic cleanliness so far as in my power.

A. 66.—Those who go young to our employment become more proficient in skill about our business than those who go old; as for general characters, there are exceptions in all classes; however, I know nothing against the most of my workers, and the most of them have been about mills since they began to work for their living; can state nothing against their character in general.

A. 67.—I do not think that the health of the people is any ways deteriorated within the last ten years, but if any thing improved, as the mills are in general kept more clean than in those times, and the flats being higher gives room for more ventilation; however I never considered our employment unhealthy, and my reason for this is, that I have been employed about spinning-mills of various dimensions for upwards of thirty years; and I must say that I never saw many cases of real distress by sickness or otherwise, and I challenge any one who has the same experience as I have had, to say if it is not a rare thing to see even a single death happen among the workers employed at flax-spinning mills.

A. 68.—I make no selection, as they are all generally healthy.

A. 69.—I am not aware of any Act affecting our mills at present in Scotland.

A. 77.—I shall not be displeased with any evidence my workers give, if it be truth.

A. 78.—I have nothing to suggest on that point.

A. 79.—The only observation I have to make with reference to the present inquiry is, that any legislative interference betwixt master and servant is quite uncalled for amongst the workers so far as I have any thing to do with them; they all appear to be satisfied, and I am also decidedly of opinion, that instead of improving the morals of children and others employed, shortening the hours of labour would rather tend to increase immorality; my reason for thinking so is, that where so many are collected together, there is no doubt some amongst them whose morals are greatly immoralized already, and are not likely to improve by having more time in their own hands; but, on the contrary, it may have a tendency to lead those of tenderer years along with them to such vices as they may be addicted to themselves.

13th May 1833.

DAVID RATTRAY.

Perthshire.

David Rattray.

#### ANSWERS of DAVID CARMINOCROSS, East Haugh Spinning-mill, Rattray.

No. 121.

David Carminocross.

A. 1.—Parish of Rattray and county of Perth.

A. 2.—Flax-spinning.

A. 3.—The mill was converted into a spinning-mill in 1828.

A. 4.—By water-power, being five horse-power, or thereby; very irregular from frosts and floods, so that the work is sometimes stopped for three or four days at a time.

A. 5.—No distinct provision.

(APP.—A. 1.)

Y 3

A. 6.

Perthshire.

David Carminocross.

- A. 6.—It depends on opening the windows.  
 A. 7.—It is regulated by the workers.  
 A. 8.—All dangerous parts are fenced off.  
 A. 9.—The workers all lodge about thirty yards from the mill, and no spare rooms are required; they are allowed to go out of the work at all hours when they wish.  
 A. 10.—I never had but one person under twelve years of age at my work.  
 A. 11.—No.  
 A. 15.—No orphans.  
 A. 17.—Thirteen hours besides meal-hours.  
 A. 19.—Fourteen hours and a half in making up time for two holidays.  
 A. 20.—Three hundred and five days and a half.  
 A. 21.—Three thousand nine hundred and seventy-one hours.  
 A. 22.—No difference; all carried on at one time.  
 A. 23.—Twelve hours and nine tenths.  
 A. 25.—Preceding fairs and festivals, which the workers desire to attend. Two holidays are allowed and paid for without making up; two additional holidays are required, which they make up by extra hours, to have their pay full.  
 A. 26.—It is no doubt avoidable; but when the workers request to be allowed to go away they offer to make up the lost time by extra hours, which understanding should not be disturbed.  
 A. 27.—No.  
 A. 29.—The inducement is gain; but I have not practised, excepting as above stated at the request of the workers.  
 A. 31.—No objection to relays, and practised them for two months in summer of 1828.  
 A. 32.—Only tried for two months, as above stated.  
 A. 33.—The night-set commenced at eight in the evening, when the day-set retired, and wrought till six in the morning, having half an hour for refreshment at twelve at night, and wrought in all nine hours and a half; the day-set wrought as above stated.  
 A. 34.—I now prefer using a day-set only for the ordinary hours.  
 A. 35.—No relays now.  
 A. 36.—No night-work now; it was unprofitable, and I relinquished it.  
 A. 37.—The effect would be a reduction of wages to the worker, a diminution of my profit, and a bar to our competing with foreigners in the same branch of trade.  
 A. 38.—Flax can be wrought at any temperature, and no artificial mode of heating is adopted.  
 A. 40.—Fifteen or sixteen hands in the mill.  
 A. 41.—None.  
 A. 47.—No such process required.  
 A. 50.—By patent oil-lamps.  
 A. 51.—None, except by the windows, as before explained.  
 A. 52.—I knew no difference, having only continued the practice for two months.  
 A. 53.—Breakfast at nine and dine at two; half an hour allowed for each meal.  
 A. 54.—All leave.  
 A. 57.—Premiums for good service, remonstrance and dismissal for bad.  
 A. 59.—By none, so far as I know.  
 A. 63.—Instructions given to stop them from working till investigated by myself; these instructions were verbal.  
 A. 64.—No such complaints have been brought.  
 A. 65.—The adults live in houses belonging to me, and the children in my own family, and on Sundays undergo the same discipline as my own children.  
 A. 66.—I have observed no difference.  
 A. 67.—No difference; all are healthy.  
 A. 68.—This is unnecessary in my small work.  
 A. 69.—No.  
 A. 74.—I know of no such instance.  
 A. 77.—I do not believe they are afraid to give evidence.  
 A. 78.—I consider all legislative interference unnecessary, especially in flax-mills propelled by water-power.

15th May 1833.

DAVID CARMINOCROSS.

No. 122:

Alexander Dick.

## ANSWERS of ALEXANDER DICK, Haugh Mill, Rattray.

- A. 1.—Parish of Rattray, county of Perth.  
 A. 2.—Flax-spinning entirely.  
 A. 3.—All erected in 1825.  
 A. 4.—Water-wheel about eighteen horse power, and subjected to interruptions from floods and frosts.  
 A. 5.—None, except the windows.  
 A. 6.—Opening the windows.  
 A. 7.—Regulated at the discretion of every person in the work.  
 A. 8.—Yes, they are.

A. 9.

- A. 9.—Nothing particular, except ventilation.
- A. 10.—I have no person under ten years of age, except one; I do not like any hands under twelve; none ever were at any other trade to my knowledge.
- A. 11.—Not at all; no children, in my opinion, should be taken into spinning-mills under twelve years of age.
- A. 12.—None required under twelve years of age.
- A. 13.—None.
- A. 15.—I do not lodge and maintain any of my people; they all live with their friends.
- A. 16.—Any children I have live with their relations.
- A. 17.—About twelve hours and a half, except Saturdays, and twelve hours on these days.
- A. 18.—The same for all.
- A. 19.—One day last year (the day before the celebration of parliamentary reform) fifteen hours.
- A. 20.—1st May 1832 to 1st May 1833, five holidays, exclusive of Sabbaths.
- A. 21.—Not exceeding four thousand hours, to the best of my knowledge.
- A. 22.—None required. (See A. 26.)
- A. 23.—Twelve hours and three quarters, as near as I can calculate.
- A. 25.—For a prospective holiday and the celebration of parliamentary reform.
- A. 26.—It was the choice of them all for making up for the day above stated, and unavoidable with five of the hands in the preparing flat; for about two months lately they worked the breakfast hour.
- A. 27.—Once about six years ago worked during the night for two or three weeks.
- A. 28.—I cannot answer this question; I did so merely to hasten the execution of an order for yarns, and I made no calculation.
- A. 29.—I have no night-work.
- A. 30.—Too complicated a question for me to answer; it is a question relating to political economy, and should be well considered in all its bearings.
- A. 31.—I work no extra hours, except sometimes for unforeseen detentions.
- A. 32.—Never required any.
- A. 35.—No night-work.
- A. 37.—This is a question of political economy, and a very complicated question to follow it out in all its consequences.
- A. 38.—Never tried it; windows allowed to be opened at the pleasure of every one in the work.
- A. 39.—A cold damp atmosphere is the best suited for flax-spinning.
- A. 40.—I employ about fifty.
- A. 47.—No process required.
- A. 50.—Oil-lamps.
- A. 51.—None except windows, as before described.
- A. 52.—I can give no opinion as to this.
- A. 53.—In winter, breakfast before they come to work, and dine at two P. M.; in summer, breakfast at nine A. M., dine at two P. M.
- A. 54.—All at liberty to leave the work.
- A. 57.—Sometimes a slight fine, sometimes a slight corporal punishment, if it can be called so.
- A. 58.—Very rarely indeed.
- A. 59.—By overseers or manager, but very rarely required.
- A. 60, 61, & 62.—Yes; it cannot be called corporal punishment. We have no trouble with our people, they are all very peaceable, and require almost no chastisement or punishment of any kind whatever; I hold my workers to be generally a pattern for sobriety and general good behaviour.
- A. 63.—No instructions.
- A. 64.—Never.
- A. 65.—None of them live with me.
- A. 66.—They should learn young to become expert workers; I like none under twelve years of age.
- A. 67.—I cannot answer this question; I never paid particular attention.
- A. 68.—No selection required.
- A. 69.—I have no knowledge of this.
- A. 78.—Spinning-mills propelled by water-power are subjected to being stopped from the effects of floods and frosts, and to place them in the same situation as mills propelled by steam-engines by any legislative enactment would be an act of great injustice to the proprietors. My hands, in winter, all prefer taking their breakfast and beginning to their work with daylight, and work proportionably later in the evening; I believe they would consider it a great hardship to be obliged to begin to their work at half past five or six o'clock in the winter mornings.

ALEXANDER DICK.

Perthshire.

No. 123.

William Fife.

## ANSWERS of WILLIAM FIFE, Keath Mill, Rattray.

- A. 1.—Situating on the Water Erech, parish of Rattray, and county of Perth.
- A. 2.—Solely flax and tow spinning.
- A. 3.—The first erection was in 1823-4, set a working July 1824; addition to the work built in 1828, set a working March 1831.
- A. 4.—By a water-wheel of twelve horse power; the only stoppages by floods and frost.
- A. 5.—No distinct provision.
- A. 6.—Entirely by the opening of the windows, which are hung in the preparing flat; in the spinning flat the corner panes are out, and boards to shut and open at the pleasure of the workers; no other means.
- A. 7.—The ventilation is regulated by any of the workers; they may open or shut at pleasure.
- A. 8.—The dangerous parts of the machinery are fenced off where it can be done consistently with its being worked.
- A. 9.—No arrangements, as the workpeople are at liberty to go out of the work when necessary; no check-locks on the doors; there is no need for shifting their clothes; it was never practised with me.
- A. 10.—In some cases children are taken into works as low as nine or ten years of age, but the masters would rather want them than have them.
- A. 11.—The nature of the work requires no person under twelve years of age, although boys of ten years of age are quite sufficient for some parts of the work.
- A. 12.—I believe any alteration in machinery has not affected the employment of hands of any particular age.
- A. 13.—I never employ apprentices, but I frequently take in girls to learn spinning, upon a verbal understanding with their parents that they are to remain at the work for eighteen months, and to be paid as they become expert and useful.
- A. 14.—I never had apprentices.
- A. 15.—None of the children are regularly visited at the work either by their parents, natural or legal guardians; those of them who have parents or guardians live with them; I have no orphans.
- A. 16.—No actual superintendence, excepting what is stated in answer to the preceding question.
- A. 17.—Thirteen hours per day except on Saturdays, on these days twelve hours only; but as the workers wish to get away earlier on Saturdays we work longer on Friday, when the work is stopped at five o'clock P. M. on Saturdays.
- A. 18.—The same hours as the above, except those in the preparing flat, who work about ten and eleven hours per day only.
- A. 19.—Fifteen hours and a half generally on Friday all winter, as the mill is not lighted on Saturdays.
- A. 20.—From the 1st January 1832 to 31st December 1832; the total number of days the mill was wrought was three hundred and seven.
- A. 21.—From the 1st January 1832 to 31st December 1832, the total number of hours 3,939.
- A. 22.—Every part of the work is carried on at the same time, except the preparing flat, which sets sooner at night, as they do not require to work so long.
- A. 23.—Twelve hours and five eighths nearly per day, from the 1st January 1832 to 31st December 1832.
- A. 24.—This question is answered in A. 19., fifteen hours and a half per day.
- A. 25.—When the mill was stopped for an hour or two with a flood in the river, or frost; when stopped a day or days no time for that is made up, the workers prefer wanting their wages, and so I do.
- A. 26.—Any excess beyond the regular hours is the workers own choice, except in what the former question answers.
- A. 27.—I believe I have never done so otherwise than stated in A. 17.
- A. 28.—I am not prepared to give an answer or opinion to this question.
- A. 29.—I have never worked my mill beyond the regular hours, except to the extent already stated in A. 25.
- A. 30.—My opinion is, that to reduce the working hours must increase the expence of production.
- A. 31.—I never saw any occasion for a set of fresh hands, as I never worked the mill longer than the ordinary hours.
- A. 32.—I never have tried two sets of hands, and I think it would be difficult to get two sets in the country situations.
- A. 33.—Never had occasion to work but one set of hands; no night-work.
- A. 37.—In my opinion, it would open a door for perpetual discord betwixt master and servant, when, under the present system, in perfect unison.
- A. 38.—No artificial heat used; never ascertained the temperature.
- A. 39.—No artificial heat required.
- A. 40.—I generally employ forty hands.
- A. 46.—No process; it is not required; it is all done during the ordinary working hours.
- A. 50.—By patent oil-lamps.

A. 51.

A. 51.—By the windows; no other.

A. 52.—I have no experience of this more than the day-labour; the hands seem equally cheerful and lively. At my work the mill does not start before daylight in the morning, and we work out our thirteen hours.

A. 53.—From nine to half past nine A. M. for breakfast, and from two to half past two for dinner, that is the time for about nine months of the year; three months in winter, say from the 1st of November to the end of January, all the workpeople take breakfast before they come to the work, as the mill never starts before daylight A. M.

A. 54.—They are all at liberty to leave the work at meal-times. As there are some of the hands that come from the villages too far a distance to go backwards and forwards to their meals, they get boiling water in the kitchen at breakfast-time, and their parents or some of the younger branches of the family bring their dinner to them.

A. 55.—They all leave the work, as above stated in A. 54.

A. 56.—I wish none to stop at meal-times in the mill; they are at liberty to go to the kitchen to take their meals when their parents or others bring them.

A. 57.—I have never used any other means than advice; when that would not do they must leave the work.

A. 58.—None to my knowledge.

A. 59.—I never had any complaints from any of the workers.

A. 62.—Strictly forbidden any corporal punishment; the workers are all directed to give me their complaints, and the overseers directions are, if they cannot manage the workers without corporal punishment, they must leave the work.

A. 63.—The overseers of their respective flats are instructed to tell me if any of the hands are refractory; I then make inquiry, and whoever is in the fault they must promise to behave better for time to come, or leave the work.

A. 64.—One case, December 1831, before the justices of the peace, against one of the overlookers, which they decided in his favour; no other case since the mill started.

A. 65.—Some of the families live in the houses, also some of the workers. I do advise them to keep cleanliness and good order, but no further. I furnish clean bed-clothes to the workers who live in the bothy.

A. 66.—Workers employed in spinning-mills, at least in some departments of it, require to go in when young, say ten or twelve, to learn to be proficient; when they enter to the work when old, they seldom become so expert as those who had gone young.

A. 67.—I do not think the health in this place of the country has deteriorated any with the workpeople, to the best of my knowledge.

A. 68.—None, as I consider there is very little difference of the work.

A. 69.—I am not aware of any Act of Parliament for flax-spinning mills.

A. 77.—I am sure, for my own workers, they are not afraid to give evidence, and I do not think any of the others are afraid, as they have no cause.

A. 78 & 79.—I have nothing to suggest. I consider any legislative interference betwixt master and servant bad; I will also take the liberty to say that the provisions of Lord Ashley's Bill would be ruinous to water-mills, and where the workers have a distance to come to their work in a country place they cannot be disappointed with daylight in the morning in winter, whereas if they have to rise by six o'clock and come to their work a lonely road, wading through dirt and snow in a dark morning, they cannot be in a good state for work, and I believe there would not be a possibility to get hands to do that here.

15th May 1833.

WILLIAM FIFE.

Perthshire.

William Fife.

## RENFREWSHIRE.

### ANSWERS of JOHN WHITE, Eaglesham.

A. 1.—Parish of Eaglesham and county of Renfrew.

A. 2.—Carding, drawing, roving, and spinning.

A. 3.—Erected partly in 1819 and in 1826. Used for its present purpose since 1819.

A. 4.—Water-power, in general regular; extent, thirty-five to forty horse power.

A. 5.—By opening panes, which have been found effectual.

A. 6.—Wholly on the opening panes.

A. 7.—At the discretion of all.

A. 8.—All that are considered dangerous.

A. 9.—No particular arrangements, such as apartments for changing their clothes. It is only some of the females who think of changing their upper garments. All have it in their power to wash themselves when necessary.

A. 10.—Nine years. We are not aware that any of them have been previously employed at any other trades.

A. 11.—Not particularly.

A. 12.—Not as far as we are aware.

A. 13.—No.

(APP.—A. 1.)

Z

A. 14.

Renfrewshire.

No. 124.

John White.

Renfrewshire.

John White.

A. 14.—Not applicable.

A. 15.—No worker lodged or maintained by us. In the case of orphans they are generally under the care of relations. If we know of it, we would not employ orphans who had no relations to take charge of them, and it is only under particular circumstances when we do employ orphans.

A. 16.—Their relations generally.

A. 17.—Twelve hours.

A. 18.—Twelve hours. No difference at any age.

A. 19.—Twelve hours.

A. 20.—Three hundred and one days.

A. 21.—Three thousand four hundred and fifty-nine hours.

A. 22.—All carried on at one time.

A. 23.—For five days of the week the average of each day was eleven and one half hours, and nine hours on each Saturday.

A. 24.—Twelve hours.

A. 25.—Never.

A. 26.—Avoidable.

A. 27.—Yes, previous to the Factory Bills, say twelve hours and a half during six days of the week.

A. 28.—We do.

A. 29.—To lower the cost of production, and with the view of realizing more profit. Without a change of hands we cannot see how night-work can be carried on.

A. 30.—Yes, in all the branches, the extent nearly in proportion to the limitation of the hours of working. In the spinning department the late reductions have not been greatly felt, as the spinner could exert himself to make it up; but if a farther reduction takes place he could not. In preparation hands, &c. we consider every limitation of the hours are in exact proportion on the cost to that limitation.

A. 31.—We know of none (if the extra hours are equal in duration to the ordinary hours), only we disapprove of night-work.

A. 32.—We are not aware that it has, except in the case of night-work. A fresh set of hands for a few extra hours would not be profitable.

A. 33.—We never wrought at night; if we did, two set of hands would be necessary. The practice is, where night-work is carried on, that the night-set come in when the day-set leave their work.

A. 34.—We conceive it to be our interest to work only one set of hands, because we could not find people to work six hours for the half they would work twelve hours, and although we could it is not necessary. Two sets in twelve hours would not produce more than one, and would give much trouble to us, besides confusion and irregularity.

A. 35.—As far as we know, they do work uniformly by night. A contrary practice would not do, at least we think so.

A. 36.—As we never wrought at night, we cannot tell the effects that a prohibition of night-work would have.

A. 37.—To increase the cost of production; and the grounds for this opinion is, that we can produce more in twelve hours than in any shorter period, and because the items which constitute the oncost remain the same whether we produce much or little; and if the wages are not reduced in proportion to the hours, the effects will be still more felt on the cost of production.

A. 38.—Generally from 65° to 70°; our aim is to keep the apartments comfortable, and no more; we consider this as low a temperature as our work would do at.

A. 39.—Nothing above 70°; a moderate dry summer heat we find sufficient, but when the atmosphere is damp a little steam is necessary in the mornings even in summer.

A. 40.—All the hands work in the same temperature.

A. 50.—By gas, when required, during the usual hours.

A. 51.—The same as during the day.

A. 52.—We should think night-work unnatural, and in so far its effects on the habits of the persons employed must be injurious.

A. 53.—Three quarters of an hour for breakfast, and the same for dinner.

A. 54.—All, with the exception of two or three individuals, and they are allowed the usual time for meals when the other workers come in.

A. 55.—For the convenience of the manufactory.

A. 56.—All the meals are taken out of the factory; each individual repairs to his own house for this purpose.

A. 57.—Finding fault with any impropriety of conduct, and after two or three reproofs, if this is ineffectual, the person is dismissed.

A. 58.—Not with our knowledge or consent. Parents prefer gentle correction to dismissal, and sometimes this is had recourse to, but we cannot and we do not approve of it.

A. 59.—No person is allowed to use corporal punishments.

A. 63.—Only verbal; our mind is well enough known on this subject.

A. 64.—We do not recollect of more than one or two complaints having been made to us, and in no case were proceedings taken before magistrates against us or our overlookers.

A. 65.—No.

A. 66.—In some particular kinds of work there is no great difference in those employed from

from infancy and those taken in at later periods. We however in general prefer the worker who has been employed from infancy, and we may say in some departments that it is almost necessary they are so. As to the general character, there is no marked difference. We cannot adduce any instance as to the difference in skill or character of the two classes, as in general our people have either been brought up with us from children, or where they came from to us.

A. 67.—We think the health of the people is much the same for the last ten years.

A. 68.—We select the persons best fitted for each kind of work; no change of these persons has been made in consequence of the injurious effects of any process. The only place where this might be an advantage is at the machine where the cotton is cleaned, and we have thought of adopting it, or of trying a more perfect way of ventilation in this particular place.

A. 69.—Strictly so, to the best of our knowledge.

A. 70.—Never.

A. 76.—No case having come under our notice, we cannot speak to this.

A. 77.—We really do not know how the workpeople would act in this case, or whether the fear of displeasing their masters would prevent their giving evidence; in the nature of things they must feel to do so, and other means ought to be adopted.

A. 78.—The penalties cannot be too high if the individuals are able to pay them. We know of no better means for securing obedience than enforcing the law.

JOHN WHITE.

Renfrewshire.

John White.

#### ANSWERS of JAMES LANG, for M<sup>c</sup>Nab & Co., Greenock.

No. 125.

James Lang.

A. 1.—West parish Greenock, county of Renfrew.

A. 2.—Flax and hemp spinning, weaving of sailcloth and other fabrics by power and hand-spinning, and laying of cordage.

A. 3.—Rope-work purchased by the present company in November 1828; the factory erected in 1828 and 1829; the adjoining buildings for stores, warerooms, &c. &c., were built in 1830 and 1831.

A. 4.—Water-power, the most regular in Great Britain; fifty horse power.

A. 5.—The upper half of the windows are hung on balance-weights, and regularly opened to admit a free current of air for the health of the workers.

A. 6.—The ventilation of our factory depends entirely on the lowering upper half of the windows.

A. 7.—The ventilation is strictly attended to by the overlookers.

A. 8.—All the dangerous parts of the machinery are fenced off.

A. 9.—We have a room appropriated for the females to change their clothes; it is heated in the winter season by a stove; they are allowed the privilege of a large bleaching-green and other accommodations for washing, and have abundance of good soft water. Bleaching-green, &c. &c., since the commencement of work, and room built about two years ago.

A. 10.—In the factory we have no children under twelve years of age, and only one boy between eleven and twelve years of age in the rope-walk; as far as we can learn, none of the children have been at any other trade.

A. 11.—We do not think it would be of any advantage to us to employ children under twelve years of age in our factory.

A. 12.—As we have no children under twelve years of age in our factory, we cannot say.

A. 13.—Only two in the rope-walk; none in the factory.

A. 15.—A few of the workers whom we employ are orphans; we do not lodge or maintain any.

A. 17.—The rope-walk hours are ten hours each day; the factory hours are twelve hours for five days of the week, and ten hours on Saturday.

A. 18.—The same as above; we make no difference.

A. 19.—For two nights during last year the workers employed preparing and spinning rope-yarns for cordage were engaged sixteen hours of the twenty-four.

A. 20.—Three hundred days and two hours in the factory.

A. 22.—We have endeavoured to carry on all the different departments of our work regularly.

A. 23.—About twelve hours for five days, and ten hours for the remaining day of the week in the factory, and ten hours per day in the ropewalk.

A. 24.—The children in our factory have been kept to work about twelve hours; those in the rope-walk about ten hours per day.

A. 25.—When we exceeded the usual number of hours, it was to meet our engagements in the fall of last year and in the spring of this year, but the workers were paid over-time.

A. 26.—The proprietors of works should endeavour to avoid all departures from the regular number of working hours; they may however be under the necessity of working over-hours in order to meet their engagements when any breakage of machinery or other unforeseen circumstance takes place to interrupt their work.

A. 27.—It is about eighteen months since we made up some lost time, say about twenty-four hours, and to do this we worked the manufactory one hour longer in the evening.

A. 28.—As we have had no practical knowledge, we cannot answer this query.

A. 29.—We have not done it in our work.

(APP.—A. 1.)

Z 2

A. 30.

Renfrewshire.

James Lang.

- A. 30.—We never have made the trial.  
 A. 31.—We do not believe this would answer.  
 A. 32.—We have not wrought with children extra hours. Our privilege of the water-power is restricted to twelve working hours.  
 A. 33.—We never had a night-set of hands.  
 A. 34.—We consider one set of good workers sufficient for a well regulated factory.  
 A. 35.—We never worked our manufactory during the night.  
 A. 36.—We consider the prohibition of night-work would be most beneficial both to the employers and employed.  
 A. 37.—Provided all manufacturers were restricted to the same hours, we do not think it would be attended with any injurious effects.  
 A. 38.—We can work our machinery at any temperature.  
 A. 49.—We have none to state, as we have no process that requires it.  
 A. 50.—By gas in the winter season.  
 A. 52.—We do not employ night-workers, therefore cannot answer this question.  
 A. 53.—To ropemakers and mechanics one hour for each meal to the workers; within the factory forty minutes for breakfast and fifty for dinner.  
 A. 54.—As we stop the machinery during meal-hours, all the workers are at liberty to leave the factory. Those who do not choose to go home have a room appropriated for their accommodation.  
 A. 55.—During the winter season a great many of the workers remain during meal-hours for their own comfort and convenience. Their numbers vary according to the state of the weather.  
 A. 56.—This alteration does not apply to our work.  
 A. 57.—They are threatened with a fine, reduction of wages, and dismissal; and should these prove ineffectual they are discharged from the work.  
 A. 58.—Corporal punishments are not sanctioned by us.  
 A. 59.—Our overlookers have frequently received strict orders never to inflict corporal punishment.  
 A. 60.—Not with our knowledge at the time.  
 A. 61.—Not with our prior or subsequent sanction.  
 A. 62.—We have strictly prohibited (verbally) corporal punishments; and being informed of one instance of infliction, have taken steps to prevent its recurrence.  
 A. 64.—Never.  
 A. 65.—We have no dwelling houses for the workers, with the exception of one for a man and family who reside within the premises, for their protection during the night.  
 A. 66.—As we have only been a short time in operation, and have employed none from their infancy, we cannot state particularly their improvement in skill and general character.  
 A. 67.—It is now more than three years since we employed females at our factory, and we find in general they have improved in health. This we ascribe to the healthy situation of our work, and the enforcement of habits of cleanliness.  
 A. 68.—We have not as yet considered it necessary to do so, as none of our workers have suffered from the work at which they have been employed.  
 A. 69.—It is not.  
 A. 73.—There are no mills in our neighbourhood subject to the Cotton Act.  
 A. 77.—We have no reason whatever to believe our workers are afraid.  
 A. 78.—We would suggest that no factory should work more than ten hours a day under a severe penalty vigorously enforced, that there should be no distinction made between children and adults as to the number of hours they work; and let it be distinctly understood that an enactment should be passed, that all proprietors who supply mills with water or steam-power shall make a deduction of the rent in proportion to the alteration in the number of hours of work.

JAMES LANG.

No. 126.

John Freeland & Co.

## ANSWERS of JOHN FREELAND and Co., Houston.

- A. 1.—Parish of Houston, county of Renfrew.  
 A. 2.—Spinning cotton-wool into cotton-yarn.  
 A. 3.—Erected in 1790; additions made in 1825 and 1827; never applied to any other purpose.  
 A. 4.—Water-power only, generally regular; water-wheel from thirty-five to forty horse power.  
 A. 5.—No special mode of ventilation considered necessary. Work stands in an airy situation.  
 A. 6.—Windows only, opening at pleasure.  
 A. 7.—By the overlookers or the workers.  
 A. 8.—Yes.  
 A. 9.—No particular arrangement, water being at the command of workers; workers shift their clothes at pleasure; overlookers pay general attention to cleanliness of workers.  
 A. 10.—Nine to ten years of age. A few connected with weaving.  
 A. 11.—No; some parts of the work are as well done by children under twelve years as older.

A. 12.

- A. 12.—Cannot say, having made no alteration in our work.  
 A. 13.—No.  
 A. 15.—None of the children in our work are maintained by us.  
 A. 17.—Twelve hours during five days of the week, nine hours on Saturday.  
 A. 19.—Twelve hours and a half.  
 A. 20.—Three hundred days.  
 A. 21.—Three thousand five hundred and twenty-five hours.  
 A. 22.—Work begun and stopped simultaneously.  
 A. 23.—Eleven hours and a quarter.  
 A. 24.—Twelve hours and a half.  
 A. 25.—Excess of water or scarcity of water.  
 A. 26.—Avoidable, by not working up lost time for reason stated in A. 25.  
 A. 27.—Yes, twelve hours and a half.  
 A. 28.—Yes.  
 A. 29.—Increase of profits.  
 A. 30.—Reduction in hours of labour tends to increase cost of production, the lesser quantity bearing all charges of manufacture, viz. interest of capital, managers, clerks, &c., and day-workers wages.  
 A. 31.—Never have employed two sets of hands.  
 A. 37.—Either such a reduction in the present rate of wages as would tend to curtail the workers comfort, or make the loss on the manufactured article so great as might lead to bankruptcy, the rise on the price of yarn acting as a premium to foreign countries, and rendering competition with them nearly hopeless.  
 A. 38.—Sixty-six to sixty-eight degrees of heat.  
 A. 39.—Seventy to seventy-two degrees.  
 A. 40.—From fifty to sixty.  
 A. 41.—Not once.  
 A. 50.—Coal-gas.  
 A. 51.—Same as during day.  
 A. 52.—Have no experience of night-work.  
 A. 53.—Breakfast from quarter past nine till ten, dinner from quarter past two till three.  
 A. 55.—Twelve cleaners, who clean and oil parts of the machinery that would be dangerous when the work is going; when the work starts these persons are allowed the same time to each meal as the rest of the workers.  
 A. 56.—All the workers go home at meal-hours.  
 A. 57.—The observation of overlookers, or turning them off for obstinacy or disobedience.  
 A. 58 & 59.—No, except a slight tap of the hand is considered such, given by the overlookers.  
 A. 62.—Yes, but have never had occasion to interfere.  
 A. 66.—In general the workers have been employed from their youth.  
 A. 67.—Are not aware that the general state of health has either materially improved or deteriorated during the last ten years.  
 A. 68.—Have no occasion.  
 A. 69.—Yes.  
 A. 70.—No.  
 A. 73.—They do, as far as we know.  
 A. 78.—The present laws are sufficient if duly put in force.  
 A. 79.—None, except earnestly imploring parliament to weigh well their measures ere they make such an important alteration.

JOHN FREELAND &amp; CO.

Renfrewshire.

John Freeland & Co.

## ANSWERS of WILLIAM STEVENSON, Houston.

No. 127.

William Stevenson.

- A. 1.—Crosslee, parish of Houston, county of Renfrew.  
 A. 2.—Cotton-spinning.  
 A. 3.—Part erected in 1794, and part erected in 1824.  
 A. 4.—Water-wheel of about sixty horse power; regular, except in very dry seasons.  
 A. 5.—By the windows.  
 A. 7.—Left principally to the discretion of the workers.  
 A. 8.—All the dangerous parts are fenced off.  
 A. 9.—There is a supply of water in the work, and it is left to the discretion of the workers to use it or not, as also the changing of clothes, opportunities for doing so being allowed.  
 A. 10.—Nine years; very few have been employed at any other trades.  
 A. 11.—It is more for the benefit of the families than from necessity that children under twelve years are employed, because if not employed until twelve years, many families would be unable to support themselves.  
 A. 12.—There is not much alteration in our works.  
 A. 13.—No.  
 A. 15.—The principal part of the children are under the care of parents, and there are a few orphans who live with relations, as mentioned in list.

(APP.—A. 1.)

Z 3

A. 17.

Renfrewshire.

William Stevenson.

- A. 17.—The greater part are employed sixty-nine hours per week, a few seventy-two.  
 A. 18.—All persons under eighteen years of age are employed sixty-nine hours per week.  
 A. 19.—Sometimes our work has been partially on for thirteen hours and a half, owing to the supply of water not being sufficient to drive the whole at once, or to some cause of that kind, although no person under eighteen has been employed more than twelve and a half.  
 A. 20.—About three hundred and six days.  
 A. 21 & 22.—Cannot be ascertained exactly.  
 A. 23.—Sixty-nine hours per week.  
 A. 24.—Twelve hours and a half when making up time, as allowed by the present Act.  
 A. 25.—Either when making up time lost by want of water, or other causes, as allowed by the present Act.  
 A. 26.—It is unavoidable in the case of mills driven by water.  
 A. 29.—The lessening of the cost of production.  
 A. 30.—Yes; the cost of production has been increased, although not quite in proportion to the diminution of time, on account of the general expenditure and interest on capital being more on the quantity produced.  
 A. 31.—The objection to relays would be the difficulty of getting children on these terms, as they would be unable to support themselves on account of the smallness of wages.  
 A. 32.—No, because never required.  
 A. 37.—The effects of a still further reduction in the working hours would be an increase in the cost of production, or a reduction of wages that would be extremely hurtful; especially to those who earn small wages, as without this reduction we could not compete with foreign countries.  
 A. 38.—About 50°; but no particular heat being necessary, it is regulated by the comfort of the workers.  
 A. 50.—By gas.  
 A. 51.—Windows.  
 A. 53.—Forty-five minutes for breakfast and the same for dinner to all.  
 A. 54.—All leave the work.  
 A. 57.—Dismissal.  
 A. 58.—No.  
 A. 60 & 61.—Except very slightly, but without any prior or subsequent consent.  
 A. 63.—My instructions are to dismiss, and not to punish.  
 A. 65.—About one third of the workers live in houses belonging to their employers, and the others live in houses under their control, and therefore cleanliness is strictly attended to; and there is a week-day and Sabbath school where the children are taught to read gratuitously, and the other common branches of education at a moderate rate.  
 A. 66.—We do not find much difference after they have been some time at the work.  
 A. 67.—There has not been any deterioration of the health of those employed in the factory or of their families. The following is last year's bill of mortality of this village, containing about five hundred souls, two hundred of whom are employed in the factory; among the latter there has been no deaths:—Under one year old, four, of whom two were twins about a week old; from one to five years old, two; from five to twenty years old, none; from twenty to forty years old, one; from forty to fifty years old, one; above sixty years old, three; eleven deaths in the whole.  
 A. 68.—No, there being no particular injurious processes.  
 A. 69.—Yes.  
 A. 73.—I believe they do.

WILLIAM STEVENSON.

No. 128.

James Brown.

## ANSWERS of JAMES BROWN, Linwood Cotton Works, Kilbarchan.

- A. 1.—Kilbarchan parish, county of Renfrew.  
 A. 2.—Spinning of cotton yarn.  
 A. 3.—Three fourths of the works were erected in 1805, and the remainder in 1824.  
 A. 4.—Fifty horse power required; driven generally by water, but in drought or in floods we have an engine of twenty horse power to assist, which is for the most part sufficient.  
 A. 5 & 6.—The ventilation of our factory depends wholly upon the opening of windows.  
 A. 7.—It is controlled at the discretion of persons employed.  
 A. 8.—We consider all the dangerous parts of our machinery fenced off.  
 A. 9.—We have no specific arrangements, but the workers change their clothes on entering and leaving the factory; they are also allowed soap and water to clean themselves.  
 A. 10.—Nine years of age; many of them have been employed drawing to weavers previously for a year or two.  
 A. 11.—It is not absolutely necessary.  
 A. 12.—No alteration that we are aware of.  
 A. 13.—No.  
 A. 17.—Twelve hours per day, and nine on Saturdays.  
 A. 18.—All work the same time.  
 A. 19.—Twelve hours and a half.  
 A. 20.—Three hundred and seven days and a half during 1832, having stopped six days and

and a half, two days at New-year's day, two parish fasts, and one government fast, and one day and a half at a procession and a fair.

A. 21.—Three thousand five hundred and thirty-four hours.

A. 22.—In floods, when short of power, a proportionate part of the work stands until it abates.

A. 23.—Eleven hours and a quarter per day.

A. 24.—Twelve hours and a half, but never exceeded nine hours on Saturdays.

A. 25.—Making up lost time by want or excess of water.

A. 26.—We consider it avoidable.

A. 27.—For many years after 1805 we worked twelve hours and a half each day, Saturday included.

A. 28.—Certainly, the cost is enhanced.

A. 29.—To cheapen the cost of production.

A. 30.—As the interest on sunk capital, &c. is the same, whatever may be the hours of work, the cost of production must be increased in all branches by the shortening of time.

A. 31.—Never having worked longer than twelve hours and a half in any one day, we did not consider it necessary to have a relay of hands.

A. 32.—We never tried it.

A. 33.—No night-work.

A. 36.—The effects we conceive would be beneficial.

A. 37.—If any further reduction of working hours take place, we are of opinion that we would thereby be rendered more unable to compete with the foreign manufacturer; it would also prove injurious to the workers by the necessary reduction of wages which would follow.

A. 38 & 39.—Seventy degrees.

A. 40.—All alike.

A. 53.—Forty-five minutes for breakfast and forty-five for dinner.

A. 54.—All.

A. 57.—Dismissal.

A. 58 & 59.—Not allowed.

A. 63.—Those instructions are that they shall be dismissed.

A. 65.—Some of our workers live in our houses, but the greater part are accommodated otherwise; we don't find it necessary to interfere with their domestic arrangements; the poorer children are taught to read at our expence.

A. 66.—Almost all our workers have been engaged in cotton-spinning from infancy, and we prefer employing such to instructing adults.

A. 67.—We do not know of any material alteration.

A. 69.—It is.

A. 70.—Never.

A. 73.—In general, we believe, they conform to the Act.

JAMES BROWN.

#### ANSWERS of JAMES FINDLAY, Kilbarchan and Houston.

No. 129.

James Findlay.

A. 1.—Parishes of Kilbarchan and Houston, county of Renfrew.

A. 2.—Cotton-spinning only.

A. 3.—First erection about the year 1798, two thirds; second erection, in the year 1823 one third.

A. 4.—Water power, regular.

A. 5.—Yes.

A. 6.—Ventilation by opening a pane of glass in the windows.

A. 7.—At the discretion of all the adults.

A. 8.—All the dangerous parts are fenced off.

A. 9.—None are required.

A. 10.—Nine years of age.

A. 11.—No.

A. 12.—Not in our works.

A. 13.—No.

A. 15.—Under the guardianship of their parents always.

A. 17.—Twelve hours, and nine on Saturday.

A. 18.—No difference of time.

A. 19.—Twelve hours and a half.

A. 20.—Two hundred and ninety-five days.

A. 21.—Two thousand nine hundred and seventy-six hours.

A. 22.—No difference.

A. 23.—Average number, ten hours.

A. 24.—Twelve and a half hours.

A. 25.—After stoppage for want or excess of water.

A. 26.—It is avoidable.

A. 27.—Yes, half an hour longer.

A. 28.—Certainly.

A. 29.—Cannot say.

(APP.—A.1.)

Z 4

A. 30.

Renfrewshire.

James Findlay.

- A. 30.—In all branches, and in proportion to the diminution of hours.  
 A. 31.—Cannot say.  
 A. 32.—It has never been required.  
 A. 33.—No.  
 A. 36.—None.  
 A. 37.—It throws an additional expence on our manufacture.  
 A. 38.—About seventy-four the temperature.  
 A. 41.—None.  
 A. 53.—From a quarter past nine till ten o'clock A.M., and from a quarter past two till three o'clock P.M.  
 A. 54.—All.  
 A. 57.—Dismissal from the works.  
 A. 58.—No.  
 A. 67.—There is no difference.  
 A. 68.—No.  
 A. 69.—Yes.  
 A. 70.—No, never.  
 A. 73.—I believe they do.  
 A. 78.—I consider the present Act perfectly sufficient, if put in force, for cotton factories.

JAMES FINDLAY.

No. 130.

John Buchanan.

ANSWERS of JOHN BUCHANAN, for Fultons, Buchanan, and Company, Proprietors, Lochwinnock, Renfrewshire.

- A. 1.—Lochwinnock, Renfrewshire.  
 A. 2.—Cotton-spinning.  
 A. 3.—Two thirds of it erected forty-three years ago, and one third about ten years since.  
 A. 4.—Steam and water, generally regular; forty-five horse power.  
 A. 5.—House is ventilated by opening the windows.  
 A. 6.—On the opening of windows.  
 A. 7.—Any of the workers may open the windows for ventilation, but the overlookers attend to it, and see the rooms properly ventilated.  
 A. 8.—All parts that are considered dangerous are fenced off.  
 A. 9.—All the workers are and have always been required to appear clean, both personally and as to their clothes, but any arrangements as to pulling off and on their clothes are left to themselves.  
 A. 10.—Ten years. We believe at no other trade.  
 A. 11.—Not necessarily; but some of the work being very light, the wages paid are proportionally low, and on that account the proper number in some places above twelve years might not always be got.  
 A. 12.—Considerably less.  
 A. 13.—No.  
 A. 15.—We lodge and maintain none.  
 A. 17.—Twelve hours.  
 A. 18.—Under twelve years, ten hours five sixths; above twelve, twelve hours.  
 A. 19.—Twelve hours.  
 A. 20.—Two hundred and ninety-nine days.  
 A. 21.—Three thousand four hundred and forty-five hours.  
 A. 22.—When short of water last summer the steam-engine was kept at work from five in the morning till nine in the evening, and the workpeople divided into three classes, and worked alternately; this continued only a short time, and was in consequence of repairing a dam-breast.  
 A. 23.—Eleven hours.  
 A. 24.—Twelve hours above twelve years of age; under twelve, ten hours five sixths.  
 A. 27.—No.  
 A. 29.—We consider that no person who understands business will continue at work more than twelve hours per day, and that a change of hands on the same machinery is always attended with injury to the machinery.  
 A. 30.—We have no experience.  
 A. 31.—If extra labour is constant and of much extent, relays or fresh sets of hands might be got where there is abundance of population; but where over-time is occasional, and only to the extent of an hour or two per day, sufficient inducement could not be afforded for two sets of hands to attend.  
 A. 32.—No, we never had occasion for them.  
 A. 36.—Having no night-hands, we could not be affected.  
 A. 37.—An immediate proportional reduction of the wages of all the day-hands, which, in our opinion, would be attended with the very worst consequences to that class of people. Few of them could afford it, and many of the families connected with them would be thrown upon the parish; their wages we consider are as low at present as they ought to be, or as they could live upon, but the proprietors must either stop their work and allow themselves to be ruined, or resort to some method to counteract the loss of one sixth of their produce, and the reduction

Renfrewshire.

John Buchanan.

reduction of wages is the only way left them. We also have no doubt that it would have the effect, in a short time, of reducing most materially the wages of the operative spinner, for it is giving a large premium to the foreign manufacturer, and enhances the price of our goods so much as would effectually prevent the introduction of our manufactures into their markets. Our markets would then be in a state of constant glut, which is certain to reduce wages,—witness the hand-loom weaver. If the hours are reduced to ten per day, we expect that cotton-twist will be imported from the United States of America before a few years are expired.

A. 38.—Seventy degrees, lowest sixty-five degrees.

A. 39.—Seventy degrees; the temperature through the whole works is required to be from sixty-five to seventy degrees, and is kept as regular as possible.

A. 50.—We have no night-work, but during winter the works are lighted with gas morning and evening.

A. 51.—Same as during day, by opening the windows.

A. 52.—We have no experience.

A. 53.—Fifty minutes for breakfast between nine and ten, fifty minutes for dinner between two and three.

A. 54.—All.

A. 57.—They are discharged.

A. 58.—No.

A. 62.—No, for we never knew of any punishment being inflicted.

A. 63.—Instructions were necessary, as we never knew of any punishments being inflicted.

A. 64.—No.

A. 65.—An evening school is established for the benefit of the children employed in the factory, where they are taught reading, writing, and arithmetic, and a day-school for the benefit of those under ten years of age, whose parents or guardians are employed in the factory. Every child in the factory can read, and almost all can write.

A. 66.—The skill of those who have been employed from infancy is generally allowed to be superior to that of those taken in at an advanced period of life, but their moral character we consider the same.

A. 67.—We consider the health of the people employed in this factory has always been as good as that of any class of people in the neighbourhood, but do not know any difference during the last ten years from what it was formerly.

A. 68.—No, we have no occasion for it.

A. 69.—It is.

A. 70.—We have, once.

A. 71.—No, the information was false.

A. 72.—Information was given that we had infringed the Act in several particulars, but it was not the fact, and was not proved against us.

A. 73.—They do, as far as we know.

A. 78.—We consider it very improper to allow any part of the penalties to go to the informer; if he is a proper character, he will inform for the benefit of the children, and not for the reward; but let there be a public inspector appointed by government in every manufacturing district, paid by a small tax on the moving power, whose business shall be to give information of every one who contravenes any of the provisions of the Act, and let the penalty go to the parish.

A. 79.—We do not consider twelve hours per day too long for children of twelve years of age and upwards, and we consider it most dangerous to the trade of this country to interfere and restrict the hours of labour as is now proposed. If parliament considers that the age of nine years allowed by the present Act is too young, let the age be restricted to ten or eleven or twelve, or even fourteen, but on no account interfere further with the hours of labour; but we think all night-work ought to be done away with, no lost time made up on any account, whether the power is water or steam, and the twelve hours should be worked between five in the morning and eight in the evening.

These are the regulations under which our factory is conducted, and not a child under ten years of age is employed in it, and the children between ten and twelve are employed ten hours and three quarters per day. We employ nearly three hundred and sixty people; and we venture to say, notwithstanding all that has been urged to the contrary by either interested individuals or by those who know nothing of the subject, that our people are as healthy, comfortable, and happy, better fed, better clothed, and better educated, and as moral and religious as any other class of people, agricultural or otherwise, that is to be found in the country.

If the hours of labour of persons under eighteen years of age are reduced to ten per day, the distress it will cause will be fearful, for all those persons will be discharged, and the work performed by older people, and the factories still kept at work twelve hours per day. These children must then look for other employment, and most of them will probably resort to hand-weaving, where they will be employed as draw-boys at harder work in a more uncomfortable and less healthy situation, the hours longer, and the wages much less.

JOHN BUCHANAN.

Renfrewshire.

## ANSWERS of WILLIAM WRIGHT &amp; Co., Lochwinnoch.

No. 131.  
William Wright  
& Co.

- A. 1.—Parish of Lochwinnoch, county of Renfrew.  
 A. 2.—Spinning cotton from the wool into yarn.  
 A. 3.—Erected wholly between the years 1789 and 1794 for a cotton factory, and has never been applied to any other purpose.  
 A. 4.—Water-power only; twenty to thirty horse power.  
 A. 5.—The work stands in an open airy situation; no special mode of ventilation considered necessary.  
 A. 6.—By windows only, which are made to open at pleasure.  
 A. 7.—By the overlooker in each department, and generally at the pleasure of the workers.  
 A. 8.—Yes.  
 A. 9.—No particular arrangement, but water at discretion is to be found in all the different apartments; the workers shift their clothes at their pleasure, either at entry or dismissal, and the overlookers are expected in a general way to see that cleanliness of person is attended to.  
 A. 10.—Ten years, during a few of which they may have formerly acted as draw boys or girls to hand-loom weavers.  
 A. 11.—Not necessarily, but a part of the work can be done by children under twelve years of age as well as by older ones.  
 A. 12.—Cannot speak generally; the alterations with us have not materially changed in either way the proportion of children employed under twelve years of age.  
 A. 13.—No.  
 A. 15.—None of the children in this work are either lodged or maintained by their employers.  
 A. 17.—Twelve hours during five days of the week, and nine upon Saturday.  
 A. 18.—The same as those above twenty-one years.  
 A. 19.—Twelve hours.  
 A. 20.—Two hundred and ninety.  
 A. 21.—About three thousand three hundred and twenty.  
 A. 22.—The whole work is begun and stopped simultaneously.  
 A. 23.—Eleven hours and a half.  
 A. 24.—Twelve hours.  
 A. 25.—At no time have the regular hours of work been exceeded.  
 A. 26.—All extra working may be avoided by not making up such time as may be unavoidably lost from want of water, breaking of machinery, or other similar occurrences.  
 A. 28.—Having at no time worked for a longer or shorter period than at present, have no experience.  
 A. 29.—We can conceive no other motive but the increase of his profits.  
 A. 30.—Any reduction in the hours of labour must tend to increase the cost of production, the lesser quantity produced having to pay the same expenditure for rent, interest on capital, wages to day-workers, and salaries to clerks and managers, &c.  
 A. 31.—We have no experience of such working.  
 A. 33.—Never had occasion to employ more than one set of hands.  
 A. 37.—Either such a reduction in the present rate of wages of all employed as would materially interfere with their comfort, or such a blow to the already very inadequately remunerated manufacturer as but few would be able to withstand; as a smaller quantity of goods would undoubtedly be produced, some enhancement of price might be probably obtained, but it appears very questionable indeed if any the smallest rise in price would not at once give such an additional advantage to the manufacturers of foreign countries as would render competition nearly hopeless.  
 A. 38.—About 68° of Fahrenheit; much lower would not answer well.  
 A. 39.—Seventy-two.  
 A. 40.—About one hundred and seventy.  
 A. 41.—Not once.  
 A. 50.—With oil.  
 A. 51.—Same as through the day.  
 A. 53.—The breakfast-time is from nine to ten minutes before ten A.M., and the dinner-time from two P.M. to ten minutes before three o'clock P.M.  
 A. 54 & 55.—All at pleasure, except eight cleaners, who generally clean and oil parts of the machinery that cannot be got at when the work is going, but who get the same time, say fifty minutes, for each meal immediately after the mill starts.  
 A. 56.—The people employed in this work go all home for meals.  
 A. 57.—The observation of overlookers, and turning them from the work if obstinate.  
 A. 58.—No; if a slight slap with the palm of the hand is not considered such, when given by overlookers.  
 A. 62.—Never knew of any case that required interference.  
 A. 64.—Nothing of the kind has taken place.  
 A. 65.—The workers do not live in houses belonging to their employers.  
 A. 66.—All the workers have been so employed from their youth, except a few, who are now pretty far advanced in the decline of life.

A. 67.

A. 67.—We are not sensible that the general state of health has either materially deteriorated or improved during the last ten years.

A. 68.—Yes.

A. 69.—It is.

A. 70.—Yes, once.

A. 71 & 72.—Was not convicted.

A. 73.—They do, so far as we know.

A. 74.—We have heard so.

A. 76.—So far as we know, it was.

A. 77.—No, if the masters are intentionally guilty.

A. 78.—The present penalties are certainly sufficiently numerous, and may be made abundantly vexatious; and were those proposed to be inserted in the new Bill enacted, we do not think that the business of cotton-spinning could be carried on; while we are convinced that proprietors of cotton or other factories will generally endeavour to have their machinery made as free from danger to those about it as possible, it is perfectly certain that no care and consequently no law can prevent the occurrence of accidents.

A. 79.—If it be found really necessary for the legislature to interfere in regard to the subject, we are of opinion the only enactment should be a clause to prohibit entirely the employment of children under a certain age, say ten years, and to limit the hours of labour for young persons to eleven hours in any one lawful day under certain penalties, leaving the master and workers or the parents or guardians of workers to make such other necessary arrangements as may best suit the circumstances of the case. In legislating upon such a subject it is obviously necessary that the law should be perfectly plain; interfere between the employer and employed as little as possible; and above all be strictly enforced, that those who wish to obey the law may not be put upon a worse footing than they who would break it.

WILLIAM WRIGHT & Co.

Renfrewshire.

William Wright  
& Co.

ANSWERS of WILLIAM KEELY junior, one of the Partners of the Busby Company,  
Busby Works, Mearns.

No. 132.

William Keely jun.

A. 1.—At Busby, parish of Mearns, and county of Renfrew.

A. 2.—Spinning of cotton-wool and weaving of cotton-cloth.

A. 3.—In the month of June 1781 cotton was first spun here in what is called the Old Mill; about forty years ago another mill was built called the New Mill, since which several additions have been made to these works, particularly in the summer of 1823.

A. 4.—Water-power, and pretty regular; new mill-wheel twenty-eight to thirty horse power, old mill-wheel twenty-two to twenty-four horse power.

A. 5.—The windows are all cased and made to lift up.

A. 6.—By the opening of windows.

A. 7.—The ventilation is regulated by the foreman in spinning-flats, and by the workers at discretion in preparation and weaving flats.

A. 8.—Fenced off.

A. 9.—The workers reside so near the works that it is deemed unnecessary to have any apartment for changing their clothes; in wet weather the girls all wear cloaks.

A. 10.—To our knowledge, none are admitted below nine years of age, and none have been employed at any other trade, as far as is known.

A. 11.—The nature of the work requires children under twelve years, because the child at twelve would require more wages than can be afforded to one at nine years; besides, in many cases at twelve the child is rather large for the nature of the work.

A. 12.—The recent alterations in machinery require a less proportion, particularly in water-frame spinning.

A. 13.—None.

A. 15.—There are three orphans employed.

A. 17.—Twelve hours for five days, and on Saturday nine hours.

A. 18.—Twelve, and no difference is made.

A. 19.—Twelve hours and a half.

A. 20.—Three hundred and six days, fifty-two of which nine hours per day.

A. 21.—Three thousand five hundred and sixteen hours, or thereby.

A. 22.—The works are carried on all at the same time.

A. 23.—Twelve hours for five days, and nine hours for Saturday.

A. 24.—Twelve hours and a half.

A. 25.—Making up time for repairs on machinery and irregularity of water.

A. 26.—It can be avoided; the workers, however, prefer making up lost time to a reduction on their weekly income.

A. 27.—Prior to the passing of the Twelve Hour Act these works wrought twelve hours and three quarters.

A. 28.—Certainly, other things being the same.

A. 29.—The inducement to work long hours generally is to increase the production, and thereby to diminish the cost of each pound or piece produced; at times there may be the additional inducement of large contracts which the masters may be anxious to execute within certain periods.

(APP.—A. 1.)

A a 2

A. 30.

Renfrewshire.

William Keely jun.

A. 30.—The cost of production will always, in our trade, be increased by any limitation of the hours of working, and it is my opinion that any limitation of the hours from the present rate would be attended with an increased cost more than equal to the difference of hours in all branches of our trade.

A. 31.—Relays or fresh sets of children was never tried here.

A. 32.—The population of the village being limited relays, or change of hands cannot be tried here.

A. 33.—Night-work was never tried here, at least not for a very long while.

A. 37.—The effects of a farther reduction of the working hours would, by increasing the cost, add much to the embarrassments already experienced by masters, and would eventually prove most injurious to the cotton trade of this country. The tendency of such a measure, in my opinion, is to transfer the cotton trade to other countries.

A. 38.—In spinning flats the temperature is from 60° to 70° of Fahrenheit's thermometer, and in preparation and weaving flats such a temperature as the workers feel comfortable.

A. 39.—In the dressing of yarn for weaving the temperature may sometimes be rather above 66°, but never exceeds 75°, and the workmen are all above twenty years of age.

A. 40.—Twelve men.

A. 50.—By gas.

A. 53.—For each meal three quarters of an hour for every worker.

A. 54.—All the workers leave the works at meal-times.

A. 57.—For improper conduct on the part of the children dismissal from the works, which they think the most severe punishment that can be inflicted.

A. 58.—Never.

A. 63.—To all overlookers, verbally.

A. 65.—In most cases the workers live in the houses of their employers. Their moral improvement is cared for by the establishment of Sabbath and weekly evening schools, by the regular attendance of a clergyman, who makes regular visitations to their houses, and who preaches to them twice every Sunday. The clergyman is paid by the masters. Their domestic cleanliness is under the superintendence of the foreman, who visits the houses periodically.

A. 66.—Those hands who have wrought from infancy are incomparably better workers than those taken in at a later period of life, and so far as can be ascertained equally healthy.

A. 67.—We think there is some improvement, which may be owing partly to the lower prices of food, and partly to an increased attention to enforce temperate and orderly habits amongst the workers.

A. 69.—Yes.

A. 70.—Never to our knowledge.

A. 78.—I am of opinion that it will not be easy to maintain a strict obedience to legislative enactments; that I conceive must depend in a great measure on the state of the labour market, or the proportion which the demand for labour may at any time bear to the number of workers seeking employment; and it must ultimately become a matter of bargain between employers and workers, understood if not expressed.

A. 79.—I have only to observe, that in my opinion all restrictions on trade tend to injure it, and especially where factories are concerned, and thereby to lessen the amount of employment, and that must of course eventually prove injurious to the interests of children and others of the working classes.

29th May 1833.

WILLIAM KEELY jun.

No. 133.

Charles Dunlop.

## ANSWERS of CHARLES DUNLOP, Neilston.

A. 1.—Neilston parish, county of Renfrew.

A. 2.—Cotton-spinning.

A. 3.—Erected in 1792.

A. 4.—Water-power very regular, equal to about thirty horse power.

A. 5.—There is a specific provision for the ventilation of picking-room by means of fanners; other parts are ventilated by opening of windows and of doors.

A. 6.—The provision for ventilation of picking-room does not depend on opening of windows, the dust from that room being carried off by fanners driven by the water-wheel.

A. 7.—Principally by the foreman and overlookers, and partially at the discretion of the workers.

A. 8.—The water-wheel is fenced off; the other parts of the great gearing are not fenced off, because from their situation not considered dangerous. The small machinery requires to be left open for cleaning and oiling.

A. 9.—There are no specific arrangements for this purpose, but the overlookers are instructed to enforce a certain degree of cleanliness.

A. 10.—Nine years. They very seldom have been previously employed at any other trade.

A. 11.—The nature of the work does not require the employment of children under twelve years of age, but from nine to twelve they are capable of doing certain parts of the work.

A. 12.

Renfrewshire.

Charles Dunlop.

A. 12.—The recent alterations in machinery have not affected the employment of children at this work.

A. 13.—None, excepting one or two as machine-makers.

A. 14.—No apprentices from parishes.

A. 15.—None of the children are lodged or maintained by their employers, but are all under the guardianship of their parents or relations.

A. 17.—Twelve hours on five days of the week and nine on Saturdays, the average being eleven hours and a half each day.

A. 18.—The duration of the hours of work is the same for persons of all ages.

A. 19.—Twelve hours and fifty minutes.

A. 20.—Three hundred and seven days.

A. 21.—Three thousand five hundred and thirty hours and a half.

A. 22.—The whole work is carried on at the same time, excepting in cases of floods in the river, and other accidental causes.

A. 23.—Eleven hours and sixteen minutes.

A. 24.—Twelve hours and fifty minutes.

A. 25.—To work up time lost on account of floods, and occasionally for time lost by accidents having happened to great gearing, also sometimes, at the request of the workers, to make up what was lost by partial stoppages for holidays.

A. 26.—It is impossible to prevent stoppages from accidental causes, and it would be a hardship for all not to be allowed to work up lost time to a certain extent.

A. 27.—Prior to the limitation of the hours imposed by Act of Parliament we usually worked seventy-two hours per week, being on an average twelve hours per day.

A. 28.—The cost of production, *ceteris paribus*, will always be enhanced by a reduction in the hours of working.

A. 29.—The inducement on the part of the manufacturer is to obtain a higher rate of profit, and on the part of the workers to obtain higher wages.

A. 30.—At this factory, where the average of the yarn spun is about number 50<sup>s</sup>, if the hours of working were reduced one sixth part, while wages remained the same, the cost of production would be increased about fourteen per cent.; but if wages fell proportionably, the cost of production would then only be increased about seven per cent.

A. 31 & 32.—At mills situated in the country relays of children could not be procured. It is even sometimes difficult to procure a sufficient number for one set.

A. 33.—Never during the last twenty years has a night-set been employed.

A. 36.—An universal prohibition of night-work would place the trade on a more equal footing than the present.

A. 37.—To increase the cost of production, and thus endanger our foreign trade, on which we principally depend.

A. 38.—Spinning-rooms, 68° to 72° Fahrenheit; carding-room, 65° to 70; picking-room, 60° to 65°; lowest temperature for spinning, 66°; lowest temperature for carding, 60°; lowest temperature for picking, 55°.

A. 39.—Highest degree of heat required for any part of this factory is 72°.

A. 40.—Seventy-five to eighty.

A. 50.—The works are lighted during the winter, in the mornings and evenings, by gas.

A. 51.—The same as during the day.

A. 53.—Forty minutes for breakfast and the same for dinner for all classes of workers, by the request of the workers.

A. 54.—All the workers, except seventeen, leave the works at meal-times.

A. 55.—Those who do not leave the works have their victuals brought to them for their own convenience.

A. 56.—It would occasion inconvenience to those who live at a distance in bad weather.

A. 57.—The usual method of enforcing obedience on the part of the children is to threaten them with dismissal.

A. 58.—Light corporal punishments are sometimes inflicted on negligent or mischievous children in the same manner as in schools, but very seldom.

A. 59.—By overlookers.

A. 60.—The foreman has sometimes been requested by parents rather to punish their children slightly than to dismiss them.

A. 61.—Slight corporal punishments have, in a few instances, been inflicted with my sanction, in so far as I have not found fault afterwards with the persons who inflicted it.

A. 62 & 63.—The punishments are so extremely slight that I have not thought it necessary to take any steps for their prevention, believing them to be requisite where so many children are employed together.

A. 64.—None.

A. 65.—About one hundred and forty of the workers live in the houses of their employers, and these are required to keep their houses clean. For their moral and social improvement, the proprietors afford gratuitously elementary education to all their workers.

A. 66.—We consider any difference in skill and general character to be in favour of those who have been employed from infancy.

A. 67.—Know no difference in this respect.

A. 68.—The workers sometimes change from one department to another, and no objections are made except on the score of incapacity.

(APP.—A. 1.)

A a 3

A. 69.

Renfrewshire.  
 —  
 Charles Dunlop.

A. 69.—It is.

A. 70.—Have never been informed against.

A. 73.—So far as I know, they conform to the provisions of the Act as regards the time of working, and the age at which children are employed.

A. 78.—I would suggest that the law should be made as simple as possible, that it should merely regulate the hours of work for children under fourteen years of age, and the earliest age at which children should be employed. The present penalties are sufficiently high, if a public prosecutor were appointed to see the law carried into effect.

A. 79.—In so far as this neighbourhood is concerned, I believe that the clamour raised against the employment of children in cotton-mills is totally unwarranted. That the children so employed are as healthy and as well taken care of as any children in the same rank of life, and better than the generality. That no cruel treatment exists; and that any law which would materially diminish the time of working would ultimately produce the most injurious consequences to the workpeople, and tend to draw the trade out of this country.

CHARLES DUNLOP.

No. 134.  
 William Craig.

#### ANSWERS of WILLIAM CRAIG, for Broadley Mill Company, Neilston.

A. 1.—Parish of Neilston, county of Renfrew.

A. 2.—Cotton-spinning and power-loom weaving.

A. 3.—The original spinning department erected and set on about the year 1791; the weaving, with an addition to the spinning, was erected in 1827, and set on in 1828.

A. 4.—Water-power only; regular supply; about thirty horse power.

A. 5 & 6.—The ventilation depends chiefly on the opening of windows, &c., which are constructed for that purpose.

A. 7.—By the overlooker or tenter of each department.

A. 8.—Yes, all that are considered dangerous.

A. 9.—As to change of clothing, this is left optional on the part of the workpeople; but strict measures for promoting and enforcing habits of personal cleanliness are resorted to. A public washing-place is erected in the lobby, where several ewers of pure water and soap are gratuitously furnished, and open to all who wish or may require washing: this measure was introduced in February 1832.

A. 10.—Nine years. I have known a very few of these to be previously engaged at a printfield as tearers.

A. 11.—Yes, a few; because the work to be done is so very trifling and light, that children at or above twelve years will not give attendance for the small wages afforded, and therefore could not be had; besides, they cannot so conveniently go about the work as a smaller child.

A. 12.—I consider a less number.

A. 13, 14, 15, & 16.—No apprentices ever employed.

A. 17.—Twelve hours and five minutes, and eight hours and thirty-five minutes on Saturdays.

A. 18.—All ages subject to the same hours.

A. 19.—Thirteen hours, and that only on one day, the 24th August 1832; never before or since that time.

A. 20.—Three hundred and four days and two thirds.

A. 21.—Three thousand five hundred and four hours.

A. 22.—The whole of the works, spinning and weaving, are set on and stopped at the same time every day.

A. 23.—Eleven hours and a half.

A. 25.—At various times a few minutes, occasionally by accidents to the machinery, sometimes by mistake in shutting too early the water-slucies, and frequently loss of time at the particular request and for the gratification of the workpeople.

A. 26.—I do not consider it wholly unavoidable, but to all parties in so small proportions I consider it preferable, though I have generally given the workpeople their choice.

A. 27 & 28.—No, never but as at present.

A. 29.—I conceive such a practice gives him an advantage over the honest adherent to existing laws by increasing his production at a disproportionate expence.

A. 30.—Our working hours being regular I have not found this from experience; however I conceive limitation in the hours of working must increase the cost of production in proportion generally to the lessening of the working hours; but this, I think, will vary in different circumstances and situations.

A. 31.—I see no objection provided they could be obtained.

A. 32.—Never been tried here, having no wish to extend beyond the limits prescribed by the existing Act of Parliament.

A. 33, 34, 35, & 36.—No night-work.

A. 37.—If all manufacturers at home and abroad were put on an equal footing, and subject to the same restrictions in hours of labour, I could apprehend no very bad effects; but while the British manufacturer has to compete with those of the continents of Europe and America, and in the same market, who are unrestricted, we must suffer in proportion to these

these restrictions on our production. To the operative the effect is obviously an immediate reduction in his earnings in proportion to the lessening of his working hours.

A. 38.—About sixty degrees of Fahrenheit.

A. 39.—Seventy to seventy-five or eighty degrees, varying as the state of the natural atmosphere.

A. 40.—Twelve hands.

A. 50, 51, & 52.—No night-work; only in the winter season oil is used for lighting.

A. 53.—One hour and a half is allowed, but at the especial and unanimous desire of the workpeople only one hour and twenty minutes are taken, which enables them to leave the work so much earlier in the evening.

A. 54.—All, nearly.

A. 55.—A very few do occasionally remain about the work, but these entirely for their own convenience or amusement.

A. 56.—All are perfectly free to go home to their meals.

A. 57.—The alternative, prompt obedience, with quiet orderly conduct, or dismissal at a moment's notice.

A. 58 & 59.—Never by any one.

A. 60 & 61.—Never.

A. 62.—Strictly prohibited; never heard of any instance.

A. 63.—Verbal instructions only, amounting to complete prohibition of chastisement by corporal punishment, on any individual, at any age, or for any offence however aggravated.

A. 64.—Never.

A. 65.—A number of them do live in the houses of the employers, and are under the daily observation of the master, who uses every means to induce and enforce cleanliness in person and dwellings, by regularly cleansing common sewers, whitewashing interior walls, and encouraging ventilation.

A. 66.—In regard to the spinning, carding, and mechanical departments, I consider it indispensable to a good workman that he has been brought up from the first stages connected with it, and from an early age; as to the other branches of employment, it is of little consequence, these varying chiefly according to the several capacities of the individuals. Among their characters I cannot discriminate, they being much similar.

A. 67.—Having been in possession here only four years and a half, no decided change in this respect is to me perceptible.

A. 68.—Yes, always, when required from declining health, and often when the motives are merely pecuniary, provided the person is capable of any other species of work; they at all times get a preference if their former character entitles them to such.

A. 69.—Yes, with the exception of the regulations referred to in A. 17. and A. 53.; these are optional on the part of the workpeople, and adopted at their particular request, giving them a little more time on Saturdays to go to a distant market for provisions, &c.

A. 70, 71, & 72.—Never.

A. 73, 74, 75, & 76.—I believe they do conform.

A. 77.—No.

A. 78.—No, the present are sufficient if regularly acted upon.

1st May 1833.

WILLIAM CRAIG.

#### ANSWERS of JOHN GRAHAM, Neilston.

No. 135.

John Graham.

A. 1.—Neilston, Renfrewshire.

A. 2.—Cotton-spinning.

A. 3.—First employed for present purpose in 1800, when it was erected, and it was considerably enlarged in 1824.

A. 4.—Water, pretty regular; about thirty-five horse power.

A. 5.—None but the use of doors and windows, under the control of the overseers.

A. 6.—Answered above.

A. 8.—Yes.

A. 9.—There are no arrangements of the description alluded to, although a few of the workers are in the practice of partly shifting their clothes, and also of washing themselves on leaving and returning to their work.

A. 10.—None under nine years of age; none of them have been previously employed at other trades.

A. 11.—Not absolutely.

A. 12.—No difference in that respect.

A. 13.—None.

A. 15.—No orphans or other children employed, lodged, and maintained by the proprietor of the work.

A. 17 & 18.—Twelve hours.

A. 19.—Twelve hours and a half.

A. 20.—Three hundred and seven days.

A. 21.—Three thousand five hundred and thirty-one hours.

A. 22.—All departments of the work are carried on at the same time, steam-heating excepted, which is commenced a few hours previous to the starting of the work.

(APP.—A. 1.)

A a 4

A. 23.

Renfrewshire.

John Graham.

A. 23.—Eleven hours and a half.

A. 24.—Twelve hours and a half.

A. 25.—Only when time was lost from scarcity of the water from which power is obtained, or from breakage in the great gearing.

A. 26.—It is avoidable by subjecting master and worker to the loss of the time lost from such causes; but such occasional loss, if not made up by working extra time, would occur although the allowed regular working hours were limited to one half of the present number.

A. 27.—No.

A. 29.—To diminish the general charges on his establishment by an increased production.

A. 30.—Working as many hours now as at any former period, I have no experience.

A. 31.—Where extra hours to a great extent are required, such as fifteen, eighteen, or twenty-four hours, there can be no objection in any case, and an absolute necessity in the extreme cases, for a relay of hands, where such can be procured; but where extra hours are required only to the limited extent required in this work, (see A. 25.) a relay of hands for these hours could not be procured, and would not be desirable.

A. 32.—It has not been tried at this work, because there are, comparatively speaking, no extra hours required here.—See A. 25.

A. 33.—No.

A. 36.—None upon my work, the supply of water for power being limited to the day.

A. 37.—An increase of cost from diminished production, which would ultimately prove injurious to the cotton trade; but that effect might be retarded by the comparative redundancy which would be thereby for a time occasioned in the supply of cotton wool, and by the enhancement in the price of cotton yarns, which the diminished production of yarns, if suddenly introduced, would have a tendency to produce in the market. I am also of opinion that a considerable reduction in the regular working hours would force all manufactories having the opportunity so to do to work night and day with a shift of hands.

A. 38.—There has been no thermometer kept at this work; but from a trial made this week, the highest temperature in any of the departments was seventy-six degrees Fahrenheit, and the lowest seventy degrees. It is believed the usual average is under seventy degrees, and a higher is not deemed necessary for any of the departments, all requiring about the same temperature.

A. 50.—There is no night-work, but gas is used in the mornings and evenings when dark.

A. 52.—I have no experience.

A. 53.—Forty-five minutes to breakfast and forty-five minutes to dinner.

A. 54.—All.

A. 57.—Dismissal and the fear of it.

A. 58.—It is believed not, none being permitted, and no complaint having been made on that score.

A. 60 &amp; 61.—Yes, but not for many years.

A. 63 &amp; 64.—None.

A. 65.—The greater part live in houses belonging to me. No control is used farther than dismissal, or the fear of it, in the event of egregious misconduct. The only arrangement to enforce cleanliness is to have the houses whitewashed twice a year.

A. 66.—Those employed from early youth, as compared with others employed from a later period in life, are generally more skilful, in point of character equally good, and in point of education generally superior.

A. 67.—I am inclined to think the health of the workers generally, within the period referred to, is improved, they having adopted improved habits of living as regards temperance, food, and clothing.

A. 68.—Yes.

A. 69.—It is.

A. 77.—I believe they would not be afraid of giving evidence against their masters in any matter of moment.

A. 78.—The Act at present in force having been acted up to in all essential matters at this work, and as far as I know in similar works in this neighbourhood, I do not think that further provisions are required to secure obedience to it in this neighbourhood; but I think that the provisions of any Act would be best enforced by rendering it imperative on the sheriff or chief magistrate of each district to annually perambulate the works situated therein, to investigate, by an examination of workers and otherwise, as to the obedience given to the Act, with power summarily to inflict the present or an increased scale of penalties, such penalties to be increased on repetition of offence; the power of voluntary information against offenders, as by the present Act, to be continued.

A. 79.—My opinion is, that any alteration to be effected by a new act should be limited to children above nine and under twelve years of age, who might be allowed to be employed each day a number of hours not exceeding two thirds of the number of hours allowed under the Act at present in force; and no further alteration seems to be required, excepting as stated in A. 78.

JOHN GRAHAM.

## ANSWERS of THOMAS MITCHELL, for Mitchell and Norris, Neilston.

Renfrewshire.

No. 136.

Thomas Mitchell.

- A. 1.—Parish of Neilston, shire of Renfrew.
- A. 2.—Spinning of cotton-wool only.
- A. 3.—The entire part of the factory where the operation is carried on was burnt in 1812 and rebuilt in 1813, at which time it was applied to its present purpose.
- A. 4.—Water-power only, regular; about thirty-six horse power.
- A. 6.—The provision depends on opening the windows. In every window of sixteen panes there is one thirteen by eight inches that opens; the workers have the power of opening and shutting these panes at all times; if they are inattentive to this, the overlooker is instructed to attend to it.
- A. 8.—All the parts of the machinery usually considered dangerous are fenced off.
- A. 9.—The workpeople are all allowed to change, and put on additional clothing before leaving the work.
- A. 10.—The age allowed by the law, viz. nine, is the lowest that we employ children. We are not aware of any children in our employment having been otherwise engaged before.
- A. 11.—Not necessarily, although, to limit them to this would be a serious loss to their parents.
- A. 12.—We have not understood that the recent alterations in machinery have made any change in this respect.
- A. 13.—No.
- A. 15.—We have not any children in our employment who are orphans.
- A. 17.—Twelve hours, except on Saturdays, when they are only employed nine hours.
- A. 18.—There is no difference made in this respect for different ages.
- A. 19.—Thirteen hours, and that only for fewer than ten successive days in the case of an accident having happened to the water-wheel.
- A. 20.—We have not been in possession of the work for a year, so that we cannot answer this question; we only entered 1st September 1832.
- A. 22.—All parts of the work are carried on at the same time.
- A. 26.—We consider excess beyond the regular hours avoidable, although with occasional inconvenience and loss.
- A. 27.—Never.
- A. 28.—We have had no experience of this.
- A. 29.—We believe the inducement for such over-working to be the power of ruinously underselling the fair manufacturer.
- A. 31.—The difficulty, we might rather say the impossibility, of procuring two sets of children, especially in country works such as this is.
- A. 32.—We have never worked extra hours, except according to A. 19, which is within the limits of the Act.
- A. 33.—We have never employed night-workers.
- A. 36.—We think beneficial generally.
- A. 37.—We consider a reduction of the hours of work to the extent proposed by Mr. Sadler's Bill would be injurious in a high degree to the employer, and ruinous to the comfort of the employed in consequence of the great reduction of wages that must inevitably take place, as there is not profit from which the prodigiously increased cost of production could be taken. In any modification of Mr. Sadler's Bill the tendency would be the same.
- A. 38.—The usual temperature is from 66° to 76°, but in many parts of the manufacture 66° would do.
- A. 39.—We do not consider above 76° at all necessary in ordinary cases.
- A. 40.—About one hundred and ten.
- A. 41.—Never, except mechanics repairing an accidental damage. They are all above twenty-one years of age.
- A. 47.—Twelve hours is all the time we are allowed by the present Bill, which we abide by.
- A. 48.—All ages, male and female.
- A. 50.—With oil-lamps and glass tops.
- A. 51.—Same as through the day.
- A. 53.—Half an hour for each meal; we are aware that this is not according to the letter of the statute, but it is the wish of the workpeople, in consequence of their houses being almost at the door of the factory. We stop half an hour earlier, which enables the children and others to give more day-light to education and recreation.
- A. 54.—All are allowed to go home for meals, and almost all avail themselves of it, indeed we may say all.
- A. 57.—Dismissal from their employment.
- A. 58.—Not to our knowledge.
- A. 59.—If at all, by parents.
- A. 62.—The case has not come before us, but we would certainly forbid it.
- A. 63.—No instructions have been given, because no complaint of ill-usage has been made.
- A. 64.—No.
- A. 65.—The workpeople live in our property. There is a school for eighty scholars, a schoolmaster
- (APP.—A. 1.) B b

Renfrewshire.

Thomas Mitchell.

schoolmaster provided and paid by us; the school-room, fire, and light free. We keep the outside of the houses clean and tidy, and encourage them to keep the inside so also.

A. 66.—Those employed from early life are the most expert workmen.

A. 68.—This is seldom necessary, but it has been done more than once in this factory.

A. 69.—It is.

A. 70.—Never.

A. 73.—As far as we know they do, as to hours of work, and age of children employed.

A. 77.—We have no experience to guide us in answering this.

A. 78 & 79.—We deem it very unjust, that while all the cases of hardship and cruelty stated in evidence before the committee applied to and took place in wool and flax works, which are not under the present Act, the cotton trade, against which, especially in Scotland, nothing of the kind was proved, or so far as we know even alleged, should be subjected to a measure which in our humble opinion would prove so injurious to our interests, and ultimately so ruinous to the comfort (in consequence of reduced wages), and of course to the respectability of our workpeople. We would therefore give it as our opinion that all factories whatever be brought under the regulation of Hobhouse's Act, the penalties raised so as to make conviction more certain; and if this measure does not produce the desired effect, we will willingly give our consent to any farther regulations that may conduce to the comfort of the workpeople themselves.

THOMAS MITCHELL.

No. 137.

James Orr.

ANSWERS of JAMES ORR, for James Orr & Co., Crofthouse Mill, Neilston.

A. 1.—Parish of Neilston and county of Renfrew.

A. 2.—Preparing and spinning of cotton-wool.

A. 3.—The first erection was in 1803, and employed spinning in 1806; the second erection in 1818, and employed in 1819.

A. 4.—Water-power, pretty regular; about forty horse power.

A. 5 & 6.—An opening pane of glass in each window.

A. 7.—Every worker regulates it for himself, but if the foreman should see an improper use made of it he checks it.

A. 8.—Yes.

A. 9.—None.

A. 10.—Nine years; I do not think any of them have been employed at any other trade.

A. 11.—I do not think it does, but it would be a hardship on parents to restrict them to that age.

A. 12.—I am not aware of any such alterations.

A. 13.—No.

A. 15.—All the children employed at these works lodge with their natural guardians or parents; the three orphans stated in the list live with a sister, and a married brother looks after them.

A. 17.—Twelve hours for five days each week, and nine on Saturday.

A. 18.—All ages employed as in A. 17.

A. 19.—Thirteen hours, being one hour extra for lost time, but the regulation now is twelve hours and a half when time is made up.

A. 20.—Three hundred and one days.

A. 21.—Three thousand four hundred and sixty-one hours and a half.

A. 22.—It is carried all on at the same time.

A. 24.—Thirteen, and then only in making up time.

A. 25.—For any little irregularity in the water, or breaking of shafts.

A. 26.—The only way to avoid it is not to work any lost time, but upon which there is a difference of opinion.

A. 27.—Yes, before any legislative interference with regard to hours.

A. 28.—Enhanced in proportion to the time reduced.

A. 29.—It lessens the cost of production in so far as regards interest on stock, insurance, rent, and feu duty, manager and foreman's wages, and many other charges.

A. 31.—Two sets of hands would not answer without you were working the factory day and night, as by employing two sets of children for twelve hours, or an occasional half hour for extra time, you could only give them half wage, which would not support them.

A. 32.—I am not aware of it having been tried; my reasons for not doing so are given above.

A. 33.—Never employed a night-set of hands.

A. 36.—I do not approve of night-work in a factory; I think a prohibition of it would do good.

A. 37.—In consequence of foreign competition we would require to reduce the wages so much as the reduction of the time enhanced the cost of production, otherwise we would lose our export trade.

A. 38.—About 70° is the usual temperature.

A. 39.—We do not require it higher than 70°.

A. 41.—Never worked during the night, excepting mechanics working at any broken machinery.

A. 46.

A. 46.—None.

A. 50.—Oil and candles in the morning and evening.

A. 51.—The same as in day-light; we do not work during the night.

A. 52.—I think it must hurt their morals.

A. 53.—One half hour to each meal; this is done at the request of the workers; the difference of time allowed by the Act is given them at night for education.

A. 54.—They all leave their work at meals.

A. 55.—A few who come from a distance prefer taking it in the work, and to accommodate them the company do not object.

A. 56.—None.

A. 57.—If they do not pay attention to their work they are dismissed.

A. 58.—No corporal punishment allowed.

A. 62.—Yes.

A. 64.—Never at any period.

A. 65.—They mostly live in their employers houses. A week-day and a Sabbath school is kept. The manager occasionally inspects their houses.

A. 66.—It is natural to suppose a person employed at any trade from infancy must in general be a more perfect workman than one employed at a more advanced age. The persons employed from infancy I allude to in the list are John Robertson foreman, and William Thom and William Morrison, both tenters or overseers. No difference of moral character.

A. 67.—I do not think there is any difference in the general state of the health of the workers during the last ten years.

A. 68.—Seldom.

A. 69.—Yes.

A. 70.—Never.

A. 73.—Strictly to the number of hours, say sixty-nine hours per week.

A. 74.—No.

A. 77.—I have not, as any person by the Act can inform.

A. 78.—I would suggest 100*l.* penalty for working more hours than the Act allowed in place of 10*l.*, and I would stop the moving power after the hours by the Act for children are expired, as by allowing longer hours for adults gives an opportunity for evading the Act.

28th May 1833.

JAMES ORR.

Renfrewshire.

James Orr.

#### ANSWERS of JOHN ORR, for John Orr, jun. & Co., Paisley.

No. 138.

John Orr.

A. 1.—Paisley, county of Renfrew.

A. 2.—Cotton-spinning only.

A. 3.—Built in the year (we believe) 1790 and 1792, and a small addition in 1830.

A. 4.—Steam only, thirty-six horse power.

A. 5 & 6.—By the windows, which have opening panes, and the windows are, besides, in two halves.

A. 7.—No ventilator.

A. 8.—The upright shafts are all fenced off above the height of a person.

A. 9.—Considerable part of our workers live in the town, but we have no arrangements of the kind described in this query.

A. 10.—Nine or ten years employed, and paid by the spinning operatives; those in the preparation and other parts of the work paid by owners twelve years and upwards; not at any other trade previously known to us; there may be a single exception or two younger.

A. 11.—It does not.

A. 12.—No difference in this work.

A. 17.—The present regulation factory hours.

A. 19.—We worked probably twelve days at the rate of twelve hours and a half per day, the workers having great objections to work any extra time beyond Act of Parliament.

A. 20.—All the year, but two sacramental fast-days, two days idle at New Year's Day, one on the race-day, and probably two others.

A. 21.—Kept no reckoning.

A. 22.—No account kept of this.

A. 23.—The regulation hours, the holidays, and others stated as above, fall to be deducted.

A. 24.—The same as the other workers.

A. 25.—To make up for holidays.

A. 26.—They may be all avoided if a general regulation provides so.

A. 27.—Before any parliamentary regulation was in force we worked average twelve hours per day.

A. 28.—Most unquestionably.

A. 29.—To benefit himself, the profit being greatly increased by extra quantity turned off.

A. 30.—At our balance, 1st October 1832, the wool and waste formed fifty-four per cent.; wages, accounts, interest of capital, discounts, &c., &c. formed forty-six per cent. of the yarns manufactured; and last half year, ending 31st March, the wool and waste was fifty-five per cent.; wages and other charges forty-five per cent. If the labour was restricted to ten hours, or sixty per week in place of sixty-nine per week, and no reduction of wages,

(APP.—A. 1.)

B b 2

the

Renfrewshire.

John Orr.

the expence of workmanship and other charges on capital would be increased about six per cent.; which on the operatives wages, and overseers included, is about twenty per cent. This increase applies to diminished production entirely.

A. 31.—In country mills the objection would be scarcity of workers, and accommodation for them; in towns there would be less objection; but we disapprove of all night-work under any circumstances, being in the present state of trade quite uncalled for.

A. 32.—Those who have worked their mills night and day must have relays of work-people; we have never tried it.

A. 33.—No.

A. 34.—Any person working with two sets of hands must be to reduce the cost of production, and thereby increase the profit.

A. 36.—We wish all night-work prohibited.

A. 37.—The great increase of expence in the manufacture of the raw material, and the danger from foreign competition where the wages are so low, especially on the continent; the consumption of raw cotton increasing so rapidly is the best evidence of their success.

A. 38.—Sixty to seventy degrees of Fahrenheit's thermometer.

A. 39.—The heat is much the same throughout all the work.

A. 41.—No part whatever.

A. 50.—Gas during the regulation hours of winter.

A. 53.—Three quarters of an hour to breakfast, and the same to dinner.

A. 54.—All are ordered out, and the doors desired to be locked.

A. 57.—If contumacious, after one or two admonitions, they are dismissed.

A. 58.—No corporal punishment allowed.

A. 64.—Never at any time we can remember since the works were in our possession in the year 1810.

A. 65.—We have one large dwelling house occupied by thirty-five families; a woman is paid for keeping it clean, that is, washing lobbies, passes, and stairs, taking out dirt, &c. to dunghill, sweeping stairs and lobbies daily, and airing the houses by stair and lobby windows; the rest of the workers live in the town.

A. 66.—We do not feel ourselves sufficiently acquainted with the skill and character of our workmen to state the difference, but those trained from infancy must make the best workers.

A. 67.—I am not aware of any difference.

A. 68.—If any person had been long with us, and applied for a change in consequence of his health, we would generally attend to it if in our power.

A. 69.—We consider so.

A. 73.—The cotton-mills do, but not all the thread-works.

A. 74.—Not that we are aware of.

A. 78.—I believe the present law has been shamefully evaded in England in particular; but I am not prepared to suggest a remedy, neither am I prepared to suggest any improvement in the treatment of the children, as I am not aware of any improper treatment exercised in the work.

A. 79.—I have no other observation to make.

3d June 1833.

JOHN ORR.

No. 139.

Peter Pollock.

## ANSWERS of PETER POLLOCK, for N. &amp; P. Pollock, Paisley.

A. 1.—Town of Paisley.

A. 2.—Cotton-spinning.

A. 3.—Partly in 1789 and partly in 1825.

A. 4.—Steam; ten horse power engine.

A. 5.—All the windows open from the top, and the skutching-machine is ventilated by a funnel.

A. 7.—By one of ourselves.

A. 8.—They are fenced.

A. 9.—No such arrangements.

A. 10.—Nine years of age; some of them have been previously employed by weavers as draw-boys.

A. 11.—It does not.

A. 12.—We know of no alteration requiring younger workers.

A. 13.—No.

A. 15.—We have none under sixteen years of age, and they take care of themselves.

A. 17.—Twelve hours for five days, and nine hours on Saturdays.

A. 18.—Same as above, except a few under twelve years called spinners scavengers, who are employed only five hours per day.

A. 19.—Thirteen hours.

A. 20.—About three hundred days.

A. 22.—We never wrought before six o'clock in the morning, nor after eight in the evening.

A. 23.—Twelve hours on five days, and nine on one day.

A. 24.—We have only one set of workers.

A. 25.

A. 25.—It seldom happens at all, but the usual cause is a break of some part of the machinery.

A. 26.—It is not avoidable unless we or the workers suffer for the lost time.

A. 27.—Before passing the late Bill we wrought seventy-two hours per week; we now work sixty-nine hours.

A. 28.—We decline giving any opinion.

A. 33.—No.

A. 38.—From fifty-six to seventy degrees Fahrenheit; sixty is as much heat as we require.

A. 41.—We never wrought during the night.

A. 46.—No.

A. 50.—Lighted with gas from sun-set till half past seven o'clock during the winter months.

A. 53.—Three quarters of an hour for breakfast, and three quarters of an hour for dinner.

A. 54.—All leave the work.

A. 57.—Dread of being turned off.

A. 58 & 64.—No.

A. 65.—A few in our houses; the rest scattered over the neighbourhood; no special superintendence.

A. 66.—Those employed from infancy are the most expert workmen.

A. 67.—We remark no difference.

A. 69.—It is subject.

A. 70.—Never.

PETER POLLOCK.

#### ANSWERS of JOSEPH TWIGG, Sneddon Mill, Paisley.

A. 1.—Paisley, county of Renfrew.

A. 2.—Cotton-spinning, from 30 to 110 hanks per pound.

A. 3.—About two thirds of the mill in 1792, the other third in 1823; at the first number mentioned period till this time, in cotton-spinning.

A. 4.—Steam-engine only; quite regular; about twenty-five horse power.

A. 5.—None. The mill stands in a fine airy situation.

A. 6.—Opening of windows, &c.

A. 7.—No person has any particular charge; it is generally done at the discretion of the workers; the upper and lower sashes of the windows are moveable, and the ceilings being high (mostly ten feet), the rooms are quite comfortable in that respect.

A. 8.—All that are within the reach of the workers are covered.

A. 9.—The whole of them mostly change their clothes at coming in and going from work, and are watched as to keeping themselves clean and respectable.

A. 10.—Nine years of age; some of them were employed before in drawing to weavers and at silk-mills.

A. 11.—It does, because they do as well as those farther advanced in life, and are got at a lower rate of wages.

A. 12.—There is very little difference in this respect in my work.

A. 13.—Only one mechanic; his parents alive and and respectable.

A. 15.—I don't lodge or maintain any of the workers.

A. 17.—Twelve hours five days in the week, and nine on Saturday.

A. 19.—Thirteen and a half hours; one day only the engine was kept on for the purpose of turning a shaft, and some of the workers continued the whole time.

A. 20.—Three hundred and six and a half days.

A. 21.—Three thousand five hundred and twenty-four hours and three quarters.

A. 22.—All at the same time.

A. 23.—Eleven hours and one quarter per day.

A. 25.—The workers wish to get away on particular occasions, and an accident may happen with the machinery; the time so lost is sometimes worked up, and sometimes not.

A. 26.—As it is an unpleasant thing making up lost time, every attention is paid to keep on the mill as regular as possible.

A. 27.—Prior to the passing of Sir John Hobhouse's Bill, the mill worked twelve hours per day, five days in the week, and ten on Saturday.

A. 28.—As the machinery for spinning cotton is very expensive, it is quite obvious that the smaller the quantity produced, the price will be enhanced accordingly.

A. 29.—It is the interest of the manufacturer to produce as much yarn as possible off his machinery, but I don't approve of working through the night, either with the same or a fresh set of hands.

A. 31.—If a manufacturer wishes to work through the night regularly, the only way he can do it, is to have two sets of hands, but I don't approve of it.

A. 32.—As the children employed by me go through their work cheerfully, I see no use in two sets of hands, yet I would not object to half an hour per day off our present time.

A. 33.—Never.

A. 35.—I have no night-work.

A. 38.—From 60° to 70° of Fahrenheit.

(APP.—A. 1.)

B b 3

A. 46.

Renfrewshire.

Peter Pollock.

No. 140.

Joseph Twigg.

Renfrewshire.

Joseph Twigg.

- A. 46.—No.
- A. 50.—With gas.
- A. 52.—I never had any night-work.
- A. 53.—Breakfast and dinner three quarters of an hour each.
- A. 54.—The whole of them.
- A. 57.—By advice, and instructing them what to do.
- A. 58.—Not to my knowledge.
- A. 63.—Most pointed instructions given that no person in the mill will be permitted to strike or abuse any fellow-worker.
- A. 64.—Never.
- A. 65.—Very few of them.
- A. 66.—Generally speaking, they are the best hands who begin the business early in life.
- A. 67.—I am not aware of any difference in this respect.
- A. 68.—Sometimes; if a worker wishes it, it is generally complied with.
- A. 69.—Yes.
- A. 70.—Never.
- A. 73.—So far as my information goes, they all conform strictly to the present Act; probably the whitewashing clause may not in every instance be strictly conformed to.\*
- A. 74.—I believe one or two were, a few years back.
- A. 75.—I am pretty certain they were not.
- A. 76.—I have no doubt of it.
- A. 77.—As the masters in this neighbourhood comply strictly with the provisions of the present Bill, with the exception above stated, it is a matter of indifference to them who gives evidence, if they only state facts, as the mills are kept clean and comfortable.
- A. 78.—Had the present law been strictly enforced (which is quite practicable), I see no occasion for any farther legislation on the subject, yet were the time limited to sixty-six in place of sixty-nine hours per week, I see no great objection to it; but if the Ten Hour Bill should pass, I am clearly of opinion the business will be transferred to other countries where there are cheap provisions, and the trade free and unshackled; the landed interest will suffer next, as there can be little doubt but it is owing to the very great extension of the manufactures of this country that rents are so much higher now than they were forty years ago.

JOSEPH TWIGG.

No. 141.

Browns, Malloch,  
& Co.

## ANSWERS of BROWNS, MALLOCH, &amp; Co., Paisley.

- A. 1.—Edlerslie, Paisley Abbey parish, county of Renfrew.
- A. 2.—Cotton-spinning.
- A. 3.—About one half built in 1784, and the other part in 1800.
- A. 4.—Steam-power, twenty horses.
- A. 5.—The rooms are ventilated by opening the windows.
- A. 6.—We have no other provision than that of opening the windows.
- A. 7.—Under the control of the workers.
- A. 8.—All are fenced off.
- A. 9.—There are no specific arrangements, but in each room there is a vessel with water in which the workers wash at pleasure. At entering and leaving the work they change their clothes as suits their own convenience.
- A. 10.—Nine years. We have never made a practice of inquiring whether they have been previously employed at other trades.
- A. 11.—At some of the easier parts of the work children under twelve years of age may be employed to advantage.
- A. 12.—Not in this factory.
- A. 13.—No.
- A. 14.—Never had apprentices from any parish.
- A. 15.—We never lodge or maintain any of our workpeople; all are paid in money.
- A. 17.—For the first five working days of the week they are employed twelve hours, and on Saturday nine hours.
- A. 18.—There is no difference in the number of hours of labour between those under and those above twenty-one years of age.
- A. 19.—Thirteen hours; this was during only a few days when making up lost time.
- A. 20.—Three hundred and six days.
- A. 21.—Three thousand five hundred and two hours.
- A. 22.—All have been carried on at the same time.
- A. 23.—Fully eleven hours and one eighth.
- A. 24.—Thirteen hours.
- A. 26.—When time is lost in consequence of any accident happening to the steam-engine or great gear, it must be made up, otherwise great loss will be sustained both by master and worker.
- A. 27.—We have at all times wrought our manufactory agreeably to the Acts of Parliament.

\* I wish it to be distinctly understood I allude to such mills only where cotton is carded and spun into yarn.

- A. 29.—To produce at less cost.  
 A. 30.—As the interest on sunk capital, &c., is the same whatever be the hours of labour, the cost of production must be increased in all branches by any reduction of these hours.  
 A. 31.—We have no experience in the matters to which this question refers.  
 A. 32.—We have no experience.  
 A. 36.—Beneficial.  
 A. 37.—Were any further reduction of the working hours to take place, we are of opinion that we would thereby be rendered unable to compete with the foreign manufacturer, owing to the increased cost of production, as stated in A. 29. It would also prove injurious to our workpeople from the necessary reduction of their wages which would follow.  
 A. 38.—Usual temperature, sixty-six to seventy-four degrees; lowest temperature at which the works can be conveniently carried on, from sixty-six to seventy degrees.  
 A. 39.—Highest temperature required, from sixty-six to seventy degrees.  
 A. 40.—All.  
 A. 41.—Never.  
 A. 46.—No.  
 A. 50.—By oil in the winter season during our usual working hours.  
 A. 52.—They must be bad.  
 A. 53.—Three quarters of an hour for breakfast, and the same for dinner.  
 A. 54.—All.  
 A. 57.—Dismissal.  
 A. 58.—Not allowed.  
 A. 62.—Yes.  
 A. 63.—Verbal instructions have been given against the corporal punishment of children.  
 A. 64.—No complaints have been made.  
 A. 65.—Only three families of our workpeople reside in houses belonging to us. We pay a teacher for the instruction of the destitute and deserving of our factory children in the common branches of education.  
 A. 66.—Almost all our workers have been engaged in cotton-spinning from infancy, and we prefer employing such to instructing adults.  
 A. 67.—We know no difference.  
 A. 68.—No.  
 A. 69.—It is.  
 A. 70.—No.

Renfrewshire.

Browns, Malloch,  
& Co.

BROWNS, MALLOCH, &amp; CO.

## ANSWERS of JAMES COATS jun., for J. and P. Coats, Paisley.

No. 142.

James Coats jun.

- A. 1.—Ferguslie, Abbey parish of Paisley, county of Renfrew.  
 A. 2.—Manufacture of cotton thread, and winding and throwing of raw silk.  
 A. 3.—One half of the building was erected in 1825, and the other in 1828, at which respective periods they were applied in part to their present purposes.  
 A. 4.—Steam-power.  
 A. 5.—No specific provision.  
 A. 6.—On the opening of windows alone.  
 A. 7.—At the discretion of the workers themselves.  
 A. 8.—Whatever is reckoned dangerous is fenced off.  
 A. 9.—No specific arrangements other than the inculcating and rewarding of cleanliness, and discouraging the contrary.  
 A. 10.—Not under nine years; great part have been previously employed in weavers shops as drawers, and part in their parents houses at silk-winding and other warehouse and domestic work.  
 A. 11.—The only operation in which we employ children is the winding of silk, for which they are peculiarly adapted, the principal labour requisite consisting in attention.  
 A. 12.—Neither, that we are aware of.  
 A. 13.—No.  
 A. 15.—We neither lodge nor maintain any of those we employ. The greater part are resident with their parents.  
 A. 17.—Twelve hours.  
 A. 18.—From about twelve years of age and under they are employed eleven working hours, and above that age they are employed twelve working hours, except on Saturday, when all are employed nine hours only.  
 A. 19.—Thirteen hours, including meal-times, while making up lost time. This occurred on twenty different days during last year.  
 A. 20.—Three hundred and five days from the 1st January 1832 to the 1st January 1833.  
 A. 21.—Three thousand five hundred and seventy-three hours from the 1st January 1832 till the 1st January 1833.  
 A. 22.—During three months, since January 1833, that we wrought part of our factory (the throwing department) all night, a number of the day-workers (thread-winders), taking advantage of the opportunity, extended their hours to thirteen and a half and fourteen for about two months of that period; but this was quite optional on their part.

(APP.—A. 1.)

B b 4

A. 23.

Renfrewshire.

James Coats jun.

A. 23.—At three hundred and five days which we wrought the average hours for each day of the week is eleven hours forty-two minutes.

A. 24.—Children under twelve years of age never more than twelve hours, and those between twelve and fifteen years, on one occasion, for about eight days fourteen hours; this was when another department was employed all night, since January 1833.

A. 25.—In the month of January 1833, and on account of the department at which these girls were employed having fallen short in producing the work necessary to keep other parts of the machinery going, owing to particular circumstances.

A. 26.—Very rarely, and under particular circumstances it may for a short period be unavoidable, without increasing the hands (which sometimes cannot be had) on the machinery; but so far as we can judge from our own experience, a sufficient supply of hands and machinery would render it at all times avoidable.

A. 27.—In one or two instances, when unusually busy, we have worked an hour or two later (never more) for about a month or six weeks running.

A. 28.—As the above arrangement was an exception to our general rules, and as we always paid the workers extra on such occasions, the difference to us would be trifling.

A. 29.—Whenever it is done, except from some such temporary necessity as we have alluded to above, we have no hesitation in characterising the inducement as originating in the most shameful and heartless avarice on the part of the employer.

A. 30.—Having always paid extra wages during the short periods at which we wrought extra hours, we consider the cost of production to be little affected by a return to our usual hours.

A. 31.—When extra hours exceeding two at the utmost are required, and that but for a short period, we can conceive of no objection except in the cupidity of the employer.

A. 32.—Having so seldom and for so short a period worked children extra hours, we never had occasion to try it, and know of no instance in which it has been tried.

A. 33.—Yes; the day-set worked from six to eight, excepting two hours for meals; the night-set from eight till six, excepting one hour for meal and rest.

A. 34.—If by this question it is meant why we consider it our interest to work all night, we reply on account of the demand at particular seasons being greater than the machinery employed the usual hours would be fit to supply.

A. 35.—As nearly as we could accomplish it, we changed the hands periodically, but could not always effect it. Owing to the shortness of the hours, and to the wages being considerably higher for night-work, it was eagerly sought after.

A. 36.—Night-work not being very common in our manufacture, the only probable effects would be a trifling increase of machinery.

A. 37.—The remuneration for manufactured produce has necessarily adapted itself to the present hours of labour. To shorten these hours would be either, in many instances at least, to destroy that remuneration, or else to cause a reduction of wages (already sufficiently low) corresponding to the reduction in the hours of labour, which after all would not be a compensation,—one of these two. But while we condemn the disgusting cant about the miseries of factory children, the evidence elicited regarding their treatment in the north of Scotland imperiously demands the interference of the legislature for the protection of this interesting class from the possibility of such inhuman treatment as they there were subjected to, which we would humbly think might be effected by means less sweeping in their nature than those contemplated in the lately proposed Bill.

A. 38.—The usual temperature is about seventy degrees; the lowest we could work it at is about sixty-six degrees.

A. 39.—One hundred and thirty degrees are required in a steam-stove for the purpose of drying thread.

A. 40.—Two, but only for about half an hour, at different times during the day. Other two workers are constantly employed at a temperature of one hundred to one hundred and ten degrees.

A. 41.—Never, but from January to March inclusive, 1833.

A. 42.—None.

A. 45.—As already stated, for about eight days, those between twelve and fifteen years of age wrought till ten o'clock.

A. 46.—None.

A. 50.—By gas.

A. 51.—Only the windows.

A. 52.—We could not form an opinion from the short period we wrought at night-work.

A. 53.—One hour for breakfast, and one hour for dinner.

A. 54.—All, with the exception of three or four.

A. 55.—These three or four are not always the same persons; they are kept for the purpose of making such arrangements while the machinery is stopped as will prevent the necessity of stoppages during working.

A. 56.—We derive no inconvenience from their being taken out of the factory.

A. 57.—Slight deductions on the score of damages, and dismissal from the work.

A. 58.—Never.

A. 62.—We have always expressly forbidden any such mode of coercion, and have never had any complaints of it.

A. 63.—We send a copy of our printed regulations, to which we by no means rigidly adhere, and beyond which in no instance have we ever gone.

A. 64.

A. 64.—No such complaints have been made, nor any such cases occurred.

A. 65.—They live, as already stated, with their parents or relations.

A. 66.—We cannot say we know any difference, so far as our experience goes.

A. 67.—Since the erection of our work, about seven years ago, the health of the mass of our workers has not in any way deteriorated, but on the contrary is excellent; yet there is one particular branch of our work, the picking and turning or drawing of silk, where the girls have little motion, and have to stand constantly during working hours, from which about eight or ten girls (from thirteen to sixteen years of age) out of fifty who have been at that employment during the last three years have been obliged to go away on account of their legs and feet swelling; in other respects their health derives no injury; and in all these cases we have either furnished them with other employment, or, if that was not convenient, caused them to drop the work. We ascribe the good health of the workers in part to the healthy situation of the works, and to the height and cleanliness of the apartments.

A. 68.—No.

A. 69.—We have always considered not.

A. 73.—To the best of our knowledge they do.

A. 77.—As we never viewed the Act as being applicable to us, and having had no experience of the kind, we cannot say.

A. 78.—We cannot; with respect to the regulation of the hours of children, we spontaneously reduced those of all that class denominated silk-winders or piecers from twelve to eleven working hours without any reduction of their wages; they are mostly from ten to thirteen years of age; and, judging from their spirits and general health, we would distinctly say the hours are not too long for that species of work, but would recommend that at all times a full hour should be allowed for breakfast and another full hour for dinner.

JAMES COATS jun.

Renfrewshire.

James Coats jun.

#### ANSWERS of WILLIAM MULLOCH, Brown, Mulloch, and Co.'s Mill, Paisley.

No. 143.

William Mulloch

A. 1.—Johnstone, Abbey parish, county of Renfrew.

A. 2.—Cotton-spinning.

A. 3.—Three fifths erected in 1782, and the remaining two fifths in 1787; employed for its present purpose immediately after erection.

A. 4.—Water-power, irregular to a certain extent in dry and frosty weather; from thirty-six to forty horses power.

A. 5.—The rooms are ventilated by opening of windows.

A. 6.—We have no other provision but by opening of the windows.

A. 7.—Under the control of the workers.

A. 8.—All are fenced off.

A. 9.—There are no specific arrangements, but in each room there is a vessel with water, in which the workers wash at pleasure. At entering and leaving the work they change their clothes as suits their own convenience; this has been the universal practice.

A. 10.—Nine years; we never make it a point of inquiring as to other trades.

A. 11.—At some of the easier parts of the work children from nine to twelve years of age may be employed to advantage.

A. 12.—Not in this factory.

A. 13.—None at present.

A. 15.—Never lodge or maintain any of our workpeople; all are paid in money.

A. 17.—For the first five working days in the week they are employed twelve hours, and on Saturday nine hours.

A. 18.—There is no difference; all are employed for the same length of time.

A. 19.—In making up time lost for want of water, our works were for some time kept on for twelve hours and a half.

A. 20.—Our works were carried on every lawful day, with the exception of the following, when they were stopped, viz. religious fasts, three days; Horn Fair, three days; and at New Year, two days; being eight days in all.

A. 21.—Three thousand five hundred and nineteen hours, or three hundred and six days.

A. 22.—All departments were carried on at the same time, with the exception of a little variation when short of water.

A. 23.—Eleven hours and a quarter.

A. 24.—Twelve hours and a half.

A. 26.—When time is lost for want of a due supply or an excess of water, accidents happening to water-wheel or great gearing, time must be made up, otherwise great loss will be sustained by both master and workers.

A. 27.—We have at all times wrought our manufactory agreeable to the Acts of Parliament.

A. 29.—To produce at less cost.

A. 30.—As interest on sunk capital, &c. is the same, whatever may be the hours of work, the cost of production must be increased in all branches by the shortening of time.

A. 31 & 32.—We have no experience.

A. 36.—Beneficial.

A. 37.—Were any further reduction of the working hours to take place, we are of opinion that we would thereby be rendered unable to compete with the foreign manufacturer. It

(APP,—A. 1.)

C c

would

Renfrewshire.

*William Mulloch.*

would also prove injurious to our workpeople by the necessary reduction of their wages which would follow.

A. 38.—From 66° to 74° usual; 66° to 70° lowest.

A. 39.—From 66° to 74°.

A. 40.—All.

A. 41.—Never.

A. 50.—Gas during the winter season for our regular working hours.

A. 52.—They must be bad.

A. 53.—Three quarters of an hour to breakfast, and the same to dinner.

A. 54.—All.

A. 57.—Dismissal.

A. 58.—Not allowed.

A. 62.—Yes.

A. 63.—Verbal instructions given against the corporal punishment of children.

A. 64.—None.

A. 65.—A few of our workpeople reside in houses belonging to us; we have a school-room, and pay a teacher for instructing our factory children in the common branches of education.

A. 66.—Almost all our workers have been engaged in cotton-spinning from infancy, and we prefer employing such to instructing adults.

A. 67.—We know no difference.

A. 68.—No.

A. 69.—It is.

A. 70.—No.

A. 73.—We know nothing to the contrary.

A. 74.—Not to our knowledge.

WILLIAM MULLOCH.

No. 144.

ANSWERS of WILLIAM HOUSTOUN, for George Houstoun and Co., Paisley.

*William Houstoun.*

A. 1.—Johnstone, Abbey parish, Paisley, county of Renfrew.

A. 2.—Entirely cotton-spinning.

A. 3.—Laigh Mill erected in 1785, Hog Mill in 1794, and Cartside Mill in 1794. In 1825 an addition was made to Cartside so as nearly to double its size, at which mule-spinning was introduced in place of water-frames.

A. 4.—Water; so regular that the greatest loss of time in any year within the last six years has been at the Laigh Mill thirteen hours, Hog fifty hours, and Cartside Mill sixteen hours. The power of Laigh Mill and Hog Mill is about that of a seventeen horse engine, and at Cartside about a thirty horse engine.

A. 5 & 6.—The necessities are ventilated by means of air-holes, the general ventilation by opening the windows.

A. 7.—The overlookers regulate the ventilation, but are of course under the controul of the manager; but any of the workers may open a window if it is not injurious to the work.

A. 8.—All the dangerous parts of the great gearing are fenced off; the greater part of the small gearing about the machinery it is impossible to fence off conveniently; some parts of it we are at present covering.

A. 9.—The females generally wear in bad weather cloaks or mantles, which they throw off when they come into the factory; there is no apartment for the purpose of dressing and undressing, or for washing; the workers are furnished with soap for washing when they have been employed in cleaning the machinery.

A. 10.—Children are seldom taken into the factory under ten years of age, and never under nine; they have scarcely ever been employed at any other trade; a few may have been draw-boys to weavers.

A. 11.—If a sufficient number of children could be procured at and above twelve years of age at the same rate of wages as children at ten years of age, our factories could be carried on, but not so advantageously; children coming first into a mill at twelve seldom become such expert workers as those taken in between nine and ten; this particularly applies to throstle-spinning and piecers to mule-jennies.

A. 12.—It may almost be said that no children under twelve years of age are employed in cotton factories except as piecers, that is to repair the threads as they break. In spinning from the same quality of cotton, the same fineness of yarn, and going at the same speed, the better the machinery, the fewer ends will break, and fewer children will be required.

A. 13.—Never; any person may leave the work on giving a fortnight's warning.

A. 15.—Do not lodge or maintain any workers.

A. 17 & 18.—Twelve hours, and nine on Saturday.

A. 19.—Thirteen hours, and nine on Saturday.

A. 20.—The last year (leap year) was three hundred and sixty-six days; deduct Sundays fifty-two, fairs and fast days eight, leaves three hundred and six working days.

A. 21.—Saturdays fifty-two at nine hours each is four hundred and sixty-eight hours; other days two hundred and fifty-four at twelve each is three thousand and forty-eight hours; — total, three thousand five hundred and sixteen.

A. 22.

Renfrewshire.

William Houstoun.

A. 22.—Every department of the work is carried on at the same time.

A. 23.—Eleven hours and a half.

A. 24.—Thirteen hours.

A. 25.—Lost time from floods and want of water, also for holidays given at the request of the workers.

A. 26.—The working up of lost time is required merely because it is the interest of the proprietors and workers.

A. 27.—Twelve hours every day, Saturday also included.

A. 28.—The quantity produced by the workers on days wages is exactly in proportion to the time the machinery is kept going, and if the time is reduced the cost of course will be increased.

A. 29.—In working one or more hours extra it is the interest of the master to employ the same hands, because he could not get a change of hands to work only for a few hours at the same proportional rate of wages. Where a work is regularly carried on during the night we do not believe that it was ever attempted to work the same hands twenty-four hours, and cannot conceive an object for doing so.

A. 30.—The quantity of cotton prepared for the piece-workers by the hands on days wages is exactly in proportion to the time the work is kept going; and if the wages paid be the same, the increased cost will be in proportion to the diminution of the time of working.

A. 32.—We have never heard of its being tried.

A. 33.—In altering Cartside Mill from water-twist to mule-spinning we worked part of the mill for about six months both night and day, on purpose to keep the hands together till the alteration was completed; the first set worked from six A.M. till eight P.M., and the night-set worked from eight P.M. till six A.M.; the day workers one week worked at night, the next by day.

A. 34.—We work only one set of hands.

A. 36.—We do not work during the night.

A. 37.—The effect would be an increase in the cost of the article manufactured in proportion to the diminution of the quantity produced, which would be in proportion to the time the work was kept going.

A. 38.—The temperature we require is from sixty to seventy degrees, above which it seldom rises; the preparation and throstle spinning do not require to be above sixty degrees.

A. 53.—Three quarters of an hour for breakfast, and the same time for dinner, for all the workers.

A. 54.—All except four hands at Laigh Mill, four at the Hog, and ten at Cartside, who remain to clean the machinery, and who leave the works for three quarters of an hour for each meal when the works are set on.

A. 55.—The cleaners remain in, for the convenience of the manufactory, to clean and oil such parts of the machinery as cannot be done when in motion.

A. 56.—The workers almost all leave the work to take their meals, and only such as live at an inconvenient distance take their meals in the work; we would much rather that none did so.

A. 57.—The threat of being turned off.

A. 58.—Not unless the parents wish them chastised in place of being turned off.

A. 59.—By overlookers as applies to workers on day wages, and by spinners as applies to their piecers.

A. 62.—We do not recollect of a complaint being made for many years of any punishment being inflicted on the children, and it is understood by all the overlookers and spinners that we disapprove of it.

A. 64.—Never.

A. 65.—A small proportion of the workers live in houses belonging to us. No control or superintendence is exercised in regard to their morals or cleanliness; they are exemplary in both.

A. 66.—In engaging workers it is always a strong recommendation that they have been employed in a factory from infancy, they are always the most expert and best workers; this particularly applies to throstle spinning and piecers to mule-jennies.

A. 67.—The people employed in our factories have been always healthy, and we are not sensible of any change, except that in general they are now better clothed.

A. 68.—Such changes are occasionally made, but they are very seldom applied for.

A. 69.—The present Act is strictly attended to, except in whitewashing the rooms, in employing children under ten years of age, and in working up time which has been lost from the workers asking to have holidays.

A. 70.—Never.

A. 77.—We do not consider that the deviations we make from the strict observance of the Act is considered by the workers as a grievance; the fear of displeasing their masters cannot operate in preventing them from getting informations laid, as it can be done by persons not employed in the work.

A. 78.—The present mode we have found the best for our purpose, and we think it a matter of difficulty to make general rules to suit different works.

27th May 1833.

WILLIAM HOUSTOUN.

Renfrewshire.

No. 145.

H. Macdowall.

## ANSWERS of H. MACDOWALL, Floors Throstle Mill, Paisley.

- A. 1.—Johnstone, Abbey parish, Renfrewshire.
- A. 2.—Cotton-spinning.
- A. 3.—Commenced building in June 1825, work completed in 1827; commenced spinning in April 1827.
- A. 4.—Steam-power, twenty-six horse engine; works correctly.
- A. 5.—In each flat a number of panes in the windows are made to open and shut according as the rooms are hot or cold; when these panes are open a considerable draught is produced, and they are generally so in warm weather; in hot weather the front door and the doors of the different flats are thrown open also.
- A. 7.—The ventilation above described is under the control of each superintendent of a flat or room.
- A. 8.—All the dangerous parts of the machinery are fenced off.
- A. 9.—Almost all the children in my work change their clothes on entering and prior to leaving the work; in cold or bad weather they generally make use of woollen cloaks.
- A. 10.—Nine is the lowest age at which children are ever admitted, but there are very few so young; never before employed in any trade.
- A. 11.—My work being a throstle-mill, children from ten years and upwards are absolutely necessary; I conceive it to be no advantage to employ them younger than ten.
- A. 12.—Not long enough in the trade to answer this satisfactorily.
- A. 13.—No apprentices employed.
- A. 15.—Children all live with their parents or guardians.
- A. 17.—Twelve hours for five days in the week, and nine hours on Saturday, except when holidays occur.
- A. 18.—Twelve hours for five days in the week, nine on Saturday, except when holidays occur.
- A. 19.—Thirteen hours.
- A. 20.—Three hundred and four days and a half.
- A. 21.—Three thousand four hundred and ninety-eight hours.
- A. 22.—All going at same time.
- A. 23.—Eleven hours twenty-nine minutes for three hundred and four and a half working days, eleven hours ten minutes for three hundred and thirteen week days.
- A. 24.—Thirteen hours.
- A. 25.—In August, four hours and a quarter were made up, the engine having gone wrong; in November, the spinning machine broke, and thirteen hours work was done for five days.
- A. 26.—As the law at present in force permitted the time lost as above to be made up by working extra hours, it was preferred to adopting the only other alternative, of deducting the value of the time lost from the workers wages; this arrangement is also preferred by the workers themselves.
- A. 27.—No.
- A. 28.—It follows as a matter of course that the cost of production is increased when the quantity of yarn produced is diminished.
- A. 29.—The only inducement can be the wish to increase the quantity produced, and consequently increase the return from the capital invested.
- A. 30.—If a cotton mill working twelve hours produces 600lbs. of yarn, and you reduce the hours of work to ten, the production will then become 500lbs.; to make up for this diminished quantity a great advance in the price would be necessary, and which the weaver could not afford to pay at present on account of foreign competition.
- A. 31.—I conceive that a child can work twelve hours without injury at the light work in my factory; I would therefore prefer not making changes of sets even if it were possible, which I doubt, to procure the additional number of young people necessary.
- A. 32.—Cannot speak as to this query, never having made the experiment.
- A. 33.—No.
- A. 36.—I am most anxious that no night-work should be allowed in cotton factories.
- A. 37.—Should a reduction be made in the hours of working throstle-spinning mills, the consequences would be ruinous; all the people, except a few young women in the reeling-room, are paid by the day, and not by the quantity produced; if the hours of labour are reduced from twelve to ten hours, as proposed, a reduction of twenty-five per cent. from the wages will not be sufficient to remunerate the mill-owner for the diminished production; and if a reduction in wages to the above extent takes place, the young people, instead of being able to support themselves and occasionally assist their parents, will be reduced from a state of comfort and happiness to wretchedness, starvation, and misery; and on the other hand, if wages continue as at present, the production being diminished one sixth, ruin must follow to the master.
- A. 38.—Sixty-five degrees is the average temperature of the different rooms of my mill; in summer the work is kept as cool as possible, and in winter the heat does not exceed what is agreeable to the people.
- A. 39.—The heat is the same through the whole work.
- A. 50.—By gas, morning and evening, when necessary.
- A. 51.—The same as during the day.

A. 53.—Forty-five minutes for breakfast, and same for dinner.

A. 54.—I believe all, but it is according to their own pleasure; but the meal-hours of all are not the same; four cleaner boys for card rooms and two for spinning rooms remain at the work while the rest are out to clean various parts of the machinery when standing; these boys go to their meals, when the engine is set on, to their respective homes.

A. 56.—All meals taken out of the work does not apply.

A. 57.—If a child is careless or inattentive, the parent is required to warn the child to behave better, or authorize its punishment; and sometimes send them away.

A. 58.—A slap with the open hand, or a light pair of taws, such as a schoolmaster uses, but never any severe punishment; punishment is very seldom necessary.

A. 59.—By the superintendent of the room the children are punished.

A. 60.—My orders are, when a child does wrong, or is careless, to send it home to its parents.

A. 61.—I never was privy to or in any way sanctioned corporal punishment, and I never heard of an instance occurring at my work.

A. 64.—I never heard a complaint on the subject of punishment since I became a spinner in 1827.

A. 65.—The engine-man and his family are the only people living in any house of mine. If any child in my work is observed to be dirty, a message is sent to the parent recommending greater attention.

A. 66.—All the workers employed by me are young people except the tenters.

A. 67.—My work has only been erected six years.

A. 68.—No.

A. 69.—Yes.

A. 70.—Never.

A. 73.—I believe the mills hereabouts all conform to the Act, except that the workers do not go home to dinner on Saturday till all the work is over, by their own choice.

A. 74.—Cannot say, but never heard it.

A. 78.—Alter or do away with the objectionable clause in the present Act requiring that the workers should be sent home to their dinners on Saturdays before the labour of the day is over.

H. MACDOWALL, Proprietor.

Renfrewshire.

H. Macdowall.

#### ANSWERS of R. WATT, for Matthew Brown & Co., Paisley.

No. 146.

R. Watt.

A. 1.—Johnstone, Abbey parish, Paisley, Renfrewshire.

A. 2.—Cotton-spinning.

A. 3.—This work was erected in 1803, and has always continued in the same line of business.

A. 4.—Steam, two engines, one of twenty horse power and one of twelve.

A. 5.—There are ventilating pens in almost every window on both sides of the house.

A. 6.—On the opening of the ventilating pens.

A. 7.—At the discretion of the workers.

A. 8.—Yes, all fenced off.

A. 9.—They change their clothes in the apartments where they work, and in the court there is a filter-well with a sufficient supply of good water for washing and drinking.

A. 10.—None under nine years of age, and none that we know of that have been previously employed at any other trades.

A. 11.—Yes, it does require them, and the reason why, that they need work and wages.

A. 12.—No particular alteration in the machinery of this work has taken place since its commencement.

A. 13.—We have no apprentices whatever.

A. 15.—We employ, but lodge and maintain none.

A. 16.—Our workers all lodge and are maintained by their parents or their natural or legal guardians.

A. 17, 18, & 19.—Twelve hours.

A. 20.—Three hundred and six days.

A. 21.—Three thousand five hundred and sixteen hours.

A. 22.—Our work always goes regularly the same hours.

A. 23.—Eleven hours and a half nearly.

A. 24.—Twelve hours; we have only one set.

A. 25.—Under no circumstances.

A. 26.—We have no excess beyond the regular hours, and consider every excess avoidable.

A. 27.—Previous to the passing of Sir Robert Peel's Bill we wrought twelve hours and a half, Saturdays included.

A. 28.—We certainly do.

(APP.—A. 1.)

C c 3

A. 29.

Renfrewshire.

R. Watt.

A. 29.—Because it is a gain to have a greater quantity turned off in the same number of days or weeks; as to night-work, there is no such thing practised in this part of the country.

A. 30.—We do find an increase in the cost of production from the limitation of hours, and the increased cost is in proportion to the hours diminished.

A. 31.—We do not require any extra hours, therefore a change of hands is unnecessary.

A. 32.—As we never work extra hours, we never had occasion to try a system of relays, or change of hands.

A. 33.—We never employed a night-set of hands.

A. 34.—The nature of our work does not require any more than one set of hands.

A. 36.—We have no knowledge of the effects of a species of work which we never tried.

A. 37.—Our opinion is, that a further reduction of the working hours would increase the cost of production, and prevent the possibility of competing with spinners in every foreign country.

A. 38.—From seventy-four to seventy-six degrees.

A. 39.—None higher than seventy-six degrees.

A. 40.—All our hands usually experience the degree of temperature.

A. 47.—We have no night-work here at all.

A. 48.—Neither age nor description are so employed.

A. 49.—We consider working by night unnecessary.

A. 50.—Our work is lighted by gas, so far as the twelve hours requires.

A. 51.—No night-work here.

A. 52.—Having no night-work, we can say nothing about the habits.

A. 53.—Three quarters of an hour to breakfast, and the same for dinner, for all classes.

A. 54.—Every one goes home at meal-times.

A. 55.—Our answer to the last question is our answer to this.

A. 56.—Our workers have always gone home as they do now.

A. 57.—When they refuse obedience they are discharged from the work.

A. 58.—None.

A. 62.—We never have been informed of their infliction.

A. 63.—No such instructions were ever given; it is not the custom in this part of the country.

A. 64.—None whatever.

A. 65.—All our workers live in houses rented by themselves, but not belonging to us.

A. 66.—The persons employed from infancy are much more expert at every kind of work, and particularly in spinning, than those taken into the employment at a later period.

A. 67.—We know no difference within these last ten years, but we do consider that the workers enjoy better health now than they did about twenty or thirty years ago, owing to the mills being kept more cleanly and better ventilated.

A. 68.—We make no change or selection whatever, as we deem no part of our work injurious to health.

A. 69.—Entirely subject to the present Act.

A. 70.—Never.

A. 73.—So far as is known to us, they strictly conform.

A. 76.—We have no knowledge of any case that occurred in our neighbourhood.

A. 77.—Some may be afraid, but there are plenty who would without fear inform if any thing of the kind did occur.

A. 78.—We cannot conceive why there should be any difficulty in securing obedience to the present law, and if strictly enforced we are decidedly of opinion that no other enactment would be necessary.

R. WATT.

No. 147.

Robert Montgomery.

## ANSWERS of ROBERT MONTGOMERY, Paisley.

A. 1.—Johnstone, Abbey parish, Paisley, county of Renfrew.

A. 2.—Cotton-yarn and cotton-wick spinning.

A. 3.—Our old mill was erected in 1805; in 1818 there was an addition of one story put to it, and in 1823 there was sixty feet built to it of the same height and breadth; our new mill was built in 1821.

A. 4.—One steam-engine of sixteen and another of eight horse power.

A. 5.—Ventilated by air-holes.

A. 6.—Opening windows.

A. 7.—The overlooker or spinners can open the windows at pleasure.

A. 8.—All the great gearing well inclosed, and the greater part of the small gearing about the machinery.

A. 9.—The workpeople are allowed to change their clothes, and when any part of the machinery is cleaned the overlooker gives the persons who do so time to wash themselves; plenty of both warm and cold water at command.

A. 10.—When the children are healthy-looking we take them between nine and ten years of age.

A. 11.—Yes; we require children for piecers to the mule-jennies and common billy.

A. 13.—None.

A. 15.

A. 15.—We employ a few orphans; their legal guardians may visit them when they choose.

A. 16.—None else while at work.

A. 17.—The work begins at half past five morning, and shuts at seven at night, except on Saturdays, shut at three.

A. 18.—All attend alike.

A. 19.—Twelve hours and a half.

A. 20.—Three hundred and six days work.

A. 21.—Three thousand five hundred and sixteen hours, and about twelve hours for loss of time.

A. 22.—No difference.

A. 23.—Eleven hours and a half per day.

A. 24.—Twelve hours and a half.

A. 25.—Working lost time for stoppages of the engines, and occasionally repairing the gearing.

A. 26.—It can be avoided by keeping the loss of time off the workers wages.

A. 27.—Formerly we wrought twelve hours on the Saturdays, now we only work nine.

A. 28.—The quantity produced by the workers on day-wages is exactly in proportion as the machinery is kept going.

A. 29.—Cannot say; never tried the experiment.

A. 31.—Relays or fresh sets of children cannot be had.

A. 32.—It has not been tried for the reason above stated.

A. 33.—No.

A. 34.—We cannot get two or more sets.

A. 37.—It would cause an increase in the cost of the article manufactured in proportion as the quantity produced is diminished by the reduction of working hours.

A. 38.—The average temperature is between sixty-six and seventy-five; we have no occasion to keep the rooms warmer than the workers may find themselves comfortable.

A. 39.—Seventy-five degrees.

A. 40.—One hundred and twenty-seven.

A. 50.—In winter by gas.

A. 53.—Three quarters of an hour to breakfast, and three quarters of an hour for dinner.

A. 54.—All, except a few who remain to clean.

A. 55.—For the convenience of the works; but all who remain to clean get the full time to their meals, three quarters of an hour, after the others.

A. 56.—Every person is allowed to go out of the manufactory for their meals.

A. 57.—The threat of being paid off.

A. 58.—Not unless their parents wish them chastised in place of being dismissed.

A. 59.—By overlookers as applies to workers on day-wages, and by spinners as applies to piecers.

A. 60.—Never.

A. 62.—We have forbidden corporal punishment, and prefer, as above, the dismissal of the offender.

A. 64.—Never.

A. 65.—We have no control over any when out of the work; they go to their own homes.

A. 66.—It is always a strong recommendation to a worker that they have been employed in a factory from their infancy; they are always the steadiest and best workers.

A. 67.—No difference in this respect; the people may generally be considered as healthy.

A. 68.—Changes are occasionally made, but they are very seldom applied for.

A. 69.—The present Act is strictly attended to, except in whitewashing the room.

A. 70.—Never.

A. 77.—No, they are not; we do not consider that the deviation we make from the strict observance of the Act is considered by the workers as a grievance.

A. 78.—Our present mode we have found to be the best for our purpose, and we think it impossible to make general rules to suit different works.

ROBERT MONTGOMERY

#### ANSWERS of ALEXANDER ROSS, Paisley.

No. 148.

Alexander Ross.

A. 1.—Abbey parish, county of Renfrew.

A. 2.—Twining thread.

A. 3.—Erected in 1825; since then no addition, and employed as a thread-mill since erection.

A. 4.—All steam-power.

A. 5.—Ventilation of the work left to the discretion of the foreman.

A. 6.—On the opening of windows.

A. 8.—All fenced off.

A. 9.—None as to clothing, but personal cleanliness is indispensable.

(APP.—A. 1.)

C c 4

A. 10.

Renfrewshire.

Alexander Ross.

- A. 10.—Do not employ children.  
 A. 11.—Children not required in the work.  
 A. 12.—As children are not employed we cannot answer this query.  
 A. 13.—No.  
 A. 17.—Twelve hours each day of the week, but Saturday nine hours.  
 A. 18.—Twelve hours each day, but Saturday nine hours.  
 A. 19.—To make up lost time arising from contingencies; never more than twelve hours and a quarter are exacted.  
 A. 20.—Three hundred and seven days.  
 A. 21.—Three thousand four hundred and twenty-eight hours.  
 A. 22.—All the departments of the work go alike.  
 A. 23.—Eleven hours and a half.  
 A. 26.—If the regular hours of the work are not made up the lost time is deducted from the workers.  
 A. 27.—No.  
 A. 29.—Cannot answer this, as our works have never been carried on during the night; no children employed.  
 A. 30.—The cost of the article manufactured by us will be increased by any diminution of the hours of labour.  
 A. 33.—We employ no night-workers.  
 A. 37.—Refer to A. 30. The workers wages would require to be increased, and the expences upon the production would increase the cost.  
 A. 38.—Heat is only required in our works for the comfort of the workers.  
 A. 40.—About fifty.  
 A. 50.—By gas to half past seven o'clock P. M., when the works stop.  
 A. 53.—One hour for breakfast and one for dinner during summer, when the works continue to eight o'clock P. M.; but during winter, when they stop at half past seven o'clock, only three quarters of an hour to each meal.  
 A. 54.—All.  
 A. 56.—Our workers all leave the manufactory during meal-hours.  
 A. 57.—No children.  
 A. 62.—We never knew an instance of corporal punishment in our works.  
 A. 63.—Corporal punishment being never resorted to, it being illegal, instructions to prevent it are unnecessary.  
 A. 64.—None.  
 A. 65.—No; all the workers live in houses of their own.  
 A. 66.—Cannot say, as we have never employed children.  
 A. 68.—None of our processes are injurious to health.  
 A. 69.—Subject to its provisions.  
 A. 70.—Never.  
 A. 74.—We know of no instance where any of our neighbours have gone contrary to the Act.  
 A. 78.—We believe the present Act quite sufficient if enforced when the law is evaded.

ALEXANDER ROSS, Manager.

No. 149.

William Shanks.

## ANSWERS of WILLIAM SHANKS, Johnstone, Paisley.

- A. 1.—County of Renfrew, town of Johnstone, and Abbey parish of Paisley.  
 A. 2.—Cotton-spinning, and machinery connected therewith.  
 A. 3.—The first part of the work erected about 1791; some small additions were added after, and a large addition, but not fully occupied, was erected in 1823; was employed for cotton-spinning soon after its erection.  
 A. 4.—Steam, thirty-two to thirty-six horse power; the engine pretty steady.  
 A. 5.—Sash-windows, which may be opened, and air-panes hung in part of them and in all the windows that are dead lights.  
 A. 6.—It depends on opening these as above.  
 A. 7.—Generally at the discretion of the persons employed.  
 A. 8.—What is considered materially dangerous is fenced off.  
 A. 9.—The greater part of the workers throw off a part of their clothing after they come to their work, and the female part generally put on better and cleaner clothes to go home; but they are allowed to act in these matters as they think best themselves.  
 A. 10.—We study to conform to the Act, which prevents us from having any below nine years; they have rarely been at any other employment.  
 A. 11.—The parents or guardians are the persons who wish them put to work as early as possible, or as the law allows, to benefit by their wages; the nature of our work does not require them less than twelve, except for wages, as the younger the cheaper.  
 A. 12.—I suppose much the same.

A. 13

Renfrewshire.

William Shanks.

- A. 13.—None.
- A. 15.—We do not lodge nor maintain any.
- A. 17.—Twelve hours in five days of the week, and nine hours on Saturday.
- A. 18.—There is no difference of time with any.
- A. 19.—Never above one hour extra, and that very rare, to make up lost time.
- A. 20.—Three hundred and six days for 1832.
- A. 21.—About three thousand and thirty-one hours.
- A. 23.—About eleven hours and a half.
- A. 25.—Something going wrong with the engine, boiler, or some public occasion.
- A. 26.—The masters would lose their work and the operatives their wages, which neither are generally disposed to lose.
- A. 27.—Previous to August 1825 we wrought eleven hours and a half every day, including Saturday; the average for at least twenty-five years has been nearly the same.
- A. 28.—We have had no experience to go by, but it is likely in certain circumstances.
- A. 29.—It is the interest of the master to produce as much work as possible from the capital sunk in his business; it is the same as getting more interest for his money, as the returns are (or should be) according to the amount done from the fixed capital; but if the trade is overdone and the market glutted the matter is reversed, and the more that is done the more ruinous the trade becomes by a fall of prices and an increasing reduction of profits or losses.
- A. 30.—No experience in such matter, our time never having been much altered.
- A. 31.—If such could be got it would be attended with much additional trouble, but with us there is no need for it.
- A. 33.—We have not.
- A. 34.—The fewer workers the less trouble with them.
- A. 37.—It would operate in the same way as in A. 29; it would operate in the same way as reducing the interest on fixed capital sunk in trade, less would be done and the profits would be less accordingly; but if the reduction of quantity increased the demand, then the price might rise to balance or to exceed the loss on the reduction of quantity; were less done, cotton would likely fall in price and yarns would rise; the advantage to the spinner would thus be doubled, if it did not hurt the foreign demand to counteract it by the increased price throwing the trade into their hands.
- A. 38.—The usual temperature is about seventy to eighty degrees; in a hot summer day it is difficult to keep it below eighty degrees, but in a cold winter day it is difficult to get it as warm as we wish.
- A. 39.—Cotton will not spin well below seventy degrees. We require no other temperature in any part of our manufacture.
- A. 49.—None indispensable.
- A. 50.—We are lighted by gas, but do not work in the night.
- A. 53.—There are three quarters of an hour to each meal; breakfast at nine, and dinner at two o'clock; the mechanics get an hour.
- A. 54.—They all generally leave the work at meal-times if they choose.
- A. 57.—Dismissal.
- A. 58.—Not in general.
- A. 59.—There is no allowance for it, but it may have been inflicted in a rare case, by their parents or others under whom or for whom they work, under provocation.
- A. 62.—They have been forbidden, and persons threatened to be dismissed if they did not desist, and directed to dismiss the refractory rather than to punish them. Parents were considered to have more in their power over their own children than others.
- A. 63.—None but as above stated.
- A. 64.—None.
- A. 65.—They generally live in their own rented houses, or that of their parents or others; they generally are quite independent in all respects except to do their work properly by the piece or by the day, and can leave us when they choose by giving regular notice.
- A. 66.—Generally we find those who have learned young are more expert at their work than those who have come at a more advanced period; but much depends on natural cleverness. I cannot specify instances. I am not aware of any difference of character provided they live in the same kind of society; we expect good conduct from those who have lived under good parents and proper control.
- A. 67.—I am not aware of any change one way or other.
- A. 68.—Not generally.
- A. 69.—It is.
- A. 70.—Never.
- A. 73.—Our neighbours will answer for themselves; but, if an opinion is hazarded, I suppose they do conform pretty nearly.
- A. 78.—The law should certainly be enforced alike upon all, to prevent one having the advantage over another; but the subject is difficult.
- A. 79.—None; but, in the present depressed state of trade, I think it is likely that a shortening of time might be advantageous to master and operative, and that the time should not exceed eleven hours per day; this might, all things considered, be at present the wisest measure.

WILLIAM SHANKS, Managing Partner:

(APP.—A. 1.)

D d

## ANSWERS of ALEXANDER STEWART, Paisley.

Renfrewshire.

No. 150.

Alexander Stewart.

- A. 1.—Johnstone, Abbey parish of Paisley, county of Renfrew.  
 A. 2.—Cotton spinning.  
 A. 3.—The mill and engine-house was built five years ago, and occupied in a going state for four years.  
 A. 4.—Steam-engine of thirty horse power.  
 A. 5.—A pane of glass opens in each window.  
 A. 6.—The opening for ventilation is done by the workers or foreman.  
 A. 7.—By the discretion of all.  
 A. 8.—Upright shafts or any dangerous part is fenced.  
 A. 9.—The workers change their clothes in the room they work in, and wash in the court before leaving the work.  
 A. 10.—Nine years and upwards. I am not aware of any being at any trade previously.  
 A. 11.—It does not; but are more expert if begun at ten years.  
 A. 13.—I have no apprentices.  
 A. 15.—None of this description in my employ; all go to their parents houses at meal-times.  
 A. 17.—Twelve hours five days, and nine hours Saturday, each week.  
 A. 18.—All are employed as above.  
 A. 19.—Twelve.  
 A. 20.—Three hundred and four days.  
 A. 21.—Three thousand five hundred and nineteen hours.  
 A. 22.—All departments are carried on at the same time, unless some shaft or machine is repairing in any of the flats.  
 A. 24.—Regularly twelve, and nine Saturday.  
 A. 25.—They are not exceeded.  
 A. 28.—The cost will be enhanced by shortening the hours.  
 A. 29.—As I have never practised this I am not able to state the inducement.  
 A. 30.—I am aware that a limitation of hours of working will enhance the cost of all branches in the manufacture of cotton.  
 A. 31.—No objection where plenty of hands are to be had.  
 A. 33.—Never; my work was not kept on at night.  
 A. 36.—Never wrought night-work.  
 A. 37.—If a reduction of working hours take place without a proportionable reduction of wages to cover the want of quantity, interest, and other charges, the loss to the masters will be considerable, and few would continue if they could get quit of their works at any reasonable price.  
 A. 38 & 39.—My work runs from fifty to sixty degrees.  
 A. 53.—Three quarters of an hour to breakfast, and same to dinner.  
 A. 54.—All go home to meals.  
 A. 57.—They are dismissed if not obedient.  
 A. 58.—No.  
 A. 63.—Overseers are told to dismiss, but no punishment.  
 A. 65.—They live in houses rented by themselves.  
 A. 67.—I do not think that there is any difference of the general health of the workers.  
 A. 69.—It is.  
 A. 70.—Never was informed against.  
 A. 77.—I do not believe that they would be afraid to give evidence if they had cause to do it.  
 A. 78.—All in this neighbourhood attend to the present law regarding factories.

27th May 1833.

ALEXANDER STEWART.

No. 151.

James Balderston.

## ANSWERS of JAMES BALDERSTON, for James Clark, Paisley.

- A. 1.—Low Church parish of Paisley, county of Renfrew.  
 A. 2.—Cotton-sewing threads.  
 A. 3.—Built in the year 1817, an addition made in 1819.  
 A. 4.—Steam-power.  
 A. 5.—No.  
 A. 6.—Ventilation carried on by lowering the upper sashes of windows.  
 A. 7.—Regulated by the foreman and overlooker.  
 A. 8.—No part of our machinery is fenced or can be fenced; the large gearing is outside of the wall, and the drum-shafts inside run near the ceiling.  
 A. 9.—No.  
 A. 10.—Lowest age generally is twelve years; in a very few instances perhaps a few months under.  
 A. 11, 12, & 13.—No.  
 A. 15.—We do not lodge or maintain any; they lodge with their parents or guardians.  
 A. 17.—The whole of our workers work the same time, that is from six o'clock in the morning till eight o'clock in the evening, with the exception of meal-hours.

A. 19.

- A. 19.—Twelve hours and a half.  
 A. 20.—Three hundred and seven days.  
 A. 21.—Three thousand six hundred and sixty-one hours.  
 A. 22.—No different parts have been carried on at different times.  
 A. 23.—Eleven hours and ten minutes.  
 A. 25.—When any thing goes wrong with the machinery we sometimes exceed our usual time by adding half an hour to each day.  
 A. 26.—Avoidable, if the workers allow a deduction from their wages.  
 A. 27.—Formerly we worked seventy hours per week, but for four months past we have worked sixty-nine.  
 A. 28.—Enhanced in so far that the workers have still the same wages.  
 A. 29.—Pure greed.  
 A. 31.—As we never required more than a half hour of extra time per day, we consequently did not require a fresh set.  
 A. 32 & 33.—No.  
 A. 34.—We consider it to be the interest of both manufacturer and workers to have one set only.  
 A. 35.—Never had night-workers.  
 A. 36.—It would be more profitable both to worker and manufacturer.  
 A. 37.—It would lower the wages of the workers; could not say what might be the result to the manufacturer.  
 A. 38.—From sixty to sixty-five degrees.  
 A. 39.—No part of our manufactures requires more heat than another.  
 A. 50. Gas-light from sun-set to eight o'clock.  
 A. 52.—We observe no bad effects to arise from working a short time in the evening by gas-light.  
 A. 53.—Breakfast three quarters of an hour, and dinner one hour.  
 A. 54.—All leave the works.  
 A. 56.—None take meals in the works.  
 A. 57.—When they do not attend to their work we reprimand them, and if they persist, we turn them off.  
 A. 58.—No.  
 A. 62.—Corporal punishments are forbidden; never were informed of a single instance of such having been inflicted.  
 A. 66.—We consider any individual coming to our works of ordinary capacity may learn to be as expert in the course of six months as ever they can be.  
 A. 67.—Our works have always been healthy, and continue so.  
 A. 68.—Have no injurious processes.  
 A. 69.—So soon as we knew the alteration of law we adopted it, considering we were bound by that Act.  
 A. 70.—No.  
 A. 73.—A number in the neighbourhood did not conform to the Act, at least we thought so.  
 A. 78. By fining the magistrates for not enforcing the laws.

JAMES BALDERSTON.

Renfrewshire.  
 James Balderston.

## ANSWERS of GAVIN KERR, for John Kerr &amp; Sons, Paisley.

- A. 1.—Town of Paisley, Low Church parish, and county of Renfrew.  
 A. 2.—Silk and cotton.  
 A. 3.—A two story house, stone and slated, built in 1821 and occupied in 1822 for the above; a three story house, stone and slated, attached to the above, built in 1829, and used for the same purpose.  
 A. 4.—By a steam-engine of six horse power.  
 A. 5.—There is a pin in each window which is left open except in stormy weather.  
 A. 6.—The windows in garret are left open each meal.  
 A. 7.—It is principally by the overlooker.  
 A. 8.—All dangerous parts are fenced off.  
 A. 9.—If any sickness occurs, we advise always to go and take a walk, or go home.  
 A. 10.—The lowest age that we have taken in any child has been between nine and ten years of age; in some cases they have been employed by weavers at drawing the web in order to make the flowers on the shawls, &c.  
 A. 11.—We find children about eleven or twelve years of age as good as any we can get for a certain kind of work.  
 A. 12.—It has rendered a greater number of children needful.  
 A. 13.—No.  
 A. 15.—All the children we employ stop with their parents or legal guardians, and can leave us at any time by giving two weeks notice.  
 A. 16.—We do not think they have.  
 A. 17.—Twelve hours for five days, and nine hours on Saturday.  
 A. 18.—We make no difference.

(APP.—A. 1.)

D d 2

A. 19.

No. 152.  
 Gavin Kerr.

Renfrewshire.

Gavin Kerr.

- A. 19.—Thirteen hours.  
 A. 20.—About three hundred and six days.  
 A. 21.—Three thousand five hundred and nineteen hours.  
 A. 22.—No difference.  
 A. 23.—Sixty-nine hours.  
 A. 24.—Thirteen hours.  
 A. 25.—When the engine or any of the shafts went wrong we wrought one hour each day for a week to make it up, if our stoppage was six hours.  
 A. 26.—We are well enough pleased with the hours.  
 A. 27.—Before the Act came out our hours were twelve hours for five days, and ten hours on Saturday.  
 A. 28.—The difference being so small, we could not say.  
 A. 29.—We think it would be no advantage to any employer if all did the same.  
 A. 31.—We would not like to have two sets of workers, for if any thing was wrong with the work we could not find out who did it.  
 A. 32.—We never tried it.  
 A. 34.—We wish one set of hands, as we are sure of the best work.  
 A. 35.—We never had them.  
 A. 36.—We think it would be much better.  
 A. 37.—A further reduction in the hours we think would be hurtful on certain parts of our work that is light; and as it is done by manual labour in this place, and there is no prohibition on that kind, in the meantime it operates against us, and if our hours were made shorter we would do it by the hand.  
 A. 38.—We only raise the heat to make the house comfortable.  
 A. 39.—Our work needs no heat.  
 A. 50.—Gas in winter.  
 A. 51.—An open pin in each window, and garret-window lifted.  
 A. 53.—Fifty minutes each meal.  
 A. 54.—All leave the work.  
 A. 56.—Thinks it best.  
 A. 57.—We put them away; we never found children kept against their wills do any good with us.  
 A. 58.—No.  
 A. 62.—Yes, we don't allow it.  
 A. 65.—No.  
 A. 66 & 67.—We know of no difference.  
 A. 68.—We have no injurious processes.  
 A. 69.—We think it is.  
 A. 70.—No.  
 A. 73.—We do not think they do, but we have no personal knowledge, never having been in their mills.  
 A. 79.—We would wish we had it in our power to make up time for a few holidays, which our workers have been very urgent on us to do, as their wages are low enough already; there are two town fasts in the year which we cannot work, and there is three or four other days at which is not wrought by almost any person.

GAVIN KERR.

No. 153.

Peter Kerr & Son.

## ANSWERS of PETER KERR &amp; SON, Paisley.

- A. 1.—Paisley, Low Church parish, 31 New-street, county of Renfrew.  
 A. 2.—Thread manufactory.  
 A. 3.—Present mill erected 1825.  
 A. 4.—Steam-engine, eight horse power.  
 A. 5 & 6.—Thermometer always between temperate and summer heat; heated by steam and ventilated by the windows.  
 A. 7.—Regulated by the overlooker.  
 A. 8.—Heavy gear well inclosed.  
 A. 9.—Plenty of both warm and cold water at command, with every convenience for cleanliness and comfort.  
 A. 11.—None under twelve years.  
 A. 13.—No.  
 A. 15.—We require no visitors.  
 A. 16.—None else while at work.  
 A. 17.—The work begins at six in the morning and shuts at eight at night, except on Saturdays, shut at six.  
 A. 18.—All attend alike.  
 A. 20.—Every day, Sunday and holidays excepted.  
 A. 22.—Always the same, unless when under repair, &c.  
 A. 25.—At no time.  
 A. 27.—Never more, sometimes less.

A. 28.

A. 28.—That is a natural consequence; less profit when any thing obstructs our working hours.

A. 29.—Never had any experience in working over-hours; always considered it no profit.

A. 30.—Our time and the cleanliness of our work we find agreeable to our workers and profitable to ourselves.

A. 47.—Need no maximum.

A. 48.—Never any.

A. 50.—In winter mornings and evenings by gas.

A. 52.—No work through the night.

A. 53.—An hour each meal.

A. 54.—All.

A. 57.—If they do well they are kept; if not, paid off.

A. 58.—No corporal punishments.

A. 59.—By none.

A. 64.—Never.

A. 65.—We have no control over any when out of the work; they go to their own homes.

A. 66.—Those we learn young are our best workers; those who come from other works have generally to unlearn before they are of any use to us.

A. 67.—Our workers generally improve in look when steady with us.

A. 68.—We don't need, the whole is so simple and easy.

A. 69.—Cannot say.

A. 78.—Our present mode we have found to be the best for our purpose, and we think it impossible to make general rules where the works differ.

PETER KERR & SON.

Renfrewshire.

Peter Kerr & Son.

#### ANSWERS of MATTHEW and GEORGE CARSWELL, Paisley.

No. 154.

M. & G. Carswell.

A. 1.—Middle Church parish, Paisley, county of Renfrew.

A. 2.—Winding yarn from the cape, and twining for sewing threads, winding the threads on bobbins which are in part made in the mill, also silk machinery for winding and twining.

A. 3.—It was a mill for similar purposes when we entered into it; some additions have since been made about 1823, and additions now in progress.

A. 4.—All steam, about sixteen horse power.

A. 5.—None but by windows and doors.

A. 6.—It does.

A. 7.—It is controlled at the discretion of all.

A. 8.—All parts of the machinery are fenced off which are at all thought dangerous.

A. 9.—They may wash their face, hands, and feet if they choose; a place is appropriated for their cloaks.

A. 10.—We never respect their age; we find some children much more able at the same age than others, and we judge from general appearance; sometimes they have been at previous work, clipping, &c. &c.

A. 11.—It does not.

A. 13.—None.

A. 15.—We maintain or lodge no person whatever in our employ; we pay all their wages in cash.

A. 16.—Sometimes a mistress is appointed whilst at work.

A. 17.—From six in the morning till nine in the morning; from ten in the morning till two in the afternoon; from three in the afternoon till eight in the evening.

A. 18.—No difference is made; all ages work the same extent of hours.

A. 19.—When we were very much hurried with orders we have wrought fourteen hours.

A. 20.—We were going on regularly on all lawful days, except when any thing went wrong with the engine or machinery, when it was made up afterwards.

A. 21.—Answered in former question, being about three thousand five hundred and ninety-nine hours and a half.

A. 22.—We begin and close all our manufactory at the same time.

A. 23.—About eleven hours and a half.

A. 24.—Fourteen hours.

A. 25.—Only when our orders were very urgent.

A. 26.—We could not carry on our manufactory beneficially to ourselves or our workers were we not occasionally to have extra hours when a demand was brisk for our goods; and as our machinery cannot quickly be increased, the only plan we can adopt in particularly pressing circumstances is to increase the hours until the demand is supplied, allowing extra wages.

A. 27.—Yes. See A. 25 & 26.

A. 28.—Most certainly.

A. 29.—To make the most of his machinery, the demand being very irregular, so that it would not answer to have as much machinery as would meet it when greatest; for an answer to the second part of this question, see A. 31.

A. 30.—If the working hours were to be reduced under twelve hours daily, we are decidedly

(APP.—A. 1.)

D d 3

Renfrewshire.

*M. & G. Carswell.*

dedly of opinion it would increase the cost, although we are not quite prepared to state in what proportion or to what extent.

A. 31.—When fresh sets of hands are employed we cannot discover to whom to attach blame when any fault is in the goods; we therefore most decidedly prefer the same workers, if at fourteen hours a day, rather than a change of hands.

A. 32.—We have tried it, and our answer to the previous question applies to this.

A. 33.—From six in the morning till eight in the evening, allowing two hours for meals; new set from half past eight at night till half past five o'clock in the morning, allowing one hour in the night for refreshments.

A. 34.—To meet an extra demand, as formerly stated.

A. 35.—When we employed them, those that were at night-work during one week were during the following at day-work, and thus changed each week.

A. 36.—We consider any restrictions on our manufactory might be occasionally accompanied with disadvantages. See A. 26.

A. 37.—It would, we think, increase the cost of production, and at the same time diminish the wages of the workers.

A. 38.—Seventy-two to eighty.

A. 39.—All the processes in our mill require the same temperature.

A. 40.—One hundred.

A. 50.—By gas.

A. 51.—Windows and doors.

A. 52.—When we had night-work we did not observe any difference.

A. 53.—In general one hour to breakfast and one hour to dinner.

A. 54.—A few of them who reside at a distance request the favour of being allowed to have their meals sent to the mill, and about six of the senior women remain during the meal-hours to change the frames.

A. 55.—To change the frames during meal-hours by those above twenty-one years is to save time while the engine is not going; those who take meals at the mill, of which there are very few, it is an indulgence to them.

A. 56.—It is not our wish that any worker take meals at the mill.

A. 57.—Nothing but rebuke in words; if we find that has no effect we give the person thus admonished warning to leave: we find this the best mode.

A. 58.—None whatever.

A. 62.—We have forbidden it, and we would dismiss any one who would be guilty of it.

A. 63.—We never required nor ever gave any such instructions to our manager, deeming them quite unnecessary.

A. 64.—Never that we recollect of.

A. 65.—They don't live in any house connected with the mill or belonging to us.

A. 66.—We almost invariably find those who have been at the work from their early years make better workers than those who have commenced at a more advanced period. Their general character is similar, whether beginning young or later.

A. 67.—The health of those employed in our mill has not, so far as we can judge, altered during the last ten years; we are fully persuaded they are as healthy as the same number of workers in any other employment whatever.

A. 69.—We believe it is.

A. 70.—Not that we know of.

A. 73.—We do not know personally that any mills in our neighbourhood do not conform to the provisions of the Act.

A. 78.—We cannot suggest any alterations in the existing laws, but are of opinion that to shorten the hours of work much would be as injurious to the worker as to the employer.

MATTHEW and GEORGE CARSWELL.

No. 156.

*A. Carlisle.*

## ANSWERS of A. CARLISLE, for Thomas Carlisle &amp; Sons, Paisley.

A. 1.—Middle Church parish, Paisley, in the county of Renfrew.

A. 2.—Twisting of cotton, linen, and silk threads.

A. 3.—The principal part erected in 1808, the other parts two years after; all parts employed as at present from the time of their erection.

A. 4.—A steam-engine, twenty horse power.

A. 5.—None.

A. 6.—On the opening of windows and doors.

A. 7.—By the overlooker.

A. 8.—All, as far as possible.

A. 9.—No specific arrangements for the purpose, our work being clean and healthy.

A. 10.—Ten years of age; a very few of that age; some of them have been employed as draw-girls to weavers previous to their being in our employ.

A. 11.—We prefer them above twelve years of age.

A. 12.—No, so far as our machinery is concerned.

A. 13.—No.

A. 15.—We have several orphans in our employ, but we do not lodge or maintain them; we do not lodge or maintain any of our workers.

A. 17.

- A. 17.—Twelve hours per day during five days of the week, and nine on Saturday.
- A. 18.—All our workers continue the same number of hours at work, with the exception of a few who finish the goods, whose hours are only eleven per day.
- A. 19.—Thirteen hours.
- A. 20.—Three hundred days.
- A. 21.—Three thousand four hundred and sixty-seven hours.
- A. 22.—All parts work during the same hours.
- A. 23.—Twelve hours and a few minutes for the first five working days, and nine hours and a few minutes for the sixth.
- A. 24.—Thirteen hours.
- A. 25.—For three weeks continuously we worked one hour extra per day to make up lost time, but the moment we understood that it was disagreeable to some of our workers we resumed our usual working hours, though our lost time was not fully made up.
- A. 26.—Avoidable.
- A. 27.—We formerly worked one hour longer on Saturday, and a quarter of an hour longer during the other days of the week.
- A. 28.—The reduction of time has been so small that it does not tell sensibly on the cost of our manufacture.
- A. 29.—It can only be for the purpose of defrauding his workers by giving them more wages absolutely than they had previously earned, but less in proportion to their actual exertions.
- A. 32.—We have tried it and found it to answer.
- A. 33.—Some years ago we employed for a few months a night-set of hands; they worked nine hours and a half, whilst the day-set worked as usual twelve hours; we employ only one set of hands, because we work only sixty-nine hours per week.
- A. 35.—When we employed night-workers, the day and night set changed with each other periodically.
- A. 36.—No bad effects.
- A. 37.—The effects would be an immediate and permanent depression in the rate of wages, a temporary advance in prices, but a speedy and permanent reduction of both profits and price, occasioned by an outlay of capital for additional machinery, and to meet the wanted demand, also a proportional inability to compete with the foreign manufacturer.
- A. 38, 39 & 40.—No particular temperature is required for our manufacture; the temperature is regulated wholly according to the feelings of the workers. The above refers to all parts of the work where workers are regularly employed; but we have a stove kept at the temperature of about ninety degrees, into which four or five workers above twenty-one years of age go from time to time.
- A. 41.—At no time.
- A. 53.—From nine to ten, morning; and from two to three, afternoon.
- A. 54.—All.
- A. 57.—None but dismissals from the work, or threats to that effect, and occasionally small fines.
- A. 58.—None.
- A. 60.—We on one occasion were informed that a slight corporal punishment had been inflicted by an overlooker, which met with our decided disapproval, and was never again repeated.
- A. 62.—We most strictly forbid it.
- A. 63.—Positive instructions are given that no corporal punishments shall take place.
- A. 64.—None.
- A. 65.—A very few of our people rent our houses; no control exercised for their social improvement directly by us as their employers; prayer-meetings are held in the work.
- A. 66.—We find no advantage in this respect by taking workers in before the age of from twelve to fourteen years.
- A. 67.—During that time the health of our people has neither improved nor deteriorated; our workers have at all times been sober and regular in their habits, and our work has at all times been healthy.
- A. 68.—No, for no such changes are required.
- A. 69.—We rather think not, as thread-works are not stated in it.
- A. 70.—Never.
- A. 73.—As far as we know, they do.
- A. 74.—We never heard of any of them being taken before a magistrate.
- A. 77.—We have no reason to believe so.

ALEXANDER CARLISLE.

No. 156.  
James Crum jun.

## ANSWERS of JAMES CRUM jun., Polloc.

- A. 1.—Thornliebank, parish of Polloc, county of Renfrew.
- A. 2.—Cotton-spinning and weaving.
- A. 3.—Partly in the last century, partly in 1806 and 1809.
- A. 4.—Water, rather irregular; about twenty-five horse power in all.
- A. 5.—Being in an airy situation, do not consider any distinct provision necessary, except in the picking-room, which is kept free from dust by fanners.
- (APP.—A. 1.)

D d 4

A. 6.

Renfrewshire.

*James Crum jun.*

- A. 6.—Except as stated above, by opening windows, &c.  
 A. 7.—By the foreman and overlookers.  
 A. 8.—Fenced off.  
 A. 9.—All the workers live in the immediate neighbourhood, so that any arrangement of this kind is considered unnecessary.  
 A. 10.—None under nine years.  
 A. 11.—Children under twelve years could be dispensed with, but consider that the parents would thereby be less able to bring up and educate the younger part of the family.  
 A. 12.—Am not aware that the recent alterations in machinery have made any material alteration in this respect.  
 A. 13.—No.  
 A. 17 & 18.—Twelve hours, nine on Saturday.  
 A. 19.—Twelve hours and a half, nine hours and a half on Saturday.  
 A. 20.—Three hundred and seven days.  
 A. 21.—Three thousand four hundred and thirteen hours.  
 A. 22.—All parts of the work go on together.  
 A. 23.—Ten hours fifty-four minutes fifteen seconds.  
 A. 24.—Twelve hours and a half.  
 A. 25.—Loss of time for want of water in summer, and breaking of gearing.  
 A. 26.—Certainly avoidable, but a loss both to masters and workers.  
 A. 27.—Never regularly, and very rarely, except when the workers wished to have a holiday at fairs or New Year; then they made up the time before or after the holiday.  
 A. 29.—Many of the expences are the same whether we work twelve or more hours, as rent, interest of capital, insurance, &c.  
 A. 30.—I was so short a time in business before the present Act that I cannot answer this.  
 A. 31.—No objection.  
 A. 32.—Has not been tried, because the present Act prohibits working more time in any one day than one set of children can easily stand.  
 A. 33.—No.  
 A. 34.—Do not employ more than one set of hands.  
 A. 37.—The effect would be an increase in the cost of production directly in proportion to the time lost, because children are quite able to work to advantage the hours allowed by the present Act.  
 A. 38.—The temperature is kept comfortable, our work does not require any heat more than that, and the temperature is regulated mostly by the workers, except in the dressing-room, where the heat is about 90°.  
 A. 39.—In the dressing-room about 90°.  
 A. 40.—Eight hands employed in dressing-room, all above twenty-one.  
 A. 41.—Have not worked any during the night.  
 A. 50.—By gas when the day-light does not extend to twelve hours.  
 A. 53.—Breakfast, nine to a quarter before ten; dinner, two to a quarter before three.  
 A. 54.—Nearly all leave the works.  
 A. 55.—Some prefer having their meals brought to them in wet or stormy weather, entirely for their own convenience.  
 A. 57.—When children do not work well they have less wages, and if they are found to be so careless as not to do what they are desired, others are got in their place.  
 A. 58.—No.  
 A. 63.—All instructed not to inflict corporal punishment. Have no written instructions.  
 A. 64 & 65.—No.  
 A. 67.—Have only been in business about four years, but have known the people employed at this mill for more than ten years, and have always considered them quite as healthy as people employed at any other kind of work. Have no evidence.  
 A. 68.—Have no unhealthy process, so that any change on that account is unnecessary.  
 A. 69.—Yes.  
 A. 70.—No.  
 A. 73.—I believe all the mills in my neighbourhood conform to the Act.

May 1833.

JAMES CRUM jun.

No. 157.

*William Birkmyre.*

## ANSWERS of WILLIAM BIRKMYRE, Port Glasgow.

- A. 1.—County of Renfrew, parish of Port Glasgow.  
 A. 2.—Flax-spinning, sail-cloth, and linen weaving.  
 A. 3.—Flax-mill erected in 1805, weaving-shop fitted up about the same time.  
 A. 4.—Steam; thirty-two horse power.  
 A. 5.—The windows of the mill are made to lift up and lower down, and when they are lifted up or lowered down there is sufficiency of air to keep the dust from being hurtful or disagreeable.  
 A. 6.—Depends alone upon the windows.  
 A. 7.—Regulated by the overlooker.  
 A. 8.—All the dangerous parts are fenced off.

A. 9.

A. 9.—We have no specific arrangements, but generally (on account of the nature of the work in the mill) the workers have always as much leisure before meal-times to arrange themselves a little before leaving the mill.

A. 10.—A very few between the ages of nine and ten, the greatest part above that age.

A. 11 & 12.—No.

A. 13.—Two boys as mechanics, and four boys as weavers.

A. 14.—None from the parish.

A. 15.—Employ a few orphan girls, but they generally reside with some of their relations.

A. 16.—The master has charge of none; their friends superintend them.

A. 17.—In the mill, eleven hours ten minutes per day.

A. 18.—The same as the above.

A. 19.—The mill has never run a day last year more than eleven hours ten minutes.

A. 20.—Three hundred days.

A. 21.—Three hundred days at eleven hours ten minutes per day, equal to three thousand three hundred and fifty hours.

A. 22.—All the different parts went on alike.

A. 23 & 24.—Eleven hours ten minutes.

A. 25.—Not exceeded last year.

A. 26.—With us it has been avoidable this last year, but if an unexpected demand was coming upon us for yarn we would deem it necessary for some time to lengthen our hours.

A. 27.—About eighteen months ago we ran the mill twelve hours per day for two months.

A. 28.—We did not find it.

A. 29.—If the manufacturer has pressing demands for his manufacture, he will be induced to try every means within his power to have his orders executed.

A. 30.—Though we did not find any additional cost in producing our manufacture by coming back to our usual work, yet we think, if the establishment was long habituated to twelve hours labour, the manufacture would be brought forward a little cheaper by twelve than eleven hours work.

A. 31.—It would be too expensive, neither could we get workers only for a few additional hours.

A. 33.—No.

A. 34.—Working only eleven hours ten minutes, we find one set of hands quite sufficient.

A. 35.—Never wrought through the night.

A. 36.—Never having night-work, we cannot say.

A. 37.—It would either tend to increase the cost of production or reduce the wages of labour; if the quantity of work done by the mill was lessened, and if there was no reduction of wages, it is evident that the price of the manufacture must be enhanced.

A. 38.—We require no particular temperature.

A. 50.—By gas.

A. 51.—The windows.

A. 53.—Three quarters of an hour for each meal.

A. 54.—The greatest part of them.

A. 55.—Some at a distance have their meals brought to them.

A. 56.—It would be inconvenient to the families of the workers.

A. 57.—When we find any force requisite (which seldom occurs) we dismiss them.

A. 58.—None.

A. 65.—The workpeople live in their own houses; for their moral improvement we distribute books out of a juvenile library among them, and have a teacher engaged to give instructions both in reading and writing.

A. 66.—I cannot say the difference, but we prefer children from eleven to fourteen years of age to grown-up people; when they are young they are more apt to learn, and when they grow up are far more serviceable than taking old people who never were in a flax manufactory.

A. 68.—As there are various processes in the flax manufacture, we always select the workers whom we think will be best adapted for such a particular kind of work.

A. 69.—No.

A. 73.—No mills within three miles of ours.

A. 79.—I think the hours of flax-mills should be neither less nor more than eleven hours per day (Saturday included).

WILLIAM BIRKMYRE.

## STIRLINGSHIRE.

### ANSWERS of JOHN ARCHIBALD, Alva.

A. 1.—Village and parish of Alva, and county of Stirling.

A. 2.—Woollen yarns for shawls.

A. 3.—The works were all erected in 1825-6, and were first employed for their present purpose 12th April 1826.

A. 4.—The power employed is water, regular, and to the extent of five horse power, or nearly.

(APP.—A. 1.)

A. 5.

Stirlingshire.

No. 158.

John Archibald.

Renfrewshire.

William Birkmyre.

Stirlingshire.

John Archibald.

- A. 5.—No.  
 A. 8.—All fenced off where danger may be apprehended.  
 A. 9.—No particular arrangements.  
 A. 10.—Cannot say; none of them have been previously employed at any other trades.  
 A. 11.—Yes, because from the lightness of the work and action required children under twelve can do more work than adults, and for less wages.  
 A. 12.—Neither.  
 A. 13.—No.  
 A. 15.—None of the children I employ are either lodged or maintained by me.  
 A. 17 & 18.—Eleven hours.  
 A. 19.—Twenty-two hours.  
 A. 20.—About three hundred days.  
 A. 21.—About four thousand one hundred and ninety-one hours.  
 A. 22.—They have all been carried on at the same time.  
 A. 23.—Ten hours and fifty minutes.  
 A. 24.—Thirteen hours.  
 A. 25.—In the winter months, and from an increased demand.  
 A. 26.—Avoidable.  
 A. 27 & 28.—Yes.  
 A. 29.—Gain.  
 A. 30.—Yes; I cannot say in what proportion.  
 A. 31.—The objection most frequently urged is, that parents will not take their children from schools for such small wages.  
 A. 32.—Of course they have not been tried.  
 A. 33.—Yes; they commenced at two morning and worked till two P.M., and from two P.M. till two morning.  
 A. 34.—Because without a material addition of capital the profits are considerably increased.  
 A. 35.—They change periodically.  
 A. 36.—An advance of price and a consequent reduction in the consumption.  
 A. 37.—A still greater advance in price and reduction in the consumption.  
 A. 38.—From 60° to 70°; 60° is the lowest.  
 A. 39.—70° of course is the highest required.  
 A. 40.—The whole.  
 A. 41.—At one time from the 3d October till the 5th of January.  
 A. 42.—Sixteen children.  
 A. 43.—Five hours and a half.  
 A. 44.—Eight children.  
 A. 45.—Eight children are employed from six to two in the morning, and eight from two to six in the morning.  
 A. 46.—No; can stop at any time without inconvenience.  
 A. 50.—Gas.  
 A. 51.—There is none necessary, as the strap-holes in the floors are sufficient to keep the air pure.  
 A. 52.—I know of no particular effects.  
 A. 53.—All classes stop twice a day, and have an hour to breakfast, and an hour to dinner.  
 A. 54.—The whole leave at meal-times.  
 A. 57.—Threats, commonly.  
 A. 58.—Occasionally; if by corporal punishment is meant severe flogging, so that the person has been unfitted for their employment or required medical attendance not a shadow of such punishment has ever been tolerated.  
 A. 62.—No; but I have frequently forbidden the overlookers to go to excess in punishing.  
 A. 64.—None.  
 A. 65.—No.  
 A. 66.—I have no workers who have been employed from infancy.  
 A. 67.—I am not aware of any deterioration of health.  
 A. 68.—There are no particular processes by which the health can be injured.

JOHN ARCHIBALD.

No. 159.

W. Drysdale jun.

## ANSWERS of W. DRYSDALE junior, Alva.

- A. 1.—Two mills at Alva, county of Stirling.  
 A. 2.—Spinning woollen yarns manufactured into blankets, plaidings, carpets, shawls, &c.  
 A. 3.—One of the mills at Alva, erected about forty years ago, one about seven years ago; the mill at Dollar, about sixteen years ago.  
 A. 4.—The two mills at Alva, about ten horse power each; the mill at Dollar, about six horse power each. All water, irregular.  
 A. 5.—The workers to suit themselves.  
 A. 6.—By opening doors and windows.  
 A. 7.—By the workers.

A. 8.

Stirlingshire.

W. Drysdale jun.

- A. 8.—Yes.  
 A. 9.—None.  
 A. 10.—Not aware of any under nine years of age, employed at no other trades previously.  
 A. 11.—The work being light, they are quite capable for the work at nine years of age.  
 A. 12.—No alteration with me.  
 A. 13.—Yes.  
 A. 14.—From their parents in the parishes of Alva and Dollar where the mills are situated.  
 A. 15.—All with their parents, and go home to their meals.  
 A. 16.—They are more under the foreman.  
 A. 17.—Eleven hours regularly, Saturday ten hours.  
 A. 18.—As last, viz, eleven hours.  
 A. 19.—Twelve hours; one of the mills at Alva thirteen hours for about two weeks; all my mills twelve hours for about three months.  
 A. 20.—Three hundred and six days.  
 A. 21.—Three thousand three hundred and eighty-six hours.  
 A. 22.—All parts at the same time, but, when short of water, then workers and machinery are divided at one of the mills at Alva, changing at two A.M. and two P.M.  
 A. 23.—Eleven hours and twenty minutes.  
 A. 24.—Thirteen hours.  
 A. 25.—Commence in September for two or three months, when goods are more in demand.  
 A. 26.—They can be avoided by encroaching on manufacturers profits and workers wages.  
 A. 27.—Some years ago my regular working hours were twelve hours per day.  
 A. 28.—It follows, that if the quantity produced is less, the cost is increased.  
 A. 29.—The manufacturer's inducement is profit; when I have any night-work, there is two sets of workers, working ten hours each set.  
 A. 30.—I have never heard of any limitation of hours for the woollen manufacture.  
 A. 31.—None.  
 A. 32.—Finds night-work not so natural for workers, and does not do so well.  
 A. 33.—Change at two o'clock A.M. and two o'clock P.M.  
 A. 34.—The intention is profit.  
 A. 35.—Change once a week.  
 A. 36.—If general, I think it would be for good.  
 A. 37.—In the meantime that it will affect both profits and wages; I have had no complaints against the present working hours by my workers; they rather incline to work extra, as they are paid accordingly.  
 A. 38.—Common fires for the comfort of the workers in winter.  
 A. 39.—No process.  
 A. 40.—None.  
 A. 41.—One of the mills at Alva was wrought last summer about two months, when short of water, one half of the machinery at a time.  
 A. 42.—Six children at a time.  
 A. 48.—Children from nine years to fifteen years of age.  
 A. 49.—Have none.  
 A. 50.—With gas.  
 A. 51.—None except doors and windows.  
 A. 53.—One hour each meal, from nine to ten for breakfast, from two to three for dinner.  
 A. 54.—All if they choose.  
 A. 55.—If they do not, it is for their own convenience.  
 A. 57.—When gentle correction will not do, they are paid off.  
 A. 59.—By foreman.  
 A. 60.—Never by my sanction.  
 A. 63.—None, but if they would not do their duty, to warn them away.  
 A. 64.—None.  
 A. 65.—None of my workers are under my control after leaving their work.  
 A. 66.—I cannot perceive any difference.  
 A. 67.—The workers in woollen mills are more healthy than any other class of workers I know, so far as has come under my own observation.  
 A. 68.—None.  
 A. 69.—I do not know of any Act that applies at present to woollen factories or mills.  
 A. 70.—I never have, nor ever heard of any foundation for putting any of the following queries in force in this neighbourhood.

W. DRYSDALE jun.

Stirlingshire.

No. 160.

*William Drysdale  
& Sons.*

## ANSWERS of WILLIAM DRYSDALE &amp; SONS, Woollen Manufacturers, Alva.

- A. 1.—Village and parish of Alva, and county of Stirling.  
 A. 2.—Blankets, plaidings, and shawls.  
 A. 3.—The principal erection was made 1802, and an addition thereto was made 1820.  
 A. 4.—The power employed is water; regular, and to the extent of eight horse power, or thereabouts.  
 A. 5.—No.  
 A. 8.—All fenced off when danger may be apprehended.  
 A. 9.—No particular arrangements.  
 A. 10.—Can't say; none of them have been previously employed at any other trades.  
 A. 11.—Yes, because of the lightness of the work and action required children under twelve can do more work than adults, and for less wages.  
 A. 12.—Neither.  
 A. 13.—No.  
 A. 15.—None of the children employed are either lodged or maintained by us.  
 A. 16.—Yes.  
 A. 17 & 18.—Eleven hours.  
 A. 19.—Twenty-two hours.  
 A. 20.—About three hundred days.  
 A. 21.—About three thousand eight hundred and twenty-eight hours.  
 A. 22.—They have been all carried on at the same time.  
 A. 23.—Ten hours and forty minutes.  
 A. 24.—Thirteen hours.  
 A. 25.—In the winter months, and from increased demand.  
 A. 26.—Avoidable.  
 A. 27 & 28.—Yes.  
 A. 29.—Gain.  
 A. 30.—Yes; we cannot say in what proportion.  
 A. 31.—Parents will not engage their children for extra hours, the wages being so very trifling.  
 A. 32.—Of course they could not be tried.  
 A. 33.—Yes; commenced at six in the morning and wrought till six P.M., and from six P.M. till six in the morning.  
 A. 34.—Because without much more outlay of money the profits are considerably increased.  
 A. 35.—The same set of hands work uniformly by night.  
 A. 36.—An advance of price and a reduction in the consumption of goods.  
 A. 37.—A further advance and reduction in the consumption.  
 A. 38.—From sixty degrees to seventy degrees; sixty degrees is the lowest.  
 A. 39.—We don't require a higher temperature than seventy degrees.  
 A. 40.—The whole.  
 A. 41.—At one time four.  
 A. 42.—Five children.  
 A. 43.—Eleven hours.  
 A. 44.—Five children.  
 A. 45.—From six P.M. till one morning, and from two morning till six morning.  
 A. 46.—None are indispensably continuous.  
 A. 50.—With gas.  
 A. 51.—The strap-holes keep the air pure.  
 A. 52.—It has no effects, good or bad, that we can observe.  
 A. 53.—All classes stop one hour to breakfast and one to dinner.  
 A. 54.—All leave at meal-times.  
 A. 57.—Commonly threats.  
 A. 58.—Very seldom; we understand corporal punishment to be such chastisement as parents inflict on children for disobedience.  
 A. 59.—By overlookers.  
 A. 60 & 61.—Yes.  
 A. 62.—No; we have frequently charged the overlookers not to abuse the children.  
 A. 64.—None.  
 A. 65.—No.  
 A. 66.—We find those employed from infancy make the most expert workmen.  
 A. 67.—We know no difference in the health of the workpeople.  
 A. 68.—There are no processes injurious to health.

WILLIAM DRYSDALE &amp; SONS.

## ANSWERS of JAMES HARROWER jun., for James Harrower sen., Alva.

Stirlingshire.

No. 161.

James Harrower.

- A. 1.—Alva, in the county of Stirling.  
 A. 2.—Woollen manufacture, such as spinning, weaving blankets, plaidings, worsted shawls, and dyeing.  
 A. 3.—The greater part of the mill was built in 1807, and an addition is at present being made to it, and it was first employed in 1807.  
 A. 4.—Water, of which there is a full supply, except during severe drought in summer. Cannot tell exactly the power, perhaps a five or six horse power.  
 A. 5.—No provision, except opening the windows when necessary.  
 A. 7.—By all employed.  
 A. 8.—None fenced.  
 A. 9.—None.  
 A. 10.—Nine years of age.  
 A. 11.—Yes, for piecing.  
 A. 13.—Yes.  
 A. 14.—Alva parish only.  
 A. 15.—None, and the apprentices live with their parents.  
 A. 16.—None.  
 A. 17, 18, & 19.—Eleven hours.  
 A. 20.—Three hundred and thirteen days.  
 A. 21.—Three thousand four hundred and forty-three hours.  
 A. 23 & 24.—Eleven hours.  
 A. 27.—No.  
 A. 33.—About ten years ago, on account of light water and small premises.  
 A. 46.—None.  
 A. 50.—With gas.  
 A. 51.—None, except by opening the windows.  
 A. 53.—One hour at breakfast and another at dinner.  
 A. 54.—The whole.  
 A. 57.—Dismiss them and employ others.  
 A. 58.—None.  
 A. 65.—No.  
 A. 67.—Their health has been equable.

23d May 1833.

JAMES HARROWER.

## ANSWERS of MATTHEW FINLAYSON, for James Finlay &amp; Co., Ballindalloch Works, Balfron.

No. 162.

Matthew Finlayson.

- A. 1.—Parish of Balfron and county of Stirling.  
 A. 2.—Preparing, spinning, and reeling cotton-yarn.  
 A. 3.—Erected in the year 1790; a picking-room and reeling-room in addition to the original building were erected in the year 1801.  
 A. 4.—The power employed consists of a water-wheel of about thirty horse power; but as the stream which supplies the water is but small, and does not afford above half supply during considerable periods of the year, a steam-engine of about sixteen horse power is employed in conjunction with and in aid of the water-wheel when the supply of water is insufficient. During last year the steam-engine worked six hundred and ninety-two hours and a half.  
 A. 5.—The windows of every department are of the sort called Scotch or double-sash windows, being moveable in two divisions; and the upper division, generally used for ventilation, is adjustable to any extent of opening, the degree of ventilation being regulated by the overlooker, who of course studies the comfort of the people.  
 A. 6.—Except the opening of the windows.  
 A. 7.—Regulated by the overlookers of the rooms.  
 A. 8.—All the dangerous parts are fenced off.  
 A. 9.—The workpeople change their clothes on entering and on leaving the factory; for the purpose of washing themselves they are furnished with soap gratuitously; this has been in practice for more than thirty-six years.  
 A. 10.—None under nine years of age; none of the children have been previously employed at any trade.  
 A. 11.—Children from nine to ten years of age are as useful for some descriptions of work as those of twelve; their work is so very light and easy that by the time they arrive at the latter period they are fit for an advanced situation.  
 A. 12.—There have been no alterations in our machinery recently so as to affect the number of children.  
 A. 13.—None.  
 A. 15.—Orphans are employed, but none of them are lodged or maintained by us; they only receive their wages.  
 A. 16.—We have such children, but they are under the superintendence of their nearest relations, with whom they reside.  
 A. 17.—They are employed twelve hours each lawful day except Saturday, on which day they work only nine hours.  
 A. 18.—The same number of hours as those above twenty-one.

(APP.—A. 1.)

E e 3

A. 19.

Stirlingshire.

Matthew Finlayson.

- A. 19.—Twelve hours and a half.
- A. 20.—Three hundred and nine days.
- A. 21.—Three thousand five hundred and forty-nine hours.
- A. 22.—All the different departments have been carried on at the same time.
- A. 23.—Eleven hours and one third each lawful day.
- A. 24.—We have only one set of workers.
- A. 25.—The want of a due supply of water was the principal cause for exceeding the usual hours of work.
- A. 26.—If avoided, the workers would be deprived of their wages for the time lost, and the proprietors would lose from the smaller produce.
- A. 27.—Yes, previously to the passing of Sir Robert Peel's Act.
- A. 28.—The cost is considerably enhanced.
- A. 29.—By working certain extra hours the quantity is increased, and of course the workpeople receive higher wages.
- A. 30.—The produce will be nearly in proportion to the hours of work; and the interest of capital invested and general expences of management being the same, whatever the produce may be, the cost of production will be increased in the same proportion, so far as these form part of that cost.
- A. 31.—We are not acquainted with the practice of having more than one set of children employed.
- A. 32.—No, never found it to be necessary.
- A. 33.—No.
- A. 34.—Never considered it to be necessary to work more than one set of hands.
- A. 35.—We employ no night-hands.
- A. 37.—We are of opinion that the further reduction of the working classes would be accompanied by very injurious effects, for, independent of the increase of cost in bringing cotton-yarn into the market, the shortening of hours would unavoidably produce a diminution of wages, and consequently lessen the comforts of the workers.
- A. 38.—Usual temperature 66°, lowest 64°.
- A. 39.—Sixty-five degrees to sixty-eight degrees, which we never wish to exceed.
- A. 40.—All our hands are employed in nearly the same temperature.
- A. 50.—From the middle of the month of September until the end of the month of March the works are lighted up with gas to complete the day's work.
- A. 51.—By opening the windows.
- A. 52.—As we have no night-work, we can have no knowledge of its effects.
- A. 53.—Three fourths of an hour for breakfast and one hour for dinner.
- A. 54.—All are at liberty to leave the works.
- A. 55.—If any stop in the work at meal-times, it is to suit their own convenience.
- A. 56.—If the workers lodged adjacent to the works, we would think it better for them to take their meals out of the manufactory.
- A. 57.—Dismissed in case of disobedience.
- A. 58.—No corporal punishments are allowed.
- A. 62.—Yes, on all occasions.
- A. 63.—The instructions given to the foreman and overlookers are to abstain at all times from corporal punishments, and in the event of repeated disobedience to dismiss the delinquent, which in most cases has the effect of preserving implicit obedience.
- A. 64.—None.
- A. 65.—Some of them do, but at half a mile distant from the works. A general vigilant superintendence is exercised over the morals of the whole workers, but especially the children, and for an aid in which, and to promote their general intelligence, there is an evening school established, where the younger individuals are taught English, reading, writing, and arithmetic, and most of them attend a Sabbath-evening school. Frequent or excessive breaches of moral propriety are punished by dismissal. Domestic and personal cleanliness are pointedly attended to.
- A. 66.—We have no spinners but those who have been brought up to the business from their infancy, because we prefer them to those who have commenced the business at a later period of life.
- A. 67.—The people of the factory have always upon an average been healthy to a remarkable degree.
- A. 68.—No; we know of no injurious effects from any particular process.
- A. 69.—Yes, strictly subject.
- A. 70.—Not under the present Act, but once under the preceding Act, for having a child under the specified age, because it was proved that the parents deceived us as to the age of the child, stating it to be a year older than it was, and the child's appearance agreed with their assertion.
- A. 73.—There is no other mill in this parish.
- A. 74 & 75.—Never.
- A. 76.—Never wanted.
- A. 77.—We never found it so; we believe that the workers would tell the truth.
- A. 78.—We are not prepared for any such suggestion at present, but can say that the general treatment of children in our employment is in all respects intended for their comfort.

MATTHEW FINLAYSON.

## ANSWERS of WILLIAM WILSON &amp; SON, Bannockburn.

Stirlingshire.

No. 163.

*William Wilson  
& Son.*

- A. 1.—Village of Bannockburn, parish of St. Ninians, county of Stirling.
- A. 2.—Spinning of wool.
- A. 3.—The works have been erected at different times; the first and principal erection was in 1806; in almost every successive year since some alterations or additions have been made. All the buildings have since their erection been occupied with machinery connected with the woollen manufacture.
- A. 4.—Water; the supply is irregular; when there is a deficiency of the supply the deficiency is to be attributed to the dryness of the weather. The power is about twenty-five horses.
- A. 5.—There is no distinct or specific provision for the ventilation of our factory further than is obtained by the opening of doors or windows.
- A. 6.—The provision, as stated in answer to the last query, depends on the opening of doors or windows.
- A. 7.—The ventilation is controlled at the discretion of all or of any of the persons employed.
- A. 8.—A part of the machinery is fenced off, and this is done in so far as to admit of the necessary operations being carried forward.
- A. 9.—All the arrangements stated in this query are left at the discretion of the persons employed.
- A. 10.—We are unwilling to employ children who are under ten years of age, though sometimes, from the extreme poverty of the applicant and the necessity of the case, not our own inclination, in a few cases we have employed children who, on their entry into the mill, were under ten years of age. They have not been employed at any other trade.
- A. 11.—Children under twelve years of age are as suitable for the nature of our work, and have equal wages with those of twelve years.
- A. 12.—Any recent alterations in machinery in our factory have tended to diminish rather than to increase the employment for children under twelve years of age.
- A. 13.—We employ no apprentices.
- A. 15.—None of the children employed in our factory are lodged and maintained by us. We have only one orphan in our employment, and she resides with her relations.
- A. 16.—We have no actual superintendence over the children unless when they are at work.
- A. 17.—Twelve hours on the first five working days of the week, and nine hours on Saturday.
- A. 18.—The hours for the persons under twenty-one years being employed are the same as for those persons whose age is above twenty-one years.
- A. 19.—Twelve hours, as stated in A. 17, is our usual rate of hours for work; in a few instances we may have exceeded the usual rate by a half hour or by three quarters of an hour, but never, to our belief, by more than one hour.
- A. 20.—Every working day, with the exception of fast-days, holidays, reform processions, the repairs of machinery, and the want of water; these in the course of the year may have amounted to about ten days.
- A. 21.—We have no regular account.
- A. 22.—All the different parts of our work have been carried on at one and the same time during the day.
- A. 23.—Under eleven hours a day.
- A. 24.—Thirteen hours.
- A. 25.—To make up for time lost when there was any unusual occasion for the work being stopped; the usual or regular hours generally departed from at the wish of the persons employed.
- A. 26.—Avoidable, but the quantity of work is lessened, and the remuneration is diminished to the persons employed.
- A. 27.—We have not.
- A. 28.—We have no experience to answer this query from our own practice.
- A. 29.—More work done with comparatively less machinery employed.
- A. 30.—A limitation of the hours of work will cause an increase in the cost of production in every branch, in proportion to the extent of time the hours are limited.
- A. 31.—A scarcity of hands, or an increase in the prices of labour.
- A. 32.—The supply of water is only during the day, and as we can only keep working during the day, we cannot have the experience of trying, and have not therefore the experience to give an answer to this query.
- A. 33.—We have not employed a night-set of hands.
- A. 34.—When one set of hands can do the work the trouble and expence are less than when any extra set of hands is employed, and the remuneration is greater to the persons employed.
- A. 37.—The probable effects of a still further reduction of the working hours would be to cause a diminution in the quantity of goods manufactured, and if a proportionate reduction is not made from the wages of the persons employed the cost price will be increased; the machinery for carrying on the same extent of business will require also to be increased.
- A. 38.—There is no regular account of the temperature in our factory kept; our manufacture
- (APP.—A. 1.)

Stirlingshire.

William Wilson  
& Son.

factory does not require a greater degree of temperature than is suitable for the comfort of the persons employed.

A. 39.—There is no variation of heat required in our different processes.

A. 40.—The temperature is generally much the same to one person as it is to all the persons employed.

A. 46.—None.

A. 50.—For the hours during which we require artificial light the works are lighted with oil.

A. 53.—One hour, from nine to ten o'clock, for breakfast, and one hour for dinner, from two to three o'clock.

A. 54.—All the persons employed leave the works at meal-times.

A. 55.—It is adopted for the convenience of the workpeople.

A. 56.—As all the persons employed leave the works at meal-times, this query cannot be answered from experience in our manufactory.

A. 57.—The only means taken or allowed are rebuke, exhortation or advice, and dismissal.

A. 58.—There are no corporal punishments inflicted.

A. 62.—It is known in our works that we are averse to corporal punishments.

A. 63.—No instructions have been given by us to our foreman or overlooker with relation to the punishment of children.

A. 64.—We have not had any complaints.

A. 65.—The workpeople have liberty to select dwellings to suit themselves, whether these dwellings may belong to their employers or to other individuals; they are uncontrolled in their moral and social improvement, and in their arrangements for domestic cleanliness, unless when from obvious carelessness or misconduct interference may be found to be necessary.

A. 66.—The preference in skill would undoubtedly be given to those who have been employed in the same profession from infancy; our workmen have, we believe without an exception, been so employed.

A. 67.—From our general observation the health of the people in our factory is the same at the present time as it was ten years ago, and has not deteriorated during that time; our observation has also led us to the belief and conclusion, that the persons employed in our factory are generally more healthy than any other class of persons who follow sedentary employments.

A. 68.—We have no particular processes having such injurious effects as to require a selection of persons or change of employment of the same persons.

A. 69.—We have not seen the Act, nor are we acquainted with its provisions.

A. 70.—There has never been any information laid against us.

A. 71.—We have never been convicted, nor have we paid any penalty.

A. 72.—We can state no circumstances connected with any convictions.

A. 73.—We have no knowledge if the mills in our neighbourhood conform to the provisions of the Act, nor do we know what steps, if any, have been taken to enforce their obedience.

A. 74.—We have not heard of any proprietor having been taken before a magistrate.

A. 75.—We have not heard that any proprietor has been fined.

A. 76.—We have not heard of evidence being required.

A. 77.—If it were required to have evidence, we do not think the workpeople would be afraid of displeasing their masters by giving it.

A. 78.—As we are not acquainted with the scale of penalties, or other means for securing obedience to the present law, or other legislative provisions for regulating the hours of labour, we cannot suggest an alteration.

WILLIAM WILSON &amp; SON.

No. 164.

John Gilchrist.

## ANSWERS of JOHN GILCHRIST, Denny.

A. 1.—Randolph Hill and Honeywood Mills, parish of Denny in the county of Stirling, North Britain.

A. 2.—Spinning of carpet-yarns and manufacture of woollen shawls.

A. 3.—Erected about twenty-six years ago.

A. 4.—Water-power; one wheel thirty horse power, and one twelve to fifteen horse power; regular, except occasionally on the drought of summer.

A. 5.—By doors and windows.

A. 7.—The ventilation is entirely under the control of the workpeople themselves.

A. 8.—Yes, they are fenced off.

A. 9.—There is every facility for this, being near water and other conveniences.

A. 10.—From seven years and upwards; many of the children have been previously employed at the neighbouring calico print fields before engaging at the woollen mill.

A. 11.—Yes, they suit better at a certain age and size than older, eight to fourteen years; they generally leave at fourteen to fifteen, or are promoted.

A. 12.—I know of no alteration.

A. 13.—None.

A. 15.—They live with their parents and relations.

A. 17.

A. 17.—Never exceeded eleven hours; often for months only ten hours.

A. 20.—No particular account kept; the works are carried on every lawful day, except sacramental fasts, fairs in the neighbouring village of Denny, and stoppages from machinery going wrong.

A. 22.—There is no difference of time in working different parts of the works; the machinery commences and stops, and the mills locked up, at the same hour.

A. 23.—The average may be about ten to eleven hours.

A. 24.—Ten to eleven hours each day.

A. 25.—Never exceeded.

A. 27.—Never.

A. 29.—Working long hours will only occur when the mill is of small extent to meet demands; I know no instance of it at present.

A. 30.—There will be a small saving in the children's wages by long hours, as stated in A. 29, the children being generally on days wages; but, having a full supply of machinery, I have never found it my interest to extend them beyond the time specified in A. 24.

A. 31.—I have never yet seen the spinning trade in Scotland so brisk as to require either extra hours or fresh sets of hands; it may be applicable to the cotton, but not so in the wool spinning or carding, in Scotland, in my opinion.

A. 33.—Only a day-set of workers.

A. 37.—It would have the most injurious effects in various ways, is quite uncalled for in woollen mills in Scotland, would reduce the wages of the workpeople, young and old, cause the proprietor to extend his works, or, what is more probable in the present state of trade, drop the business altogether. I have been in the trade fourteen years, and have never in a single instance had one complaint from parents or children of the hours being too long; have been often solicited to extend them.

A. 38.—The mills are only heated in winter or in cold weather for the comfort of the workpeople.

A. 49.—None.

A. 50.—One mill by gas, the other two patent oil-lamps.

A. 53.—One hour for breakfast and one hour for dinner.

A. 54.—They either leave them or not as they please; no control whatever is exercised over them in this respect.

A. 55.—For the convenience of the workpeople.

A. 57.—The orders I have given to the men are not to chastise the children, but if ordinary means will not enforce obedience to dismiss them home.

A. 58.—No; parents have authorized gentle correction such as they would do themselves at home, but this is seldom or ever practised; they are dismissed, having at all times offers of more children than can be employed.

A. 63.—Instructions were given to the foreman and spinners, not in writing, but they are perfectly understood and acted upon in the mills, to the effect as stated in A. 57.

A. 64.—Never.

A. 65.—No control is exercised in this respect; my workpeople take houses to suit their convenience where they can find them.

A. 66.—I never was sensible of any material difference in this respect, spinning of carpet yarns being a simple process.

A. 67.—The health of young and old in the mills decidedly improves; I know instances of unhealthy and sickly looking children being sent to these works, and in the course of a few months they got stout and healthy, whether owing to the animal substances amongst which they work in woollen mills or not I venture not to say, but such is the fact in my works, and I have no doubt others in the same line will substantiate what I have stated.

JOHN GILCHRIST.

#### ANSWERS of THOMAS GILLIES, Dunblane.

A. 1.—At Springbank near Dunblane in the parish of Dunblane and county of Perth.

A. 2.—Manufacturing of woollen yarns, principally for Scotch carpeting, and woollen shawls, and weaving same and other coarse cloth, such as plaidings, blankets, &c. &c.

A. 3.—The work commenced about twenty-six years ago; considerable additions were made in 1819, 1823, and 1832.

A. 4.—Water, twenty-four horse power, quite regular.

A. 5.—The works are ventilated at the pleasure of the workmen by opening doors or windows when they please for their convenience.

A. 8.—Yes, they are.

A. 9.—No arrangements are made for changing of clothes or putting on additional ones on leaving the manufactory, but a house is allowed for the children to wash themselves at pleasure.

A. 10.—Rarely under nine years of age; I am not aware of any being employed at any other trade beforehand.

A. 11.—Yes, the work being light, they are more capable of performing it at nine or ten than those of maturer years.

A. 12.—In this there has been no alteration at my works.

A. 13.—No apprentices have ever been employed.

(APP.—A. 1.)

F f

A. 15.

Stirlingshire.

John Gilchrist.

No. 165.

Thomas Gillies.

Stirlingshire.

Thomas Gillies.

- A. 15.—All the children lodge with their parents or relatives.  
 A. 17.—Twelve hours, excepting Saturdays, which are ten.  
 A. 18.—All work the same hours; the work could not go on otherwise.  
 A. 19.—Never more than twelve hours, except part of the carding-engines, which have wrought about thirteen hours for two months, the children attending which are paid extra.  
 A. 20.—Three hundred and eight days, or so.  
 A. 21.—About three thousand five hundred and eighty hours.  
 A. 22.—All parts of the work proceed together.  
 A. 23.—About eleven hours and twenty minutes.  
 A. 25.—The reasons which caused me to exceed the usual hours are stated in my answer to Q. 19, and is devoted to the carding of wool for country purposes, so as not to interfere with the regular hours of the workmen.  
 A. 26.—It may be avoided by not doing the work or encroaching upon the workmen's hours.  
 A. 27.—Not unless for some special purpose, and then only a few days.  
 A. 28.—It must follow as a matter of course when the quantity produced is less its value increases.  
 A. 29.—I have never done this, neither am I aware of its being done in this neighbourhood in any of the woollen mills.  
 A. 30.—There is no prohibition on the woollen manufacture.  
 A. 31.—Were it necessary, there could be none.  
 A. 33.—No.  
 A. 34.—I have never found it necessary to employ more than one set of hands.  
 A. 35.—I have never wrought during night.  
 A. 37.—A reduction of the wages of the workers, and the quantity produced by the same machinery lessened, in consequence of which the value raised, thereby rendering it more difficult to compete with the foreign manufacturer.  
 A. 38.—Heated in winter for the comfort of the workers, in summer no extra heat.  
 A. 39.—There is no part of the work requires such a process.  
 A. 40.—None.  
 A. 49.—Have none.  
 A. 50.—Oil during winter.  
 A. 51.—I only work till eight o'clock at night.  
 A. 53.—From nine to ten for breakfast, and from two to three for dinner.  
 A. 54.—They are at liberty to go.  
 A. 55.—If they stay, it is to suit their own comfort.  
 A. 57.—If gentle discipline does not do, they are dismissed from the work.  
 A. 58.—None but what is referred to above, which deserves not the name of corporal punishment.  
 A. 59.—What is referred to is by the men with whom they work.  
 A. 60.—Never by my commands.  
 A. 61.—Never.  
 A. 63.—None, but if they are obstinate in doing their work they are turned off.  
 A. 64.—Never.  
 A. 65.—All the workers live in their own or relations houses.  
 A. 66.—It is obvious that those employed in a manufactory from infancy should be better acquainted with machinery than those going into one at a more advanced period; however, this must greatly depend on the talents of the individual.  
 A. 67.—The workpeople at my mill enjoy generally good health, and I cannot say there is any difference.  
 A. 68.—I have no process of the kind.  
 A. 69.—I am aware of no Act regarding woollen factories, which renders it unnecessary for me to answer the remaining queries; however, I beg to state that I am not aware of the children in my own work or in any other woollen mills with which I am familiar being any thing but well used.

## ANSWERS of A. E. SPEIRS, Fintry.

No. 166.

A. E. Speirs.

- A. 1.—Parish of Fintry, county of Stirling.  
 A. 2.—Cotton-spinning, only medium numbers.  
 A. 3.—The whole buildings were erected at very nearly the same time, and are still, with very trifling changes, adapted to original purposes.  
 A. 4.—Water only; supply irregular; during a dry summer the stoppages have varied from a few days to more than four weeks; power about forty horse.  
 A. 5 & 6.—The rooms extend the whole length and breadth of the building, and have windows on either side, which can be opened at top or bottom as required; the building in winter is heated by steam-pipes.  
 A. 7.—The ventilation is regulated by the manager, and under his direction by the hands of the departments.  
 A. 8.—There is no dangerous machinery which the workers need come in contact with.  
 A. 9.

A. 9.—The workers generally live very near, and are permitted to bring any extra clothing they choose, and hang it up in the mill for their use; when they quit work, the workers if they choose to wash can use the condensed water from the steam-pipes, and are allowed five minutes before each meal hour, and the same at night, to dress and clean themselves.

A. 10.—Children are never admitted below the legal age (nine years), and seldom, if any, have had a previous trade.

A. 11.—We do not wish to employ children under twelve years old, nor is it needful if we could get a sufficient number of those at twelve. We find parents much more anxious to send their children to the factory than we are to employ them, and this is more particularly the case as regards parents employed in the factories.

A. 12.—Not in this factory.

A. 13 & 14.—We do not.

A. 15.—We lodge and maintain no children; the work is altogether supplied from the population of the parish, and the children live under the care of their parents or natural guardians.

A. 17.—This factory strictly adheres to the law, and works eleven hours and a half on average of six days work, or twelve hours for five days, and nine hours on Saturday.

A. 18.—The workers, of whatever age, are employed the same period; this is necessary for carrying on the work, but the employment of the children cannot be called labour.

A. 19.—Twelve hours, or it may be twelve hours and a quarter, making up lost time under Hobhouse's Act which allows twelve hours and a quarter, but lost time we never make up if it exceeds a few hours.

A. 20.—Three hundred and six days.

A. 21.—Three thousand five hundred and nineteen hours.

A. 22.—The whole work moves and stops at the same time.

A. 23.—Eleven hours and a half.

A. 24.—Twelve hours and a quarter.

A. 27.—On oath I can say that since I was owner I never worked longer than at present, but before Sir John Hobhouse's Bill passed I believe that the hours on Saturday were the same as on other days.

A. 28.—As we produce a less quantity by working shorter hours on Saturdays, it is evident the cost of production must be increased.

A. 29.—If a manufacturer can compel his workers to labour extra hours without proportionate increase of wages, it will be clear that, his general charges remaining the same, he will from the extra production have great advantages.

A. 30.—The enhanced cost will be apparent in the preparation departments, which is performed by hands on day-wages.

A. 31.—The present hours do not, I consider, injure children, and we never work extra hours; but I doubt whether it is possible in all situations to procure relays of children; the working children, I mean, would be forced to submit to have whatever wages they receive at present divided into as many parts as there would be relays; or, to put a case in terms, how would children be hindered from forming relays in one factory and afterwards in another so as to defeat any enactment on that head?

A. 33, 34, 35 may be classed together. We have stated we never work extra hours, and never by night; night-work we wholly disapprove of, and think it ought on no account to be permitted. It is impossible to preserve the same control at night as by daylight, and the atmosphere is necessarily more impure.

A. 37.—This query would admit of a very long reply; there are, however, so many persons who have been in the cotton-spinning trade longer than I have, and whose knowledge is so much more extensive, that though I feel it necessary, yet it is with some diffidence that I state my opinion, and very shortly. In the first place, then, I would request it to be borne in mind that this is not a national question only, but a query that relates to the trade of the whole world. Great Britain no longer possesses the monopoly of cotton-spinning; the Americans, French, Swiss, and other nations already tread closely on the British Merchant, and in some instances compete with him in markets where he was formerly without a rival. I might add, that I believe the Americans undersell the British exporter in some places, while the yarns produced on the continent of Europe are even now supplying the place of British in the home consumption of the respective nations. If, therefore, the British workman is not injured in his health or his morals by present hours of work under restrictions of existing laws, it appears to me a folly, or worse, an egregious absurdity, to legislate on the subject by shortening the hours of labour. I am asked what, in my opinion, would be the consequence of shortening the hours of labour? Going on the presumption that this alludes to Lord Ashley's or Ten Hour Bill, I may reply shortly, the total ruin of the cotton manufacture of Great Britain.

From the most careful calculations I have been able to make, I am of opinion that at the present time cotton-spinning is not a beneficial mode of employing capital. As I am not aware of any extra national advantages that the British spinner possesses over his rivals in America or the continent of Europe, I do not see how it is possible for the British spinner to meet them in a neutral market if he should be forced to restrict his labour to ten hours, while they work twelve, thirteen, or even fourteen hours, producing a proportionately greater quantity of manufactured material at a lower price than the British spinner would be enabled to do. I admit that I have been informed that we are "fifty years" before

Stirlingshire.

A. E. Speirs.

other nations in machinery; but if a foreigner is about to invest capital in a mill, I do submit he will with one easy step overtake the whole half century of improvements: I may add, several of the latest improvements in cotton-spinning are of American invention. I have now to state what, in my opinion, would be the effect of such a reduction of labour on the workers, I mean two hours. At first, perhaps, the price of cotton-yarn might rise; this would not be permanent, from reasons already stated; foreigners would soon supply the deficiency in the market; I do not think it improbable that the American spinner might supply the English power-loom weaver. I have already stated the profits of spinners are very low; if, therefore, the hours of labour are shortened, they must either be ruined, or seek some way of producing an equal quantity in ten as they now do in twelve hours. I am not aware how this could be effected. A rise in price, as before stated, would be temporary, in consequence of a defalcation in the market; therefore I am of opinion that the injury would ultimately fall on the workers, and principally on operative spinners, which is the most highly paid class; nor would this reduction be in proportion of twelve to ten, or one sixth, but would at a moderate calculation be about double that proportion, or one third. I argue on the provisions of Lord Ashley's Bill: any deviation from it would act in a proportionate manner. As I have alluded to Lord Ashley's Bill, I must add, that if ever a proposed enactment showed ignorant and presumptuous legislation, it is that proposed by his Lordship; if his Bill becomes law, it ought to be entitled "An Act to destroy the staple manufacture of Britain."

A. 38.—Sixty-five or not exceeding seventy is our usual temperature, nor do we require it higher.

A. 39.—Sixty-five to seventy degrees.

A. 40.—The whole number, exclusive of mechanics, say about two hundred and forty.

A. 41.—Never.

A. 50.—During winter when we require to light for working the legal hours we use oil.

A. 51.—Not applicable, except as formerly applied to.

A. 52.—I do not know.

A. 53.—The legal time one hour and a half.

A. 54 & 55.—The greater proportion leave the work at meal-hours, but some for their own convenience have their victuals brought them. The spinning-master usually remains during dinner-time to look over and make any repair in his department, the moment the workers return he goes home.

A. 57.—Dismissal for longer or shorter periods, or altogether.

A. 58.—We permit no other punishment but as above; parents have requested their children rather to be beaten than turned out of the mill.

A. 64.—No complaint has been made.

A. 65.—The company owns a few houses in the village of Fintry; a portion of these is occupied by workers in the mill, but there is no obligation for them to take the houses unless they prefer them and find them more convenient; the company furnishes a school-room, and gives salary to schoolmaster.

A. 66.—I am not aware of any persons who have been differently employed.

A. 67.—I annex a copy of a certificate sworn to by the minister of the parish, which shows the relative state of deaths, and proves the great comparative healthiness of spinners.

#### MINISTER'S CERTIFICATE.

Q. What proportion of the population of the parish of Fintry is employed in the cotton-mill there?—A. The population of Fintry is one thousand and fifty-one, and two hundred and forty-three are employed in the mill.

Q. Can you state the relative proportion of deaths in the manufacturing population compared with the agricultural?—A. I have kept a regular account of the deaths in this parish since the 1st of January 1826, and find the result to be, that one hundred and thirty-five persons have died in the whole parish, of which thirteen have been employed in the mill.—By note, which is produced, it appears that six were of very advanced age, two died by accident, three of constitutional disease.

Q. Have you observed any deformity or malformation of the human frame in the manufacturing population from which the agricultural is exempt?—A. I have not.

Q. As minister of the parish, it is understood you are in the habit of visiting the houses of your parishioners; please state your opinion as to the relative comforts enjoyed by the two classes alluded to?—A. The manufacturing population receive higher wages, and in my opinion have more of what may be called luxuries, and are at least equally well lodged.

Q. Please state your opinion as to the morals of the two classes in question at present?—A. Those employed in the mill attend public worship and ordinances more regularly than the others, and I am not aware that any vice pervades one class more than the other.

Q. Are the children of those persons employed in the mill as well instructed in their youth as those employed otherwise?—A. As to age, certainly.

Q. Are you aware that the limiting the hours of labour and age of admission properly is attended to in the cotton factory in your parish?—A. As far as my knowledge goes, both these points are attended to.

Q. Are you of opinion that were the hours of labour considerably shortened, it would be advantageous or otherwise to the manufacturing population of your parish, I mean relative both to health and morals?—A. I must refer to my previous replies (for so far) as an answer to so comprehensive a question, but generally I may state that I approve of a regulation which

which has been made here, that no child is admitted that cannot read the Bible and further, I think that children might, with advantage to themselves and masters, be legally precluded from working before ten or eleven years of age in a factory.

(Signed) JAMES COLTART, Minister of Fintry.

Sworn before { DUNMON NAPIER.  
A. E. SPEIRS, Proprietor.

Stirlingshire.

A. E. Speirs.

A. 68.—We have no injurious or deleterious process; it may sometimes happen that a worker may prefer some branch, thinking it better suits the health, and this is complied with as far as practicable.

A. 69.—It is.

A. 70 & 71.—Never.

A. 73.—I know nothing about my neighbours, but, as a magistrate, I never had any information laid before me.

A. 77.—I know no case to which I can refer.

A. 78.—I am unacquainted with the subject except theoretically. I believe the Scotch spinners keep the law; the English, upon their own showing, do not. I consider that Government are bound to enforce present laws before they make new enactments. If the moving power of mills could be stopped by some government *employé*, it would hinder abuse in one sense, and create it in another.

A. 79.—I think so much of the present law as relates to meal-hours on Saturday ought to be repealed as inconvenient to workmen. I am of opinion that children under eleven ought not to be employed, no night-work permitted on any account, and in factories whose hands live at a distance a little more time for meals given; the hours of work ought never to exceed twelve hours, and that between the hours of five A.M. and eight P.M. Some latitude ought perhaps to be given to factories moved by water, which is an irregular power.

A. E. SPEIRS.

#### ANSWERS of ALEXANDER M'GREGOR, for Robert M'Gregor & Co., New Kilpatrick.

No. 167.

Alex. M'Gregor.

A. 1.—Parish of New Kilpatrick, Stirlingshire.

A. 2.—Cotton-spinning.

A. 3.—The work was erected all at one time in the year 1790 for cotton-spinning.

A. 4.—Steam-engine of nine horse power, and water irregular, varying from eight to fifteen horse power.

A. 5 & 6.—Opening of windows.

A. 7.—At the discretion of persons employed in each flat.

A. 8.—All dangerous parts are fenced off.

A. 9.—The workers have it in their power to change their clothes, clean themselves on entering and leaving the work, and they all do it.

A. 10.—Nine years of age; they are mostly all employed in print-fields when seven or eight years of age, and remain there till they come of age for the cotton-work.

A. 11.—Wages being so low, a sufficient number of workers could not be got at twelve years of age.

A. 12.—I think greater.

A. 13.—No apprentices.

A. 15.—One orphan.

A. 16.—The person they reside with.

A. 17.—Twelve hours five days of the week, and nine hours on the sixth day.

A. 18.—No difference.

A. 19.—Twelve hours and a half.

A. 20.—Two hundred and ninety-eight days.

A. 21.—Three thousand four hundred and thirty-five hours.

A. 22.—All parts of the work are carried on at the same time.

A. 23.—Eleven hours and a half average each day of the week during the last year.

A. 24.—Twelve hours and a half.

A. 25.—When loss of time is occasioned for want of a supply of water or any accident happening to the great gearing.

A. 26.—Not avoidable.

A. 27.—The present law being in force at the time the mill was purchased by Robert M'Gregor and Co., the present working hours have not been exceeded.

A. 28.—Yes; less quantity produced increases the oncost.

A. 29.—I consider it an inducement to the manufacturer to protract the hours during day-time, as there will be more produced for the same capital sunk, though I consider it no great advantage to work during night, as additional expences are incurred.

A. 30.—In the preparation departments the machinery is not capable of being driven quicker to do justice to the work, whereas in the spinning-flats the men will be able in proportion to throw more quantity off in ten hours than twelve, so that there must be more capital sunk in preparation and more wages paid for preparing.

A. 31.—We have no extra hours except in cases of lost time, when half an hour is worked additional every day till the time is made up.

A. 32.—No change of hands, and though tried could not be got.

(APP.—A. 1.)

F f 3

A. 33.

Stirlingshire.

Alex. M'Gregor.

A. 33.—No night-work.

A. 36.—Working day and night, the article can be produced a little cheaper in the market.

A. 37.—Proprietors sinking a capital in machinery calculate upon the quantity it will throw off in twelve hours a day; if they are reduced to ten hours they will be nearly one sixth deficient in quantity; at present the prices are so very low for cotton-yarns as barely to pay the interest, so that they cannot get remuneration for the capital sunk, and consequently will reduce the workers wages in proportion.

A. 38.—From 50° to 60°.

A. 39.—No difference required; all departments alike.

A. 50.—With whale-oil.

A. 51.—Opening the windows.

A. 52.—I consider people working during the night cannot be so healthy, and are more liable to have their morals corrupted.

A. 53.—Three quarters of an hour at breakfast and the same at dinner, being at the request of the workers.

A. 54.—All leave the mill at meal-time except one.

A. 55.—To suit her own convenience, being in delicate health, her victuals are brought to the mill.

A. 57.—By reprimanding two or three times, and if that does not do, we put them away for two or three days; if that does not do after some trials they are discharged.

A. 58.—Upon no person, except it be by the parent of the child.

A. 62.—The workers are not allowed to strike, abuse, or punish the children in any way, except they be the parents of the child; in that case we do not interfere but when harshly dealt with.

A. 63.—The overlookers are instructed not to allow any of the workers under any pretence to punish any of the children, with the exception of parents.

A. 64.—No complaints.

A. 65.—Yes; the following rules are to be observed. Rules to be observed by the tenants occupying dwelling houses belonging to Robert M'Gregor & Co.—1st, These houses, as already known, are let from fortnight to fortnight. 2d, After you are prohibited from keeping dogs or poultry of any description, under the penalty of leaving the house without the usual warning. 3d, The vents will in future be cleaned by a tradesman every quarter of a year, for which you are to pay the sum of two-pence along with your rent. 4th, The house will be whitewashed once a year, for which you are to pay along with your rent. 5th, You are strictly prohibited from harbouring beggars, idle or disorderly persons, about your house, and are enjoined to observe orderly conduct in your own family. 6th, You are to keep the windows of your house clean; and all glass, tile, or slates that are broken or injured must be repaired at your expence, without you can satisfactorily account for the damage. 7th, No tenant in these houses allowed to sell spirits or malt liquors of any description, either with or without licence. 8th, On any of the tenants leaving their houses, they are to endeavour to agree with the succeeding tenant as to the value of the garden crop; should they not agree, then Robert M'Gregor & Co. shall appoint one man, and the outgoing tenant another, whose determination shall be final.

A. 66.—There are two or three in the work that were grown-up men before they were spinners, and I do not think their skill, character, or education is any better than those brought up from their youth at cotton-works.

A. 67.—The workers, with the exception of one or two, all say that they have been healthy during their lives, and that they can make no distinction between the last ten years and the former part of their lives.

A. 68.—Delicate persons get the light and easy work to do, strong and healthy persons the heaviest work to do.

A. 69.—Yes.

A. 70.—The present Act has not been infringed upon in any way, and of course never have been informed upon.

A. 73.—I never heard of the mills in our neighbourhood working longer than the provisions of the present Act.

ALEXANDER M'GREGOR.

No. 168.

Thomas Kerr.

## ANSWERS of THOMAS KERR, St. Ninians.

A. 1.—Milton woollen mill in the parish of St. Ninians and county of Stirling.

A. 2.—Spinning of yarns chiefly.

A. 3.—The lower part of the carding-house was fitted up for carding about twenty years ago, the upper part about ten.

A. 4.—Water is the power employed; regular, save two or three months in summer, when instead of getting it drawn at six in the morning it is often eight. The extent of power has never been tried.

A. 5.—The provision for the ventilation of the mill is the opening of the windows or doors.

A. 7.—Each flat of the mill is regulated by those that work in the different parts.

A. 8.

Stirlingshire.

Thomas Kerr.

A. 8.—What we consider dangerous are fenced off.

A. 9.—The parents of the children have such a taste for the keeping of them clean and comfortable, that they cause their children to fetch cloaks in winter, and often two suits of clothes in summer; indeed I wonder often that they pay so much attention to them.

A. 10.—The lowest age at which I have employed children was ten years of age, none of which were ever at any other trade.

A. 11.—Although the nature of my work can be done with children about ten or eleven years of age, yet nevertheless I seldom engage any at ten if I can get them at twelve.

A. 12.—Any alterations I have made of late require a greater proportion of children above twelve years of age than below it.

A. 13.—Yes.

A. 14.—They certainly dwelt in parishes, but I had none that were under the guardianship of parishes. I had two from the parish of Alloa.

A. 15.—All the children I employ are under the guardianship of their parents, under whose roof they every night dwell.

A. 16.—I superintend all the children in the mill.

A. 17.—Twelve hours are the most each day that any in the mill work.

A. 18.—Great and small work the same length of time each day.

A. 19.—To my knowledge, no day exceeded twelve hours.

A. 20.—I kept no account.

A. 22.—As water is the only power employed to drive the mill, all the parts go on alike each day in general.

A. 23.—I believe eleven hours is the average of each day during the year.

A. 24.—I keep only one set of children.

A. 25.—I never caused the children to be wrought beyond the usual time.

A. 26.—I consider that there is neither need nor profit to exceed the usual hours we work, (to wit) eleven or twelve hours a day.

A. 27.—No.

A. 28.—Never tried the experiment.

A. 29.—The only inducement, in my opinion, is to get gain.

A. 30.—These are experiments I never have had occasion to try.

A. 31.—I consider it more profitable to the master who has to employ his mill night and day to have two sets of children.

A. 32.—I believe in this part of the country those that have occasion to keep their mills going day and night keep two sets of hands.

A. 33.—I have never had occasion to keep my mill going day and night since I took it, save ten or twelve nights at most.

A. 35.—When I cause my mill to go day and night I will cause the hands to change periodically from night to day.

A. 36.—In this part of the country night-work is sometimes called for in the winter season by some of our customers that require a greater quantity of goods at that season than in summer, but were night-work prohibited they would just have to buy a larger stock in summer, which would neither better nor make worse either the merchant or manufacturer.

A. 37.—In my opinion, the probable effects of a reduction of the working hours would only affect the small capitalist; the wealthy would just add to their mills more machinery, that would do a greater quantity of work by fewer hands.

A. 38.—Our mill manufactures no stuff that requires more heat in winter than just to keep the workers warm.

A. 41.—If I mistake not, I spun ten or twelve nights along with two of my men.

A. 46.—No.

A. 48.—I believe that in any mill where the twenty-four hours are continuous that both men and children are employed.

A. 50.—Our mills are lighted yet with the glimmering oil-lamps.

A. 51.—Doors and windows are the only inlets and outlets to fresh and foul air.

A. 52.—Being inured in early life to night-work, I must confess it is not good for health.

A. 53.—One hour at breakfast and one at dinner.

A. 54.—They all leave save two that require to keep two scribbling-engines going for the convenience of the manufactory.

A. 56.—According to the construction of the two engines alluded to, were they to stand in the meal-hours, a sixth part of the work done each day would be lost.

A. 57.—We just tell them that if they don't obey we will get others in their room.

A. 58.—Not with my sanction.

A. 59.—None are authorized to inflict any sort of corporal punishments.

A. 62.—When I get any strange worker to my mill that has to work with children, it is among the first things I tell them that they are not to do violence to any of the children.

A. 63.—No instructions are given to punish the children, quite the reverse.

A. 64.—Never.

A. 65.—“All the workers live under their own vine and under their own fig-tree, none daring to make them afraid.”

A. 66.—We see the adage holds true in those who come apprentices to us in early life, that “learn young learn fair.”

(APP.—A. 1.)

F f 4

A. 67.

Stirlingshire.

Thomas Kerr.

A. 67.—It is considered by all those who have children at a woollen mill that they thrive better after they come to the mill than before.

A. 68.—We make no selection save that of putting the cleverest to the nicest process.

A. 69.—Don't think it.

A. 77.—I have good reason to believe that the workpeople are as independent of displeasing their master as their masters are of displeasing them.

A. 78.—The long-established law of justice and humanity seem to be the best guardians of the people.

THOMAS KERR.

No. 169.

Robert Smith.

## ANSWERS of ROBERT SMITH, St. Ninians.

A. 1.—One at Stirling, and one at Milnholm, in the parish of St. Ninian and county of Stirling.

A. 2.—Manufactory of woollen yarn, chiefly for carpeting.

A. 3.—In Stirling, the manufactory was commenced about twenty-three years ago; a considerable augmentation was made to the buildings in 1818, very little since. At Milnholm, about nineteen years since.

A. 4.—At Stirling, steam, twelve horse power; at Milnholm, six horse power, rather irregular.

A. 5.—The works are ventilated at the discretion of the workers, by opening doors or windows, to suit their own comfort.

A. 7.—Same.

A. 8.—Yes.

A. 9.—None.

A. 10.—Very seldom under nine years of age. I am not aware of their being previously at any other trades.

A. 11.—Yes; because the work is easy, and they can do it as well at nine or ten as at twelve years of age.

A. 12.—As far as I am concerned, it has not.

A. 13.—No.

A. 15.—I lodge and maintain none.

A. 17.—Twelve hours; but no lost time, from stoppage by machinery going wrong, dulness of trade, or any other cause, is made up.

A. 18.—The same as the last, as they cannot get on without the others.

A. 19.—Never exceeds twelve hours, with the exception of the carding machinery, which may have been kept at an average thirteen hours two days weekly, for which the children attending it are paid double their usual wages.

A. 20.—Every lawful day, except when stopped by machinery going wrong or being repaired, of which no account has been kept.

A. 21.—When the hours are not limited from dulness of trade, one hour at least may be deducted from the time stated in my answer to the seventeenth query from stoppages of machinery going wrong and other causes; and I find during four months of the present year, at Milnholm, from want of water, they did not work three fifths of their time; thus making the total number of hours at Stirling 3,443, and at Milnholm 3,021.

A. 22.—All parts are carried on at the same time.

A. 23.—At Stirling eleven, at Milnholm nine hours and forty-five minutes.

A. 25.—The circumstances which cause me to exceed the regular hours, as stated in my answer to the nineteenth query, is the carding of small quantities of wool for country people, so as the regular hours of my workmen may not be encroached on.

A. 26.—It may be avoided by encroaching on the usual hours of workmen.

A. 27.—At one time we may have wrought up some of the lost time.

A. 28.—It of course follows, when the quantity produced is less, that the cost is increased.

A. 29.—I do not do this, nor am I aware of its being done in the woollen trade.

A. 30.—There has been no restriction on the woollen manufacture.

A. 31.—Were it required, there could be none.

A. 33.—No.

A. 34.—I do not require more than one set of hands.

A. 35.—I have no night-work.

A. 37.—A diminution of workmen's wages and the quantity produced by the same machinery lessened, in consequence of which the cost enhanced, thereby rendering it more difficult to compete in foreign markets.

A. 38.—In winter, heated for the comfort of the workers; no extra heat in summer, but the windows and doors opened as the workmen choose for their own comfort.

A. 39.—No process of the kind.

A. 40.—None.

A. 41.—From the scarcity of water last autumn my work at Milnholm for four weeks; one half of the machinery was kept going during the day, and the other the night; this is the only instance I ever had of any night-work, during which time none of the sets wrought more than seven hours.

A. 42:

- A. 42.—Five, during the time alluded to above.  
 A. 45.—Cannot exactly say.  
 A. 46.—None.  
 A. 49.—Have none.  
 A. 50.—At Stirling, gas; Milnholm, oil during winter.  
 A. 51.—I have no night-work, except to the usual hour, eight o'clock.  
 A. 53.—Nine to ten for breakfast, two to three for dinner.  
 A. 54.—All if they please.  
 A. 55.—If they do not go, it is for their own conveniency.  
 A. 57.—If gentle correction does not do, they are turned off.  
 A. 58.—None but what is alluded to in the above, which cannot be called corporal punishments.  
 A. 59.—What is alluded to is by the men to whom they work.  
 A. 60.—Never by my orders.  
 A. 63.—None, but that if they did not do their work, I would turn them off.  
 A. 64.—Never.  
 A. 65.—The workpeople live either in their own or friends houses.  
 A. 66.—It is reasonable to suppose that those employed in a manufactory from infancy should be better skilled in machinery than those going into one at an advanced period of life; this must depend, however, greatly on the talents of the individual.  
 A. 67.—The workpeople in woollen factories generally enjoy the best health; I cannot say there is any difference.  
 A. 68.—I have no process of the kind.  
 A. 69.—I believe there is no Act regarding woollen factories, which renders it unnecessary for me to answer the remaining queries; I may however state, I am not aware of the children in my own work, or in any other woollen mill with which I am acquainted, being any thing but well treated.

ROBERT SMITH.

Stirlingshire.

Robert Smith.

## ANTRIM.

## ANSWERS of JOHN M'CRACKEN, Belfast.

- A. 1.—Belfast, in the county of Antrim.  
 A. 2.—Spinning cotton-yarn on mules.  
 A. 3.—One mill erected about the year 1804, and the other in 1810, for their present purpose.  
 A. 4.—The two mills are driven by one steam-engine, made by Messrs. Boulton and Watt, of twenty horse power.  
 A. 5.—In the old mill the sashes are hung in the manner of a dwelling house, in the new one by panes made to open; both plans succeed extremely well.  
 A. 6.—The ventilation depends on the opening of the panes of glass constructed for the purpose in the new mill, and opening the windows in the old one.  
 A. 7.—The workers in each room have authority to let in the fresh air whenever they choose to do so.  
 A. 8.—All the main shafts are regularly fenced off, and no accident whatever has happened.  
 A. 9.—The workers change their clothes at their own pleasure, and always have a plentiful supply of fresh water to each separate room; this was always the case in my two mills, also plenty of water for washing.  
 A. 10.—The lowest age that I know of is ten years, and I would not engage any workers from any other trade to my knowledge.  
 A. 11.—The nature of the work requires small children to get about the machines in cleaning them.  
 A. 12.—I know nothing of such alterations.  
 A. 13.—I employ none.  
 A. 15.—All the children I employ live entirely with their parents.  
 A. 16.—I know nothing of such a thing.  
 A. 17, 18, & 19.—The greatest number of hours wrought in any one day during the last year by workers of all ages was about twelve hours; part of the time nine hours, and part only six hours; at this time, the 5th of June, only eight hours.  
 A. 20.—The mills wrought every day a part of the day, except Sundays, Christmas Day, and Easter Monday.  
 A. 21.—Two thousand nine hundred and fifty-four hours.  
 A. 22.—All parts of the works go on regularly together.  
 A. 23.—The average number of hours, as nearly as can be calculated, was about nine hours and a half.  
 A. 24.—Twelve hours.  
 A. 25.—At no time whatever.  
 A. 26.—I think there is no good reason for extra hours.  
 A. 27.—I never remember working more than twelve hours.

(APP.—A. 1.)

G g

A. 28.

Antrim.

No. 170.

John M'Cracken.

Antrim.

John M<sup>c</sup>Cracken.

A. 28.—The shorter hours naturally enhance the cost of production.

A. 29.—I can give no answer to this question.

A. 30.—All the branches must go on equally, and as to the limitation in hours it naturally increases the cost, but I really cannot answer exactly the proportion.

A. 31.—I have neither knowledge or experience on this head.

A. 33.—I do no such thing.

A. 37.—A great many expences in carrying on my works remain the same whether six or twelve hours are worked, consequently the more the time is lessened the higher the expence on the quantity produced.

A. 38.—The temperature best calculated for the spinning in my two mills is from seventy-two to seventy-six degrees of Fahrenheit.

A. 40.—The total number of hands employed by me in both mills is one hundred and fifty-six.

A. 50.—I have not used any light but day-light for years.

A. 52.—I know nothing of this.

A. 53.—Half an hour each meal for all.

A. 54.—All.

A. 56.—No alteration is necessary.

A. 57.—A small fine or dismissal.

A. 58.—None.

A. 62.—Always.

A. 63.—Never gave any.

A. 64.—None.

A. 65.—Out of one hundred and fifty-six workers employed by me there are only about twenty who inhabit houses of mine, the rent of which is stopped off their wages in the way least inconvenient to them; further I do not interfere, except frequently whitewashing the houses.

A. 66.—It is impossible to answer this, except generally to state that those most early employed in mine or similar works must be superior to those a shorter time in practice.

A. 67.—The health of all my workers has been uniformly good, and during the late attack of cholera not one was affected.

A. 68.—No such thing appears to me at all necessary, as there is nothing injurious to health in either of my mills.

A. 69.—As I thought my concerns were subject to the provisions of the present Act, I have always conformed to the provisions of it to the best of my judgment.

A. 73, 74, 75, 76, &amp; 77.—I have never paid any attention to the affairs of the worthy proprietors of mills in my neighbourhood; and I would humbly suggest that the magistrates are the only persons competent to answer these questions, and I am happy that I can answer them in the way I have done, as I consider them, to speak in the mildest terms, indelicate.

A. 78.—I consider the present Act calculated to answer every good purpose with honest and conscientious men, and with others I fear nothing will do.

A. 79.—I would recommend to leave our trade as it is, and not impose restrictions on us which others are free from.

13th June 1833.

JOHN M<sup>c</sup>CRACKEN.

No. 171.

F. Lepper & Co.

## ANSWERS of FRANCIS LEPPER &amp; Co., Lodge Road, near Belfast.

A. 1.—Near Belfast, county of Antrim, Lodge Road.

A. 2.—Spinning and manufacturing cotton.

A. 3.—One half of the mills in 1813, the remainder in 1824; began spinning first half in 1815, second half in 1825.

A. 4.—Two steam-engines, one of thirty-two horse power, Boulton and Watt, the other forty horse power, Peel and Williams; seventy-two horse power in all; tolerably regular as to power and driving.

A. 5.—Air-panes in the windows both back and front.

A. 6.—By the opening of the window-panes.

A. 7.—The workers generally regulate the air-panes to please themselves.

A. 8.—All.

A. 9.—They have places to hang up any additional clothing, such as cloaks, if they bring them. There is a place for washing their feet and hands. These liberties and places were established since the commencement of the works.

A. 10.—Nine years is the lowest we have had returns of; those so very young are usually employed and paid by the operatives, and most generally their own children; not any other trades.

A. 11.—We believe it is highly necessary for the operative spinners and stretchers, who employ and pay their own rove and slab piecers, and who generally have their own children or relations, who usually get a preference, and whose benefit it is to get them in as early as possible.

A. 12.—In our works we can find little difference.

A. 13.—We do not.

A. 15.—We have some girls who are orphans, who maintain themselves; they have no guardians.

A. 16.

A. 16.—We generally look after the morals of our workpeople, and are happy to give them advice.

A. 17.—We usually work our engines from twelve hours and a quarter to twelve hours and a half per day, but the workers seldom, upon an average, work more than about twelve hours.

A. 18.—The hours that the younger children work per day depend much upon their employers, most of whom have not more than eight hours actual work to do per day; we mean those employed as rove-piecers.

A. 19.—About thirteen hours and a quarter, or perhaps thirteen hours and a half in some cases, which was occasioned to make up loss of time, or preparatory.

A. 20.—We have not kept an exact account, but we suppose rather under three hundred and eleven days.

A. 21.—We kept no regular account of our time, but suppose we are under twelve hours per day, owing to our not commencing lighting up at the usual time, considering the state of the trade, that it was better both for our people and ourselves not to light up too early.

A. 22.—We usually work both engines together, unless some accident, and in that case we regulate them so that the one assists the other to work up lost time; by which means, in case of either losing time, by such arrangement it saves nearly the half of the time that is to be so wrought up.

A. 23.—We kept no account of the hours, but we never work on Saturdays after four o'clock, nor do we commence before half past five in summer and six in winter.

A. 24.—All the hands we actually employ ourselves are above twelve years of age, and whose duty it is to attend in their frames or cards during the mill-hours, but who can rest occasionally if required.

A. 25 & 26.—The day after Easter Sunday, called Easter Monday, from custom, has become a day of pleasure among the working class, and a time for the working people laying in a stock of new clothes; we generally, to give them larger pay, before that time run the engines from half an hour to an hour per day for fourteen to eighteen days before the time, so that on Easter Monday, although they do not work, or if they do it is only to ten o'clock, they get full pay; this the workpeople all know of. Such excess on such occasions seems to please our people, rather than keep them at work on such a particular day.

A. 27.—We have, about half an hour to an hour; this is several years since.

A. 28.—We consider that the cost of producing the given quantity is enhanced by the reducing the hours of work; for instance, if you can spin 100lbs. per hour, you will of course have 1,200lbs. in twelve hours, and if you reduce the hours of work to eleven hours you will have only 1,100lbs., so that the interest of capital, &c., will make your yarn stand much more per lb.

A. 29.—Not having had any thing to do with the like, we cannot give a sufficient answer.

A. 30.—Certainly, the shorter the hours the greater the expence of producing the article, referring to A. 28; we spin such a variety of numbers, it is more difficult for us to make out a table of the different expence, but no doubt you will get this information from persons always on one set of numbers.

A. 31.—We are of opinion that the work in our mill could not be done by relays of hands so well as by one set.

A. 32.—We never overwrought our children, nor more than either their parents or themselves said they were equal to, and we always observed that they were healthy, if otherwise we would not allow them into the works with our knowledge.

A. 33.—We did at one time for about nine or ten weeks; the reason was, we were starting new machinery; at such times there is generally great delay and loss of time to the working class; to save this, we chose the number of hands that would be required for the new machinery, and run as much of the old mill during the night as employed those hands that were waiting on the new; this gave the people something to live on till the new started; then we gave up the night-work; this arrangement gave the people general satisfaction and pleasure.

A. 34.—We consider it most for our advantage to work only one set of hands.

A. 35.—We do not consider it profitable for any spinning concern to be wrought day and night.

A. 36.—We consider that night-work is more injurious to the health and comforts of the working class, owing to many visiting during the day when they should be in bed; we also consider that it is bad for the masters; the machinery is not taken the same care of when two sets of hands are responsible, nor the work so good.

A. 37.—We consider that a further reduction of hours would be the means of reducing the workers wages. The master spinners of late have not been paid for the wear and tear of their machinery, without interest for the capital.

A. 38.—We usually work our rooms at rather below summer heat; there is nothing but damp and winds that is severe upon us; we may suppose our usual heat to be about 70°, or rather under it; there is a valve in each flat; the heat can be regulated by the workers themselves.

A. 39.—Where we dress by steam the heat is applied to dry the yarn, but is not felt by the workers, owing to the fans.

A. 40.—Three hands, one for each machine.

A. 48.—None, with the exception of a watchman, which we have always kept since the commencement of the establishment to give an alarm in case of fire or any sort of danger.

(APP.—A. 1.)

A. 49.

Antrim.

F. Lepper & Co.

Antrim.

F. Lepper & Co.

A. 49.—None.

A. 50.—By gas when we light up, in winter both morning and evening.

A. 51.—Air-panes, both sides of the room.

A. 52.—We consider the effects of night-work injurious to the habits of workers in general.

A. 53.—Prior to the Act of Parliament we were in the habit of giving three quarters of an hour to breakfast and the same to dinner; but when the Act passed regulating half an hour to breakfast and one hour to dinner, we tried it for a short time. Several of our people applied to us to go back to our usual hours of three quarters of an hour to each meal; indeed a few of our hands we observed did not look so well, and I inquired the cause, and was answered, they supposed the short time for breakfast, in consequence of which we returned back to three quarters of an hour to breakfast and the same to dinner ever since.

A. 54.—Generally all, or with the exception of a very few.

A. 55.—For the convenience of the workpeople alone, who usually are very poor women and girls, living at a distance and bringing their meat with them, who are allowed the use of fire to warm their meat.

A. 56.—We consider it is for the advantage of the workpeople to take their meals out of the factory, and better for their health. We seldom allow it, excepting on a very wet day, when they could not well leave without being wet, or when a solitary hand or two may have some particular work to do during meal-hours, or live at a very great distance from the works.

A. 57.—Our general practice is to complain to their parents or employers; if that does not answer, we impose a fine of 3*d.* or 6*d.* as the case may be, and if that does not answer we discharge the most refractory as an example; very few of these have occurred.

A. 58.—Not any.

A. 63.—We do not allow any punishments.

A. 65.—Many do; it is our orders to our watchman to inspect each of our houses once a week to see if clean, and if not to report the same to me, or in my absence to the manager, that the filth or effects may be immediately removed. We have a day and Sunday-school; attached thereto is a small library of religious books and tracts, and is frequently visited by clergymen, who either preach or give lectures in the evening after the works are stopped.

A. 66.—We consider there is a very great difference, so much so that we would not give employment to those who begin late in life unless we could not get another at present; we have none that we are aware of of that kind.

A. 67.—We have not observed any difference in our people for the last ten years, with the exception of what the number of years will make in all people; we consider our people more healthy than any other class of persons we know, whether it be on account of the high situation and the care we take of them or not.

A. 68.—We could not make much change in our hands, as the places are separately learned; there is not any as to danger or injurious process in any part of our works.

A. 69.—It is.

A. 70.—Never.

A. 73.—We really know very little, so we may say nothing of our neighbours arrangements.

A. 75.—We never heard that any had.

A. 77.—We do not think ours would; but we must do them the justice to say that we think we live in such friendship generally with them that there is not any cause on either side.

A. 78.—We consider that the best mode of obtaining obedience is by a mutual good understanding between workman and master, and a good example by master and managers, &c.; and when men of bad character get into such works, get rid of them as soon as possible, marking the children who do well as well as those who do wrong.

A. 79.—Where the works are managed properly the least possible interference the better; the children in our mills we consider better off than at home; for example, we are obliged to lock the mill-door to keep them out at meal-hours, for the moment they swallow their meal, which they do in a very short time, if they could get back into the mill they would. We do suppose upon an average such little ones have not more than from eight hours or perhaps nine per day, as already stated, namely, in the morning when they come in, if the creels are full, they frequently pop down and sleep until they are required, which will be only for about twenty minutes at a time, and can repeat the like; a good deal depends on the operative who employs them.

FRANCIS LEPPER &amp; Co.

No. 172.

John Mathews.

## ANSWERS of JOHN MATHEWS, Belfast.

A. 1.—Town of Belfast, county of Antrim.

A. 2.—Cotton-spinning.

A. 3.—Don't know when the building was erected; believe it has been used as a cotton-mill for the last four years; we have only had it since January last.

A. 4.—Steam.

A. 5.—Ventilation in the windows.

A. 6.—Opening ventilation in windows.

A. 7.

A. 7.—At the discretion of all.

A. 8.—Fenced off.

A. 9.—None.

A. 10.—The lowest age we have employed is ten years; don't know if they have been occupied previously or no.

A. 11.—A very small portion of our work requires.

A. 12.—Cannot say, not being long enough spinners.

A. 13.—No.

A. 17 & 18.—Fourteen hours; out of this one hour and a half allowed for meals.

A. 19.—Since we commenced in January last we have sometimes wrought one hour additional.

A. 20 & 21.—Not in the business last year.

A. 22.—All carried on at once.

A. 23.—During our time about thirteen hours; out of this one hour and a half for meals are allowed.

A. 24.—During our time fifteen hours; short of this, one hour and a half for meals.

A. 25.—Before Easter Monday one hour each day to make up for that holiday, and about a month an hour each day over our usual time whilst we required an additional quantity of yarn.

A. 26.—It is avoidable.

A. 28.—The time we worked extra was so short, we never went into calculation.

A. 29.—Our inducement was, being in want of the yarn.

A. 31.—When a quantity of extra hours each day are required, we think a set of hands extra would be necessary.

A. 32.—We never tried it, working so few extra hours.

A. 33.—Don't work at night.

A. 37.—Could give no opinion.

A. 38.—Don't keep a thermometer.

A. 41.—We are only working since January.

A. 42.—Don't work at night.

A. 50.—In winter by gas, only till eight o'clock in the evening; no work at night.

A. 51.—Ventilators in windows.

A. 52.—Don't work all night.

A. 53.—Three quarters of an hour for breakfast, and the same for dinner.

A. 54.—All except one or two, and they stop for their own convenience, except the fireman.

A. 57.—We caution them.

A. 58.—No.

A. 63.—No instructions given.

A. 64.—None.

A. 65.—There are three persons; the carding-master and his son, and one girl who lives with her parents; we exercise no control.

A. 66.—Not long enough in spinning to form an opinion.

A. 69.—Don't know.

14th June 1833.

JOHN MATHEWS.

Antrim.

John Mathews.

#### ANSWERS of JOSEPH STEVENSON, Springfield, Belfast.

No. 173.

Joseph Stevenson.

A. 1.—County of Antrim, parish of Belfast, about one mile from Belfast on Falls Road.

A. 2.—Water-twist.

A. 3.—First mill was built in 1791, burned in April 1820; front mill built in 1821, at work 1822; back part of present building in 1824, at work in 1825.

A. 4.—By a water-wheel and two steam-engines united in one power, which is regular; eighty or ninety horse power.

A. 5.—By sashes, letting down six or eight inches in front and rear.

A. 6.—By opening windows.

A. 7.—By the overlooker or workers at pleasure.

A. 8.—All fenced off which is deemed necessary.

A. 9.—Rails with hooks for workers clothes, spring-water in the yard when they chance to require it for washing, a well-constructed water-closet in every room, when the works were first set on.

A. 10.—Nine years is the lowest, to our knowledge.

A. 11.—Yes; from experience it is found that children at nine learn fully as quick, if not more so, and are better workers, than when advanced. Beside, they are learning their business at small wages at that early period, when they are nearly useless at home; and when they arrive at eleven or twelve they get good wages in place of commencing at low.

A. 12.—Little change in water-twist spinning.

A. 13.—None.

A. 15.—Some there are who lodge in the houses of other workers.

A. 16.—Very little but what their employers family give them.

A. 17.—Twelve hours.

(APP.—A. 1.)

G g 3

A. 19.

Antrim.

Joseph Stevenson.

A. 19.—About thirteen or thirteen hours and a quarter, but that very seldom.

A. 20.—Every working day, except Christmas or Easter Monday, unless when an accident occurs in the machinery.

A. 21.—Three thousand seven hundred and fifty-seven by regulator, being thirteen hours over usual time on account of Easter Monday.

A. 22.—When preparations accumulate, a carding-room will be stopped by a chance time, perhaps a quarter of a day.

A. 23.—Twelve hours per day; the cause of the number of hours during last year being more than that was, Easter Monday took place the 8th of April, and time was gained for that, by which the workers were paid for that day.

A. 25.—From accidents or breaks-down of machinery, and for holidays.

A. 26.—It is only avoidable by loss of wages to the workers and loss to the proprietor.

A. 27.—In November 1825 reduced from twelve hours and a half to twelve.

A. 28.—It certainly is.

A. 29.—Never knew of the hands in a mill working day and night; when extra are worked it is for mutual advantage to spinner and employer.

A. 30.—Great increase, nearly to the reduction of time worked in a water-twist mill; for instance, reduce the hours from twelve to ten, which would cause the produce to cost very nearly one sixth more, although the wages of the workers were reduced one third, which would be the case was such a restriction to be enforced.

A. 31.—The first objection would be, nearly starvation of the children, having to employ two sets of hands to do one set's work; great injury to the children, in giving them idle habits; keeping them long at low wages, perhaps three times, and most probably never would be good workers.

A. 32.—Never heard of the like; not required for any chance working extra hours, and in many situations not to be obtained.

A. 33.—Never.

A. 34.—Day-work is better done than at night.

A. 36.—Having never worked all night, cannot say; but two mills worked by day would be preferable to day and night in one.

A. 37.—Nearly a prohibition to export of cotton-yarn and goods to the continent of Europe and the United States of America, where rapid progress is making in almost all branches of the cotton manufacture, where there are no restrictive laws to cramp industry, no import duty on the raw material, but all as free as light.

A. 38.—From seventy to eighty, often below seventy, about sixty.

A. 39.—Sixty-five to seventy.

A. 40.—That depends on the extent of the works; here there are three hundred and thirty-seven.

A. 41.—Never work all night.

A. 42.—None.

A. 43.—Never work at night, only in the evening until the regular hours are made up.

A. 44, 45, & 46.—None.

A. 47.—Twelve hours.

A. 48.—From nine to sixty, men, women, and children, but the great proportion of girls from nine to twenty.

A. 49.—The production of quantity; for reduce the time of producing, and an increase of cost takes place, which would destroy the export.

A. 50.—By gas made from rosin alone.

A. 51.—Same as by day.

A. 52.—Not having night, cannot say.

A. 53.—Half hour at breakfast, three quarters to dinner.

A. 54, 55, & 56.—All except one day in the week, when sixteen boys clean and grease shafts and large wheels; that cannot be done when the machinery is at work.

A. 57.—Fines, dismissal, sometimes for two, three, or four days a week, or more, or discharged. All fines are given to the fever hospital.

A. 58.—Very rarely and very light.

A. 62.—Seldom or ever had occasion, from the slight manner it is administered.

A. 63.—None.

A. 64.—Never at any period for forty years and upwards.

A. 65.—Three hundred and five of the workers reside on the premises, thirty-two in the neighbourhood; in all, three hundred and thirty-seven. Much attention is given to domestic cleanliness, moral conduct, and correctness of behaviour; to promote which a day, evening, and Sunday school is kept, equal to contain upwards of two hundred and fifty scholars; during the day children younger than what are employed in the mill are taught. In summer evenings between fifty and sixty boys and as many girls (workers in the mill) are instructed in writing and arithmetic, free of charge. In winter a class of boys attend, for which they pay the schoolmaster a small sum. On Sundays a well-attended school from two hundred to two hundred and thirty boys and girls, nearly all workers, are instructed in suitable books until they can begin with their New and Old Testaments, which they continue at until they leave the school, no matter what their religion is. There are thirty-three teachers, who are indefatigable in their care and attention to their flock; they belong to the place, and their conduct is most exemplary.

A. 66.—Persons when taught young always make the best workers.

A. 67.

A. 67.—Not aware of any deterioration in the health of the people; if any change, the reverse; their dwellings are in a very healthy, pleasant, airy situation; cleanliness is much attended to in houses, persons, and clothing. A medical gentleman of much experience attends on any of them at their houses when they are unable to go to him, who supplies them with medicine and advice free of expence to them. As one proof of the healthiness of the place and the people, not an individual of the establishment was afflicted with cholera when it was raging in the neighbourhood; much owing to the people refraining from going to town but when absolutely necessary, conforming strictly to the orders given them.

A. 68.—Sometimes it is done, but seldom necessary; and when, mostly from twenty years of age and upwards.

A. 69.—Supposed so.

A. 74.—Never knew an instance but one.

A. 76.—Evidence was not required.

A. 77.—Not easily knowing, when only one information has been lodged.

A. 78.—Let manufacturers, as commerce, be free from compulsory laws, and they will work better than with all the restrictions that can be heaped on them.

5th June 1833.

JOSEPH STEVENSON.

Antrim.

Joseph Stevenson.

A N S W E R S.

WRITTEN ANSWERS received to the QUERIES.

---

DEVONSHIRE.

ANSWERS of AMBROSE BREWIN jun., Tiverton.

- A. 1.—The lace manufactory is situated at Tiverton in the county of Devon.
- A. 2.—The manufacture, bleaching, and finishing of lace, and the preparation of cotton and silk for the same, with the auxiliaries of a foundry, machine-making, and gas works.
- A. 3.—The principal building was erected in 1791; other additions have been made at various times within the last sixteen years.
- A. 4.—The principal dependence is upon a water-wheel of one hundred horse power; during the summer the supply of water is generally short, sometimes to the extent of fifty horse power; part of this deficiency is made up by a steam-engine of twenty-five horse power.
- A. 5.—Ventilation is effected by the upper part of the windows being hung horizontally on pivots, by which the air is allowed to escape without the wind blowing in.
- A. 6.—As stated above, on a partial opening of the windows.
- A. 7.—The ventilation is at the discretion of the workpeople, subject to the control of the overlookers in case of disputes between them.
- A. 8.—The upright shafts, which are considered the most dangerous, are all guarded.
- A. 9.—Care is taken that the children are sent to their work as clean and well clad as possible, and in the rooms where the females work there is a constant supply of water for washing themselves, and places appointed to hang up their cloaks, shawls, &c., which are delivered to them before leaving the rooms. There are water-closets in each room where the females work which are not accessible to others.
- A. 10.—Ten is the age under which children are not (knowingly) employed. Few, if any of them, have been previously at any other trade.
- A. 11.—Not necessarily; they are employed under that age chiefly at the request of their parents, and with a view of affording them pecuniary assistance, as they are principally the children of men working in or about the mill.
- A. 12.—Rather fewer.
- A. 13.—None, except two parish apprentices, who were bound on the proprietor against his will, and who are employed at wages by agreement with themselves and parents.
- A. 14.—The parish of Tiverton.
- A. 15 & 16.—No children are lodged or maintained by the proprietor; they chiefly live at home with their parents or relations; and those who have none resident lodge with other families.
- A. 17.—Eleven clear hours.
- A. 18.—Those employed in manufacturing lace eleven hours, those in twisting cotton twelve hours.
- A. 19.—The lace-machines have been worked fourteen hours per day for thirteen days, but no persons have worked more than twelve hours.
- A. 20.—Three hundred and eleven.
- A. 21.—The lace-machines four thousand and thirteen, the doubling-frames three thousand eight hundred and seventy-five.
- A. 22.—The lace-making has been all carried on between six in the morning and eight at night, other works between six and seven, except the doubling, which has been worked sixty-nine times at night.
- A. 23.—Twelve hours fifty-one minutes and a half, *i. e.* the machinery, but not the work-people; it is impossible to state the average hours during which they have been employed.
- A. 24.—Twelve hours.

*A. Brewin jun.*

---

Devonshire.

*A. Brewin jun.*

A. 25.—The lace-machines were worked one hour per day extra for thirteen days, to make up a day lost in the summer; the doubling-rooms were worked sixty-nine times by night between April 10th and August 17th, from not having water to work them by day.

A. 26.—In case of interruptions from shortness of water or other causes, if the time was not made up the workpeople would lose their wages; and in some cases, by reason of a small number of children not being allowed to work extra hours, the whole number of people employed would be at times unable to work.

A. 27.—Formerly part of the works were kept on a greater number of hours by means of two sets of workpeople.

A. 28.—The present hours of work are satisfactory both to the proprietor and workpeople.

A. 31.—If it were desired to work a much greater number of hours permanently, relays of two sets of children would not be objectionable but desirable.

A. 32, 33, & 34.—Many years since two sets of hands were employed, one by night and the other by day, but that has long since been discontinued.

A. 35.—Night-work is only practised in the gas-works, except as regards a proportionately small part, when from want of water they cannot all be employed in the day-time.

A. 36.—In case of such a shortness of water as will only admit a part of the work to be in operation in the day-time, the prohibition of night-work would deprive the workpeople thus prohibited from earning a livelihood, and would frequently cause a large additional number to be unable to work in consequence of the machinery standing still.

A. 37.—Generally a lessened production at an increased cost. As regards the lace trade in particular, the proprietors of power-machines (which are worked in factories) would be placed in a very injurious and unfair position as regards the owners of hand-machines. The latter compose four fifths of the trade, and being worked chiefly in private dwelling houses can (if not subject to the proposed Act) be worked all hours, and thus supply the trade at their own discretion, so as to glut the market, whilst the power manufacturers, without reaping any advantage from an active state of trade, must afterwards suffer all the evils of an overstocked market.

A. 38.—No temperature is required in these works beyond what conduces to the comfort of the people, except the dressing-rooms, where no children are employed.

A. 39.—The dressing-rooms require a heat of from 70° to 80°; but, as before stated, no children are employed therein.

A. 40.—About twenty.

A. 41.—Some one or other of the twisting-ooms have been worked sixty-nine nights, part at a time, when from want of water they could not be worked in the day-time.

A. 42.—Seventy-six under eighteen years of age.

A. 43.—Eleven hours, allowing thereout one hour for rest.

A. 44.—Sixty-eight under eighteen years of age.

A. 45.—From seven in the evening until six in the morning, whilst the other machinery was standing.

A. 46.—The gas works.

A. 47.—They are never entirely suspended.

A. 48.—Three men of the ages of thirty-five, forty, and fifty-three, of whom one only is employed at night.

A. 49.—This, as regards the gas works, is too notorious to require explanation.

A. 50.—By gas.

A. 51.—The same as by day.

A. 52.—The effects of night-work are injurious (to young people especially) in a moral point of view, and is only adopted here as a lesser evil than their being without work, and particularly when a great number of people would also be idle who depend upon the produce of this work for their employment in subsequent stages of the manufacture.

A. 53.—All except those employed in twisting cotton leave the mill for half an hour at breakfast, an hour at dinner, and half an hour at tea; the twistors take their breakfast and tea in the mill.

A. 55.—The reasons why the twistors do not go out are to avoid coming earlier or staying later without working less time, and that it would be very inconvenient to stop these machines, which take much power, for half an hour only, on account of the overflow of water. With the lace-machines which have each a man and boy, this difficulty does not exist.

A. 57.—By reprimand, fine, or discharge.

A. 58.—Corporal punishments are forbidden, except as below.

A. 59.—In some few cases the overlookers have, by desire of their parents, punished sturdy and rude boys.

A. 60.—Only as stated in the last and following answers.

A. 61.—In some few instances, at the request of the parents, who from infirmity or other causes were incapable of correcting their boys themselves, the overlookers have been permitted to administer a moderate chastisement; but even these requests on the part of parents have been generally refused.

A. 62.—Whenever it has come to the knowledge of the proprietor that corporal punishment has been inflicted (except as above) he has expressed his disapprobation, and forbidden a repetition.

A. 63.—No instructions have been given, except as stated in former answers; as a general rule, corporal punishments are forbidden.

A. 64.

A. 64.—No complaints have been made or proceedings taken before magistrates on these subjects, but in some instances complaints have been made to the proprietor, who, upon inquiry, has done justice between the parties to the best of his judgment.

A. 65.—A small part of the workpeople inhabit houses belonging to the proprietor, but no interference is exercised in their domestic arrangements.

A. 66.—Those who have been employed from an early age are far more skilful, make more and better work, and earn more money than others who have learnt as adults; but in a list containing between eight and nine hundred names it would be very difficult to particularize.

A. 67.—Within the last ten years the health of the workpeople has decidedly improved; cannot state any particular evidence, but believe it is an undoubted fact. The cause is believed to be (at least in part) the people being more habituated to the employment. Formerly many adults were employed who had been accustomed to out-door work, and the change had an injurious effect on their healths.

A. 68.—There is seldom any occasion to change the employment of the workpeople; if, when first employed, they are found unfit for their work, which sometimes happens, from defective sight or other causes, they are recommended to take up some other employment.

A. 69.—As a lace manufactory it is not subject to the present Act.

A. 70 to 78.—As these questions relate to mills under the present Act, the last answer will show that they do not apply to this manufactory; and it is not known that there are any mills or factories in this or the adjoining counties which are subject to the present Act.

## GLOUCESTERSHIRE.

Gloucestershire.

### ANSWERS of DANIEL COX, Chalford.

No. 2.

Daniel Cox.

A. 1.—Chalford, in the parish of Bisley, county of Gloucester.

A. 2.—Woollen cloth for the East India Company.

A. 3.—No additions have been made to the buildings in the last thirty years. I have no means to ascertain when first employed, but suppose it has been a fulling-mill for one hundred and fifty years.

A. 4.—Water-power, very irregular; not one tenth as much water in the summer as in the winter. Average power about twelve horses.

A. 5 & 6.—The rooms are large and airy, but no means of ventilation otherwise than the opening of windows.

A. 7.—At the discretion of those employed.

A. 8.—Yes, to the best of my judgment, without making danger more dangerous.

A. 9.—The workpeople in the winter months have access to the stoves for drying, that are detached from the mill, temperature about eighty degrees, where they can change their clothes if wet by rain on coming to work; males to the cloth stove, females to the wool stove.

A. 10.—About nine years. They are generally introduced by and work under their parents.

A. 11.—Yes; the process of piecing can be performed with more ease by children about the stature at which they arrive from nine to twelve years than later.

A. 12.—No; there has been no alteration in the machinery used by me in the last thirty years, which employs children under twelve years of age.

A. 13.—No.

A. 15.—There are a few who reside with relations.

A. 16.—By the relations, not by the master.

A. 17.—The day process of spinning, ten hours; the continuous process of fulling and raising twenty hours, by two sets of hands.

A. 18.—Ten hours; no difference.

A. 19.—The spinning department may have been employed thirteen hours, to regain the time lost any preceding day in repairing the works.

A. 20.—Sundays and holidays excepted, I do not know of its being entirely closed.

A. 21.—Cannot say.

A. 23.—Not more than eight in the spinning department, twelve in the fulling.

A. 26.—It has seldom occurred to me of late years to require any excess of the hours of labour in the spinning-department, because there have been so many mills but partially employed, I have always had recourse to their assistance.

A. 27.—Not during the last three years.

A. 29.—I do not know of any inducement to keep children at work through the night, after being employed all the preceding day.

A. 30.—No; ours is all paid by the piece; therefore, if a less quantity is done, a less sum is paid; the loss is only in the loss of the water-power, which occurs every summer, and this casualty is considered in the rent.

(APP.—B. 1.)

A 2

A. 31.

Gloucestershire.

Daniel Cox.

- A. 31.—None.
- A. 32.—Yes, in the fulling-department always.
- A. 33.—Yes, one man, and one boy about fourteen, to each set of stocks and to each gig-mill. I work two sets of stocks and two gig-mills.
- A. 34.—None.
- A. 35.—Change.
- A. 36 & 37.—A restriction on the fulling and raising departments from work at night would reduce the produce one third, and lessen the value of premises in a similar proportion.
- A. 38.—Atmospherical.
- A. 39.—The process of drying in the winter months about 80°.
- A. 40.—Three.
- A. 41.—In fulling and raising five nights in every week.
- A. 42.—None under twelve years of age.
- A. 43.—Ten.
- A. 45.—Seven to seven; two hours for meals.
- A. 46.—Yes, fulling and raising, the meals are taken the process going on, the millman relieving the rougher.
- A. 47.—Some cloths will full in fifteen hours, others, some twenty, thirty, and, if checked in the process, it may require one hundred.
- A. 48.—Adults, and boys of fourteen and upwards.
- A. 50.—Candles.
- A. 51.—Similar to the day.
- A. 52.—I discover none.
- A. 53.—One hour breakfast, one hour dinner.
- A. 54.—As they think proper.
- A. 57.—Dismissal.
- A. 65.—In cottages detached from the manufactory, and not generally belonging to the master.
- A. 66.—I consider those who have been initiated in the primary processes make the best workpeople, but I have no means of reference to any particular case; I am not aware there is an individual in my employment who has not been reared in the manufacturing employment.
- A. 67.—Much the same; but if provisions had been cheaper, and the temptation of the beer-shops withheld, I think the younger branches would have been better fed.
- A. 68.—No injurious process.
- A. 69.—Not that I know of.
- A. 77.—No.
- A. 78.—I do not think any legislative provision necessary, except the repeal of the present corn laws. Ameliorate the condition of the workpeople by allowing them to buy cheap food, and parental feelings will operate to prevent children being forced to work too much. The present destitution of some of this class is great, caused by the produce of their labour being in competition with that of mechanics in other countries where food is one third the price; this has reduced the wages here, while the high or war price of provisions has been continued, and compels parents to send children of tender age to eight or ten hours daily labour; but if you restrict the free exercise of labour without repealing the restrictions on the free importation of corn, I fear that thousands of children will perish with hunger.

DANIEL COX.

No. 3.

Messrs. Davis.

## ANSWERS of Messrs. DAVIS &amp; Co., Chalford.

- A. 1.—Chalford, in the parishes of Besley, Hampton, and Salperton, and county of Gloucester.
- A. 2.—Manufacture of broad-cloths, and dyeing the same.
- A. 3.—One factory built about seventeen years, one twenty years, one thirty years and upwards, one eighteen years, and dye-house four years; employed wholly as above.
- A. 4.—Water-power, about thirty-six horse; steam-power about twenty-four horse; causes of irregularity sometimes for want of employment, and sometimes out of order.
- A. 5.—None.
- A. 6.—There are windows in all the rooms, which may be opened at the convenience of the people working therein.
- A. 7.—The workpeople are at liberty to open the windows for ventilation as they please.
- A. 8.—They are.
- A. 9.—They may wash and dress and undress if they please.
- A. 10.—About seven years, and not otherwise employed previous to their coming to the factory.

A. 11.

A. 11.—It does, but the nature of the work is so simple and easy that it could not injure the health of a child of the most tender years.

A. 12.—Not that we are aware of.

A. 13.—No.

A. 15.—They come from their parents in the morning, and return to their protection in the evening.

A. 16.—Their parents only.

A. 17 & 18.—About ten hours.

A. 19.—Not more than twelve hours, except when the machinery has been retarded by accident, or in time of short water, when the millmen or fullers of cloth sometimes work at night.

A. 20.—Every day in the year, except Sundays, Christmas-day, and the Fast-day.

A. 23.—I should suppose from six to eight hours per day, but cannot tell exactly.

A. 24.—We are not aware of any child's working more than ten hours in any one day last year.

A. 25.—When we have a good trade and plenty of orders, but which has not been the case for some years past.

A. 26.—Not having occasion, cannot tell.

A. 27.—Some five or six years ago we have worked more hours than at present.

A. 28.—Not in the least.

A. 29.—Never having caused children or adults to work through the night, cannot tell what may induce other manufacturers to do so.

A. 31.—We cannot see why there should be any objection.

A. 32.—We never tried the experiment.

A. 34.—Never had occasion to employ more than one set of hands, therefore had no recourse to working at night.

A. 36.—In the milling or fulling of cloth, which in that process occupies from ten to twelve hours, which if stopped during that process would be injurious to the texture of the cloth, and could not be afterwards recovered.

A. 37.—Our opinion is, that the hours of working are at present too much reduced for want of more trade.

A. 38.—The temperature of the atmosphere, winter and summer.

A. 39.—Not any particular degree of heat required.

A. 46.—The milling only (see A. 36.), which often requires the whole of the twenty-four hours, except meal-times.

A. 47.—In the night.

A. 48.—From fourteen years to fifty and sixty.

A. 50.—Some with candles, and others with oil.

A. 51.—By opening the doors and windows.

A. 52.—Are not aware that it produces any different effect.

A. 53.—One hour at breakfast and one hour at dinner, but very often exceeded.

A. 54.—Not controlled, they may dine where they please.

A. 55.—For the convenience of the operatives.

A. 57.—Dismiss them at once.

A. 58.—No.

A. 65.—Some of the workpeople live in houses of their masters, but not generally so. The houses of a great proportion of the working-classes were visited last year by their masters and others, who caused them to be whitewashed and cleaned, to keep off the cholera morbus.

A. 66.—Of course those who have been bred up from their infancy to the business are generally the most easy taught, and make the best servants.

A. 67.—Do not know any difference in the health of the working-people for the last twenty years.

A. 68.—We select those whom we consider most competent to fulfil the different occupations.

A. 69.—We do not consider our mills subject to the Act.

A. 73.—We are not aware of any Act of Parliament to which our mills in this neighbourhood are subject.

A. 74.—Never to our knowledge.

A. 77.—Never knew any one instance of the kind.

A. 78.—We do not see how any improvement can be effected.

9th May 1833.

HANDY DAVIS.  
JESSE DAVIS.

Gloucestershire.

No. 4.

S. &amp; W. Long.

## ANSWERS of S. and W. LONG, Charfield.

- A. 1.—Parish of Charfield, county of Gloucester.
- A. 2.—The manufacture of superfine broad-cloths and cassimeres.
- A. 3.—First building 1813, second 1826, third 1829; all have been employed since their erection for their present purpose.
- A. 4.—First building all by steam (twenty horse engine), except two gig-mills, which are driven by water; second entirely by water; third entirely by steam (thirty-six horse engine). The water-power of the second building and part of the first equal to about twenty-five horse-power in the summer, but it is very irregular; the water-power is greater in the winter, perhaps equal to fifty horse power, but even then irregular, from floods.
- A. 5.—Casements in every room, by which the fresh air passes through them.
- A. 6.—On the opening of windows.
- A. 7.—At the discretion of all who feel the need of air.
- A. 8.—All we consider dangerous are fenced off, but probably a person unacquainted with factories may consider some parts dangerous that are not fenced off.
- A. 9.—We consider the works and workshops healthy, so that nothing of the sort is needed, unless for a few, perhaps six men and boys that are employed in a drying-stove in the winter season; these have the convenience of changing their clothes when they think it needful.
- A. 10.—About nine years.
- A. 11.—Yes, because they do not require so much wages, and in many instances a child at eight or nine years is equally capable of the work as one at twelve years of age, as it requires attention only, and is not laborious.
- A. 12.—It has made scarcely any difference with us.
- A. 13.—At present have not one.
- A. 15.—None lodged or maintained, as all come from and return to their parents or guardians daily.
- A. 17.—Spinners generally from six in the morning till seven in the evening, with two hours for meals out, leaving eleven hours daily. Persons employed in finishing goods vary from twelve to sixteen hours, and occasionally all night; they are always paid for over-time, and many of them work by the piece.
- A. 18.—Many from the age of twelve to twenty-one are employed in finishing goods as above, who are paid by the piece or by the hour for over-time.
- A. 19, 20, & 21.—No account having been kept it is impossible to reply to these queries correctly. On an emergency some part in finishing goods have been kept on the whole twenty-four hours, but entirely optional to the workmen.
- A. 22, 23, & 24.—Impossible to answer this unless an account had been kept during the year; and as most work by the piece, it was not needful.
- A. 25.—Cannot state the time; but the circumstances, brisk demand for goods.
- A. 26.—Certainly not, unless we could foresee for six months prior that the demand would be brisk, or relinquish an order when a given time only was allowed, for instance, the sailing of a vessel, &c.
- A. 27.—Yes.
- A. 28.—Most certainly it is.
- A. 29.—Sometimes for want of power, and at others to get the goods ready by a certain time for the market.
- A. 30.—Yes, in the finishing, when we have a given quantity to finish in a certain time, our old hands, by working extra hours, would accomplish it gladly; whereas if we put in others for a short time, we should run much risk of having the goods damaged; and of course if we employ a man only occasionally he will expect more wages; besides it is sometimes impossible to get hands in this way: this refers only to the finishing the goods, and we never want to employ children under twelve years of age in this work.
- A. 32.—We have never found but the children we employ were fully equal to their work.
- A. 33.—Of late years we have not, but when our power was more limited we had a set of hands to work at the gig-mills in dressing cloths alternately, twelve hours on and twelve hours off.
- A. 34.—The only reason that could induce a person to employ two sets of hands might arise from want of power, and a demand for goods, when it would be needful to keep his machinery continually at work, and two sets of hands must be had to do this.
- A. 35.—Formerly when we employed two sets of hands for dressing goods, they took it alternately; the set that worked one week by day worked the next week by night.
- A. 36.—Very injurious at times, in rendering it impossible to accept of contracts for goods required in a limited time; also after contracts were made, in case of any stoppage from accidents in machinery, it would be quite impossible to fulfil them without working by night.
- A. 37.—In a time of demand it would be impossible to execute orders to the extent required; also unless a price could be obtained to enable the master to give the same wages for a less number of hours, the workman would be greatly injured, and we believe ours would be equally dissatisfied.
- A. 38, 39, & 40.—No particular heat is required for any of the works above the natural temperature; but there are two rooms in the first building near the steam-engine, in which about fifteen men and boys are employed, that are certainly warmer; also the drying-stove spoken of in A. 9.

A. 41, 42, 43, 44, & 45.—Cannot say, having kept no account, but have not worked during the whole of the night for the last year or more, except at the process called fulling, although we have worked late in finishing goods for pressing orders.

Gloucestershire.

A. 46.—No process in which our goods would absolutely spoil if stopped for a few hours, but the fulling and dressing take the longest time, and are more essential to be continued than any other.

S. &amp; W. Long.

A. 47.—Various, depending on the sort or kind of goods.

A. 48.—Men, and boys above twelve years of age.

A. 49.—Because the goods in fulling and dressing acquire a certain heat, and require to be kept in season, which is checked in stoppage, in some instances with damage to the goods.

A. 50.—By lamps and candles.

A. 51.—The windows.

A. 52.—We have never observed any ill effects on the persons who have been employed by us during the night.

A. 53.—Two hours a day; one for breakfast, from eight to nine o'clock, and one for dinner, from one to two o'clock; those who work by the piece or pound use their own inclination.

A. 54.—Being in a country place, not many leave the premises.

A. 55.—Solely for the convenience of the workpeople.

A. 56.—Inconvenient for them, as they would have some distance to walk.

A. 57.—When disobedient we generally discharge them.

A. 58.—They have been occasionally.

A. 59.—Usually by the person aggrieved.

A. 60.—Yes; though rarely.

A. 61.—Yes, when we have deemed it absolutely necessary for the correction of the person, and to prevent ourselves from further damage; but only for such as careless neglect, wilful mischief, or gross immorality, have we sanctioned such punishment.

A. 62.—Yes, when we have considered that children have been punished undeservingly.

A. 63.—No particular instructions ever given.

A. 64.—Never any that we remember during twenty-seven years, as it respects ourselves, although we have often had occasion to correct them; but about eighteen months ago an overlooker flogged a boy who had thrown maliciously a piece of iron at a man's head for being corrected by him, and was summoned before a magistrate by the mother of the lad, but made it up with her, and the lad returned to work again.

A. 65.—Very few; and those we have no control over, but as it respects their work.

A. 66.—We always find that those who have been employed in the trade from their infancy are preferable as workmen to those who come at later periods.

A. 67.—Are not aware of any difference; we consider our people generally healthy.

A. 68.—Yes, of the boys employed in the stove during the winter season, spoken of in A. 9.

A. 69.—No.

A. 77.—Can only speak of our own, and should say most certainly not.

A. 78.—Should say that our neighbouring magistrates are quite sufficient for this purpose, in any case of complaint, without further legislation.

A. 79.—We think the Factory Bill a most absurd thing in the west of England, undoubtedly the parents are best able to judge at what age a child is capable to work, and also what work he is able to do; and in case of any ill-treatment the magistrates are always accessible; and why should the legislature interfere with our manufacture more than with mining or any other labour?

S. &amp; W. LONG.

## ANSWERS of JOHN HOWARD, Dursley.

No. 5.

John Howard.

A. 1.—Dursley, in the county of Gloucester.

A. 2.—Superfine woollen cloth.

A. 3.—Erected about fifty years.

A. 4.—Water-power, very irregular.

A. 5.—Windows, doors, and fire-place on each floor.

A. 7.—By the foreman, or any persons employed in the room.

A. 8.—All parts considered dangerous have a fence.

A. 9.—The health and cleanliness of the workpeople render such arrangements unnecessary.

A. 10.—Six years.

A. 11.—Children under twelve years of age may be advantageously employed.

A. 13.—No.

A. 17.—Eleven hours when well supplied with water.

A. 19.—Fulling and gig mills thirteen hours and a half.

A. 22.—Work when supplied with water.

A. 23.—Eight hours.

A. 24.—Eleven hours.

A. 25.—Children never exceed eleven hours.

A. 27.—No.

(APP.—B. 1.)

A 4

A. 37.

Gloucestershire.

John Howard.

A. 37.—The wages of the workman and the profits of the manufacturer would be reduced in proportion to the decreased hours of labour, which would deprive the former of his present domestic comforts, and his idle hours would probably be spent in the beer-houses, to the injury of his morals, and the ruin of himself and family.

A. 38.—Atmospherical temperature is at all times sufficient.

A. 53.—From eight to nine, and from one to two.

A. 54.—All leave the factory at meal-hours.

A. 57.—Kind treatment is generally sufficient, but upon extraordinary disobedience a small switch is used by the foreman or parent.

A. 64.—No such complaints have been made.

A. 65.—We have no cottages occupied by the workpeople.

A. 67.—The general health of the workpeople is good.

A. 68.—There is no branch of the trade injurious to health.

A. 69.—We know of no Act to which woollen factories are subjected at the present day.

A. 79.—Parents are the only proper persons to regulate the hours of work for their children.

JOHN HOWARD.

No. 6.

J. F. Marling.

## ANSWERS of JOHN FIGGINS MARLING, Ebley.

A. 1.—Ebley Mills, in the parish of Stonehouse, in the county of Gloucester.

A. 2.—Washing, drying, willeying, picking, scribbling, and carding wool; spinning warp, and abb yarn; spooling, warping, fining yarn; quilling, weaving, fulling, burling, dressing, and finishing superfine cloths and kerseymeres.

A. 3.—The principal building erected in 1818; first used in 1825. The other buildings erected for the most part about 1800; first used for their present purpose in 1829.

A. 4.—Power employed in the principal building only water; irregular in the summer months; sometimes no water until near noon; power of the mill about eighty horses.

A. 5.—Sash windows on each side of the building, which admit a proper circulation of fresh air.

A. 6.—Depends on the sashes being lifted up.

A. 7.—The sashes are lifted, as occasion requires, by any of the persons employed in the respective rooms.

A. 8.—All the dangerous parts of the machinery are fenced off.

A. 9.—I consider that every part of my manufactory is healthy; it is not found necessary to change their clothing on entering or leaving their work further than the difference persons feel it necessary to make in leaving a dwelling house to go the distance between their homes and the mills, which depends chiefly on the season of the year and the state of the weather.

A. 10.—The youngest children employed here are of the age of seven years, and when employed so young have seldom been previously employed at any other trade.

A. 11.—Taking away and joining rollers after carding requires children under twelve years of age, as they have only to carry half an ounce weight, and join the rollers of about the twentieth of an ounce each, and the older children have a great objection to this light work.

A. 12.—There have been no alterations in the machinery here which have affected the number of children employed under the age of twelve years.

A. 13.—No apprentices are employed here.

A. 15.—There are some orphans employed here, who all live with their relations or friends, and are sent here to obtain the means necessary for their support.

A. 17.—Chiefly the adults are employed ten hours and a half, but, as the trade may require, they work twelve or fourteen hours per day.

A. 18.—Persons of the age of fourteen and upwards are occasionally employed twelve or fourteen hours, but those under fourteen years are not employed more than ten hours and a half.

A. 19.—The fulling stocks are occasionally employed twenty-four hours continuously; the other departments from ten to twelve hours each per day.

A. 20.—Not more than two hundred and ninety-nine days.

A. 21.—Two thousand nine hundred and ninety hours.

A. 22.—We begin in the morning at six and half past six, and leave at six in the evening, except the weaving, which is continued until seven, and the fulling, and dressing, and finishing, which are continued until eight or nine o'clock, as the trade may require.

A. 23.—Ten hours and a half.

A. 24.—Eleven hours.

A. 25.—I have not required extra hours of labour of the children for a long period.

A. 26.—I think persons may avoid requiring more than eleven hours of labour from children under fourteen years; but above that age they are required in the fulling, and dressing, and finishing, which require for the two latter sometimes twelve or fourteen hours, and for the former twenty-four hours continuously; but in the fulling there are considerable intervals for rest.—N.B. The labour in fulling cloths is not continuous, although the operation of the machinery is.

A. 27.—I have always worked my mills about the same hours per day as at present.

A. 29.—In those manufactories where there is not sufficient machinery, or where there is not sufficient power to carry on all the works at the same time, some night-work may be necessary;

necessary; but in the fine trade, I believe it would not benefit the manufacturer to employ children in the night.

A. 30.—I have not known the laws for the limitation of the hours of work put in force in this neighbourhood; nor have I known the hours of labour limited by any other rule than the mutual convenience of the master and the labourers.

A. 31.—I consider that in some departments of the trade it would be injurious to the goods to have two sets of children employed on the same piece, and for the same reason it would be equally injurious to employ children in the night.

A. 32.—I have not known extra hours required but to a very small extent during the twenty years I have been in the trade, and consequently have not known a change of hands employed.

A. 33.—I have not employed a night-set.

A. 34.—The work on which the children are employed here is very valuable, and requires a nice uniformity in the work, which I believe would not be insured by two sets of children.

A. 35.—I have only employed one set, and these work only in the day-time.

A. 36.—It would be a very serious loss to me if I could not employ persons above the age of fourteen years occasionally twelve or fourteen hours, because the demand would frequently cease before the goods could be finished if this were prohibited.

A. 37.—The manufacture of fine cloths and kerseymeres occupies a period of nearly four months before the goods are ready for the market, and any restriction of the hours of labour would prolong the time necessary to finish the goods.

A. 38.—There is no heat required in the manufactory higher than the ordinary temperature of a dwelling-house.

A. 41.—The fulling-stocks and the finishing-hands have been occasionally employed for a part of the night, about two nights in the week till ten o'clock.

A. 42.—No children employed.

A. 46.—In summer we are compelled to work the stocks, finishing at such hours as the water comes, but I have no children at this work under fourteen years.

A. 47.—It is not indispensable to continue any process for twenty-four hours, except for dispatch, and also to prevent the great loss which is occasioned by waiting for the water and repairing the mills.

A. 48.—Adult males and youths above fourteen years of age; no females.

A. 49.—In milling or fulling cloths if you work the mills ten hours each day only, it will sometimes take a week, but if continued eighteen hours may be done in two days. The loss in interrupting milling and dressing is very great.

A. 50.—By lamps and candles.

A. 51.—Same as by day.

A. 52.—Having only occasionally required night-work I have never found the ill effects from it in the habits of those employed.

A. 53.—One hour for dinner for all that are employed here, *i.e.* from one till two o'clock.

A. 54.—They all do as they like in this; many of them go home to dinner as they live very near.

A. 55.—The few who stay here to dinner do so entirely for their own convenience.

A. 56.—I should not have the least objection to it; the only inconvenience would be to those persons who prefer to remain here.

A. 57.—The chief means used here are occasional discharges for misconduct.

A. 58.—I have very seldom known corporal punishments inflicted here under any circumstances, and am sure it is very seldom resorted to.

A. 59.—When it has been done it has been by their parents, or the foreman, or those who have the care of them.

A. 60.—I have in most instances been acquainted with the circumstances of each case.

A. 61.—I have frequently been requested by their parents to have them punished when they prove refractory, as it frequently displays itself at home as well as at the mills.

A. 62.—I have generally preferred discharging those children who would not yield to mild treatment, and have not punished them as requested by their parents, nor allowed them to be punished.

A. 63.—I have always instructed my foremen to inform me of any misconduct of the children, but not in writing, as I live on the premises.

A. 64.—I do not recollect any case of this kind during all the time I have been in the trade, and I believe that not one case has occurred in my experience.

A. 65.—Six families, comprising forty individuals, live on these premises; they are orderly and cleanly, and the children are instructed in day and Sunday schools.

A. 66.—Those who are employed at an early age are generally better workmen than those who have previously worked at other trades. Our people have nearly all been brought up to this business, and have not left other employments to come to this.

A. 67.—The health of those employed here has improved within the last ten years. The improvements in machinery have made the labour less than formerly; and the reduced prices of food and clothing, and their improvement in knowledge, have greatly contributed to their health, and they are not so frequently intoxicated or diseased.

A. 68.—There is no process of the manufacture found to be injurious to health, to my knowledge.

A. 69.—I have never known any of the provisions of the present Act applied to this or

(APP.—B. 1.)

B

any

Gloucestershire.

J. P. Marling.

Gloucestershire.

J. F. Marling.

any other mill in this neighbourhood, and I do not know whether this mill is subject to it or not.

A. 77.—I believe that any person who had any complaint against his or her master would very freely make that complaint to a magistrate, and would also give evidence in the case of a fellow-servant making complaint.

A. 78.—I consider that the interest of the master will guarantee proper treatment to all his servants in the manufacture of superfine cloths, as the weight of the materials used in making them is much less and the cost much more than in making heavy goods, and it is incurring too great a risk of spoiling the goods to have the work performed by persons who are fatigued and weary by over-working.

A. 79.—I believe that the necessity for a new Act of Parliament to regulate the hours of labour does not exist anywhere in the West of England.

JOHN FIGGINS MARLING.

No. 7.

M'Lean, Stephens,  
& Co.

ANSWERS of MACLEAN, STEPHENS, and Co., Stanley Mills, Kingstanley.

A. 1.—Kingstanley, in the county of Gloucestr. The mill is fire-proof, the floors being composed of brick arches on iron beams, over which is laid stone paving. The rooms are twelve feet high, from the paving to the crown of the arch above.

A. 2.—The manufacture of superfine cloth and kerseymere.

A. 3.—Erected in the years 1812 and 1813, and employed for its present purpose since the period of its erection.

A. 4.—Five water-wheels on a fall of sixteen feet, equal to about two hundred horse power, and a steam-engine of forty horse power. The supply of water in the summer is so irregular as to cause occasional suspension of part of the works for several hours of a day.

A. 5.—There is a distinct specific provision for ventilation by the windows being so contrived that the upper section of each opens by pulling a cord, which any of the operatives can effect according to his own wants.

A. 6.—On the opening of the windows.

A. 7.—The overlookers have the charge of keeping up a proper ventilation; but every workman is at liberty to study his own convenience in this respect.

A. 8.—All machinery considered dangerous is fenced off as far as is practicable with reference to its proper uses.

A. 9.—Our workpeople live in a village close by the mills, and in adjacent cottages, and have means of their own, within a few minutes walk, to ensure personal cleanliness, and other comforts described in this query. They have the free use of fire and water in the manufactory, and are not restricted from remaining in the rooms during meal-time, when they prefer it to going home.

A. 10.—None under nine years old, and very few under ten. None have been previously employed in any other trade.

A. 11.—Not if a sufficient number could be procured at that age, but that is impracticable.

A. 12.—No recent alteration in our machinery has affected the number of children heretofore employed.

A. 13.—We do not.

A. 15.—We do not lodge or maintain any children, and employ none but such as reside in the immediate neighbourhood, under the care of their parents or legal guardians.

A. 17.—Eleven to twelve hours, and occasionally in some departments thirteen hours. In the fulling-department (which employs very few hands, say six men,) a still greater number of hours; but the workmen may take an occasional hour's sleep, the labour not requiring constant attention.

A. 18.—Children employed as piecers, of nine to twelve or thirteen years of age, work ten and a half to eleven hours; above that age, eleven to twelve hours.

A. 19.—Not more than twelve hours, exclusive of the hours of refreshment, with the exception of the fulling-department.

A. 20.—Every day, except Sundays and some holidays at Whitsuntide and Christmas.

A. 21.—It is impossible for us to answer this query; we keep no time-book; our operatives are paid by the piece or quantity of work done.

A. 22.—We keep no register of the time of working in the different departments, and are therefore unable to give a satisfactory answer to this query.

A. 23.—Children less than ten hours; adults less than eleven hours. We think the average will not exceed nine hours.

A. 24.—We never employ more than one set of children, and that set has never been employed or kept to work more than twelve hours during any one day of the last year, and those were children of from nineteen to eighteen years of age.

A. 25.—The usual hours were not exceeded last year; but sometimes an excess beyond the usual hours of work becomes necessary to make up for stoppages, from shortness of water, from breakage of machinery, or owing to some particular department failing to produce the requisite quantity of work. If this were not the case, a great portion of the workpeople would occasionally be deprived of a considerable part of their usual earnings, by the necessity of one operation in the manufacture of cloth waiting for the other; ex. gra. if the spinners are

are obliged to wait for the carders, the latter must work a little longer to put the former to work, and so on throughout all the different operations of cloth-making.

A. 27.—We have at no former time usually worked our manufactory for a greater number of hours daily than at present.

A. 28.—Any restriction imposed upon the working of machinery, by a reduction in the hours of labour or otherwise, will enhance the cost of production.

A. 29.—We are not aware of any inducement to a manufacturer to have his work continued through night, without an intermediate change of hands. Night-work is not the practice of this country, and we are unacquainted with the custom of manufacturers in other countries. Work done at night, and particularly after the workpeople are fatigued by their day's labour, is never so good as that performed in the day-time. There is no law or general understanding of the trade that regulates this.

A. 30.—We have no diminution of our accustomed hours of working in any branch of our manufacture.

A. 31.—A scarcity of children would constitute one objection, but supposing this objection did not exist, the general duration of the hours of labour in the operation in which children are employed would not be sufficient to remunerate a double set. We are principally engaged in giving attention to machines worked by adults, during which they have no muscular labour to perform, and they are therefore not unwilling to work eleven or twelve hours, which is as long as any manufactory can under ordinary circumstances require to expedite the work of the department in which they are employed.

A. 32.—Upon this ground, as well as believing that the work cannot be so well done, we have never attempted to employ a second set of hands.

A. 36.—The effect in reference to the fulling or felting operation would be ruinous, as a great part of it is carried on at night. A prohibition therefore of night-work in this operation would take away the employment of one third of the whole manufactory.

A. 37.—To enhance the cost of production, to diminish the comfort of the operatives who are paid by the piece, in short, to disable the British woollen manufacturer to compete with his foreign rival.

A. 38.—There is no operation in our manufacture which requires a particular temperature; it is therefore entirely regulated with reference to the comfort of the workpeople.

A. 41.—At no time beyond eight o'clock at night, except the fulling-mill.

A. 42.—None after seven o'clock, and these from fourteen to nineteen years of age.

A. 45.—From dark to seven o'clock, say two hours and a half in the winter-time.

A. 46.—A continuity in the process of fulling cloth is essential to the proper execution of that operation; in the course of which a certain degree of heat is generated, which is required to be kept up during the continuance of the process. If the temperature were not properly preserved, the cloth would be injured.

A. 47.—The cloth remains in the stocks twenty-four to thirty hours, sometimes forty hours.

A. 48.—Men of experience (adults) are usually employed.

A. 50.—By gas, generated on the premises.

A. 51.—The same as by day.

A. 53.—Eight o'clock in the morning, half an hour for breakfast; one o'clock P. M., an hour for dinner; five o'clock, quarter of an hour for tea.

A. 54.—Some do, and some do not; optional with themselves.

A. 57.—Refractory or disorderly children are punished by dismissal, when slight correction by the overlooker (which is permitted) proves insufficient.

A. 58.—The overlooker of the children is authorized to inflict slight punishments by means of a small leather strap, half an inch wide, (which he carries in his pocket,) in case of disobedience or a perverse neglect of their work, without which it would be impossible to keep the children in any kind of order.

A. 59.—In case of petty delinquencies, where a stripe or two of the leather strap would be insufficient, the overlooker of each department in which children are employed is instructed to call a jury of half a dozen of themselves, before whom regular evidence is adduced; and should the delinquent be found guilty this juvenile tribunal awards the punishment, which is confined to the leather strap or a few hours solitary confinement. Should the verdict direct corporal punishment, it is never carried into effect without the sanction of the parents and the authority of the master. This plan has been attended with the most salutary effects.

A. 64.—Never, upon any occasion.

A. 65.—No houses are attached to our establishment for lodging workpeople. We possess a few cottages, which we let to some of the heads of departments, on the usual footing between landlord and tenant.

A. 66.—Persons employed in the manufactory from their infancy are uniformly more intelligent and skilful than those who have been taken into employment at later periods.

A. 67.—We are not aware of any alteration in the health of the people of the factory. It has been uniformly good.

A. 68.—No process is carried on that can have any injurious effect on the health of the people.

A. 69.—Our mill is not subject to the provisions of the present Act.

18th May 1833.

MACLEAN, STEPHENS, & Co.

Gloucestershire.

No. 8.

*Samuel Clutterbuck.*

## ANSWERS of SAMUEL CLUTTERBUCK, Minchinhampton.

- A. 1.—Minchinhampton in the county of Gloucester.  
 A. 2.—The manufacture of woollen cloth.  
 A. 3.—Very old works, but pulled down and rebuilt about fourteen years ago.  
 A. 4.—Water chiefly; in very dry seasons steam, to supply the deficiency; water thirty horse, steam thirty horse.  
 A. 5 & 6.—The mill is kept to a convenient temperature by means of windows to open and shut as required.  
 A. 7.—By consent of all.  
 A. 8.—When it is considered necessary the machinery is fenced off, but so little dangerous is it that no single accident has happened during the last fourteen years.  
 A. 9.—None.  
 A. 10.—I consider they come to work as piecers at about nine years of age, and this is generally their first employment of any kind.  
 A. 11.—Yes.  
 A. 12.—I know no difference.  
 A. 13.—No.  
 A. 15.—I lodge and maintain no children; I have no orphans in the manufactory, and the children live with their parents.  
 A. 16.—They are under their parents care when from the factory.  
 A. 17.—Eleven hours each day, exclusive of meal-times.  
 A. 18.—All work alike as to time.  
 A. 19.—I have not exceeded the eleven hours in any instance, excepting where the stocks and gig mills have worked at night during short water.  
 A. 20.—Every day.  
 A. 21.—As there are occasional hindrances from breaking of machinery, repairs, &c., I cannot answer this question accurately.  
 A. 22.—They are all carried on together.  
 A. 23.—About eleven hours.  
 A. 24.—Eleven hours.  
 A. 27.—Very rarely; my factory has generally gone on in a regular and moderate way. I therefore can give no answers to the questions up to A. 36. except as matter of opinion.  
 A. 37.—It is obvious that the more the number of hours water-power is employed with machinery, the more benefit will accrue to the proprietor.  
 A. 38.—The temperature of the season when that is comfortable; at other times steam heat to a moderate degree.  
 A. 39.—In the stoves for drying, about one hundred degrees.  
 A. 40.—Three or four occasionally, and for short periods.  
 A. 41.—None, excepting stocks and gig-mills during a short time of water.  
 A. 42 & 43.—Four or five with stocks, &c. as above, occasionally all night.  
 A. 45.—All night, with occasional rest during a non-supply of water.  
 A. 46.—In felting cloths it is advantageous to continue, but it is not indispensable.  
 A. 48.—Men generally, and boys from the age of fourteen and upwards.  
 A. 49.—It is advantageous, because the process of felting goes on better than it does at intervals.  
 A. 50.—By lamps and candles.  
 A. 51.—The same as by day.  
 A. 52.—I am not aware of any.  
 A. 53.—Two hours each day.  
 A. 54 & 55.—Some who live near go to their homes, some eat their meals on the premises, but all do as they like.  
 A. 56.—As there is no restraint, I know not how to give any answer to this question.  
 A. 62.—Kindness is always shown to the children, and they are almost always obedient and tractable.  
 A. 64.—There is only one instance during the last fourteen years, when a boy was punished for inattention and insolence to his overlooker.  
 A. 65.—Some live in my cottages, others elsewhere; the master's superintendence ends with the hours of labour.  
 A. 66.—Those who have pursued any avocation from childhood are certainly preferable to such as come into the factories ignorant of the business they undertake to perform. This remark applies generally.  
 A. 67.—I know of no difference.  
 A. 68.—It is not necessary.  
 A. 69.—I know of no existing act of parliament by which my mill is regulated.  
 A. 78 & 79.—As I am not aware of any improper treatment having been at any time practised, I see no occasion for legislative interference.

SAMUEL CLUTTERBUCK.

## ANSWERS of Messrs. BARNARD and Co., Nailsworth.

Gloucestershire.

No. 9.

Edward Barnard.

- A. 1.—Nailsworth, near Minchinhampton.
- A. 2.—Manufacture of superfine black cloth.
- A. 3.—First portion very old; first employed as a cloth-mill about 1730; second portion erected in 1806; third portion erected in 1814.
- A. 4.—Water about half the year; the other half part water and part steam.
- A. 5.—Opening of windows, assisted by the rotary motion of machinery and the revolution of straps or belts from the drums in the lower floors through holes in the different floors, and through every story of the building.
- A. 7.—Left to the discretion of the workmen in each apartment.
- A. 8.—All are fenced.
- A. 9.—There is no need of such, as the work is not of a dirting description.
- A. 10.—Nine years the lowest we allow, but poor parents will bring their own children under that age. Very seldom have any children been employed at other trades.
- A. 11.—The youngest children are employed in piecing rollers at the spinning-billies, or winding bobbins for the weavers.
- A. 12.—There have been no alterations in machinery for thirty years past which makes any alteration in the employment of children.
- A. 13 & 14.—None.
- A. 15.—None. There may be orphans employed by us, but not lodged or maintained by us.
- A. 16.—They reside with some friend or guardian.
- A. 17.—Eleven; from six in the morning till seven in the evening in the summer; eight to eight in winter; two hours out for meals, except in the fulling-mills, where the work is often carried on by one man and one boy for sixteen hours per day.
- A. 18.—Eleven; all come and go at the same time except the persons employed at the fulling-mills.
- A. 19.—About ten boys and men have wrought thirteen hours per day for about six weeks during the last year.
- A. 20.—Fifty-two weeks, six days each week; three hundred and twelve days.
- A. 21.—Fifty-two weeks, sixty-three hours each week, three thousand two hundred and seventy-six hours.
- A. 22.—All goes on together.
- A. 23.—Ten hours and a quarter each day is the average.
- A. 24.—Eleven hours.
- A. 25.—None, except about ten men and boys above mentioned in A. 19. The reason, the goods in the department they worked in were got a little behind hand.
- A. 26.—In the fulling-mills the goods would be much injured if they were stopped every day after working eleven hours; also in roughing or raising stopping the mills would injure the goods.
- A. 27.—Never.
- A. 28.—The cost of production must necessarily be enhanced by shortening the time of labour per day.
- A. 29.—We never work our mills through the night except the fulling-mills or stocks occasionally, which requires the attendance of one man and one boy.
- A. 30.—We work the same number of hours all the year round, therefore can make no calculation on this question.
- A. 31.—There would be little objection to a change of hands every ten hours, if necessary.
- A. 32.—Never wanted to be tried by us.
- A. 33.—Never employed a night-set.
- A. 34.—That portion of the charge on manufacturing which is for rent and interest of capital on machinery would be reduced nearly one half if the mills and machinery worked double time.
- A. 36.—We want no night-work, and wish it prohibited here and elsewhere.
- A. 38.—The temperature of the open air, except in frosty weather, when the temperature is raised to fifty and fifty-five.
- A. 39.—Just to make the workpeople comfortable. No branch requires any particular elevation of temperature.
- A. 40.—None; no such process.
- A. 41.—At no time.
- A. 42.—None.
- A. 46.—In fulling cloth or kerseymeres it is sometimes necessary to keep moving for twenty-four hours and upwards.
- A. 47.—Never absolutely indispensable; but the goods would be better by continuous working from twenty-four to fifty and sixty hours.
- A. 48.—Boys of fifteen and men: only four such persons wanted by us.
- A. 49.—When a piece of cloth continues to felt and thicken towards the close of the operation, a stop for several hours would prevent its thickening any further, however desirable it might be.
- A. 50.—By lamps.
- A. 51.—Same as by day; open windows.

(APP.—B. 1.)

B 3

A. 52.

Gloucestershire.

Edward Barnard.

A. 52.—Never practised, therefore cannot state the effects; suppose injurious to health and morals.

A. 53.—One hour at breakfast, one hour for dinner, quarter of an hour for tea in the winter.

A. 54.—All may leave. Some prefer taking their meals in their workrooms.

A. 55.—A mere matter of choice to the workmen.

A. 56.—There would be no injurious effect. It would be better for all to go to their homes to meals, if not too far distant.

A. 57.—A small stick is sometimes employed.

A. 58.—A stroke now and then is inflicted on the children.

A. 59.—By the persons who employ them.

A. 60.—Very seldom.

A. 61.—With our sanction.

A. 62.—Never heard an instance of cruelty, therefore never interfered.

A. 63.—Never. We have often, when the men complain of the children, desired them to chastise them. The general answer is, "If we do, they will have us before the magistrate for striking them."

A. 64.—Never heard of any for the last thirty years.

A. 65.—Few live in their employers houses; generally in cottages they rent. They are generally very cleanly in their persons and houses.

A. 66.—They generally commence at nine years of age, and are of course much better workmen when grown up from having acquired habits of discipline, industry, and skill.

A. 67.—No difference whatever is discernible the last twenty or thirty years.

A. 68.—All our processes are healthy, therefore we never change the hands on that account.

A. 69.—We know of no particular act applicable to our mills.

A. 70 & 71.—Never.

A. 72.—None to state.

A. 73.—No act is known to operate on the mills in this neighbourhood.

A. 74.—Never.

A. 75.—No.

A. 77.—Never hear them complain.

A. 78.—We conceive that as we can prove that no abuses have existed in the cloth manufacture of Gloucestershire, that there is no necessity for any new enactment to include this county. We consider that any interference is unjustifiable, and will be seriously injurious both to employers and the employed.

A. 79.—The space occupied by each individual in our factory is at least one hundred square feet of floor and eight to ten feet high.

EDWARD BARNARD.

No. 10.

Messrs. Playne  
and Smith.

## ANSWERS of Messrs. PLAYNE and SMITH, Dunkirk Mills, Minchinhampton.

A. 1.—Dunkirk Mills, Minchinhampton, Gloucester.

A. 2.—Manufacturing broad and narrow woollen cloths.

A. 3.—Part very old; no date; part built in 1800, 1818, 1819, 1820, and 1821; believe it has been a fulling-mill more than two hundred years.

A. 4.—Water and steam; the water varies from forty to ten horses power.

A. 5.—Casements, air passages near the floor, wood shutters, and fans driven by the mill power.

A. 7.—By the foreman generally.

A. 8.—All, where it is practicable; very seldom has any person been injured; for the last twenty years we have had only one fatal accident; in no other case has any person been disabled.

A. 9.—There are stoves where they can dry their clothes, steam-pipes to warm the buildings in winter; fans, &c. for cooling, with other conveniences, have been introduced many years.

A. 10.—We have four under nine years of age working with their parents, who have not been employed in any other trade to our knowledge.

A. 11.—Children under this age can perform some part of the manufacture with ease; their parents in general are anxious to get them out as early as possible.

A. 12.—The introduction of most of the machinery in use by us has increased the demand for children generally.

A. 13.—None.

A. 15.—We neither lodge or maintain any children.

A. 17.—Varies from nine to thirteen hours; sometimes fourteen.

A. 19.—We have no memorandum.

A. 20.—We believe not more than three hundred and ten days.

A. 22.—We have generally but little variation, except milling and rowing.

A. 27.—Occasionally we have, for a short period.

A. 28.—We believe it does; rent and taxes being the same.

A. 29.—We have not worked our manufactory through the night at any time.

A. 30.

Gloucestershire.

*Messrs. Playne  
and Smith.*

- A. 30.—Our time varies so little, we have made no calculation.  
 A. 31.—We are aware of none.  
 A. 32.—We have had no occasion to try the experiment.  
 A. 33.—We have not.  
 A. 36.—It might be a serious loss, by preventing our executing orders in time, and our water power would be partly lost.  
 A. 37.—It will be a loss to the parents of the children and to the manufacturers, having the same rents and taxes to pay.  
 A. 38.—It varies from 40° to 70°; cannot be carried on well under 40°.  
 A. 39.—The drying-stove is sometimes as high as 90°.  
 A. 40.—Three generally, but not obliged to be there constantly.  
 A. 41.—None all the night, except the fulling-mills.  
 A. 42.—None all the night.  
 A. 43, 44, & 45.—We seldom employ any children after eight.  
 A. 46.—Milling or fulling.  
 A. 47.—Some cloths three days or more.  
 A. 48.—From eighteen years to fifty.  
 A. 49.—We find the cloths hollow, and not so firm as they ought to be.  
 A. 50.—Oil and tallow.  
 A. 51.—The same as by day.  
 A. 52.—We never observed or heard of any difference in those in our employment.  
 A. 53.—Varies from half an hour to one hour each meal.  
 A. 54.—All leave if they choose, but some prefer staying on the premises, especially in winter, having comfortable places to eat their meals. Distance from the manufactory another reason.  
 A. 57.—Discharged if they do not answer our purpose; sometimes by small fines, which are put to the fund for charitable purposes for the workpeople.  
 A. 58 & 59.—Very seldom, except by the parents of the children. If severely by any other person complaint would be made to a magistrate.  
 A. 60.—We believe very seldom.  
 A. 61.—Never, except for wilful mischief.  
 A. 62.—We have in two instances discharged the parents of children for cruelty to them. In no other case we do not recollect having occasion to interfere.  
 A. 65.—In a few instances they do, but generally not; they are all at liberty to rent where they like; we never interfere with their domestic arrangements.  
 A. 66.—Children brought to the manufactory early generally make the best workmen.  
 A. 67.—We have never known much sickness amongst the workpeople; on the contrary, we consider them generally very healthy; we believe they enjoy quite as good health as those employed at any other work.  
 A. 68.—We never find it necessary, no part being unhealthy.  
 A. 69.—We do not understand the Act.

PLAYNE &amp; SMITH.

## ANSWERS of W. PLAYNE &amp; Co., Minchinhampton.

- A. 1.—Minchinhampton, Gloucestershire.  
 A. 2.—Woollen manufactory.  
 A. 4.—Both water and steam.  
 A. 5 & 6.—Windows.  
 A. 7.—Left entirely to the discretion of the workpeople.  
 A. 8.—Fenced off.  
 A. 9.—We have not.  
 A. 10.—Not under nine years, with our knowledge.  
 A. 11.—It does not.  
 A. 12.—No difference.  
 A. 13.—No.  
 A. 15.—We do not lodge any of them.  
 A. 17.—From ten to eleven hours.  
 A. 18.—Ten hours.  
 A. 19.—Twenty hours.  
 A. 20.—Three hundred and eight days.  
 A. 21 & 22.—Three thousand and forty-six hours.  
 A. 23.—Ten hours.  
 A. 24.—Fourteen hours.  
 A. 25.—When we had a given time to execute any orders.  
 A. 26.—Not avoidable, on account of having orders to execute within a limited time.  
 A. 27.—Yes.  
 A. 28.—No difference.  
 A. 29.—Never do without a change of hands.  
 A. 30.—No difference.  
 A. 31.—No objection.  
 A. 32.—Has been tried, and answers very well.

(APP.—B. 1.)

B 4

A. 33.

No. 11.

*W. Playne & Co.*

Gloucestershire.

W. Playne & Co.

- A. 33 & 34.—We have, and changed them at twelve.  
 A. 35.—Change at twelve.  
 A. 36.—If when limited to time, we should not be able to execute certain orders.  
 A. 37.—Injurious to the people and manufacturer.  
 A. 38 & 39.—Same as a dwelling house.  
 A. 41.—About six weeks.  
 A. 42, 43, & 44.—Twenty-five till twelve at night, and twenty-five afterwards.  
 A. 46.—Certainly not.  
 A. 50.—Oil-lamp.  
 A. 51.—Windows.  
 A. 52.—The few times they have been employed apparently have not hurt them.  
 A. 53.—Half an hour each time.  
 A. 54.—They have liberty to leave.  
 A. 57.—Reprimanded.  
 A. 58 & 64.—None.  
 A. 65.—Only a few.  
 A. 66.—Generally speaking, those who have been employed in the factory from infancy do their work best.  
 A. 67.—Much the same.  
 A. 68.—No injurious effects.

W. PLAYNE &amp; Co.

No. 12.

ANSWERS of THOMAS T. GORDON, Upper Mill, Painswick.

Thomas T. Gordon.

- A. 1.—Upper Mill, Painswick, Gloucestershire.  
 A. 2.—Manufacturing woollen cloths.  
 A. 3.—All erected at one time; employed about twenty-six years; only employed by me since Michaelmas 1830.  
 A. 4.—Water power, irregular; in the summer months one half the power; it is about forty horse power.  
 A. 5.—Yes, windows in each floor, and doors that open to admit a free current of air.  
 A. 6.—On the opening of windows and doors.  
 A. 7.—At the discretion of all employed in the manufactory.  
 A. 8.—All the dangerous parts are fenced off.  
 A. 9.—None.  
 A. 10.—Sometimes as low as seven or eight years; but I have none at present under nine years of age.  
 A. 11.—It does; because children under that age would become chargeable to the parish, and they are, by employing them, kept off the parish.  
 A. 12.—About the same.  
 A. 13.—No.  
 A. 65.—Some do. I cannot tell, having other business to look to.  
 A. 66.—Those employed when young make the best workmen.  
 A. 67.—I have only carried on business here three years, and their health has generally been good.  
 A. 68.—No; no part of our manufactory is unhealthy.  
 A. 69.—I presume it is.  
 A. 70.—I never have been informed against.  
 A. 73.—I never heard of any infringement.  
 A. 76.—Never any required.  
 A. 77.—I should think not.  
 A. 78.—As far as our own neighbourhood is concerned, I should think the present scale of hours sufficient, as the workpeople appear quite satisfied with the hours they now work.  
 A. 79.—None.

THOMAS T. GORDON.

No. 13.

ANSWERS of WILLIAM PALLING, Painswick.

W. Palling.

- A. 1.—Painswick, Gloucestershire.  
 A. 2.—The entire manufacture of woollen cloth, with the exception of weaving.  
 A. 3.—The mill rebuilt in the year 1818, and had been employed as a woollen manufactory for twenty years previous to 1818.  
 A. 4.—Water only, and of course irregular during the summer season, there being several mills above; the one immediately above is a grist-mill, which occasions a greater irregularity in the power than would occur if it was employed as a woollen manufactory. The average power is from five to six pieces a week.  
 A. 5.—The factory is ventilated by windows only.  
 A. 6.—On the opening of windows.  
 A. 7.—The ventilation is regulated according to the feelings of those employed in the different rooms or workshops.

A. 8.

Gloucestershire.

W. Palling.

A. 8.—The only machine or parts of machinery fenced off are the water-wheels and a machine called a wool-twilly; the reason other machinery is not fenced is, they are not so close together as to endanger the lives of the children or persons employed in passing or repassing them, neither do we consider the construction of the machinery itself so dangerous as to render such a measure necessary.

A. 9.—None.

A. 10.—We have only in one instance employed a child below the age of nine years, and then at the request of his father, under whom he worked. Generally speaking, we do not employ children under the age of ten; cases may occur of their having been employed at other trades, though I cannot give an instance.

A. 11.—The work which children are usually employed at is well adapted to the ages of ten or twelve; a child of ten years will do equal work with one of twelve, and receive the same wages.

A. 12.—The alteration in machinery has been the means of employing a greater number of children under twelve years of age; but previous to the introduction of machinery children were employed at the ages of ten and eleven.

A. 13.—We do not.

A. 17.—The usual hours are ten.

A. 18.—Ten hours. We make no difference for persons under the age of twenty-one.

A. 19.—The stocks in which cloths are milled or felted have occasionally worked successively from forty to forty-eight hours. The shearing-machines have also worked twelve hours. Both have been worked by adults only. The machine for roughing or dressing cloth has worked fourteen hours, and at this a boy of the age of sixteen has been employed.

A. 20.—Three hundred and nine.

A. 22.—The whole of the works have been carried on ten hours a day, except when the water has been short or an accident has happened to some of the machinery, which accident would not affect the whole.

A. 23.—Rather more than ten by adults.

A. 24.—Not more than ten, with the exception of the boy alluded to in answer to Q. 19.

A. 25.—The circumstances which render more than ten hours necessary are an extra demand for the manufactured article, or loss of time occasioned by an accident to some of the machinery.

A. 26.—A manufacturer may be so situated (and happily so) that an excess of ten hours would be unavoidable; for instance, if a manufacturer had to supply a merchant with a certain quantity of goods in a given time, and the order to such an extent that ten hours labour would not accomplish it in the time specified, he must either forego the order or exceed the regular hours.

A. 27.—Yes, we have.

A. 28.—The only difference in the cost of producing a given quantity would be as regards the rent of the mill or mill-hire; for instance, if a mill at 10*l.* rent per week produced ten cloths with ten hours labour daily the mill-hire upon each cloth would be 1*l.*, whereas by working fifteen hours daily the quantity produced would be fifteen cloths, which would be a saving of 5*l.* per week to the manufacturer, or in other words the mill-hire on each cloth would be only 13*s.* 4*d.*

A. 29.—I cannot believe there can be any inducement beyond what I have stated in answer to Q. 26. & 28. as to the first part of the question; and certainly one set of children could not work during the day and night without endangering their health, and I should also say, without running great risk of mutilating their limbs.

A. 30.—I think my observations on Q. 28. will apply to this.

A. 31.—Persons under the age of twenty-one, indeed I may say children of the age of ten or twelve, would not feel distressed at working twelve hours; but should it be necessary to have the works continued for sixteen or eighteen hours, I consider it would be as advantageous to the master as it would be beneficial to the children to have relays.

A. 32.—The system of relays we have never tried, never having occasion for their labour more than twelve hours in a day.

A. 33.—We never have employed a night-set.

A. 36.—The prohibition of night-work in some instances, indeed I conceive in several, would be attended with inconvenience and loss to the manufacturer.

A. 37.—The effect would be a positive loss to the manufacturer.

A. 38.—In the summer season we never have fires in any part of the factory, therefore the temperature of the mill is regulated by the weather; in cold weather we have fires for the comfort of the persons employed.

A. 39.—None of our workshops are heated, except for the comfort of those employed in them.

A. 41.—I cannot say; but what has been worked has been by adults, with the exception of a boy who assists the rougher or dresser.

A. 42.—One only, the boy alluded to at A. 41.

A. 44.—One only.

A. 46.—Yes, they are; the felting or milling of cloth.

A. 47.—I have known it essentially necessary to continue it for forty-eight hours.

A. 48.—Above twenty-one years.

A. 49.—If it was not continued, some cloth would never be sufficiently milled or felted.

A. 50.—Some part by oil, others with candles.

(APP.—B. 1.)

C

A. 51.

Gloucestershire.

W. Palling.

A. 51.—Windows only.

A. 52.—Constant night-work would produce, I conceive, great laxity of conduct and an inclination to intemperance.

A. 53.—One hour for breakfast and one hour for dinner.

A. 54.—Entirely optional; all may if they like.

A. 57.—I have known a small switch made use of, but the persons under whom the children work have frequently told me that confinement in the mill during their meals is the best plan.

A. 58.—Occasionally with a switch.

A. 59.—By the persons under whom they work.

A. 60.—Yes, but never severely.

A. 61.—Yes.

A. 62.—I have not.

A. 63.—I have always instructed him to chastise them for neglect of work or improper conduct. I have advised a small osier or hazel twig. I have never given him any instructions in writing.

A. 64.—Never any.

A. 65.—Only two instances. No control exercised with regard to cleanliness or moral improvement.

A. 66.—Those brought up from infancy are the best and most skilful workpeople.

A. 67.—I am not aware of any change either one way or the other; I believe they enjoy an equal share of health with persons employed in agriculture.

A. 68.—We do not.

A. 69.—I am not aware of any Act that refers to cloth factories.

A. 73.—I am not aware of any Act, therefore do not know if they conform or otherwise.

A. 77.—Certainly; if their evidence would operate to the prejudice of the master, the result to the person most likely would be loss of employment.

A. 78.—In my opinion, experience has shown that fines are not adequate to enforce obedience; the truck system, to wit. If masters convicted of paying wages in goods instead of money were subject to corporal punishment, I conceive it would effectually put a stop to that as well as improper treatment to children.

A. 79.—None.

WILLIAM PALLING, for J. PALLING and SON.

No. 14.

Matthew Rice.

## ANSWERS of MATTHEW RICE of Small's Mill, Painswick.

A. 1.—Small's Mill, in the parish of Painswick, in the county of Gloucester.

A. 2.—Superfine woollen-cloth manufactory.

A. 3.—The works were erected at different times; but cannot specify the dates of such erections, or the time of its being first employed for its present purpose.

A. 4.—Fourteen horse water power in winter, varying to only seven horse power during four months in the summer season. The supply of water during the said four months is very irregular, sometimes enabling us to commence work at seven o'clock in the morning, and at other times not until ten or twelve o'clock in the day, and will then continue to flow till ten or twelve o'clock at night, and if not used at the time it will be an entire loss to masters and workpeople.

A. 5.—Windows the only provision for the ventilation of our factory.

A. 6.—The provision depends on the opening the windows.

A. 7.—The ventilation is regulated at the discretion of any of the workpeople.

A. 8.—Dangerous parts of the machinery are fenced off.

A. 9.—All the workpeople have access to water to wash themselves, and may change their clothing at their pleasure.

A. 10.—We have occasionally employed children as low as at seven years of age.

A. 11.—Children from seven to twelve years of age are as capable of piecing and feeding the machines, as also queeling to the weavers, as those above that age.

A. 12.—The recent alterations in machinery have made no difference in the employment of children under twelve years of age.

A. 13.—We do not employ apprentices.

A. 15.—We do not lodge or maintain any children.

A. 16.—All the children we employ are under the superintendence of masters and foremen.

A. 17.—Usually work eleven hours, and occasionally twelve or thirteen hours, per day.

A. 18.—Those under twenty-one years of age are required to work the same time as those above that age, because the one cannot work without the other.

A. 19.—The milling process has been occasionally carried on the whole twenty-four hours.

A. 20.—About three hundred and ten days work during the last year.

A. 21.—About three thousand five hundred hours work during the last year.

A. 22.—Generally the whole of our works has been carried on together.

A. 23.—The average time of work is about eleven hours (except Saturdays) per day, which is only nine hours.

A. 24.

A. 24.—The greatest number of hours has been about thirteen.

A. 25.—To supply urgent orders; and in consequence of the irregular supply of water power the usual hours of work has been occasionally exceeded. Gloucestershire.

A. 26.—Occasionally our orders require an additional portion of time beyond the regular hours of work. Matthew Rice.

A. 27.—Our works are carried on as great a number of hours now as formerly.

A. 28.—The hours of work have not been reduced; but if at any time it should be, such reduction of work would, in our opinion, greatly enhance the cost of manufacture.

A. 29.—A change of hands in many instances would spoil the article of manufacture.

A. 30.—A limitation of hours of work in any branch would increase the cost of production where it depends on water power.

A. 31.—Fresh sets of children would spoil the article of manufacture.

A. 32.—We have occasionally tried fresh hands, and they have invariably spoiled the article of manufacture.

A. 33.—We have not employed a night-set of hands.

A. 36.—As we have only water power, and that being very irregular, a prohibition of night-work would be a material loss.

A. 37.—A farther reduction of working hours would enhance the cost of manufacture.

A. 38.—We require no heat whatsoever, but to make the workpeople comfortable in the winter.

A. 39.—A moderate heat for drying wool and cloth in the winter.

A. 40.—Usually two hands are employed in such process.

A. 41.—Only occasionally worked at night, to use the irregular supply of water, which would otherwise run by without being used at all.

A. 42.—No children employed at night-work.

A. 46.—It is necessary occasionally to continue the milling of cloth all night, partly because it cannot be staid during the process without injury to the cloth, but chiefly to make use of the irregular supply of water.

A. 47.—It should be continued during the process of milling, which varies from fourteen to twenty hours.

A. 48.—Persons employed in such processes are all males from eighteen to sixty years of age.

A. 49.—If the process of milling be staid before the cloth is finished, it would materially injure it.

A. 50.—Our works are lighted with lamps and candles.

A. 51.—No ventilation required at night for the milling of cloth.

A. 52.—No ill effects from night-work, it being only occasionally done.

A. 53.—One hour per day for all the workpeople, as they have breakfast before they come to work.

A. 54.—All leave the works at meal-time except those employed in the milling of cloth, which commences at seven o'clock.

A. 55.—If those who are employed in the milling of cloth were to leave, it would prove an injury to the cloth, and a material loss to the manufacturers.

A. 56.—It is immaterial where the workpeople have their meals.

A. 57.—Disobedient children are remonstrated with.

A. 58.—Corporal punishments are not inflicted.

A. 64.—No complaints whatever against us or our overlookers at any time on the subject of punishments.

A. 65.—A few live in our houses, and every precaution is used to promote their moral and social improvement.

A. 66.—Those employed from infancy are in general the best workmen, and the most careful to avoid accidents.

A. 67.—In general they are healthy.

A. 68.—There are no injurious effects from any of the processes of manufacture.

A. 69.—The present Act is not applicable to our mode of manufacture.

A. 77.—The workpeople would readily give evidence against their masters, if required.

A. 78.—We do not require any legislative alterations.

A. 79.—We have no objection to the restriction of children from work until they are nine years of age, provided the legislature will adopt means for the maintenance and education of such children; and a limitation of hours for those from nine to fourteen years of age, and after fourteen years of age to be allowed to work to the advantage of themselves, and at the convenience of their employers.

18th May 1833.

MATTHEW RICE.

#### ANSWERS of JOHN APPERLY, Rodborough near Stroud.

No. 15.

John Apperly.

A. 1.—Rodborough parish near Stroud.

A. 2.—Manufacturing broad and narrow woollen cloths.

A. 3.—Greater part newly erected, about three years.

A. 4.—Water-power, irregular.

A. 5.—Windows and fireplace.

(APP.—B. 1.)

C 2

A. 7.

Gloucestershire.

John Apperly.

- A. 7.—At the discretion of all employed.  
 A. 8.—No dangerous parts.  
 A. 9.—Wool-stove and fire-places.  
 A. 10.—Nine years.  
 A. 11.—Generally under twelve for roller-joining.  
 A. 13.—No.  
 A. 15.—Neither maintain or lodge any; no orphans.  
 A. 17.—Thirteen hours.  
 A. 18.—Some thirteen, some eleven, some ten.  
 A. 19.—Stocks occasionally all night.  
 A. 20.—All the year excepting Sundays, holidays, or floody times.  
 A. 25.—I cannot say there has been any, excepting cutting or milling cloth or kerseymere, to fill up an order.  
 A. 26.—It is not avoidable at certain times.  
 A. 27.—No.  
 A. 30.—My factory or mill being water-power, of course if we worked less hours it would waste my property.  
 A. 31.—No relays in the factory wanted.  
 A. 32.—No, because it would be inconvenient and unnecessary.  
 A. 36.—The cloths would be injured, and soap wasted.  
 A. 37.—If the hours are lessened I expect I must give up my factory.  
 A. 38 & 39.—Temperate.  
 A. 41.—I cannot say exactly, but not many nights.  
 A. 42.—No children.  
 A. 50.—By lamps and candles.  
 A. 51.—Fire-places and windows.  
 A. 53.—One hour at eight in the morning, and one hour at one o'clock.  
 A. 57.—Exchange them for fresh hands.  
 A. 64.—None at all.  
 A. 65.—Only two families in two tenements.  
 A. 67.—All the men, women, and children are healthy and well.  
 A. 68.—I have no dangerous processes.

JOHN APPERLY.

No. 16.

Robert Bamford.

## ANSWERS of ROBERT BAMFORD, Hope Mill, Rodbro'.

- A. 1.—Hope Mill in the parish of Rodbro', county of Gloucester.  
 A. 2.—Woollen-yarn spinning.  
 A. 3.—Built at once; the rooms being large, lofty and airy. Began to be employed for the present purpose in July 1829.  
 A. 4.—About seventeen horse water-power; irregular in the summer; but generally water enough for the purposes required.  
 A. 5 & 6.—Nothing but large lofty rooms, and plenty of windows, which the workpeople open and shut at their own pleasure.  
 A. 7.—Controlled at the discretion of all, without any restriction from the overlooker or manufacturer.  
 A. 8.—Not particularly fenced off, although every precaution is taken to avoid accidents, which never occur, except through pure carelessness.  
 A. 9.—There is no room set apart for this purpose, but very good accommodation to put on their working dress, and a pump of fine spring-water close to the factory, that all may wash at their pleasure.  
 A. 10.—A very small proportion are employed at seven years, who have not worked at any other trade.  
 A. 11.—We are obliged to employ children under twelve years, because there would be a difficulty in finding a sufficient number above that age, and the parents are anxious to find a place of quiet easy work at a much earlier period.  
 A. 12.—There has been no alterations in machinery used in my trade to affect the age of children required.  
 A. 13.—None.  
 A. 16.—A foreman, who is deputed to look after the children, but whose salary does not depend on the quantity of work performed.  
 A. 17.—Ten hours per day.  
 A. 18.—Ten; no difference in respect to age.  
 A. 19.—I have not exceeded eleven hours per day the last ten years, not being required in my trade.  
 A. 20 & 21.—The manufactory has been regularly employed during the last year, except the time lost by short water, which cannot be ascertained.  
 A. 22.—I generally arrange that the whole works shall go on together.  
 A. 23.—Prior to 1st of January 1833 eleven hours per day, except Saturdays, and on that day only eight hours.  
 A. 24.—Never more than eleven, and now only ten; Saturdays eight only.

A. 25

A. 25 & 26.—Never exceeded the usual or regular hours under any circumstances, not being necessary in my trade.

A. 27 & 28.—Eleven hours regularly before the 1st of January 1833, but now only ten; but all my servants are paid by the day, and not by piece.

A. 38 & 39.—Having no steam, the factory is comfortably heated by fires in winter, and the accommodations before stated render it sufficiently airy in the summer.

A. 41.—Not one.

A. 46, 47, 48, & 49.—Our trade differs from the manufacture of cloth; we can begin and leave off at any time.

A. 50.—Oil-lamps.

A. 51.—Same as by day, but my factory is not open at night.

A. 52.—Never requiring night-work, cannot tell what may be the result of such employ.

A. 53.—One hour for each meal.

A. 54 & 55.—They all seek their own pleasure; the greater part living near generally go home; those who do not have their meals brought to the factory by some member of the family. It cannot affect the employer whether they go home or remain during the meals.

A. 56.—The preceding remarks will apply to this.

A. 57.—Generally discharged, and others taken in their stead, and the example frequently operates to command better obedience.

A. 58.—Not with my knowledge or consent.

A. 62.—I always requested they may be dismissed rather than any improper punishment should be inflicted, which I believe is generally attended to.

A. 63.—I have always requested that the children may be treated kindly, and in such cases of disobedience as render them useless I have given orders for their dismissal.

A. 64.—None.

A. 65.—I have only two houses for the accommodation of workpeople, and I generally choose men of good conduct to occupy them.

A. 66.—More steady and useful in their work, and more scientific in their ideas.

A. 67.—The workpeople generally look well in constant and regular employ, but in the absence of employ they soon show poverty and wretchedness, particularly since the introduction of the Beer Bill.

A. 68.—They pursue that branch of the business which their strength and capacity entitle them.

A. 69.—Not that I am aware of.

A. 77.—I have no idea of their being under apprehension on that head.

A. 78.—I cannot conceive that any legislation for the working people in this part of the country can be necessary; with regard to my own, I believe they are perfectly happy, healthy, and contented.

A. 79.—None.

ROBERT BAMFORD.

#### ANSWERS of WILLIAM FLUCK, Pitchcombe Mill, Standish.

No. 17.

William Fluck.

A. 1.—Parish of Standish in the county of Gloucester.

A. 2.—Woollen-cloth manufactory.

A. 3.—Erected at different times, but cannot specify the dates of such erection, or when the time it was first employed for its present purpose.

A. 4.—Sixteen horse water power in winter, varying to about eight horse power during four months in the summer season; the supply of water during the said four months is very irregular as to time, sometimes enabling us to commence working at seven o'clock in the morning, and at other times not until nine or twelve in the day, and will then continue to flow to ten or twelve o'clock at night, and if not used at the said time it will be an entire loss to master and servants.

A. 5.—Windows.

A. 6.—On opening the windows.

A. 7.—At the discretion of any of the workpeople.

A. 8.—Dangerous parts of the machinery are fenced off.

A. 9.—All the workpeople have access to water to wash themselves, and to change their clothing at their pleasure.

A. 10.—We have occasionally employed children as low as seven years of age.

A. 11.—Children from seven to twelve years of age are as capable of piecing and feeding the machines, also quilling to weavers, as those above twelve years of age.

A. 12.—It has made no difference.

A. 13.—None.

A. 16.—We have no orphans.

A. 17.—Usually work eleven hours, and occasionally twelve or thirteen hours per day.

A. 18.—Those under twenty-one years of age are required to work the same time as those above that age, because the one cannot work without the other.

A. 19.—The milling process has occasionally been carried on the whole twenty-four hours.

A. 20.—About three hundred and ten days.

A. 21.—About three thousand five hundred hours.

(APP.—B. 1.)

C 3

A. 22.

Gloucestershire.

William Fluck.

- A. 22.—Generally the whole has been carried on together.
- A. 23.—About eleven hours per day, except Saturday, which is in general nine hours.
- A. 24.—About thirteen hours.
- A. 25.—To supply urgent orders, and in consequence of the irregular supply of water-power, the usual hours of work have been occasionally exceeded.
- A. 26.—Because occasionally our orders require an additional portion of time.
- A. 28.—The hours of labour have been reduced; in consequence it has enhanced the cost of manufacture.
- A. 29.—A change of hands in many instances would spoil the article of manufacture.
- A. 30.—A limitation of hours in any branch would increase the cost of production were it depends on water-power.
- A. 31.—Fresh sets of children would spoil the article of manufacture.
- A. 32.—We have occasionally tried fresh hands, and they have invariably spoilt the article of manufacture.
- A. 33.—We have not employed a night-set of hands.
- A. 34.—By working more than one set of hands would prove injurious.
- A. 35.—We have no general night-work.
- A. 36.—A prohibition of night-work would be a considerable loss to the manufacturer, especially where it depends on water-power.
- A. 37.—A farther reduction of working hours would be a material loss to the manufacturer, as it would enhance the cost of manufacture, particularly where it depends on water-power.
- A. 38.—The usual temperature for the summer season is as the weather may be; during the winter sufficient firing is allowed to make the workpeople comfortable; we require no further heat than the above described.
- A. 39.—A moderate heat.
- A. 40.—Two persons.
- A. 41.—Cannot recollect how many nights during last year, but we know that it was but very few, chiefly to use the irregular supply of water.
- A. 42.—No children have been employed for the special purpose of night-work.
- A. 43.—A few hours, but cannot recollect how many.
- A. 44.—None for the special purpose of night-work.
- A. 45.—A few from eight to twelve o'clock.
- A. 46.—It is indispensably necessary that we drive the stocks the twenty-four hours for the milling of cloth.
- A. 47.—During the whole time.
- A. 48.—The ages usually are from sixteen to fifty or sixty; all males.
- A. 49.—The reason why it is indispensable, for if the cloth is let go cold time after time it spoils the piece of goods.
- A. 50.—With lamps and candles.
- A. 51.—The windows.
- A. 52.—Do not know the effects which night-work has on the constitution, but those who work at milling cloth are in general healthy.
- A. 53.—Two hours each day.
- A. 54.—In general they do leave their works, and are entirely at their own disposal.
- A. 55.—For the convenience of the workpeople.
- A. 56.—None.
- A. 57.—Discoursing with them, and instructing them.
- A. 58.—None at all by our knowledge.
- A. 59.—It is strictly forbidden by us to all our overlookers.
- A. 60.—None.
- A. 61.—Never has been sanctioned by us.
- A. 62.—Always forbidden corporal punishments, and do not know of any being inflicted.
- A. 63.—When we take foremen into our service, we caution them not to use corporal punishment.
- A. 64.—Not one complaint has been alleged against us or our overlookers.
- A. 65.—None of the workpeople do live in our houses.
- A. 66.—We believe those that are brought up to work from their infancy do make decidedly the best workmen, and are less liable to accidents, as they are in general more careful.
- A. 67.—We believe the health of the people is much the same as for the last ten years.
- A. 68.—We do not make any selection of persons, as we have no injurious effects of any particular process.
- A. 69.—It is not applicable to our manufacture.
- A. 70.—We never have been informed against for any thing.
- A. 77.—No reason to believe they are afraid of displeasing their masters.
- A. 78.—Cannot; we think the thing is working well and comfortable in our neighbourhood.
- A. 79.—We should have no objection to a limitation of hours, say from nine to fourteen years of age, provided the legislature will adopt means for the maintenance and education of such children which otherwise would become burdensome to their parents and parishes; and after the age of fourteen to be allowed to work for the convenience of themselves and their employers.

14th May 1833.

WILLIAM FLUCK.

## ANSWERS of GEORGE D. HARRIS, Stroud.

Gloucestershire.

No. 18.

George D. Harris.

- A. 1.—Stroud.  
 A. 2.—Fine broad cloth.  
 A. 3.—Not known, having been employed by me but about two years.  
 A. 4.—Water; a regular supply.  
 A. 5.—Windows that open in every room.  
 A. 7.—At the discretion of the persons employed.  
 A. 8.—All are properly fenced.  
 A. 9.—None appears to me necessary.  
 A. 10.—Nine years.  
 A. 11.—Yes, because they are better taught, and more effective for roller-joining from nine to twelve, when early taught.  
 A. 12.—Am not aware of any alterations in machinery that affects this question.  
 A. 13.—None.  
 A. 17.—From ten to eleven hours.  
 A. 18.—Ten hours if above fourteen years; some may have occasionally worked eleven hours.  
 A. 19.—None more than eleven hours, except the fulling-stocks.  
 A. 23.—Not eight hours.  
 A. 25 & 26.—Never exceeded.  
 A. 27.—No.  
 A. 29.—Profit.  
 A. 30.—This, on reflection, must be obvious, even to a M.P.  
 A. 31.—Difficulty in finding competent hands.  
 A. 32.—Not to my knowledge.  
 A. 33.—Have not employed a night-set of hands.  
 A. 37.—Increase of machinery, and expence in producing the same number of yards of cloth.  
 A. 38.—From sixty to seventy.  
 A. 39.—Boiling heat.  
 A. 40.—Two.  
 A. 50.—By candles and lamps.  
 A. 51.—Same as by day.  
 A. 53.—One hour for breakfast and one hour for dinner.  
 A. 54.—At their option.  
 A. 55.—Their own convenience.  
 A. 56.—An inconvenience to the persons employed.  
 A. 57.—A strap.  
 A. 58.—Not after the manner of soldiers.  
 A. 59.—By their masters.  
 A. 60 & 61.—Never.  
 A. 65.—No.  
 A. 66.—Those employed from infancy are preferable.  
 A. 67.—Have occupied but two years.  
 A. 68.—I know of no injurious effect from any process in my manufactory.  
 A. 69.—No Act of Parliament applicable to my mills.  
 A. 79.—The less parliamentary interference in the manufacture of this district, the better for employers and those employed.

GEORGE D. HARRIS.

## ANSWERS of WILLIAM HELME, New Mills, Stroud.

No. 19.

William Helme.

- A. 1.—New Mills in the parish of Stroud principally; a small part of the building in Painswick.  
 A. 2.—Kerseymeres; buffs, whites, scarlets, and blacks.  
 A. 3.—The building was erected in 1766. The deeds of the estate call the place New Mills in the time of Charles II., and state its being then used as a fulling-mill.  
 A. 4.—Both water and steam-engine; the water irregular, but the works are driven regularly by the application of the steam-engine when the water is deficient.  
 A. 5.—Not any; the size of the rooms in which the children and greatest numbers work would not make it necessary. Room in which one man and five children work, thirty feet long, twenty feet wide, eight feet six inches high, or five thousand one hundred cubic feet. Another room, one man and five children, thirty-three feet long, twenty feet wide, eight feet six inches high, or five thousand six hundred cubic feet. Another room, one man and seven children, fifty-three feet long, twenty feet wide, nine feet high, or nine thousand five hundred and forty cubic feet. Another room, two men and eight children, thirty-three feet long, eighteen feet wide, nine feet high, or five thousand four hundred and twenty-seven cubic feet.  
 A. 6.—There are some causes which I apprehend tend to the constant ventilation of the rooms mentioned in A. 5. There are several large holes in the ceilings of the rooms through which the straps to drive the machines in the floors above pass; and the carder and scribbler cylinders, about seven and nine feet in circumference, revolving about eighty or an hundred times per minute, must keep the air in motion.  
 A. 7.—The windows and doors are kept open or shut at the discretion of the persons employed.

(APP.—B.1.)

C 4

A. 8.

Gloucestershire.

William Helme.

A. 8.—Yes.

A. 9.—None; all arrangements for personal cleanliness are at the discretion of the workpeople. I consider the workpeople very cleanly.

A. 10.—We leave the foremen of the engines to engage them; he says he employs them more according to their size than their age, and only seldom before nine or ten.

A. 11.—No, if we could find a sufficient number at the wages we have paid since 1825, of 2s. 6d. per week. The joiners work is of the lightest description.

A. 12.—Since I have known the cloth manufactory, from 1814, I do not recollect any alteration in machinery which renders requisite any alteration in the proportion of children employed.

A. 13.—We do not.

A. 15.—We lodge and maintain none of the children whom we employ.

A. 17.—Our regular hours are ten hours for five days and eight on Saturday; those are the hours we agree for for the week's wages; if any workman works more hours he is paid extra for them.

A. 18.—Fifty-eight hours per week. We make no difference, having had very little occasion to work extra hours in that branch where the children are employed.

A. 19.—The greatest number of hours that the billy-men or slubbers and joiners children have worked is eleven hours; the greatest number of hours that the people employed at the shearing-machines (which persons are principally above eighteen at the least) is fourteen hours.

A. 20.—Every day except Good Friday, Christmas-day, Whitmonday, and half a day on Stroud fair.

A. 22.—Our works have been carried on at the same time, with the exception of the cutters working extra hours when no other part has.

A. 24.—Eleven hours, five days in the week, for a period of ten or twelve weeks during the twelve months.

A. 25.—We were spinning for another manufacturer a small quantity.

A. 26.—I consider it unavoidable. Stocks or the fulling of cloths must be kept on beyond the regular hours occasionally as well as the gig-mills.

A. 27.—Our regular hours have always been ten hours on five days and eight on Saturday, paying extra for any time beyond this. We have very seldom worked much overtime except the cutters.

A. 28.—Have had no occasion to reason or calculate on the subject.

A. 32.—No; we have had no occasion to exceed our regular time for the children's work to render it necessary, according to our opinion.

A. 33.—Never employed a night-set.

A. 37.—A decrease of consumption, from an increased price of production.

A. 38.—We pay no attention to temperature, we merely have fires in the winter for the comfort of the people.

A. 46.—It would be better for the milling or fulling process of double-milled kerseymeres to be continued during twenty-four hours, but as we make very few of them we do not do so.

A. 48.—A millman, generally above twenty; and a boy or boys, from fifteen to twenty.

A. 49.—I only state it to be preferable.

A. 50.—By lamps and candles.

A. 51.—None.

A. 52.—Have had no opportunity of forming an opinion.

A. 53.—One hour, from twelve to one, for dinner.

A. 54.—They please themselves.

A. 55.—If they stay, it is for the convenience of the workpeople.

A. 56.—They do as they like, and I do not know any difference that it would make.

A. 57.—If frequently disobedient they are discharged, sometimes they are beaten with a leather strap on the back.

A. 58.—No other than as mentioned in A. 57.

A. 59.—By the slubbers.

A. 60, 61, & 62.—I have never troubled myself about it for the reason mentioned in A. 64.

A. 64.—I have never had a complaint since I carried on the business in 1818 to the present time, before a magistrate, or from the parents, or from the children, on the subject of punishment, to the best of my recollection.

A. 65.—We have only seven cottages, which are occupied by our workpeople; if they did not conduct themselves properly they would have notice to quit. Their houses are kept very neat and clean.

A. 66.—I have no observation to make on the subject.

A. 67.—I think it remains much the same; from the list of the people, there seems to be very little illness.

A. 68.—We do not consider any of our processes of manufacture injurious, and make no change of employment on that account.

A. 69.—I believe not.

A. 79.—To express my satisfaction that this inquiry has been instituted, feeling confident that it will relieve the manufacturers of this neighbourhood from the obloquy to which they in common with the whole body of manufacturers of the kingdom were held up, for the over-working and ill-treatment of the children employed by them.

WILLIAM HELME.

## ANSWERS of CHARLES HOOPER, Eastington.

Gloucestershire.

No. 20.

*Charles Hooper.*

A. 1.—Eastington parish, in the county of Gloucester.

A. 2.—Manufacture of fine woollen cloths and kerseymeres.

A. 3.—One of the manufactories has been used for the manufacture of fine cloth for about five hundred years past, and has been several times rebuilt; another has been built and employed for the same purpose about thirty-five years; the other about twenty-five.

A. 4.—Water and steam; the water is very irregular; water-power about one hundred horse power, steam about ninety horse power.

A. 5.—There is not any distinct provision for the ventilation of my manufactories, but windows made to open, which has always been considered quite sufficient, as the rooms are lofty and airy.

A. 6.—On the opening of windows, as stated above, with window-frames in the stair-cases only partially filled with glass.

A. 7.—Controlled at the discretion of the foreman and persons employed.

A. 8.—The dangerous parts of my machinery are fenced off.

A. 9.—I have no arrangement of this description, neither is there any necessity for such, as my workpeople live near, and the temperature of the manufactories is much the same as a well-ventilated parlour, and their clothes are not so much soiled as to require a change.

A. 10.—The lowest age at which I admit children is nine years, and I am not aware that any of them have been employed at other trades previously.

A. 11.—The nature of the work at which I employ children does not absolutely require that they should be under twelve years of age, but if they were not employed before that age they would in the course of two years become too big for the work, require higher wages, and not perform the work so well.

A. 12.—The recent alterations in machinery used in my manufactories have not affected the age at which the work of children is required.

A. 13.—I do not.

A. 15.—I do not lodge or maintain any of the children in my employ, and they have all homes.

A. 17.—Eleven hours, excepting on Saturdays, when all persons in my employ are worked only eight hours, being dismissed three hours earlier.

A. 18.—Eleven hours. Children in my employ under thirteen years of age do not average in the year more than from nine to ten hours per day.

A. 19.—Thirteen hours.

A. 20.—Not having kept an account, and having been frequently stopped by breakages, I cannot answer this question.

A. 21.—I am not able to answer this question for the reasons stated in A. 20.

A. 23.—Ten hours.

A. 24.—Twelve hours for a very short period only.

A. 25.—The extra work was required in consequence of the manufacture having been stopped for some time from a flood.

A. 26.—I do not consider that this excess beyond the regular hours of work is avoidable, as it would often occasion a serious loss and inconvenience if the working occasionally two or three extra hours per day were prohibited, particularly in dry seasons.

A. 27.—Never.

A. 29.—I consider there are three causes which may induce a manufacturer to continue the hours of labour beyond the usual time; first, to provide for an extraordinary demand; second, to supply orders in a given time; third, to produce an article at a less cost, to enable him to undersell the fair trader.

A. 30.—The limitation of the hours of work would increase the cost of production.

A. 31.—Never having tried the plan I cannot answer practically, but should think that the introduction of two sets of hands would cause the work not to be performed so well.

A. 33.—I have not.

A. 36.—The prohibition of night-work would prevent the supply of cloth within a given time, and making up of time lost by casualties.

A. 37.—I think the further reduction of working hours would prove injurious to the trade, as it must increase the cost of production, and lay the manufacturers more open to foreign competition.

A. 38.—Temperature does not affect the working of my manufactories, except stove-drying.

A. 40.—Three men.

A. 41.—Not at all during the whole night, excepting the fulling department.

A. 47.—Sixty hours.

A. 48.—Men usually employed in this process are generally upwards of twenty-five, and boys at seventeen years and not under.

A. 49.—Because the discontinuance of the process would prevent its further progress, and thereby render the completion of the manufacture impossible.

A. 50.—By candles and oil-lamps.

A. 51.—No extra provision.

A. 52.—Those persons who work at night for me are my steadiest and most responsible servants.

A. 53.—From eight to nine o'clock in the morning, and from one until two o'clock in the day.

(APP.—B. 1.)

D

A. 54.

Gloucestershire.

Charles Hooper.

A. 54.—All persons in my employ leave at the meal-times, except those who may remain for their own convenience.

A. 56.—I should not sustain any inconvenience if every person in my employ was obliged to leave the manufactory during the meal-times, but it would inconvenience those persons who work for me and live at a distance, from one to two miles, from the manufactories, especially in wet weather.

A. 57.—If the authority of the foreman is disregarded by the children they are brought before the master, which seldom fails to produce obedience. Those children who are considered most deserving are always first promoted, and this proves a great stimulus to obedience.

A. 58.—Corporal punishments never resorted to except in extreme cases.

A. 59.—It is then inflicted by the parents or foreman.

A. 60 & 61.—I have not known a case of corporal punishment during the past year in either of my manufactories.

A. 62.—I have not forbidden corporal punishment, but have given orders that before it be resorted to I must be informed of the case.

A. 64.—None.

A. 65.—My workpeople live principally in the same parish (or adjoining) as that in which my manufactory stands, and their houses belong to a variety of landlords, but none of them live in those belonging to me.

A. 66.—The difference is very great in favour of those who have been employed in the manufactory from their infancy.

A. 67.—From my own observation, I should not hesitate to state that the health of the people working in the manufactories now occupied by me has decidedly improved.

A. 68.—I do not consider any of the operations carried on in my manufactories prejudicial to the health of those brought up in them.

A. 69.—Yes, it is.

A. 70 & 71.—I have not.

A. 73.—I am not aware.

A. 74.—I have not heard of such a case.

A. 75 & 76.—Never.

A. 77.—I do not think they are.

A. 78.—I cannot, neither do I consider that any legislation is required for the regulation of such manufactories as mine, as no tyranny or oppression is resorted to, and the children are better provided for and more comfortable and healthy than those of the same class of parents residing in this neighbourhood employed in agriculture and otherwise.

A. 79.—I have noticed since the introduction of the Beer Bill that a demoralization has taken place amongst my workpeople, who spend in those houses that portion of their wages which would enable them to provide many comforts for their families which they now deprive them of, and I attribute this principally to the encouragement that the beer-houses give to the people to stay when they receive their wages, by giving them credit for what they drink from one pay-day to another, and I think the Bill in contemplation will increase this evil by allowing more leisure in the evening.

17th May 1833.

CHARLES HOOPER.

No. 21.

N. & J. Jones.

## ANSWERS of NATHANIEL &amp; JOSEPH JONES, Minchinhampton and Stroud.

A. 1.—Parish of Minchinhampton one mill, and Stroud one mill, &c.

A. 2.—Woollen cloths, principally for the East India Company.

A. 3.—No idea whatever.

A. 4.—Water-power, varying, according to the seasons, from thirty-five horse power down to fifteen horse power.

A. 5.—Opening of windows.

A. 6.—Merely opening windows, nothing more being necessary.

A. 7.—Controlled at the discretion of all. The people have all an opportunity to open and shut the windows according as the weather is too hot or cold.

A. 8.—Not particularly fenced, but of such construction as not to be generally considered dangerous. If accidents occur, they arise from carelessness. The principle of our machines, with the apparatus for driving them, is such that they cannot be fenced off throughout so as to prevent the possibility of an accident.

A. 9.—The workpeople have an opportunity to wash themselves, and also they may change their clothes; but there is no room set apart for the purpose, nor have we, from experience, ever deemed it necessary.

A. 10.—Nine years of age; in some few instances they have been employed two and three years prior.

A. 11.—The nature of our work does require the employment of children under twelve years of age, because there are initiatory processes suited to lesser children, and which can be performed without detriment to their health.

A. 12.—No recent alteration so as to affect the number or age of children required.

A. 13.—None.

A. 15.—One orphan. None of the children are lodged or maintained by us.

Gloucestershire.

N. & J. Jones.

A. 16.—One orphan under the care of an elder sister aged about twenty-five years.

A. 17.—Ten hours per day, but if emergency require their services for a longer time, we pay them accordingly.

A. 19.—Twenty-four hours per day, meal-times excepted, the day principally for purposes of spinning, &c., and the night for milling and roughing (two distinct departments, and different hands employed.)

A. 20.—Our manufactories were regularly employed during the last year, except from short water, (the extent of which cannot be ascertained,) or delay occasioned by repairs.

A. 22.—When we have a sufficiency of water we prefer driving the works altogether; but as the power is so very uncertain, we are obliged frequently to drive them separately.

A. 23.—Ten to eleven hours per day.

A. 24.—Thirteen hours per day.

A. 25.—Our trade being governed by tender is unavoidably irregular as regards quantity, therefore we require them to work a greater or less number of hours, according to the nature of the contracts.

A. 26.—The preceding answer applies to this question, namely, the fluctuation as regards the quantity of orders, which if wanted against a certain time for shipping, if the hours were absolutely restricted, in many instances we must decline shipping orders.

A. 27.—The nature of our trade is subject to so many contingencies, that although during the last year our workpeople have sometimes exceeded the regular hours per day, at present, our being without orders, they do not work so many as ten hours per day, nor even eight hours.

A. 28.—As it is impossible to govern water-power in the same way as with steam, because of its great irregularity, the fixing of hours for working would very much depreciate the value of water-power mills.

A. 29.—We have no object in working extra hours, except to expedite orders of emergency which cannot be got up in the day, in which case the children are paid for the extra hours above ten hours, and which they are generally allowed by their parents to keep for their own use, which makes them anxious rather than otherwise to work over-hours.

A. 30.—Water-power is so very very uncertain we are obliged to avail ourselves of it as the stream serves, or else let it waste, except where there is a very large mill-pond sufficient to hold what may collect during the time of its not being employed, which conveniency we are without.

A. 31.—Except that the work cannot be quite so uniformly done by different hands, no objection to have relays of children or persons under twenty-one years of age; but it frequently happens they cannot be procured.

A. 32.—We have occasionally had relays of hands, but which were with difficulty obtained; and only upon this ground do we see any objection to it, except for the sake of uniformity of work, which is certainly a consideration.

A. 33.—When we have employed relays of hands they have taken day and night work alternately.

A. 34.—It is usual in our business to employ certain sets of hands to do the earlier processes of manufacture, which is principally performed in the day; but the latter processes, such as milling, roughing, &c., being continuous, require night-work in addition.

A. 36.—The continuous part of the manufacture, viz. milling, roughing, &c., is such as to render night-work indispensably necessary; indeed the prohibition of night-work would so seriously interfere with special orders, they could not be undertaken.

A. 38.—Our manufacture is such as not to be particularly affected by any certain degree of temperature. We merely have fires kept in the winter season for the comfort of the people.

A. 39.—No extra degree of heat used in any process, except for the purpose of drying wool and cloth during the winter season.

A. 40.—Four or six hands, as occasion may require.

A. 42.—About fifty occasionally.

A. 43.—Sometimes till six, seven, eight, nine, and not later than ten o'clock at night; beyond this we cannot particularize.

A. 44.—About fifty.

A. 45.—Not later than ten o'clock.

A. 46.—Milling and roughing.

A. 47.—Varies according to the quality of the article under operation.

A. 48.—Above twenty-one years.

A. 49.—The process of milling having been begun, the value of the cloth would be greatly deteriorated by a suspension of that process, and the expences increased thereby.

A. 50.—Candles.

A. 51.—Same as by day (windows only).

A. 52.—We have not noticed that it has produced any injurious effect upon the persons employed.

A. 53.—One hour for breakfast, and one hour for dinner.

A. 54 & 55.—Entirely at their own option.

A. 56.—They have already the opportunity to do so.

A. 57.—Dismissal after having used reproof in vain.

A. 58, 59, 60 & 61.—Not with our sanction.

A. 65.—Only one family in our employ.

(App.—B.1.)

D 2

A. 66.

Gloucestershire.

*N. & J. Jones.*

A. 66.—Because there are certain initiatory processes to be performed, which gradually qualifies them for succeeding branches of the trade.

A. 67.—Not conscious of any.

A. 68.—We have no process particularly injurious connected with our trade.

A. 69.—Not that we are aware of.

A. 76.—Evidence was to have been obtained, if bad conduct required it.

A. 77.—No.

A. 78.—If the parents of children could maintain and send them to school until they are nine years of age, we think it would be very desirable they should not be employed at an earlier age; but if, on the contrary (as is the case at the present time), rather than children should beat the streets they would be better at work, because there are processes of such an easy nature that children of a more tender age could perform without injury to health, and as their parents frequently work in the same mills, they are therefore more under their control. But, as before said, if means and inclination can be found to send them to school by the parents, it would be very desirable no children should be allowed to work under nine years of age.

NATHANIEL & JOSEPH JONES.

No. 22.

*Thomas Jones.*

## ANSWERS of THOMAS JONES, Clothier, Chalford.

A. 1.—Situate in Bisley parish one mill, another mill in Stroud parish.

A. 2.—Woollen manufactory.

A. 4.—Water-power, which varies with the seasons from sixteen horse power down to six horse power.

A. 5.—Windows.

A. 6.—Opening of windows only.

A. 7.—The people may open and shut the windows as they please.

A. 8.—The machinery is of such a nature it cannot be fenced off so as to prevent a possibility of accident, but there is nothing particularly dangerous, and if accidents occur it arises from negligence.

A. 9.—No particular accommodation, but the people have access to water so that they may keep themselves cleanly, and they may dress or undress if necessary.

A. 10.—Employed at six years of age, but at no other trade than the woollen manufactory.

A. 11.—Yes; because there are processes which younger children can perform without injury to health, and which prepare them for after stages in the same trade.

A. 12.—No recent alterations affecting the number of children required.

A. 13.—No.

A. 15.—The whole of the children that work for me live with their parents.

A. 16.—The billy-men whom they work with.

A. 17 & 18.—Ten hours per day.

A. 19.—I have occasionally employed my works or some of them the whole twenty-four hours, including meal-times; the spinning processes have been done chiefly in the day, and milling, roughing, &c. by night.

A. 20.—The whole time, except delayed by repairs, short water, or want of orders.

A. 22.—I have preferred to drive the whole of my works together, but from shortness of water have been obliged sometimes to do otherwise, in which case the carding and spinning power has been driven by day, and the milling and roughing by night.

A. 23.—Ten hours.

A. 24.—Thirteen hours.

A. 25.—When I had more orders than could be possibly completed by adhering to the regular hours.

A. 26.—Sometimes I get ship orders, which could not be executed without resorting to extra hours, and which orders I must otherwise forego.

A. 27.—Yes, I have, for at the present time the workpeople are not employed half ten hours per day.

A. 28.—Water-power would be lessened in value materially under a restriction of hours.

A. 29.—Water-power is so very uncertain, I am obliged to conform to the stream, but where there is steam-power it is more at command; I do not know of any existing law relating to the hours of working.

A. 30.—A limitation of hours for working water-power would depreciate the value very materially, because unless there be a sufficiently large reservoir to hold the water during the hours proscribed, which cannot sometimes be provided, the power in such cases must waste.

A. 31.—No objection to fresh sets of hands where they can be obtained, except that the work is not performed so regularly as by one set.

A. 32.—Relays of hands have sometimes been tried, but not frequently, on account of the difficulty to obtain them and the want of uniformity in the work.

A. 33.—The few instances when I have had relays of hands they have worked night and day alternately.

- A. 35.—Alternately.
- A. 36.—A serious interference with orders of emergency, especially shipping orders.
- A. 37.—It would not be in my power to undertake a shipping order if the hours of working were restricted.
- A. 38.—No artificial heat is used in reference to the work, except for the purpose of drying wool and cloth in the winter season. Fires are only kept for the convenience of the people.
- A. 39.—I cannot say.
- A. 40.—Four or five, as occasion requires.
- A. 46.—Milling and roughing.
- A. 48.—Twenty-one years and upwards.
- A. 49.—Because the process of milling and roughing having been begun, a suspension would so much injure the texture of the cloth that it could not afterwards be recovered.
- A. 50.—Candles.
- A. 51.—Same as by day, windows.
- A. 52.—I have not observed any injurious effect.
- A. 53.—One hour breakfast and one hour dinner.
- A. 54.—Just as they like.
- A. 55.—For the convenience of the workpeople.
- A. 56.—They may do so already.
- A. 57.—If found refractory they are first admonished, and if without effect they are then discharged.
- A. 58.—Not that I know of.
- A. 60.—No.
- A. 62.—I have never heard of any improper punishment, or I should have interfered to prevent a recurrence.
- A. 66.—There are progressive stages in the manufacture of cloth, therefore children which are employed in the early stages are thereby gradually prepared for the succeeding ones.
- A. 76.—Evidence might have been obtained if bad conduct required it.
- A. 77.—No.

THOMAS JONES.

Gloucestershire.

Thomas Jones.

#### ANSWERS of WILLIAM LEWIS, Stroud and Minchinhampton.

No. 23.

William Lewis.

- A. 1.—Stroud and Minchinhampton, Gloucestershire.
- A. 2.—Woollen-cloth manufacture.
- A. 3.—I have two factories, one of which has been in possession of myself and family upwards of forty years, and the other about twenty-seven years, during which periods several additional buildings have been erected.
- A. 4.—Steam and water, the latter irregular, particularly during the summer and autumn months. The average water-power through the year is from about sixty to eighty horse; the steam-power is about eighty horse, of which forty only is now in use.
- A. 5.—Well ventilated by windows and doors.
- A. 6.—On the opening of windows and doors.
- A. 7.—By all the persons employed.
- A. 8.—They are.
- A. 10.—The lowest age at which any child is employed by myself is thirteen; my piecework servants employ five only under nine and five at nine years of age; all the others are above the age of ten.
- A. 11.—In some processes children of the age of nine or ten can be advantageously employed.
- A. 12.—Not for the purpose of working the recently improved machinery, but so far only as it has led to the production of an increased quantity of manufactured goods.
- A. 13.—No.
- A. 15.—I have six orphans in my employ, who are under the protection of relatives and guardians.
- A. 17 & 18.—Ten hours.
- A. 19.—During the short seasons of water it has been necessary to make good ten hours work out of the twenty-four by working some of the water-power in the hours of night as well as day, which has been regulated according to the supply of water.
- A. 20.—Every day except Sundays, and a few holidays which are usually kept.
- A. 21.—Cannot say, not having kept any account.
- A. 22.—Generally every department has been employed at the same time.
- A. 23 & 24.—Ten hours.
- A. 25.—During the irregular supply of water the hours of work have been varied, but not exceeded by machinery worked by water.
- A. 27.—Only under particular circumstances, such as orders which would not admit of delay in their execution, and to make good the time lost arising from accidents, when an extra hour or two per day has been worked.
- A. 28.—The cost of manufacture must be lessened to those who employ the capital vested in mills, machinery, &c. the greatest number of hours.

(APP.—B. 1.)

D 3

A. 29.

Gloucestershire.

William Lewis.

A. 29.—To lessen the cost of manufacture, and enable the manufacturer to execute additional orders.

A. 31.—In my trade such a system would prove very injurious if adopted.

A. 32.—It has been tried, but did not answer, from the work proving irregular.

A. 33.—Never.

A. 36.—It would be very injurious to all manufacturers using water-power, and to those entirely dependent on it it would be ruinous, besides depriving thousands of workpeople of employment several months in the year, and thus compelling them to apply to their parishes for support.

A. 38.—The temperature of the seasons, except in the winter months, when all the workshops are heated by fires and steam for the comfort of the servants.

A. 39.—About one hundred degrees in the stoves for drying wool and cloth in the winter months.

A. 40.—Three or four men in the day only, and those only at short periods.

A. 41.—None, except the water-power, in the dry season.

A. 42.—None, except with the water-power, in the dry season.

A. 43.—Regulated by the supply of water.

A. 44.—Occasionally from eight to ten in the dry season at machinery worked by water.

A. 45.—Depends on the supply of water.

A. 46.—In the process of felting it is advantageous though not indispensable to be continuous.

A. 47.—None.

A. 48.—Men, and boys from the age of fifteen.

A. 50.—Principally with candles; some lamps.

A. 51.—Same as in the day. See A. 5.

A. 52.—Never witnessed any bad effect from night-work.

A. 53.—All the workpeople employed at machinery propelled by steam and water; dine at one o'clock, all others at twelve o'clock; one hour allowed to all. In the summer months the labour commences at seven o'clock in the morning, and discontinues at six, in the winter months from eight to seven.

A. 54.—All at liberty to go where they please.

A. 57, 58, 59, 60, 61, & 62.—Strict injunctions have been given by me to the overlookers and the persons under whom the children are employed never to inflict severe or unnecessary punishment on them, and no complaint has ever been made to me of the violation of such injunctions.

A. 64.—Never.

A. 65.—They reside where they please.

A. 66.—They are notoriously more skilful.

A. 67.—They are now in the enjoyment generally of good health, quite equal to what they were ten years ago.

WILLIAM LEWIS.

No. 24.

William Marling  
& Sons.

## ANSWERS of WILLIAM MARLING &amp; SONS, Ham Mills, Stroud.

A. 1.—Ham Mills, parish of Stroud, in the county of Gloucester.

A. 2.—Manufacturers of superfine woollen cloths in all its branches, except dyeing.

A. 3.—The premises have been employed in the manufacture of woollens more than one hundred years; a second mill erected in 1814, a third in 1825, a fourth in 1832.

A. 4.—A steam-engine of thirty horse power, and three wheels of ten horse power each; during the summer and autumn months the water is very short in the daytime, and in the shortest time of water there is about ten horse power of water in the night, viz. from six in the evening to six in the morning.

A. 5.—In every third window is a casement, which ventilates the factory.

A. 6.—On the opening of windows.

A. 7.—As a particular heat is not required to be kept up in any parts of the factory, the ventilation is controlled at the discretion of all or any of the persons employed.

A. 8.—The dangerous parts are fenced.

A. 9.—There are no particular rooms set apart for this purpose, but there are ample conveniences on the premises for every one who choose to avail themselves of them, such as washing themselves and drying their clothes.

A. 10.—We have no child working in the factory under nine years of age; last year there were ten or twelve under that age, but they were introduced at the wish of their parents or guardians; the children are not worked generally in any way before they come into our factory.

A. 11.—It requires them under twelve years of age, because there are not enough children above that age to do the work necessary to be performed by children.

A. 12.—A less proportion.

A. 13.—No.

A. 15.—Not a child whom we employ is lodged or maintained by us.

A. 17.—The usual hours are eleven per day; but they vary from ten to thirteen hours, as their particular labour may be in greater or less demand.

A. 18.

Gloucestershire,

*William Marling  
& Sons.*

A. 18.—In the manufacture of superfine cloth there are four branches in which children and young persons are employed, viz. weaving, spinning, dressing, and shearing; the former branch is for the most part done at the weavers own houses, and there generally very young persons (eight years old) are employed, but of course no legislative enactment can affect them. Where the weaving is done in factories they work about eleven hours per day; they are generally employed at the age of nine, and continue in it three or four years, when they are removed to the dressing and shearing departments, which are sometimes worked twelve hours per day, so that young persons from the age of nine to thirteen work from ten to eleven hours, and from the age of thirteen to twenty-one ten or twelve hours per day.

A. 19.—The process called fulling is often started Monday morning, and kept on without stoppage till Saturday night; this process does not employ more than six persons. Some parts of the manufacture have varied during the past year from nine to fourteen hours per day, at most.

A. 20.—Three hundred days, ending 31st March.

A. 21.—About three thousand four hundred.

A. 22.—Cloth-picking, from eight to four in winter, and from eight to six in summer, performed by women; wool-picking, the same hours, also by women; spinning, from eight to eight in winter, meal-time one hour, and from six to seven in summer, meal-time one hour and a half; weaving, the same; dressing, six to eight in winter, and from six to eight in summer, meal-time one hour and a half to each day; pressing, six to nine, meals two hours.

A. 23.—Eleven hours.

A. 24.—The young persons employed in the shearing and dressing department have, in a few instances, worked twelve hours and a half.

A. 25.—When the demand for goods has been great, as in the case of a general mourning, every person works as many hours as he is able, but the extra number of hands is generally occasioned by accident from breakage of machinery; the workman and master are anxious to have the lost time made up.

A. 26.—To ensure a regular supply of manufactured goods, the retailer finds it often necessary to enter into a contract with the manufacturer to take a certain quantity of goods per month for a given time, and the manufacturer finds it convenient, as it ensures him a regular demand. Now when a breakage occurs, it is absolutely necessary that an extra number of hours should be worked to enable the manufacturer to perform his contract; but in every case the master is not more desirous of making up the lost time than the workman.

A. 27.—We are now working ten hours per day, but our usual hours are ten and a half or eleven.

A. 28.—We have never found it an advantage to work a greater number of hours than the workpeople are well able to perform.

A. 29.—In this county, night-work in manufactories is very unusual, except in the fulling process, and we know nothing to induce a manufacturer to continue the working of children through the whole or great part of nights, as the inferior manner in which the work would be done would, we think, more than counterbalance any advantage he might get by having an extra quantity of work done. At the same time, we are sure it would be extremely inconvenient in case of a hurried demand to introduce two sets of hands, as the hurry generally continues only a week or two. By the time the arrangement was made and got to work the demand would have ceased, and two sets would be no longer required.

A. 30.—Our usual hours having been from ten to twelve per day, we have not had the opportunity of judging from experience; but we conceive these to be the most advantageous to the workpeople and the masters, and our opinion is, that we can manufacture goods quite as cheap from ten to twelve hours per day, as by working longer days; on the other hand it is our belief that if these hours are reduced the cost of production will be increased, but to what extent we cannot say.

A. 31.—It is seldom we require the labour of children more than an hour beyond the usual hours of ten hours per day, and it is evidently impracticable to introduce an entire fresh set for so short a period; but if in any manufactory the labour of children is required during the greater part or the whole night, fresh sets of children we think must be an advantage, as it is certain the one set of children could not perform the work required.

A. 32.—Relays of children have never been tried by us.

A. 33.—We have never employed a night set of children.

A. 34.—One set of children perform all the labour we require of them, without in any degree injuring their constitutions, therefore any alterations that would introduce two sets of children to do the work of one would be as injurious to the workpeople as to the manufacturer, because the labour of children under thirteen years of age is seldom required more than eleven hours per day, and above that age it does not average more than eleven hours and a half; besides, we think two sets could not be found for all the manufactories.

A. 36.—During eleven months in the year it probably would not produce any effect, but on particular occasions of urgent demands for our manufacture it would be a great hardship if prohibited from working extra hours to supply that demand. See A. 26.

A. 37.—By a specific regulation of the hours of labour the manufacturer will be prevented from employing his works in the execution of urgent and extra orders, which will have the effect of driving that part of the trade to countries where the manufacturers are not clogged by unnecessary legislation. We conceive it out of the power of any legislature to control or regulate the demand for goods, as it results from the wants of the people; that demand from various causes not being uniform and regular, but is constantly ebbing and

Gloucestershire.

William Marling  
& Sons.

flowing, it is absolutely necessary that there should be some degree of elasticity in the producing power, and that it should not be bound down to certain prescribed and arbitrary rules. By prohibiting our manufactories from being worked certain hours the legislature will be throwing another advantage into the hands of foreign manufacturers, which, in addition to the advantage they have at present in the low price of wages resulting from the difference in the low price of corn, would, we fear, give a death-blow to the English manufacturers. If the British Parliament could regulate the hours of all manufactories in the world, these objections would vanish; but as our great competitors abroad would be left entirely free, it is plain to us that if the hours of labour in our manufactories are reduced, we shall be no longer able to compete with them who have so much in their favour at present; and the consequence must be, that such a measure would most completely and effectually prevent the overworking of every part of the manufacturing population, as it would take the work from them and give it to other nations.

A. 38.—The comfort of the workman only is considered in regulating the temperature of our manufactory.

A. 39.—No particular degree of heat required.

A. 41.—Except in the fulling process, no part of our works have been employed a whole night during the last year.

A. 42.—None under sixteen years of age.

A. 43.—Excepting fulling, and mechanics not any.

A. 44.—Six.

A. 45.—All hours.

A. 46.—It is indispensable that the process of fulling should be continuous on particular sorts of cloth.

A. 47.—The maximum of time cannot be stated; it is customary to work the whole week day and night.

A. 48.—From fifteen to seventy years; the senior fulling-man is generally one of the most respectable persons on the manufactory.

A. 49.—Fulling is a process producing heat by its own friction, and if stopped during this process of thickening the cloth is injured. The number of hours for fulling one piece of cloth varies from twelve to eighty hours.

A. 50.—By lamps.

A. 51.—Opening the casements as in the daytime.

A. 52.—The best and most industrious are generally selected to perform night-work, and we never found night-work injurious to the habits or health of those employed.

A. 53.—From half past eight to nine for breakfast, and from one to two for dinner.

A. 54.—The works are stopped during the hours for meals, and every person is allowed to do as they please during that time.

A. 55.—The convenience of the workpeople only is consulted during the hours for meals.

A. 56.—Every comfort the working class can require is provided for them in the factory for their meals; and if they were compelled to leave the factory to take their meals it would be a great hardship, as many of them live a considerable distance from the manufactory, and do not return to their homes until the labour of the day is ended; it would be an advantage to the manufacturer that every person should leave the factory during meal-times.

A. 57.—Fines, and the fear of being discharged.

A. 58.—If they are, it is contrary to our orders.

A. 59.—Corporal punishment not allowed.

A. 60 & 61.—No.

A. 62.—Our general and particular orders are to discharge rather than inflict punishment.

A. 63.—Corporal punishments are verbally forbidden.

A. 64.—No complaint has ever been alleged against any person connected with our establishment.

A. 65.—We have seven respectable families living on our premises.

A. 66.—The most skilful are those who have been employed in factories from infancy; and in proof of this, all our foremen, who have risen entirely by their merit, were employed in factories as under:—William Morgan, foreman of spinners, began to work in a factory at the age of seven years, and has been so employed ever since. Joseph Fluck, foreman of dressing, began to work in a factory at the age of ten years, and has been so employed ever since. John Davis, foreman of finishing, began to work in a factory at the age of eleven years, and has been so employed ever since. Charles Cox, foreman of shearing, began at the age of five years, and has been so employed ever since. Charles Ricketts, foreman of the cutters, began at the age of nine years, and so employed ever since. Nelson Lediard, engineer, began at the age of ten years, and so employed ever since. James Spratt, foreman of weaving, began at the age of five years, and so employed ever since.

A. 67.—It may be here remarked, that the situation of our factories is particularly well situated to preserve health, there not being in the whole borough a single establishment that is not standing alone, distinct from any other building. We therefore cannot report improvement or deterioration for ten years past, but should say that since our recollection our working class have been and still are as fine and healthy a race of people as are to be found in any county in England.

A. 68.—There is no process in our manufacture that produces any injurious effects, consequently no change is required; but in this, as in all other cases, those who merit the best places are sure to have them.

A. 69.

A. 69.—It is not.

A. 78.—We suggest that children under nine years of age be prohibited from working in factories; and as to further interference on the part of the legislature, we should say, "Let it all alone."

A. 79.—It is with regret we have heard of the proposal of a plan for regulating the labour of young persons above the age of seventeen or eighteen, and we most earnestly beg the Commission of Inquiry to look well into the effect likely to be produced by such a measure. This is the very age when it is all important that persons should be closely employed. We do therefore, on behalf of the working classes, and the welfare of society in general, most earnestly beg that no such regulation may be made. It is absolutely impossible that the manufactures of this country can be carried on without occasionally working various hours, and such persons must be employed as are not restricted from employing their labour in any manner they please. Manufacturers, therefore, instead of employing young men from seventeen to twenty-one, will be compelled to dismiss them, and throw them on the wide world, where, finding themselves outcasts and useless appendages to society, their last resource we fear will be to the beer-houses, whence they will be compelled by dire necessity to issue forth by night to obtain that by plunder which they would formerly gladly have earned by their industrious labour. In making this statement, we beg the Commission will give us credit for higher motives than those of an interested nature; besides, it is clear that the difference to us cannot be great in the wages of a youth of eighteen or twenty years of age and a man above twenty-one years of age.

7th May 1833.

WILLIAM MARLING & SONS.

Gloucestershire.

William Marling  
& Sons.

#### ANSWERS of NATHANIEL SAMUEL MARLING, Stroud.

No. 25.

N. S. Marling.

A. 1.—No. 1. Vatch Mills, parish of Stroud, county of Gloucester. No. 2. Upper Vatch Mills, parish of Stroud, county of Gloucester. No. 3. Pig-house Mill, parish of Painswick, county of Gloucester.

A. 2.—Woollen cloths and kerseymeres manufactured from German and Saxony wools; the goods are chiefly dyed black, and of the finest description.

A. 3.—My factory No. 1. was burnt down and rebuilt in 1827; No. 2. was rebuilt in 1830; No. 3. was partly rebuilt in 1823.

A. 4.—Mill No. 2.; the power is water only; used solely for the purpose of fulling; on the ground floor; the power as regular as the average of water-power in the neighbourhood, and of the power of six horses; the upper floors are weaving-shops, all performed by hand. Mill No. 1. contains three steam-engines, together sixty-six horse power, and two water-wheels of twelve horse power each; the water-power regular; both water-power and steam used daily. Mill No. 3. contains a steam-engine of thirty horse power and one water-wheel of ten horse power; the latter only used at present; power regular; used solely for the purpose of fulling.

A. 5.—Windows and doors at each end of the factory.

A. 6.—Depends on the opening of windows and doors.

A. 7.—The workman who happens to be nearest the windows or doors regulates the heat or cold to suit the convenience of the shop generally; never heard of any misunderstanding; if any should arise the foreman is bound to see justice and fair play, or I should discharge him.

A. 8.—Having had accidents arising from neglect of this sort, of late years I have carefully had all dangerous parts fenced off.

A. 9.—Persons on coming to work generally are cleanly, and although the cloth when finished is black, it is not dyed black until nearly finished, so that the workpeople have the advantage of working on white wool in spinning, carding, weaving, &c., most other cloths except black being dyed in the wool; some blacks are dyed in the wool, but by far the greater part is dyed when the cloth is nearly finished; this mode gives a decided advantage to the workpeople as to cleanliness and health; and a stranger in passing through the neighbourhood is immediately struck with the contrast between the condition and appearance of the workpeople, as compared with Leeds and other districts where they work on coloured wool and not on white. I have no arrangements for change of clothing except when, in rainy or inclement weather, they arrange among themselves and neighbours to change their clothes and put them in the stove or engine-loft to dry.

A. 10.—There are a few children I employ at the age of eight or nine years, but I believe they have not been previously engaged in other trades.

A. 11.—Directly; I employ but fifteen or sixteen children under twelve years of age; there are many in my factory at a less age, but are employed by their parents or others who work by the piece.

A. 12.—I am not aware of any alteration in machinery the last twenty years affecting the employment of children of this age.

A. 13.—None.

A. 17.—Eleven hours and a half.

A. 18.—Eleven hours.

A. 19.—Sixteen hours in the fulling department.

A. 20.—Three hundred and seven days.

(APP.—B. 1.)

E

A. 21.

Gloucestershire.

N. S. Marling.

- A. 21.—Three thousand six hundred and eighty-four hours.
- A. 22.—All work together, except from accidents, or shortness, or an over-supply of any kind of work.
- A. 23.—Twelve hours.
- A. 24.—Eleven hours.
- A. 25.—Fulling cloths is the general exception, also dressing or raising the pile.
- A. 26.—Fulling and dressing are absolutely necessary beyond the regular hours, as it would affect the fabric and dress of the cloths.
- A. 27.—I have some years ago averaged the working hours one hour per day more than at present.
- A. 28.—The difference is not perceptible in the cost of goods.
- A. 29.—Pressing orders, and a difficulty in obtaining persons competent to continue the works at night.
- A. 30.—I consider the hours I work quite sufficient to produce a manufactured article on the best of terms, to compete with any manufacturer who works a greater number of hours.
- A. 31.—I can conceive of no objection.
- A. 32.—Not in my experience.
- A. 33.—I have not.
- A. 34.—I employ only one set of hands, and by day only.
- A. 36.—The effect would be to destroy the application of the power in many water-mills, as in the summer season there is more water by night than by day; it would also be highly injurious in case of the urgency of foreign orders.
- A. 38.—I have no artificial heat.
- A. 41.—I never work the whole of my works by night, with very few exceptions; it is confined to fulling and roughing or raising the pile.
- A. 42.—I do not recollect any children having been so employed.
- A. 46.—Fulling and roughing or raising the pile.
- A. 47.—Some descriptions of cloths require the fulling to be completed, which sometimes takes thirty, forty, or fifty hours.
- A. 48.—Men, and a boy from fifteen to twenty years of age.
- A. 50.—By lamps, called Liverpool lamps.
- A. 51.—The opening of doors and windows.
- A. 52.—I have such little night-work that I can draw no general inference from its effects.
- A. 53.—I commence work at seven o'clock and stop at six; one hour for meals, from one to two o'clock.
- A. 54.—My factories are situated in the country; some walk to enjoy the air; some lie down on a piece of cloth and go to sleep; some go out in the fields to play; they please themselves; there is a field belonging to the factory, and most of the children play there when the weather is dry.
- A. 56.—The effect would be a great benefit to the manufacturer; he gets more mischief done in meal-times than any other by breaking of windows, throwing stones, balls, and other youthful frolics.
- A. 57.—Their discharge, and the consequent anger of their parents or guardians.
- A. 58.—I allow no person to correct any child except the father or mother thereof, and leave it to their discretion; nevertheless it is more than probable a foreman may sometimes strike a child with a strap or stick, but since my commencement in business fourteen years ago I do not remember ever having a complaint relating thereto.
- A. 63.—My foremen have instructions to discharge any unruly child or children, and inform the parents the cause of such discharge, but not inflict corporal punishment.
- A. 64.—None for fourteen years.
- A. 65.—I have eight families living in my own houses; no control or superintendence whatever is exercised over them; an infant and Sunday school is established on the premises, and some of all the families are engaged in them.
- A. 66.—Those persons who are accustomed to work in clothing factories from infancy are generally the best workmen, the employment being progressive from one kind of work to others, as their age and talents fit them for more superior situations.
- A. 67.—They now are, and were ten years ago, comparing equal numbers taken indiscriminately, equal to any population in England, florid, healthy, and of good stature. I should say, from the establishment of schools and the greater interest taken by the higher classes of society for the welfare of the poor, their health and moral condition has improved.
- A. 68 & 69.—No.
- A. 77.—When manufacturers have been summoned before magistrates I believe there has been no difficulty or hesitation on the part of the workmen to give evidence.
- A. 78.—I am not aware of any existing law affecting the woollen trade. I have no objection to a law prohibiting infant labour under nine years of age, and regulating the hours of labour from that age to fifteen.

NATHANIEL SAMUEL MARLING.

## ANSWERS of JOHN WILLIAM PARTRIDGE, Bowbridge, near Stroud.

Gloucestershire.

No. 26.

*J. W. Partridge.*

A. 1.—Parish of Stroud, county of Gloucester; four factories and extensive dye-house.

A. 2.—Manufacturing broad superfine cloths, kerseymeres, and Spanish stripes, and cleansing cloths for an extensive dyeing establishment, and carrying on the business of a public dyer.

A. 3.—No. 1. was erected about 1795; No. 2. is a very old building, but altered in 1824 to its present purpose; No. 3. was erected in 1802; No. 4. was erected about 1780.

A. 4.—At No. 1. our power is wholly from water, at No. 2. our power is wholly steam, at No. 3. our power is partly steam and partly water, and at No. 4. our power is wholly water; our whole steam-power is about equal to eighteen or twenty horses, our whole water-power about equal to thirty horses; our water-power is very irregular in the summer from May to November, varying according as the season is wet or dry, but always irregular in summer.

A. 5.—There is not any.

A. 6.—Windows are made to open on every floor, and the buildings are not crowded.

A. 7.—The ventilation is left to the discretion of the workpeople, except that in summer they are recommended to keep open the windows.

A. 8.—All the dangerous parts of the machinery which admit of it are fenced off; some parts must be left open for the people to work them, and some straps must be left open to throw in and out of motion; if these latter were boxed up, and a child had its hand entangled in the machine, great mischief might be done before the machine could be stopped.

A. 9.—Only that those who work at coloured work may use soap out of the mill to wash themselves with.

A. 10.—Eight years.

A. 11.—The nature of our work does not require children under twelve years of age, but those of eight or nine years can well bear it; and the parents, from the difficulty they experience in providing for their children's necessities, and their utter inability to send them to school, much prefer to bring them to work; and especially when the parents themselves work out from home, they do not like to leave children of that age at home.

A. 12.—No, there has not been any recent alteration affecting the employment of children.

A. 13.—No.

A. 15.—I do not lodge or maintain any child whom I employ.

A. 17.—The time on our premises is twelve hours, but half an hour breakfast and an hour dinner are deducted, making the actual time of work ten hours and a half.

A. 18.—Generally the hours are as specified in A. 17, but if an order is received which is required to be executed in a short time, then persons in our employ under twenty-one years are required to work additional hours.

A. 19.—Some part of our works have been continued on particular occasions during the whole day and night, meal-times excepted.

A. 20.—All the year, except when accidents to the machinery stopped us for a short period while repairs were made, which was three or four weeks in the year.

A. 21.—I cannot ascertain.

A. 22.—They all proceed together, except accident prevent, want of water in the mill-pond, or want of orders.

A. 23.—About ten hours and a half at the outside for those parts in which children are employed.

A. 24.—Young children never more than fourteen hours in any one day, and that is of very rare occurrence; some few children between fourteen and eighteen years old have worked occasionally all day and night once or twice a week on urgent orders.

A. 25.—When goods have been required in less time than it was possible to manufacture them, working only by day, chiefly in spring and fall, for ship-orders, and frequently when the water is short.

A. 26.—This excess of hours is not avoidable at some particular times, because the goods for ship-orders are frequently required in less time than they could be manufactured in abiding by the usual hours of work, and more especially when the power is water, and the orders are required in a short season of water.

A. 27.—No.

A. 28.—If the hours for working water-power were arbitrarily fixed, the value of most water-mills would be decreased thirty or forty per cent.

A. 29.—I know of no "existing law, regulation, or understanding of the trade" in Gloucestershire respecting the hours of labour in clothing factories. The only inducement I know of to work extra hours is that of executing an order for which there is not sufficient time allowed to perform by day, for it must be remembered that in a manufactory of power to make twenty pieces weekly twenty pieces may be made in the same time required for making one piece.

A. 30.—The same work cannot be carried on by alternate sets of hands without great injury, but the chief pecuniary loss would accrue to owners of water-power if they should be by any means impeded or delayed in the use of it. The workpeople would suffer under such a regulation much more than their employers, for they have not enough to eat now, and if you prevent their employment you must find some other means of feeding them.

(APP.—B. 1.)

E 2

A. 31.

Gloucestershire.

*J. W. Partridge.*

A. 31.—The work produced by different hands will not work well together in one piece of cloth.

A. 32.—Parents would not send their children to any factory for half a day while a whole day's work could be obtained at some other place. On some branches of the work, such as joining and feeding, relays might be employed, but they would in that case earn so little that there would not be enough inducement to work.

A. 33.—We seldom or never work children all night; they sometimes work over-hours, the produce of which their parents suffer them to retain for their own use, and this renders them anxious for such employment.

A. 36.—An impossibility of executing the real orders required in less time than usual to make a piece of cloth; orders generally for shipping, and which, if not supplied in time, are totally lost.

A. 38.—We do not require any artificial heat in summer, and in winter more for the sake of the people than as being necessary to our processes, except in our drying-stoves.

A. 39.—The drying-stoves are kept up to about ninety degrees Fahrenheit.

A. 40.—From two to four, according to the pressure of business.

A. 41.—I cannot say; certainly not forty nights.

A. 42.—Perhaps six or seven.

A. 43.—One or two hours frequently in the evening; and it has occurred, though rarely, that they have worked six or seven hours and all night.

A. 44.—Three or four.

A. 45.—On some occasions all night, but very seldom. They frequently work an hour or two over hours in the evening.

A. 46.—Not indispensably; but fulling and dressing at the gig-mill are performed much better if uninterruptedly.

A. 47.—Inapplicable to our trade, except in the above instances, which require about eighteen hours of uninterrupted work, but which we very seldom attempt, rather putting up with the inconvenience than encourage night-work.

A. 48.—Men, and boys from fourteen to twenty years old.

A. 50.—By oil-lamps and candles, but gas is now erecting in the neighbourhood.

A. 51.—Same as by day.

A. 52.—Except a watchman, no one person works a sufficient number of nights to affect his general habits.

A. 53.—The general allowance out of twelve hours is half an hour breakfast and an hour dinner.

A. 54.—None need remain in the factory to their meals.

A. 55.—Those who do so do it by choice; few of them remain in-door to their meals during summer, but during the winter they get round the fires we allow them in the mills.

A. 56.—In the winter they would be much worse off, not having any comfortable place near at hand to resort to; and if there were a beer-shop near, all the wages would go there.

A. 57.—If refractory after repeated admonition, they are discharged, and their parents then punish them generally.

A. 58.—We do not know of any such, though it is possible it may have occurred.

A. 59.—By those whom the children work under, if inflicted at all.

A. 60.—No.

A. 61.—No; but to some degree of corporal punishment I should not object.

A. 62.—No; I would rather encourage it in a moderate degree; and if any thing improper had been inflicted, I should certainly have heard of it, which I have not.

A. 65.—Some few live in our houses, but distant from the factory, and not at all under our control when from the factory.

A. 66.—I do not know that I have any hands at work except those who have been at the work from infancy; I have known one or two such cases, but those persons never could attain so much proficiency or earn so much money as the others.

A. 67.—We have but few old servants in our factory, not having in the last two years been so extensively engaged in that department, but those that we have are generally healthy, and have always been as much so as any class of people whatever.

A. 68.—There is no occasion for it; none of our processes are injurious.

A. 69.—No.

A. 76.—It might be if there were any ill conduct.

A. 77.—Not in cases where the masters behave ill, because the public opinion of the neighbourhood would be a sufficient protection.

A. 78.—It might be advisable to enact that no children should work in a mill if under nine years of age, and that no children under fourteen should work more than twelve hours each day; but parents would not suffer their children to work if they could get bread without, and if laws are made to interfere with the right of the poor to earn his bread, some other provision must be made. The chief difficulty is to provide a sufficient quantity of remunerating work for all our labourers; no regulations can be beneficial, because if there be not work enough for all, competition will keep down the price of all labour, and each man will undergo greater difficulties in his attempts to earn a livelihood; and if by law you fetter his means through imposing restraints on the work of his children, you may relieve these children from work, but in that case you must consign them to starvation.

JOHN WILLIAM PARTRIDGE.

## ANSWERS of WILLIAM STANTON &amp; SONS, Stroud &amp; Rodborough.

Gloucestershire.

No. 27.

*William Stanton  
& Sons.*

A. 1.—We have two manufacturing establishments, Stafford Mills in the parish of Stroud and Lodgemore Mills in the parish of Rodborough, distant one mile and a quarter from each other, and both situated in the county of Gloucester.

A. 2.—The manufacture of wool into cloth.

A. 3.—A portion of Stafford Mills was erected more than forty years since; other parts have been erected eighteen, fifteen, ten, seven, five, and two years since. One portion of Lodgemore Mills was erected twenty years since, the other seven years since.

A. 4.—We have both water and steam power at each; the water is tolerably regular, but necessarily varies with the seasons.

A. 5 & 6.—We have no specific provision for ventilation further than the opening of windows. Our rooms are not so crowded as to render the atmosphere impure, and therefore ventilation is not made a primary object.

A. 7.—The opening of the windows is, for the most part, left to the discretion of the workpeople.

A. 8.—All machinery we consider to be more or less dangerous; the most dangerous parts are fenced off, and no one can be injured with common care and precaution.

A. 9.—None whatever.

A. 10.—Till the lists are made out we cannot state the age of the youngest child in our works; we never wish to have any child employed under nine years of age, but as our roller-joiners (and these are our youngest hands) are procured and paid by the billy-spinners, very young hands are occasionally brought into our works; if so young as nine the billy-spinner is generally the parent, for it is not his interest to employ children so young.

A. 11.—Many of our joiners are above twelve years of age; however, as the work is particularly light, we find children from nine to twelve years of age capable of performing their daily tasks without any appearance of fatigue. If the spinner were compelled to employ children above twelve years of age, he would be obliged to give them more wages, and would probably make two big children do the work of three small ones.

A. 12.—The alterations in machinery have not for the last twenty years tended to change the proportions of children employed under twelve years of age, but the abundant supply of infant labour has of late years tended to advance the ages at which children are admitted into factories; twenty years since, when trade was brisk and children scarce, they were eagerly sought for and admitted at six and seven years of age.

A. 13.—No.

A. 17.—Our dressers and finishers work on an average twelve hours a day, exclusive of meal-hours, excepting on Saturday, on which day they work nine hours in the summer and eight hours in the winter.

A. 18.—Our spinners average about eleven hours a day exclusive of meal-hours, and on Saturday nine hours and eight hours; the roller-joiners of necessity work the same time; we do not recognize the ages of children in any of our arrangements.

A. 19.—Our fulling-stocks have occasionally been kept going day and night, from Monday morning till Saturday night.

A. 20.—Every day, with the exception of Sundays, Christmas Day, and five or six other days now difficult to particularize.

A. 21.—It is quite impossible to answer this question correctly; the fulling of cloth requires to be continuous; to guess at the average of last year, we think our stocks must have worked ninety hours in each week; our fulling-stocks are chiefly driven by water-power on the ground floor, and the spinning and finishing are in the rooms above.

A. 24.—Our finishing process has occasionally been going on from six A.M. till eight P.M.; and if all under twenty-one years of age are classed as children, then have our children been employed, meal-hours included, fourteen hours a day.

A. 25.—In the months of April and May, when the demand for goods is great.

A. 26.—Unquestionably it is avoidable by the expenditure of additional capital in the creation of more power, room, and machinery.

A. 27.—We formerly did work more hours a day; but of late years we have erected steam-engines, enlarged our buildings, and increased our machinery.

A. 28.—Of necessity, the more pieces produced in a given time by a given power, the less will be the charge for rent on each piece.

A. 29.—We can scarcely be expected to state our belief on a system which with us has no existence.

A. 30.—We can give no practical answer to this question; it probably refers to the cotton manufacture.

A. 31.—Having never overworked one set of children, we have never speculated on the advantages of employing two sets.

A. 32.—We believe the system of relays has not been tried in the west of England, at least we have never adopted it.

A. 37.—A diminution of wages commensurate with the decrease of time; the price of labour would not advance; the supply of hands would still be superabundant.

A. 38.—The usual temperature in summer is from fifty-five to sixty-five degrees, in winter from thirty-five to forty-five degrees; our operations are not impeded at any temperature above the freezing point.

Gloucestershire.

---

 William Stanton  
& Sons.
 

---

A. 39.—The most desirable temperature is about fifty degrees, just high enough to keep oil in a liquid state.

A. 41.—Our works, excepting fulling, are not carried on by night.

A. 46.—The process of fulling is indispensably continuous; if the heat be checked, the cloth is injured. We have no boys under sixteen years of age employed in the fulling process.

A. 47.—This depends on circumstances which are continually varying; the fulling of a piece of cloth requires from twelve to forty hours.

A. 50.—By Argand lamps and candles.

A. 52.—The workmen in our fulling-mills do not exhibit externally any ill effects.

A. 53.—Sometimes half an hour each, breakfast and dinner; sometimes an hour each.

A. 54.—Those who live near leave the works at meal-times; the others remain.

A. 55.—It is optional with the people themselves.

A. 56.—Great prosperity to the neighbouring beer-shops.

A. 57.—The fear of being discharged is the only hold we have on their obedience.

A. 58.—Not with our sanction; we have given orders to discharge, but not beat, all disorderly children.

A. 62.—Yes.

A. 64.—Certainly not against ourselves, and, to the best of our belief, not against any of our foremen or overlookers.

A. 65.—They live chiefly in houses, varying in distance from the works one quarter of a mile to four miles; we have only five or six houses in which our overlookers chiefly reside.

A. 66.—Our people have been bred up in factories; we never engage men unacquainted with the trade; as we require additional hands, we shift our young people from one process to another, according to their age, handiness, and activity.

A. 67.—We have no reason to infer that the health of the people of this vicinity has been or is at all deteriorated by the factory system.

A. 68.—We deny that any injurious effects arise from any process in our manufacture.

A. 69.—It is not.

A. 79.—In conclusion we have only to observe, that overworking of children, and ill-health resulting therefrom, will not be found to exist in the manufacturing districts of Gloucestershire.

WILLIAM STANTON and SONS.

No. 28.

---

 O. P. Wathen.
 

---

ANSWERS of O. P. WATHEN, for Messrs. Wathen and Cork, Woodchester.

A. 1.—Woodchester, Gloucestershire, called Woodchester Mills.

A. 2.—Superfine Saxony broad cloth.

A. 3.—These mills were rebuilt in 1803 and 1804.

A. 4.—One half of this mill is worked by two powerful water-wheels, and the other half by a forty horse steam-engine.

A. 5.—Every other window has a swing-sash, which the people in each room open or shut at pleasure, just to suit their own feelings.

A. 6.—Every room in the manufactory is very airy, but the ventilation depends on opening the swing-windows.

A. 7.—The ventilation of every room is regulated by the persons working therein.

A. 8.—Every dangerous part is most securely fenced off.

A. 9.—None; it is left to their own discretion.

A. 10.—It is seldom any children are employed under ten, and then principally by their own parents; at present there are only two children under that age, and they are nine.

A. 11.—No, not absolutely under twelve; but it is considered an advantage to families to give their children employment from nine and ten years of age.

A. 12 & 13.—No.

A. 17.—In summer from six in the morning to eight at night, allowing two hours out for meals.

A. 18.—No difference is made.

A. 19.—No day longer than fourteen hours, allowing two hours out for meals.

A. 20.—Every day excepting Sundays, Christmas Day, Good Friday, Fast Day, Whit Monday, and at the election for the borough of Stroud.

A. 21.—Cannot say exactly, but answered in A. 17. & 20.

A. 22.—Different persons are employed in every department, and all are working at the same time.

A. 23.—Eleven hours.

A. 24.—Twelve hours.

A. 25.—It is a very rare occurrence to exceed the working hours before named.

A. 26.—Yes, it is avoidable.

A. 27.—We have occasionally formerly worked the manufactory to later hours, but we do not consider any advantage is derived from working by night beyond regular or reasonable hours.

A. 28.—No.

A. 29.—It is not practised in these parts.

A. 30.

A. 30.—No, because the people are either paid by the day at the rate of ten hours or by the piece, and therefore extra work can only be to produce more manufactured goods.

A. 31.—None whatever; but would be advantageous.

A. 32.—Answered before, as the practice is not followed in these parts.

A. 33.—No.

A. 36.—Night work can only be required occasionally, to execute large or foreign orders by a limited time.

A. 37.—The working hours of this manufactory are by no means too severe for any of those employed, and a reduction of the working hours would be a loss to the employers, as both water and steam power would be lost to them, and a serious injury to the servants.

A. 38.—We use no artificial heat, except from fire-places in the different rooms; and those employed attend to the fires in the winter or cold weather, and the rooms are kept comfortably warm. We only require a sufficient heat to prevent the oil used with the wool in the scribbling machines from congealing.

A. 50.—In the winter evenings we use the Argand lamps and candles.

A. 51.—The same as by day.

A. 53.—Eight to nine in the morning, and twelve to one or one to two in the middle day.

A. 54.—They do as they please, but many have their meals sent at the stated hours to them in the factory.

A. 56.—They may do so if they please.

A. 57.—Force is never resorted to. If any child or youth does not conform, they are discharged.

A. 58.—Never with the knowledge of the masters.

A. 62.—Yes. If ever we have heard of a father beating his child, we have threatened to discharge him if repeated, excepting it is done with moderation.

A. 63.—We have directed our foreman to forbid any child being beaten verbally, and if ever practised to report thereon, that the person may be discharged.

A. 65.—They live in their own houses; not at all under the control of their employers after they leave the manufactory.

A. 66.—In the different departments those who have been initiated early in the specific process of manufacture they follow are in riper years better workmen, and get better wages.

A. 67.—This factory is proverbially very healthy.

A. 68.—There are no injurious effects to be apprehended from any part of our manufactory.

A. 79.—None, excepting that I do not consider the Bill now before Parliament applies to this neighbourhood.

O. P. WATHEN.

Gloucestershire.

O. P. Wathen.

#### ANSWERS of ROBERT S. and EDWARD DAVIES and Co., Stonehouse.

No. 29.

R. S. and E. Davies.  
and Co.

A. 1.—Stonehouse, Gloucestershire.

A. 2.—Manufactory of woollen cloths.

A. 3.—It was first employed as a woollen manufactory upwards of one hundred years ago; a considerable addition was made to the buildings about thirty to forty years ago.

A. 4.—Both steam and water; the latter very irregular on account of want of supply in the summer and floods in the winter, which occasionally prevent the working of the steam-engine.

A. 6.—It depends on the opening of windows.

A. 8.—They are.

A. 9.—This clause does not apply to our manufactory.

A. 10.—Nine years.

A. 11.—Yes, for roller-joining at the billies.

A. 12.—Has made no difference.

A. 13.—No.

A. 17.—The average about twelve hours.

A. 18.—Under twelve years, ten hours, exclusive of meals.

A. 24.—No set of children has been employed more than ten hours.

A. 25.—In cases of accidents to machinery, &c.

A. 26.—Because the whole process of the manufactory would be delayed by the stoppage of any one branch.

A. 27.—No.

A. 31.—If in cases of accidents we work the mill beyond the regular hours, we have a different set of men and children, having two mills.

A. 36.—In case of an accident to any one branch of machinery, a delay and loss of wages to the workpeople employed in every other branch.

A. 38.—The temperature of 55° to 60° would be preferable to any other degree.

A. 46.—The milling of cloth, as well as the roughing or dressing.

A. 48.—Men and boys of sixteen years of age and upwards.

A. 50.—Gas and oil lamps.

(APP.—B. 1.)

E 4

A. 52.

Gloucestershire.

*R. S. and E. Davies  
and Co.*

A. 52.—We do not employ persons by night, excepting in milling and dressing, and it has no ill effects upon their habits.

A. 53.—Half an hour at breakfast; one hour for dinner; half an hour in the evening.

A. 54.—Every person is at liberty to leave the manufactory at meal-times.

A. 57.—The children are generally very attentive to their work, to insure a constant employment.

A. 58.—No.

A. 62.—Yes.

A. 63.—If a child is disobedient and not attentive to his work, our foreman is directed to discharge him.

A. 66.—We prefer those who have been employed from their infancy.

A. 67.—The people in our factory have been remarkably healthy for the last ten years, and are so at present.

A. 69.—No.

ROBERT S. and EDWARD DAVIES and Co.

No. 30.

*John F. Lewis.*

## ANSWERS of JOHN FREDERICK LEWIS, Oil Mills, near Stroud.

A. 1.—The parishes of Stonehouse and King Stanley, both in the county of Gloucester.

A. 2.—Manufacturing superfine broad and narrow woollen cloth.

A. 3.—Some part of these mills must have been erected one hundred years or more, and no part of them later than thirty years. During the memory of man it was always a cloth mill.

A. 4.—Water-power only, irregular according to season.

A. 5.—We have casements in our factory for ventilation.

A. 6.—The provision depends on the opening these windows.

A. 7.—It is controlled at the discretion of all or of any of the persons employed.

A. 8.—All dangerous parts of our machinery are fenced off.

A. 9.—Our men are generally provided with a great coat, and females with cloaks, pattens, and umbrellas. My operatives are all personally cleanly.

A. 10.—Eight years. I have none who have worked at other trades.

A. 11.—Yes, because the quantity of labour required is so small.

A. 12.—Less.

A. 13.—No.

A. 14.—We employ no apprentices.

A. 17.—Eleven hours and a half a day is the most any person working for weekly wages are employed; too often there is a great falling off from these hours.

A. 18.—From nine hours to eleven hours and a half. Our weekly operatives generally come and go at the same time as each other.

A. 19.—Our milling (or fulling) has been frequently going for the twenty-four hours; our finishing fourteen hours; but those parts where children are employed eleven and a half at most.

A. 20.—About three hundred.

A. 22.—As a great part of my works are done by the piece, I have no means of specifying the times each department has been carried on.

A. 24.—Eleven hours and a half.

A. 25.—During the last year our regular hours were not exceeded.

A. 26.—During excessive short water in summer it may be necessary to extend the hours, because the children sometimes play for hours in the day. Our general plan is to work the children in the day, and do the milling in the night, because the milling do not require regular attending.

A. 27.—Yes; before the panic in 1825 and 1826.

A. 28.—The sweeping reductions that have been made in profits and wages inclines us not to overwork ourselves, and the only difference is, do we pay as much taxes and rent for turning out a small as a larger quantity of goods?

A. 29.—Large manufacturers, with expensive clerks, overlookers, and assistants, must drive on; and as the corn laws prevent an increase of trade, extra hours and reduction of wages follow each other.

A. 30.—To limit the hours of milling and dressing cloth would be very detrimental, but where children under twelve years are employed it would only add to the cost.

A. 31.—To produce as great a quantity of goods as possible with their power, which generally is steam, where extra hours are required.

A. 32.—In manufacturing fine cloths the children are not required to work extra hours; it is the dressing and finishing that requires extra time.

A. 33, 34, & 35.—No, nor never will, till I can get better profits and pay better wages. Master and man may work ten or twelve hours a day just to rub on, but no eighteen or twenty hours a day for us without better pay. My father used to get more profit by one piece of cloth than I can by twenty; it does not however follow that I shall make twenty for his one. The hope of reward sweetens labour.

A. 36 & 37.—If you prohibit night-work in the milling, dressing, and finishing of fine cloth, the effect will be that eight out of ten employed in the cloth-mills will have their hours

of

of labour reduced to about six hours a day, because the cloth could not be finished, and would not be made.

A. 38.—The temperature of the atmosphere any thing above freezing.

A. 41, 42, 43, 44, & 45.—Our milling, dressing, and finishing processes, at which men from sixteen years old and upwards only are employed, are the only parts of our manufactory that has been employed in the night, and these are all piece-workers, so I have no account of their time.

A. 46.—The milling or felting of cloth.

A. 47.—I have known cloths in short water five days and five nights continuous in this process.

A. 48.—Men; sometimes a very strong boy to help. The personal labour is very little to either, and plenty of time to sleep. They are well paid, and it is a very healthy process.

A. 49.—It requires a heat produced by moisture and the continued pressure of the machine, any interruption of which is detrimental to this process.

A. 50.—By candles.

A. 51.—None of our apartments are crowded. No special provision for night ventilation.

A. 52.—As it is our piece-workers that work by night, I conclude that their habits become more industrious.

A. 53.—The piece-workers what time they please; our weekly people enjoy their breakfasts at home, and are allowed half an hour dinner-time.

A. 54 & 55.—As many as please. Those who live at a distance prefer taking their meals in the factory entirely for their convenience.

A. 56.—Some of them would get over to Mrs. Knight's at the Kidly Wink, and others would frequently be out in the rain.

A. 57, 58, & 59.—All my children work by the hour, and are only paid for the time they work. If they do their work bad, and will not mend, I dismiss them.

A. 60 & 61.—If they are guilty of any gross misconduct, I correct them with an inch strap. I have only had occasion to inflict chastisement five times in the last three years.

A. 62.—I have forbid corporal punishment.

A. 63.—My instructions are, that if children want beating I will do it myself.

A. 64.—I have never had a complaint against myself or any overlooker for punishment inflicted.

A. 65.—Some of them do; we employ only moral characters, and have no complaint whatever to make of domestic uncleanness.

A. 66.—We universally find that where children are employed from infancy they arrive at those branches where greater skill is required and greater wages given.

A. 67.—I should think the health of the people improved, being in my opinion cleaner in their persons and habits.

A. 68.—We have no injurious processes in the manufacture of woollen cloths.

A. 69.—I believe not.

A. 77.—Certainly not.

A. 78 & 79.—I would suggest, that if our government were to busy themselves to get us a good trade, the parents of children would be better employed at better wages, and would not then let their children go to work till they were well able. I have people in my employ that will not let their children go to work because they can keep them without, and send them to school, and others that would be in the workhouse if they did not send them to work simply because they cannot find them bread without labour.

16th May 1833.

JOHN FREDERICK LEWIS.

#### ANSWERS of WILLIAM HOOD, Stonehouse.

A. 1.—Stonehouse, Gloucestershire.

A. 2.—Woollen manufacture.

A. 3.—One part is old, and has been erected many years; an addition has been made within the last ten years; it has been used for its present purpose probably for a century.

A. 4.—The power is water, and therefore irregular, varying according to the seasons. The power is probably about forty horse.

A. 5.—There is no distinct provision for ventilation besides windows.

A. 6.—Windows are kept open when considered necessary by the workmen themselves.

A. 8.—All parts considered dangerous are fenced off.

A. 9.—The workpeople clean themselves and change their clothes if they think fit, having plenty of water at their command; no particular arrangements are made.

A. 10.—Some children come to learn as early as seven years of age, and I never inquire if they have been otherwise employed.

A. 11.—My work does require the employment of children under twelve years of age, because they are best adapted to the work, being short and not obliged to stoop, and it affords great relief to the parents.

A. 12.—There is no material difference.

A. 13.—Only to learn the business; not to work.

A. 15.—None employed by me are orphans, except elderly people able to take care of themselves.

(APP.—B. 1.)

A. 16.

Gloucestershire.

John F. Lewis.

No. 31.

William Hood.

Gloucestershire.

William Hood.

- A. 16.—All children employed at this mill are under my control.
- A. 17.—Vary from ten to twelve or thirteen.
- A. 19.—As we are dependent on water, which varies considerably, it is impossible to say exactly; sometimes the mill is going for two hours, and the next two nothing is done.
- A. 20.—Can't say exactly; suppose about two hundred.
- A. 22.—All worked alike.
- A. 23.—Eleven.
- A. 24.—Twelve.
- A. 25.—When work was brisk.
- A. 26.—It is avoidable, because no one is compelled to carry on a manufactory, but when business is brisk the people prefer working a greater number of hours to increase their earnings.
- A. 29.—I have no other inducement to continue the working beyond the usual hours of labour than that of doing more business, and it is immaterial to me whether it be done by the same or other hands, but the people prefer not changing, because when water is short they would lose the opportunity of working, and consequently earning money, unless allowed to do so by night.
- A. 30.—As mine is all piece-work, the increase or diminution of hours and prices of labour is immaterial.
- A. 31.—I have no objection to a change, but I think the persons employed would object, as it would decrease their earnings.
- A. 32.—I have never tried it for reasons stated in the last answer.
- A. 33 & 34.—I have not employed two different sets of people on the same work.
- A. 35.—Only a part of my manufactory is carried on by night, and that only in the summer months, and no change takes place.
- A. 36.—If persons were not allowed to work by night during the summer months I should shut up the mill, because I could not afford to pay rent for water and not use it when I liked, or as it came down the stream.
- A. 37.—My opinion as to a further reduction of working hours is, that if such were the case people would go more to the beer-shops, because they would be idle.
- A. 38.—About sixty-five or seventy degrees in summer; about fifty-five in winter, the mill being warmed by steam-pipes. We could not work if it were freezing in the rooms.
- A. 39.—We do not want it very warm; it is inconvenient to the persons employed; sixty-five or seventy degrees quite warm enough.
- A. 40.—There is no difference of heat necessary for different processes.
- A. 50.—By oil-lamps.
- A. 51.—Doors and windows.
- A. 52.—The same as by day.
- A. 53.—Two hours in twelve, unless they prefer working to earn higher wages.
- A. 54.—They do as they like; some stay, others go away.
- A. 57.—Discharging them.
- A. 58.—But very seldom.
- A. 59.—By the persons who employ the children.
- A. 60.—Yes.
- A. 61.—Both.
- A. 62.—They have been used so seldom and so slightly, that I have not interfered.
- A. 63.—I have given no instructions.
- A. 64.—Proceedings were once taken against my foreman, and the complaint immediately discharged by the magistrates as frivolous.
- A. 65.—Some of them; but I don't interfere in their domestic arrangements; they are happier left to themselves.
- A. 66.—Persons brought up from their infancy are more skilful of course, and earn better wages.
- A. 67.—No change either way to my knowledge.
- A. 68.—No particular processes carried on here which have injurious effects.
- A. 69.—I don't know what Act is alluded to.
- A. 77.—All persons will readily give evidence if called on, and we have no wish to prevent them.
- A. 78.—I think all laws and all penalties for regulating the hours of labour of children or other persons very absurd, and instead of suggesting others would recommend those enacted to be repealed, and leave masters and servants to make their own agreements. Acts of this sort are more likely to cause animosity between the workman and his master; and if a law be made making out what hours a person may work, the industrious man who would willingly work a greater number of hours will go to the public-houses, and become idle and drunken, instead of earning money for the support of his family, who will become burthensome to the parish. This is my opinion.

WILLIAM WOOD.

No. 32.

William Boughton.

WILLIAM BOUGHTON, manager of Messrs. Kirby, Beard, and Kirby's pin manufactory, situate in Westgate-street in the city of Gloucester, states in answer to the paper of queries on behalf of the said firm that the hours of working in their factory never exceed ten hours and a half per day, and very seldom work more than nine or ten hours per day; and as every branch

branch of their work done is paid for as piece-work, they never place any restraint upon any of their hands, or task them, and their workpeople are allowed to go in and out of the factory whenever they please. The factory is well ventilated, and is at all times kept clean and wholesome, and no children are employed (except one) under eleven years of age, who are allowed to return home to their parents, relations, or guardians at least three times a day. No corporal punishments are inflicted upon any persons employed in the factory, young or old.

The said William Boughton further states, that this true answer, with the papers hereunto annexed, has been exhibited and placed in a conspicuous part of Messrs. Kirby, Beard, and Kirby's pin manufactory frequented by persons in their employment for two days.

In witness my hand this 30th day of May 1833.—WILLIAM BOUGHTON.

Westgate Street, Gloucester.

Gloucestershire.

William Boughton.

ANSWERS of Messrs. LEWIS and DUTTON, Wotton-under-Edge.

No. 33.

Messrs.  
Lewis & Dutton.

A. 1.—Dyehouse Mills in the parish of Wotton-under-Edge, Gloucestershire; new mills, in the parish of Kingswood, Wilts.

A. 2.—Manufacture of fine woollen cloths and kerseymers.

A. 3.—Dyehouse Mills, erected in 18.—; New Mills, erected, we should suppose, about thirty years ago; both mills always used as woollen manufactories.

A. 4.—Dyehouse Mills, steam-power fourteen horse; New Mills, water-power, irregular; about forty horse power, more or less.

A. 5.—No distinct provision, but doors and windows opened at the discretion of the workpeople, and without interference in any manner on the part of the masters or overlookers.

A. 6.—Yes.

A. 7.—Entirely at the discretion of the workpeople.

A. 8.—All are fenced off carefully.

A. 9.—No specific arrangements exist, but most of them attend to it for their own comfort and convenience.

A. 10.—Only one so young as eight years; never of course worked at any other trade.

A. 11.—We consider from ten to twelve the best age for children to commence learning some of the more simple processes.

A. 12.—We know of no recent alterations on which this question will bear.

A. 13.—No.

A. 15.—We have no orphans, and the parents or guardians are at liberty to call upon the children at any time they please.

A. 17.—From ten to twelve hours per day.

A. 19.—With the exception of milling cloth (which employs with us only three people), we have not exceeded fourteen hours, and usually not more than ten working hours.

A. 20.—Three hundred and sixty-five days, less fifty-two for Sundays.

A. 22.—Our works are carried on simultaneously.

A. 23.—Between ten and eleven hours.

A. 24.—Never exceeded eleven hours.

A. 25.—Our only irregularity has been occasioned by an irregular supply of water, varying of course with the seasons.

A. 26.—Unavoidable, because we have no control over the supply of water.

A. 28.—Certainly.

A. 29.—To supply orders that are to be executed against a given time, and to save an extra outlay for machinery and premises, what we could not calculate upon being regularly worked.

A. 30.—Certainly, more or less in every process, but to what extent we cannot say.

A. 31.—The few hours we want to work beyond the regular day are not sufficient to answer either the purpose of the master or of the servant to have relays.

A. 33.—We have not employed a night-set of hands.

A. 36.—With the exception of the three millers of cloth, we have no night-work.

A. 37.—It will interfere with the master's profits and the workpeople's comforts.

A. 38.—We never require a higher temperature in our manufactory than thirty-three degrees.

A. 39.—The common temperature of the atmosphere.

A. 41.—None, with the exception of milling.

A. 46.—We consider the fulling of cloth requires to be commenced, and carried to its conclusion without interruption.

A. 47.—It depends upon the nature of the cloth to be milled, varying from sixteen to seventy-two hours.

A. 48.—A considerable degree of strength is indispensable, the age varying from seventeen or eighteen upwards.

A. 49.—Because the shrinking process is carried on by the degree of temperature generated by friction.

A. 50.—Argand lamps and candles.

A. 51.—The same as by day.

A. 52.—We know of no ill effects.

A. 53.—One hour at nine for breakfast, one hour at two for dinner.

A. 54.—All may leave, but some for their own convenience bring their food with them.

(APP.—B. 1.)

F 2

A. 56.

Gloucestershire.

Messrs.

Lewis &amp; Dutton.

- A. 56.—Optional with the workpeople, immaterial to the master.  
 A. 57.—Expostulation and turning off.  
 A. 58.—Very slight if any, and never with our approbation.  
 A. 59.—Corporal punishments not allowed.  
 A. 63.—All our regulations with regard to children are included in expostulation and turning them off.  
 A. 64.—Never.  
 A. 65.—We have a few tenements in the occupation of our workpeople, but we never interfere in their domestic arrangements further than friendly advice.  
 A. 66.—We cannot decidedly answer the question, our observation only extending over about six years, but we should give the preference to those who have been early initiated.  
 A. 67.—We know of no alteration.  
 A. 68.—The woollen manufactory is particularly healthy in all its branches.  
 A. 69.—We know of no Act to which you refer.

LEWIS &amp; DUTTON.

No. 34.

Llewellyn Ford.

## ANSWERS of LLEWELLYN FORD, Wotton-under-Edge.

- A. 1.—Wotton-under-Edge, county of Gloucester.  
 A. 2.—Manufacture of superfine broad cloths and kerseymeres.  
 A. 3.—Erected entirely in 1817, and used first for its present purpose in 1825.  
 A. 4.—Steam-power entirely.  
 A. 5.—No.  
 A. 6.—Ventilation depends on the opening of the windows, doors, &c.  
 A. 7.—Controlled at the discretion of all.  
 A. 8.—Yes.  
 A. 9.—None required.  
 A. 10.—Between eight and nine years; none previously employed at any other trades.  
 A. 11.—The nature of the work does not in particular require it, but children at eight years of age will be quite as well in some processes of the manufacture, it being of so mild a nature, provided they are not worked more than eleven or twelve hours per day. Could not get children if confined to twelve years.  
 A. 12.—Has made no difference to me as to the number or age.  
 A. 13.—No.  
 A. 15.—Live with their parents.  
 A. 17.—Twelve working hours; Saturdays only nine hours.  
 A. 18.—Eleven working hours; make no difference to age, not thinking the hours of work too long. Saturdays work only seven hours.  
 A. 19.—Not more than stated in A. 17.  
 A. 20.—Above two hundred and ninety-eight.  
 A. 21.—About three thousand four hundred and fifty.  
 A. 22.—No difference.  
 A. 23.—About eleven.  
 A. 24.—Only one set of children in my employ.  
 A. 25 & 26.—Not exceeded.  
 A. 27.—No.  
 A. 29.—Never done any thing of the kind, consequently cannot form an opinion.  
 A. 30.—I work as regular as I can the number of hours specified before, therefore cannot judge.  
 A. 31.—Cannot tell.  
 A. 32.—Not been tried by me, my business not requiring the same.  
 A. 33.—Never work at night, not having enough work for one set of hands.  
 A. 37.—I am of opinion that if a still further reduction of the working hours was to take place, viz. less than twelve hours per day, it would be injurious to the workman by cutting short his time, which would consequently reduce his wages and his condition worse than it is at present.  
 A. 38.—The temperature depends entirely on the weather, nothing being used in any process of the manufacture where the workpeople are employed.  
 A. 39.—190°, and this in the open air away from the factory.  
 A. 40.—Two, and only about half an hour a day, and that at about a dozen different times.  
 A. 50.—Lamp and olive oils when required, which is only a few hours in winter.  
 A. 51.—None required.  
 A. 53.—From eight till nine in the morning, and from one till two in the afternoon.  
 A. 54.—All.  
 A. 57.—None allowed.  
 A. 58.—No.  
 A. 65.—Not live in my houses.  
 A. 66.—Do not find but little difference as to skill or general character in those who have been previously and those recently employed; with regard to skill, much depends on their natural abilities.  
 A. 67.—Have not been in business so long.

A. 68.

- A. 68.—None necessary in any process.  
 A. 69.—Am not acquainted with the Act; my rooms are from ten to twelve feet high.  
 A. 78.—Not knowing what the law is, cannot form any opinion thereon.  
 A. 79.—In this part of the country I don't consider any alteration to be necessary, but should there be any alteration made, would recommend a scale of working hours per day according to the age of the persons employed, beginning from eight years; none under.

LLEWELLIN FORD.

Gloucestershire.

Llewellyn Ford.

## ANSWERS of WILLIAM PERRIN, Wotton-under-Edge.

No. 35.

William Perrin.

- A. 1.—One room for machinery in a mill situate in the parish of Wotton-under-Edge, county of Gloucester; workshops in the parish of Kingswood and county of Wilts.  
 A. 2.—The manufacture of superfine broad cloths.  
 A. 3.—Cannot state the date of erections, but believe they have always been used for their present purpose.  
 A. 4.—Water; and as part only of the mill is now employed, it is regular.  
 A. 5.—Sash-windows.  
 A. 6.—On opening the windows.  
 A. 7.—At the discretion of all or any who feel the need of air.  
 A. 8.—They are.  
 A. 9.—The works and workshops are healthy, so that nothing of the sort is needed.  
 A. 10.—About nine years; not employed at any other trade previously.  
 A. 11.—Yes, because they do not require so much wages; and in many instances a child at eight or nine years is equally capable of the work as one at twelve years, as it requires attention only, and is not laborious.  
 A. 12.—It has made scarcely any difference with me.  
 A. 13.—No.  
 A. 15.—None lodged or maintained, as all come from and return to their parents or guardians daily.  
 A. 17.—About ten hours daily.  
 A. 18.—About ten hours daily, all.  
 A. 19, 20, & 21.—No account having been kept, it is impossible to reply correctly to these queries.  
 A. 22.—All at the same time.  
 A. 23.—Not more than ten hours daily.  
 A. 24.—Not exceeding eleven hours.  
 A. 25.—In the summer season, when the water has been previously short, and a few days rain have made it more plentiful, was disposed to take the opportunity of working longer.  
 A. 26.—Certainly not avoidable from the above and many other circumstances.  
 A. 27.—Yes, formerly.  
 A. 28.—Not in my case, but in many instances it must be so.  
 A. 29.—Sometimes for want of power, and to get goods ready for the market by a certain time.  
 A. 36.—No night-work needed by me.  
 A. 37.—Enhance the value of the power and injure the workman, unless the master could give him as much wages for a less number of hours.  
 A. 38, 39, & 40.—No heat required above the usual temperature.  
 A. 46.—No, as I do neither the fulling or dressing myself; it is done at a neighbouring mill.  
 A. 53.—Two hours daily; one from eight to nine, and the other from one to two o'clock.  
 A. 54.—All leave them.  
 A. 57.—When disobedient we generally discharge them.  
 A. 58.—They have been occasionally.  
 A. 59.—Usually by the person injured.  
 A. 61.—Not with my prior, but they have with my subsequent sanction, when they have been deserved.  
 A. 62.—Yes, when I have considered that children have been punished undeservingly.  
 A. 63.—No particular instructions ever given.  
 A. 64.—Never for thirty-six years.  
 A. 65.—Very few, and have no control over them but as it respects their work.  
 A. 66.—Those employed in the trade from their infancy are certainly preferable to those taken into employ at later periods.  
 A. 67.—Not aware of any difference; I consider the people healthy.  
 A. 68.—Not required.  
 A. 69.—No.  
 A. 78.—I think that the magistrates are quite sufficient for this purpose in any case of complaint, and that there is no need of further legislation.  
 A. 79.—I think the present inquiry very useful, in order to ascertain where abuses do exist; still I am of opinion that it would be unjust to lay others under injurious restrictions, with whom there are no abuses.

WILLIAM PERRIN.

Somersetshire.

No. 36.

William Naish.

## SOMERSETSHIRE.

## ANSWERS of WILLIAM NAISH, for Naish &amp; Co., Bristol.

- A. 1.—Castle Precincts, city and county of Bristol.
- A. 2.—Preparing sewing cottons, and manufacturing the same into balls, skeins, bobbins, &c.
- A. 3.—The building now used was erected for the special purpose, and removed into from the old one in the year 1827.
- A. 4.—Entirely hand-power.
- A. 5.—Yes; a circulation of fresh air is kept up by means of sash-windows in the sides of the building and ventilating sky-lights.
- A. 6.—By constant or occasional open doors or windows, as circumstances require and as the weather permits.
- A. 7.—By the overlooker, or in his absence the workpeople.
- A. 8.—No parts of our machinery are dangerous.
- A. 9.—We have fires in winter, where those who come wet may dry their clothes; we have also water-closets and a supply of soft water, &c. for washing, introduced at the erection of the premises, and every person is required to keep themselves clean; fresh spring-water is daily provided for drinking.
- A. 10.—As shown by the list, we sometimes employ them as young as nine years; we do not recollect any so young were previously employed.
- A. 11.—A small part of it from its extreme lightness and simplicity.
- A. 12.—No alteration affecting power has taken place in our machinery.
- A. 13.—No.
- A. 17, 18, & 19.—About ten.
- A. 20.—About three hundred and ten.
- A. 21.—About three thousand one hundred.
- A. 22.—No division of labour.
- A. 23.—Ten, holidays excepted.
- A. 24.—About ten.
- A. 27.—Some years ago we occasionally worked extra hours, owing to a lack of machinery.
- A. 28.—The difference consisted only in the extra cost of gas light and firing.
- A. 29.—We know of no cases, nor are we acquainted with the inducements to manufacturers to do so.
- A. 30.—No account.
- A. 31.—When any extra hours are required here they rarely exceed one or two, which render fresh relays unnecessary.
- A. 32.—Unnecessary; not done.
- A. 37.—We presume ten hours working to be unexceptionable.
- A. 38.—The temperature of our manufactory is generally the same as in dwelling houses.
- A. 39.—Enough to keep the workpeople warm (except in as mentioned in A. 97).
- A. 40.—There is no difference in our process, excepting as stated in A. 79.
- A. 50.—In winter evenings we light up with coal-gas.
- A. 51.—Same as before stated for ventilation by day.
- A. 52.—No night-work; manufactory is closed by eight.
- A. 53.—One hour and a half for dinner, and some who occasionally go out to tea are allowed three quarters of an hour.
- A. 54.—In fine weather they generally all leave at dinner-time.
- A. 55.—When any stay in, it is generally for their own convenience.
- A. 57.—A set of rules for the conduct of the workpeople hangs in the manufactory, conformity to which is enforced by small fines, which form a fund for their relief when prevented from working by sickness.
- A. 58.—It rarely happens a girl is struck; if corporal punishment is thought necessary, the overlooker generally refers it to their parents.
- A. 59.—If struck in the factory, generally done by the overlooker.
- A. 60.—We are aware they are sometimes struck as above.
- A. 61 & 62.—We have not thought it necessary to interfere, being of the slight nature as before described.
- A. 63.—None given.
- A. 64.—No.
- A. 65.—They reside with their parents or families, yet, as occasion offers, endeavour is made to enforce their moral and social improvement; a portion of Scripture is read among them every morning.
- A. 66.—We cannot speak so decidedly to this query as to refer to names, but in general those who have been longest in our employ are considered most competent.
- A. 67.—We have perceived no remarkable difference, excepting during the prevalence of any epidemic; however, we do not recollect having lost one by death during that period.
- A. 68.—We have no injurious process.
- A. 69.—Our manufactory is not, strictly speaking, a mill, nor do we conceive it comes within

within the provisions of the Act if it be the contemplated Ten Hours Act which is here meant.

A. 73.—Not personally acquainted with any.

A. 78.—We are not enough acquainted with the regulations of those factories which we conceive are implied to be able to give an opinion.

A. 79.—We have a small manufactory at Montpelier near Bristol, where three girls are employed, in which is a room for drying the goods heated by means of a stove. The girls do not work in this room, and have seldom occasion to enter it, except to take in and out the goods.

WILLIAM NAISH.

Somersetshire.

William Naish.

#### ANSWERS of J. S. WARD, Bruton.

No. 37.

John S. Ward.

A. 1.—In Bruton, but I employ women and children in the neighbouring villages winding silk at their own houses; those are paid by the pound.

A. 2.—Winding and twisting silk.

A. 3.—At different times during the last fifty years.

A. 4.—By steam and water; the irregularity of the supply from water is considerable in a dry season.

A. 5 & 6.—The factory is ventilated by opening windows.

A. 7.—The ventilation is generally by the order of the foreman, but any of the workpeople may open the windows if they please.

A. 8.—Yes.

A. 9.—There is nothing in a silk-mill generally to acquire dirt; the hands are always at liberty to wash, water being always near at hand.

A. 10.—I prefer taking them at the age of eight, but they have sometimes been sent as young as seven, but they then only work about seven or eight hours; there is no other trade for the employment of children in this town.

A. 11.—Children who are taught early make the best hands.

A. 12.—A greater proportion.

A. 13.—No.

A. 15.—Very few; I suppose this applies to apprentices.

A. 16.—They are under the superintendence of the foreman.

A. 17.—We profess to work eleven hours and a half, but we are not strict to five minutes at the meal-times; I should say therefore eleven hours and a quarter.

A. 18.—No difference, except that the young children do not work before breakfast, nor in the winter after candles are lighted.

A. 19.—When the hands work over-time, they work thirteen hours and a quarter, Saturday excepted, for which they are paid for an extra day's work.

A. 20.—All the year except three weeks, when they keep their annual holidays.

A. 21.—I don't know; I worked very little over-time the last year.

A. 22.—Only my spinning-mills work over-time when warp is in greater request than shute, and then I require less than twenty hands for that purpose.

A. 23.—Eleven hours and a quarter.

A. 24.—Children are very rarely worked more than eleven hours and a quarter; it is only the few that work at the spinning-mills are required to do so.

A. 25.—When the demand for warp is pressing, which requires more machinery, viz. more spinning-mills, as before stated.

A. 26.—Unavoidable, unless I disappoint my employer, who will give his work to other throwsters.

A. 27.—Not for the last three years.

A. 29.—I do not work all night, and have never exceeded the ten hours extra labour per week for the last three years.

A. 31.—It would not be worth while to employ different sets of hands for the trifling excess of time I wish to engage them, nor could I obtain such extra hands in this town if I wanted them.

A. 37.—The effect of the still further reduction of hours would be the necessity of procuring (if possible) more hands and more machinery to obtain the present return of silk from the mill.

A. 38.—I should think about sixty degrees in winter. Our only object is to make the hands comfortably warm.

A. 39.—The silk factory does not require any certain degree of heat.

A. 41.—I seldom work over-hours, and then only ten hours in the course of the week. I never work my hands all the night.

A. 46.—Not necessarily continuous.

A. 50.—By candles.

A. 51.—Only by windows.

A. 52.—My people are generally healthy.

A. 53.—I profess to allow forty-five minutes at each meal; but I do not object to fifty minutes, that is, the factory door is not shut till that period.

A. 54.—All are expected to leave the mill at the meal-hours, unless from the state of the weather.

(APP.—B. 1.)

F 4

Somersetshire.

*J. S. Ward.*

weather. We allow the more distant hands to stay in the mill, and have their victuals brought to them.

A. 57.—The best means, and which I have constant recourse to, are extra pence on the pay-day for those who have no complaint made against them by their superintendent.

A. 58.—We so rarely have recourse to corporal punishment that I may say it is abolished.

A. 59.—The overlookers report to me if they behave improperly.

A. 60.—I do not sanction corporal punishment.

A. 62.—I have had no occasion to forbid punishment, as my overlookers are not disposed to take such responsibility on themselves. They often say, "that child does not deserve her penny this week for good behaviour."

A. 63.—I have never given written instructions; my general order is, inform me when the hands do any thing improper.

A. 64.—One complaint only has been made during the last three years; it was against my then foreman, who gave a girl a cut with a small cane. The imprudent mother, who preferred the complaint, has since repented and confessed her folly. The child's fault was perversely wasting the silk, in consequence of which I was obliged to discharge her for a season.

A. 65.—I do not provide houses for any of my people except the foreman and my late foreman, who, after sixty-three years service without losing a day's work during his servitude, has recently retired.

A. 66.—The skill of those who are initiated in their infancy is very superior to those who commence working at a later period.

A. 67.—My factory for the last ten years has been generally healthy. I do not know that there has been any deterioration or any decided improvement.

A. 68.—I am not aware that there is any injurious effect from the process used in my factory.

A. 69.—No.

A. 77.—The workpeople are not in the least afraid of displeasing their masters by giving evidence. I am sure my people have no reason to be afraid.

A. 78.—I should say of the silk-throwing mills, leave them alone. The workpeople are at present satisfied, for though their wages are low, they are convinced that their masters cannot afford them more wages for their labour.—N. B. In the list of hands given to the Commissioner it is to be observed that those people who work at their own houses are not included, they having the control of their own time.

J. S. WARD.

No. 38.

Messrs.  
Brittain & Houston.

## ANSWERS of Messrs. BRITTAIN &amp; HOUSTON, Frome.

A. 1.—Frome, Somerset.

A. 2.—Manufactory of white and buff kerseymeres.

A. 3.—Erected in 1823; some little addition in 1829.

A. 4.—Steam-power, ten horses, regular.

A. 5.—A part of each window opens.

A. 6.—Depends on opening the windows entirely.

A. 7.—At the discretion of both men and women employed.

A. 8.—Fenced off.

A. 9.—Proper accommodation for purposes mentioned erected same time with the mill.

A. 10.—Some mothers bring them as early as seven years of age, the employment being so very light.

A. 11.—It requires children under that age, the employ being so trifling; at a fuller age too much wages would be expected.

A. 12.—We believe not.

A. 13.—No.

A. 17.—Generally eleven hours.

A. 18.—About eleven hours; the youngest are favoured at all times.

A. 19.—On particular occasions, with shipping orders, &c. a few of our people have worked all night perhaps six or eight nights during the year, as we could not execute our orders without, and the people are glad to do it, and paid above the average rate of wages on such occasions.

A. 20.—The whole year, excepting four or five days holidays.

A. 21.—Cannot say, as we keep no account; believe not more than twelve hours per day throughout the year.

A. 22.—The whole works together.

A. 23.—No particular account at any time kept; our people commence and leave at different times; some part at five o'clock, leaving at seven, with two hours for meals; others, the females, come at six and leave at seven, having two meal-hours and tea-time.

A. 24.—Our works are very regular; but on some occasions the children have worked from six in the morning until nine or ten at night, but on such occasions the biggest are detained, and extra time allowed for refreshment between meal-hours, and sometimes refreshments are given them.

A. 25.—On occasions of orders given at particular seasons of the year, and which depend

on those seasons, whether particularly severe or mild, early or late; also with shipping orders, with which a limited time must be necessary, and is at all times given.

A. 26.—By no means avoidable; a suddenly severe season, or on the contrary, a very forward and hot season not only increases the demand for certain goods, but shortens also the time required for their production. Shipping orders also must at all times be forwarded early and late, being always limited as to time; on such occasions, in particular, extra hours and night-work is quite unavoidable.

A. 27.—The greater part of it not more time formerly than at present.

A. 29.—It would be found impossible to have children or adults in waiting to supply the place of others for only a few hours, or on particular occasions a night or two.

A. 30.—Were we to shorten the hours of work, we should certainly find an increase in cost of production in nearly all parts of the manufactory.

A. 31.—Division of labour has made children and adults more perfect in their various branches, so that they could not be removed from one part of the manufactory to another; and it would be very expensive, and on that account impossible to have a fresh set of hands in waiting where they are only very occasionally required.

A. 32.—It has not been fully tried by us, as we do not often require them; when we have required, we have of course detained the most able, and by extra pay and providing refreshment, as well as working some part only the half night, who have been relieved by others, we have managed as much to the satisfaction of the people as our own.

A. 36.—Goods with which a limited time were given would be thrown on our hands if not finished by the day given, and no future orders given from such quarter.

A. 37.—A certain increase in the cost of production, larger warehouses, and more machinery, with an increase of rates and taxes, increase of capital employed, &c.

A. 39.—We have only a stove for drying cloth, which is only a very little hotter than our hottest summer's day.

A. 40.—Four or five men; men only.

A. 41.—About six or eight whole nights.

A. 42 & 43.—Only six or eight children. About eight hours.

A. 46.—None.

A. 53.—Many have an hour, others three quarters of an hour, some only half an hour.

A. 54.—All generally leave.

A. 55.—Their own convenience and pleasure.

A. 56.—No injurious effect to the trade.

A. 57.—No severe means.

A. 58.—Very seldom indeed.

A. 59.—Very occasionally by the foreman.

A. 62.—We have forbidden such steps.

A. 63.—No instructions verbal or written; severity always forbidden.

A. 64.—No complaint at any time whatever.

A. 65.—A few families, six or eight, with all proper steps taken to enforce cleanliness.

A. 66.—Our trade is of the light fancy description, and in some branches require clever good hands, whom we generally take in very young, and find them much more clever on that account; the burlers in particular are of this description.

A. 67.—Neither, we believe.

A. 68.—There are no processes particularly, if any degree, injurious.

A. 69.—We believe by no means subject.

A. 78.—With us, and at nearly all the mills in these parts, the workmen's own children are employed in preference to others, and are in most cases with their fathers in the factory, who place them according to their capacity, and are permitted to advance them so soon as they are capable of undertaking higher branches; we believe any interference would not by any be desired, and would prove injurious to the workpeople and families, as to the masters.

RICHARD BRITTAIN.

HENRY HOUSTON.

ANSWERS of J. W. LITTLE, Frome. Referred to in the Deposition of Mr. Little,  
24th May 1833.

No. 39.

J. W. Little.

A. 1.—Frome, Somerset.

A. 2.—Dressing woollen cloth in the part rented by me.

A. 3.—Answered by the owners.

A. 4.—Steam.

A. 6.—One square may be opened in a window.

A. 7.—By the persons employed.

A. 17 & 18.—Twelve hours.

A. 19.—Fifteen hours.

A. 20.—The whole year to average twelve hours a day.

A. 50.—With oil and candles.

A. 51.—Same as by day.

A. 52.—Should suppose the effects were bad.

A. 53.—Half an hour.

A. 54.—Very few.

A. 55.—Their own convenience.

A. 57.—Threatening them with loss of work.

A. 58.—No.

A. 67.—They appear very healthy.

(APP.—B. 1.)

J. W. LITTLE.

G

Somersetshire.

No. 40.

G. W. B. &  
G. Sheppard.

ANSWERS of G. W. B. & G. SHEPPARD, Frome and Rodden. Referred to in the Deposition of Mr. William Sheppard, 24th May 1833.

A. 1.—Spring Gardens Mills, Frome, and Rodden Mill, Rodden, Somerset.

A. 2.—Manufacture of cloth and kerseymere.

A. 3.—Three mills at Spring Gardens, built respectively in 1809, 1815, and 1824. Rodden Mill, formerly a corn-mill, used for clothing, and enlarged 1793, burnt down and rebuilt in 1812, added to in the year 1825, again added to in the year 1829.

A. 4.—Both steam and water, the latter very irregular, particularly in the summer.

A. 5.—There is no provision for the ventilation of the factories, except windows, there being no necessity for such.

A. 6.—The provision depends upon the opening of windows.

A. 7.—The windows are opened and shut as the workpeople find convenient.

A. 8.—All dangerous parts of the machinery are fenced off.

A. 9.—We have fires in the winter through the mills in the different rooms, or pipes from the steam-engine to warm them, and a drying-stove on the premises, where they may dry their clothes in wet weather.

A. 10.—Very few are employed under ten years, and they have nothing to do that can be called work, or that would tire them so much as their usual running about. We know nothing of the children before they come to us.

A. 11.—It does not; but we conceive if children do no work till twelve years of age, idle habits will be acquired, and they will never make good servants.

A. 12.—They have not made any alteration.

A. 13.—We do not.

A. 17.—They come at six in the morning, and leave work at eight in the evening; out of which they have one hour for breakfast and one hour for dinner, so that they work twelve hours.

A. 18.—Very few children under twelve years work more than ten hours; from that age and upwards they work as the other people do, twelve hours, though none of them have any laborious work to perform.

A. 19.—It is impossible for us to say, as different parts work different times. The milling frequently goes on day and night; the spinning seldom if ever more than ten hours; the cutting and gigging departments have occasionally worked a whole night, but very rarely.

A. 20.—We have no means of knowing correctly; but, besides Sundays, we may have stopped from seven to ten days, perhaps more.

A. 21.—We have no means of answering this question.

A. 22.—The spinning in general ten hours; the feeding from ten to twelve, sometimes fourteen; the cutting in general twelve hours; the gigging in general twelve hours.

A. 23.—It is impossible for us to answer this question.

A. 24.—The younger children have never worked more than ten hours; but occasionally the same set of older ones have worked through the night; but they always, in such case, have two hours, from twelve to two, to lay down, and a quarter of an hour at eight o'clock for supper.

A. 25.—The regular hours have only been exceeded to make up lost time, that the workpeople might have full wages, or on an extraordinary press of orders.

A. 26.—If a manufacturer undertakes a contract, and an accident stops his works, if he is not at liberty to work beyond the regular hours he might be subject to great loss. The India Company and other parties, in giving contracts, impose a heavy fine if the order is not executed by a certain day; and in cases of water-mills during the summer, if the mill is not allowed to work when it can, the workpeople will not earn half wages, and the manufacturer would lose half his trade.

A. 27.—We have not usually worked our manufactory more than at present, except for some months, when one factory was under repair. We let both sets relieve each other, and work extra time in the other.

A. 28.—We think the cost is enhanced by working at night, as neither so much work in proportion is done, nor is it done so well.

A. 29.—We do not know; if there was any law to forbid it, we suppose it would not be done.

A. 30.—If the hours of work were limited, the cost of production must be increased, as a manufacturer must make a greater outlay in machinery or reduce his trade if the hours of labour were reduced two hours out of twelve; he must either reduce his trade one sixth, or purchase one sixth more machinery.

A. 31.—In that case children would be likely to be more worked than at present, as they would work for two masters, and so change from one to the other, and work in two sets on the same day.

A. 32.—Never having regularly used night-work, we have never tried.

A. 33.—Not having regularly worked by night, we have not done so.

A. 35.—Not having regularly worked by night, when we have occasionally worked a night, we have not changed the set.

A. 36.—We never use it but on very urgent occasions, but we conceive that cases would occur where a manufacturer would be greatly inconvenienced by a prohibition.

A. 37.—Our answer to A. 30 applies to this question; the facts prove themselves.

A. 38.—It is different at different times during hot and cold weather, varying from fifty to sixty degrees; but the best temperature is that which is most conducive to the comfort of the workpeople, but no particular temperature is necessary.

A. 39.

Somersetshire.

G. W. B. &  
G. Sheppard.

A. 39.—In our cloth and wool drying stoves, which are entirely detached from our mills, a high degree of heat is necessary, ninety to one hundred and twenty degrees.

A. 40.—From eight to ten men are usually employed, but they are in the stoves only a few hours in the day, being employed also about other things, and the stoves are not used in fine weather when we can dry without them.

A. 41.—We have no means of knowing how many times our works have been worked by night during the last year, but parts of them have so worked occasionally.

A. 42 & 43.—From thirty to forty children may have been employed at night-work at different times; when they have, they stop a quarter of an hour about eight o'clock, and again two hours from, twelve to two, during the night; perhaps five or six times they may have worked a night.

A. 44.—Not more than sixteen children in one room, or more than thirty altogether.

A. 45.—They work on all night, stopping, as we before stated, a quarter of an hour at eight o'clock, and two hours from twelve to two.

A. 46, 47, & 48.—The milling or fulling process is necessarily continuous, sometimes for more than forty-eight hours, and the cloths are much injured in many cases if the work stops. The dressing or finishing process also requires frequently twenty-four hours or more, and a cloth is materially injured when obliged to be stopt when at work, or, as we term it, when in season, or warmed by the friction of the gig-mill; if it is stopped in that stage, it never again acquires the lustre and appearance required; it is difficult to state a maximum of time, for no two cloths will come forward in the same manner. Both men and boys are employed in the milling and finishing, the latter from twelve years of age and upwards; each gig-mill employs one gig man and three boys, nor can the man work without them, so that if the boys time is shortened, the gig man's must be the same, and his wages reduced.

A. 50.—By lamps and candles.

A. 51.—There is none but windows; and as only a part of our mills work ever by night, there is more circulation of air than by day.

A. 52.—Working so seldom, we have never observed any effects on the habits of persons employed.

A. 53.—One hour for breakfast, and one hour for dinner.

A. 54.—Those who live near go home, others go to workpeople's houses near, and others remain in the mill.

A. 55.—It is entirely left to the option of the workpeople and children; they may go or remain, as they like.

A. 56.—Were we to oblige them all to leave our premises at meal-times, it would subject many to great inconvenience, and as our factory is distant from the town, would occasion fatigue.

A. 57.—We have no arrangements for this purpose.

A. 58.—Occasionally; but if done with any severity the parties know, on complaint being made to the master, the person offending will be fined or discharged.

A. 59.—By the workmen under whom the boys are employed.

A. 60 & 61.—We never order corporal punishment to be inflicted, but we know it is done occasionally, and conceive where a number of boys are employed, light punishment of the kind is necessary; we never knew of a girl being beaten.

A. 62.—When complaints have been made (which are very rare), we have always taken notice of them.

A. 63.—There have been no particular or written instructions, except generally, that no severe punishment of any kind is allowed.

A. 64.—Never.

A. 65.—Our workpeople live in their own houses; we mean, they rent them as other persons do.

A. 66.—We generally find those who have been brought up from children in the factory more skilful and industrious than others who may have come in at later periods, for we consider habits of idleness contracted in childhood most frequently grow up into dissipation and vice as the persons advance to manhood, and we therefore always prefer to advance our people from step to step in the factory, rather than take grown-up hands whom we have not known.

A. 67.—The health of persons employed in our manufactory has been uniformly good; if any fever or epidemic of any kind has prevailed in the town, we have observed always how very few of the factory people or children have taken the infection, and our medical men have made the same remark. Most of the workmen and women in our factories having been brought up there through the different gradations from children, their general good health is the best evidence we can give of the facts stated.

A. 68.—We have no processes, the effects of which are found to be particularly injurious.

A. 69.—Our mills are not subject to the provisions of the present Act.

A. 79.—We beg the commissioners to remark the general state of our workpeople as to their morals, education, and health; that there are no such things as distortions, and but very few cases of injury from accident; nearly all the children can read, and a lending library is established in our factory. Take as many children from any parish or town where there are no manufactories, and see if they are generally so well conditioned.

G. W. B. &amp; G. SHEPPARD.

Somersetshire.

ANSWERS of G. M. GEORGE, Hapsford Mill, Great Elm. Referred to in the Deposition of Mr. G. M. George, 25th May 1833.

No. 41.

G. M. George.

- A. 1.—Called Hapsford Mill, in the parish of Great Elm, Somerset.
- A. 2.—Woollen broad-cloth, scribbling, carding, spinning, milling, and dressing.
- A. 3.—Milling part upwards of one hundred years, scribbling and carding forty years, and an additional part built about ten years.
- A. 4.—Steam and water, regular; steam ten-horse power, water about the same.
- A. 5.—Doors and windows to open.
- A. 6.—Opening of windows, and other casual means.
- A. 7.—Opened by the workpeople whenever they like it; entirely at their own discretion.
- A. 8.—All the dangerous parts are fenced off.
- A. 9.—Wash and clean themselves at their own discretion; my work being mostly of light colours, little washing is required beyond what is usual with all persons.
- A. 10.—One under nine years; at no other trade.
- A. 11.—Yes, because children are most capable.
- A. 12.—None.
- A. 13.—No.
- A. 15.—Children go home every evening.
- A. 17 & 18.—From ten to eleven hours per day.
- A. 19.—A very few days in the year fifteen hours, but no children under twelve years old more than eleven hours.
- A. 20.—About two hundred and seventy days.
- A. 21.—Can't tell exactly.
- A. 22.—All the work is carried on generally together.
- A. 23.—Not exceeding ten hours.
- A. 24.—At the gigs (dressing) boys above twelve years of age have occasionally worked sixteen hours, but none under that age.
- A. 25.—When any particular cloths were much hurried.
- A. 26.—Not to be avoided on pressing occasions, if we desire to please our customers.
- A. 27.—Yes, before I had the steam-engine.
- A. 28.—No; since my steam-engine it has cost less, and labour diminished.
- A. 29.—Can't say what the inducement is to others; I don't do it myself.
- A. 30.—None.
- A. 31.—Difficulty, I suppose, in getting hands suitable for the business.
- A. 32.—Need no extra hands myself.
- A. 33.—Don't require night-work.
- A. 37.—My decided opinion is, that ten hours a day average is long enough for any children to be employed.
- A. 38.—We have good fires in each room in the winter, and always a regular comfortable temperature.
- A. 39.—None in particular.
- A. 50.—By candle, to make up the regular ten hours.
- A. 53.—Half an hour each meal-time, out of eleven or twelve hours.
- A. 54.—Some leave, some do not; are at liberty to do just as they like.
- A. 55.—For the convenience of the workpeople.
- A. 56.—They would have to go two miles to their homes.
- A. 57.—Verbal admonitions.
- A. 58.—None.
- A. 62.—Have always forbid corporal punishment.
- A. 63.—My orders are to discharge them if disobedient, but never any corporal punishment to be inflicted.
- A. 64.—None.
- A. 65.—A few of my workpeople live in my own houses, but are under no particular control.
- A. 66.—Those employed from infancy are of course better acquainted with the trade, but I don't think it makes much difference as to character.
- A. 67.—I don't know any change.
- A. 68.—I have no injurious process.
- A. 69.—I never saw the present Act.
- A. 70.—Never.
- A. 73.—I don't know about any mill but my own, but believe all are well conducted in this neighbourhood.
- A. 74.—Have heard of none.
- A. 78.—The children employed in my factory are hearty, fat, and cheerful, and I never saw any more happy and contented; I think the average of ten hours a day quite long enough for all under ten years of age to be worked.

G. M. GEORGE.

## ANSWERS of THOMAS SPACKMAN jun., Charter-house, Hinton.

Somersetshire.

No. 42.

T. Spackman jun.

- A. 1.—Charter House, Hinton, county of Somerset.  
 A. 2.—Milling and dressing.  
 A. 3.—Erected in the year 1795, and then employed as now.  
 A. 4.—Steam-power and is regular.  
 A. 5, 6, & 7.—Ventilation by windows, which are under the entire control of all the workpeople.  
 A. 8.—They are.  
 A. 9.—Not any.  
 A. 10.—Only four children employed between the ages of nine and twelve; others in my employ are all above twelve; cannot say if previously employed.  
 A. 11.—It does not at the manufactory I am now speaking of.  
 A. 12.—They have not at the mill I am speaking of.  
 A. 13.—I do not.  
 A. 17 & 18.—From seventy-three to eighty-four hours per week.  
 A. 19.—Twenty-four hours.  
 A. 20.—Suppose about three hundred days.  
 A. 21.—Suppose about six thousand four hundred hours.  
 A. 22.—All are continued during the day, with the exception of the time allowed for meals in the dressing department.  
 A. 23.—Twenty-four hours for fulling.  
 A. 24.—Sixteen hours.  
 A. 25.—The hours of work are increased or diminished according to the character of goods in course of manufacture.  
 A. 26.—Irregularity in hours of work can only be avoided by keeping an increased number of servants, which would render their employ uncertain.  
 A. 27 & 28.—I have not.  
 A. 29.—In most cases the work cannot be so well performed by different hands.  
 A. 30.—In milling the expence is greatly increased by limitation of time, and the work cannot be properly executed; in most other branches of the woollen trade the cost of production would be much increased.  
 A. 31 & 32.—In most cases I consider it best for each set of hands to finish the work they began, and therefore object to relays.  
 A. 33.—Five nights in the week I have employed a night set of hands (men and boys), who take on at eight o'clock in the evening, and work till five next morning, taking three quarters of an hour for meals.  
 A. 34.—Time too long.  
 A. 35.—The same set uniformly by night.  
 A. 36.—Very injurious to the manufacture of cloth in certain process.  
 A. 37.—I consider it would generally tend to throw the parties into society likely to injure them in a moral and pecuniary point of view.  
 A. 38, 39, & 40.—The temperature may vary from 56 to 70 degrees; it is of little importance what is the state of it.  
 A. 41.—Certain parts every night, Sundays excepted.  
 A. 42 & 43.—Four children; hours of work from eight o'clock in the evening till five next morning; three quarters of an hour for meals during that period.  
 A. 46 & 47.—It is indispensable that the process of milling should be continuous, and it sometimes requires six days for stout goods.  
 A. 48.—Men, and boys from sixteen to twenty-one years of age.  
 A. 49.—For the purpose of making a good felt.  
 A. 50.—Candles and oil.  
 A. 51.—Windows and doors.  
 A. 52.—Do not notice any particular effect.  
 A. 53.—One hour, from nine till ten, in the morning, and one hour from two till three, in the afternoon.  
 A. 54, 55, & 56.—At the option of the workpersons.  
 A. 57, 58, 59, 60, 61, & 62.—Usually remonstrance, and if that do not avail, discharge from work; corporal punishment not sanctioned.  
 A. 64.—Not any.  
 A. 65.—They do not.  
 A. 66.—Greater skill and better morals.  
 A. 67.—Cannot speak to any change.  
 A. 68.—Do not find such change necessary.  
 A. 69.—I am not aware.

31st May 1833.

THOMAS SPACKMAN jun.

Somersetshire.

No. 43.

Messrs.

Nalder &amp; Hardisty.

ANSWERS of Messrs. NALDER & HARDISTY, Pilton and Shepton Mallet. Referred to in the Deposition of Mr. Wm. Hardisty, 1st June 1833.

A. 1.—One factory at Lower Darshill in the parish of Pilton, and one at Middle Darshill, and two at Upper Darshill, in the parish of Shepton Mallet in the county of Somerset, and one at Coomb Lane, also in the said parish of Shepton Mallet.

A. 2.—Manufacturing crape, and throwing silk, and making gros de Naples.

A. 3.—The whole of the factories were erected for the purposes of clothing long before the establishment of the manufacture of crape in the neighbourhood; the crape trade has been carried on about twenty-one years, and the gros de Naples three years last December.

A. 4.—In the factory at Lower Darshill and one of the factories at Upper Darshill both steam and water is used, but the steam-engine at either factory is only employed in the summer when the water is short; the power at the lower factory is about ten-horse, and that at the upper about four-horse; the other two factories are worked by water only, requiring very little power; the factory in Coomb Lane is worked by hand.

A. 5.—As the process of manufacturing crape requires no application of heat, other than for the comfort of the people employed, the ventilation is left entirely to their own option; the lower factory is supplied with heat by the introduction of hot air in the winter, the other factories by stoves and steam apparatus.

A. 8.—The whole of the dangerous part of the machinery is fenced off.

A. 9.—As the work about which the people are employed is not of a filthy nature, and as they have two periods in the day at which they leave the factory, it is not considered necessary that any arrangements of this sort should be made.

A. 10.—The work at which children are employed is so very light, in the winding of silk, that they may be enabled to accomplish it even at five years of age; the earliest age that we employ them is about eight years old; we are not at all aware of any of them being employed at any other trades previously.

A. 12.—No alterations have been made.

A. 13.—We do not employ any apprentices.

A. 17.—The usual hours at which our factories are worked is from six to a quarter past eight, from nine to one, and from two to seven o'clock in the summer, and as long as these hours will afford light; in the winter the hours vary, but the working time is the same, viz. eleven hours and a quarter, except Saturdays, when the people work only ten hours and a quarter.

A. 18.—We refer to the former reply, all being worked the same number of hours.

A. 19.—The greatest number of hours for the last year our people worked was twelve hours and three quarters. It is very rare indeed that they are required to work out of the usual hours, and then any who desire it are generally allowed to leave at the usual time.

A. 20.—The works are carried on regularly daily, except three or four periods in the year when the hands have a few days holiday.

A. 27.—It has been always worked the same number of hours as at present.

A. 53.—Three quarters of an hour at breakfast, and one hour at dinner, all.

A. 54.—It is considered they all leave at meal-hours; those who stay do it for their own convenience.

A. 57.—Generally very slight fines on the whole of the hands.

A. 65.—There are not more than four or five small cottages attached to the manufactory and these are occupied by mechanics; at Darshill and at Coomb Lane there are six cottages occupied by weavers.

A. 66.—Children are generally more handy than grown-up persons at swift engines, and consequently better calculated to take stations at throwing-mills than hands introduced grown up.

A. 67.—The trade not being unhealthy, and the hours of working not very extended, the health of the people has been uniformly good.

A. 68.—None whatever.

A. 69.—It is not.

A. 73.—We know of no mills subject to the Act in this neighbourhood.

A. 78.—As our factories do not come within the Act, we have no means of judging; and as all our hands appear to be perfectly satisfied with the present regulations, we are not aware that any legislative provisions would be attended with material benefit to the children.

A. 79.—We employ a number of hand-weavers also, who take their work home and are paid by the yard.

10th May 1833.

NALDER & HARDISTY.

ANSWERS of CHARLES WILKINS, Twerton. Referred to in the Deposition of Mr. Charles Wilkins, 23d May 1833.

No. 44.

Charles Wilkins.

A. 1.—Twerton, in the county of Somerset.

A. 2.—Broad cloth only.

A. 3.—The buildings consist of two distinct mills, called the Upper and Lower Mills. The Lower Mill was first used as a cloth manufactory in 1800, when it was enlarged, and again in 1817. The Upper Mill has been used to its present purpose about forty years; enlarged about twenty-six years since, and again in 1828.

A. 4.—Steam and water.

A. 6.—The ventilation is wholly by means of windows.

A. 7.—The windows are opened at the option of the workpeople, but of course under the control of the foreman in case of any neglect.

A. 8.—The machinery from whence danger can be reasonably apprehended is, in all cases where it is possible, fenced off.

A. 9.—It is considered nothing of the kind is required, or would be used.

A. 10.—Six or seven children have been employed in these works at six years of age, but these invariably work with their parents, are employed by them, and do not work more than five to six hours per day; the ages that children are first employed by Charles Wilkins and Co. are generally from eight to ten.

A. 11.—The only reasons for the employment of children under twelve years of age are, economy on the part of the employer, the interests of the parents, and the benefit to the children themselves, by substituting habits of industry for idleness.

A. 12.—No alterations have recently taken place which affect the employment of children.

A. 13.—None.

A. 17.—The required hours of work are in some cases eleven each day, in others eleven and a half, but from various causes, especially in winter, the average is less.

A. 18.—The children are, many of them, necessarily employed the same hours as the men with whom they work. The youngest children are those who quill for the weavers, and these for the most part work with their parents, who regulate their hours of labour. (See A. 10.)

A. 19.—The whole works have never been employed more than the usual time; but from a partial stoppage for repairs, and to make up for lost time, part of the workmen were employed for fourteen hours on three different occasions, one day each time.

A. 20.—The works are always employed, except two days at Christmas, two at Whitsuntide, and half a day at Easter, two other half days for holidays, and one day when a dinner was given to the workpeople.

A. 23.—The average has certainly not exceeded eleven hours each day, not including Saturday, when the work is only eight hours, or sixty-three hours in the week.

A. 24.—There is but one set of workpeople, whether children or adults.

A. 25.—Only when by some accident a part of the works have been stopped, making it necessary to recover the lost time.

A. 26.—Not avoidable, because as the whole manufactory is conducted upon a regular system, if the time lost by one part is not made up, the rest must necessarily be stopped an equal time, and thus the whole of the workpeople would be thrown out of employment.

A. 27.—No.

A. 29.—We believe that the inducements to any manufacturer to continue his work beyond the accustomed hours of the trade can be only two; first, that his premises are not sufficiently extensive to enable him to produce the goods required in the usual hours; or, secondly, that by working a greater number of hours at the same wages given by others for the smaller number, he obtains his goods cheaper at the expence of the workmen. (See A. 31.)

A. 30.—If the hours of work were reduced, the wages continuing the same, the cost of production must be correspondingly greater.

A. 31.—When the labour is constant, and sufficient to employ two sets of workmen or children, it must be to the advantage of the employer to have them, could they be got; if the additional work be only occasional it would be impossible to get them, as every person requiring work seeks out for constant employment.

A. 32.—We know of no case in which it has been tried.

A. 33.—The only part of our works carried on by night is the fulling-mill; this is done by the piece. The men regulate their own hours, and there are a sufficient number to relieve one another.

A. 36.—We apprehend no bad effects would arise from such prohibition, except in the case of the fulling department; but in this it would produce incalculable mischief, as the felting process requires continuous working, or the cloth is neither so well felted, and done at a greater waste.

A. 37.—Any reduction in our hours of work would necessarily involve a reduction in the prices of labour, and also an increase in the expense of manufacture from the standing still of the works and machinery, which forms a very considerable item in the cost of production.

A. 38, 39, & 40.—The average temperature of the rooms this day, the 17th of May, is under seventy degrees. The best temperature suited to our work, and that which we endeavour to obtain, is a medium warmth, or about sixty-five degrees; but certainly the heating of the manufactories was principally for the comfort of the workpeople.

A. 53.—Half an hour at breakfast, half after eight till nine; one hour at dinner, from one till two; half an hour at tea, half after four till five.

A. 54.—All may, and the greater part do; some few prefer having their meals brought to them.

A. 55.—Whenever it is otherwise it is the sole choice of the individual.

A. 56.—Already the case.

A. 57.—Generally by reduction of wages, which is in fact punishing the parents, and making them responsible for the conduct of their children.

A. 58.—Not for defect in work; but in some gross cases, such as running away and petty theft.

A. 59.—By parents, or in the presence of parents.

(APP.—B. 1.)

G 4

A. 60.

Somersetshire.

Charles Wilkins.

Somersetshire.

*Charles Wilkins.*

A. 60.—Yes, as above.

A. 63.—General but not written instructions are given to the foreman to report all cases deserving punishment to their employers.

A. 64.—Never.

A. 65.—No.

A. 66.—The difference in skill depends so much upon the peculiar talents of individuals, that it would be impossible to specify particular cases, but it is evident that early habits must greatly contribute to the improvement of mechanical dexterity.

A. 67.—The workpeople employed in this factory are in the enjoyment of good health, and it is not known that any change for the better has taken place.

A. 68.—No process employed by us is injurious to health.

A. 69.—We know of no Act applicable to woollen manufactories.

A. 70 to 77.—We profess ourselves friendly to the general principle of the proposed Bill, and think that some legislation might be beneficial both to the workmen and to the trade. We should wish to see the hours of labour restricted to some definite period, allowing for cases of stoppage for repairs, by which the workmen would be protected from all unreasonable demands on their exertion during periods of comparative activity; employment would be thrown over a greater space of time, the work better performed, and the men benefited; they would also in some measure be protected from that species of injustice which is afraid to lower wages nominally, but does so actually by demanding more labour for the same money. We should ourselves say that eleven hours labour a day is what, from the nature of their employment, the workpeople, whether adults or children above ten years of age, are fully equal to, which they would willingly give, and the masters may reasonably require. We think any fixed hours for meals very objectionable; we should prefer, when the daylight is long enough to admit of their beginning work at six o'clock in the morning, to allow one hour for breakfast, from nine till ten, and one hour at dinner, from two till three, in preference to the half hour for breakfast, one hour for dinner, and half an hour for tea, being convinced that the men would after their leaving their work at seven o'clock, go home and enjoy their tea with their families, whereas, having had their tea at five o'clock, many of them upon leaving work go immediately to the beer-shops, and in some cases we are convinced merely for want of something to do. We cannot now avoid remarking, the introduction of beer-houses in this parish has been attended with the most deplorable results; children of both sexes are now habitually frequenting them, whereas before their introduction such habits were quite unknown; nor can this excite surprise, when we state there were formerly only two public-houses and two retail breweries, and directly on the passing of the Beer Bill, no less than twenty beer-shops were opened in addition to the two regular public-houses; these beer-shops, to be profitably kept open, can only be done so by holding out inducements formerly not resorted to; and we find it impossible entirely to prevent the children and young persons in our employment from frequenting them, notwithstanding our most strenuous endeavours to do so.

CHARLES WILKINS.

No. 45.

*Charles Wilkins.*

DEPOSITION \* of CHARLES WILKINS, Cloth Manufacturer, Twerton near Bath, sworn before Leonard Horner and S. Woolriche, 23d May 1833.

You are, I believe, an extensive manufacturer of broad cloth?—I am, under the firm of Charles Wilkins and Company.

To what number of persons do you give employment?—About eight hundred upon the premises, and from two to three hundred at their own houses.

What is the extent of your moving power?—We have two steam engines, one of thirty and the other of thirty-four horse power; and we have water-power, which is equal to from one hundred to one hundred and twenty horses, the water-power being liable to irregularity.

Do the children and adults necessarily work together, so that any interruption to the labour of the children must be followed by a similar interruption, as to time, to the labour of the adults?—In most cases it would, and it would materially tend to interrupt the manufacture.

Would the limitation of the time of young persons employed by you between the ages of fourteen and twenty-one, as proposed by Lord Ashley's Bill, be a serious interference with your manufacture?—It would be so.

Do you ever work beyond what may be considered your regular hours of daily labour?—Very rarely.

Are you of opinion that the limitation of the hours of labour of young persons from fourteen to twenty-one, as proposed in Lord Ashley's Bill, would have a tendency to injure their moral habits by leaving them so much more time at their own disposal?—In some measure I think it would be so; but in answer to this question I would beg to refer to the general observations I have made at the conclusion of the printed queries.

\* This Deposition was accidentally omitted in the printing of the First Report.

Is there any difference in the length of time in the employment of your people on a Saturday?—The working hours on a Saturday never exceed eight hours and a half.

Does the power stop at the intervals for meals?—It does in all cases in which the children are employed.

Are there any written or printed regulations in your factory?—There are a few written regulations.

Have you any objection to furnish the Commissioners with a copy of these?—None; and I now deliver a copy.

Have parents ever applied to you to shorten the hours of labour of their children employed in your factory, or said that their health was injured by over-work?—Never.

Have serious accidents frequently occurred in your mills?—Certainly not frequently. Since 1804 there have been not more than five or six.

Is there any medical man specially attached to your factory?—There is not.

Do you pay any special attention to the education of the children employed in your factory, or give encouragement to schools in your neighbourhood to which the children may go?—I perhaps had better state in answer to this question, that there are three Sunday-schools and an infant daily school. The Established Church Sunday-school has nearly two hundred children; the infant daily-school, which is attended by the clergyman of the Established Church, has nearly a hundred children; the Wesleyan Methodists Sunday-school has about rather more than two hundred children, and the Baptist Sunday-school has also about one hundred and thirty children. The population of this parish is a little more than two thousand.

What is your impression of the general moral character of the people in your employ?—Certainly they are so generally.

Have you any knowledge of the usual diet of the workpeople in your employ?—I have no doubt that they in general live well, but from my own knowledge I cannot speak to any particular diet.

Is there any particular age at which young persons in your factory are considered to have ceased to be children?—No precise age; but when able to maintain themselves they almost universally throw off the authority of their parents, and, speaking generally, this commences from fifteen to seventeen years of age.

Is there any precise age at which the wages earned by the children in your factory are paid to them for their own use, and not to their parents or guardians?—Certainly not; the wages are generally paid to the children themselves, unless when their parents are working with them in the factory.

What is your opinion of the general state of health of the people in your employment throughout the year?—Generally good.

CHARLES WILKINS.

1832.

From the great increase of beer-houses in this parish, and the consequent increased drinking which it has occasioned, much to the injury both of the workpeople and ourselves, we have considered it absolutely necessary, as much for their benefit and respectability as for our own protection, to enforce the following

#### RULES AND REGULATIONS:

1st. Any person whatsoever who shall leave his or her work without first informing the clerk or foreman of their respective shop of such their intention shall be fined 1s.

2d. Any slobber who shall, without permission, leave his employment, by which the work of his engines, and feeders and piecers, must necessarily be suspended, will, in addition to the fine, be required to pay the amount of such feeders and piecers wages.

3d. Any mule-spinner absenting himself without leave will also be required, in addition to the fine, to pay for the lost time of the piecers.

4th. Any weaver having a loom driven by power absenting himself without leave for part of a day shall be fined 1s., and for a whole day 2s.

5th. Any young woman found drinking in a public-house at any time, whether during the hours of work or not, will be liable to a fine of 1s., and any such who may make a practice of frequenting public houses will on no account be employed in any capacity whatever. It is hoped that young women who are disposed to live respectably will consider it a disgrace to associate with such persons.

6th. Incomings, or what are called shop dues, of any kind whatever, are strictly forbidden; and if any such should be enforced, the parties concerned shall be fined in the full amount of the dues paid; but no fine will be considered a sufficient compensation for such a breach of rules. As it is scarcely possible this rule can be evaded without the knowledge of the foreman of the shop, he will be held responsible, and fined in the same amount as the parties so offending.

7th. All waste or sweeping is to be removed daily from each shop to a place appointed, and for any neglect in this respect the shop will be fined 2s. 6d.

8th. Every power-weaver is required to clean the gear, and all other parts of his loom, at least once a week, under a penalty of 1s.

9th. All workmen are required to keep their respective windows clean, and to pay for such as may be broken. In case of necessity, the foreman will decide to whom any window shall belong.

(APP.—B.1.)

H

10th.

Somersetshire.

Charles Wilkins,

Somersetshire.

*Charles Wilkins.*

10th. A book will be kept for the entry of all offences, and for an account of imperfect and bad work of all kinds, to which reference will be made from time to time; and such workmen who shall be often found infringing these rules, or otherwise negligent in their work, will be discharged.

11th. All money paid as fines shall go to form a fund for the relief of those who are in sickness or distress, the management of which shall be under the direction of a committee selected from the most respectable of the workmen.

C. WILKINS &amp; Co.

1832.

## ASSOCIATION FOR THE PROMOTION OF ORDER.

The object of this society is to ensure a better observance of Sundays, and to check the great evils of idleness and drunkenness, which the number of beer-houses lately opened has greatly contributed to aggravate and encourage.

There is scarcely a parent to be found who, whatever his own habits may be, will not admit that the Sunday spent in idleness by his children, will have a manifest tendency to encourage vice, which in all probability must end in misery.

The members of this society will therefore engage to use their influence that all young persons shall attend some place of public worship, and those members who have families will see they shall both attend public worship and belong to a Sunday-school so long as their age may require it. By young persons is meant all those who are under the age of twenty-one years, and Messrs. Charles Wilkins and Co. will require that all such in their employment shall attend public worship at least once every Sunday.

The members of this society engage not to drink in a public-house or beer-house in Twerton on a Sunday, except under very particular circumstances.

A committee will be formed of some of the most respectable and influential persons in the employment of Messrs. Charles Wilkins and Co. to enforce the rules of this society, and Messrs. Charles Wilkins and Co. will lend all their assistance for such purpose, and will always regard with friendly feelings those who conform to the rules of this society.

The committee already appointed are,—

|                |   |   |               |
|----------------|---|---|---------------|
| James Cadby    | - | - | foreman.      |
| Robert Gardner | - | - | ditto.        |
| William Rudman | - | - | weaver.       |
| Joseph Bailey  | - | - | ditto.        |
| James Vincent  | - | - | ditto.        |
| George Silcox  | - | - | ditto.        |
| James Gigg     | - | - | sloober.      |
| John Beser     | - | - | mule spinner. |

For the names of the members, see the book in which they are entered kept for that purpose.

CHARLES WILKINS &amp; Co.

## STAFFORDSHIRE.

No. 46.

*John Hawkesford.*

## ANSWERS of JOHN HAWKESFORD, Bilston,

- A. 1.—Bilston in the county of Stafford.
- A. 2.—Wood-screws and cut nails.
- A. 3.—Within the last ten years.
- A. 4.—Steam power.
- A. 5.—No distinct or specific provision.
- A. 6.—On the opening of windows.
- A. 7.—The windows are opened at the pleasure of the workpeople.
- A. 8.—Dangerous parts are fenced off.
- A. 9.—The foreman requires the workpeople to come clean in their persons.
- A. 10.—Children are employed as young as ten years.
- A. 11.—The nature of the work does not require any particular age, but it is very easy employment; but parents send their children of that age to work, as they have the same price—piece-work—as if they were older.
- A. 12.—More children are employed now than formerly.
- A. 13.—No.
- A. 15.—All reside with their parents or friends.
- A. 16.—Superintended by a foreman.
- A. 17.—Eleven hours.
- A. 18.—Eleven hours, but are very irregular in their attendance, not averaging more than nine hours a day.
- A. 19.—Thirteen or fourteen.

A. 21.

- A. 21.—Have no means of ascertaining.  
 A. 22.—No difference.  
 A. 23.—Eleven hours.  
 A. 24.—All are at piece-work, but seldom work more than nine hours.  
 A. 25.—To finish particular orders some part of the hands have sometimes worked two hours over, but it has been at their own option to do so or not.  
 A. 26.—It is avoidable, except under particular circumstances.  
 A. 27.—No.  
 A. 28.—No night-work.  
 A. 37.—Injurious to the workpeople, as they would not be enabled to earn so much money.  
 A. 38.—The temperature of the atmosphere, except in winter, when stoves are used to warm the manufactory.  
 A. 39 & 40.—No particular degree of heat required.  
 A. 50.—Gas during the winter months.  
 A. 51.—Same as day.  
 A. 53.—One hour for breakfast and one hour for dinner.  
 A. 54.—All leave, unless they prefer eating their meals at the works.  
 A. 55.—Convenience of the workpeople.  
 A. 57.—Threats of discharge.  
 A. 58.—No.  
 A. 62.—Have forbidden it.  
 A. 63.—No instructions given.  
 A. 64.—None.  
 A. 65.—Do not live in the houses of their employers.  
 A. 66.—Any person of moderate ability will become skilful in twelve months, with proper industry.  
 A. 67.—The general health has been good.  
 A. 68.—No part injurious to health.  
 A. 69.—I believe not.  
 A. 73.—No necessity for any Act of Parliament being put in force.

JOHN HAWKESFORD.

Staffordshire.

*John Hawkesford.*

## ANSWERS of G. F. BAKER, for Robert Todd &amp; Co., Brampton, Newcastle.

No. 47.

*G. F. Baker.*

- A. 1.—Brampton Silk Mill, Newcastle-under-Lyme.  
 A. 2.—Silk-throwing.  
 A. 3.—Erected in 1826.  
 A. 4.—Steam, fourteen-horse power.  
 A. 5.—Yes; opening windows, constructed for that purpose on swivels.  
 A. 6.—Opening windows.  
 A. 7.—By the overlooker.  
 A. 8.—Yes.  
 A. 9.—No.  
 A. 10.—Eight years; not previously employed generally.  
 A. 11.—Yes; because since the competition with foreigners our wages are of necessity greatly reduced, and therefore children are employed because they work cheaper.  
 A. 12.—No alteration.  
 A. 13.—No.  
 A. 15.—Some; they generally live with some relative.  
 A. 16.—Yes, the overlooker.  
 A. 17, 18, & 19.—Eleven hours and twenty minutes actual work; but they are in the factory twelve hours, having twenty minutes allowed for breakfast, and the same time for tea, which they sit down and eat in the factory.  
 A. 20 & 21.—Recently commenced, having been standing idle for two years.  
 A. 26.—Since the free trade system the work is naturally very irregular, for if a little demand arises we are so afraid of competition that we work day and night to be first in the market, which creates an over-stock, and then we are not able to work above three or four days per week.  
 A. 27.—Yes; occasionally worked seven days in the week instead of six.  
 A. 28.—Slightly in winter by the cost of light; not in summer.  
 A. 29.—Because in general the wages are so very low, that children will work at a lower rate for eight days per week than for seven, and for seven than for six.  
 A. 33.—No.  
 A. 34.—It is not the interest of a manufacturer to work two sets of hands, because, as stated above, the longer the week in number of days the cheaper hands will work per day.  
 A. 36.—The best possible effect, by checking over-production. Only few mills work by night, and those are owned by parties recently embarked in the trade, who having superior machinery can come cheaper into market, and therefore sell all their production even when working day and night.  
 A. 38.—Seventy degrees—at any low temperature.  
 A. 39.—No particular temperature.  
 (APP.—B. 1.)

Staffordshire.

*G. F. Baker.*

- A. 40.—None requiring any particular temperature.  
 A. 46.—No.  
 A. 47.—No particular time.  
 A. 49.—It is not indispensable.  
 A. 50.—By candles.  
 A. 51.—The same as by day.  
 A. 52.—Not working ever more than seven and a half to eight days per week, and that only on occasions, cannot say.  
 A. 53.—Twenty minutes breakfast and tea, and one hour dinner. See A. 17.  
 A. 55.—For the convenience of both.  
 A. 56.—That they would require more time to go and come, many living at a distance of one mile.  
 A. 57.—Encouragement, and punishment if incorrigible.  
 A. 58.—Occasionally, but very seldom.  
 A. 59.—By overlookers.  
 A. 60.—No; we disapprove the plan very much.  
 A. 62.—Yes.  
 A. 63.—Yes, to avoid punishment, and if any is requisite to give them a bad mark, or something by way of disgrace, rather than punishment.  
 A. 64.—None.  
 A. 65.—No.  
 A. 66.—Children employed early in life are far more expert.  
 A. 67.—The people are in general very healthy, and in establishing a new factory some seven years since great improvement took place in their appearance after the first year.  
 A. 68.—No injurious part in the silk factories.  
 A. 69.—Did not know there was an Act in existence.  
 A. 79.—If the hours of working were fixed at eleven per day, I think good would accrue; but this would be difficult, because the hands could not live on less wages than they earn in thirteen or fourteen hours per day, and the masters are so forced into competition with foreign labour that they cannot pay more than at present, and even under the circumstance of work-people starving and half clothed, the masters have for seven years been working generally, and almost without any exception, without profit, and in many instances at a sacrifice of thousands of pounds; and it becomes imperative that manufacturers have cheaper bread and food, or a very different currency, or they cannot ameliorate the condition of their workpeople.  
 6th May 1833. ROBERT TODD & Co.

No. 48.

*James Edwards.*

ANSWERS of JAMES EDWARDS, for Messrs. E. &amp; G. Phillips, Longport, Burslem.

- A. 1.—The parish of Burslem, the township of Burslem, the county of Stafford.  
 A. 2.—Earthenware manufactory.  
 A. 3.—The works have been erected at several times, but cannot ascertain the dates.  
 A. 4.—Our work requires no power beyond that of human strength.  
 A. 5.—Windows and doors in each place, which the people may open or shut at discretion.  
 A. 6.—On opening the windows or doors.  
 A. 7.—By the people.  
 A. 8.—No machinery.  
 A. 9.—Our business requires no such arrangements, the business being all clean of itself.  
 A. 10.—We have no specified age; we employ them when their parents consider them fit for work.  
 A. 13.—Yes.  
 A. 14.—Not from parishes.  
 A. 15.—We do not lodge or maintain any apprentices. They are all left to their parents or guardians.  
 A. 16.—Their parents.  
 A. 17.—The time for people whom we pay by the day, and whose time we control, average about eleven hours and a half each day, including meal-times; but those who work by the piece, may work longer if they choose.  
 A. 18.—We make no difference as to age; that is left to themselves. Those whom we pay by the day we compel to work eleven hours and a half each day, including stoppages; but those who work by the piece may work longer if they like.  
 A. 20.—About two hundred and ninety days.  
 A. 21.—Multiply the above by eleven hours and a half, and the product will be three thousand three hundred and thirty-five hours, or thereabouts.  
 A. 22.—Our works are open the above time generally, if the men think proper to work, or they may work three hours longer if they chuse.  
 A. 24.—Cannot answer. We keep no check of that kind, it being left to the servants to choose.  
 A. 26.—Sometimes it occurs that the servants, one part of them, are sick, and sometimes they are refractory, and will not work for some days together. On such occasions, when we are tied to time in shipments of goods, it is unavoidable.

A. 27.—The average time, both now and in time past, has been about the same. The doors are open at half past six or seven in the morning, and closed at eight in the evening, taking out half an hour for breakfast and one hour for dinner.

A. 28.—When we work over-hours it is because we are tied to time in shipping orders.

A. 29.—We do not practise the same, therefore cannot say what is the inducement of other men. If a man has occasion to work one night in the week, if he wanted to make arrangements to play the following day, we should have no objection.

A. 30.—We believe there would be no decrease in production if manufactory doors were closed at moderate times, say open twelve hours per day, including meal-hours.

A. 31.—We do not compel people to work day and night, therefore can see no objection. If those men who attend to the kilns at night wished to play next day, they might arrange so.

A. 33.—Our business requires but little night-work. That part of the business which requires it is the firing of our goods, which cannot be completed in one day. One kiln taking generally one day and one night.

A. 34.—Because we have no engines or machinery to stand still, and the men, &c. are able to leave off work at any time without much inconvenience, except the man who attends to the oven or kiln.

A. 36.—We should not be able to make china or earthenware at all, for the reason which I have just mentioned, viz. that of firing the kilns, which, if allowed to extinguish during the night, it would take the same time afterwards as though it had never been commenced with.

A. 41.—Two men are obliged to stop five nights each week on the average.

A. 42.—One boy each night, with one man to attend to making a fire to the oven; but that is more for their convenience of sleeping alternately. They are not employed more than one third part of the time during the night.

A. 44.—Two.

A. 45.—During the whole of the night their attendance at the work is required, but in actual work not more than three hours.

A. 46.—Yes; they are firing the ovens or kilns.

A. 47.—One process of firing is continued about twenty hours, and another process of firing is continued about fifty hours.

A. 48.—One adult and one boy about fifteen years of age each night.

A. 49.—Because the goods would not be hard enough for use, and would be spoiled.

A. 50.—All the lights we require are performed with candles.

A. 51.—Doors and windows.

A. 52.—We see no bad effects, because the employment is easy, not occupying more than one third the night.

A. 53.—One half hour for breakfast, and one hour for dinner, is what we allow all the people we control or pay by the day.

A. 54.—All, if they choose.

A. 57.—We are often obliged to expel them. We use very little corporal punishment.

A. 58.—If a boy is too thoughtless to notice admonition, we sometimes pluck his ear, or some other slight punishment similar. We never use either whip or stick.

A. 59.—By overlookers, or masters.

A. 61.—With our sanction, as far as described above. See A. 58.

A. 62.—If complaints are made by the parents or guardians we inquire into the matter, and insist upon proper treatment.

A. 63.—We have given no such instructions.

A. 64.—No; not an instance.

A. 65.—Some of them do; but we take no further steps to enforce morality or domestic cleanliness than admonishing and requesting them to practise good conduct. If they become public nuisances we discharge them from our employ, and leave the rest to the authority of the police of the parish.

A. 67.—Their health has deteriorated, and very much. We find that men are more addicted to intoxication than they previously were; we partly ascribe it to the throwing open of the beer trade, which has given such facilities to tippling and vice, and not partaking of such wholesome food as usual.

A. 68.—If we see it necessary, we do.

A. 69.—We have no mill.

A. 70.—No, never.

A. 79.—My opinion is, that Government ought to refer to our pottery representatives for the information required, who I am sure could answer any question which would be required on the subject.

JAMES EDWARDS,

#### ANSWERS of ENOCH WOOD & SONS, Burslem.

No. 49.

E. Wood & Sons.

A. 1.—Burslem, Staffordshire.

A. 2.—Manufacturing earthenware.

A. 3.—Our works have been erecting annually during the last forty-two years.

A. 4.—Steam, water, atmosphere, and the degree of power is changed from three horse power to twenty or thirty many times every day it is used. This is the first steam-engine ever formed which joined the two great powers of Boulton and Watt with that of Trevethic.

(APP.—B. 1.)

H 3

A. 5.

Staffordshire.

E. Wood & Sons.

- A. 5.—Doors and windows.  
 A. 7.—Not by a foreman or master, but by any person in the room at their own discretion.  
 A. 8.—They are well fenced off.  
 A. 9.—We have not any arrangements of the kind.  
 A. 10.—A part of our workmen employ their own children, or hire others on their own account, at nine, ten, or twelve years of age.  
 A. 11.—Such part of our workmen as employ children under them are used for the purpose of handing moulds to and from the men, to prevent the necessity of the man moving from his seat; this is very light work, and requires the children's assistance one third less time than the workmen are employed generally. These children are called runners.  
 A. 12.—Machinery being used does not affect the employment of children in any way.  
 A. 13.—We do.  
 A. 14.—We have no parish apprentices.  
 A. 15.—We never lodge children of any description.  
 A. 16.—The persons who lodge children are expected to superintend them.  
 A. 17.—We engage such men to work from six in the morning to six in the evening, allowing half an hour for breakfast, and one hour for dinner, but the men never pay strict attention to these times.  
 A. 54.—All leave at meal-times if they choose to do so.  
 A. 55.—Those persons who do not choose to go are waited upon with their meals, for their own convenience, at their own choice, and not by our order.  
 A. 56.—Any compulsive alteration would be vexatious to the persons employed.  
 A. 57.—We speak angrily to them, and threaten to send them home.  
 A. 58.—We never order corporal punishment, nor do we allow it if such be made known to us.  
 A. 59.—If parents correct their own children, we do not interfere.  
 A. 60.—Never within our recollection.  
 A. 62.—We have forbidden corporal punishment in our manufactory.  
 A. 63.—Never to punish by stripes of any description, and this order is verbally given to our foremen.  
 A. 64.—Never, to the best of our recollection.  
 A. 65.—No need of our interference, they are so generally neat and clean; some live in our houses; generally they do not.  
 A. 66.—So various we cannot answer.  
 A. 67.—No difference is generally observable in each department, except in the health of a few who are employed about the glazing or painting upon the glaze before firing-glossed or glazing. Since the substitution of borax for lead, we do not see the health of any one injured.  
 A. 68.—No.  
 A. 69.—We know of no provision in the Act as respects our mill, or which our mill is subject to.  
 A. 70.—No, never.  
 A. 74 & 75.—Not to our knowledge.  
 A. 77.—Those who work for truck masters we believe are, but we cannot prove it.  
 A. 78.—No; we do not want or wish for any change.  
 A. 79.—No; all things are satisfactory, except indeed intemperance at the beer-shops, gin-shops, and political union shops, &c. These are nuisances.  
 13th May 1833.

ENOCH WOOD &amp; SONS.

No. 50,

Ralph Stevenson.

## ANSWERS of RALPH STEVENSON, Cobridge, Burslem.

- A. 1.—Cobridge, parish of Burslem, county of Stafford.  
 A. 2.—China and earthenware manufactory.  
 A. 3.—Erected about the year 1803 and 1810 and 1824.  
 A. 4.—No steam or water.  
 A. 5.—Doors and windows.  
 A. 7.—By the people themselves.  
 A. 8.—None.  
 A. 9.—Rests with themselves; many have change of clothes.  
 A. 10.—As early as nine years of age.  
 A. 11.—Some branches can employ them very young to advantage, to get up cheap work.  
 A. 12.—Machinery of taxes requires it.  
 A. 13.—Yes.  
 A. 14.—None.  
 A. 17.—From six to six, and frequently three, four, and five nights a week until nine.  
 A. 18.—Generally the same hours as the above; most of the children assist men in various branches.  
 A. 26.—All hours beyond six to six may be avoided, and would contribute much to the good and comfort of the working classes.

A. 27.—No.

A. 29.—This sometimes arises from large orders for export wanted in a very short time, but more frequently from the men neglecting or drinking Monday and Tuesday, and working the other nights to bring up the lost time, and hence the little children who work with them are the sufferers.

Staffordshire.

Ralph Stevenson.

A. 31.—Cannot have relays to work only three hours, say six to nine.

A. 33.—A few now and then upon great emergency, but very seldom.

A. 36.—Less goods made, and better price for labour.

A. 37.—Ten hours per day of constant labour is sufficient to tire any man; and no longer hours were known fifty to sixty years ago in this manufactory.

A. 46.—Firing the ware in ovens; some require twenty hours, others forty-eight hours.

A. 48.—Men of all ages; boys from ten to fourteen.

A. 49.—If the fire was not continued, the ware would be spoiled.

A. 50.—Candles.

A. 51.—None required.

A. 52.—If constant very bad, but if a man fires alternately two or at most three nights in a week, and sleeps in the day, it will do him no harm.

A. 53.—Half an hour for breakfast, and one hour for dinner.

A. 54.—A great proportion go home to dinner, not so many to breakfast.

A. 55.—They please themselves.

A. 56.—If the distance was not too great, much more comfortable and economical at home.

A. 57.—Fining those who do not keep the rules; if a man loses a day by drinking, a fine of 2s. 6d. per day for such offence.

A. 58.—None.

A. 60.—Now and then a rope's end to the least boys, applied by the foreman or master, but very rare.

A. 62.—Never had a complaint in my experience of thirty-three years.

A. 63.—We find small fines keep the best order.

A. 64.—None.

A. 65.—Live where they please.

A. 70.—Never.

A. 77.—Ours have no such fears.

A. 78.—I think no children should be allowed to work more than ten hours per day, and if the men were so restricted it would improve their health and morals, and prevent excessive drinking. More people would get employment, and probably the prices of some branches higher paid.

A. 79.—If the commissioners had asked the questions from the parties, they would have got more satisfactory information than can be had from filling up their blanks, which appear to be more calculated for steam-mills spinning cotton, silk, or worsted, and might have been done as well if sent from London direct.

RALPH STEVENSON.

#### ANSWERS of ROBERT GODWIN, Cobridge.

No. 50.

Robert Godwin.

A. 1.—Cobridge, Staffordshire.

A. 2.—Manufacturing earthenware.

A. 3.—All built at one time.

A. 4.—No steam nor water employed.

A. 5.—All ventilated by windows.

A. 6.—Windows do open in all places.

A. 7.—It is left to themselves to keep themselves comfortably warm, and for no other purpose.

A. 8.—No machinery employed.

A. 10.—Thirteen years old.

A. 11 & 12.—No.

A. 13.—Fourteen.

A. 14.—No apprentices from parishes.

A. 15.—No orphans.

A. 16.—No.

A. 17 & 18.—Ten hours and a half.

A. 19.—Fifteen hours.

A. 20.—Three hundred days.

A. 21.—Three thousand and five hours.

A. 22.—All alike.

A. 23.—Sixty-three hours.

A. 24.—Ten hours and a half.

A. 25.—None.

A. 27.—No.

A. 32.—Not requisite.

(APP.—B. 1.)

 A. 70.—No.

ROBERT GODWIN.

No. 52.  
 W. Ridgway & Co.

ANSWERS of Messrs. W. RIDGWAY & Co., Hanley, Stoke-upon-Trent,

- A. 1.—Township of Hanley, Parish of Stoke-upon-Trent, Staffordshire.  
 A. 2.—Manufacture of earthenware.  
 A. 3.—The manufactory was erected above fifty years, but has been enlarged at different times; the dates cannot be specified.  
 A. 4.—All is done by manual labour alone, except the grinding of the rough materials, which is done at a distance from the manufactory by steam-power or water.  
 A. 5.—By casements and doors in all cases where it is thought necessary.  
 A. 6.—Which are opened at the discretion of the workmen.  
 A. 7.—At the discretion of the persons employed.  
 A. 9.—No such arrangements are necessary.  
 A. 10.—Nine years of age; have not been previously employed to our knowledge.  
 A. 11.—Children under that age have generally a light employment, which is an introduction to the different branches of business for which they are intended.  
 A. 12.—No machinery applicable to the work.  
 A. 13.—Yes.  
 A. 14.—Almost always the children of persons in our employ.  
 A. 15.—All who have parents live with them; such as are orphans reside with some relation or friend.  
 A. 16.—At the manufactory a foreman superintends them; at home, their parents or friends.  
 A. 17.—Actual working hours, not including the time taken for meals, nine hours per day.  
 A. 18.—The above is applicable to all, except those under ten years of age, who seldom work more than eight hours.  
 A. 19.—Fifteen hours, including one hour and three quarters for meals; but this has never been for more than three days in a week; viz. Wednesday, Thursday, and Friday.  
 A. 20.—Two hundred and seventy-eight days, not including the Sabbath, on which day no work is ever done.  
 A. 21.—It is impossible to answer this question with precision; the replies to seventeen and twenty give the ordinary work and the maximum.  
 A. 22.—They must be carried on nearly together, as they are dependent upon each other.  
 A. 24.—Never more than one set employed.  
 A. 25.—Have not been exceeded.  
 A. 26.—Not required in our business.  
 A. 27.—No.  
 A. 29.—Cupidity, and a scandalous disregard of the comfort of those he may employ.  
 A. 30.—Whenever limits are put to the hours of employment; supposing the parties to be so circumstanced that they cannot force the workman to greater exertion of labour during such limited period, it will have the effect of keeping labour to a given standard in price, but it will not increase its value.  
 A. 33. Never; except oven-men, *i. e.* persons who attend the burning of the ware; they go home early the next day, and also sleep part of the night whilst attending the oven, which is generally one night out of seven.  
 A. 34. Never employed more than one set of hands.  
 A. 37. It would keep labour up to a wholesome standard. Unlimited hours naturally tend to lower labour: the natural increase of population will always keep it down sufficiently.

A. 38.

A. 38.—The stoves of plate and dish makers, pressers, and for thrown ware are sometimes as high as eighty to eighty-four degrees, but the workmen do not work in them; they go in occasionally to take their moulds out.

A. 42.—None.

A. 46.—Yes, the firing the ovens; the biscuit-ovens take forty-four hours.

A. 47.—Biscuit-oven, forty-eight hours; gloss oven, twenty-two hours.

A. 48.—Men of mature age, with a boy of fourteen or fifteen years to assist during part of the time.

A. 49.—The fires must necessarily be graduated until they attain a certain maximum.

A. 50.—By candles.

A. 51.—The same as by day.

A. 52.—They have too little to produce any sensible effects.

A. 53.—For breakfast, from nine to half past nine; dinner, from one to two; for tea (if they work after six) from six to half past six.

A. 54.—The greater part leave the manufactory at meals; some who reside at a distance cook their victuals in the workshops.

A. 55.—It is at the discretion of the workpeople, as all work is suspended during the meal-times.

A. 57.—Kindness and proper conduct towards them.

A. 58.—No; the refractory are dismissed.

A. 60.—Not allowed.

A. 63.—The only instructions are, that if any man, woman, boy, or girl conduct them selves improperly, notice of the same be given to the master.

A. 64.—No.

A. 65.—In a few instances they do, but not often; no superintendence is exercised over them in any case.

A. 66.—It is necessary in all branches of the pottery business which require skill that a seven years apprenticeship should be served; they are therefore taken at from twelve to fourteen years of age, and generally those who have worked in clay previously.

A. 67.—We do not see any difference in the health of the people we employ.

A. 68.—We do not. The nature of the business is such that one person cannot do the work of another. The department most injurious to health is the glaze-dipping; but this is far less so than it was twenty years ago, as less oxide of lead is used, and more alkali.

A. 69.—Not requisite.

11th May 1833.

W. RIDGWAY & Co.

Staffordshire.

W. Ridgway & Co.

#### ANSWERS of Messrs. HENSHALL & WILLIAMSONS, Longport, Staffordshire.

No. 53.

Henshall & Co.

A. 1.—Longport, in the parish of Burslem and county of Stafford.

A. 2.—Manufacture of earthenware.

A. 3.—The works were originally erected in the year 1784, and various additions and alterations have been made within the last fifteen years.

A. 4.—No steam or water power employed or requisite.

A. 5.—None requisite beyond the occasional opening of the windows of some particular departments in warm weather.

A. 8.—No machinery used.

A. 9.—Does not apply to the earthenware manufactories, any arrangement being unnecessary.

A. 10.—From ten to twelve years of age, and they have not been previously employed in any other trade.

A. 11.—The nature of the earthenware trade does not require the employment of children under ten or twelve years of age.

A. 12.—Does not apply to the earthenware trade.

A. 13.—Yes.

A. 14.—They are not apprenticed from the parishes.

A. 15.—The children in our employ are supported and maintained by their parents.

A. 16.—Yes; the overlooker of the manufactory.

A. 17.—From ten to twelve hours, and in times of brisk trade fourteen hours.

A. 19.—Fourteen hours, but usually from ten to twelve hours.

A. 20, 21, & 23.—No account kept.

A. 24.—There are no regular sets of children employed.

A. 26.—Excess beyond the regular hours is in cases of brisk trade totally unavoidable; an order is received by the manufacturer to be executed and shipped within a limited period, and the manufacturer is in consequence obliged either to extend the hours of working, or to cancel the order, and this order may arrive at the very period when the men had previously only worked three days per week.

A. 28.—We have made no calculation.

A. 29.—We have already stated, that in brisk times we do not work more than fourteen hours

(APP.—B. 1.)

I

Staffordshire.

*Henshall & Co.*

hours a day; the inducement for extra hours is an extra demand for goods to be supplied within a limited period.

A. 30.—The cost of production does not fluctuate much in the potting business.

A. 31.—Children are employed in specific departments, and we could not have relays unless by doubling the establishment, and thus having (except in cases of brisk trade) twice the number of hands wanted.

A. 36.—An order for goods is frequently sent, to be shipped within a limited period, or the order cancelled; hence the necessity for extra hours in such cases.

A. 37.—The loss of business as stated in A. 36.

A. 41.—No regular work is done in the night, with the exception of firing ovens, which is indispensable.

A. 42.—None.

A. 46.—Yes; the firing of ovens.

A. 47.—From eighteen hours to fifty hours.

A. 48.—Men from eighteen years of age to sixty.

A. 49.—Earthenware in its first stage of firing requires from forty-five to fifty hours successive heat, and in the second stage from fifteen to eighteen hours.

A. 50.—With candles.

A. 53.—From nine to half past nine for breakfast; from one to two o'clock for dinner; and if there is work out of time, that is, from six to nine o'clock at night, twenty minutes are allowed at six o'clock.

A. 54.—Just as it suits their convenience; no restriction whatever.

A. 57.—None; all that is required of the children is to keep good order.

A. 58.—No.

A. 65.—Every workman is at liberty to live where he pleases.

A. 66.—Too indefinite to be answered.

A. 67.—Whatever deterioration has taken place in the health and morals of our people we ascribe wholly to the pernicious effects of the beer bill.

A. 68.—No.

A. 69.—We have no mill.

A. 73.—We are not aware of any mills in our neighbourhood.

A. 77.—Not the least.

A. 78.—No.

A. 79.—Our opinion is, that trade finds it level, and works the best, when left unshackled by legislative enactments, and not subject to speculative theories.

4th May 1833.

HENSHALL & WILLIAMSONSON.

No. 54.

*William Henshall.*

## ANSWERS of WILLIAM HENSHALL, Newcastle.

A. 1.—Newcastle, Staffordshire.

A. 2.—Silk-throwing.

A. 3.—Erected in 1815.

A. 4.—Steam-power.

A. 5.—Ventilators are placed in the windows.

A. 6.—Ventilated by opening the windows.

A. 7.—Overlookers.

A. 8.—All dangerous parts are fenced off.

A. 9.—A spacious lodge, where the people are allowed to leave their clothes to dry in wet weather, and a constant stream of water to wash in.

A. 10.—Nine.

A. 11.—Yes; we could not afford to pay the wages required by older hands.

A. 12.—A greater number.

A. 13.—None.

A. 15.—I do not lodge or maintain any.

A. 17.—From twelve to fourteen hours.

A. 18.—Eleven hours and thirty-five minutes.

A. 19.—Fourteen hours.

A. 20.—About two hundred and eighty-six.

A. 21.—About three thousand four hundred and thirty-two.

A. 22.—Men and women fourteen hours, children eleven hours and thirty-five minutes.

A. 23.—Twelve hours.

A. 24.—Eleven hours and thirty-five minutes.

A. 25.—Never exceeded.

A. 26.—Possibly it is not avoidable in some establishments, from a variety of causes.

A. 27.—Never.

A. 28 & 30.—Never tried the experiment.

A. 33.—None.

A. 34.—No extra set of hands employed.

A. 35.—No night-work.

A. 37.—Injurious, as we are now compelled to use every possible effort to meet the foreigner in the market.

- A. 38.—No particular temperature is required.  
 A. 39.—No particular degree of heat beyond that of rendering the rooms comfortably warm for the hands to work in.  
 A. 40.—No process where great heat is required.  
 A. 53.—Fifteen minutes for breakfast, sixty dinner, ten luncheon.  
 A. 54.—At dinner-time.  
 A. 55.—The hands have every convenience of boiling water and having their breakfast comfortable.  
 A. 56.—Supposing thirty minutes to be allowed for breakfast, and thirty minutes in the afternoon, if the hands were allowed to leave the premises there would be a considerable time lost in their assembling again for work.  
 A. 57.—Rewards.  
 A. 58.—Not allowed if at all avoidable.  
 A. 59.—No overlooker or foreman is allowed to punish a child severely; the parents are either sent to or a proportion of wages deducted if loss in silk is sustained.  
 A. 60.—No.  
 A. 62.—Yes.  
 A. 63.—It is understood by all overlookers not to inflict severe punishment.  
 A. 64.—One complaint for boxing a girl's ears, and that the only one for the last seven years at least.  
 A. 65.—No.  
 A. 66.—Those instructed from infancy are the most skilful hands.  
 A. 67.—I consider the health of the children generally improved.  
 A. 68.—No.  
 A. 69.—It is not, that I am aware of.  
 A. 79.—I do think, if masters are to be laid open to informations by the people in their employ or others, or are brought under any inquisitorial power beyond what now exists with the magistrates, it will tend very greatly to injure the employer and the employed.

4th May 1833.

WILLIAM HENSHALL.

Staffordshire.

William Henshall.

## ANSWERS of WILLIAM UPTON LESTER, for G. M. Lester &amp; Sons, Newcastle-under-Lyme.

No. 55.

W. U. Lester.

- A. 1.—Newcastle-under-Lyme, county of Stafford.  
 A. 2.—Silk weaving and throwing.  
 A. 3.—Erected 1825; first worked January 1826.  
 A. 4.—Steam-power sixteen horse, ten horse power only being required.  
 A. 5.—An open communication between each room from the bottom to the top; an open ventilator in the balcony.  
 A. 6.—And also the opening of windows.  
 A. 7.—At the discretion of all, so far as the windows are concerned; the other always acts itself.  
 A. 8.—Fenced off.  
 A. 9.—A water-pipe and cistern in every room from its first erection; the females in separate rooms, except in one, where some apprentices are, but each party is forbidden to overstep the space that separates them; one at one end, and the other at the other; that any of them may take off any wet clothing if it should rain when they come to work, but all have good cloaks or umbrellas. There are about five women, mostly married, who are obliged by their occupation to be among the weavers as fillers.  
 A. 10.—Eight years of age; when taken at that age never been in factory employ before; very near all being taken in at that age.  
 A. 11.—It requires them under twelve, because when they are twelve the parents either wish them to go to service, and it takes one year to learn them, or they are required in a nicer part of the process where more knowledge is required, and more wages than can be afforded.  
 A. 12.—No alteration.  
 A. 13.—In the silk weaving.  
 A. 14.—No parish apprentices.  
 A. 15.—Some few are orphans, but under the care of near kindred.  
 A. 16.—Their near kindred.  
 A. 17 & 18.—Eleven hours and a quarter per day, and ten hours and a quarter on Saturday.  
 A. 19.—Eleven hours and a quarter.  
 A. 20.—Every working day, with the exception of Christmas-day, Good Friday, Easter Monday, and half days at fairs six times per year.  
 A. 21.—The works run twelve hours per day, and eleven on Saturday, which will be, with the deductions, above three thousand three hundred and thirty-six hours.  
 A. 22.—All carried on at same time, as one part depends upon the other.  
 A. 23.—Ten hours and three quarters, but the children losing time of their own accord would make about ten, or nine and a half.  
 A. 24.—Eleven hours and a quarter.  
 A. 25.—At no time.  
 (APP.—B. 1.)

Staffordshire,

W. U. Lester.

A. 26.—We can choose our own silks, being throwsters not for hire, but mostly for our own use. If a throwster for hire has at any time an inferior lot of silk, he must either work the elder part of his hands short time, or the younger one hour per day more.

A. 27.—Formerly, sometimes on account of bad-working silks we have been obliged to do so.

A. 28.—We gave rather more wages for the extra hour, as an inducement for the children to produce sufficient for the full employ of the other departments.

A. 29.—Where the above is not the cause it must be to make the cost of production less, on account of rent, interest, &c., or making a small manufactory at small rent and machinery do the work of a larger.

A. 30.—We do find it increase the cost, because if we threw 300 lbs. of silk per week on commission at 2/0 and 2/6, our expenses of rent and interest on machinery would be 15*l.* per week; take one hour from the eleven, would be near 1½*d.* per lb., 1-20th more; if hours are reduced wages will be nearly the same; and if we gained 6*d.* per lb. profit, 7*l.* 10*s.*, it would be reduced 30 lbs. less, and 1½*d.* per lb., 4*l.* 8*s.*, profit, small enough to one hundred and forty hands at the throwing, and we cannot get more.

A. 31 & 32.—We cannot tell, never having worked above an extra hour, but we have always found a very great scarcity of hands under twenty-one; indeed our mill has never yet been properly worked for want of them.

A. 33.—No.

A. 34.—Because hands are scarce; it would add to wages; and we could not look after them ourselves.

A. 35.—We do not know.

A. 37.—Wages will be the same as now, the cost of production more, by that, and expences which go on whether at work or not; and as foreign competition has brought us down, that since 1826, instead of even paying our way we have lost much money. We cannot raise our prices, or we may keep our goods; we used to have 5/6 before 1825 for what we have now 2/0 and 2/6 for — sharp work — wages, the same; and our hands now do not, one with the other, work above nine hours and a half, as they lose much time on their own accord; and we have found working four days per week, when we have been obliged to do so by the slackness of trade, that is, beginning at eight o'clock in the morning and working until five in the evening, their time is exactly the same, they lose equally as much of their own accord; and we must work the mill no longer than what the youngest hands are allowed to work; we cannot work longer.

A. 38.—From fifty to seventy-five throughout the year; above eighty in summer; we should suppose is not pleasant; we are warmed by steam.

A. 39.—We require it as cool as the hands can be comfortable with, but by being either too warm or cold we are losers.

A. 40.—About two hundred and forty in all, the weaving and throwing.

A. 50.—By gas in the evenings.

A. 53.—One hour for dinner; from twenty to twenty-five minutes for breakfast and tea.

A. 54.—All at dinner; none at other times.

A. 55.—For the convenience of both parties; if they went home, as some live half a mile from the works, it would take an hour upon average.

A. 56.—Some hands would be at work before breakfast and not after, some before tea and not after; besides, the loss would be more than one hour per day extra.

A. 57.—If refractory, reprimanded; if still bad and using irritating language, corrected with the flat of the hand.

A. 58.—As stated above, on the younger hands, and cannot be avoided; forty or fifty different children of different families and different tempers are not easily kept in order by one person; let any one try it that thinks different.

A. 59.—By ourselves and the lookers-over; the females by women, the boys by the man who sees to them.

A. 60.—Yes, when imperatively required.

A. 61.—Yes, generally, but we cannot be in every place and see every case.

A. 62.—So far as regards either straps or sticks, a cane we have used at times with the very bad, but we require them to be brought to us in that case; if an overlooker was passionate, and corrected severely, we should quietly discharge him, or the friends of the children would apply to the magistrates, who would punish the man.

A. 63.—Instructions have been given that no stick or strap should be used, but only the flat of the hand, a box, or a fine.

A. 64.—Two complaints within that time against a man who is over forty-five lads, from ten to fifteen years of age; both the boys used very provoking language; the man had to pay for the summonses, and cautioned not to go so far.

A. 65.—Some few, but we do not interfere any further than when any ill conduct of theirs comes to our knowledge we tell them how wrong it is.

A. 66.—A child above twelve would generally take double the time to learn as one under, and their wages would be higher whilst they were learning and getting us nothing; we have no instance but that those put to it younger make the best workpeople, which will be found by looking at the list, and comparing those who are young now, and have, as most of them have,

been with us from eight years of age; their wages are more in proportion, and we find the same hand better before twelve than after generally.

A. 67.—If any thing improved, because clothing is cheaper; they are more healthy than those suffered to run about the streets; every child has now either a good warm shawl or cloak for cool weather.

A. 68.—None, except in some few cases where there has been weakness from birth; and sitting is stated to be preferable to standing.

A. 69.—We believe not.

A. 77.—Not a bit; if any thing is wrong they will soon state it, with no diminution thereof, but addition thereto.

A. 78.—No.

A. 79.—If the hours are reduced below what we work now we had much better shut up, as every one now loses on an average one hour per day on their own account, which with the holidays will bring it to nine hours and a half per day.

WILLIAM UPTON LESTER.

Staffordshire.

W. U. Lester.

ANSWERS of LEWIS ADAMS, for W. Adams & Sons, Stoke-upon-Trent.

No. 56.

Lewis Adams.

A. 1.—Stoke-upon-Trent, Staffordshire.

A. 2.—Earthenware and China manufactory, and steam-engine for grinding materials.

A. 3.—Worked by our firm ten years.

A. 4.—Steam-engine for grinding materials; fourteen-horses power

A. 5.—None.

A. 6.—Optional with the workpeople.

A. 7.—Of all.

A. 8.—Machinery not dangerous.

A. 9.—None.

A. 10.—From nine years and upwards.

A. 11.—The work is light where children are employed.

A. 12.—No children employed with machinery.

A. 13.—Yes.

A. 14.—None from parishes.

A. 15.—Neither lodge nor maintain any.

A. 16.—Under the superintendence of the overlookers

A. 17.—They are at piece-work, and please themselves as to hours.

A. 18.—Same as A. 17.

A. 19.—Fourteen hours.

A. 20.—Always employed.

A. 21.—Same as A. 20.

A. 24.—Work with the men.

A. 25.—No times.

A. 27.—No.

A. 29.—Never work in the night.

A. 30.—No change of hours.

A. 33.—No.

A. 53.—Half an hour for breakfast, and one hour for dinner.

A. 54.—Part leave.

A. 55.—Workpeople.

A. 57.—Work piece-work.

A. 58.—No.

A. 63.—None.

A. 64.—Never.

A. 65.—No.

A. 66.—Greater part serve an apprenticeship of four to seven years.

A. 67.—Neither.

A. 68.—No.

A. 69.—Not subject to any Act.

LEWIS ADAMS.

ANSWERS of WILLIAM OUTRIM, for Messrs. Copeland & Garrett, Stoke-upon-Trent.

No. 57.

William Outrim.

A. 1.—Stoke-upon-Trent in the county of Stafford.

A. 2.—China and earthenware manufactory.

A. 3.—Different times, and commenced perhaps sixty years since.

A. 4.—Steam for grinding and preparing materials, also for turning throwing-wheels &c., thirty-six horse power.

A. 5.—As a common house, by windows, doors, and chimneys.

A. 6.—Windows, &c.

A. 7.—Workpeople.

A. 8.—Fenced off.

A. 9.—Water.

(APP.—B. 1.)

Staffordshire.  
 —  
 William Outrim.

- A. 10.—Ten years.  
 A. 11.—No.  
 A. 12.—No.  
 A. 13.—Yes.  
 A. 14.—None.  
 A. 15.—None of this description.  
 A. 16.—None.  
 A. 17.—Eleven hours.  
 A. 19.—Thirteen and fourteen hours, and a part twenty-four hours.  
 A. 20.—Three hundred days.  
 A. 21.—Three thousand six hundred hours, and a part of works nearly double the quantity.  
 A. 22.—Firing the ware and engine in the night.  
 A. 23.—From ten to eleven hours per day.  
 A. 24.—From thirteen to fourteen hours per day.  
 A. 25.—Demand for goods the urgency of the case.  
 A. 26.—I consider it avoidable.  
 A. 27.—Yes.  
 A. 28.—Not materially so.  
 A. 36.—Total suspension.  
 A. 42.—Thirty.  
 A. 43.—Two hours and a half.  
 A. 44.—Thirty.  
 A. 45.—Six to nine o'clock in the evening.  
 A. 46.—Ovens.  
 A. 47.—From twelve to sixty hours.  
 A. 48.—From twenty to sixty years old.  
 A. 50.—Candles.  
 A. 51.—Doors and windows.  
 A. 53.—Half an hour for breakfast, and one hour for dinner.  
 A. 54.—As many as please.  
 A. 55.—Workpeople's conveniency.  
 A. 56.—None.  
 A. 57.—Admonition and moderate correction, and expulsion.  
 A. 58.—On refractory children.  
 A. 59.—By overlookers.  
 A. 60 & 61.—Yes.  
 A. 62.—No.  
 A. 63 & 64.—No.  
 A. 65.—Some; but no control is exercised over them on that account.  
 A. 66.—We certainly consider that those who have been brought up to any branch of our manufacture from infancy are generally more skilful than those who have been introduced to it at a later period in life.  
 A. 67.—We have observed no difference in that respect for the last ten years.  
 A. 68.—We do not.  
 A. 69.—No.

WILLIAM OUTRIM.

No. 58.

Charles J. Mason.

ANSWERS of CHARLES J. MASON, Stoke-upon-Trent,

- A. 1.—Stoke-upon-Trent, Staffordshire.  
 A. 2.—China and earthenware.  
 A. 3.—Part 1813, and to 1823.  
 A. 4.—Steam-power twenty horse; six days and nights.  
 A. 5.—None whatever except doors, and in some cases windows.  
 A. 6.—On opening doors; and, generally speaking, if the windows open they are made a means of introducing ale and other nuisances.  
 A. 7.—As before stated, by the doors.  
 A. 8.—Not fenced off, because none but the miller has any occasion to go near it.  
 A. 9.—Time occupied in finding money for the men's, &c. wages, instead of looking after change of raiment, since the return to cash payment.  
 A. 10.—Ages, eight, nine, and ten, but at those ages work very easy.  
 A. 11.—Yes; because parents have to pay double the price for bread, owing to the corn monopoly.  
 A. 12.—Machinery has no effect on our trade.  
 A. 13.—Yes.  
 A. 14.—All from their parents, parish apprentices being good for nothing.  
 A. 15.—Don't know; but the children leave the manufactory three times a day.  
 A. 16.—Our apprentices are under the care of one journeyman in one room.  
 A. 17.—From seven to nine; half past nine to one; two to six; total, nine hours and a half.

A. 18.

A. 18.—The same for all ages.

A. 19.—Up to 1825-6 often twelve and thirteen hours ; since that period as A 17.

A. 20.—Every day except Sundays and holidays, perhaps four or five weeks out of each year.

A. 21.—Never calculate.

A. 23.—Less than we have stated in A. 17, by perhaps one hour and a half.

A. 24.—Never more than we have stated in A. 17.

A. 25.—When the men have been at the new beer-shops, Monday, Tuesday, and perhaps Wednesday.

A. 26.—Under circumstances in A. 25, inevitable.

A. 28.—We pay by the piece, dozen, or score ; therefore no difference.

A. 29.—Smallness of profit and making most of capital causes night and day work ; but in potting this system does not exist, except in firing of the ware.

A. 37.—When there is no foreign competition the fewer hours the men work the less goods made ; as such, less advantageous to man and master.

A. 38.—The heat never being objectionable, temperature not ascertained, but very varying.

A. 40.—In firing, sixteen or eighteen men and boys ; say three men to one boy.

A. 41.—Sometimes the men contrive to work all night after drinking one or two days, but quite without or against our knowledge.

A. 42.—One boy sits up with the fireman, and the boy considers it a great privilege.

A. 43.—The whole night ; rarely more than once, though sometimes twice a week.

A. 45.—The boy comes to work, say half past six or seven A. M., and continues all day and night, and often until six P. M. the following day, but thinks himself ill-used if deprived of his turn.

A. 46.—Firing china or earthenware in its first stage, called biscuit, thirty-six to forty hours.

A. 47.—Say forty hours.

A. 48.—A grown man and a boy about fourteen or fifteen years old.

A. 49.—Because the necessary degree of heat can only be obtained by length of firing.

A. 50.—Gas or candle.

A. 51.—No work being done, none required.

A. 52.—Cannot say that we have perceived any ill effects ; if a man is sick then he is discharged instantly.

A. 53.—Half an hour breakfast, one hour dinner.

A. 54.—All may leave.

A. 55.—Some bring their meals with them, others have theirs sent by their children or brought by their wives.

A. 57.—Being angry, fined, or kept until their task be completed.

A. 58.—Not half so much as they are at ordinary boarding schools ; if they were beat their parents would instantly get a summons.

A. 60.—Yes ; but if any are beat for an offence, a general outcry is made by their parents.

A. 61.—Sometimes one and sometimes the other, a small cane being used.

A. 62.—Certainly not, from opinion, unless I intended to ruin the child ; but, as I have found the parents sustain their children in bad conduct, I now let them go the way to ruin unchecked by the cane ; and generally the parents live to rue their interference.

A. 63.—The foreman has been told that if he beat the child, however ill his behaviour, he was liable to an action for assault, and that he must get them on with their work by some other means, taking care to let him understand that I thought chastisement highly necessary, though not legal.

A. 64.—About ten years ago a foreman was taken before a magistrate, who settled the matter by the foreman paying the expences. The magistrate said, that even a parent had no legal right to order correction, which was my foreman's plea.

A. 65.—Mostly ; but no interference in any way when off the manufactory.

A. 66.—The processes in general are very simple, yet those long used to it are decidedly more apt in the various branches.

A. 67.—About the same.

A. 68.—Since the reduction of duty on boracic acid lead is almost exploded, and we have now no unhealthy employment.

A. 69.—No Act to regulate a mill for grinding pottery materials.

A. 77.—The men are ten times as independent of their masters as their masters are of their customers.

A. 78.—The children are as happy as they well can be, quite as much so as boys at school ; but if corn was duty-free they would have more to eat.

CHAS. J. MASON.

Staffordshire.

Charles J. Mason.

## ANSWERS of THOMAS MAYES, Stoke-upon-Trent.

Staffordshire.

No. 59.

*Thomas Mayes.*

- A. 1.—Stoke-upon-Trent, Staffordshire.  
 A. 2.—Earthenware manufacturer.  
 A. 3.—This work has been in existence about sixty years.  
 A. 6.—The rooms are ventilated by opening the windows.  
 A. 7.—The windows are opened at the discretion of the workpeople themselves.  
 A. 10.—I believe the lowest age at which I have children employed is eight years.  
 A. 11.—No.  
 A. 13.—Yes.  
 A. 14.—One only has been apprenticed by the parish—Stoke-upon-Trent.  
 A. 15.—All my apprentices, excepting the one forced on me by the parish, live with their parents or friends.  
 A. 16.—None.  
 A. 17.—Twelve hours is the usual time; sometimes the manufactory is kept open until nine o'clock; in that case the day-wages people receive half a day's wages for the three extra hours.  
 A. 18.—The working hours are the same for children and adults, i. e. from six to six, unless an order is wanted to be executed in a hurry, and the workpeople make over-time.  
 A. 19.—Some individuals have worked all night to complete an order.  
 A. 20.—Every working day throughout the year.  
 A. 22.—Each department has been carried on regularly throughout the year.  
 A. 23.—Twelve hours.  
 A. 24.—Twelve hours will be the average.  
 A. 25.—The object in working extra hours at Cliff Bank Pottery is invariably to execute foreign orders in time for vessels which are appointed to sail on a stated day.  
 A. 26.—I consider working extra hours at a manufactory of pots to be sometimes unavoidable; punctuality in the execution of orders not only commands future orders, but it often secures the manufacturer from losses by having the goods returned on his hands (should the market be glutted) on arriving at their destination.  
 A. 27.—Always the same.  
 A. 53.—Half an hour at breakfast, one hour at dinner.  
 A. 54.—It is optional with the workpeople to go to their meals, or stay and eat them in the manufactory.  
 A. 57.—There are very few hands employed but what receive all they earn; therefore their own interests cause them to be diligent and industrious, which does away with the necessity of corporal punishments.  
 A. 59.—Very rarely indeed.  
 A. 60 & 61.—No.  
 A. 62.—I will not allow any children to be beaten either by the foreman or the workmen.  
 A. 63 & 64.—None.  
 A. 65.—Many workpeople live in their own houses, but there is no superintendence exercised over them by their employers.  
 A. 66.—In some branches of potting it is requisite to serve an apprenticeship to become an able workman; in others it is not so.  
 A. 67.—Cannot answer this question, because it has not come under observation.  
 A. 68 & 69.—No.  
 A. 79.—I think the less government interferes between the master and his workmen the better for all parties, and I am also of opinion that government cannot lighten the labours of the working classes without it can give them bread at a lower rate than they now buy it.

THOMAS MAYES.

## ANSWERS of THOMAS MINTON, Stoke-upon-Trent.

No. 60.

*Thomas Minton.*

- A. 1.—Stoke-upon-Trent, Staffordshire.  
 A. 2.—Clay-preparing, throwing, turning, handling, pressing, biscuit-firing, printing, dipping, gloss-firing, enamelling, gilding, painting, kiln-firing, packing.  
 A. 3.—Some parts of my manufactories have been built forty years, others within the last two years.  
 A. 4.—All manual labour at the works; steam only used to grind flints and colours.  
 A. 5.—No specific provision is made, but the workshops are ventilated.  
 A. 6.—Upon the opening of windows and slides.  
 A. 7.—At the discretion of the persons employed.  
 A. 8.—No dangerous machinery is used in the potting manufacture.  
 A. 9.—No; none necessary. Potters are generally very clean in their personal habits.  
 A. 10.—Cannot say precisely; few children of ten years old employed at all; none so employed, it is presumed, have ever worked at other trades.  
 A. 11.—No; children of twelve years of age would do just as well as younger ones.  
 A. 13.—Yes.  
 A. 14.—There are no parish apprentices on my manufactories.

A. 15.

A. 15.—A few of the children whom I employ are orphans, but I do not lodge or maintain any of them. No parents or guardians visit the children in my employ.

A. 16.—Yes, that of bailiffs or overlookers.

A. 17.—Nine hours and a half from Monday to Friday; eight hours and a half only on Saturday. If there be full over-time, then twelve hours per day from Tuesday to Friday the other days as usual.

A. 18.—The same as those above twenty-one years of age; no difference is made.

A. 19.—Twelve hours, as nearly as I am able to answer; *i.e.* from seven o'clock in the morning till nine o'clock at night, deducting two hours, which meal times make up, in all.

A. 20.—Two hundred and eighty-eight days, exclusive of over-time, three hundred and thirty-six days over-time included; five hours of over-time are reckoned a day.

A. 21.—Two thousand nine hundred and twenty-eight, as correctly as I can calculate, over-time included.

A. 22.—Potting manufactories are carried on regularly through the whole day.

A. 23.—Ten hours and one sixth of an hour; *i.e.*, reckoning in-time and over-time, the works to have been in operation two hundred and eighty-eight days. Holidays make up about four weeks in the year, or twenty-four clear days; taking all the days in the year, with the exception of Sundays, and the average of the hours of work will be about nine hours and a quarter.

A. 24.—Twelve was the extreme number of hours that any children in my employ were kept at work during the last year.

A. 25.—In the spring and summer seasons the potting business is generally better than at other periods of the year; during those seasons, therefore, my people usually work over-time; *i.e.* till nine o'clock.

A. 26.—This excess is unavoidable with me, as my works are fully occupied. There is no way of avoiding it in the general, but that of taking a larger number of hands, which would bring down the condition of the present race of workmen.

A. 27.—No.

A. 36.—This question has no reference to the potting business, except it may be said to relate to firing; to prohibit which would be to put an end to the manufacture.

A. 37.—No reduction has taken place in the potting manufacture; the hours of labour are not deemed excessive; no one complains of them; ergo, to reduce the number would do no good, but very likely lead to one of two mischievous consequences, either a fall in the general rate of wages, or a diminution in the amount of individual earnings, as fresh hands must be taken into the business, or the trade must be contracted; to force up prices, so as to enable the master to give his workmen more, is not possible as long as there is a redundancy of labour in the market; the best way is to leave such matters to find their own level.

A. 38.—The rooms in which many of the processes are conducted have no occasion to be more than the ordinary temperature, heated in winter just enough to render them comfortable; the throwing, turning, handling, dipping, enamelling, gilding, and painting places are of this class. The pressing and printing rooms range from eighty up to a hundred degrees of heat. The process of drying the ware in the clay-state requires a high degree of heat, but the duty of those who have to manage this department is, in the general, rather that of superintendence than of labour; they have to go into this heat occasionally to see that the ware dries properly.

A. 39.—In firing or baking the ware the highest which can be attained inside the kilns or ovens; but of course the men are not exposed to any such heat; they have, however, to bear as great a degree of heat as can be endured in feeding the fires, but this only at intervals of every two hours, and then for about half an hour at a time.

A. 40.—About thirty-five, but not more than six or eight of these are up during any one night with the different kilns or ovens.

A. 41.—Two hundred and eighty-eight, as accurately as I can say. Ovens or kilns are firing almost every night when the works are engaged; firing is the only part of work connected with potting which is prolonged through the night.

A. 42.—Not any.

A. 46.—Yes; firing the ware into what is called the biscuit state.

A. 47.—Forty-eight or fifty hours; but the same persons are not engaged in this work the whole of the time. My plan is this; one man stays up with each oven the first night, another man and a boy the second.

A. 48.—Men of all ages, and youths from fourteen to twenty years of age.

A. 49.—Because the ware could not be brought to a sufficient degree of hardness in less time.

A. 50.—With candles.

A. 51.—Opening the windows or slides.

A. 52.—Not friendly to their health, but my observation would not warrant me in saying that as a class of men firemen (who are the only persons employed in night-work) are more dissipated than others.

A. 53.—Half an hour for breakfast, a full hour for dinner, and if the workpeople continue their labours till nine o'clock at night, half an hour for evening refreshment.

A. 54.—Many do, particularly those who live near the works.

A. 55.—Because of the distance of their homes from the manufactories, the practice is adopted for their own convenience, as it is optional with them.

A. 56.—An improvement, no doubt, in their general health.

(APP.—B.1.)

K

A. 57.

Staffordshire.

Thomas Minton.

Staffordshire.  
 —  
 Thomas Minton.

A. 57.—The active supervision of bailiffs, fines for neglect of duty, or a reduction of wages.

A. 58.—Yes; if a boy behave insolently, he sometimes gets a slight thrashing; such punishments, however, form no part of my system of management.

A. 59.—By bailiffs or foremen.

A. 60.—Yes.

A. 61.—In some cases with my direct sanction; in others without it, because not necessary.

A. 62.—No; do not remember any such instance.

A. 63.—No specific instructions are given to my foremen; corporal punishments, so rarely inflicted, not necessary.

A. 64.—Not any.

A. 65.—None of my people live in any houses of mine.

A. 66.—Few children taken when very young; when so taken their employments in the general are so light that I have not observed any difference.

A. 67.—Much the same as it was; no improvement nor any deterioration that I can perceive.

A. 68.—No.

A. 69.—No mill is used for the works, nor is any essential to the potting manufacture, otherwise than to prepare some portion of the raw materials.

A. 79.—These questions have evidently been framed with a view to the cotton manufactures; many of them in consequence are not applicable to the potting business. My opinion is, that no legislative interference with the usages of this manufacture (beyond perhaps that of prohibiting the employment of children of very tender age) is wanted; and I may add, that the employment of such children in this district is far from having grown into the magnitude of a crying abuse.

13th May 1833.

THOMAS MINTON.

No. 61.

John Ridgway.

#### ANSWERS of JOHN RIDGWAY, Cauldon Place, Shelton, Stoke-upon-Trent.

A. 1.—Cauldon Place, Shelton, parish of Stoke-upon-Trent, county of Stafford.

A. 2.—Manufacture of china and earthenware.

A. 3.—The principal part erected in 1802, and fit to work the following year; the buildings doubled the subsequent year.

A. 4.—In the processes of manufacture happily no steam or water power is employed, consequently the population have that advantage to a great extent; in grinding the materials both are regularly employed of necessity, and well.

A. 5.—Each room in my work has one and generally more casements, besides a door, and sometimes a chimney.

A. 6.—The ventilation certainly does depend on the above means; the means are not casual, the using them is.

A. 7.—The workpeople have the charge of ventilating their own places, but it is not properly done.

A. 8.—Have none.

A. 9.—The workpeople are generally cleanly, characteristically so; they keep jackets and aprons expressly to work in; have water at hand and in their places, which they do not forget to use; on leaving their work they put on their coats, their clean aprons, their neckcloths; and looking at their skin, especially their hands (often I have seen it at public meetings), they would surprise a stranger with their whiteness; of course in some departments this cannot be, but this is the exception.

A. 10.—I take children to preparatory employment at ten years old.

A. 11.—It does not; but the wants of parents and the interest of children under all circumstances seem to require it.

A. 12.—No machinery; no alterations.

A. 13.—I do, many, both boys and girls.

A. 14.—No; they are brought by and apprenticed under the guarantee of their parents.

A. 15.—Each child taken apprentice has a natural or legal guardian, and the child lives with him; therefore sees him twice, thrice, or more per diem.

A. 16.—They have, in each department.

A. 17.—Ten hours is the regular average, exclusive of meal-times; when very busy this is extended to twelve hours per day.

A. 18.—Children are employed somewhat less than ten hours, although not much; but there are few children whose hours are extended beyond that term; yet there are a few, both young and old, in that situation, not to my credit.

A. 19.—Fifteen hours, including two hours meal-times.

A. 20.—No Sabbath-days; say about two hundred and eighty-four days, or rather more.

A. 21.—About three thousand five hundred hours.

A. 22.—This business must go on simultaneously; the firing goes on night and day of necessity; this however employs but few hands, and no children.

A. 23.—Twelve hours per day, I am persuaded, is considerably above the average.

A. 24.—Fifteen hours, including two hours for meals; but this is the exception, not the rule.

A. 25.—The periods are uncertain; the cause is the pressure of orders in this or that department.

A. 26.

A. 26.—I consider it may be avoided, although to some inconvenience; but it may be done, and then I consider it ought to be done.

A. 27.—No, not materially, at least not more than I have described.

A. 28.—The cost is not increased, but the capability of production is decreased, and this sometimes operates as the disadvantage.

A. 29.—The inducement: sometimes limited room for employing more; sometimes a ready indulgence of the wish of parents to have them get large wages; and frequently the cupidity of the manufacturer to get too much out of them.

A. 30.—Having no limitation in the hours of work, I answer this negatively; but suppose the hours for employing children were limited, no material increase of cost would take place in this species of manufacture.

A. 31.—When children work at a branch there is no occasion for their working more than ten clear hours; when they attend upon men it seems necessary; but an arrangement is practicable whereby they may be relieved at the end of that term.

A. 32.—It has not been tried; principally because the case is within a narrow compass, and because it has not been thought of.

A. 33.—No; the only persons who work during nights are the firemen; this, as before said, is of necessity; but these men are few in number, and they get relieved during the day.

A. 34.—I do not do it, therefore have no reason to assign.

A. 35.—No, they change about, so that few men are up more than one, none more than two nights per week.

A. 36.—1st, ovens, which require thirty-six hours to fire them, could not be fired in less time; the business therefore must be ended; 2d, those which require sixteen to eighteen hours, if not fired during the night, could not be filled during the day, and the same effect produced.

A. 38.—Twenty rooms at 100°, twenty at 90°, and twenty at 80°.

A. 39.—The highest heat requisite is 120°, but the stoves of this heat are separated from the outer places wherein the men work, which places are about 100°.

A. 40.—About a hundred persons.

A. 41.—None.

A. 46.—Yes, to my manufactory; I have seven ovens to use.

A. 48.—Adults and great boys from sixteen to twenty-one.

A. 49.—The biscuit-firing cannot be completed in less than thirty-six hours; the glazed firing requires sixteen; the men fill the ovens during the day, and fire them at night; the very best arrangement.

A. 50.—With candles.

A. 51.—The same as by day.

A. 52.—The employment of night-work with me is trifling, and the relief by day balances it; but I do not hesitate to say that night-work causes double wear to the constitution.

A. 54.—Thirty per cent. leave at breakfast-time or thereabouts, seventy to eighty per cent. at dinner-time.

A. 55.—All may and indeed are wished to leave; their convenience (my works being a little distant) or pleasure alone induces them not to leave.

A. 56.—A very agreeable one to me, and so far as they can do it, a beneficial one to them, viz., the change of air, scene, &c.; but against this is occasional bad weather, so they cannot do better than have an option.

A. 57.—Encouragement, in the way of advancement and improved wages to the meritorious; the lessening of privileges and occasional punishment to the undeserving.

A. 59.—Yes; I occasionally correct them a little in extreme cases; in others I require their parents to attend, and do it in my presence; the overlooker, too, exercises an authority in light matters, but this is done rarely, and to a very trifling extent.

A. 62.—I have had only two cases of what has deserved the name of severe corporal punishment in a long course of years, and these were through resistance; the rule is, to bring naughty parties to me; and this, with due reproof and advice, I generally find effectual.

A. 63.—My instructions are, that they reason with and admonish children, also that they withhold the privileges conferred on the deserving, but not to correct; instead thereof to refer that to me.

A. 64.—No.

A. 65.—I have thirty or forty families (workpeople) who live in my houses at their express desire; the houses replete with comfort and cleanliness; a pattern, I may say, of the manner in which mechanics should be housed.

A. 66.—The difference is immense; so much so, that a person in manhood will find it difficult to learn some of the trades which children learn with facility.

A. 67.—I consider it has improved on the whole, and that more humane attention has been paid to this point. A greater, i.e. a more general improvement, would have taken place but for the influence, the demoralizing influence, of the beer-shops.

A. 68.—Yes, occasionally; happily there is little necessity for this.

A. 69.—No mill.

A. 73.—No mills of the kind.

A. 76.—None to obtain.

A. 77.—No, they are not.

7th May 1833.

JOHN RIDGWAY.

B. 1.

Staffordshire.

No. 62.

F. Wedgwood.

## ANSWERS of FRANCIS WEDGWOOD, Etruria, Stoke-upon-Trent.

- A. 1.—Parish of Stoke-upon-Trent, county of Stafford.
- A. 2.—Potting solely.
- A. 3.—The chief part about 1770; the only material addition about 1788; the steam-engine was put up 1801; never used for any thing else.
- A. 4.—A steam-engine of Boulton and Watt's, thirty-horse power.
- A. 5.—No, except in one of the workshops containing eight or ten boys, which is heated and ventilated by one of Silvester's hot air-stoves; in the other work-places the ventilation depends on the doors and windows and fireplaces.
- A. 7.—At the discretion of the persons working in the respective rooms.
- A. 8.—There are no dangerous parts.
- A. 9.—No.
- A. 10.—The youngest boy in the works is eight years old.
- A. 11.—No, except for cheapness.
- A. 12.—I know of no recent alterations.
- A. 13.—Yes.
- A. 14.—Not parish apprentices.
- A. 15.—They all live with their parents or natural guardians.
- A. 17.—Day-wage men ten hours and a half in summer; piece-work men manage to get in half an hour or an hour more.
- A. 18.—The same as above, only that those children who work with piece-work men work the same time, and about half an hour more, as they are expected to have the fire lit and the place ready before their masters come.
- A. 19.—Fifteen hours and a half, including meals.
- A. 20.—Two hundred and eighty-eight. Can't say to a day or two.
- A. 21.—I cannot give an answer to this, as sometimes one set of workmen are working over-time, and sometimes another, and sometimes none.
- A. 22.—The only difference is, that those whose work is wanted (some times one set of men, sometimes another,) work till nine instead of six.
- A. 24.—Fourteen hours and a quarter, or fourteen.
- A. 25.—Whenever the work was wanted.
- A. 26.—Yes, this, but not any; for instance, the ovens must be kept alight at night.
- A. 27.—Yes, they used to leave off at ten instead of nine in working over-time.
- A. 28.—Never calculated.
- A. 29.—The inducement is to get more work done when orders come in without taking in fresh hands, who perhaps would be turned adrift again in a fortnight; never heard of any law about it.
- A. 30.—No.
- A. 31.—I suppose it would not be easy to find children to take the work for the three hours, from six to nine only.
- A. 32.—No, never been thought of.
- A. 36.—Orders would lie back, and we should lose our customers, or be forced to take more hands than we wanted, and keep them short of work.
- A. 37.—The law would not be attended to.
- A. 38.—I do not know; the people must be comfortably warm; that is all.
- A. 39.—No particular heat.
- A. 41, 42, 43, 44, & 45.—There is hardly a night, except Saturdays and Mondays, but what somebody about the place has to work from six to nine; and besides this there are boys from sixteen to twenty years old sitting up all night with the ovens every week fourteen or fifteen times.
- A. 46.—Yes, keeping up the steam-engine and oven fires.
- A. 47.—The engine-fires never go out; the ovens must be kept alight forty-eight hours.
- A. 48.—Men and boys from sixteen to twenty years old.
- A. 49.—It requires a certain time to burn the ware, and the engine is working all night grinding flint.
- A. 50.—By candles.
- A. 51.—The same as by day.
- A. 52.—I do not know.
- A. 53.—Breakfast half past eight till nine in summer, nine till half past nine in winter; dinner from one till two for all.
- A. 54.—Some do, and some do not.
- A. 55.—They all please themselves.
- A. 57.—Fining, putting on 'prentice wages, (*i.e.* less than they can get at piece-work,) and an occasional cuff from their masters, I believe.
- A. 59.—By the men the children work with.
- A. 60.—Once, I think.
- A. 61.—Yes.
- A. 62.—I never have been informed of any instances except the one referred to in A. 60.
- A. 65.—Mostly; that is houses belonging to their employers.
- A. 66 & 67.—I do not know.
- A. 68.—Not systematically, but occasionally.
- A. 69.—I never heard of it.

FRANCIS WEDGWOOD.

ANSWERS of ROBERT PHILIPS for John and Nathaniel Philips & Co., Tean and Cheadle.

A. 1.—Tean and Cheadle in the Parishes of Checkley and Cheadle in the county of Stafford.

Staffordshire.

A. 2.—Manufacture of tapes and bobbins.

No. 63.

A. 3.—Previous to the year 1823 the manufactory was not carried on by power, which since that time it has been.

Robert Philips.

A. 4.—Steam-engines of forty and fourteen horse power, the whole of which power is not employed.

A. 5.—Yes; there is a ground flue, with communication to the outward air, and grates to admit the same into the mill, with outlets through the floors and roof.

A. 6.—No, it does not, but every window is provided with a casement in addition, which is regulated at the discretion of the workpeople.

A. 7.—The ventilation stated in A. 5. is regulated, according to the season, by the direction of the superintendent of the works.

A. 8.—Yes, they are.

A. 9.—Every room or department is provided with water-closets, which are repeatedly and daily washed out from a cistern at the top of the mill, and which is constantly supplied with water by a pump attached to the steam-engine; also there are provisions, as above, giving access to water the whole of the day both for washing and drinking. No operation is carried on requiring a change of clothing.

A. 10.—We do not employ any children directly ourselves, but some are employed by the weavers. There is no other employment for children in this neighbourhood, being agricultural.

A. 11.—There is nothing in the nature of the work itself that renders it imperative.

A. 12.—Not in this manufactory.

A. 13.—We do not.

A. 17.—The number of working hours are eleven, except Saturday, on which day the time is less.

A. 18.—The same hours.

A. 19.—As the hands employed directly by us are nearly entirely on piece-work, we do not find any time-book necessary.

A. 20.—Every day except the usual holidays at Christmas, Easter, Whitsuntide, and the annual wakes; fifteen days in the whole.

A. 21.—Refer to A. 17.

A. 22.—No difference except occasionally, and that in the making-up department only, where no children are employed.

A. 26.—If a law could be enacted which would regulate the demand and stock of each manufacturer, we presume no excess over regular hours would be necessary.

A. 27.—No, we have not.

A. 29.—As we have not been in the habit of working over-hours, we do not give any opinion, except on facts of which we are cognizant from personal experience.

A. 33.—No, we have not.

A. 37.—We do not think it would be beneficial, inasmuch as it would reduce the income of the operative, unless the manufacturer could obtain such an advance in the price of goods as to enable him to advance wages to such a point as to make up the difference arising to the operative from such reduction of time; and we believe the general state of trade does not hold out a reasonable prospect of such an advance in the price of goods being obtained.

A. 38.—No process in our manufactory is dependent upon temperature.

A. 41.—We have no night-work.

A. 42, 43, 44, & 45.—None are so employed.

A. 46.—No, they are not.

A. 50.—Candles and Argand lamps.

A. 51.—Same as in the day. Refer to A. 5 and 6.

A. 52.—We use no lights except within the regular hours, which are stated in A. 17.

A. 53.—All except the finishers have two hours, and they have two hours and a half, being chiefly heads of families.

A. 54.—They can if they choose.

A. 55.—A few that live at any inconvenient distance stay for their own convenience, and there is a separate room and fire for them to go to if they like.

A. 57.—We do not employ any children directly ourselves, but we should not allow them to be kept if disobedient.

A. 58.—Obedience is not enforced by corporal punishment, as a regulation of or standing rule of the manufactory.

A. 60.—To the same extent and of the same description as is recommended by Solomon to parents.

A. 62.—We have never found it necessary to interfere, the children being chiefly employed by their parents, and for the foregoing reasons we have not given any such instructions; but it is well known that should any case of improper correction be reported, it would be inquired into, and treated as the case required.

A. 64.—Never at any time.

A. 65.—We have a considerable number of houses, but no operative is under any obligation to become our tenants; dirty or disorderly tenants are dealt with accordingly; there is facility given as respects garden-ground.

(APP.—B.1.)

K 3

A. 66.

Staffordshire.

Robert Philips.

A. 66.—From this manufactory being insulated, and in the centre of an agricultural district, we have hardly a single instance of employment being given to a hand who has not been taken in in early life.

A. 67.—We are not aware of the general state of health having undergone any alteration.

A. 68.—We do not consider that we have any such processes, but we always adapt the person to the work as much as possible.

A. 69.—We are not aware of the provisions of the Act.

A. 70 & 71.—Never.

A. 73.—This is not a manufacturing district.

A. 74.—We know nothing thereof.

A. 79.—We provide an infant-school, day and Sunday school, and a sewing-school.

22d May 1833.

ROBERT PHILIPS.

No. 64.

Ralph Taylor.

## ANSWERS of RALPH TAYLOR for John Meir, Tunstall.

A. 1.—Township, Tunstall, Parish of Wolstanton.

A. 2.—Earthenware manufacture.

A. 3.—They have, but cannot particularize the dates.

A. 4.—Neither.

A. 5.—No.

A. 6.—Opening of windows.

A. 7.—By the workmen.

A. 8.—No machinery.

A. 9.—Need none but their workshop.

A. 10.—Eight years.

A. 11.—Yes, because the work is not laborious, and the work employed at will not admit of paying large wages.

A. 12.—Have no machinery.

A. 13.—Yes.

A. 14.—Have no parish apprentices.

A. 15.—Lodge and maintain none; their parents and relations visit them occasionally.

A. 16.—Yes, in cases where they are employed by workmen.

A. 17.—The usual working hours are twelve.

A. 19.—From twelve to fifteen hours.

A. 20.—The manufactory is open all days, except Sunday.

A. 21 & 22.—Cannot correctly say.

A. 23.—About sixty-eight hours.

A. 25.—When demands have exceeded the possibility of getting them completed in the twelve hours.

A. 26.—No.

A. 27.—Occasionally.

A. 28.—No.

A. 29.—My work is not protracted when wanted.

A. 30.—Have never made the calculation.

A. 31.—Have no need of relays or fresh sets of children or persons of any description.

A. 32.—I have not made the experiment, because I have not required it.

A. 33.—No.

A. 34.—My demands have not as yet required me to try whether or not it would be to my interest to work two sets of hands.

A. 35.—Have only one set of hands.

A. 36.—Cannot tell without an experiment.

A. 37.—It is impossible to state the effects that would be produced without a trial.

A. 38.—Is various in different departments, but cannot state accurately the usual or lowest temperature.

A. 40.—Various, according to circumstances.

A. 46.—Yes; the process of firing kilns.

A. 47.—The shortest twenty, the longest fifty hours, or thereabouts.

A. 48.—Various; from ten to sixty and upwards.

A. 49.—Because a less time of fire will not produce the effects required.

A. 50.—By candles.

A. 51.—Windows.

A. 52.—As far as applies to my manufactory, see no difference in the habits of those employed at night-work more than day.

A. 53.—Those paid by the day one hour and a half, those by the piece what they like.

A. 54.—Most of them.

A. 55.—For the convenience of workmen.

A. 56.—Those who like leave my manufactory at meal-times.

A. 57.—Proper correction.

A. 58.—As far as proper correction applies.

A. 59.—Each.

A. 60.—Yes, as described in A. 58.

A. 61.

- A. 61.—Both, if required.  
 A. 62.—Have had no reason for so doing.  
 A. 63.—No further punishment is required at my manufactory than that described in A. 58.  
 A. 64.—Never.  
 A. 65.—Some of them; no controul is exercised over them in any shape.  
 A. 66.—I keep none in my employ that do not perform their work in a proper manner.  
 A. 67.—As far as recollection serves me, should say, improved in health; causes are various, cleanliness, &c.  
 A. 68.—No.  
 A. 69.—Have no mill.

Staffordshire.

Ralph Taylor.

RALPH TAYLOR.

## ANSWERS of Mr. JOHN WEDGWOOD, Tunstall.

No. 65.

John Wedgwood.

- A. 1.—Tunstall in the county of Stafford.  
 A. 2.—Earthenware manufactory.  
 A. 3.—Newly erected in 1830.  
 A. 7.—At the discretion of all.  
 A. 9.—Not necessary.  
 A. 10.—Seven to ten.  
 A. 11.—Yes, because at twelve they are bound as apprentices.  
 A. 12.—Have no machinery whatever.  
 A. 13.—Yes.  
 A. 14.—Not any from parishes.  
 A. 16.—Yes.  
 A. 17.—Twelve hours; except by loss of time, occasioned by their own wilful neglect when engaged in drinking at beer-shops, they apply themselves more closely to work to make up for such loss of time.  
 A. 23.—Ten on the average.  
 A. 27.—No.  
 A. 30.—We generally find more work done, and at as low a rate, when the hours of work are limited to twelve per day.  
 A. 38.—Fifty to seventy degrees.  
 A. 39.—In summer the work-shops adjoining to stoves are necessarily higher than seventy.  
 A. 46.—The firing of earthenware occupies from sixteen to fifty hours.  
 A. 49.—The continuation of fires, to produce the requisite heat.  
 A. 50.—Candles.  
 A. 51.—The apartments adjoining the houses are perfectly cool, and the doors of them may be at all times open.  
 A. 52.—None but the common effects, of want of rest.  
 A. 53.—Breakfast-time from nine to half past, dinner-time from one to two o'clock, and doors generally closed at six.  
 A. 54.—All that think proper.  
 A. 55.—For their own convenienc.  
 A. 58.—No.  
 A. 59.—By their own parents.  
 A. 60.—No.  
 A. 62.—Yes.  
 A. 63 & 64.—No.

JOHN WEDGWOOD.

## ANSWERS of JAMES VARDY for Messrs. Dixon &amp; Vardy, Wolverhampton.

No 66.

James Vardy.

- A. 1.—Wolverhampton, Staffordshire.  
 A. 2.—Brass foundry and gas apparatus.  
 A. 3.—About twenty years.  
 A. 6.—Opening of windows.  
 A. 7.—Foreman.  
 A. 8.—Not considered dangerous.  
 A. 9.—At their own discretion.  
 A. 10.—Not under twelve.  
 A. 13.—Yes.  
 A. 14.—Principally Wolverhampton.  
 A. 15.—Generally live with their parents.

(APP.—B.1.)

K 4

A. 17.

Staffordshire.

James Vardy.

- A. 17.—Twelve hours, excepting the meal-hours, about two and a half to three.  
 A. 20.—Holydays, perhaps five weeks.  
 A. 50.—Gas.  
 A. 53.—Breakfast one hour, dinner one hour on the premises, four o'clock half an hour.  
 A. 54.—Breakfast and dinner, all.  
 A. 56 to 62.—We do not employ more than half a dozen that are not apprentices, and if they do not conform to the indentures we apply to the magistrates.  
 A. 79.—We employ about eighty persons, principally mechanics, and no part of our establishment is particularly laborious. We shall at all times be happy to show our manufactory, and furnish any information.

JAMES VARDY.

## ANSWERS of Messrs. RYTON &amp; WALTON, Wolverhampton.

No. 67.

Ryton & Walton.

- A. 1.—Wolverhampton.  
 A. 2.—Tin plate and japan ware.  
 A. 4.—Neither.  
 A. 6.—Windows and doors.  
 A. 7.—At the discretion of the persons employed.  
 A. 10.—There are two twelve years of age; all the rest are above thirteen.  
 A. 11.—No.  
 A. 13.—Yes.  
 A. 15.—They are all lodged and maintained by their relatives.  
 A. 15.—Yes, foremen.  
 A. 17 & 18.—The hours of work are, from seven o'clock in the morning till eight at night, exclusive of meals; if they work longer, it is at their own option.  
 A. 27.—When business has been very good, the regular hours for partial periods have been exceeded, for which both children and journeymen have been compensated accordingly.  
 A. 33.—No.  
 A. 42.—None.  
 A. 46.—No.  
 A. 50.—By oil-lamps.  
 A. 54.—One hour at dinner, half an hour to an hour at breakfast, at five o'clock half an hour.  
 A. 57, 58, & 59.—The instances of corporal punishments are rare and trivial; when we find them, incorrigible we resort to the magistrates.  
 A. 66.—The earlier they commence, the more skilful they generally become; if they remain till fifteen before they come, we have seldom found them so.  
 A. 67.—The people generally employed in our manufactory are very healthy; when the reverse has been the case, it has generally arisen from intemperance.  
 A. 68.—No.

RYTON &amp; WALTON.

## ANSWERS of THOMAS THOMPSON jun. Wolstanton.

No. 68.

T. Thompson jun.

- A. 1.—Wolstanton, county of Stafford.  
 A. 2.—Spinning cotton, and a little weaving by power-looms.  
 A. 3.—Erected and employed for its present purpose about thirty-six years ago, and not since enlarged.  
 A. 4.—Steam, about a forty-horse power engine.  
 A. 5.—The factory stands in a free, open, airy situation, half a mile from Newcastle, and ventilated by small casements in every window, regulated by any persons employed to suit the state of wind or weather.  
 A. 7.—Quite under the controul of persons employed.  
 A. 8.—We are not aware of any deficiency, having had no serious accident for more than twenty years.  
 A. 9.—Every hand uses its own discretion, there being nothing to prevent their being cleanly.  
 A. 10.—We never like to employ any under ten years of age, and it rarely occurs that they have been employed in other trades.  
 A. 11.—No; but it is difficult to obtain the number wanted at twelve years old.  
 A. 12.—Not with us.  
 A. 13.—None.  
 A. 17.—Generally twelve hours.  
 A. 19.—Thirteen hours, and only then in cases of a few hours lost time.  
 A. 20.—Two hundred and ninety-seven days, or forty-nine weeks three days.  
 A. 21.—Three thousand five hundred and sixty-four hours.  
 A. 22.—We generally work all or none.  
 A. 27.—Seldom; in a few instances thirteen hours per day, but only for short periods, and then usually in cases of lost time.

- A. 29.—Greater production at less cost.  
 A. 30.—The less produced the greater the cost in each department; as the same buildings machinery, and capital must be employed.  
 A. 31.—Perfectly unnecessary for twelve hours.  
 A. 32.—No.  
 A. 33.—Never worked at night.  
 A. 36.—All put upon the same footing.  
 A. 37.—Certain loss.  
 A. 38.—About seventy in the hottest rooms; the mill is not heated in the summer months at all, and subject only to external changes.  
 A. 39.—Ninety degrees of heat in one small room containing two dressing-machines.  
 A. 40.—Two men.  
 A. 54.—The whole do as they please, save fifteen (chiefly men) retained for cleaning, oiling, &c.  
 A. 57.—They are inspected by overlookers, and if refuse to obey orders are discharged.  
 A. 58.—No.  
 A. 62.—Yes.  
 A. 64.—In one instance, in the case of an overlooker, during the last thirty years, but no other.  
 A. 65.—Very partially so; in the way of cleanliness, as it regards whitewashing, &c.  
 A. 66.—They are decidedly superior. Mary Wright came at thirteen years of age, now forty-six; Ellen Bloor came to work at thirteen years of age, now thirty-six; Sarah Wonalow at twelve, and now forty-two; Mary Molyneux came at ten, now nearly thirty-five.  
 A. 67.—We consider it rather improved than otherwise. Provisions lower, better clothed, and work more regular.  
 A. 68.—In one instance, in the blowing or cleaning of cotton.  
 A. 69.—Yes.  
 A. 70.—Never.  
 A. 73.—No other cotton mill in the neighbourhood.  
 A. 79.—We have every reason to believe that any interference on the part of the legislature will ultimately prove injurious to the cotton trade.

THOMAS THOMPSON jun,

Staffordshire.

T. Thompson jun

### WARWICKSHIRE.

#### ANSWERS of JOHN RATCLIFF jun., Birmingham.

No. 69.

John Ratcliff jun.

- A. 1.—Birmingham, Warwickshire.  
 A. 2.—Cabinet brass-foundry, and lamp and chandeliers.  
 A. 3.—Greater part erected about fifty years, and an additional part ten years ago; was first employed for its present purpose fifteen years ago.  
 A. 4.—Neither.  
 A. 5.—No.  
 A. 6.—On opening of the windows.  
 A. 7.—Discretion of all.  
 A. 8.—No machinery.  
 A. 9.—No.  
 A. 10.—Nine years of age.  
 A. 11.—Only in six instances, and that to run of trifling errands in various parts of the manufactory.  
 A. 12.—Does not affect us.  
 A. 13.—Only three.  
 A. 14.—Never have any parish apprentices.  
 A. 15.—Have no in-door apprentices.  
 A. 16.—Have no children which require it.  
 A. 17.—Ten hours.  
 A. 18.—No variation.  
 A. 19.—Sixteen hours.  
 A. 20.—Three hundred and four days.  
 A. 21.—Three thousand six hundred and sixty.  
 A. 22.—All parts about the same.  
 A. 23.—Twelve hours.  
 A. 24.—Ten hours.  
 A. 25.—From press of business.  
 A. 26.—No.  
 A. 27.—Yes.  
 A. 28.—No.  
 A. 29.—With us, extra hours are caused by an extra demand.  
 A. 30.—Cost the same.  
 A. 31.—Do not employ children.  
 (APP.—B. 1.)

Warwickshire.

*John Ratcliff jun.*

- A. 34.—The nature of our work will not allow us to employ more than one set.  
 A. 35.—No night-work.  
 A. 37.—It would encourage idleness and pauperism.  
 A. 50.—Candle and gas.  
 A. 51.—None.  
 A. 53.—One hour each meal.  
 A. 54.—All may who choose.  
 A. 55. Convenience of the workpeople.  
 A. 56.—No effects.  
 A. 57.—Discharged.  
 A. 58.—No.  
 A. 62.—Yes.  
 A. 63.—Do not employ children.  
 A. 64 & 65.—No.  
 A. 66.—We have observed in numerous instances men who have been in our line of business only a few years are more skilful than the generality of those who have been regularly brought up to this line of business, owing we suppose to their natural abilities.  
 A. 67.—We do not perceive any variation.  
 A. 68.—No.  
 A. 69.—No mill.  
 A. 73. We believe that they conform.  
 A. 77 & 78.—No.  
 3d May 1833.

JOHN RATCLIFF jun.

No. 70.

*Henry Smith.*

## ANSWERS of HENRY SMITH for Timothy Smith &amp; Sons, Birmingham.

- A. 1.—Birmingham.  
 A. 2.—Brass foundry and lamps.  
 A. 4.—Neither.  
 A. 5.—Yes, in some of the shops numerous apertures in roof and walls.  
 A. 6.—Both.  
 A. 7.—At the discretion of the workmen.  
 A. 8.—Have no dangerous machinery.  
 A. 9.—Specific arrangements have been found unnecessary.  
 A. 10.—Ten years of age.  
 A. 11.—Yes, because some processes, though important, are too trifling for the employment of older persons, and still form an important part of the education of a mechanic.  
 A. 12.—Not within my knowledge.  
 A. 13.—No, but our men occasionally do.  
 A. 15.—We do not lodge or maintain any children; all are under the controul of their parents or guardians.  
 A. 17.—The manufactory is open from seven in the morning till eight in the evening. A large majority of the men work by the piece, consequently their time for working is in a degree optional. Those who are paid by the day ought to work ten hours per diem, exclusive of meal-times; beyond that time an extra allowance is made.  
 A. 18.—No children work more than ten hours.  
 A. 20.—Six days in every week.  
 A. 21.—The manufactory was open during thirteen hours in each of six days in every week.  
 A. 22.—No division exists.  
 A. 24.—Children do not work in sets.  
 A. 27.—No.  
 A. 29 to 36.—All queries having reference to the employment of children by night are totally inapplicable to Birmingham, as the practice does not exist.  
 A. 37.—Any regulation which should prevent mechanics working ten hours per diem, exclusive of meal-hours, would be decidedly injurious to themselves and families, from the demoralization and consequent poverty it would produce.  
 A. 38.—No regulated temperature is essential in our shops.  
 A. 41.—None.  
 A. 53.—Three hours per diem.  
 A. 54.—Optional, but the great majority leave.  
 A. 57.—None, except remonstrance.  
 A. 58.—Not to my knowledge.  
 A. 60.—No.  
 A. 65.—All live wherever they please.  
 A. 66.—Employment from infancy is essential to make a good mechanic.  
 A. 67.—Health has always been good. Not unfrequently three generations are in the same shop whose ages are between sixteen and seventy-five years.  
 A. 68.—Deleterious effects are avoided by division amongst all.

HENRY SMITH.

## WILTSHIRE.

## ANSWERS of Mr. WILLIAM HOLLWEY, Bradford.

Wiltshire.

No. 71.

*William Hollwey.*

- A. 1.—Bradford, in the county of Wilts.
- A. 2.—Scribbling, carding, and spinning wool, dressing cloth, &c.
- A. 3.—The factory has been used for its present purpose about twenty years, but the exact period I cannot ascertain.
- A. 4.—Steam only; extent of power twelve-horse.
- A. 5 & 6.—The only provision for ventilation is by opening windows, or such means.
- A. 7.—Solely at the discretion of the parties employed.
- A. 8.—They are.
- A. 9.—None.
- A. 10.—The youngest employed is nine years of age, and none have worked in any trade but the woollen.
- A. 11.—In some departments children are required, as the employment is of too trivial a nature for those of more mature years.
- A. 12.—Neither.
- A. 13.—No.
- A. 17.—Eleven, except Saturdays, on that day seven.
- A. 18.—Eleven, as before; no difference made on account of age.
- A. 19.—Fourteen in the dressing department alone.
- A. 20.—Entered 21st June 1832 to 1st May 1833 worked two hundred and sixty-one days.
- A. 21.—From 21st June 1832 to 1st May 1833 two thousand six hundred and fifty-four hours in the dressing department; this time has been exceeded by two or three hours daily, as occasion required.
- A. 22.—All are carried on at the same time, with the exception of the dressing commencing earlier, or continuing to a later hour.
- A. 23.—Ten hours.
- A. 24.—Eleven.
- A. 25.—By working earlier and later during press of business.
- A. 26.—Avoidable only by lessening the production.
- A. 27.—In the dressing department alone the time has been exceeded by two or three hours daily.
- A. 28.—The cost is increased in proportion to the decrease of production.
- A. 29.—For the sake of profit; the change of hands is quite immaterial where the nature of the work will admit of it.
- A. 30.—The limitation of hours increases the cost, and principally in the dressing department, where the greater part of the power is used, and but comparatively few hands.
- A. 31.—In many branches this would be impracticable, as the necessary uniformity of the work could not be preserved.
- A. 32.—No extra hours have been worked to render such an arrangement necessary.
- A. 33.—No night-set employed.
- A. 37.—A reduction of wages, and an increase of cost to the manufacturer proportionate to the decrease of his production.
- A. 38.—No artificial means are used to raise the temperature, which depends wholly on the state of the atmosphere; and the manufacture can be carried on in the winter season when common fires and stoves only are necessary.
- A. 39.—No unusual heat required.
- A. 41.—Not at all.
- A. 46.—One process only, that of fulling or milling, which is not carried on in this factory, or under my controul.
- A. 47.—About seventy hours.
- A. 48.—Males, chiefly adults.
- A. 49.—The texture and fabric of the cloth would be injured by stoppages.
- A. 50.—By candles and lamps in the evenings of the winter season.
- A. 51.—None.
- A. 52.—None employed.
- A. 53.—From nine till ten in the forenoon, two till three in the afternoon, with the exception of dressers when the labour is done by machinery, so that they can take their meals while the work is going on.
- A. 54.—All except those employed in dressing.
- A. 55.—If others remain on the premises it is for their own convenience.
- A. 56.—It would be attended with inconvenience, as regards those employed in dressing only.
- A. 57.—If they do not comply with the regulations of the factory they are discharged.
- A. 58.—Yes, with a small stick, as in a common school.
- A. 59.—By those with whom they work.
- A. 60.—No.
- A. 62.—Neither; never having been complained to on the subject.
- A. 63.—None.
- A. 64.—No complaints have ever been made.

(APP.—B. 1.)

L 2

A. 65.

Wiltshire.

William Hollwey.

A. 65.—They do not.

A. 66.—I cannot perceive that difference in the character or skill of these parties to enable me to point out any by way of comparison.

A. 67.—I consider there is no alteration in the general health of the people employed in the factory during my experience.

A. 68.—As no particular process has an injurious effect, no change is made in the employment of any person on that account.

A. 69.—It is not.

WILLIAM HOLLWEY.

No. 72.

Messrs.

S. & J. Mundy.

## ANSWERS of Messrs S. &amp; I. MUNDY, Bradford.

A. 1.—Bradford, in the county of Wilts.

A. 2.—Woollen manufactures.

A. 3.—Built in 1807.

A. 4.—Steam and water; water irregular, power twenty-four horse.

A. 5.—No provision.

A. 6.—Except opening windows.

A. 7.—Regulated at the convenience of the workpeople.

A. 8.—Yes.

A. 9.—No.

A. 10.—Eight years. Not aware they have been.

A. 11.—Yes; the nature of their work being so light and easy.

A. 12.—We employ about the same number as usual.

A. 13.—No.

A. 17.—Eleven hours.

A. 18.—Some ten and some eleven hours, and no reduction made on account of age.

A. 19.—Fourteen hours.

A. 20.—Three hundred and five days.

A. 21.—Three thousand seven hundred.

A. 22.—No.

A. 23.—Twelve hours.

A. 24.—A few days fourteen hours.

A. 25.—When we were placed under an inconvenience by failure of the machinery we were obliged to work extra time to fulfil our engagements.

A. 27.—We have occasionally.

A. 28.—The cost is certainly increased by reduction in quantity.

A. 29.—The change of hands in many branches would render the manufactured article uneven, and consequently unsaleable.

A. 30.—A limitation in the hours of work would be attended with extra cost, but cannot say to what extent; but it would materially affect the dressing department.

A. 31.—The extra hours have been so few that no relays were necessary, nor would the nature of the work admit of it.

A. 33.—No.

A. 34.—Only one set work.

A. 35.—None employed by night.

A. 36.—Do not work by night.

A. 37.—Attended with extra cost.

A. 38.—No unusual heat is necessary; and the manufacture can be carried on at all seasons by addition of fires in the winter.

A. 39.—No extra heat necessary.

A. 41 to 45.—No night-work.

A. 46.—Fulling department.

A. 47.—Seventy or eighty hours.

A. 48.—Twenty-one years and upwards, relieving each other occasionally.

A. 49.—It would tend to impoverish and deteriorate the cloths.

A. 50.—Lamps and candles.

A. 51.—None.

A. 52.—No night-work except the fulling department, nor is their employment attended with injurious effects.

A. 53.—Two hours a day allowed to all, except the dressing and cutting department.

A. 54.—Yes.

A. 57.—We allow the children to be corrected in a reasonable manner, by the persons of mature age with whom they work.

A. 58.—Yes.

A. 59.—By parents or any other persons working with them.

A. 60.—Yes.

A. 62.—No, as slight punishments of this nature are necessary.

A. 63.—None have been given.

A. 64.—No case of the kind has ever occurred.

A. 65.

A. 65.—We have three tenements occupied by our workpeople, but not under any peculiar controul.

A. 66.—This depends wholly on the skill of the persons employed.

A. 67.—We know no difference.

A. 68.—No.

A. 69.—Not acquainted with the nature of the Act.

S. & I. MUNDY.

Wiltshire.

Messrs. Mundy.

ANSWERS of T. H. SAUNDERS for Messrs. Saunders & Co., Bradford.

No. 73.

T. H. Saunders.

A. 1.—A superfine woollen factory at Bradford in Wilts.

A. 2.—Scribbling, carding, slubbing, spinning, fulling, and dressing.

A. 3.—Built and employed about twenty-one years.

A. 4.—A steam-engine of twelve-horse power and three water-wheels; the power very uncertain, the water being too irregular to admit of calculation.

A. 5.—None, except a stair-case, distinct, and opening in the roof.

A. 6.—Principally by opening windows.

A. 7.—At the discretion of the persons employed.

A. 8.—Yes.

A. 9.—None of these.

A. 10.—Ten years.

A. 11.—Yes; some parts are too trivial to admit of paying older parties higher wages.

A. 12 & 13.—No.

A. 17.—Ten to eleven hours, except on Saturdays, on which day it is six or seven only.

A. 19.—Twelve hours, except in fulling and dressing, which have been more, but very irregular.

A. 20.—We cannot say; floods and short water occasionally stop us; and we give two days holiday at Easter, two at each of the two fairs, and two at Christmas; in all, eight days.

A. 22.—Fulling is continuous day and night when the water serves, but two men only are thus employed; and dressing has been occasionally fifteen hours, in which one man and nine boys only are employed.

A. 25 & 26.—In consequence of delays in some branches, and of accidental circumstances, the usual hours have been occasionally exceeded an hour or two in a day only, but that has been very seldom the case.

A. 27.—No.

A. 29.—To produce a greater quantity, and to obtain more profit.

A. 30.—The cost is increased in all branches by limiting the hours of work.

A. 31.—The work would not be uniform with change of sets.

A. 32.—No, not wanted.

A. 33, 34, & 35.—No.

A. 36.—No night-work required by us.

A. 37.—Less supply; less wages to the workpeople, and less profit to masters.

A. 38.—From fifty-five to sixty-five degrees of Fahrenheit (except the summer heat).

A. 39.—No extra heat required.

A. 46.—The fulling process.

A. 47.—Sometimes forty hours.

A. 48.—Generally above age.

A. 49.—Fulling requires continued friction until the operation is complete, and any interruption occasions the work to be in part done over again, which injures the fabric.

A. 53.—One hour for breakfast at nine, and one hour for dinner at two o'clock.

A. 54.—All leave.

A. 57.—Generally by discharging them for misconduct.

A. 58.—Very rarely, and then only by a small cane or stick, as in common schools.

A. 59.—By overlookers, foremen, and parents only.

A. 62.—No; we have never been appealed to by any one in consequence of punishment, nor have we ever seen punishment inflicted in any case.

A. 63.—None.

A. 64.—Never, either before or within the last three years.

A. 65.—None.

A. 66.—We think those earliest employed are the best workpeople, generally speaking.

A. 67.—Their health has been always good.

A. 68.—Never.

A. 69.—It is presumed this and the other questions, to No. 78 inclusive, relate to the cotton trade only.

T. H. SAUNDERS.

Wiltshire.

No. 74.

*Thomas Spackman jun.*

## ANSWERS of THOMAS SPACKMAN jun., Bradford.

- A. 1.—Bradford, county of Wilts.  
 A. 2.—Scribbling, carding, and slubbing.  
 A. 3.—The original very ancient; additions more modern; cannot state the date of any part; suppose always employed in the manufacture of woollens.  
 A. 4.—Steam and water; steam employed when not sufficient power from water, or water-power not in a state to work.  
 A. 5 & 6.—Ventilated by windows, which are under the entire controul of all the adult workpeople.  
 A. 8.—They are.  
 A. 9.—Not any.  
 A. 10.—Only five between the age of eight and ten years; others all above ten years; cannot say if previously employed at other trades.  
 A. 11.—It does in this neighbourhood, as I think sufficient supply could not be obtained of twelve years of age.  
 A. 12.—They have.  
 A. 13.—I do not.  
 A. 17.—Eleven hours per day.  
 A. 18.—From twelve to twenty-one years, twelve hours and a half per day; under twelve years, eleven hours per day.  
 A. 19.—Fourteen hours on one or two occasions, for previous stoppage of work.  
 A. 20.—Suppose about two hundred and seventy.  
 A. 21.—Suppose about three thousand one hundred and fifty.  
 A. 22.—All are continued during the day, with the exception of time allowed for meals.  
 A. 23.—Ten hours per day.  
 A. 24.—Fourteen.  
 A. 25.—On occasions of previous loss of time through floods or breaking of the works.  
 A. 26.—I consider it necessary their work should be got up to prevent the after-processes of manufacture from stopping also.  
 A. 27 & 28.—I have not.  
 A. 29.—In most cases the work cannot be so well performed by different hands.  
 A. 30.—In fulling the expense would be greatly increased by limitation of hours; the operation could not be perfectly performed; in most other branches of the woollen trade the cost of production would be much increased.  
 A. 31 & 32.—In most cases I consider it best for each set of hands to complete the work they begun, and therefore object to relays.  
 A. 33, 34, & 35.—No, I have not, in the department of my trade I am now speaking of.  
 A. 36.—In certain parts most injurious.  
 A. 37.—I consider it would generally tend to throw the parties into society likely to injure them in a moral and pecuniary point of view.  
 A. 38 & 39.—The temperature may vary from fifty-six to seventy degrees, it is of little importance what may be the state of it.  
 A. 40 to 48.—Have not on any occasion worked later than eight o'clock at night in the department I am now speaking of.  
 A. 50.—By candles.  
 A. 53.—One hour, from nine till ten o'clock in the morning, and one hour, from two till three, in the afternoon.  
 A. 54, 55, & 56.—At the option of the work people.  
 A. 57 to 62.—Usually remonstrance, and if that do not avail, discharge from work; corporal punishment not sanctioned.  
 A. 63.—No instructions have been given.  
 A. 64.—Not any.  
 A. 65.—They do not.  
 A. 66.—Greater skill and better morals.  
 A. 67.—Cannot speak to any change.  
 A. 68.—Do not find such change necessary.  
 A. 69.—I am not aware.
- 1st June 1833.

THOMAS SPACKMAN jun.

## ANSWERS of YERBURY EDMONDS, Bradford.

No. 75.

*Yerbury Edmonds.*

- A. 1.—Bradford, Wilts.  
 A. 2.—Manufacture of woollen-cloth.  
 A. 3.—The works have been erected about thirty years, and have been employed for the present purpose from the time of erection.

Wiltshire.

Yerbury Edmonds.

- A. 4.—Steam.
- A. 5.—No.
- A. 6.—On the opening of windows.
- A. 7.—It is at the discretion of the persons employed in the different rooms.
- A. 8.—They are fenced off.
- A. 9.—We have no particular arrangement for any purpose of this sort.
- A. 10.—There is no specific age at which we employ children, and it is seldom they follow any avocation before they are employed in the factory.
- A. 11.—Children at from nine to twelve years of age are particularly adapted by their size to certain employments.
- A. 12.—No recent improvements in machinery have made any alteration in the employ of children under twelve years of age.
- A. 13.—We do not.
- A. 15.—We do not lodge or maintain any in our employ.
- A. 17.—Ten hours for the manufacturing department, and eleven hours for the dressing and finishing department; any time worked beyond this is paid for extra.
- A. 18.—Those under twenty-one work the same as those above.
- A. 19.—Fifteen hours.
- A. 20.—Three hundred days, including Saturdays, when the persons leave work at two o'clock.
- A. 21.—Three thousand eight hundred hours, as near as we can calculate.
- A. 22.—The whole of our works have been carried on together, but the dressing department is continued while the others are stopped during meal-hours.
- A. 23.—In the dressing department we work thirteen hours a day, except on Saturdays, when we work only eight; in manufacturing we work eleven hours a day, and seven on Saturday.
- A. 24.—We have only one set.
- A. 25.—Having been obliged to stop for repairs, we were necessitated to work extra hours to make up for lost time.
- A. 26.—Unavoidable, for the reasons stated in the preceding answer.
- A. 27.—No.
- A. 31.—It is necessary that our work should be done particularly regular and even, and this would not be the case if different hands were employed on the same piece of work.
- A. 32.—We have never employed two sets of workpeople, as we have never worked sufficient hours to require a change of hands.
- A. 36 & 37.—Any diminution of the hours we now work would be injurious both to master and workman, as most manufactories are filled with machinery to their greatest extent both in room and power, and in many cases it would be imprudent as well as inconvenient to go to the expense of other machinery for the purpose of producing the same quantity as at present; consequently the master would lose profit to the amount of such diminution, and the workmen being reduced in time would of course be also reduced in their earnings.
- A. 38.—The usual temperature of the atmosphere, no artificial heat being used except in winter, and then only for the comfort of those employed.
- A. 41.—None, except the fulling and milling.
- A. 46.—Yes, fulling and milling.
- A. 47.—From forty to one hundred and twenty hours, according to the texture of the goods.
- A. 48.—Men, and boys, seldom under eighteen or nineteen.
- A. 49.—In the process of milling, a cloth gets into a state of fermentation, which can only be kept up by a continuous process.
- A. 50.—In the winter we light by candle or common lamp.
- A. 53.—For breakfast one hour from nine to ten; for dinner one hour from two to three.
- A. 54.—The greater proportion leave for meals.
- A. 55.—Those who do not leave the factory have ample time afforded them for their meals from the nature of their employ; this practice is adopted for the convenience of the manufactory.
- A. 56.—It would delay the manufactory.
- A. 57.—If the children are not obedient, they are discharged.
- A. 58.—It is very seldom any corporal punishments are found necessary.
- A. 59.—If any, it is inflicted by the persons with whom they are working.
- A. 60.—No particular orders have been given by us on this subject.
- A. 63.—None.
- A. 64.—No.
- A. 65.—The workpeople do not live in the houses of their employers.
- A. 66.—Those who have been employed from their infancy are generally superior in comparison with those employed at later periods, though this depends in a great measure on the natural ability of the person: we refer to Thomas Aland and John Scrine, Thomas Aland jun. and James Tribe.]
- A. 67.—It has always been remarkably good; we do not perceive any improvement or deterioration.
- A. 68.—We have no process so injurious as to require a change of hands.
- A. 69.—We know of no Act that at present interferes with the management of our mill.
- A. 77.—We are not aware of any evidence our workpeople could give, that would subject them to our displeasure; and therefore see no reason for them to be afraid.

Wiltshire.

Yerbury Edmonds.

A. 79.—As the woollen manufacture is not pernicious to health, we see no reason for restricting the hours of labour, and particularly in the dressing and finishing departments, these in a great degree requiring a continuous process in order to bring goods to that state of perfection which the market demands. The present system of dressing requires so much more time than formerly, that if we were restricted to the same hours as the other departments, an injurious accumulation of stock in the other stages would be the result; as a proof of this, it now requires five or six machines to do the work which seven or eight years since was done by one; and to keep pace with the other branches we have frequently been obliged to work these additional machines fifteen hours per day, whilst the machinery in other departments worked only eleven hours; but as this is not a laborious part, the work being wholly done by the machines, a little extra time per day has never been found injurious to any in our employment.

YERBURY EDMONDS.

No. 76.

Daniel Rawlings.

## ANSWERS of DANIEL RAWLINGS, Chippenham.

- A. 1.—Chippenham, Wilts.  
 A. 2.—Dyeing, scribbling, fulling, and dressing.  
 A. 3.—The principal part about twenty-five years, and an addition about two years since.  
 A. 4.—Two steam-engines, thirty and fourteen horse power.  
 A. 5.—Window-sashes.  
 A. 6.—The opening of windows.  
 A. 7.—Any person is allowed to open a window if they find it necessary.  
 A. 8.—All the dangerous parts are fenced off.  
 A. 9.—I have not. The factory is immediately adjoining the town, and within a few minutes walk of the residence of the workpeople.  
 A. 10.—Nine years; there are two under that age, who work under the care of their parents.  
 A. 11.—Children from nine to twelve are required as piecers; the wages are low, two shillings per week.  
 A. 12.—There have been no alterations in this factory which have required a greater number of children under twelve years of age.  
 A. 13.—I do not.  
 A. 15.—There are seven employed, two of whom are under the care of the overseer, and the others of friends.  
 A. 16.—The foreman.  
 A. 17 & 18.—Eleven hours.  
 A. 19.—The fulling is occasionally continued day and night; scribbling sixteen hours.  
 A. 20.—The whole of the year.  
 A. 21.—No account kept.  
 A. 22.—The fulling has been continued after the other parts have stopped, from seven in the evening to six in the morning.  
 A. 23.—Eleven hours.  
 A. 24.—The children generally have not worked more than eleven hours, but there are eighteen persons from twelve to forty-five years employed as feeders, some of whom have worked during the last few weeks sixteen hours per day.  
 A. 26.—If these eighteen persons had been prevented working more than eleven hours per day, more than one hundred and fifty persons would have been thrown out of employment.  
 A. 27.—We are working longer now than we have for three years past.  
 A. 28.—The object in working over-hours at the present time is not to reduce the cost of production, but in consequence of having a lot of fine wools which are difficult to scribble, and the quantity made must be reduced nearly half if the extra hours were not allowed.  
 A. 31.—It would be impossible to get them.  
 A. 32.—It has not; they are not to be had; they would require some time for instruction, and they might not be wanted more than a few weeks in a year.  
 A. 33.—I have not.  
 A. 36.—Occasionally half of those employed during regular hours would be out of work.  
 A. 37.—It would lessen the quantity manufactured, and throw many persons out of work.  
 A. 38.—Woollen mills do not require any particular temperature.  
 A. 39.—Stoves are used for drying wool and cloths, in which men and women go occasionally.  
 A. 41 to 45.—The fulling has been continued during the night occasionally, but no person under twenty employed.  
 A. 46.—The milling or fulling are much better if continuous.  
 A. 47.—Sometimes we find it necessary from two on Monday morning to four on Saturday afternoon.  
 A. 48.—Generally above twenty.  
 A. 50.—Oil and candles.  
 A. 51.—Window sashes.

A. 52.

- A. 52.—I have never observed any ill effects.  
 A. 53.—One hour for breakfast at eight, and one hour for dinner at one.  
 A. 54.—All.  
 A. 55 & 56.—No person is obliged to take his meals in the factory.  
 A. 57, 58, & 59.—If the children will not attend to the orders of the foreman, they are dismissed. On inquiry, I find a small cane has occasionally been used by the foreman.  
 A. 60.—Never with my knowledge or prior or subsequent sanction.  
 A. 62.—I have forbidden the use of a cane at any time, and have ordered that any child shall be dismissed who will not obey the orders of the foreman.  
 A. 64.—Never against myself or any foreman.  
 A. 65.—They do not.  
 A. 66.—Those who have been employed from infancy are much better than those taken at a later period.  
 A. 67.—I have not observed any alteration; they generally appear healthy.  
 A. 68.—No.  
 A. 69.—I suppose the Act for the regulation of cotton-mills is referred to.  
 A. 70 & 71.—Never.  
 A. 77.—If any unfair advantage were taken of the workpeople in any way, I think they would not hesitate to seek redress.  
 A. 78.—I think any other legislative provisions quite unnecessary, the present laws being sufficient for the protection of every individual.  
 A. 79.—Trade ought to be left as free as possible. The time-book proposed will occasion immense trouble and not be of the least service, as the engine must be continued day and night unless the milling is restricted as well as the other processes; it would be quite as reasonable to oblige every person who keeps a servant (domestic or not) to enter every thing they do in the course of the day, and to subject them to penalties if they allow them to do any thing before six in the morning or after seven in the evening, particularly farmers labourers during harvest.

DANIEL RAWLINGS.

Wiltshire.

Daniel Rawlings.

## ANSWERS of JOHN EDWARD DAVIS, Halt.

No. 77.

John E. Davis.

- A. 1.—Halt, Wilts.  
 A. 2.—Manufacture of fine cloth.  
 A. 3.—At different times, but cannot tell the dates.  
 A. 4.—Steam and water, both of small power; the latter in the summer months is not above one fourth.  
 A. 5.—No.  
 A. 6.—On opening windows.  
 A. 7.—At the will of the workmen in the room.  
 A. 8.—Gearing fenced off; the machines not dangerous.  
 A. 9.—No.  
 A. 10.—Nine years old; have not been previously employed.  
 A. 11.—It is more easy work for children under twelve years of age than above it, unless they are very short of their age.  
 A. 12.—No alteration.  
 A. 13.—No.  
 A. 17 & 18.—Eleven hours is regular time for all hands; that is thirteen hours, with two hours out of it for meals.  
 A. 19.—Cannot tell; it has depended on the water; when the children occasionally, indeed daily in summer, play several hours in the middle of the day, waiting to get a head of water.  
 A. 26.—Occasionally the greater part of the hands may be set at peace the following day, when a short extension of the regular hours for a few hands would prevent it.  
 A. 27.—No.  
 A. 28.—Undoubtedly it would.  
 A. 29.—It is objectionable to change hands on the same work.  
 A. 30.—It would occasion an increase in the cost of manufacturing; the amount would vary according to circumstances.  
 A. 31.—If generally adopted, a sufficient number of hands could not be obtained.  
 A. 32.—I have not worked above a moderate average, unless in short water.  
 A. 33.—No.  
 A. 37.—Disorder and drunkenness.  
 A. 38.—Not warmer than is necessary for the workmen's comfort.  
 A. 39.—The drying stoves alone are heated, at which the hands are employed, but at short periods; two or three times in a day in winter.  
 A. 40.—About half a dozen.  
 A. 41.—Cannot tell; but never all night.  
 A. 46.—The milling.  
 A. 47.—Uncertain.  
 (APP.—B.1.)

M

A. 48.

Wiltshire.

*J. E. Davis.*

A. 48.—Men.

A. 49.—It would injure the cloths to have them stopt before finished very materially.

A. 50.—By candles.

A. 51.—None.

A. 52.—No visible effect, as it rarely exceeds four hours a night; in winter, from four to eight.

A. 53.—From nine to ten and two to three, or half hours; at the option of the workmen to leave earlier at night, which is usually preferred.

A. 54.—All.

A. 57.—Immediate dismissal.

A. 58.—Very rarely, probably not twice in a year.

A. 59.—By foreman.

A. 60.—Yes.

A. 61.—Both.

A. 62.—No; as it has been only done when I did not wish to discharge the children for the sake of the parents poverty, or some like cause.

A. 64 &amp; 65.—No.

A. 66.—So much as to make it objectionable to employ persons who have not been brought up to the different branches.

A. 67.—Not aware of any alteration.

A. 68.—No process necessary to require a change of hands.

A. 69.—Not aware of any Act relative to it.

A. 70.—No.

A. 73.—The regular hours are usually the same in this neighbourhood.

JOHN EDWARD DAVIS.

No. 78.

*Counsell & Millman.*

ANSWERS of Messrs. COUNSELL &amp; MILLMAN, Kingswood.

A. 1.—Kingswood in the county of Wilts, near Wotton-under-Edge, Gloucestershire.

A. 2.—Scouring and picking wool, spinning yarn, milling or fulling, roughing or dressing, and finishing cloths.

A. 3.—An old mill for milling or fulling, &amp;c., before our recollection; a new part added about 1816 or 1817; since that time it has been used as at present.

A. 4.—Water-power only; there is more water than we use in winter, but short in summer; obliged to pen three or four hours per day; the power about twenty horse.

A. 5.—It is ventilated by the opening of windows on each side of the mill, which makes it very airy.

A. 7.—It is ventilated at the discretion of the workmen.

A. 8.—The dangerous parts are fenced off.

A. 9.—We have no particular arrangements; it is left to the discretion of the workmen.

A. 10.—We generally employ them about ten years old and upwards, some of them may have been previously employed at similar work.

A. 11.—The principal part of our work does not require children under twelve years of age.

A. 12.—We do not think there is much difference in the number of children employed under twelve years for several years past.

A. 13.—No.

A. 15.—We neither lodge nor maintain any.

A. 16.—We have no such children in our employ.

A. 17.—Eleven hours per day in summer, and less in winter.

A. 19.—Eleven hours per day for all except the milling or fulling, for which we have no regular hours.

A. 20.—We cannot tell, because we were stopped several weeks in making some alterations.

A. 23.—About nine or ten hours.

A. 24.—Eleven hours.

A. 25.—We don't know that it has been exceeded at any time, except in the milling or fulling.

A. 26.—We can avoid working more than regular hours, except in the milling or fulling.

A. 27.—No.

A. 28.—We work very regular, therefore we don't know of the difference.

A. 29.—We think any manufacturer that works more than regular hours must have extra orders to fulfil, and we cannot see any advantage for the same hands to work day and night.

A. 30.—We find no difference, as we generally work very regular.

A. 31.—If we had occasion to work day and night, we should prefer a fresh set of men and children; but if only a few extra hours, the same would be preferable.

A. 32.—We have had no occasion for trying it.

A. 34.—We can generally supply our orders by working one set of men regular hours.

A. 35.—We have no night set of hands.

A. 36.—We have no night-work except in the short days, when some of the workmen make up their regular time.

A. 37.—Our opinion is, that eleven hours per day at such work as ours is not too much for any men or children of ten or twelve years of age, and upwards.

A. 38.—We don't know exactly, but we think about the usual temperature of common buildings, according to the state of the weather, as we have no steam-engine, and we warm it in winter by common fires.

A. 39.—We require no particular degree of heat, except for scouring wool, and steaming or boiling cloths, which are done in furnaces made for the purpose, which heat is sometimes up to two hundred.

A. 40.—About three or four to put the cloths in and take them out of the furnace.

A. 41.—We don't know.

A. 42.—Six.

A. 43.—Two or three hours in winter.

A. 44.—We seldom employ more than six.

A. 45.—From dark until seven o'clock at night.

A. 46.—Some, we believe, continue the fulling or milling of cloths all night, but we do not; we leave it to the discretion of the millman himself, who, we believe, keeps it on about fourteen or fifteen hours; occasionally it may be more.

A. 47.—According to the state of the cloths, probably from fourteen to sixteen hours; but most people are of opinion that the cloths are better to be kept on until finished.

A. 48.—Millmen upwards of twenty-one years, and boys from fourteen and upwards.

A. 49.—Because the cloths are considered to be better thus milled.

A. 50.—By lamps or candles.

A. 51.—Windows and doors, if needful.

A. 52.—We are not aware of their being injurious, but we don't know any thus employed around us.

A. 53.—An hour for breakfast, and an hour for dinner, probably half an hour each meal in winter, to save day light, and leave an hour earlier.

A. 54.—Those who live near the mill go home to their meals, and the rest stay about the premises.

A. 55.—We leave it to their own discretion to go home or stay; some of them live at too great a distance to go home.

A. 56.—Some of those that live at too great a distance have no where else to take their meals without being out in the open air.

A. 57.—Remonstrance and good advice.

A. 58.—Very seldom, if ever.

A. 59.—By parents, if resorted to.

A. 60.—We believe not.

A. 62.—We have no recollection of any such case.

A. 65.—A few, but not many of our workmen live in our cottages; but we exercise no control over them, but occasionally give them advice.

A. 66.—We don't know that we have any that are particularly skilful.

A. 67.—We don't know of any material change either way.

A. 68.—We are not aware that any part of our employment is injurious.

A. 69.—We have never seen the Act.

A. 70.—No.

A. 72.—We know nothing of it.

A. 73.—We don't think they attend to any thing more than usual.

A. 74.—Not that we are aware of.

A. 75.—We don't know of any.

A. 76.—We have heard nothing of it.

A. 77.—We think not.

A. 78.—We don't know any better than our own.

A. 79.—No.

COUNSELL & MILLMAN.

#### ANSWERS of W. TANNER MERCER, Kingswood.

A. 1.—Kingswood, Wilts.

A. 2.—Manufacture of superfine cloth.

A. 3.—Employed at different times, and employed for more than twenty years.

A. 4.—Principally water; a small steam-engine has been erected about seven years ago, the water-power being very irregular and short in summer; extent of power about twenty-horse.

A. 5.—No.

A. 6.—Windows, &c.

A. 7.—At the discretion of all.

A. 8.—Yes.

A. 9.—No, but plenty of room to do what they please.

A. 10.—None under nine years. Can't tell.

A. 11.—Yes; answering the purpose of older ones.

A. 12.—Less.

A. 13.—No; I prefer paying what they earn.

(APP.—B. 1.)

W. T. Mercer.

Wiltshire.

*W. T. Mercer.*

- A. 14.—No.  
 A. 15.—Believe no orphans; parents visit them when they please.  
 A. 16.—Yes.  
 A. 17.—A few from five till eight, less two hours for meals.  
 A. 18.—From six o'clock till seven, longest; less two hours for meals.  
 A. 19.—About twelve hours.  
 A. 20.—The whole year more or less, except Sundays and holidays.  
 A. 21 & 22.—Can't tell.  
 A. 23.—I should guess eight or nine hours.  
 A. 24.—I should guess at ten hours.  
 A. 25.—None.  
 A. 26.—Not required.  
 A. 27.—No.  
 A. 28.—Generally paid by the quantity produced.  
 A. 29.—To get money.  
 A. 30.—Principally paid by the lb., pieces, or job.  
 A. 31.—None.  
 A. 32.—Can't tell.  
 A. 33.—No.  
 A. 34.—One set only.  
 A. 35.—No night-work of any consequence.  
 A. 36.—No night-work.  
 A. 37.—Regulated by times, circumstances, and water.  
 A. 38.—Does not apply to this trade.  
 A. 39.—Comfortable.  
 A. 41.—None.  
 A. 46 & 47.—Milling only of consequence.  
 A. 48.—From twenty-four to seventy-five.  
 A. 49.—When the fulling process is commenced, it is better to finish it than stop.  
 A. 50.—When lighted in the evening, by lamps.  
 A. 51.—None required.  
 A. 53.—Breakfast, dinner, and tea (say two hours).  
 A. 54.—The major part leave at meal-times.  
 A. 55.—Those that stay do it for their own convenience.  
 A. 57.—Turning them off and getting others.  
 A. 58.—No.  
 A. 65.—A few only.  
 A. 66, 67, & 68.—Only commenced business May 1831.  
 A. 77.—I should think not.  
 A. 79.—I do not see any necessity for the present inquiry, as far as regards the manufacture of superfine cloth in this neighbourhood.

WILLIAM TANNER MERCER.

No. 80.

*J. L. Phillips.*

## ANSWERS of JOHN LEDYARD PHILLIPS, Melksham and Box.

- A. 1.—All my factories are at Melksham, Wilts, excepting the fulling-mill, which is at Box, Wilts.  
 A. 2.—Manufacture of broad cloth.  
 A. 3.—Principal factory in 1801; cutting factory about 1814; spinning factory in 1831; I cannot say when the weaving factory and the fulling-mill were erected, as I am only the tenant.  
 A. 4.—Fulling by water; all the other departments by steam, excepting the spinning factory and weaving factory, which are worked by hand.  
 A. 5.—The windows open at the discretion of the workpeople.  
 A. 6.—On the opening of the windows.  
 A. 7.—By the persons employed, at their own pleasure.  
 A. 8.—All the machinery which is considered dangerous is fenced off.  
 A. 9.—No; none required.  
 A. 10.—None employed under nine years; can't say whether they have been employed previously, but believe they have generally been at the free-school.  
 A. 11.—Yes; it is requisite to employ children from nine to ten years of age, as older children could not do the work so well.  
 A. 12.—No alteration within twenty years, excepting in spinning by mules and cutting by cutters, in both of which processes some children are employed under twelve years; I have, however, only one in the cutting department under twelve years.  
 A. 13.—No.  
 A. 15.—None of the children are boarded; their friends see them at any time.  
 A. 16.—The foreman of each department of the manufactory.  
 A. 17.—Eleven hours for the day's work; occasionally they work over-time.  
 A. 18.—The same. No difference as to age. The children often work with their own parents.

A. 19.

Wiltshire.

J. L. Phillips.

A. 19.—Fulling and scouring about three nights in the week, in addition to every day; cutting for two days only from six in the morning till ten at night; usual time from six till seven. All the children excepting one are above fourteen years in this department.

A. 20.—Cannot say; the works have been fully employed, excepting Easter, Whitsuntide, Melksham Fair (the 27th July), and Christmas, when a whole day holiday is allowed.

A. 21.—Cannot say

A. 22.—All the same time, being from six till seven, with two hours allowed for meals, excepting the dressing and cutting, who work the same time without stopping for meals.

A. 23.—Cannot say, but suppose it not to be much above eleven hours per day; on Saturday the whole works stop at two o'clock.

A. 24.—On two days, as stated, A. 29, one department worked from six till ten; the large body of children employed in scribbling, carding, and piecing from six till seven, with two hours for meals.

A. 25.—When, from any circumstance, less work has been done in any one department, it has of necessity accumulated in the others, and then has been made up by working extra hours in that department.

A. 26.—Unavoidable, from floods and short water in the fulling-mill causing at times an accumulation of work for dressing and cutting, which, if not got up, would occasion great loss. The larger number of children who are employed in scribbling, carding, and piecing, seldom exceed their usual hours (eleven) throughout the year.

A. 27.—Not of late years.

A. 29.—Not done.

A. 30.—If the limit be less than eleven hours actual work, the cost would be considerably increased.

A. 31.—No objection.

A. 32.—The extra hours have been so few that it has not been required.

A. 33.—Don't work at night except in fulling.

A. 36.—None.

A. 37.—Any thing below eleven hours actual work would be highly injurious to the master, and at the same time a considerable loss to those employed.

A. 38.—The temperature is regulated by the workmen, as no particular degree is required for the work.

A. 39.—Just sufficient to keep the oil in a liquid state.

A. 41.—Not once.

A. 46.—Fulling; it is also highly beneficial in the dressing department.

A. 47.—From the commencement of fulling till the cloth is finished, which varies according to the substance from thirty to forty or sixty hours; in the dressing thirteen hours would be sufficient.

A. 48.—In fulling, men and boys from sixteen to twenty; in dressing, men and boys from fifteen to twenty.

A. 49.—In fulling the felting principle is lost if the cloth is suffered to get cold, which cannot be recovered without loss of length and soap; dressing the same in principle, but to a less degree.

A. 50, 51, & 52.—In fulling the workmen sleep for an hour or two at a time when working by night while the mills are going; they are as healthy as possible; they use candles. In the other departments gas is used morning and evening, when required.

A. 53.—From nine to ten for breakfast; two to three for dinner.

A. 54.—All excepting the dressing and cutting departments, who also go home for meals when not working extra hours.

A. 55.—Convenience of both.

A. 56.—The dressers and cutters would earn less money, and occasionally subject the trade to great inconvenience, by not getting up an arrear of work.

A. 57.—Punishment seldom required; chiefly regulated by small fines, all of which go to the workmen's benefit club.

A. 58.—It has occasionally on younger boys, when the infliction of fines has not been found to answer.

A. 59.—By foremen.

A. 60.—Yes.

A. 61.—Both.

A. 62.—No.

A. 63.—Verbal instructions to the foreman not to punish severely, as I preferred discharging the delinquent.

A. 64 & 65.—No.

A. 66.—It is essential that children should be initiated early, say from nine to ten years. Most of my men have been with me from that age, or have been employed in the same manufacture elsewhere.

A. 67.—Much the same; always healthy.

A. 68.—No, not required.

A. 69.—No.

A. 79.—I think the hours of work should be generally from six till seven, one hour being allowed for breakfast, and one hour for dinner, and that the dressing and finishing departments

Wiltshire

*J. L. Phillips.*

ments should be without restrictions of hours for all persons above seventeen years of age. The dressing is exceedingly light work, the heavy work being done by machinery. Many of the men and boys sit half their time while the gig-mill is going on.

JOHN LEDYARD PHILLIPS.

No. 81.

*John Clark.*

## ANSWERS of JOHN CLARK, Trowbridge.

- A. 1.—Trowbridge, Wiltshire.  
 A. 2.—Woollen manufacture.  
 A. 3.—At four different periods, but do not know the date of the erections, except the last addition, which was about seven years ago.  
 A. 4.—Steam.  
 A. 5.—Windows.  
 A. 6.—Opening windows.  
 A. 7.—At the option of the persons employed within the different rooms.  
 A. 8.—All are fenced off as securely as possible.  
 A. 9.—No.  
 A. 10.—We have none under nine years of age. It is not usual to notice their previous occupation, and we have not done it.  
 A. 11.—Part of it does, the light work being so easy.  
 A. 12 & 13.—No.  
 A. 14.—None employed.  
 A. 15.—This relates to apprentices.  
 A. 16.—We have no apprentices.  
 A. 17.—Some twelve and some fourteen hours a day, and on Saturday some four and some nine hours.  
 A. 18.—Twelve hours under fourteen years, and thirteen for some above fourteen years.  
 A. 19.—Not keeping any account, we cannot speak to any one day, but not more than fifteen.  
 A. 20 & 21.—We have never kept any account.  
 A. 22.—All our works are regular.  
 A. 23.—Kept no account.  
 A. 24.—Fifteen hours to a few above fourteen years of age.  
 A. 25.—On account of particular orders for goods.  
 A. 26.—We should lose the sale of the goods if not in the market by the time required.  
 A. 27.—Not for some years.  
 A. 28.—Certainly it is.  
 A. 29.—Less expence; we do not work all night.  
 A. 30.—Very great indeed in the dressing and fulling of cloths; it would be impossible to full some kind of cloths to be saleable with frequent stopping.  
 A. 31.—The work would be done uneven.  
 A. 32.—We have not tried it.  
 A. 33.—Do not work at night.  
 A. 34.—The same set of hands being on the same work do it more regular.  
 A. 35.—We do not work by night.  
 A. 36.—Not working by night, does not apply to us.  
 A. 37.—Would increase the cost of making.  
 A. 38.—The woollen trade does not require more than a temperate heat.  
 A. 39.—Summer heat.  
 A. 40.—Eight or twelve men for two periods of the day, an hour each time.  
 A. 41 to 45.—Do not work by night.  
 A. 46.—The fulling; but which process we do not do ourselves.  
 A. 47.—Some cloths will require one hundred and twenty hours.  
 A. 48.—Men. These all apply to fulling.  
 A. 49.—The cloth felts only whilst it is kept warm in working; this applies to fulling.  
 A. 50.—By gas when light is required.  
 A. 51.—Do not work by night.  
 A. 52.—Do not employ any at night.  
 A. 53.—Two.  
 A. 54.—The greater part.  
 A. 55.—Mutual.  
 A. 56.—Of little consequence.  
 A. 57.—Small fines, and a small stick.  
 A. 58.—Very little and slightly.  
 A. 59.—By the men under whom they work.  
 A. 60.—Slight ones.  
 A. 61.—Yes.  
 A. 62.—Not unless severe.  
 A. 63.—No written instructions, merely telling them to see the children do the work well.  
 A. 64.—No.

A. 65.

- A. 65.—No; they live where they like.  
 A. 66.—Those employed young are much preferable.  
 A. 67.—Equally healthy.  
 A. 68.—We have no injurious process to require it.  
 A. 69.—We know of no act for the woollen trade.  
 A. 77.—Certainly not.  
 A. 78.—We think any provisions unnecessary.  
 A. 79.—No.

Wiltshire,  
John Clark.

JOHN CLARK.

ANSWERS of EDWARD COOPER for Cooper, Brothers, & Co. (Referred to in the deposition of Mr. EDWARD COOPER, Trowbridge, 3d June 1833.)

No. 8  
Edward Cooper.

- A. 1.—Staverton, in the county of Wilts.  
 A. 2.—Manufacturing of woollen-cloth in all its branches, except weaving.  
 A. 3.—At various times since the year 1800 inclusive; we cannot say the precise dates.  
 A. 4.—Water and steam; water irregular, sometimes too little, at others too much.  
 A. 5.—None, because it is not required.  
 A. 6.—By opening windows.  
 A. 7.—At the discretion of any and all.  
 A. 8.—Whatever is considered dangerous is properly secured.  
 A. 9.—None are considered necessary for such purposes.  
 A. 10.—The lowest average age is about ten or eleven years; there may be two or three at nine, but certainly none under. We know nothing of their previous employments.  
 A. 11.—We do not think a sufficient number of children could be generally obtained without having recourse to those under twelve years, otherwise it would not be necessary.  
 A. 12.—No recent alterations of machinery have altered the nature of the employment of children, as regards their ages, in our work.  
 A. 13.—No.  
 A. 15.—We do not lodge or maintain any children or other persons; all reside at their own proper dwellings.  
 A. 17.—The usual number of working hours are eleven; in some instances variation may take place.  
 A. 18.—The children work as a matter of course the same time as others, because the work of the one depends on the other. This question cannot be answered more specifically because we have not the means of doing it.  
 A. 19.—The fulling is never stopped until Saturday afternoon, if it can be avoided.  
 A. 20.—We really cannot answer such a question: we wish to work every working day, except at three periods when holidays are given, Christmas, and at two fairs in the neighbourhood.  
 A. 21.—It is not in our power to answer.  
 A. 24.—We are not aware that any children have been employed more than eleven hours; and during the winter, only from sunrise to dark, except in particular cases as stated below.  
 A. 25.—Occasionally; in consequence of the machinery having been prevented working by floods or accidents.  
 A. 26.—Not avoidable, from the causes named above.  
 A. 27.—Our working is always as regular as we can keep it.  
 A. 28.—The welfare of every person employed in every branch of the business, both at home and out, depends on the utmost regularity in each department. The above is the only reply we can make to this.  
 A. 29.—It never has been required by us to keep any of our works employed through the night excepting the fulling and dressing.  
 A. 30.—If hours are unnecessarily limited for work, the cost must be greater, or wages reduced.  
 A. 31.—The only branches where we require extra hours are in the dressing and fulling departments, and we adopt the plan of fresh hands to relieve in turn, and no very young persons are employed, and about fourteen may be required.  
 A. 33.—In the dressing we employ two sets, one begins early, and leaves work at mid-day, when the others commence. The actual working hours are about nine for each set.  
 A. 36.—All would be utter confusion, and a great part of the business must be stopped, if we could not dress our cloths at any time which may be required. Some cloths require forty hours dressing, others only six or eight.  
 A. 38.—We never wish it to be higher than fifty-two or fifty-four.  
 A. 39.—We have no particular heat required where children are employed.  
 A. 46.—Milling.  
 A. 47.—Monday morning to Saturday, if possible.  
 A. 48.—From seventeen upwards.  
 A. 49.—Because our cloths would be much injured.  
 A. 50.—Oil-lamps where required.  
 A. 51.—No particular provisions necessary.  
 A. 52.—We are not aware of any particular effects produced by the mode of working adopted by us.

Wiltshire.

Edward Cooper.

- A. 53.—Some half an hour others an hour.  
 A. 54.—Nearly all.  
 A. 55.—Some remain on the premises, because it is most convenient to themselves.  
 A. 56.—There is no restriction as to where the meals are taken.  
 A. 58 & 59.—There are no particular corporal punishments used or necessary; a small hazel stick may occasionally be used.  
 A. 63, 64, & 65.—No.  
 A. 66.—We know of none who have not always been accustomed to some branch of the work.  
 A. 67.—With thirty-two years experience, we have never known any particular complaints or disease among the workpeople more than falls to the lot of human nature generally; see the general increase of population in manufacturing districts.  
 A. 68.—Yes.  
 A. 69, 70, & 71.—No.  
 A. 79.—We have about five hundred persons employed in the villages in our neighbourhood, who are wholly dependent on the regularity with which the works in the manufactory are conducted; if, therefore, great restrictions are laid on those branches in which children are employed, they must all suffer a great inconvenience and loss of work. From all the experience we have had of the woollen trade, we do not consider eleven hours work (it being of a light nature) has ever caused any injury to the health of young persons employed by us, and we see no objection to that restriction, as also to the employment of children under ten years of age; nor is there any objection to restricting the night-work altogether, with the exception of the dressing and fulling branches; it is absolutely necessary these be permitted, but a clause to prevent persons under sixteen years of age being employed by night in these may be introduced. As to the penal-clauses proposed in the Bill, we hope in this enlightened age none such will be permitted to disgrace the statute book, and that the first reformed parliament will not pass a bill so harsh and arbitrary.

EDWARD COOPER.

No. 83.

James Edgell.

## ANSWERS of JAMES EDGELL, Trowbridge, Wiltshire.

- A. 1.—Trowbridge.  
 A. 2.—Scribbling, carding, sloobing wool, braying, dressing, and shearing cloth.  
 A. 3.—1812, 1815; 1818 back part.  
 A. 4.—Steam-engine, twenty horse.  
 A. 5.—Windows to open, at their own discretion.  
 A. 7.—As they like.  
 A. 8.—Yes.  
 A. 9.—No; some of them wash and clean themselves, and others go home and do as they like.  
 A. 10.—Now and then one has come with its parent to learn at six years of age, but not generally before eight.  
 A. 11.—Some of our work certainly is more adapted for children than for grown people, as they would be obliged to stoop to it, and the children do it standing upright.  
 A. 12.—No alteration lately to make it more or less.  
 A. 13.—No.  
 A. 14.—None.  
 A. 15.—Not lodged or maintained. Parents or guardians visit as they like.  
 A. 16.—Some of the children under the controul of sloobers, and some under a foreman.  
 A. 17.—Eleven hours, sometimes twelve, and occasionally thirteen, and sometimes six, seven, eight, nine, and ten, and sometimes not at all; eight hours on Saturday.  
 A. 19.—Fourteen hours.  
 A. 20.—Three hundred and three days.  
 A. 23.—General time of working is from six in the morning to seven at night.  
 A. 24.—Fourteen hours.  
 A. 25.—According to the trade, when any particular goods may be wanted to a specified time.  
 A. 26.—I do not consider any excess of time has been made use of; as formerly, before there was any machinery, and the greater part of the work was done by manual labour, they worked from one in the morning till seven at night; now many of them have only to watch the machinery, to set it going and stop it; hardly any manual labour.  
 A. 27.—Some years back occasionally, for a short time, from five in the morning till eight at night.  
 A. 28.—But little difference, but of course the more any thing is worked the more it ought to pay.  
 A. 29.—To save the expence, I suppose, of erecting more machinery; which I should not do if I wanted, as I do not like night-work; working by day ought to be quite enough.  
 A. 30.—I pay according to the hours they work, therefore no difference to the workpeople, but stopping in the day would make a difference in expence of raising steam, and an injury to some of the processes.

A. 31.

A. 31.—Two people seldom do their work exactly alike, which is of consequence in some things, and but very little in other things.

A. 32.—No occasion.

A. 33.—No.

A. 34.—Two sets of people would not be so well in some parts of the work, as they would not work exactly alike.

A. 35.—No night-work; never did work by night, nor any intention of doing so.

A. 36.—I do not want to work by night, excepting after eight or nine o'clock.

A. 37.—Limiting our time of working might be attended with great inconvenience, as if we get a foreign order to a given time, and should not be able to accomplish it, the goods might not be saleable for home consumption, and be a great loss.

A. 38.—Common atmospherical air; we only heat it at winter to make it comfortable.

A. 39.—No heat required excepting for drying, which is in a separate apartment.

A. 40.—Eight or ten hands go in the winter at different times to put up and take down, at which times they open the windows as they like, as well as the ventilators.

A. 41.—Not at all.

A. 46.—The milling cannot be done well without being kept on at night as well as day, which is not laborious only to watch, and which I believe they have different sets by night to watch it, none of it done on my premises being put out to a water-mill.

A. 47.—From the time it is begun until it is finished.

A. 48.—Men at different ages.

A. 49.—Stopping of it would require a great time to get it into the state again it was when stopped, and injure it.

A. 50.—By candle.

A. 51.—Doors and windows.

A. 52.—No night-work; our people are all very healthy.

A. 53.—Some of them take their meal-hours, and some of them take their meals and watch their work at the same time, and help one another.

A. 54.—Some do and some do not, as they like, and some cannot leave.

A. 55.—For the convenience of both and all, as most of them work at piece-work or by the hour.

A. 56.—Some of the work, such as braying and scouring, would not be so well to be stopped just in the midst of working; it would check it, and would not be so well for it.

A. 57.—Turn them off.

A. 58.—No.

A. 62.—Forbidden, but turn them off.

A. 63 & 64.—None.

A. 65.—No.

A. 66.—Depends on the genius; they have all been taken young.

A. 67.—Always healthy, excepting a fever which was in the town generally about thirty years ago.

A. 68.—No.

A. 69.—I know not what the present Act is.

A. 78.—I know of no disobedience to any reasonable law, but I should not like to be sent to prison for any misfortune that might happen; and if the manufacturer is to be restricted too much, it will go into other countries, and the land of this country will then be worth but little.

A. 79.—No further than the people used to work more formerly at manual labour and more hours than they now stand or sit and watch it, a great many of them, the laborious part being taken off. Mr. Pitt always encouraged trade, which was the life of the country; without it we shall be no better than other countries.

JAMES EDGELL.

#### ANSWERS of WILLIAM EDGELL, Trowbridge.

A. 1.—Trowbridge, Wilts.

A. 2.—Scribbling, sloobing, braying, scouring, and dressing cloth.

A. 3.—At different times; I do not know when.

A. 4.—Steam-engine, twenty horse power.

A. 5.—They open the windows when they think proper, which has the desired effect.

A. 7.—It is left to the men who work in the factory.

A. 8.—Yes.

A. 9.—No arrangement made for cleaning; if any of them choose to do so, they can; some of them do; they have plenty of water if they will use it.

A. 10.—Seven or eight years of age; scarcely any are employed under eight.

A. 11.—Yes; they are equal to some kinds of work at seven or eight years of age, and when they grow older, they find some other employment.

A. 12.—We have no recent alterations to interfere with the children's work.

A. 13.—No.

A. 14.—None.

(APP.—B. 1.)

N

A. 15.

Wiltshire.

Jame Edgell.

No. 84.

William Edgell.

Wiltshire.

William Edgell.

A. 15.—I only employ them ; they are lodged by their parents and friends ; I employ one orphan, who takes his earnings to an elder brother, who provides for him.

A. 16.—Their parents see them as often as they wish to do ; when in the factory, they are under the care of the sloober.

A. 17.—Twelve or fourteen ; it depends on the quantity of work they may have to do.

A. 18.—The usual time of working is eleven hours ; sometimes twelve or thirteen, and sometimes only six or seven ; not more than eight on Saturdays.

A. 19.—Fourteen hours.

A. 20.—Three hundred and three days.

A. 21.—I cannot tell correctly.

A. 22.—The machines and workpeople are kept to work as stated above in A. 17 & 18.

A. 23.—The usual time is from six o'clock in the morning till seven in the evening ; from six in the morning till two in the afternoon on Saturdays.

A. 24.—Fourteen hours.

A. 25.—When we have goods under hand which are wanted in the market, sometimes for shipping, &c.

A. 26.—In some cases it is unavoidable, as the sale of goods in some cases would be lost ; consequently a considerable loss would be occasioned to the manufacturer, and the labouring class must suffer by losing part of the employment which would be found for them.

A. 27.—It has not been worked more than fourteen hours per day.

A. 28.—Have made no alteration.

A. 29.—For the time they are employed one set of hands is considered best, in order that there may be no difference in the manner of sloobing, so as to cause a difference in the size of the yarn, &c. ; scarcely any two men can do their work exactly alike.

A. 30.—There would be a great disadvantage from being limited to ten or twelve hours per day, as sometimes for a month or two we have work to employ them fully ; and if limited, factories much require to be enlarged, and more machines erected, and sometimes we have not work to employ those already in use.

A. 31.—The earnings of the children, if divided between two sets, would not be worth their attention ; and there would be a disadvantage in having a fresh set of persons to finish work which others had begun.

A. 32.—No ; not considered necessary for the time we work.

A. 33.—No.

A. 34.—Do not.

A. 35.—Do not work through the night.

A. 36.—No disadvantage to me, but in some factories where the proces of milling is carried on the injury would be very great ; see A. 49 ; do not wish to employ them after eight or nine.

A. 8.—The factory is heated in the winter with steam-pipes, so as to make it comfortable for the children and persons employed ; nothing further is required.

A. 39.—In the factory only moderate ; but in the stove the heat is more, for drying wool, cloth, &c.

A. 40.—Sometimes two and sometimes eight for two or three hours per day only.

A. 41.—Not at all.

A. 42.—None.

A. 43.—None after eight o'clock.

A. 44.—None.

A. 45.—Not after eight o'clock.

A. 46.—The process of milling cloth sometimes takes forty-eight hours, more or less ; braying and scouring require to be kept on.

A. 47.—When the above process is begun, it is better to keep it on until finished.

A. 48.—Men of any age.

A. 49.—Because the heat in this process is only produced by friction, and if allowed to get cold it takes a considerable time to get it where it was left off, besides the waste occasioned in that time.

A. 50.—By candles when requisite.

A. 51.—None.

A. 52.—None employed.

A. 53.—Those who are paid by the quantity or piece take their own time, and those who are paid by the hour have their food brought to them, and they assist each other if required while at their meals.

A. 54.—Some do who are paid by the piece ; others, who are paid by the time they work, do not.

A. 55.—The process of braying and scouring will not allow of persons so employed to leave.

A. 56.—The work, as before described, would in many instances be much injured ; and many of the persons employed, if allowed to leave, would not be back by a given time.

A. 57.—Common correction by a stick.

A. 59.—By the sloober.

A. 62.—If a slight correction has not the desired effect they are turned off, and other children taken in their places.

A. 63.—None.

A. 64.—No.

A. 66.—Those employed young generally make the best workmen.

A. 67.

- A. 67.—I know no difference.  
 A. 68.—I do not know any injurious process in our factory.  
 A. 69.—I do not know what the Act is.  
 A. 79.—I should consider the Bill (if passed) a very serious injury to the trade generally.

Wiltshire.

William Edgell.

WILLIAM EDGELL.

## ANSWERS of JOHN OBAN, Trowbridge.

No. 85.

John Oban.

- A. 1.—Trowbridge, Wilts.  
 A. 2.—Braying, milling, and dyeing.  
 A. 3.—Fourteen years.  
 A. 4.—Steam, ten horse power.  
 A. 5.—No occasion for it.  
 A. 7.—By all.  
 A. 8.—Yes.  
 A. 9.—No need of it.  
 A. 10.—Twelve years of age.  
 A. 11.—No.  
 A. 12.—Less.  
 A. 13.—No.  
 A. 17 & 18.—Eleven hours.  
 A. 19.—Thirteen hours.  
 A. 20.—Three hundred days.  
 A. 21.—Three thousand three hundred hours.  
 A. 22.—Altogether.  
 A. 23.—Eleven hours.  
 A. 24.—Thirteen hours.  
 A. 25.—Owing to the breaking of some part of machinery.  
 A. 26.—No.  
 A. 27.—Yes.  
 A. 28.—No.  
 A. 29.—If the factory works extra hours, children and adults receive extra wages.  
 A. 30.—No.  
 A. 31.—I know of no objection.  
 A. 32.—No need.  
 A. 37.—More machines required, and more hands wanted.  
 A. 38 & 39.—Natural.  
 A. 40.—Nine.  
 A. 41 to 49.—None.  
 A. 50.—By candle.  
 A. 51.—Windows.  
 A. 52.—Ill health.  
 A. 53.—From nine till ten; two till three.  
 A. 54.—If they choose.  
 A. 55.—For their own convenience.  
 A. 56.—Cannot see any.  
 A. 57.—No children.  
 A. 58.—No.  
 A. 66.—Better acquainted with the nature of the work.  
 A. 67.—Improved.  
 A. 68.—No.  
 A. 69.—Yes.  
 A. 70 & 71.—No.  
 A. 73.—Yes.

JOHN OBAN.

## ANSWERS of Messrs. CLARK &amp; PERKINS, Trowbridge.

No. 86.

Messrs.  
Clark & Perkins.

- A. 1.—Trowbridge in Wiltshire.  
 A. 2.—Scribbling, carding, slubbing, spinning, and dressing woollen goods.  
 A. 3.—Built in 1815.  
 A. 4.—A six horse power steam-engine.  
 A. 5 & 6.—Casements, windows, and ventilators in the upper ceiling.  
 A. 7.—By any of the work-persons.  
 A. 8.—Yes, all that are considered to be dangerous.  
 A. 9.—No.  
 A. 10.—Seven years of age, and not previously employed.

(APP.—B. 1.)

N 2

A. 11.

Wiltshire.

Messrs.

Clark &amp; Perkins.

A. 11.—Yes, because those under twelve can do it, and those above twelve are employed in other work.

A. 12.—Our machinery has undergone no recent alteration.

A. 13 & 14.—No.

A. 15.—We lodge no children.

A. 17, 18, & 19.—Twelve.

A. 20.—About three hundred.

A. 21.—About three thousand four hundred.

A. 22.—Generally all work at the same time.

A. 23.—Eleven.

A. 24.—Twelve.

A. 25.—Not at all.

A. 26.—Does not refer to us.

A. 27.—Yes.

A. 28.—Not materially.

A. 29.—Because a change of hands on the same piece of work would be injurious.

A. 30.—In all branches, by an increase of buildings and machinery.

A. 31.—Additional expence.

A. 32.—The extra hours were not sufficient to induce us to try a change of hands.

A. 33.—No night-set; a watchman only employed by night.

A. 34.—We do not conceive it to be our interest to work more than one set of hands.

A. 38.—Our building is warmed in the winter by steam pipes, at the discretion of the workpeople, for their comfort.

A. 39.—Sufficient only to keep the oil liquid.

A. 40.—No hands in extreme temperature.

A. 41.—Not at all.

A. 50.—By candles and lamps morning and evening.

A. 51 & 52.—We do not work by night.

A. 53 & 54.—One hour for breakfast, and one hour for dinner, to all except those employed in scribbling and gig-dressing.

A. 55.—Both.

A. 56.—Less work would be performed; consequently the manufacture would require more machines, and the work-persons earn less wages.

A. 57.—They are beaten with a small stick.

A. 58.—On children.

A. 59.—By the man who works at the same machine with them.

A. 60.—Yes.

A. 61.—Both.

A. 62.—No.

A. 63.—No instructions given.

A. 64.—No complaint ever made against us or our men.

A. 65.—Our workpeople do not live in our houses.

A. 66.—Children are not employed on the same kind of work that grown persons are.

A. 67.—No change in the last ten years.

A. 68.—No; we are not aware of any injurious effects.

A. 69.—We know of no Act relating to woollen-mills.

MESSRS. CLARK & PERKINS.

No. 87.

Samuel Pitman.

## ANSWERS of SAMUEL PITMAN, Trowbridge.

A. 1.—Trowbridge, Wilts.

A. 2.—Kersey Mere.

A. 3.—Factory built about 1795, for the same purpose as used now.

A. 4.—Horse-wheel till 1812; from that time steam-engine of eight horse power.

A. 5.—No.

A. 6.—Opening of windows.

A. 7.—At the discretion of all.

A. 8.—All fenced off with board.

A. 9.—None.

A. 10.—Eight years.

A. 11.—Yes, at ten; because if not employed till twelve, it would be necessary to remove them in about two years, being unqualified by size for the former.

A. 12 & 13.—No.

A. 17.—Eight hours only the last six months.

A. 18.—They all work the same time (eight hours).

A. 19.—Twelve hours.

A. 20.—Two hundred and ninety-nine days.

A. 21.—Two thousand eight hundred and one hours.

A. 22.—The different departments are carried on at the same time.

A. 23.—Ten hours on five days, and six hours on Saturday.

- A. 24.—Twelve hours.  
 A. 25.—When the days were long.  
 A. 26.—Ten hours is quite sufficient for any man, woman, or child to work in a factory.  
 A. 27.—Never more than thirteen hours.  
 A. 28.—Not in the least.  
 A. 29.—Covetousness, in not getting machinery sufficient.  
 A. 30.—No increase of cost.  
 A. 31.—There could be no objection.  
 A. 32.—Relays are unnecessary; the number of hours they are employed renders it uncalled for.  
 A. 33.—No night-work.  
 A. 37.—It is necessary to work ten hours a day that the people may earn comfortable wages.  
 A. 38.—Usual temperature 60°, lowest temperature °.  
 A. 39.—Rack-stove, 100°.  
 A. 40.—Two persons, one hour a day each.  
 A. 41.—Not any.  
 A. 50.—No night-work for the last two years; when there was, candles were used.  
 A. 53.—One hour for dinner only.  
 A. 54.—All leave.  
 A. 57.—A small stick.  
 A. 58.—Yes, on children.  
 A. 59.—By the master.  
 A. 60 & 61.—Yes.  
 A. 63.—All complaints to be made to the master.  
 A. 64.—None.  
 A. 65.—No.  
 A. 66.—Those who are employed from youth upwards are more expert workmen than those who commenced in matured years.  
 A. 67.—I see no alteration.  
 A. 68.—No.  
 A. 69.—Yes.  
 A. 70 & 71.—No.  
 A. 73.—I believe they do.  
 A. 74 & 75.—No.  
 A. 77.—I think they would.  
 A. 79.—Except where fulling-stocks are used, the hours of woollen manufactories may be confined to ten or twelve per day without any detriment to the master.

4th May 1833.

SAMUEL PITMAN.

Wiltshire.

Samuel Pitman.

## ANSWERS of SAMUEL SALTER, Trowbridge.

- A. 1.—Trowbridge, Wilts; clothing manufactory of kerseymeres.  
 A. 2.—Scribbling, carding, gigging, cutting, and brushing.  
 A. 3.—Rented of Mrs. Webber.  
 A. 4.—Steam, thirty horse power, and water irregular; about three fourths part of time in work, from six to eight.  
 A. 5 & 6.—By opening the windows; all made to work on hinges.  
 A. 7.—Discretion of all the men in the factory.  
 A. 8.—All are properly fenced off.  
 A. 9.—Warm water at the steam, and cold water at the mill.  
 A. 10.—Generally about eight, not younger.  
 A. 11.—Children from nine to ten will do better than older in the part we call joining.  
 A. 12.—No.  
 A. 13.—None.  
 A. 15.—Not lodge nor maintain; any parents may visit as often as they please.  
 A. 16.—None.  
 A. 17.—From twelve to fourteen.  
 A. 18.—Some twelve, some fourteen; different works have different periods.  
 A. 19.—Not exceeding fourteen hours.  
 A. 20.—No account kept.  
 A. 22.—Always work together.  
 A. 23.—Twelve hours.  
 A. 24.—Fourteen hours.  
 A. 25.—Spring season, when a great demand for goods.  
 A. 26.—Necessary in spring, and when foreign orders are to be executed in haste for shipping.  
 A. 27.—Only occasional, when orders for shipping requires it.  
 A. 29.—Never had any night-work.

(APP.—B. 1.)

N 3

A. 32.

No. 88.

Samuel Salter.

Wiltshire.

Samuel Salter.

- A. 32.—Never had any occasion to work by this method.  
 A. 34.—Do not conceive it would be to the interest of manufacturers; have found night-work never do well.  
 A. 36.—Much better done.  
 A. 37.—Never be able to keep the children together, and introduce bad habits.  
 A. 38.—Proper stoves provided in the winter, and the windows open in summer.  
 A. 39.—No extra heat but in the steam-room.  
 A. 40.—Three.  
 A. 49.—None employed.  
 A. 50.—By gas and candles.  
 A. 53.—Sloobers, feeders to carders and joiners, two hours per day; gig-boys, and feeders to scribblers, cutters, &c., have their food brought to them from their dwellings.  
 A. 54.—Between forty and fifty.  
 A. 55.—For the convenience of both, to enable them to make better wages.  
 A. 56.—They would be obliged to rise earlier and work later to have same wages.  
 A. 57.—Discharge them.  
 A. 58.—Not allowed. For bad behaviour and negligence discharged.  
 A. 62.—The dread of being discharged for negligence, &c., is sufficient amongst my people.  
 A. 63.—Never to use large sticks or large straps.  
 A. 64.—None.  
 A. 65.—Only one.  
 A. 66.—There is no comparison in my trade in workmen bred to my system and those taken in casually; it takes two months in general to instruct and make them perfect.  
 A. 67.—Have been very healthy.  
 A. 68.—No part of my business I ever found unhealthy.  
 A. 69.—I cannot tell.  
 A. 78.—I require no penalties in conducting my business; have been forty years in it, and my people have behaved well.  
 A. 79.—No.

SAMUEL SALTER.

No. 89.

Messrs. Stancomb  
& Wilkins.

## ANSWERS of Messrs. STANCOMB &amp; WILKINS, Trowbridge.

- A. 1.—Trowbridge, Wilts.  
 A. 2.—Kerseymere manufactory.  
 A. 3.—Cannot say at what time the manufactory was erected, but was purchased by us in 1827.  
 A. 4.—Six horse steam-engine.  
 A. 5.—None in particular.  
 A. 6.—Opening of windows.  
 A. 7.—Discretion of all.  
 A. 8.—Yes.  
 A. 9.—No.  
 A. 10.—Eight years.  
 A. 11.—Not absolutely.  
 A. 12.—Not any difference.  
 A. 13.—No.  
 A. 15.—Not any orphans in our employ.  
 A. 17 & 18.—Thirteen hours.  
 A. 19.—Fourteen hours.  
 A. 20.—Three hundred and ten.  
 A. 21.—Three thousand seven hundred and seventy.  
 A. 22.—Quite impossible to answer, as no account has ever been kept.  
 A. 23.—Twelve hours.  
 A. 24.—Fourteen hours.  
 A. 25.—For about ten days after Easter, Whitsuntide, Trowbridge Fair, and Christmas.  
 A. 26.—It is avoidable, but done by the wish of the workpeople.  
 A. 27.—No.  
 A. 29.—Do not work by night.  
 A. 30.—Our time for work has never varied.  
 A. 31.—Never require fresh sets.  
 A. 33.—No, do not work at all by night.  
 A. 37.—As we do not work over-time, it would be to the injury of the workpeople.  
 A. 38.—From seventy to seventy-five in the heat of summer, about forty in the winter.  
 A. 39.—Not any particular degree of heat.  
 A. 40.—None.  
 A. 53.—From nine to ten; two to three.  
 A. 54.—Cannot say how many exactly, but by far the greater part.  
 A. 55.—For mutual convenience.  
 A. 56.—Lessening their earnings.  
 A. 57.—Small stick occasionally.

A. 58.

- A. 58.—Yes, as stated above.  
 A. 59.—By overlookers.  
 A. 60.—Yes.  
 A. 61.—Prior.  
 A. 62.—No, never having had any notice given of their infliction.  
 A. 63.—Only verbally, and then only when any unruly.  
 A. 64.—No.  
 A. 65.—Very few, over whom we have no control, independent of the work.  
 A. 66.—Not any.  
 A. 67.—Not any difference perceived.  
 A. 68.—No such change-set being required.  
 A. 73.—We do not know any thing of any other mills.  
 A. 74.—Cannot say, but do not know of any.  
 A. 77.—Cannot say, as none of them have ever been called upon.  
 A. 78.—Not any.

STANCOMB &amp; WILKINS.

Wiltshire.

Messrs. Stancomb  
& Wilkins.

## ANSWERS of JAMES STANCOMB, Trowbridge.

No. 90.

James Stancomb.

- A. 1.—Trowbridge, Wilts.  
 A. 2.—Scribbling, carding, and slubbing.  
 A. 3.—Employed for its present purpose, December 1829.  
 A. 4.—Six horse steam-power.  
 A. 5.—Yes.  
 A. 6.—Opening of windows.  
 A. 7.—At the discretion of all.  
 A. 8.—Fenced off.  
 A. 9.—They change their clothes at home; they are generally clean; there is every arrangement made for their health.  
 A. 10.—From seven years and a half to ten; almost all ages.  
 A. 11.—The roller-joiners are required before they are twelve; the employment is easy.  
 A. 12.—A greater proportion.  
 A. 13 & 14.—No.  
 A. 15.—None of them. Every day; sometimes more if they choose.  
 A. 16.—No.  
 A. 17.—Generally ten.  
 A. 18.—Ten hours, from eight to fourteen years of age.  
 A. 19.—Twelve hours.  
 A. 21.—About four hundred and eight hours.  
 A. 22.—Generally all work together, and stop the same.  
 A. 23.—Eight hours.  
 A. 24.—About twelve hours.  
 A. 25.—More work at that time.  
 A. 26.—I don't see they are avoidable, the trade not being regular.  
 A. 27.—Yes, in the years 1824, 1825, 1826.  
 A. 28.—Not in the least.  
 A. 29.—There is work for adults and for children; if the factory work extra hours the adults and children require extra wages.  
 A. 30.—No.  
 A. 31.—I know of no objection.  
 A. 32.—Yes, they have been tried; I have found it answer very well; each change has had twelve hours work.  
 A. 33.—The first set go to work at five in the morning, and work till seven at night; the second set take on at seven, and work till five in the next morning.  
 A. 34.—I see no interest in working one set of hands; because they have the same wages as both.  
 A. 35.—I have always left it to their own choice; they have always more wages for working by night than by day.  
 A. 36.—I see none.  
 A. 37.—If they are to work less hours there must be more machines, and of course more hands.  
 A. 38.—The same; I cannot say; there appears no difference in temperature.  
 A. 39.—If it is warm enough for the workpeople, that is all that is required.  
 A. 41.—Not once.  
 A. 42.—None of them.  
 A. 43.—None.  
 A. 48.—From eight to forty or fifty.  
 A. 49.—None.  
 A. 50.—By candles.  
 A. 51.—The window.

(APP.—B. 1.)

N 4

A. 52.

Wiltshire.

James Stancomb.

- A. 52.—I believe night-work to be very injurious to the health of any person.  
 A. 53.—One hour for breakfast, and one hour for dinner.  
 A. 54.—All, if they choose.  
 A. 55.—Some prefer staying.  
 A. 56.—I see none.  
 A. 57.—They generally obey without force.  
 A. 58.—Sometimes by a small stick or cane.  
 A. 59.—Sometimes by the person that overlooks them, and sometimes by their parents.  
 A. 61.—Yes.  
 A. 62.—Generally inquire what it is for; endeavour to avoid punishment as much as possible.  
 A. 63.—If children require to be punished, and won't work without it, I give orders to tell their parents of it; if that won't do, they are sent home.  
 A. 64 & 65.—No.  
 A. 66.—They understand it better.  
 A. 67.—I never knew but their health was generally good; it is seldom I hear they are ill. Most of the children are in Sunday-schools; their teachers visit them when ill.  
 A. 68.—No; left to their own choice.  
 A. 69.—Yes.

JAMES STANCOMB.

No. 91.

John Stancomb.

## ANSWERS of JOHN STANCOMB, Trowbridge.

- A. 1.—Trowbridge, Wiltshire.  
 A. 2.—Woollen manufacture.  
 A. 3.—Erected 1828.  
 A. 4.—Steam.  
 A. 5.—Yes.  
 A. 6.—Opening of windows.  
 A. 7.—At the discretion of the persons employed in each room.  
 A. 8.—The whole of the dangerous parts are fenced off as far as is possible.  
 A. 9.—No; I have never considered such arrangements necessary in my factory, it being light, airy, and spacious.  
 A. 10.—The two youngest children in my factory are between eight and nine, and work with their own fathers; the others are all above nine; generally speaking, they have not been employed at other trades.  
 A. 11.—No; but joining the rollers being very light work, the parents put them at that work, because they cannot earn any thing in our town in any other way.  
 A. 12 & 13.—No.  
 A. 15.—I do not lodge and maintain any.  
 A. 17.—Ten hours and a half per day at present, through the depressed state of the trade. Usually about thirteen hours per day.  
 A. 18.—None of them more than ten hours and a half per day; the younger children only nine hours per day, on an average of five days and a half to the week at present, through the depression of the trade. Usually the elder children thirteen hours, and the younger children twelve hours per day.  
 A. 19.—As near as I can ascertain, thirteen hours per day.  
 A. 20.—Five days and a half per week, allowing two days holiday at Easter, Whitsuntide, Trowbridge Fair, and Christmas, making two hundred and seventy-eight days.  
 A. 21.—I cannot ascertain.  
 A. 22.—Those who work by the hour generally work the whole day; those who are paid for the quantity of work done work only such hours as they find necessary to do their work in.  
 A. 23.—I cannot tell the average, but they never exceeded thirteen hours per day.  
 A. 24.—The elder children thirteen hours, and the younger children twelve hours.  
 A. 25.—My usual or regular hours are thirteen hours for the elder children, and twelve hours for the younger, and I am not aware that those hours were in any instance exceeded; but when business was flat I worked fewer hours.  
 A. 26.—I do not believe that a factory will pay to work fewer hours than as stated in the previous answer.  
 A. 27.—Yes.  
 A. 28.—Certainly.  
 A. 29.—Never having worked extraordinary hours, I have never found a change of hands necessary; but, generally speaking, the profits of manufacturing are so much reduced that a factory will not answer unless worked a proper number of hours.  
 A. 30.—Certainly. The outlay in a factory and machinery is so great that unless worked a proper number of hours the business must cause a loss to the proprietor.  
 A. 31.—I do not know.  
 A. 32.—I do not know how others have found it, but I have never had occasion to try it.

A. 33.

A. 33.—No.

A. 34.—I have never had occasion to employ more than one set of hands.

A. 36.—I do not consider night-work absolutely necessary in my manufacture, excepting in the fulling department, which cannot be performed without continuous work day and night; but this kind of work is not performed in my factory, as I send my goods to public fulling-mills in the neighbourhood.

A. 37.—I do not think any factory will pay for working less than thirteen hours per day.

A. 38.—The usual temperature of my manufactory while at work is very little warmer than any private dwelling-house; no particular temperature is necessary to the works.

A. 39.—No heat further than for the comfort of the workpeople, excepting in the stove used for drying the cloths in winter, where the heat is about summer heat.

A. 40.—The process of drying or racking the cloths takes but a short time, and requires about four men, and is only used when wet weather prevents me from drying in the open air.

A. 41.—Never after eight or nine o'clock.

A. 42.—None after eight or nine o'clock, and very few after six or seven o'clock.

A. 46.—The fulling process is indispensably continuous; but that part is not conducted in my manufactory, as there are public fulling-mills in the neighbourhood worked by water, to which I send my goods for that process.

A. 47.—I cannot say, as it depends entirely upon the kind of goods, and other circumstances.

A. 48.—I cannot say.

A. 49.—The goods could not possibly be got through the process of fulling unless the process be continued until completed.

A. 50.—Partly by candles, partly by gas.

A. 51.—By windows.

A. 52.—Never having employed people through the night, I cannot say.

A. 53.—All the younger children leave from nine to ten for breakfast, and the whole of my people leave from two to three for dinner.

A. 56.—I think it would be advantageous to the workmen to take their meals out of the manufactory, and no disadvantage to the master.

A. 57.—A very slight correction by a small stick or strap only is allowed.

A. 59.—By the overlookers.

A. 60, 61, & 62.—I allow only a slight corporal punishment by the overlookers; if more punishment be necessary, I dismiss the children from my employ, which both the children and the parents consider as the greatest punishment that can be inflicted.

A. 64.—Never.

A. 65.—No.

A. 66.—Very considerable; those make always the best workmen who have been accustomed to the different processes from childhood.

A. 67.—I do not consider the health of my people deteriorated by working in the factory; they appear to me as healthy as others in the neighbourhood.

A. 68.—No, as I do not consider any of the processes injurious.

A. 69.—I am not aware that any Act is in force relative to woollen-mills.

A. 73 to 77.—The mills in our neighbourhood are all woollen-mills, and I am not aware that any Act is in force relative to them in particular.

A. 78.—I approve of excluding the children under a certain age, whatever age the legislature may think best, from the woollen factories; but I think those admitted should be allowed to work twelve hours per day, as the machinery cannot be worked to advantage at fewer hours; say from six to eight, allowing one hour for breakfast and one hour for dinner, as the utmost to be allowed.

A. 79.—The very heavy penalties and regulations proposed in cases of accidents will be extremely harassing and injurious to the manufacturer. The object of getting all dangerous parts of the machinery fenced off would be much better attained by periodical inspections by the parochial authorities, with power to inflict small penalties whenever their recommendations were not carried into effect. I think a benefit society in every factory, every workman to subscribe by a graduated scale in proportion to his earnings, and to derive a proportionate benefit in case of illness, the capital to be invested weekly in a saving's bank, would be very advantageous to the workmen.

JOHN STANCOMB.

ANSWERS of JOHN HENRY WEBB, successor to the late W. E. Waldron Esq., referred to in his deposition, 5th June 1833.

No. 92.

J. H. Webb.

A. 1.—Trowbridge, Wils.

A. 2.—Maker of kerseymeres.

A. 3.—At different times, and as far back as 1770.

A. 4.—Twenty-four horse steam-engine.

A. 5.—Doors and windows.

A. 6.—Opening of windows.

(APP.—B. 1.)

O

A. 7.

Wiltshire.

*J. H. Webb.*

A. 7.—When too cold, care is quickly taken by the inmates to close the doors and windows, and the reverse when too hot.

A. 8.—All the dangerous parts.

A. 9.—My arrangements are none; but on Saturdays my men and boys wash themselves, and look as clean as possible.

A. 10.—None under seven; none to my knowledge.

A. 11.—Yes, because at twelve years of age they can earn more wages.

A. 12 & 13.—No.

A. 14.—None from parishes.

A. 15.—I lodge none, and nearly all live with their parents, and of course go to their meals twice a day.

A. 16.—No.

A. 17.—Twelve hours; but upon an average not more than ten.

A. 18.—Question 17. will apply here.

A. 19.—Never more than twelve.

A. 20.—Three hundred.

A. 21.—Three thousand six hundred.

A. 22.—We start at six, and stop at eight. Two meal hours out of this time.

A. 23.—Twelve hours.

A. 24.—Ten to twelve hours.

A. 25.—None.

A. 26.—Twelve hours a day is my general rule, excepting when trade is bad, then less hours.

A. 27 & 28.—No.

A. 29.—We do not want this sort of thing in the West of England.

A. 30.—But very little.

A. 31.—None, if required, I think.

A. 32.—Not tried in Trowbridge for the last twenty years.

A. 33.—No.

A. 34.—In the summer months we can prepare for winter goods at the regular hours.

A. 35.—I never tried.

A. 37.—I should say, if buyers would give their orders in due time, twelve hours a day would do for all England.

A. 38.—We are not guided by heat or cold.

A. 48.—Men, women, and children from seven to seventy.

A. 50.—Gas.

A. 51.—None, as it is too cold when I use gas, being November, December, January, and February only.

A. 52.—Not working at night, I cannot say.

A. 53.—Breakfast and dinner.

A. 54.—All.

A. 55.—Neither one or the other.

A. 56.—None.

A. 57.—That if they do not behave well, I turn them off and get others.

A. 58.—Very rarely.

A. 59.—Foreman.

A. 63.—My instructions are, that if children do not get on well, not to strike them, but on Saturday turn them off.

A. 64.—Never from me, or the late occupier, W. E. Waldron Esquire.

A. 65.—Some do, and they are all very clean; and as far as their morality goes, we have had a pretty good supply of this from our late church pastor, the Rev. George Crabbe, LL.B.

A. 66.—I have no particular instance, as most of my children attend Sunday-school.

A. 67.—All as healthy as ever they have been, which I can recollect twenty-five years.

A. 68.—No.

A. 69.—Not at all.

JOHN HENRY WEBB.

No. 93.

*Benjamin Overbury.*

## ANSWERS of BENJAMIN OVERBURY, Westbury.

A. 1.—Boyer's Factories, Westbury Leigh, parish of Westbury, Wilts.

A. 2.—Scribbling, carding, slubbing, spinning, weaving, dressing, &c. woollen cloth.

A. 3.—The water factory about thirty-six years, and the other about thirty-four; both erected for the present business.

A. 4.—Water-power only; irregular, the mill being situated on a stream without a sufficient mill-head, and of course nearly dependent on the water coming down, there not being a head sufficiently large to secure two hours consumption of water. Power varies according to the abundant or scanty supply of water.

A. 5.—None, except opening the windows.

A. 6.—Entirely so; but the factories being small, it is quite adequate to their ventilation.

A. 7.—The windows can be opened by any of the workpeople who choose.

A. 8.—Yes, nearly all that can be called dangerous.

A. 9.—No arrangements as to changing their clothing or washing, or making it imperative on them to do so. Several of them occasionally wash when they leave work; but as the dark-coloured woollen manufacture is very dirty to those engaged in some processes, it is impossible that such can work at it and keep themselves clean.

A. 10.—The youngest we have is ten years of age — has been here one year; the second eleven, has been here two years. Neither have been employed at other trades.

A. 11.—The roller-joining or piecing does require the employment of young children, as after they attain an age much beyond twelve years they are too large, their work being near the ground.

A. 12.—The introduction of machinery during the last twelve years has employed a greater number of children above and under that age.

A. 13.—None at an early age, *i. e.* under fifteen.

A. 14.—No parish apprentices.

A. 15.—Do not lodge or maintain any such.

A. 16.—That of an overlooker or foreman.

A. 17.—As follows: hand-spinners, ten hours; slubbers, ten hours; weavers, eleven hours; hand-dressers, eleven hours and a half; gig-dressers fourteen hours and a half: average last year.

A. 18.—Billy-piecers, ten hours; age from ten to thirteen: boys, &c. at cutters, thirteen hours; age from twenty to ten: boys at gigs, fourteen hours and a half; age from seventeen to twelve: average. The youngest children, *i. e.* billy-piecers, do not exceed ten hours per diem.

A. 19.—Excepting the stocks, which in the West of England generally work day and night, the greatest number of hours was worked by the gigs, eighteen hours, from four to ten; but this was not customary.—See A. 24.

A. 20.—The principal part three hundred and eight days, as nearly as I can ascertain.

A. 21.—As above, three thousand three hundred and eighty-eight hours, some parts being occasionally stopped as much as three days per week for want of water.

A. 22.—This is not our plan of working, except as stated above, as we work all parts together when water is abundant.

A. 24.—The boys at gigs have in a few instances, not so many as ten, worked eighteen hours, deducting two for rest between; that is sixteen hours work.

A. 25.—When water was very short we were obliged to stop parts, and sometimes the whole of the machinery two, three, and four times a day. The long hours were occasioned by the loss of time by stopping.

A. 26.—Unavoidable in our case, most certainly, as the hours must either depend on the supply of water, which I cannot regulate, or the water be suffered to run away.

A. 27.—In this account I have given the average of two years, except where required to state the maximum, which it will be seen I have done. I have only occupied the mill two years.

A. 28.—As I have not ever worked it more than I have stated, I can only say, that an increase of cost of production would be the infallible consequence of a reduction of the hours, because more capital would be required to be invested in mill-room, power, and machinery.

A. 29.—Unless the works were in constant operation day and night, two sets of children would be hardly necessary, as in many instances the hours of working beyond the ten or eleven, as the case may be, are not sufficient to remunerate the children for coming, and to divide the work would be to starve both sets.

A. 30.—I am of opinion that, should the restriction be enforced, the cost of production would be very much increased in all the branches of my manufactory affected by the provisions of the contemplated measure in the proportion of the productiveness of my machinery to being lessened. See A. 28.

A. 31.—None where there is sufficient work to employ two sets; but I should think it impossible to get a set of children to take two or three hours a day; their earnings would not be worth their coming.

A. 32.—Where any part of the machinery has been worked all night, or nearly so, a change of hands being judged necessary has always been practised with adults as well as children.

A. 33, 34, & 35.—When I employ a night set as well as a day set, as I do with the scribbling-engines, which sometimes work all night as well as day, and which are fed by two women, both above twenty-one years of age, a boy aged twelve, and a girl aged eighteen, they manage thus: the first set begin at six o'clock on Monday morning, working till twelve at night, when the two women, who generally work ten hours in the daytime, never exceeding that number, feed till five in the morning; when these leave off, the other set who retired at twelve come on again. This does not happen more than three days per week all the year round, not averaging a night's work for each individual, there being four of them; and these hours are peculiar to this operation, and not general in the trade. We change on account of the number of hours being too great for any person to work. They work uniformly by night, only sometimes taking the first six hours, and sometimes the last. I am obliged to do this, because of want of room and power, even if I had more machinery.

A. 36.—The loss of all the water-power at night, the necessity for larger premises and more machinery to do the same work, and probably to introduce more machinery where it would be a cheaper power than manual labour; because I do not believe that with the

Wiltshire.

Benjamin Overbury.

present prices of goods and the raw material a manufacturer can give more for labour to remunerate himself; and in the above case, the children being deprived of labour would of course be sufferers, or their earnings be lessened.

A. 38.—About fifty degrees Fahrenheit in winter, and in summer as cool as open windows, &c. will make them.

A. 39.—About fifty-five degrees Fahrenheit, temperate.

A. 40.—All in that temperature.

A. 41.—The scribbling-engines alluded to about one hundred and fifty times all night, and perhaps two hundred and fifty, part of it, as nearly as I can tell.

A. 42.—Three.

A. 43.—Severally four, three, and three.

A. 44.—Three.

A. 45.—Sometimes from seven to twelve, and sometimes from twelve to five; depending on the coming down of the water longest time.

A. 46.—Yes; the milling or fulling of woollen cloth.

A. 47.—It should never stop, if possible; because, after stopping, the process will not recommence till the cloth gets warm by the action of the fulling stocks.

A. 48.—Men, generally above the age of twenty-one; our mill-man being thirty-nine.

A. 49.—I have done so on the other side. I may add, that locally the water-power here would be considerably diminished by a restriction to working only by day, and the mill rendered less valuable.

A. 50.—By candles and lamps.

A. 51.—The windows can be opened when the weather induces the workpeople to do so.

A. 52.—I have observed no demoralizing effects when under proper regulations.

A. 53.—They vary, according to circumstances, from one hour to half an hour; most having a full hour.

A. 54.—The greatest part of the workpeople do generally, as all, unless the machinery they attend is working during the meal-hours, can leave it if they please.

A. 55.—Several coming from a distance prefer taking their food there to returning, and in a few instances, not exceeding six, they take their meals without stopping the machinery they are attending, unless they get others to attend for them when they eat their food; these of course stay for the convenience of the manufactory.

A. 56.—Either the stoppage of the machinery, or the substitution of others while they were away.

A. 57.—Several of them being paid by the piece, that is, a certain sum for a certain quantity of work, do not need much overlooking.

A. 58.—Very seldom indeed.

A. 59.—By the foreman, by the father of one family, and occasionally by the hand-slubber, who has four children under his care.

A. 60.—Yes, in one or two instances; not exceeding two.

A. 61.—As I never saw any instance of cruel punishment, I have never interfered but in the above cases, when it was done by my direction.

A. 62.—I have not done so, as, although always on the premises, I never had occasion to do so.

A. 63.—None have been given.

A. 64.—Since the present occupier has been here there have been no complaints of any kind made.

A. 65.—Some of them do. There is no existing code of regulations over such; but all the houses being near the manufactory, and since the state of the public health has been a matter of importance, they have been visited with a view to promote cleanliness.

A. 66.—We generally find, that in all processes where quickness is required persons learn much more readily as children before they are grown up than afterwards.

A. 67.—I have only occupied the factory two years, since which I think the health of the workpeople is improved, arising, I should suppose, from those who were before in want being able to live better.

A. 68.—No; we have only one process which is at all unhealthy, *i. e.* the cleaning of the wool from dust.

A. 69.—I am not aware of any Act which interferes with the hours of labour, but only in cases of cruel treatment.

A. 73.—I know of no recent cases of infringement, or inhuman or cruel conduct.

A. 74.—Not as I have ever heard of.

A. 77.—I should think not, as an overlooker in the neighbourhood was summoned before a magistrate for beating a boy some years since, and there were no marks of indisposition in the parents to complain.

A. 78.—I should think that persons residing on the spot, fully acquainted with the circumstances of the case, being appointed with power to visit and collect evidence, and summarily to punish cases of cruelty and oppression, would be a superior plan to the measure in contemplation.

A. 79.—That I consider the meditated provision for a person injured by machinery, which in many cases is the consequence of the carelessness, &c. of the individual, is most oppressive and unjust. I should also think that the magistrates in the neighbourhood might be invested with powers sufficient to punish in case of any cruelty or oppression, of which I know of none, if such should occur. I see very great objections to the measure in contemplation. Why bring

bring under restrictions and penalties the trade and operations of manufacturers more than other commercial men? The merchants and others often find themselves in a situation to require the extra services of those employed by them.

BENJAMIN OVERBURY.

Wiltshire.

*Benjamin Overbury.*

## ANSWERS of NATHANIEL OVERBURY, Westbury.

No. 94.

*Nath. Overbury.*

- A. 1.—All our manufactories are in the parish of Westbury, county of Wilts.  
 A. 2.—Manufacturing fine cloths and kerseymeres, principally the latter.  
 A. 3.—There has been no material alteration since the works have been in possession of the present firm, except in 1829, when a steam-engine and the necessary buildings were erected; but the trade has been carried on from twenty-five to thirty years.  
 A. 4.—Both steam and water, the latter irregular; the power so various as hardly to be defined, except that the deficiency is regulated by a twenty-horse power steam-engine.  
 A. 5.—We have no distinct provision for ventilation.  
 A. 6.—Ventilation depends on opening the windows.  
 A. 7.—The ventilation is left to the discretion of those employed, but the number of hands in each room is small in proportion to its size.  
 A. 8.—The dangerous parts of the gear-work are fenced off so as to avoid risk of accidents if there is not carelessness; but some parts which have lately been in course of alteration will, when finished, be more completely enclosed.  
 A. 9.—We have no arrangements of this kind, nor do we think there is any thing in our manufactory to render them necessary.  
 A. 10.—Ten years; we have only one child under that age in our employ. We are not aware they have been employed in other trades.  
 A. 11.—Yes; because the nature of the work requires persons of low stature, and is very light.  
 A. 12.—Not under twelve years of age.  
 A. 13.—No.  
 A. 15.—We do not lodge or maintain any.  
 A. 16.—Yes; we have an overseer for each department of our trade.  
 A. 17.—About twelve hours is the regular time, but it so much depends on the state of trade, and so frequently varies, that we cannot give a specific answer.  
 A. 18.—Ten, twelve, or fourteen hours. No difference on account of age, as children and adults work together.  
 A. 19.—Twenty-two hours has been the case in one department, in all others not above fourteen that we are aware of.  
 A. 20.—We have no data by which to give a positive answer; we work almost every day except Sundays and holidays.  
 A. 24.—Twenty-two hours twice in the week for a short period, but only arising from peculiar circumstances not likely again to occur, and in the department alluded to in A. 19.  
 A. 25.—The excess of time arose in this particular case from the trade becoming brisker at the time we were making an alteration in the dressing and cropping process.  
 A. 26.—Yes; by having a larger proportion of building and machinery than is necessary for the usual purposes; but that would impose a tax on the manufacturer, already heavily burdened.  
 A. 27.—Not since it has been in our hands, except for short periods; but in former times, when trade has been very brisk, hands have been employed more hours we have no doubt.  
 A. 28.—We pay almost every thing by the piece, therefore in the cost there is no direct difference; but of course the greater the quantity of work done by each machine, the less is the expence.  
 A. 29.—We have no inducement except when trade demands an extra exertion that is not sufficient for two sets, we are induced to wish the persons employed to increase the hours of labour; but if it were possible to make trade regular it would be better for masters and servants. We know of no general regulation or understanding.  
 A. 30.—The increase in the cost of production by a limitation of hours will necessarily either oblige the manufacturer to abandon his chance in a brisk market, or to have more factories and machinery than is generally necessary.  
 A. 31.—We should prefer two sets, but in many cases it requires constant practice and experience in the children, and the little extra employment would not remunerate two sets of children.  
 A. 32.—When any accident has happened to part of the machinery, and we have been obliged to work the other part extra hours, we have then employed the persons thrown out as a relay, and it of course answers the same purpose.  
 A. 33.—In some departments we have, in others we could not.  
 A. 34.—The advantage of two sets of hands, provided there were full employment for them, arises from the increased quantity of work from the same dead capital.  
 A. 35.—When we have had occasion to work at night, the same sets of hands have worked.

(APP.—B.1.)

O 3

A. 36.

Wiltshire.

Nath. Overbury.

- A. 36.—No disadvantageous effect, except in the fulling process, which would be greatly injured by it.
- A. 37.—As already mentioned, it will increase the outlay in machinery and building, and must decrease the rate of wages.
- A. 38.—We work at the common temperature.
- A. 39.—No particular degree ; we apply steam in brushing, and in the winter in drying.
- A. 40.—One in brushing and five in drying ; all men.
- A. 41.—We cannot say, but we know it has only happened in the department alluded to in A. 19.
- A. 42.—Thirty-six children.
- A. 44.—Thirty-six.
- A. 45.—Generally from seven till ten in the evening.
- A. 46.—Fulling, and that only.
- A. 47.—It depends on the nature of the manufacture.
- A. 48.—Men, and occasionally boys from fifteen to twenty-one.
- A. 49.—Because the fulling process ought to be continued till the fabric is sufficiently thickened.
- A. 50.—By both oil and candles.
- A. 51.—No particular provision.
- A. 52.—Our night-work has generally been so little that we have not had much opportunity of judging.
- A. 53.—Nine to ten for breakfast, and two to three for dinner ; these hours have been shortened when any particular stress of work has arisen.
- A. 54.—They do not profess to take their meals at the factory ; but some who live at a distance have their food brought to them.
- A. 55 & 56.—They do leave, as it relates to their employers.
- A. 57.—We have no means except as under, and that of discharging children when very disobedient, which we generally adopt.
- A. 58.—Yes.
- A. 59.—By overlookers or foremen.
- A. 60.—Yes.
- A. 61.—They do not require our previous sanction.
- A. 62.—No ; we would only require that they should be avoided as much as possible.
- A. 64.—No.
- A. 65.—No, except in two or three cases as common tenants.
- A. 66.—We have no particular observation to make to this ; of course experience renders an individual more perfect.
- A. 67.—They are generally healthy, but we cannot recollect what they were ten years ago.
- A. 68.—We have no particularly unhealthy process.
- A. 69.—We know of no particular act to which we are subject.
- A. 72.—No convictions.
- A. 77.—Certainly not ; we think there is no reason to fear on that head.
- A. 78.—We can only say that we are anxious for the welfare of those under our care as far as circumstances permit, and we believe no legislative enactment will improve the relative situation either of workman or master.

NATHANIEL OVERBURY.

---

### WORCESTERSHIRE.

Worcestershire.

No. 95.

Henry Brinton.

#### ANSWERS of HENRY BRINTON, Kidderminster.

- A. 1.—Kidderminster, Worcestershire.
- A. 2.—Dyeing worsted and manufacturing carpets.
- A. 3.—Erected about fourteen years.
- A. 4.—Hand-labour entirely.
- A. 5 & 6.—To every twenty feet in length, eight feet in width, and ten feet in height, there is a casement window.
- A. 7.—At the discretion of the workpeople.
- A. 8.—There is no machinery employed.
- A. 9.—None ; nor do I perceive any necessity.
- A. 10.—I have made a specific return.
- A. 11.—Not necessarily.
- A. 13.—No.
- A. 16.—They are completely under the control of the weavers, to whom they are assistants.
- A. 17.—About twelve.
- A. 18.—About twelve : when the weaver works the assistant must.
- A. 20.—On all working days but Christmas-day, and the general fast.
- A. 24.—They do not work in sets ; each weaver has one assistant.

A. 37.

A. 25.—Sometimes particular orders required extra hours, and sometimes the negligence of the weaver in the beginning of the week occasioned over-work necessary at the end.

A. 26.—I do not think this can be altogether avoided; it seldom depends upon the master, but men will sometimes be idle, and they are generally necessitous.

A. 27.—Never.

A. 29.—Avarice.

A. 30.—I should think there would be none, but I never tried it. Each man and his assistant have always worked as he pleased.

A. 36.—Some inconvenience to the master; none to the weaver.

A. 37.—I think if the factories here were kept open only thirteen hours a day, and those fixed, it would be better for all concerned as it respects health, comfort, and profit.

A. 38.—Very little above the surrounding atmosphere in winter, and below it in summer.

A. 41 & 42.—Ten; but not above one or two weavers and assistants at any one time.

A. 43.—Eight or nine.

A. 44.—One or perhaps two.

A. 45.—Eight or nine.

A. 46.—None.

A. 50.—Each weaver has a tallow candle.

A. 51.—The same as by day.

A. 52.—Very few are so employed, and I have not seen any.

A. 53.—The custom is an hour at nine for breakfast, and another at one for dinner.

A. 54.—All, I believe.

A. 57.—Scolding and whipping.

A. 58.—No doubt they are, but I have very seldom witnessed it.

A. 59.—By weavers.

A. 62, 63, & 64.—No.

A. 65.—Frequently they do, but I am not aware of much being done; I do a little.

A. 66.—I know of no difference between those apprenticed at fourteen and those brought up from childhood.

A. 67.—I have perceived no difference.

A. 68.—None are considered injurious.

A. 69.—No.

A. 79.—I think no child under eleven should be employed as a drawer or assistant in the weaving of Brussels carpets, and that no factory should be open more than thirteen hours each day, from six to seven in summer, and seven to eight in winter. The nature of the trade, being altogether a fancy one, is such, that at times the looms are compelled to be kept incessantly going; in this case a fresh relay of weavers and drawers to be appointed.

HENRY BRINTON.

Worcestershire.

Henry Brinton.

#### ANSWERS of J. MORTON, Kidderminster.

No. 96.

J. Morton.

A. 1.—Town and parish of Kidderminster in the county of Worcester.

A. 2.—Brussels and Wilton, Venetian and Kidderminster or Scotch carpeting, are the chief descriptions.

A. 3.—Most of my factories and premises came into possession in their present state by purchase about twenty years since, having been for many years before used for the same purpose. The additional building or factory, capable of holding twenty-four Brussels looms, was erected by me in 1824, and has been in use since that time.

A. 4.—No steam or water-power; all manual labour except the occasional use of one horse to keep in motion a machine for stacking woollen yarns.

A. 5.—None other than by opening the windows and doors.

A. 7.—At the discretion of the weavers.

A. 8.—I have no machinery of the kind alluded to.

A. 9.—No; such precautions being unnecessary.

A. 10.—There is an instance of one child being now employed at the low age of nine years, but it is unusual for the weavers to employ them as drawers under ten years of age; I believe none are previously employed at any other trade, with very few exceptions.

A. 11.—Not necessarily so, and more are employed above twelve years old than under that age.

A. 12.—A less proportion, and I have reason to think further alterations are in progress that will still further diminish the number of children to be employed. I am alluding to hand-looms in all my answers.

A. 13.—No, but the weavers frequently do; and in such cases the man is allowed a loom by his master for the use of his apprentice in addition to his own.

A. 14.—Amongst my weavers there is only one who has an apprentice from a parish, and that one was removed from the house of industry at Worcester.

A. 15.—Apprentices usually lodge with and are maintained by the weaver, his master, unless their parents reside in this town, in which case they usually live at home.

A. 16.—None that I am aware of.

A. 17.—My factories are open from the hour of six A.M. to eight P.M. in summer, and from daylight until the same hour at night in winter, excepting the hour for breakfast and one hour

(APP.—B. 1.)

O 4

Worcestershire.

*J. Morton.*

hour for dinner time; but no particular notice has been kept of the hours employed each day by the workmen; generally they do not work their full time.

A. 18.—Same answer as that to Q. 17 will apply to this, as the drawers and weavers work together, except that the former are often employed in winding quills and changing bobbins during the absence of the weaver, and consequently they are engaged in the factories longer in each day than the weaver.

A. 19, 20, 21, 22, & 23.—The factories are kept open every day in the year (excepting Sundays and Good Friday) during the hours stated in A. 17, and have only been exceeded in a very few instances, and then only for the admission of one or two weavers and their drawers to enable them to complete some work by a given time, which has either been previously neglected by their weavers, or where, from particular circumstances, only a limited time, shorter than usual, would be allowed for finishing the work.

A. 24.—Not able to answer this question with precision, but I believe it has happened to some six or eight of my weavers and their drawers that they have been obliged to exceed their usual hours of work three or four times during the last year by four hours, viz. two in the morning and two in the evening.

A. 25 & 26.—The causes for excess in the hours of work have been stated above, and had become unavoidable or would not have been resorted to, for this obvious reason, that work so made is never so well manufactured.

A. 27.—No.

A. 29.—This does not apply to the manufacture of carpeting, and, as far as I know, the practice is to have a change of hands for night-work.

A. 30.—As a manufacturer of carpeting, buying, as is the custom, for piece-work, that is, a given price per yard, I should be affected by the reduction in the hours of labour only in so far as my stock of materials would be longer under process of conversion to a marketable state, and capital be thus considered less productive. This result would, however, be comparatively of little consequence, provided it did not produce a demand for higher wages.

A. 31 & 32.—These questions, I presume, apply to proprietors of mills. I am not competent to answer them.

A. 33, 34, & 35.—In my answer to Q. 24 I have referred to instances of workmen having been employed extra hours. Besides those in houses, it has happened occasionally that two or three looms were kept at work during the whole night as well as day. In such cases the rule has been for the weaver and his drawer to work twelve hours: viz. from noon till midnight, and to be relieved by another weaver and drawer taking the work from midnight to noon next day; intervals for meal-hours being, of course, allowed.

A. 36.—The effect would be just such as I should desire. It would be a salutary regulation, and I hope to see it become the law of the land. It would prevent the risk of fire, and often prevent plunder.

A. 37.—I have already anticipated the answer to this question in A. 30. It would, to a certain extent, retard the operation of capital, but I should not regard that, especially as I think it possible such a regulation of the hours of labour may cause the weaver to be more regular in the distribution of his time; such a result would most materially benefit the operative and his employer.

A. 38 & 39.—No considerable degree of artificial heat is required in summer; the windows are opened, and in winter the factories are warmed by a coal-fire in a grate of small dimensions. The factories are divided into shops of the dimensions of thirty-seven feet six inches long, by seventeen feet six inches wide, and eleven feet high; containing four looms requiring four men and four children as drawers, to work them.

A. 40.—The number of men, women, and children employed in my manufactory is 176.

A. 41.—Not more than three or four times that I am aware of, and then only with three looms at work.

A. 46.—Not any.

A. 47.—There are no processes in my manufactory necessarily continuous beyond the space of two hours.

A. 48.—Children are employed as drawers, their ages varying between nine and eighteen years. Girls and women are winders and warpers, whose ages vary from twenty to sixty-five years. Men are the weavers, who, by the custom of the trade, are qualified to work as such at the age of twenty-one years.

A. 50.—One candle to each loom, suspended in front of the weaver.

A. 51.—None required.

A. 52.—Necessarily injurious.

A. 53.—One hour for breakfast and one hour for dinner for those employed at day-wages; but the weavers being paid piece-work, the time taken by them is not particularly noted.

A. 54.—They usually leave the premises.

A. 55.—When they do not, it is for the convenience of the workpeople alone.

A. 56.—I have stated such to be already the practice.

A. 57.—I am not aware of any other than a threat of dismissal by the weaver, who, for the time being, is the master of the child.

A. 58.—No; I never knew of an instance of it.

A. 62.—It is well known by all persons employed by me that corporal punishment is forbidden, and would never be permitted with impunity.

A. 63.—Verbal instructions have been given to my overseer to report to me any instance of corporal punishment or oppression of any sort towards the children, should it occur.

A. 64.—None whatever.

A. 65.—Many of the workmen do live in the houses of their employers, but it is not so generally the case as formerly; I have not more than ten or a dozen who occupy houses of mine. I am not aware of any control or superintendence of the nature here referred to.

A. 66.—Experience has proved those to be most skilful who have been drawers to the loom from early age, but general character depends chiefly on the example of him with whom he has been placed for instruction. It is difficult to adduce instances.

A. 67.—I think their health has considerably deteriorated. The cause of it I ascribe chiefly to the privations they suffered during the strike or turn-out in 1828, of twenty-three weeks duration. The debts they contracted at that period with the smaller tradespeople of the town were large, and the discharge of those debts has been a constant drain upon their earnings ever since.

A. 68.—We occasionally change the loom of a man who is weak to narrow work, because it is easier, and give the wider work to a man more robust.

A. 69. I have no mill, nor am I acquainted with the regulation of one, and consequently am not competent to answer the remaining queries.

A. 78.—The provisions of the proposed Bill are enough, as far as I see, for the regulation of the hours of labour in mills where the works are under one roof; but in works such as mine, where the factories are often separated in distant parts of the town, the same degree of superintendence on the part of the master cannot be exercised. Besides the children (the drawers), being under the control of the weaver and paid by him, the master does not, in the ordinary way, interfere between them. That the children may therefore have the full benefit contemplated by this measure, I would suggest that the weavers so employing the children should be more especially referred to in the proper clauses of the Bill. They may be said to be already comprehended, in clauses 34 and 35, under the term "or other person," but I conceive it would have a beneficial tendency if more special reference was made to the duties required of them as the employers of children.

8th May 1833.

J. MORTON.

Worcestershire.

J. Morton.

GEORGE HOOMAN, for Pardoe, Hooman, and Pardoe, Kidderminster.

No. 97.

George Hooman.

A. 1.—Borough of Kidderminster, county of Worcester.

A. 2.—Carpet manufacturing, and worsted and woollen yarn spinning.

A. 4.—Steam and water; water hitherto regular; steam fifty-horse power; water about thirty-horse power.

A. 5.—No; merely windows.

A. 6.—Yes, on opening windows.

A. 7.—Discretionary; at the option of all persons employed therein.

A. 8.—Yes.

A. 9.—We have conveniences for washing, for cooking their victuals if they choose to bring them with them (but they generally go home to take their meals), and privies, for the use of females only, in each room; we have others out of doors for the use of the males.

A. 10.—We never inquire, but believe we have none employed under ten years of age. We seldom inquire as to the second part of this question.

A. 11.—Young children are of course employed for economical reasons.

A. 12.—Not in our own mills.

A. 13.—No.

A. 15.—We do not, when engaging workpeople, make inquiries on these points. We do not lodge and maintain any of our workpeople.

A. 16.—Not whilst employed at our works.

A. 17.—Twelve hours, exclusive of meal-hours.

A. 18.—The same hours as above, viz. twelve, and no difference made as to ages.

A. 19.—A small portion of our works was employed from six in the morning until ten at night; but this was only for a short period, and all the workpeople so employed were eighteen years of age and upwards.

A. 20.—About three hundred days.

A. 21.—About three thousand six hundred hours.

A. 23.—About twelve hours.

A. 24.—Twelve hours, exclusive of meals.

A. 25.—Last autumn; demand for the particular description of work.

A. 26.—Of course avoidable, but at the sacrifice of non-completion of orders in a specified time.

A. 27.—Only occasionally for short periods, and then only a portion of our works.

A. 29.—A belief that his profits will be enhanced by an increased production at a proportionately less cost.

A. 33.—Yes; the night-hands work nine hours for the same wages as the day-hands work twelve hours.

A. 35.—When we have had recourse to night-work, we have employed distinct sets for the night and day, and have not exchanged them, excepting perhaps in an individual case or two.

A. 36.—Could such a prohibition be made general and effectual, we believe it would not be at all to our disadvantage.

(APP.—B.1.)

P

A. 38.

Worcestershire.

*George Hooman.*

A. 38.—We do not require high temperature in our mills; taking the average of the rooms, we imagine they seldom exceed sixty-five degrees, excepting it may be during the heat of summer.

A. 39.—About seventy-five degrees; perhaps a few degrees higher in the heat of summer.

A. 40.—About six.

A. 41.—Our works driven by water were worked during last autumn and the early part of the present year, in all about five months, by night.

A. 42.—Perhaps from twenty to thirty.

A. 43.—Nine hours each night except Saturday evening, and then six hours.

A. 44.—Perhaps from twenty to thirty.

A. 45.—Between eight in the evening and six in the morning.

A. 46.—No.

A. 50.—By gas.

A. 51.—Windows.

A. 53.—Day-hands, forty minutes for breakfast and forty minutes for dinner, with an allowance for coming into their work in the morning and after each meal-time of, together, full half an hour; night-hands are allowed a rest of one hour, viz. from twelve to one o'clock.

A. 54.—All, excepting those who choose to remain.

A. 55.—For the convenience of the workpeople.

A. 57.—If not obedient to our rules they are discharged.

A. 58.—No; if at all, they are unknown to us, and contrary to our strict orders.

A. 66.—We should say there is at least twenty per cent. difference in skill in these two descriptions of people.

8th May 1833.

GEORGE HOOMAN.

## ANSWERS of T. SIMCOX LEA, Kidderminster.

No. 98.

*T. Simcox Lea.*

A. 1.—I have no mill and no power-looms, so that I am unable to communicate any information bearing upon the present inquiry; but I have annexed a few memoranda, and shall be happy to wait upon the Commissioners if they should wish it.

A. 2.—The workpeople in my employ are occupied in the weaving of bombazeens and carpets, or in processes connected with those manufactures, subsequent to the spinning of the yarns.

A. 8.—The bombazeen weaving in this town is all done by hand in the houses of the workpeople, but this trade is at a very low ebb, owing to the reduced wages paid in other parts of the kingdom.

A. 10.—It is not usual to employ children in the carpet trade at all until the age of ten or eleven, when they draw the lashes for the weavers and are paid by them; the manufacturers have no control over their children. The wages are from 3s. 6d. to 4s. 6d. per week, older children doing the work required quicker than those of ten or eleven.

A. 13.—Apprentices in the carpet trade are not taken by the masters, but by the workmen, and rarely now from any other parish. I do not consider that the population of the town has been in full employ at any time during the last six or seven years.

A. 18, 19, & 20.—Carpet weavers all work by the piece, and their hours of attendance at the factory are voluntary. It is usual to have the doors open to them about fifteen hours in the day; they go home to breakfast, dinner, and often to tea, unless they live at a distance, when their tea is brought. If they worked regularly their average production would not occupy this time, but it is a prevailing habit with a large proportion of the men to neglect their work at the beginning of each piece, and to work extra hours when at the latter part; and it is customary (a very bad custom) to allow them the key of the shop earlier and later before the taking in days.

A. 31 & 32.—In the carpet trade it is a frequent and increasing practice for many looms to be kept constantly going by a double set of hands, originating chiefly in orders from retail dealers in London, who pledge themselves to execute them in an unreasonably short time; impracticable on any other plan. This is injurious both to the health and morals of the workpeople, the drawers being often girls from fourteen to eighteen years of age. The manufacturers resort to it only from necessity, and always against their inclination.

A. 38.—No heat is required for carpet-weaving; the carpet factories in this town are all well ventilated by sliding windows on each side of the shop, and coal fires are made in the winter.

A. 65.—Many of the workpeople in this town live in the houses of their employers; but such houses, with the exception of a foreman or overlooker's occasionally adjoining the factory, are scattered about the town in streets, and the tenants are upon the same footing as other workmen.

3d May 1833.

T. SIMCOX LEA.

## ANSWERS of ROBERT BAKER.

Worcestershire.

No. 99.

Robert Baker.

- A. 1.—Newport-street, All Saints, Worcester.  
 A. 2.—Gloving trade.  
 A. 5.—Five windows, which may be opened at the pleasure of the workpeople  
 A. 7.—At the discretion of all.  
 A. 10.—Generally not under fourteen years of age, with the exception of one boy as an errand-boy, who has his meals and sleeps at home.  
 A. 13.—Yes.  
 A. 17.—Eleven hours.  
 A. 20.—Six days each week, except fast-days and holidays.  
 A. 21.—Three thousand four hundred and thirty-two, I suppose.  
 A. 23.—Eleven hours.  
 A. 25.—None.  
 A. 27.—Yes; when trade was better, seven years since, previous to the introduction of French gloves.  
 A. 28.—No.  
 A. 50.—In the winter with candles.  
 A. 51.—The same as by day.  
 A. 53.—Half an hour for breakfast, one hour for dinner, and half an hour for tea.  
 A. 54.—All.  
 A. 58.—No.  
 A. 77.—Only on the truck system.

ROBERT BAKER.

## ANSWERS of JAMES BRISTOW, City of Worcester.

No. 100.

James Bristow.

- A. 1.—Newport-street, parish of All Saints, city of Worcester.  
 A. 2.—Cutting of gloves; staining of skins.  
 A. 3.—June 1828.  
 A. 4.—No engine employed.  
 A. 5.—None, with the exception of opening the windows.  
 A. 6.—The opening of windows.  
 A. 7.—At the discretion of all.  
 A. 8.—No machinery employed.  
 A. 9.—None required.  
 A. 10.—Twelve years of age, as boys.  
 A. 11 & 12.—No.  
 A. 13.—Yes.  
 A. 15.—I do not maintain any apprentice.  
 A. 16.—No.  
 A. 17.—Twelve hours.  
 A. 18.—No difference.  
 A. 19.—Not more than twelve.  
 A. 20.—Every day, except Sunday and festival days.  
 A. 22.—Regularly from six in the morning till eight in the evening, two hours being allowed for meals.  
 A. 25.—We never exceed fourteen hours, including meals.  
 A. 26.—We do not consider this beyond the regular hours.  
 A. 27.—At no time, except in case of public mourning.  
 A. 29.—I know not of any in our line of business that are employed through the night, or even extra hours, unless it be their own will and pleasure.  
 A. 31.—We have no occasion for a second set of hands, young or old.  
 A. 35.—Our hands are all employed by day.  
 A. 36.—I cannot say, as our hands never work the whole of the night; eight o'clock in the evening they in general leave off business.  
 A. 38.—The men employed work in rooms of moderate temperature; they regulate it to their own comfort.  
 A. 42.—We employ none by night.  
 A. 46.—There is no necessity for continuing that length of time.  
 A. 47.—The hands employed may leave off at any time, without any injury to their employer.  
 A. 48.—Apprentices from fourteen to twenty-one; from that age to forty or fifty.  
 A. 50.—By candles.  
 A. 51.—By the opening of windows, if required.  
 A. 53.—Half an hour at breakfast, and one hour at dinner.  
 A. 54.—The whole of them.  
 A. 57.—We do not employ any children in our manufactory; they work at home.  
 A. 58.—None whatever.  
 A. 62.—I have never had occasion to do so.  
 (APP.—B.1.)

Worcestershire.

James Bristow.

A. 63.—I have no children under my control, with the exception of my own family.

A. 64.—In no one instance.

A. 65.—They live in houses most convenient to themselves, of their own choice.

A. 66.—We have none but those who have served a regular apprenticeship.

A. 67.—The whole of the persons employed by me have in general enjoyed tolerable good health for these last eighteen years, with the exception of two individuals who have died, the one with a fever, the other with consumption; the latter I believe to have been constitutional; they were both upwards of thirty years of age.

A. 68.—Sometimes.

A. 69.—I do not make use of any mill.

JAMES BRISTOW.

No. 101.

Mr. Allen.

## ANSWERS of — ALLEN, Worcester.

A. 1.—Parish of St. Clement, city of Worcester.

A. 2.—Leather-dressing and glove-manufacturing.

A. 3.—In the year 1824.

A. 4.—Manual power.

A. 5.—Windows.

A. 6.—Opening of windows.

A. 7.—Of all.

A. 8.—No machinery used.

A. 9.—None required.

A. 10.—At nine years, to go on errands.

A. 11.—No.

A. 12.—No machinery used.

A. 13.—Yes.

A. 14.—Have no parish apprentice.

A. 15.—Have no orphans.

A. 17, 18, &amp; 19.—Twelve hours.

A. 20.—The whole year, except holidays.

A. 21.—Twelve hours per day.

A. 22.—The whole day.

A. 23 &amp; 24.—Twelve hours.

A. 25.—No time.

A. 26.—None.

A. 27.—No.

A. 29.—No night-work required.

A. 30.—No.

A. 37.—Because our work is not laborious, and when out of our employ we cannot say what company they keep.

A. 38 &amp; 39.—No particular degree of heat required.

A. 46.—We do not work more than twelve hours.

A. 50.—With candle.

A. 52.—Industry.

A. 53.—Two hours per day for men and boys.

A. 54.—All.

A. 56.—Loss of time.

A. 57.—No means.

A. 58.—No.

A. 64 &amp; 65.—No.

A. 66.—Better workmen.

A. 67.—Have not been a factory ten years.

A. 68.—No.

A. 69.—Have no mills.

— ALLEN.

No. 102.

Thomas Cox.

## ANSWERS of THOMAS COX, Worcester.

A. 1.—Parish of St. Helen, city of Worcester.

A. 2.—Glove manufactory.

A. 3.—Building employed as workshops by present occupier about twenty years.

A. 4.—No power by steam or water required.

A. 5.—No specific or particular ventilation required.

A. 6.—Sometimes windows are opened to admit air in very hot weather.

A. 7.—If ventilation is required, windows are thrown open by the persons employed, three or four being in a room.

A. 8.—There are no dangerous parts or dangerous machinery used.

A. 9.—I make no arrangements with the workmen to change their clothes, &c., but they generally appear healthy and clean; a clean business.

A. 10.—About thirteen or fourteen years of age boys are taken as apprentices, and have seldom been employed at any other trade.

A. 11.—Children (boys) are employed to go of errands, under twelve years of age, but not required to work much.

A. 12.—No alterations or machinery used.

A. 13.—Yes.

A. 14.—No parish apprentice.

A. 15.—I do not maintain or lodge them; they lodge and are maintained by their parents. I pay them wages.

A. 16.—No.

A. 17.—About ten or twelve hours.

A. 18.—About ten or twelve hours; no difference can be made.

A. 19.—Occasionally fourteen hours, but very seldom more than twelve.

A. 20.—Three hundred and sixty-five days, except Sundays and Christmas and other holidays; say three hundred and five days.

A. 21.—About three thousand six hundred and sixty hours.

A. 22.—No difference.

A. 23.—Average eleven hours.

A. 24.—Twelve hours.

A. 25.—Only in cases when work has been much wanted.

A. 26.—Avoidable.

A. 27.—No.

A. 28.—I do not consider that the reduction in the hours of work would enhance the value on gloves, as the labour is done by piece-work.

A. 29.—This question does not apply to any part of a glove manufactory.

A. 30.—I do not find any increase in the cost of production from limitation of hours of work, because all labour is done by piece-work.

A. 32.—Never occasion to work extra hours, and no change of hands required.

A. 33.—Never employed night-hands.

A. 34.—Nature of trade does not require two sets of hands; each person must finish his own work.

A. 53.—Breakfast half an hour, dinner one hour, tea half an hour.

A. 54.—All persons employed leave the work at meal-times.

A. 56.—Never in practice.

A. 57.—Proper correction, as circumstances may require.

A. 58.—No.

A. 63.—Nothing of the sort.

A. 64 & 65.—No.

A. 67.—Know of no difference in their health.

A. 68.—Does not apply to glovers.

A. 69.—No mill employed.

A. 77.—Workpeople not afraid of displeasing their masters by evidence.

A. 78.—Cannot suggest a better principle or regulation than the present for regulating the hours of labour and treatment towards children.

A. 79.—No further observations to make, otherwise than that the questions do not apply to a glove manufactory.

THOMAS COX.

Worcestershire.

Thomas Cox.

#### ANSWERS of PHILIP BALL, late PHILIP BALL & Son, Worcester.

No. 103.

Philip Ball.

A. 1.—Saint Martin's parish, city of Worcester.

A. 2.—Glove manufacturer and leather-dresser.

A. 3.—Workshop built about forty years, for glove-making.

A. 4.—All manual labour.

A. 5.—All windows.

A. 6.—Work done up stairs not required to open windows.

A. 7.—By every person employed.

A. 8.—None.

A. 9.—Work done almost in the country, except by men cutting out gloves &c.

A. 10.—None under ten years of age.

A. 11.—If parents can keep them without work.

A. 13.—Yes.

A. 14.—No parish apprentices.

A. 15.—None to lodge or board; paid by the week.

A. 16.—Their parents, except when at work; then by the foreman.

A. 17.—From six in the morning to eight at night; usual time allowed for meals, &c.

A. 19.—Never to exceed their twelve hours.

A. 20.—Every day, Sunday excepted.

A. 23.—At most, twelve hours.

(APP.—B. 1.)

P 3

A. 24.

Worcester.

*Philip Ball.*

- A. 24.—We have no sets of children.  
 A. 25.—If Government continue to allow the importation of French gloves, we shall not long have cause to employ any hands.  
 A. 27.—We have some difficulty to find employ or even half for our hands since the importation of French gloves.  
 A. 33.—We have no cause for night-hands.  
 A. 46.—None.  
 A. 50.—By gas.  
 A. 53.—One hour dinner, and half hour breakfast and tea.  
 A. 54.—Every person.  
 A. 57.—No means.  
 A. 58.—No.  
 A. 62.—We always prevent any infliction of punishment on our boys.  
 A. 63.—Never once.  
 A. 64.—Never.  
 A. 65.—They are employed at their own houses.  
 A. 67.—We do not know that there has.  
 A. 77.—Not in the least.  
 A. 79.—We must reduce our manufacture unless French gloves are stopped, as at present our trade is falling off fast.

PHILIP BALL.

No. 104.

*W. Jones.*

## ANSWERS of WILLIAM JONES &amp; SON, late Johnson &amp; Jones, Worcester.

- A. 1.—St. Martin's parish of the city of Worcester.  
 A. 2.—Glove-manufacturing.  
 A. 4.—Manual labour.  
 A. 5.—Windows.  
 A. 6.—On the opening of windows.  
 A. 7.—Of all.  
 A. 8.—No machinery.  
 A. 9.—No need.  
 A. 10.—Sometimes one or two for errand-boys, and those not under ten years of age.  
 A. 11.—Not if parents can maintain them until that age without work.  
 A. 13.—We do.  
 A. 14.—Not parish apprentices.  
 A. 15.—Never have any to lodge and board.  
 A. 17.—We have few but what work piece-work, and have no control over them; they have the work at their own homes.  
 A. 18.—In summer the apprentices are expected to work twelve hours, in winter ten hours, exclusive of meals.  
 A. 19.—Not more than fourteen.  
 A. 20.—About three hundred.  
 A. 21.—About three thousand six hundred.  
 A. 22.—They have not.  
 A. 23.—Eleven hours at most.  
 A. 24.—We have no need of sets of children.  
 A. 25.—None, nor likely to be any as long as Government continues to allow French gloves to be imported.  
 A. 27.—Some years back, previous to the introduction of French gloves, but since then it has been difficult to find work, and sometimes half work, for them the usual hours.  
 A. 33.—No.  
 A. 41.—None at all; it is difficult to find work in the day since French gloves have been introduced.  
 A. 46.—None.  
 A. 50.—By candles.  
 A. 53.—Breakfast and tea half an hour each, and dinner one hour.  
 A. 54.—All.  
 A. 57.—Not any in particular.  
 A. 58.—No.  
 A. 62.—We have.  
 A. 64.—Never.  
 A. 65.—They do not.  
 A. 67.—We do not know there has.  
 A. 77.—Not in the least.  
 A. 79.—We have to say that we hope Government will put a stop to the importation of French gloves, or we must lessen the quantity and price of work, which is now very short.

WILLIAM JONES &amp; SON.

## ANSWERS of JOSEPH &amp; SAMUEL BURLINGHAM, Worcester.

Worcestershire,

No. 105.

Messrs. Burlingham.

- A. 1.—In the parish of Saint Peter the Great (so called) in the city of Worcester.
- A. 2.—Closing the seams of boots and shoes, and cutting out the work ready for the work-people, who make it up at their own homes.
- A. 3.—The greater part of the building in which the manufactory is carried on has been erected a great many years, and a small part of it about twenty years ago.
- A. 4.—Neither steam nor water employed as a power; all manual labour.
- A. 5.—Partly by means of skylights, which are made to open or lift up altogether, by which means the rooms in which they are are most effectually ventilated.
- A. 6.—By the opening of doors, windows, and skylights.
- A. 7.—At the discretion of those employed in the different rooms.
- A. 8.—No machinery used.
- A. 9.—None; the nature of our business does not require any; most of the persons employed keep a coat and apron at the manufactory, which they put on and wear when at their work.
- A. 10.—Ten years of age; two have been employed as errand-boys, and one has worked in a rope-walk.
- A. 11.—It does, on account of its being less expensive; and the branch in which the children or boys are employed, that of closing the seams of boots and shoes, is light easy work, and best adapted for boys.
- A. 12.—No machinery used.
- A. 13.—One only at the present time.
- A. 14.—Apprenticed by his parent.
- A. 15.—None of the boys employed are orphans, and all of them lodge and board with their parents.
- A. 16.—The boys are placed under the superintendence of a foreman, who overlooks them and puts their work ready for them.
- A. 17.—From ten to eleven hours.
- A. 18.—From ten to eleven hours; no difference made as to age.
- A. 19.—Eleven hours and a half.
- A. 20.—Three hundred and ten days.
- A. 21.—Not more than three thousand two hundred and fifty-five.
- A. 22.—No difference; all going on at the same time.
- A. 23.—Ten hours and a half.
- A. 24.—Twelve hours.
- A. 25.—Very seldom, and only on occasions of getting a lot of goods in time for shipping.
- A. 26.—Unavoidable, from the time allowed for the execution of orders for shipping being often so limited.
- A. 27.—From the great depression in trade, the manufactory has not been carried on, in the average, quite so long each day as formerly.
- A. 28.—It makes no difference to us as regards machinery, none being used, but only as regards rent and taxes, which are the same as when the manufactory was carried on an average longer time, and more work done.
- A. 29.—No night-work nor change of hands.
- A. 37.—No reduction in the working hours at all necessary, or required by any of the workmen employed.
- A. 38.—Moderate; in summer the rooms are properly ventilated, and in winter suitably warmed by means of stoves.
- A. 39.—None required.
- A. 48.—None so employed.
- A. 50.—Candles and oil are used in the winter time when the days are short.
- A. 51.—No night-work.
- A. 53.—From half an hour to an hour.
- A. 54.—All leave their work at meal-times.
- A. 57.—They are dismissed if they do not conduct themselves properly, or spoil their work.
- A. 58.—Not in the manufactory.
- A. 59.—Sometimes, though very seldom, and then by their parents.
- A. 60, 61, & 62.—We never interfere between the parents and their children.
- A. 63.—The overlooker never inflicts corporal punishment, and, when occasion requires, makes his complaint against any boy to his employer; if the boy does not reform after repeated admonishing, he is then dismissed.
- A. 64.—None.
- A. 65.—No.
- A. 66.—Cannot make any selection applicable to this question.
- A. 67.—Not otherwise than what is natural from increase of years.
- A. 68.—None, no process in our manufactory being injurious.
- A. 73.—Are not competent to answer this query.
- A. 77.—We have no reason to suppose that our workpeople would be afraid to give evidence when called upon.
- A. 78.—None necessary in our line of business that we know of.

JOSEPH &amp; SAMUEL BURLINGHAM.

## ANSWERS of HENRY DAVIS, Worcester.

Worcestershire.

No. 106.

Henry Davis.

- A. 1.—Parish of St. Peter, city of Worcester.  
 A. 2.—Cutting, laying-out, and finishing gloves.  
 A. 3.—When erected unknown by the present occupier. First employed as a glove manufactory in 1824.  
 A. 4.—No steam; water regularly.  
 A. 5.—No other ventilation but windows.  
 A. 6.—Opening of windows only.  
 A. 7.—Of all the persons employed.  
 A. 8.—No dangerous machinery employed.  
 A. 9.—Unnecessary.  
 A. 10.—Nine or ten years.  
 A. 11.—Only as errand-boys.  
 A. 12.—Don't apply to the glove trade.  
 A. 13.—I employ three apprentices.  
 A. 14.—Not from parishes.  
 A. 15.—Maintain none.  
 A. 16.—None.  
 A. 17.—Fourteen hours, including meal-times.  
 A. 18.—Not any difference made.  
 A. 19.—Sixteen.  
 A. 20.—All, except Christmas-day and Sundays.  
 A. 21.—Impossible to tell, not keeping any account.  
 A. 22.—All open at the same time.  
 A. 23.—Twelve.  
 A. 24.—Employ but one set all day.  
 A. 25.—When trade was very brisk, or when lazy.  
 A. 26.—Seldom any excess; when so, quite avoidable.  
 A. 27.—None.  
 A. 30.—No.  
 A. 33.—No.  
 A. 37.—Less hours, less wages.  
 A. 39.—Glazing gloves, the only process which requires heat; can't tell the degree; never had a thermometer in.  
 A. 40.—Two.  
 A. 41.—Never later than ten to eleven o'clock.  
 A. 46.—No.  
 A. 50.—Candles.  
 A. 51.—Windows.  
 A. 52.—None work after ten o'clock.  
 A. 53.—Half an hour breakfast; one hour dinner; half an hour tea.  
 A. 54.—All.  
 A. 58.—No.  
 A. 64.—No.  
 A. 66.—Do not know any difference.  
 A. 67.—Much the same.  
 A. 68.—No injurious process.  
 A. 69.—No mill.

HENRY DAVIS.

## ANSWERS of RICHARD LOWE, Worcester.

No. 107.

Richard Lowe.

- A. 1.—Parish of St. Peter the Great, city of Worcester.  
 A. 2.—Cutting of gloves, grounding of leather, staining, &c.  
 A. 3.—Used as a manufactory about twelve years, and erected and enlarged at different times.  
 A. 4.—No steam used.  
 A. 5.—All good open windows.  
 A. 6.—Of course, it is more healthy, and they do as they please.  
 A. 7.—By their own will.  
 A. 8.—No part dangerous.  
 A. 9.—Have no necessity for either.  
 A. 10.—They begin to work about ten years old, some few as errand-boys, &c.  
 A. 11.—There are a many employed under twelve years with their parents at home, making gloves, &c.  
 A. 12.—I think it has made no difference in the glove trade, as it is mostly labour.  
 A. 13 & 14.—No.  
 A. 16.—The masters have nothing to do with them.  
 A. 17.—They work by the piece, and, of course, work as long as they like.  
 A. 18.—Same as above.

A. 19.

A. 19.—About twelve hours.

A. 20.—All, except Sundays and a few holidays.

A. 21.—As above.

A. 23.—About twelve hours.

A. 24.—I do not employ any.

A. 25.—Seldom exceeded, frequently otherwise, owing to the shameful introduction of French gloves.

A. 27.—When the glove trade was better, and we had some profit; but that is now shamefully taken away, by an unfair competition in French gloves.

A. 31.—Never employ any such.

A. 33.—No.

A. 36.—Have no night-work.

A. 37.—Ours are not bad hours; do not know other trades.

A. 38.—Ours is healthy.

A. 50.—Have none, except in winter, and then they leave work at eight o'clock.

A. 52.—About half an hour breakfast, one hour dinner.

A. 54.—Generally.

A. 55.—For general convenience.

A. 57.—Have none.

A. 58.—No.

A. 64.—No.

A. 65.—They live in small tenements, and would live very comfortable but for the introduction of French gloves.

A. 66.—We have none employed from infancy.

A. 67.—Ours are generally healthy.

A. 68.—No.

A. 69.—Have no mills.

A. 70.—No, I never keep a tommy shop, but some do, and I wish all those were made an example of; they injure the poor shamefully.

A. 71.—No.

A. 73.—Here are no mills.

A. 76.—Not quick enough with these tommy men.

A. 77.—Yes, for fear of losing their work, trade being very indifferent.

A. 79.—I should like to see those tommy shops stopped, as I think they are a great injury to the poor and likewise to the fair trader. I do not see that I can give any further information.

9th May 1833.

RICHARD LOWE.

Worcestershire.

Richard Lowe.

#### ANSWERS of THOMAS PRICE, Worcester.

108.

Thomas Price.

A. 1.—Parish of St. Peter, city of Worcester.

A. 2.—Glove manufactory.

A. 5.—Windows, which open.

A. 7.—At the discretion of all.

A. 10.—Have no children employed in the manufactory.

A. 11.—Does not require children under twelve years of age.

A. 13.—None.

A. 17.—Eleven hours.

A. 23.—Ten to eleven.

A. 25.—At no time.

A. 27.—We worked more time before the introduction of French gloves.

A. 53.—Half an hour breakfast; one hour for dinner; half an hour tea.

A. 54.—All leave at meal-times.

A. 58.—Inflicted on none.

A. 64.—Never.

THOMAS PRICE.

## ADDENDA.

---

### ESSEX.

#### ANSWERS of Messrs. COURTAULD and Co., Braintree.

- A. 1.—Braintree, Bocking, and Halsted, Essex.
- A. 2.—Silk-throwing, weaving, dyeing, dressing, and mechanical.
- A. 3.—At Braintree, old buildings first employed by us in 1816; further buildings erected in 1826. At Bocking, Old Water Bay Mill converted by us in 1819; steam-power mills erected in 1828, 1830, and 1832. At Halsted, water-mill erected in 1825; steam-power factory in 1832.
- A. 4.—At Braintree, man power (five men). At Bocking, water; average eight horse power, falling to three horse power; steam, four horse power. At Halsted, water, eight horse power, falling to two horse power; steam, nine horse power.
- A. 5.—A number of small cowls along the roof, with sliding shutters, to close the ventilation when required, and abundance of windows.
- A. 6.—At the Halsted steam factory an extended ground floor with lofty ceiling, abundance of high windows all opening at top, with trap-doors in the ceiling and open shutters in the gables above, and steam pipes for winter; provide admirably for fresh air, and agreeable temperature.
- A. 7.—The convenience of the workpeople is the only consideration in regulating the heat and ventilation, and it is under the control of overseers.
- A. 8.—All dangerous parts are fenced off.
- A. 9.—Nothing further than means for washing in those departments of the business connected with delicate colours requiring especial cleanliness in the people.
- A. 10 & 11.—We do not wish to employ any children under twelve; when we do so, it is at the solicitation of themselves or their friends, when we sometimes consent to employ them as young as seven or eight years, and occasionally, but not commonly, find children of these ages earn their wages as well as older hands.
- A. 12.—Our patent original machinery requires in a throwing-mill a larger proportion of skilful hands, and consequently admits of a smaller proportion of very young children.
- A. 13.—Among the mechanics only.
- A. 14.—Self-apprenticed.
- A. 15.—No hands lodged or maintained by us.
- A. 17.—Twelve hours net work by day, or ten hours and a half net work by night.
- A. 18.—The same hours for all.
- A. 19.—Generally our throwing-mills, *i. e.* the twisting-machines, work constantly, night and day, stopping only at meals. (Formerly, when the mills did not work through the night, it was usual to work them three hours over-time.) All other works keep constant time of twelve hours.
- A. 20.—The whole number; less a few days of customary holiday.
- A. 24.—Twelve hours.
- A. 26.—The adoption of night-work, with a double set of hands, has superseded over-time for any.
- A. 27.—Formerly the over-time hands, say about one tenth of the whole number, made fifteen hours.
- A. 28.—Night-work is perhaps cheaper than over-time, although we usually thought more work was done in the over-time hours than in the earlier part of the day.
- A. 29.—A double set of hands is quite inappropriate as a means of providing for a few hours of over-time, which the circumstances of a business may require in some of its branches. Where regular night-work is established a double set is obviously necessary, and a master can have no inducement to attempt to do without it.
- A. 30.—Twelve hours has always been recognized in this neighbourhood; this time has not been limited.

B. 1.

---

Essex.

---

No. 109.

*Samuel Courtauld.*

---

Essex.

*Samuel Courtauld.*

A. 31 & 32.—It would be impossible to obtain a double set of hands upon an emergency requiring over-time in some department; and if as a permanent arrangement a double set were provided in such department for the sake of one fourth over-time, either the hands must be content to receive less than two thirds their usual wages, or the master must pay three hands in full for doing the ordinary and easy work of two.

A. 33.—One set begin their day at half past five in the morning and conclude it at half past six in the evening; another set take the intervening hours of night. Thus the day comprehends thirteen hours, and the night eleven hours.

A. 34.—A capital of say 12,000*l.* is invested in the building, machinery, and works of the spinning department of the general business. In this department say thirty-five hands keep employed; in the various other departments, of winding, weaving, &c. say seven hundred hands. If a double set of spinners were not kept, either one half the total number of hands must be discharged, and the business correspondently reduced, or another 12,000*l.* must be invested, merely to employ these thirty-five hands by day instead of night.

A. 35.—It is always optional with the hands to give up night-work for day-work when they please. At one factory the sets are changed every week; at another it is thought preferable to allow the night-hands to continue such for considerable periods, conceiving that perpetual change prevents their so well accommodating themselves to the unusual periods for meals and rest. Night-work is generally preferred by the hands, on account of the afternoon of leisure it affords them from one o'clock in the day, when they usually rise, until half past six in the evening, when they go to work.

A. 36.—The condition of our trade holds out no inducement to us to double our crape and other spinning works. If night-work in them were prohibited, the effect must therefore be to diminish our crape and other manufacturing business by one half. Several hundred families now employed by us in hand-loom and half our factory children must be discharged, and all this for the sake of denying some thirty-five young women a work they prefer to any other they can get.

A. 37.—Twelve hours net work in our business, under the favourable circumstances of very light employment in no sedentary or fixed position, in a pure atmosphere, of which the temperature is regulated solely in reference to the comfort of the children, is certainly found perfectly consistent with the health and spirits of the children. A reduction of the working hours would therefore reduce in absolutely the same proportion the amount of business done in a given establishment; and as all current charges would remain the same, the cost of production would be larger upon the smaller return, even if it be supposed that wages were also reduced in proportion to the reduced hours, to the great distress of the workpeople themselves.

A. 38.—The usual temperature is perhaps about 50° to 60° in winter, and 60° to 75° in summer, according to the circumstances of particular buildings. From 50° to 60° is the most favourable to the condition of the fabric; below 40° is decidedly unfavourable.

A. 39.—Except in drying-stoves, a high temperature is not required in any process.

A. 41.—The crape and marrabout spinning constantly.

A. 42.—Sixty, a few more or less.

A. 43.—Ten hours and a half.

A. 44.—Thirty-five; two or three more or less.

A. 45.—From half past six at night until half past five in the morning.

A. 46.—No.

A. 50.—By candles or vegetable oil lamps, and oil or resin gas.

A. 51.—None in particular.

A. 52.—The effects are in many respects favourable, as compared with day hands, whose leisure time is all thrown into the late hours of evening. The best and best-conducted hands and females only are selected for night-work; they have more leisure time than the day set by two hours, and it is all thrown into the early afternoon hours. When disorderly persons are filling the streets, the night sets are steadily at their work. In point of fact, our night-hands are quite as steady and respectable as any other.

A. 53.—Half an hour at breakfast and half an hour at dinner.

A. 54.—All may, and most do; it depends on the state of the weather, and their inclination at the time.

A. 57.—A regular system of forfeits and rewards the stimulus of piece-work, and dismissal in the last resort.

A. 58.—No.

A. 60.—Formerly something like a system of slight chastisements, connected with a system of task-work, was adopted, but the gradual though very obvious improvement in the conduct of the people has rendered corporal punishments unnecessary, and for several years they have been wholly superseded by piece-work, forfeits, and rewards.

A. 66.—This inquiry has led us to prick off the best and best conducted hands in our service, and we find a singularly large proportion of these have been employed by us from the earliest age at which any have been taken. In the booking sheets these hands are distinguished by a cross against their names.

A. 67.—I think the orderly and industrious habits introduced with our manufacture into this neighbourhood, and the better food and clothing obtained by its means, have been gradually improving the health of the class employed. Intermittent fevers, and scrofulous affections used, I think, to be very much more prevalent among our children twelve or fifteen years since than they are now; but I have not the present means of ascertaining the fact.

A. 68.

A. 68.—There is no injurious process to require such change.

A. 69.—I believe it is not.

A. 79.—In answer to this inquiry, I beg to observe generally, that if any circumstances can justify legislative interference between workpeople and their employers, they must at least be such as make out an undeniable and strong case of hardship and wrong. Now as respects the silk trade, certainly no such case can be made out. Mr. Sadler founds his case upon the broad assumption that more than ten hours employment in factory is necessarily inconsistent with the health and comfort of children, and his evidence goes to show that the attempt to keep children employed for a longer period necessarily involves much harshness and severity to urge them to exertions continued beyond their strength. Now as respects our silk factories, there is not the slightest foundation for such a position. No children among the poor in this neighbourhood are more healthy than those employed in factories, as none are so well fed and clothed. Their employment cannot be called labour; and so far is it from being necessary to use any severity to rouse their flagging powers at the close of the day, that all our overseers would testify that at no part of the day is there more cheerfulness, and at no time is the work better done, than after the lamps are lit of an evening. A certificate of the healthfulness of the silk-factory children, was signed last year for Sadler's committee (but which he managed should never reach them) by the several clergymen, dissenting ministers, magistrates, surgeons, guardians, and overseers of the poor, of the three parishes. Then, as to night-work, it is perfectly voluntary, and is so managed as to be sought for by the day-hands, for the greater leisure time and better earnings it affords them. It is not injurious to their health or unfavourable to their morals; and to prevent the night-work of about thirty-five hands would stop half our business, and reduce to most severe distress several hundred families now regularly employed in it. Almost all the children work by the piece or by the pound; coercion or corporal punishment of any kind is unknown; dismissal is the utmost severity practised; they seek the employment and are benefited by it. Is it possible to imagine any thing in legislation more uncalled for and unwarrantable than laws to prevent their working as their interest and their necessities prompt them to do? No legislation is called for by the circumstances of the silk trade, and any interference must be mischievous both to masters and servants; but if, in reference to popular excitement, delusion, or otherwise, it be thought something must be done, I would respectfully lay before the commissioners the following statement of the extent to which I consider legislative interference might be carried, without essentially injuring the workpeople or their employers in this neighbourhood. That no children should be employed in factories under ten years of age; that none under seventeen years be permitted to work more than twelve hours (net work) out of the twenty-four, or to be employed as night-hands; that none should be permitted to work by night more than alternate weeks, and that all corporal punishments should be interdicted. Finally, I testify that the real hardship of the labouring poor here is rather the want of adequate employment than its severity; and the really painful task of a master manufacturer is the daily necessity of refusing employment to numbers of famishing applicants; and the factory hours are comparatively few, and the factory employment is light; but the hand-weavers at their own homes sit in a confined posture for many more hours, their appearance is pallid and overwrought, and they are really entitled to the most benevolent consideration, and their cry and just demand is for cheap bread. May the wisdom of the legislature grant them this effectual relief.

Essex.

Samuel Courtauld.

#### OBSERVATIONS ON A BILL to regulate the LABOUR of CHILDREN and YOUNG PERSONS in MILLS and FACTORIES.

It must be premised that the following observations upon this Bill are made in reference to its bearing upon the silk trade only; whether any of its clauses may be desirable or necessary for the protection or the improvement in the condition of children engaged in cotton, flax, or any other branch of manufacture, the interests of which are affected by the provisions of this Bill, is a question which it is not intended to approach, excepting so far as general views of the impolicy and injustice of legislative interference with the terms of employment and rate of wages between masters and their workpeople must be applicable to all.

Legislative interference in the arrangement and conduct of business is always injurious, tending to check improvement and to increase the cost of production, and can only be justified by absolute necessity: before such interference is proposed a very strong case should be made out, which, as regards the silk trade, has not, and it is believed cannot, be done. It is most unjust to assume that an evil does exist, and then proceed to enforce a remedy highly injurious to the manufacturer, and oblige him to prove a negative.

In 1816 an attempt was made to apply to silk mills the regulations which were thought necessary in cotton establishments. Evidence was then produced proving that the same necessity did not exist in the former case; that the occupation was perfectly innoxious, the labour light and suitable for children; that their health was not affected, nor their constitutions at all impaired; and that they grew up as robust and vigorous as persons engaged in the ordinary avocations of life; and in consequence of such evidence the silk manufacture was exempted from the operation of the Bill.

In the operation of silk-throwing the employment (particularly of the younger hands, which consists in merely tying broken threads together,) is as light as possible, and labour

Essex.

*Samuel Courtauld.*

it cannot be termed. So far as muscular exertion is required, a child is as competent to perform it as a grown-up person. Nor has it any tendency to cramp the energies either of mind or body; no constrained or uneasy position or attitude is necessary; in performing the work the limbs are all at perfect liberty; nor is the attention so intensely exerted that the mind of the child is at all fatigued. In the working of cotton deleterious particles are liable to be thrown off, and a damp and high temperature is necessary, which perhaps renders it in some degree an unhealthy employment; but this is not at all the case as regards silk, the fibre of which is perfectly compact; and the temperature of the factories is regulated merely with reference to the comfort and feelings of the workpeople. In fact silk is worked to greater advantage in a moderate temperature, and the mills and factories are therefore well ventilated.

Another and important circumstance which distinguishes silk from many other descriptions of mills is the perfect cleanliness that is requisite to be maintained, both of person and premises, in order to preserve the beauty of the material. This applies to the operation of throwing and weaving, and is highly favourable to the comfort and health, and has at least a tendency to improve also the morals of the persons employed.

The regulations and restrictions introduced into this Bill are vexatious, embarrassing, and arbitrary, peculiarly inapplicable to silk, and if carried into operation would be very injurious to masters and workpeople.

The clauses limiting the time of working to ten hours, the prescribing when those hours shall commence and terminate, the time to be allowed for meals, and particularly the declaring the hands shall work only eight hours on Saturday, are most arbitrary interferences between master and workpeople. Some mills begin working at half past five in the morning, others at six, seven, or in the winter-time even so late as eight o'clock. And this variation depends not wholly upon the season of the year, but frequently upon the distance of the mills or factories from the residences of the greater part of the hands; and if this be considerable, it is in every respect better and more agreeable to the children to commence their work at a later hour in the winter, which by the provision of this Bill they will not be permitted to do.

The limitation of the hours of labour is peculiarly inapplicable to silk-mills. In the operation of throwing, the silk passes through several distinct processes, and as many different sets of hands; and from the endless variety in the size, quality, and facility of the working of the silk, it is impossible so to adjust the various processes as to keep them exactly balanced; and consequently it is necessary frequently to work one department longer than another, in order to keep employed the hands engaged in the following process, who would otherwise be losing time. This injury is greatly aggravated in cases where the throwster is also a manufacturer, and weaves the produce of his mills; for being prevented from so working his mills as to produce a uniform supply, he could not employ his looms with any regularity, and his weavers would be perpetually stopping for want of silk.

Interference and restriction increase the cost of production. It is notorious that at the present moment every branch of the silk trade experiences the greatest difficulty in competing with the foreign manufacturer; and the present Bill, by increasing the cost of production, will evidently increase that difficulty, and, in fact, probably throw them altogether out of the market.

The average time that machinery is worked in silk-mills may be taken at twelve hours per diem, or seventy-two hours per week; the Bill limits the time to fifty-eight hours per week, being a diminution of nearly one fifth; consequently the returns of silk-throwsters are decreased twenty per cent., and of course a correspondent increase of cost occasioned.

This decrease of return is most particularly injurious where silk manufacturers throw their own silk, as they will be thereby prevented from supplying more than four fifths of their present establishment of looms, and the remaining one fifth must immediately be stopped.

If it be supposed that the rate of wage will be reduced in proportion to the decrease of labour, the reduction will be twenty per cent., and application to the parish must be made to make up the difference; if, on the contrary, the rate of wage will remain the same, although the product of the labour is decreased, it is manifest the cost of labour will be increased twenty per cent., and so far increase the difficulties of the throwster and manufacturer, his returns being decreased, and his cost of labour being increased twenty per cent.

The Bill will defeat its object, for its tendency is to increase the operation of the causes which have occasioned the evils complained of, because the present depression of the working population is occasioned by a want of demand for their labour; the operation of the Bill is to increase this evil. It not only opens no new field for labour, but injures those already existing; and while the cause of the evil is the want of demand for labour, it actually diminishes that demand, and thereby aggravates the evil it is intended to remedy. For nothing can be clearer than that restriction upon any branch of manufacture increases the cost of production, which immediately occasions decreased consumption, and consequently a decreased demand for the labour which is employed in such production.

These observations were made upon the Bill brought forward by Mr. Sadler, and probably may not entirely apply to all the details of the present Bill, but substantially they do, and they may be considered as a reply to Q. 79.

SAMUEL COURTAULD.

## ANSWERS of GEORGE HENRY HOLAH, Resident Superintendent, Braintree.

Essex.

No. 110.

George H. Holah.

- A. 1.—Braintree, Essex.  
 A. 2.—Silk-throwing.  
 A. 3.—Erected in 1810, and continued working since that time.  
 A. 4.—Worked by water with regular and constant power.  
 A. 5 & 6.—From the opening of windows.  
 A. 7.—At the discretion of the persons employed.  
 A. 8.—All machinery considered dangerous, and within reach of the hands, is fenced off.  
 A. 9.—They are provided with soap, and every convenience for washing themselves, also drying their clothes if wet.  
 A. 10.—Formerly seven years of age, but none are now employed under nine, many of whom have previously been engaged in lace tambouring and straw plaiting.  
 A. 11.—Children are more preferable at nine than twelve years of age for silk employment; they in general make better hands, and sooner become accustomed to the employment and discipline of a silk-mill; between the ages of nine and twelve years their hands have become hardened, and their fingers frequently distorted, from domestic service.  
 A. 13.—No.  
 A. 15.—No children are lodged and maintained.  
 A. 17.—Twelve hours per day.  
 A. 18.—Twelve hours per day; no difference for age.  
 A. 19.—Not more than twelve hours any day.  
 A. 20.—Three hundred and three days and a half.  
 A. 22.—The spinning and throwing mills continue working during meals, but without the attendance of the hands.  
 A. 23 & 24.—Twelve hours per day.  
 A. 27.—No.  
 A. 37.—Reduction of wages to the persons employed; diminished quantity of work done; while standing expenses of rent, &c. remain the same, and therefore increased cost.  
 A. 38.—The temperature is regulated solely by the comfort of the hands. A moderate temperature is best adapted to the work.  
 A. 39.—A hot-air room, heated by a stove, is used to dry the silk on the reels, but it is attended by one man only, and is distinct from other parts of the mill.  
 A. 50.—Oil and candles during the twelve hours of day-time when there is not sufficient natural light.  
 A. 53.—Half an hour for breakfast, and half an hour for dinner, for all.  
 A. 54.—All that choose leave the mill during meal-times, and those who take their meals in the mill have opportunities of exercise on the premises in the open air.  
 A. 57.—Reproof, disgrace, and forfeit of wages.  
 A. 58.—Slight correction, such as an occasional box on the ear.  
 A. 59.—By the female overlookers.  
 A. 64.—None.  
 A. 65.—Three adults and two children live in the cottages of their employers, but are not under any superintendence when out of the mill.  
 A. 66.—I am fully convinced that those who commence the business of a silk-mill in infancy are more skilful than those who begin later; that there are not more than six hands who began after eleven years of age.  
 A. 67.—Since 1825 six hands have died of consumption, and two of other disorders up to 1831. From 1831 to 1833 four have died of consumption and two of brain fever, during which time more than four hundred hands have been on the books; and the ague and scarlet fever have prevailed in the town and neighbourhood.  
 A. 68.—There are no injurious processes in the mill.  
 A. 69.—No.  
 A. 79.—The employment of a silk-mill requires cleanliness, and is favourable to health. There is no dust, or effluvia, or loose particles arising from it, as is the case in cotton-mills; and the chief exertion required is in standing to their work. Besides two carpenters, two labourers, and the superintendent, only females are employed.

GEORGE HENRY HOLAH.

## ANSWERS of JOHN HALL, Abbey Silk-mills, Coggeshall.

No. 111.

John Hall.

- A. 1.—Little Coggeshall, Essex, Abbey Silk-mills.  
 A. 2.—Silk-throwing.  
 A. 3.—The original mill supplied the Abbey with flour in King Stephen's time; was rebuilt by Mr. White in 1773, and used as a fulling-mill; enlarged by Thomas Sawyer and John Hall in 1818, and converted into a silk-mill.  
 A. 4.—Water-power, very irregular; in winter eight horse night and day; in summer frequently obliged to stop for six hours in a day. Have added a steam-engine, ten horse power.  
 A. 5.—Pipes are constructed to pass from the upper room through the roof. The windows  
 (APP.—B. 1.) Q 4

Essex.

John Hall.

windows all open as required, and have many tin ventilators which regulate themselves according to the heat of the rooms.

A. 6.—The opening of windows are the best and principal means.

A. 7.—The ventilation is attended to by the overlookers, and is at the discretion of any hand in the mill to admit or exclude air.

A. 8.—The shafting is all under cover, except the main shafting, which is seven feet high.

A. 9.—I have a convenient room for the hands to exchange or dry their clothes, warmed by steam. Cisterns and sinks in each room for the hands to wash at three times a day. Introduced in 1826.

A. 10.—Nine years of age is the time I fix to receive children into the mill; but some parents, who have large families, state they cannot keep them at home after they are eight; they become so desirous of coming to the mill with their sisters, that I am induced to take them nine hours per day.

A. 11.—The nature of the work does not require children under twelve years of age, provided we could get a supply at and above that age.

A. 12.—I think not; but a child at ten or eleven can do as much work as one at twelve, and being satisfied with less wages, induces throwsters to give them employment.

A. 13.—No, not one.

A. 15.—I do not lodge or maintain one. Those who come too far to walk home to sleep, their parents procure them lodgings in the town, and come frequently to see they are comfortable. If orphans, the parish officers pay for their lodgings, and see to them weekly.

A. 16.—Every one is attended to, either by parents or the overseers of the poor.

A. 17.—Those who work by day eleven hours and a half; those who work by night ten hours and a half.

A. 18.—All who work by day begin and end at the same time, and work eleven hours and a half, except a few instances when they are sent in under nine years of age, or are at all out of health, then they come after breakfast, and make nine hours.

A. 19.—We work day and night regularly from September to April, Saturday and Sunday night excepted. The water then falls short; after which night-work depends partly upon rain.

A. 20.—About three hundred and five days, and about two hundred nights.

A. 21.—About ten thousand.

A. 22.—Every department goes on regularly together from six o'clock in the morning until seven o'clock at night (except meal-times). At seven an entire fresh set of hands come in, all above seventeen years of age, who work the mills only, or the last process.

A. 23.—About eleven hours and a half.

A. 24.—Eleven and a half.

A. 25.—Have not had occasion to exceed the regular hours.

A. 26.—There is no occasion to work children beyond the fixed hours; it can easily be avoided, either by increasing the hands and machinery upon the first operation, or by purchasing prime good working silks, so that the supply of bobbins may equal or exceed the demand of the drawers, or second operation, and so on. It is bad management alone that makes it necessary to work the youngest class over time.

A. 27.—Have made no alteration.

A. 28.—I do consider that the reduction of working-hours must enhance the value of a given quantity; but not in the same ratio.

A. 29.—Ignorance and avarice; but the man who tries the experiment pays dearly for it. If children are worked beyond their strength, they make bad work and double waste. This system fills the market with a bad finished article, and is generally sold at a low price, which has a bad effect upon the whole trade.

A. 30.—I have made no alteration as yet in my hours of work. My calculation is this; if my week is reduced from sixty-nine hours to sixty hours, making allowance for candle, coals, &c., my wages will be increased ten per cent. Wages are about one third of the cost of producing one pound of fine organzine silk, say at 6s. upon the cost of the raw, it will add 3d. per pound to the price. If the supply is decreased by short hours, the prices would advance 6d. at least.

A. 31.—There surely cannot be a man existing who would not prefer two sets of hands to one, where extra hours are required. I presume the extra hands are not to be got.

A. 32.—I expect a change of hands are tried in every mill, provided they can be procured.

A. 33.—I employ all my power by day, so as to prepare a supply of bobbins for the mills at night. The mills require only a few old hands to superintend them; and water-power being cheap is my only inducement to work at night.

A. 34.—I do not comprehend this Query, unless it means a set by day and a set by night; if so, to increase the supply.

A. 35.—My night set work uniformly. Should any one wish to change, I find no difficulty in filling up her place. The fifty per cent. extra wages given for night-work induces plenty to accept it in preference to day-work.

A. 36.—At the present profits upon throwing I can barely produce a sufficient quantity of work to cover my outgoings; if my present quantity of production is reduced from 25,000l. to 20,000l. my mill would be ruined, and bankruptcy ensue, unless the advance took place mentioned in A. 30.

A. 37.—It is my sincere opinion that if the working hours are at all under sixty, many throwsters who have the means will remove to the opposite coast.

Essex.

John Hall.

A. 38.—A moderate temperature is the best for silk work; 50° to 60°; either too hot or too cold makes the silk brittle.

A. 39.—If too warm the gum flies off and we lose weight; if too cold, say at freezing, the thread is brittle and makes much waste.

A. 40.—Not applicable to silk throwing.

A. 42, 43, 44, & 45.—I do not employ any children at night-work.

A. 46.—Not any.

A. 50.—By candles.

A. 51.—The same as by day.

A. 52.—By obtaining high wages they dress more; in other respects we perceive no difference.

A. 53.—Half an hour for breakfast, three quarters of an hour for dinner.

A. 54.—It is optional; if fine nearly all go out; if wet many take their meals in and about the mill.

A. 55.—The moment the machinery stops the hands are at liberty to do as they think most comfortable, to go home or stop in or about the mill.

A. 56.—If it is fine my hands all leave the mill.

A. 57.—I give rewards to every hand employed every Monday morning, according to the report of conduct the preceding week,—five, ten, fifteen, up to thirty per cent. advance upon the wages stated; which has the effect of keeping them all regular and well conducted, as their parents allow them to set this apart for clothes, and pocket-money for their own use.

A. 58.—Occasionally.

A. 59.—By foreman only; he is the overlooker; I have one to each room.

A. 60.—Yes.

A. 61.—Both.

A. 62.—No.

A. 63.—My instructions upon this matter are given so frequently in the hearing of all employed, that no copy is necessary. I allow nothing but a small strap to be used, and never allow a child to be touched except across the shoulders: if an overlooker was to strike a child upon the head I should discharge him. It is the disgrace of the punishment, and not the severity of it, that has the best effect.

A. 64.—Not one since the mill was established.

A. 65.—Not one.

A. 66.—It is a fact that those who commence about ten years of age always make the best hands.

A. 67.—The health of the children is generally improved; we do not average two deaths to one hundred children employed in the mill per annum for the last five years; regular employment; good bread; cheap clothing; the poor laws liberally administered in the parish; several good charities; the cottages mostly roomy and very clean, well stocked with flour and pork; dress neat and always clean; surprises all strangers who visit us. Previous to our establishing the silk-mill the parish was deeply in debt, the poor children in rags, miserable looking wretches, more like an Irish than an English village.

A. 68.—All processes in the silk-throwing business are equally healthy. The winders and drawers all stand; my mill girls all sit; sitting agrees better with one than another, so we accommodate them in that way.

A. 69.—I never saw any Act that relates to my mill; I never had occasion to inquire for one.

A. 77.—Not at all should a case occur to require it.

A. 78.—I do not consider myself so competent as those who have already taken this matter in hand to say how obedience is to be enforced; my opinion is, that in case the time is reduced below sixty hours per week, wages will be so reduced that the masters and workpeople will all join to break the enactment, and the law will be a dead letter. Should Saturday be limited to six or eight hours, my works shall never move on that day. I shall engage all my hands to work by day instead of by week, and having no competition for their labour, what are the people to do? I am favourable to a time bill, but am not aware of any advantage children can derive from mixing in the crowd on Saturday's market, having others to market for them.

JOHN HALL.

## ANSWERS of STEPHEN BROWN, Colchester.

No. 112.

Stephen Brown.

A. 1.—Parish of St. Martin's, borough of Colchester.

A. 2.—Silk-throwing.

A. 3.—Built 1825–1826, commenced work July 1826, gradually increased and completed in 1828, enlarged 1832, 1833.

A. 4.—Steam-engine of twenty-four horses power.

A. 5.—There is no other provision afforded for the ventilation of the rooms save that of the windows, which, being numerous, afford the best and only effectual means of ventilation.

A. 6.—On the opening of windows.

(APP.—B.1.)

R

A. 7.

Essex.

Stephen Brown.

A. 7.—The ventilation is regulated by the overlooker, who adds to or diminishes therefrom at the will or caprice of the workwomen.

A. 8.—The dangerous parts of the machinery are all fenced off.

A. 9.—The arrangements for the health and convenience of those employed consist of suitable places for adding to or diminishing the quantity of clothes, with a constant supply of good fresh water with which to wash as often as occasion may require, such arrangements having date with the erection of the mill.

A. 10.—I profess to take no child below ten years of age, although frequently deceived by parents, whose anxiety to place them to the work is such as to induce them very frequently to mis-state their age.

A. 11.—Children require to be taught as early as ten years of age to make good and efficient hands at the different processes as they advance in years.

A. 12.—Recent alterations in machinery have had no effect either way.

A. 13 & 14.—No.

A. 15.—I lodge and maintain none; but those who are orphans are at stated periods properly attended to by the parish officers of the parish to which they may belong, whose duty it is to see their wants supplied and morals protected.

A. 16.—Every child is properly attended to by either parents, guardians, or parish officer.

A. 17.—Twelve are the stated number of hours by day, and ten and a half by night.

A. 18.—Twelve hours, and no difference made unless under peculiar circumstances, such as indisposition or other casualties.

A. 19.—There have been twenty-two hours made in an extreme case, but such very seldom happens.

A. 20.—About three hundred and eleven days.

A. 21.—About three thousand seven hundred and fifty, including nights, may be the hours which the women have worked; and about three thousand four hundred for that of children.

A. 22.—Every department commences with seven o'clock in winter and six in summer, and terminate after twelve hours labour.

A. 23.—About eleven hours.

A. 24.—Twelve hours.

A. 25.—Never exceed the usual number of hours for day labour.

A. 26.—Nothing but bad management could ever occasion it.

A. 27.—Owing to the variations in the different filatures of silk it has sometimes happened that I have been obligated to work a greater number of hours at one particular process, to keep pace with the other processes of throwing.

A. 28.—The cost is enhanced, but not in the same ratio.

A. 29.—The inducement to continue the same hands throughout the process both by day and night arises out of the great uncertainty of their being regularly required at night, and the casualty of good or bad silk being about to be worked requiring more or less at one process; besides the great desire to admit of hands belonging to the establishment earning all they can by over-time.

A. 30.—The increase in the cost of production from the limitation of hours of work is greatly enhanced in all the branches of silk-throwing, in the proportion of such limitation, it being usual that each branch should be only so far extended as to keep pace with the others, or as near as possible.

A. 31.—The objection to question 31 arises out of the great uncertainty of the hands being constantly required, thereby rendering their earnings of too great uncertainty to induce them to hold themselves in readiness to form relays of working hands.

A. 32.—Children are never employed by me over and above the usual twelve hours day-work; extra hours in night employment is confined to women.

A. 33.—I employ no two sets of hands; those women who are occasionally required by night work also by day.

A. 34.—One set of hands only being required, it becomes unnecessary to enhance the expence by having two; besides my anxiety to admit of every hand earning all she can to induce her to continue at the work, and become a more efficient workwoman.

A. 35.—A limited number of hands work by night, and those women only with whom there is a partial change with day-workwomen.

A. 36.—The effect on the present very distressed state of silk-throwing would be so to lessen the profits as to render those engaged in it incapable of competing with the Italian throwster.

A. 37.—The effect, in my opinion, would be to annihilate many an industrious throwster, and to throw the numerous hands depending upon him for employment upon the poor's rate.

A. 38.—About 60°; much above or below renders silk difficult to work with advantage.

A. 41.—About thirty.

A. 42.—Not any.

A. 50.—By candles and gas.

A. 51.—None, save what the windows afford.

A. 52.—No effects are visible, as far as I am enabled to form an opinion, save that of dress.

A. 53.—Half an hour at breakfast and fifty minutes at dinner.

A. 54.

A. 54.—Nearly all leave the premises, the only exception being those who come from a distance and provided with their meals on coming to their work in the morning.

A. 55.—Those who do not study their own convenience of taking with them in the morning their meals, or otherwise, the regulations of my mill making it an optional point to be settled by themselves.

A. 56.—I am not aware that it would produce any effect either way.

A. 57.—Forfeits and withholding rewards, which latter is a gift for good conduct, in case their deserving it, at the end of the week, and is given or withheld at the option of the overlooker.

A. 58.—Never, with my knowledge or sanction.

A. 62.—I forbid them under any circumstances, and have never been made acquainted with any such having taken place.

A. 63.—My instructions are general and verbatim, to inflict no corporal punishment.

A. 64.—No complaints have ever been made against myself, foreman, or overlookers.

A. 65.—The workpeople occupy no houses belonging to me.

A. 66.—Children of tender years are more easily taught, and, having their minds early engaged in the work, become more efficient hands, than those taken in at a later period of life.

A. 67.—The hands employed at my mill are and have always been, from the commencement of its going to work, generally strong, healthy, and robust, and remarks to that effect are constantly being made by the neighbouring magistrates, clergy, and gentry, who occasionally visit my mill: I can ascribe it only to the healthful state of my rooms, where, in the winter months, the poor children are well protected from the inclemency of the weather, and are happy in having such an asylum from their miserable dwellings.

A. 68.—Every process in my mill is healthy, and requires no change in the employment of the hands.

A. 69.—I know of no Act of Parliament which has reference to the regulations of my mill, and am of opinion there will never be required one to regulate its internal government.

A. 77.—Never having been placed in a situation to form an opinion, I cannot say, but should answer generally, I do not think they are in any fear of displeasing me.

STEPHEN BROWN.

#### ANSWERS of Messrs. WITTS and RODICK, Pebmarsh Silk-mill.

No. 113.

Messrs.  
Witts & Rodick.

A. 1.—Pebmarsh Silk-mill, Essex, gives employ to women and children, who bring home at the end of the week the means of support to their families, whilst the wages given by farmers during part of that period were insufficient for their maintenance.

A. 2.—Trams, organzeen, and mirabout.

A. 3.—In 1800 erected a silk-mill, formerly a flour-mill; the power of water used to grind corn. The building was erected in 1800 as it now is, except in 1823 a steam-engine was added.

A. 4.—Both water and steam. If the power of water is sufficient, steam is not used; but when water is short, steam is applied, as great irregularity in the supply of our water-power occurs at certain seasons of the year.

A. 5.—A perfect arrangement for ventilation by valves at the east and west end of the ceiling (which is lofty).

A. 6.—Does not depend on opening of windows.

A. 7.—By foreman and overlookers.

A. 8.—All dangerous parts of the machinery are inclosed.

A. 9.—Personal cleanliness is indispensable; much attention is paid to neatness in dress. They have an opportunity to change their clothes, or to dry them at the stove if necessary. In the entry they can hang up their cloaks, bonnets, and umbrellas. They have access to a constant supply of a fountain of water on the premises.

A. 10.—A few eight years old, but generally not taken till ten or twelve years old; most of our children belong to agricultural families. No other trade is carried on in our village but this silk-mill.

A. 11.—Children of ten or twelve years of age are more handy and sooner instructed to handle silk than older persons who have been employed in field-labour, &c.; and we find parents object to come to work unless we consent also to employ their girls, who, if left at home, would either get into mischief, or must be paid for to have care taken of them.

A. 13.—We did employ twenty-four apprentices; since an Act of Parliament limited the distance we discontinued apprentices.

A. 14.—Mile End and Lambeth.

A. 15.—Some orphans, and were visited by their relations and by the parish officers occasionally, and reports made half-yearly. The resident minister of the parish often visits them.

A. 16.—A matron, housekeeper, and a foreman.

A. 17.—Uncertain; their employ is regulated by circumstances; viz., a sudden decrease of water, a proper supply of the raw materials, a forward or retarded state of some part of the process of winding, &c., and other circumstances connected with machinery too numerous to detail.

(APP.—B. 1.)

R 2

A. 18.

Essex.

Messrs.

Watts &amp; Rodick.

A. 18.—Thirteen hours, deducting two hours for meals.

A. 19.—All day and night a part of the machinery; but the winding part never at night.

A. 20.—All the year, except Sundays, Christmas-day, and other holidays.

A. 25.—When there occurs an excess or a deficiency in any particular process of machinery, viz. winding, spinning, or doubling.

A. 26.—Excess beyond the usual hours is with us unavoidable occasionally, in order to forward one process, to relieve another process of throwing; and such excess is voluntary and always coveted by the hands, as they are paid for such extra employ.

A. 27.—We only worked our silk-mill during the day formerly, and often were compelled to shorten our hours for want of water; but since we added steam-power, and since the import duty has been reduced on foreign thrown silks, we have been compelled in self-defence to use more exertions to enable us to remunerate our outlay, which has been expensive, and have worked part by night by a small number of hands, who are generally married women or adults, and those changed as stated in A. 33 and 42.

A. 28.—The competition of the foreign throwster would ruin us, and deprive all our hands of employ, as our parish has no other employ for women and girls.

A. 29.—Certainly, in all branches, to a great extent. See A. 26.

A. 30.—Limitation of hours of work, or rather of employ, would be an additional expence in all processes of throwing silk, for expensive machinery would be idle when water-power is abundant (for which rent is paid), which rent is a per-centage on all silk that is thrown.

A. 31.—At Pebmarsh the population is not superabundant for our employ; to induce fresh hands to settle would not be practicable; cottages wanted, and the land-owners set themselves against an increase.

A. 32.—This would not answer with us; but young children are never required for our night-work.

A. 33.—Night-hands begin to work one hour after the day-hands leave work.

A. 35.—Change occasionally when requested to do so.

A. 36.—Our machinery would not be productive now foreign competition is so increased by the reduction of the protective duty on throwing; our water-power would run to waste; in all probability it would cause us to shut up the mill.

A. 37.—Any legislative interference (beyond the common law of the land) with the employ of persons in so easy, clean, and healthy a business as a silk-mill, would injure a manufacture at present unable to repay the cost of machinery. It would also render the hands insubordinate.

A. 38.—From 56° to 70°.

A. 39.—The silk-throwing does not require a higher degree of heat than 55°.

A. 40.—Varying from one hundred and forty to one hundred and fifty.

A. 41.—Most part of the year.

A. 42.—Six children and six women.

A. 43.—Three of each from eight to one o'clock; three of each from one to six.

A. 45.—Five hours.

A. 46.—Occasionally for weeks the spinning and throwing mills require continuous work with very few hands to attend them during the night.

A. 47.—During the whole day, with the exception of meal-times.

A. 48.—Seventeen to forty years of age.

A. 49.—To compete with the foreigner, and to make the most use of the power of water when we have abundance. See A. 26.

A. 50.—By candle; burning oil injures silk.

A. 51.—Same as by day.

A. 52.—As healthy as others, and is the employ most desired, being best paid.

A. 53.—Three quarters of an hour each meal; the leaving off and settling again takes up nearly half an hour each time.

A. 54.—Many do, but some bring their food with them, and in winter sit round the warm air pipes to eat their meal, or in summer sit out in the open air to eat their food, and afterwards engage in some active game of play; all persons use their own discretion except apprentices, who regularly go to the cottage where they reside, and sit down to their three meals daily, and after eating play about in the open air, if they like, till the bell rings.

A. 57.—Trifling fines, or withholding rewards to apprentices, or a degrading dress.

A. 58.—Never before 1830, except a box on the ear; since, a cane the size of a quarter of an inch diameter has been used by the foreman very seldom, to excite attention; now that system has been discontinued.

A. 62.—We have that confidence in our foreman that we always left it to his discretion, and he has exercised it with judgment and humanity; any instances we witnessed ourselves being so trifling, we have sanctioned it rather than forbid it.

A. 63.—We have never had occasion by writing to give instruction to our overlooker or foreman on this subject, as in repeated conversations we found they coincided with our views of humanity and discipline.

A. 64.—In thirty years, once for cutting off ornamental curls of hair as a punishment for disobedience and theft.

A. 65.—Apprentices have a cottage to reside in, with a matron to superintend, and alternately some of these children are employed to do part of the household and domestic work, to enable them to be useful to themselves in future life, when out of their time. They all are taught to read, and their catechism, hymns, and prayers, and twice each Sunday attend the parish church, are examined by the parish clergyman annually, and when of age for confirmation are taken to Halstead church, when the Bishop of London holds a confirmation there, four miles off.

A. 66.—Great; a person brought up in the mill will generally earn double what another who came later in life; instance, Mary Potter and J. Bacon.

A. 67.—For thirty years the health of the children in the mill has been better than the rest of the village population; last year not a single instance of cholera in any persons employed in the mill. We have had only one instance of death in the apprentices in thirty years, though the average has been above twenty apprentices constantly.

A. 68.—We know of no injurious effects of any particular process in a silk-mill, it is a healthy employ, requires no labour, only constant attention of the eye; extremes of heat and cold are avoided as injurious to the manufacture.

A. 69.—We are not aware there exists any Act of Parliament to regulate silk-mills; we consider that they require no particular legislation beyond the common law of the land; all further interference we think would tend to injury, be inconsistent with political economy, and be holding out a premium for informers.

A. 77.—Such is the spirit of independence prevalent amongst the working-classes in this district, and the encouragement the administration of the poor laws gives to this spirit, that the workpeople would try to hold their masters in fear by constant threat of some infringement of the law, instead of feeling any reluctance to give evidence.

A. 78.—We can only suggest, let silk-mills alone; exempt them from any legislative provisions in any new Bill; they require not any. They are now, and have been, well conducted as far as we have observed in various parts of England. The persons employed are healthy. The remuneration of the owners is so much reduced since 1826 as to cause many mills to stand still, though increase of speed has been tried to increase remuneration.

A. 79.—It is one of the most comfortable employments for females that has been encouraged in this kingdom, and tends to induce habits of order, care, and cleanliness more than most others. The children who keep their time habitually, and consequently make the best earnings, are the finest looking and most healthy.

We flatter ourselves that it would gratify any one who interests himself or herself about the condition of the operative poor, to see all our hands on a Lord's day at the parish church, as they then appear, or also after the hours of work on a week-day enjoying themselves with the greatest cheerfulness and activity, thus proving silk-mill employ does not injure them by over-work.

BROOME P. WITTS.  
E. L. RODICK.  
H. RODICK.

## HERTFORDSHIRE.

ANSWERS of THOMAS R. SHUTE, Watford, Rickmansworth, and Chesham.

A. 1.—Watford, Hertfordshire; Rickmansworth, four miles from Watford; and recently Chesham in Buckinghamshire, twelve miles from Watford.

A. 2.—Silk-throwing only.

A. 3.—The mill at Watford was erected about the year 1760, and was raised one story about the year 1814; the mill at Chesham was built about 1830; that at Rickmansworth in 1831.

A. 4.—The mill at Watford, where the heavy machinery is, is worked by a stream of about twenty-five to thirty horse power; the mills at Rickmansworth and Chesham, which only assist the Watford mill, by steam-powers; the stream at Watford is very regular for a river.

A. 5.—The rooms are lofty, about ten feet and a half high, having thirty-six windows in each; in some of the windows are ventilators.

A. 6.—When the rooms are too warm the upper sashes of the windows are pulled down, which produces a thorough circulation of air through the room.

A. 7.—The overlooker or persons employed may, at their pleasure, pull down the sashes of the windows.

(APP.—B. 1.)

A. 8.

Hertfordshire.

No. 114.

T. R. Shute.

Essex.

Messrs.

Witts & Rodick.

Hertfordshire.

T. R. Shute.

A. 8.—The dangerous parts of the machinery are fenced off; a serious accident has not occurred during my recollection.

A. 9.—The work is clean, and requires cleanliness; should the workpeople come to work with dirty hands, a tub of water and soap is kept in each room, where they are sent to wash; the people take off their bonnets and cloaks, and hang them up in the rooms where they work; this has always been the case.

A. 10.—When parents bring their children, I require that they should be about eight years of age before I take them in; I am not aware that any of these children have been employed at any other trades.

A. 11.—Most certainly; at twelve years most children who have been used to any other sort of work would be unfit for silk; their fingers would be coarse and rough.

A. 12.—They have rendered necessary a greater proportion under twelve years of age; the same competition that the silk trade has been forced into with the foreigner obliges us to adopt the same facilities that he has; the work is light, and requires no other bodily exertion than that used in tying knots, so that many children of ten or eleven years of age, who have been engaged in the work for two or three years, can work nearly if not quite as well as an adult.

A. 13.—No, I do not.

A. 15.—I do not lodge or maintain any; they return to their homes every evening.

A. 17.—The mill is open for working eleven hours and a quarter each day; the people come as they choose to work; there is not, nor do I think any compulsion can be used to bring them to work; many, perhaps the majority, absent themselves for one or two whole days in the week, calculating the time they keep by the hours of working during the long days (I mean as to light). The time of working is divided into three divisions; from their first coming in the morning until breakfast, from after breakfast until dinner-time, and from dinner-time, until the hour of leaving the factory, so that the people may work the whole or any portion of the day, (attending to the divisions of it made by the meal-hours,) as they may think fit.

A. 18.—Those under twenty-one years of age are left to their free choice in the same way as the seniors, excepting those who are beginning to learn the business, who are only allowed to work ten hours a day, if they would or would not; and this regulation is kept in force for one or two years according to their ages.

A. 19.—The mill is kept open for work regularly, for six days in the week, excepting the regular holidays, which are two days at Christmas, two days at Easter, two days at Whitsuntide, and four half holidays, which are three days of Watford Fair and Shrove Tuesday; the mill has been opened for those disposed to work at all other times for some years, unless any accident to the machinery has compelled me to close it; besides this, I should observe that I frequently work over-time, which is inevitable in the silk business, or many of the hands would be obliged to lose much of their time. It proceeds from this cause; silks vary much in quality and the facility with which they are wound; to prepare it for the weaver it has to go through three or four different processes; the winding or first process regulates all the rest. When the silk winds well, or more so than the average at which the different parts of my machinery are calculated upon, it fills up all the bobbins, and those who work at the drawing-engines have the option, if they choose to embrace it, to work over-time; this over-time extends to two hours longer than the period for which the mill is usually open; if this was not done, those who work at the winding could not come to work the following day: when the silk winds badly, the winding-engines must work over-time, or the drawers would have no employment on the following day. As the chief objections raised to the factory system by those who understand but little about it have been on account of the number of hours that persons are employed, I wish to explain myself on this point fully; over-time forms another division of the day, which, like all the rest is perfectly left to the choice of the hands to work or not, as they think fit; most of them are very glad of the opportunity to embrace it, as it enables them to lay by a little money to enjoy themselves during the regular holidays, or at other times when they may wish to visit their friends, or for other causes; possibly many who work two hours later at night will not come until after breakfast on the following day.

A. 23.—It is impossible to say the average hours that each person has worked; I should say that the majority lose from one to two days in the week.

A. 24.—The longest period from one meal time to the other in the shortest days of the year is five hours, which, taken with what I have before stated, is the reply to this question.

A. 25.—I should suppose that the nature of the work renders it necessary for me to offer them the choice of over-time for four days in the week during six months of the year.

A. 26.—In A. 19. I have stated why it is inevitable.

A. 27.—The factory has been worked in this manner as long as it has been in my possession, or as long as my recollection can extend to, which is about twelve years.

A. 28.—If I were to work my factory a less number of hours than I do, the foreign throwster would take all the business, I should be ruined, and my people starved.

A. 29.—The hours of working in silk-throwing are not regulated by any laws, excepting those who desire to work the two hours over-time. I have a distinct set of hands for the nights.

Hertfordshire.

T. R. Shute.

A. 30.—In all branches a very material increase, especially in the spinning and throwing, sufficient to give the foreign throwster such an advantage over me as would compel me to abandon my factory or be ruined.

A. 31.—The ordinary hours are never exceeded unless by the free choice of the people. If I were to work a less time than I do, neither I nor my people would live. A relay of hands during those hours is unnecessary, as the people are not at all fatigued, and the population of the place would not afford it.

A. 32.—It would be impossible to procure a relay of hands for the extra hours, which are only two when it does happen; the population of the place will scarcely supply a sufficiency for one set. I have employed a night-set of hands for many years as well as a day-set; they come to work when the others leave off; at the present season of the year (the month of May) they come at seven o'clock in the evening, and leave work at six in the morning, when the others come; they have half an hour for their supper allowed them, when I give them either tea or beer, so that they work ten hours and a half.

A. 34.—It would be my interest, under any circumstances, to work two sets of hands; but under the peculiar circumstances under which the silk-throwing trade is placed I am compelled to do so, making every effort in our power. The foreigner presses very hard on us; if I did not work during the night he would have such an advantage as would stop my business altogether. I would not engage to take a thousand pounds per annum to cover my loss if I was prevented from working during the night as well as the day. My power is water; coals here are very dear; in case I did not work during the night half my power would be wasted, and the large capital invested in expensive machinery would only make half the return that it should. The difference is this; by way of illustration, suppose my mill was a farm of two hundred acres, and I only cultivated one hundred acres, I should have the same rent, rates, taxes, and nearly the same expences for managing the one hundred acres that were unproductive as if the two hundred acres were under cultivation; but the most important reason for working during the night is this, that by employing about thirty-three persons during the night, half of whom are above the age of twenty-one years, and the other half boys from fourteen to eighteen years of age, I can employ from three hundred to four hundred more persons during the day, that is, about double the number of persons that I should employ if I worked during the day only. As this town (Watford) will not supply hands sufficient, I have two other small factories at Rickmansworth and Chesham, where I wind the silk by steam-power; the power required for winding is very small compared with that of throwing it, but it will require about fourteen persons to wind what one hand can throw into organzine; the winding is all day-work.

A. 35.—I have a set of hands which keep regularly to night-work, and they prefer it to day-work.

A. 36.—An absolute destruction to it.

A. 37.—I don't think that a corresponding reduction in wages would, if the number of hours was reduced, place the throwster in a situation to compete with the foreigner; the hindrances and injuries to the work in stopping are so great, the wages of the hands must inevitably be reduced in the first place, but the loss to the master will be double or more than the amount of the reduction of wages.

A. 38.—Neither heat nor cold are applied in any manner for the purpose of assisting the manufacture; my object and interest is to keep the rooms at a temperature comfortable to the people.

A. 40.—The temperature for all processes is the same.

A. 41.—The mill is worked as regularly during the night as the day; that is to say, the spinning and throwing rooms.

A. 42.—About sixteen hands is the regular number under twenty-one years of age.

A. 43.—For ten hours and a half.

A. 44.—Sixteen regularly.

A. 45.—From the time the day-hands leave off until they come in again in the morning.

A. 46.—Yes, the spinning and throwing.

A. 47.—During twenty-four hours.

A. 48.—I employ thirty-three night-hands for spinning and throwing; half are boys from fourteen to eighteen years of age, and the others men and women, chiefly the latter.

A. 49.—Firstly, I could not produce my work cheap enough and sufficiently spun for the manufacturer to compete with the foreigner; secondly, the other two factories that I have would be rendered useless; they assist me in producing the work cheap for the competition, and the hands would be thrown out of employment. My object is to produce the greatest return from the least outlay of capital. The foreigner, with many other advantages over the English throwster, works his mill night and day, and is under no restrictions.

A. 50.—By candles; smoke injures the silk.

A. 51.—The same as during the day.

A. 52.—I am not aware that it produces any different effect in their habits than the day-work does on the day-hands; I should say that it is more comfortable to many, as they prefer it.

(APP.—B.1.)

R 4

A. 53.

Hertfordshire,

T. R. Shute.

A. 53.—The hours for meals for all classes are alike; half an hour is allowed for breakfast, an hour for dinner, and a quarter of an hour for tea.

A. 54 & 55.—All, excepting two persons, the overlookers of the spinning and throwing rooms, who watch that no accident happens to the machinery; to stop this machinery would injure the silk; it would make it break or snarl (that means become knotty, which spoils the weaver's goods.)

A. 56.—The people do not leave for tea; the time occupied by three or four hundred people leaving their work and becoming settled again is nearly half an hour.

A. 57 & 58.—They are occasionally, but rarely, chastised with a thin cane about the size of two goose-quills; this applies to the younger persons: the elder are fined for destroying the silk, or other misdemeanors, according to a fixed scale.

A. 59.—By overlookers, the foreman, and the parents.

A. 60.—Yes, by my desire. I consider the morals and characters of the young people, whilst they are at work in the factory, committed to my charge; and when mild means fail, I think it my duty to order temperate punishment to be tried to correct any growing wicked habits, such as wilfully destroying the silk, theft, or lying, which must occur when there are a number of young boys employed. If I find that after once or twice being punished they remain incorrigible, I turn them off. I should always prefer punishment, where it was possible, to be administered by parents; but they, unfortunately, rarely do it with judgment; they rarely chastise a child unless they are in a passion, and that, too frequently, for some trivial offence, whilst they suffer the heavier faults, which affect a child's moral character, to go unpunished. Unless some mild chastisement were used occasionally, factories might justly be charged with fostering most bad vices in young people.

A. 61.—Any chastisement approaching to a sharp caning should have my previous sanction.

A. 62.—I do all in my power, by rewards and kind treatment, to prevent the necessity of corporal punishment; but, when necessary, I order it to be inflicted with a thin cane only, or by a slap in the face.

A. 63.—My instructions to the foreman and overlookers are, never to flog a child so as to produce marks on his back, and never to use his cane when a slap in the face will be sufficient.

A. 64.—I am only aware of two complaints having been made for the last seven or eight years before the magistrates on account of children being punished; one was for a bruise on the hand, which I believe was accidentally struck by the cane, which was intended for the back. I told the magistrates, that if I believed the overlooker had struck the blow maliciously, I would have discharged him; but that as the man had superintended about eighty-eight children for five or six years, and this was the first complaint preferred against him, I believed it to be an accidental blow; it made the hand black and swell, without producing any further injury. The other complaint was of a very trifling nature, made, I firmly believe, by the boy, that he might be discharged from my employment, and maintained in idleness by the parish.

A. 65.—Some of the workpeople live in cottages belonging to me, but more than half live in other houses. I have the village swept up every week, I permit no filth to be left about, and I suppress drunkenness and immorality as well as I am able.

A. 66.—A young woman who has commenced in infancy may earn, when grown up, from six to seven shillings per week, whereas scarcely any who commence at fourteen or sixteen years of age would ever earn more than three or four shillings; in fact, they are unteachable, and destroy the value of more silk than they earn in wages.

A. 67.—As the employment has always been the same, I am not aware of any alteration in the general health of the people; I should say, for the number employed, there is very little sickness amongst them.

A. 68.—None of the employments are injurious; the labour in all is much the same. At Rickmansworth, where the factory has been at work during only two years, I can form a better estimate of the effects of the employment on the children; their appearance has much improved, they appear to be better clothed, better fed, and look more healthy. I never knew an instance of a person growing deformed from the employment; I only know of two instances out of about five hundred persons, whom I at present employ, and those proceed from natural causes. If any person was to go round the factory, and select the most healthy and finest children there, I have little doubt that they would be those who keep their time most regularly and work longest; they earn more money, and are consequently better fed and clothed.

A. 69 & 70.—No, it is not.

A. 79.—Young hands are necessary at the spinning to work at night; they do the work better than the large hand of an adult; they are quite as healthy as those who work in the day-time; the noise and spirits that the children exhibit in their play would convince any body that they are not fatigued with their day's work, I mean when it is accomplished.

THOS. ROCK SHUTE.

## NORFOLK.

## ANSWERS OF WILLIAM MARTIN, Norwich.

Norfolk.

No. 115.

*William Martin.*

- A. 1.—In the parishes of St. Swithin and St. Benedict, city of Norwich.
- A. 2.—Sorting, winding, throwing, and warping silk.
- A. 3.—One building for throwing silk erected in 1811; one for sorting, winding, and warping silk in 1814; one for winding and throwing silk in 1816; one for winding silk in 1831.
- A. 4.—Twenty horse condensing steam-engine and a sixteen horse steam-engine; formerly worked by water, but discontinued in consequence of an inefficient supply.
- A. 5.—Air-holes where necessary.
- A. 6.—Windows, the control of which is left to the workpeople, with instructions to keep the rooms as cool and comfortable as possible.
- A. 7.—By the overlooker and workpeople.
- A. 8.—Fenced off.
- A. 9.—Self-acting water-closets in each room, and lead sinks, with a plentiful supply of water.
- A. 10.—From eight and upwards.
- A. 11.—Yes, cheapness, to enable us to compete against free trade.
- A. 12.—Not aware of any.
- A. 13.—No.
- A. 17.—Mill hands, from 12 years to 35 years of age, twelve hours and a half each day; one hour allowed for rest; Saturday, 10 hours and a half, out of which forty minutes are allowed for rest, as they leave work two hours sooner.
- A. 18.—Warpers, from 13 to 30 years of age, eleven hours ten minutes each day; Saturday, 10 hours and a half. Winders, from eight to twenty-three years of age, eleven hours ten minutes each day; Saturday, ten hours and a half. Can sit down at their work occasionally.
- A. 19.—No alteration in the hours.
- A. 20.—Regularly kept at work—see Nos. 17 and 18—for the time, deducting six days holidays at different periods of the year.
- A. 22.—Young hands, winders and warpers, leave off one hour earlier than the mill hands, except on Saturdays.
- A. 23.—Mill hands, twelve hours and a half each day; 10 hours and a half on Saturday. Winders and warpers, eleven hours and ten minutes each day; ten hours and a half on Saturday.
- A. 33.—Since our building was destroyed by fire at Yarmouth in May 1832 we have kept our mills going by night with a fresh set of hands.
- A. 34.—Don't apply to us.
- A. 35.—Uniformly by night, and do not change periodically.
- A. 36.—Winders and weavers thrown out of employ.
- A. 38.—This is regulated according to the convenience of the people.
- A. 39.—The common temperature.
- A. 41.—Major part of our throwing mills since May 1832. See answers 33. and 36.
- A. 42.—No children.
- A. 43.—Ten hours work, with ten minutes each hour for rest, and at one o'clock fifteen minutes.
- A. 44.—No children; 128 young women from sixteen years of age and upwards.
- A. 45.—Eight at night till six in the morning; leave off at half past eleven on Saturday night.
- A. 50.—Candle and gas.
- A. 51.—Windows.
- A. 52.—We are not aware of any difference between the night-hands and day-hands.
- A. 53.—For breakfast, half an hour at half past eight o'clock; dinner, one hour at one o'clock; tea, twenty minutes at five o'clock.
- A. 54.—All have the option of leaving at breakfast-time and dinner-time, but some not at tea-time.
- A. 55.—For both.
- A. 56.—Those who do not go home to take their meals have it in a room on the premises prepared on purpose, as some live at too great a distance to go and return in time with comfort to themselves.
- A. 57.—Children pay forfeits, which are divided amongst the most deserving at the end of every month.
- A. 58.—Not allowed by the proprietors.
- A. 63.—Instructions are for people to abstain from beating children.
- A. 66.—The majority of those that have been reared in the concern we consider are the most proficient.
- A. 67.—We consider that the health of the children and young persons employed in the silk-mills is promoted by the regularity, cleanliness, and comfort of our establishment; that they are not over-worked, and, that so far from their constitutions being impaired by their occupation, they are as robust and vigorous as persons of the same age engaged in any other
- (APP.—B.1.) S of

Norfolk.

*William Martin.*

of the ordinary avocations of life, and more so than could reasonably be expected from any care which their parents would be able to bestow upon them in their own cottages.

A. 78.—Not aware of any existing law to regulate the hours of labour in silk-mills.

WILLIAM MARTIN.

No. 116.

*John Brown.*

## ANSWERS of JOHN BROWN for the firm of Grout, Baylis, and Co.

A. 1.—St. Nicholas parish, Great Yarmouth, county of Norfolk.

A. 2.—Winding and throwing of silk, warping, and power-loom and hand-weaving.

A. 3.—In the year 1822; another building in 1826. The 1822 building burnt down 27th May 1832; rebuilt the same year.

A. 4.—Eighty horse steam-engine; condensing, not high pressure.

A. 5.—Air-holes where necessary.

A. 6.—Windows and sky-lights.

A. 7.—By the overlookers.

A. 8.—Fenced off.

A. 9.—Always have had sinks in each room for the convenience of the workpeople, as also self-acting water-closets, and water is always laid on to sinks and water-closets.

A. 10.—From seven and upwards.

A. 11.—Cheapness.

A. 12.—Not aware of it.

A. 13.—None.

A. 17.—Twelve hours and a half. Out of this twelve hours and a half each day the mill hands are allowed one hour's rest; on Saturday they work ten hours and a half, and rest forty minutes.

A. 18.—Eleven hours; ten hours and a half on Saturday.

A. 19.—No alteration in the hours.

A. 20.—Regularly at work (see Nos. 17 and 18 for the time), deducting six days holidays.

A. 22.—Young hands, winders and warpers, leave off one hour earlier than the mill hands and weavers, except on Saturday.

A. 24.—Never exceed the hours already stated.

A. 27.—No.

A. 29.—Not having practised this, cannot say.

A. 33.—Since our building was burnt down we have a set of night-hands.

A. 35.—They work uniformly, and do not change periodically.

A. 36.—Not mills enough to keep the weavers at work.

A. 38.—The temperature of the manufactory regulated according to the convenience of the people.

A. 39.—The common temperature.

A. 41.—Only our throwing-mills. Reason given for working them, see answer 36. Mills worked 254 nights.

A. 42.—No young children; those persons employed are from fourteen to twenty-four.

A. 43.—Ten hours work, with ten minutes each hour for rest, and at one o'clock twenty minutes.

A. 44.—No children; not more than seventy-two hands.

A. 45.—Eight at night till six o'clock in the morning, leaving off at half past eleven o'clock on Saturday night.

A. 50.—Candle and gas.

A. 51.—Windows.

A. 52.—We are not sensible of any difference in the habits and moral conduct of one class of hands from another.

A. 53.—Half past eight o'clock, breakfast, half an hour; one o'clock, dinner, one hour; five o'clock, tea, twenty minutes.

A. 54.—All have the option of leaving at breakfast and dinner-time, not at tea-time.

A. 56.—Time would be lost in going to and fro, and, as the work is not hard, numbers of the weavers prefer not leaving off at all at tea-time.

A. 57.—Children pay forfeits, and these forfeits are divided at the end of the month amongst those that are most deserving.

A. 58.—Not allowed by the proprietors.

A. 62.—Prevent it when it has come to our notice.

A. 66.—The majority of those that have been reared in the concern we consider are the most proficient; Wright, Gaymer, Page, weavers.

A. 67.—Our people are considered very healthy, and we are not aware of any alteration in their health having taken place in the last ten years.

A. 69.—Don't know.

22d May 1833.

JOHN BROWN.

## SUFFOLK.

Suffolk.

No. 117.

Samuel Gee.

ANSWERS of SAMUEL GEE, for Messrs. Grout, Baylis, and Co., Mildenhall.

- A. 1.—Mildenhall, Suffolk.
- A. 2.—Winding silk.
- A. 3.—Erected 1819.
- A. 4.—Manual power.
- A. 5.—Air holes in ceiling.
- A. 6.—And windows.
- A. 7.—By the overlooker.
- A. 8.—Fenced off.
- A. 9.—Every arrangement necessary for the comfort of the children.
- A. 10.—From eleven years old and upwards.
- A. 11.—Not absolutely, but in order to meet the great competition produced by the free trade system and other causes.
- A. 12 & 13.—No.
- A. 14.—Never had any.
- A. 17 & 18.—All eleven hours ten minutes each day, except Saturday, then ten and a half hours.
- A. 19.—No alteration in the hours.
- A. 20.—Regularly kept at work, see A. 17 & 18 for time, deducting six days holidays in the year.
- A. 22.—All work same hours.
- A. 23.—Eleven hours ten minutes each day, ten and a half hours Saturday.
- A. 24 & 25.—None exceed the hours stated.
- A. 27.—No.
- A. 33.—Never.
- A. 38.—Regulated to the comfort of the people.
- A. 39.—Common temperature.
- A. 50.—Oil lamps and candles in winter evenings.
- A. 53.—Half an hour at breakfast, one hour at dinner, twenty minutes tea.
- A. 54.—All leave if they like, except at tea-time.
- A. 55.—For both.
- A. 56.—Those who live at a distance prefer eating it in a room provided on the premises, or they would be hurried to go and return in time.
- A. 57.—Forfeits, which are divided amongst the most deserving at the end of every month.
- A. 58.—Very rare.
- A. 59.—By the overlookers.
- A. 62.—Yes.
- A. 63.—Instructions are from the proprietors to abstain from beating children.
- A. 64 & 65.—No.
- A. 66.—Those reared in the concern are most proficient.
- A. 67.—The appearance of the children is superior to the same class not employed in manufacture, by reason of the regularity, cleanliness, and comfort of the establishment.
- A. 68.—No necessity.
- A. 69.—Do not know.
- A. 73.—None in this town.
- A. 78.—Not aware of any law to regulate labour in silk-winding.

SAMUEL GEE.

Staffordshire.

STAFFORDSHIRE.

No. 118.

*Samuel Alcock  
& Co.*

ANSWERS of SAMUEL ALCOCK &amp; Co., Burslem.

- A. 1.—Burslem, in the county of Stafford.
- A. 2.—Manufactory of china and earthenware.
- A. 3.—Erected, 1765; enlarged, 1816.
- A. 4.—None employed.
- A. 5.—No specific provision for ventilation.
- A. 6.—On the opening of windows.
- A. 7.—Regulated by some of the persons employed.
- A. 8.—No steam employed.
- A. 9.—No particular arrangement.
- A. 10.—At nine years old, and have not been previously employed.
- A. 11.—Yes, in some branches of work, where they assist the workmen by doing that part of the work which is light and easy; and it is also very convenient for the workmen, because they have to pay them their wages.
- A. 12.—No machinery employed.
- A. 13.—Yes.
- A. 14.—None received.
- A. 15.—None employed under this specification.
- A. 16.—None such employed.
- A. 17.—Ten hours.
- A. 18.—Ten hours, making no difference.
- A. 19.—Twenty-four hours in some cases.
- A. 20.—About three hundred days.
- A. 21.—Three thousand six hundred.
- A. 22.—No distinct difference except the over-men, who at intervals work through the night.
- A. 23.—Ten hours.
- A. 24.—From ten to twelve hours.
- A. 25.—No particular time; the hours of work are sometimes exceeded when an order arrives and is wanted off in haste.
- A. 26.—Excess beyond the regular hours of work on particular occasions is unavoidable, owing to the great diversity of processes and branches of workmanship necessary to constitute pottery; and the various kinds of work contained in the orders received, not equally dividing itself in all the branches, occasions one part of the workmen to work extra hours, for but few workmen are capable of taking up two branches of workmanship.
- A. 27.—Yes.
- A. 28.—In some cases.
- A. 29.—The work of children and adults is generally intimately connected with that of other workpeople, and owing to the fluctuation of business, and the manufacturer so adjusting the number of his workpeople to the main scope of his business, sometimes renders it necessary for them to work extra hours, but not to such an extent as to require a change of hands.
- A. 31.—The work is not so laborious and of such duration as to require relays; besides the extra hours not being regular or uniform.
- A. 32.—No, because it would occasion too great a multiplicity of hands, and the extra being occasional and not regular renders it unnecessary.
- A. 33.—Not required.
- A. 34.—Because it would greatly increase the cost of production, by employing a greater number of hands than the nature of the work requires, the light work not being constant and uniform.
- A. 35.—No night-set employed.
- A. 36.—Night-work in some processes is indispensable.
- A. 37.—It would enhance the cost of production, and in some cases cause a reduction in the workmen's wages in proportion to the reduction of working hours; it would also (by the same ratio) cause a greater difference between the specific time of one part of the workmen and the maximum of time required for the completion of some processes by the other.
- A. 38.—Usual temperature, 105° Fahrenheit's thermometer; lowest, 90°.
- A. 39.—120° Wedgwood's pyrometer.
- A. 40.—Six. (We have about thirty-six firemen and assistants, thirty of whom are employed in the lesser heat.)
- A. 41.—Two hundred and sixty.
- A. 42.—None.
- A. 46.—Yes, firing the ovens.
- A. 47.—From thirty to forty-five hours.
- A. 48.—From the age of fifteen to fifty.
- A. 49.—Because the degree of heat required must be attained by a slow and gradual ignition.
- A. 50.—By candle-light.
- A. 51.—None but casual means.
- A. 52.—In most cases their habits are not perceptibly different from those of other workmen, neither in body, power, or ability.
- A. 53.—From nine o'clock in the morning to half past, and from one to two o'clock.

B. 1.

- A. 54.—About half.  
 A. 55.—It is at the option of the workpeople.  
 A. 56.—None.  
 A. 57.—None in particular.  
 A. 58.—No.  
 A. 66.—None employed from infancy that are come to years of maturity.  
 A. 67.—They have as good health, in general, as they had when first employed.  
 A. 68.—No.  
 A. 69.—No mill employed in the manufactory.

SAMUEL ALCOCK &amp; Co.

Staffordshire.

---

 Samuel Alcock  
& Co.
 

---

## ANSWERS of JOHN CORMIE, Burslem.

No. 119.

---

 John Cormie.
 

---

- A. 1.—Burslem, county of Stafford.  
 A. 2.—Manufactory of earthenware.  
 A. 3.—At once, forty years since.  
 A. 4.—None.  
 A. 5.—The same as is general in earthenware factories; the workshops being separate are well aired.  
 A. 6.—Opening of windows.  
 A. 8.—None used.  
 A. 9.—There is no branch of the work particularly injurious to health, except the attendance at the ovens and the glazing of the ware. Formerly the glazing and firing were indiscriminate; now the glazier never attends the ovens; when firing he works in clothes which he puts off when he leaves work. An attention to cleanliness has prevented for the last twenty years the former effect of lead-glazing on the health.  
 A. 10.—Six or seven years of age, as waiters upon other young lads; generally as apprentices from eleven to thirteen years; women as painters at the same age.  
 A. 11.—Yes.  
 A. 12.—Machinery cannot be used in the greater part of the work, which is and always must be by hand-labour.  
 A. 13.—Yes, a considerable number.  
 A. 14.—None from parishes.  
 A. 15.—I am not aware any are orphans.  
 A. 17.—On Mondays and Saturdays, about six hours; other days, ten hours; sometimes, at their own pleasure, twelve oven-men, when the ovens are firing; from twenty to twenty-six hours in attendance.  
 A. 18.—Same as those on whom they attend, and in every other respect as those of twenty-one years.  
 A. 19.—Generally from ten to twelve hours; in two or three extraordinary cases for twenty hours in some departments. The general rule is from six A.M. to six P.M.  
 A. 20.—Three hundred and thirteen days.  
 A. 21.—(Suppose) 3,130 hours.  
 A. 22.—All work together.  
 A. 23.—Sixty.  
 A. 24.—Sixty; that is the full extent.  
 A. 25.—When a vessel is unexpectedly to sail, and part of the order is unfinished, we must then work extra hours. This observation will hold generally.  
 A. 26.—Unavoidable, for the reason stated above.  
 A. 27.—No.  
 A. 29.—This question does not apply to me, nor to earthenware manufacturers generally.  
 A. 30.—Never tried.  
 A. 31.—It being necessary to bind apprentices to learn any part of our trade, they must be kept to one sort of work, and therefore cannot be relieved by others.  
 A. 32.—Not tried, and for the reason stated above.  
 A. 33.—Never.  
 A. 37.—As all my workpeople work by piece-work, and are paid only for what they do, preventing them would lessen their income, and in some cases disarrange the manufactory, as the whole of the branches are dependent one on the other; viz., if one set work and the other do not the whole are stopped.  
 A. 38.—Generally atmospheric. In the ovens, dependent on the state of firing; never very oppressive nor injurious to health. In stoves, about 80°. None remain to work there, but carry articles out and in.  
 A. 40.—Forty.  
 A. 41.—Painters only for three nights; no other branch except oven-men, who are all night once a week, and this is unavoidable.  
 A. 42.—None.  
 A. 46.—The oven-men only.  
 A. 47.—Biscuit-oven, forty-eight hours; glost-oven, twenty-two to twenty-four hours.  
 A. 48.—Men of all ages, and young men from fourteen to twenty years of age.

(APP.—B. 1.)

S 3.

A. 50.

Staffordshire.

*John Cormie.*

A. 50.—By candles.

A. 51.—None.

A. 52.—On oven-men, that they sleep the greater part of the following day.

A. 53.—Half an hour for breakfast, one hour for dinner.

A. 54.—Not all; they sometimes cook their meals in the works.

A. 55.—For their own convenience.

A. 56.—As father, mother, and children may work at separate manufactories, they could not in the hour or half hour all meet at their own home; the consequence would be to drive them to those.

A. 57.—I have seldom used any other means than persuasion and pointing out the bad effects of disobedience.

A. 58.—Never by my authority, and beyond a stroke of the hand never corrects.

A. 59.—By overlooker; sometimes by parents; when necessary, they are sent for.

A. 60.—Never.

A. 62.—Have forbidden corporal punishments, and from experience of thirty years think them useless.

A. 65.—In other houses. I have three of my workmen who live in houses belonging to me, but do not interfere with them in any way.

A. 66.—I know of little difference; my workpeople seldom leave me, and they are generally steady and moral in their habits. I am careful to select such, and many have been with me ten, twelve, and twenty years.

A. 67.—During the last ten years I do not know of any difference.

A. 68.—No; this cannot be done with oven-men but by agreeing to change among themselves.

A. 69.—Have no mill.

A. 78 & 79.—If beer-shops and gin-shops were put down, a great many of the evils which afflict parents and children would be removed, and masters would be relieved from witnessing and hearing of such things as the government have no conception of. Beer-shops are the pests of manufacturing districts.

16th May 1833.

JOHN CORMIE.

No. 120.

*Henry Davenport.*

## ANSWERS of HENRY DAVENPORT, Burslem.

A. 1.—Burslem, in the county of Stafford.

A. 2.—Manufacture of china and earthenware.

A. 3.—These works have been erected at different times for thirty or forty years back, but no dates can be furnished. The increase of the erections has been gradual.

A. 4.—Neither.

A. 5.—No.

A. 6.—There are doors and windows sufficient for ventilation.

A. 7.—It is at the discretion of the persons employed.

A. 8.—No machinery used.

A. 9.—Most of them change their clothes (or part of them) when they commence work, and wash themselves on leaving it, more or less, according to the kind of work.

A. 10.—None employed by the proprietors under nine years of age, but in a few instances younger children assist their parents.

A. 11.—The great object in employing children is the low rate of wages at which they can be employed in doing the light work of the manufactory.

A. 13.—Yes.

A. 14.—None from the parish.

A. 15.—No orphans lodged or maintained; all live with their parents or friends and frequently work with them.

A. 16.—No.

A. 17.—The usual hours are from six until six in summer, and from seven until six in the winter.

A. 19.—In some instances a part of the hands have worked from six A.M. to ten or twelve at night.

A. 20.—About two hundred and ninety days.

A. 21.—Cannot state; some of the branches work occasionally longer than others, accordingly as the orders run; but as most of the hands are employed at piece-work, the time cannot be given correctly.

A. 22.—The people generally work a whole day.

A. 23.—Average is ten hours and a half in summer, and nine hours and a half in winter, Mondays and Saturdays are made shorter than any other days.

A. 24.—Thirteen hours, exclusive of meal-times, which are half an hour breakfast, one hour dinner, half an hour tea; but this is at their choice, as there is no machinery to be kept going.

A. 25.—Generally for the completion of orders wanted for immediate shipment.

A. 26.—Unavoidable, owing to the nature of some of the various processes of our manufacture; but this only relates to a part of the manufactory.

A. 27.—No.

A. 29.

A. 29.—The only inducement is the completion of orders which are to be prepared in a limited time, and for which there are not goods of every description wanted ready in the stock, and without which the assortment would be incomplete.

Staffordshire.

A. 30.—A limitation of the hours of work would naturally induce a rise in the price of workmanship, but to what amount cannot be stated, as the plan is untried.

Henry Davenport.

A. 31.—Not practicable in the manufacture of china and earthenware, nor is it necessary, extra hours being seldom required.

A. 32 & 33.—No.

A. 36.—Ovens are the only night-work, and cannot be avoided.

A. 37.—A reduction of the working hours would cause less wages to be paid, and the workmen would suffer privations accordingly; but in these manufactories no reduction is necessary.

A. 38.—The temperatures are various, but are not obliged to use any specific degree of heat in the work-shops which is hurtful to the people employed.

A. 39.—Have never ascertained it, except in the ovens used for firing the wares, which of course does not come within this inquiry.

A. 41.—Not at all, except firing ovens for baking the ware.

A. 46.—Ovens only.

A. 47.—Fifty hours.

A. 48.—Eighteen and upwards.

A. 49.—The fires, when once lighted, cannot be extinguished until the process is complete.

A. 50.—Candle.

A. 51.—Same as in day-time.

A. 52.—Not any, it is so trifling.

A. 53.—Half an hour breakfast, one hour dinner, and, if working extra hours, half an hour for tea.

A. 54.—More than half.

A. 55.—The workpeople suit their own convenience.

A. 56.—Persons living at a considerable distance from the manufactory could not find convenience to take their meals out of the manufactory.

A. 57.—Fine and discharge.

A. 58.—No.

A. 65.—Some live in their own houses, some in houses belonging to their masters, but mostly in houses which they rent; in all cases their cleanliness is apparent, and almost proverbial.

A. 66.—It is a general case that those who have been longest at a trade are the most skilful, and in all the branches an apprenticeship is required to perfect them as workmen.

A. 67.—Not any alteration perceived.

A. 68.—When any employment is found not to suit the health of the workman, he seeks another more suitable, being always at liberty to do so; in the case of apprentices the master generally will make the change.

A. 69.—No mill.

HENRY DAVENPORT.

## ANSWERS of JOB JACKSON, of the firm of J. J. Jackson, Burslem.

No. 121.

Job Jackson.

A. 1.—Burslem.

A. 2.—Manufacturing earthenware.

A. 3.—Erected at different times, before it was occupied by us.

A. 4.—Manual labour.

A. 5.—Windows and doors.

A. 6.—Yes.

A. 7.—It is generally regulated by the workpeople themselves.

A. 8.—None used.

A. 9.—We have no arrangement as to this.

A. 10.—Seven or eight years of age.

A. 11.—Yes, to assist the adults.

A. 13.—Yes.

A. 14.—No.

A. 15.—We are not aware any of the children in our employ are orphans. Parents who have children employed under us see them as often as they please.

A. 16.—Their master and their parents.

A. 17.—Twelve hours, say from six to six.

A. 18.—About twelve hours.

A. 20 & 21.—We have no means of ascertaining.

A. 22.—Yes; but we have no means of ascertaining, as we do not keep an account

A. 23.—About twelve hours.

A. 24.—About the same as above.

A. 25.—No account kept.

A. 26.—It is sometimes unavoidable; we never wish our people to work more than twelve hours if it can possibly be helped.

(APP.—B. 1.)

S 4

A. 27

Staffordshire.

Job Jackson.

A. 27 & 28.—We formerly used to work fifteen hours, but we find we can get quite as much work done in twelve hours, as the people keep closer to work, and of course there is considerable saving in fuel, &c.

A. 29.—We think it is a wrong idea to keep people at work longer than twelve hours; they cannot possibly attend to it as they ought.

A. 30.—We think there is a decrease in the cost of manufacturing, for the reasons stated above.

A. 37.—We think, as stated before, that twelve hours is quite sufficient for any person to work.

A. 38.—We have no means of ascertaining.

A. 39.—Very considerable; we should think 80° to 90°.

A. 40.—Perhaps about forty or fifty.

A. 46.—Yes, the firing of ovens.

A. 47.—From eighteen to fifty-two hours, according to the nature of the process.

A. 48.—Children about twelve or fourteen years are employed to sit up, one to an oven, with one man.

A. 49.—It is impossible to carry on our business without it.

A. 52.—We do not employ people in the night, except as before mentioned.

A. 53.—Half an hour for breakfast, and one hour for dinner.

A. 54 & 55.—They do as they please as to this, but they generally do leave.

A. 57.—They are generally employed by the men, and for the most part are their own children.

A. 58.—Not that we are aware.

A. 62.—No, we never had occasion to interfere.

A. 65.—We do not let dwellings to our workpeople.

A. 66.—In nearly all the departments of our manufactory a regular apprenticeship is served; the business could not be learned without.

A. 67.—We have no means of ascertaining.

A. 68.—No.

A. 69.—We suppose it is.

JOB JACKSON.

## ANSWERS of Messrs. CLOWES &amp; Co., Cobridge.

No. 122.

Messrs. Clowes & Co.

A. 1.—Cobridge, Staffordshire potteries.

A. 2.—Manufactory of earthenware.

A. 3.—Twenty-five years ago.

A. 4.—Done by manual labour, but steam used merely for grinding flint and colours.

A. 5.—The workshops are all ventilated.

A. 6.—By opening of the windows and doors.

A. 7.—By the workmen employed, as they require it.

A. 8.—No machinery is used.

A. 9.—No arrangements whatever; all depends on their own habit of cleanliness.

A. 10.—About eight years of age; cannot speak to their having been employed at any other trade.

A. 11.—We consider not.

A. 12.—Does not apply to the manufacturing of earthenware.

A. 13.—Yes.

A. 14.—We do not employ parish apprentices.

A. 15.—Some of the children employed are orphans, but we do not lodge or maintain any of them, and they are not visited by their parents or guardians.

A. 16.—Superintended by overlookers.

A. 17.—From half past six o'clock in the morning until nine o'clock at night, Saturday and Monday excepted.

A. 18.—The same as those about twenty-one years of age.

A. 19.—Twelve hours.

A. 20.—Two hundred and eighty-five days.

A. 21.—Two thousand five hundred and twenty.

A. 22.—The manufactory has been carried on generally.

A. 23.—Twelve hours, deducting one and a half hours for meal-times.

A. 24.—Twelve hours, allowing half an hour for breakfast and one hour for dinner.

A. 25.—They have not exceeded twelve hours for the last year, and have turned out as much work as though they had worked over-time.

A. 26.—We consider that as much work may be done in twelve as in fifteen hours: we speak from experience.

A. 27.—Yes, fifteen hours per day.

A. 28.—We consider it is more profitable to the manufacturer to work twelve hours instead of fifteen hours.

A. 29.—In the manufacture of earthenware, we are of opinion it is quite unnecessary to work more than twelve hours per day.

A. 30.—The cost of production is certainly more, but may be avoided by limiting the time to twelve hours.

A. 31.

- A. 31.—In the earthenware manufacture we are of opinion none are necessary.  
 A. 32.—Never has been tried.  
 A. 33.—Never.  
 A. 34.—We have before stated, one set of hands employed twelve hours quite enough.  
 A. 35.—Are only employed daily.  
 A. 36.—We only require them to work in the day.  
 A. 37.—We consider all children should work twelve hours daily under twelve years of age, allowing the usual meal-times of one and a half hours.  
 A. 38.—Various degrees of temperature, according to the different branches, but not excessive, except the firing and drawing of ovens.  
 A. 39.—From fifty to sixty.  
 A. 40.—About thirty, and only about eight are usually employed at a time.  
 A. 41.—No part of our works have been carried on during the night, except the men, alluded to above, firing the ovens.  
 A. 42.—If eight men are employed at night, each has a boy to assist him to carry the coals to the oven.  
 A. 43.—The whole of the night at intervals.  
 A. 44.—Say about eight.  
 A. 45.—The whole, at intervals, from six o'clock at night to six the next morning.  
 A. 46.—In firing the ware in its first state, called biscuit-firing.  
 A. 47.—About fifty to fifty-two hours, but none of the men work more than twelve hours at a time.  
 A. 48.—Of all ages, and boys from about fourteen to eighteen years of age.  
 A. 49.—It is requisite to burn the ware to its proper hardness.  
 A. 50.—With candles.  
 A. 51.—Merely the same as by day.  
 A. 52.—The effect of night-work cannot be so conducive to health as that by day.  
 A. 53.—Half an hour breakfast and an hour dinner.  
 A. 54.—Yes, several do whose houses are near the manufactory.  
 A. 55.—The convenience of the workpeople.  
 A. 56.—They have every convenience for cooking, and get their meals at the manufactory as comfortable as if they were at home.  
 A. 57.—Punishable by fines and stoppage of wages.  
 A. 58.—Yes, but very slightly.  
 A. 59.—By overlookers, and sometimes by their master.  
 A. 60.—Yes.  
 A. 61.—Both.  
 A. 62.—No.  
 A. 63.—No particular instructions have been given to my foreman; it is not often practised.  
 A. 64.—Not any.  
 A. 65.—No workpeople of ours live in any of our houses.  
 A. 66.—Very few children are taken when very young, and have not noticed any difference.  
 A. 67.—The general health of the workpeople the last ten years we should consider better, as they have become more cleanly, and since the article of lead has been reduced for the making of glaze the branch of dipping the ware is much more healthy by substituting tincall and borax.  
 A. 68.—No.  
 A. 69.—The mill is merely used to grind flint-stone, colours, and other materials for the potters use.

Staffordshire.

*Messrs. Clowes & Co.*

Messrs. CLOWES &amp; Co.

## ANSWERS of WILLIAM BAILEY, Stoke.

No. 123.  
*William Bailey.*

- A. 1.—Parish of Stoke, county of Stafford.  
 A. 2.—Manufacturing china earthenware, printing, enamelling, &c.  
 A. 3.—A part of the works erected about forty years ago for manufacturing earthenware, and another part erected about twenty-five or thirty years since for the ornamenting department.  
 A. 4.—Neither steam or water employed.  
 A. 6.—The workshops are ventilated by opening the windows, &c.  
 A. 7.—Ventilated by the discretion of the workpeople.  
 A. 8.—No dangerous machinery used.  
 A. 9.—A good supply of water, and they have change of clothing when necessary.  
 A. 10.—Children come apprentices at twelve and fourteen years of age; none under that age have been previously employed at other trades.  
 A. 14.—None come apprentices from parishes.  
 A. 15.—Three orphans that lodge with their friends.  
 A. 16.—Persons solely employed for their instruction.  
 A. 17.—Twelve hours a day.  
 A. 18.—Apprentices and others twelve hours a day.  
 (APP.—B. 1.)

T

A. 19.

Staffordshire.

William Bailey.

- A. 19.—Fifteen hours a day.  
 A. 22.—Not been carried on at different times.  
 A. 23.—Twelve hours.  
 A. 24.—Not more than fifteen hours, which includes their meal-times.  
 A. 25.—According as orders are wanted.  
 A. 26.—No.  
 A. 27.—No.  
 A. 38.—About eighty degrees in summer, and fifty or sixty in winter.  
 A. 39.—About eighty degrees.  
 A. 40.—Nearly the whole of the hands.  
 A. 41.—Never during the night.  
 A. 46.—Firing the ovens.  
 A. 47.—From twenty-four to twenty-six hours.  
 A. 48.—Men of all ages.  
 A. 50.—No lights wanted.  
 A. 51.—No ventilation wanted.  
 A. 52.—Generally healthy strong men.  
 A. 53.—Half an hour for breakfast, an hour for dinner, and half an hour for tea.  
 A. 54.—All leave that think proper.  
 A. 57.—Use no means not necessary.  
 A. 58.—No.  
 A. 66.—Various.  
 A. 67.—The workpeople have generally good health.  
 A. 69.—Have no mill.

WILLIAM BAILEY.

No. 124.

T. & J. Carey.

ANSWERS of THOMAS &amp; JOHN CAREY, Lane End, Longton, Stoke-upon-Trent.

- A. 1.—Lane End and Longton, in the parish of Stoke-upon-Trent, in the county of Stafford.  
 A. 2.—Manufacture of earthenware.  
 A. 3.—The manufactory was erected in 1816, and since then no additional erections have been made.  
 A. 4.—Manual labour only employed.  
 A. 5 & 6.—Opening of doors and windows.  
 A. 7.—At the discretion of all the persons employed.  
 A. 8.—There are none.  
 A. 9.—No.  
 A. 10.—At about eight years. Not having been employed before.  
 A. 11.—Yes, but the work is not very laborious; simply carrying the moulds from which the plates, &c. are made to and from the stoves for drying; and the female children in cutting the paper prints from the engravings in proper form to lay upon the ware to leave an impression.  
 A. 12.—No machinery.  
 A. 13.—Yes.  
 A. 14.—None from parishes.  
 A. 15.—Only one orphan, who resides with an uncle.  
 A. 17.—From ten to twelve hours when at full work.  
 A. 18.—From ten to twelve hours.  
 A. 19.—Cannot say; we keep no account; probably, in the hurry of preparing shipping orders by a given period they may in some few instances exceed fourteen hours.  
 A. 20.—Impossible to say at all correctly.  
 A. 23.—About ten hours per day.  
 A. 24.—The same as the men.  
 A. 25.—By the causes stated in A. 19.  
 A. 26.—We consider it unavoidable.  
 A. 27.—Yes, when trade is very dull.  
 A. 28.—It makes little difference, for they generally work piece-work.  
 A. 36.—Does not apply to our manufacture.  
 A. 46.—Firing or burning of the earthenware.  
 A. 47.—About forty hours.  
 A. 48.—Men of middle age, and sometimes assisted by young men about sixteen or eighteen years of age.  
 A. 49.—The earthenware would be spoiled if the firing was discontinued after once began.  
 A. 50.—By candles.  
 A. 51.—Same as by day.  
 A. 52.—No ill effects have ever come under our observation.  
 A. 53.—Half an hour for breakfast and one hour for dinner to every class of persons.  
 A. 54.—Nearly all. What do not, bring their food to the manufactory on account of living at a distance.

A. 55.

- A. 55.—For the convenience of the workpeople.  
 A. 56.—None.  
 A. 57.—Reproof.  
 A. 58.—Very seldom.  
 A. 59.—By those persons under whose superintendence they are, whether they be foremen, parents, or overlookers.  
 A. 60 & 61.—Yes.  
 A. 62.—No; it has so seldom taken place that such steps were unnecessary, but very few instances having occurred during the sixteen years we have been manufacturers.  
 A. 65.—Some do, and some do not.  
 A. 66.—Those who have been employed from an early age are generally the most proficient.  
 A. 67.—We perceive no alteration.  
 A. 68.—No; the parties themselves are not restricted from exchanging work with each other, such as firemen and dippers, which is the only unhealthy employment.  
 A. 69.—Does not apply to our manufacture.  
 A. 79.—We are decidedly of opinion that the less legislative interference there is between master and servant the better.

THOMAS & JOHN CAREY.

Staffordshire.  
 T. & J. Carey.

## ANSWERS of F. &amp; R. PRATT, Stoke-upon-Trent.

No. 125.  
 F. & R. Pratt.

- A. 1.—Parish of Stoke-upon-Trent, in the county of Stafford.  
 A. 2.—Manufacturing earthenware.  
 A. 3.—Erected for an earthenware manufactory.  
 A. 4.—Neither.  
 A. 5.—Windows.  
 A. 6.—Opening of windows.  
 A. 7.—By the persons employed.  
 A. 8.—No machinery.  
 A. 9.—We are not aware of any being needed.  
 A. 10.—From ten to twelve.  
 A. 11.—In some cases.  
 A. 12.—No machinery.  
 A. 13.—Yes.  
 A. 14.—We have no parish apprentices.  
 A. 15.—No orphans.  
 A. 16.—An overlooker.  
 A. 17, 18, & 23.—Ten hours.  
 A. 33.—No.  
 A. 46.—Biscuit ovens only.  
 A. 47.—About forty-eight hours.  
 A. 48.—A man, and a boy of fifteen or sixteen years old.  
 A. 49.—Gradual heating, for burning or baking the ware.  
 A. 33.—For breakfast half an hour and dinner one hour.  
 A. 54.—Many leave, and all are at liberty to leave.  
 A. 55.—Convenience of the workpeople.  
 A. 57.—To see that work is done, or no wages.  
 A. 58.—No.  
 A. 67.—If there is any alteration, it is for the better.  
 A. 68.—No.  
 A. 69.—No mill.

F. & R. PRATT.

## ANSWERS of THOMAS GOODFELLOW, Tunstall, Wolstanton.

No. 126.  
 Thomas Goodfellow.

- A. 1.—Tunstall parish, Wolstanton, county of Stafford.  
 A. 2.—Pottery.  
 A. 3.—Cannot tell, as the manufactory was erected before it was occupied by me; should think it has been employed as a pottery for fifty years.  
 A. 4.—Neither; all manual labour.  
 A. 5.—Yes; casements and doors.  
 A. 6.—On opening windows and doors.  
 A. 7.—At the discretion of all or any of the persons employed.  
 A. 8.—Do not employ machinery.  
 A. 9.—None needed.  
 A. 10.—Eight or nine years.  
 A. 11.—Yes, as some of the trades will not allow of sufficient wages for children of more than ten years.  
 A. 12.—Have not any machinery.  
 (APP.—B. 1.)

T 2

A. 13.

Staffordshire

Thomas Goodfellow.

- A. 13.—Yes.  
 A. 14.—No parish apprentices.  
 A. 15.—Children generally live with their parents.  
 A. 16.—Yes, foreman.  
 A. 17.—The regular time is from half past six o'clock in the morning to six'clock in the evening, allowing them half an hour to breakfast, and one hour to dinner, making their labour ten hours a day.  
 A. 19.—Greatest number of hours fourteen, but this very seldom occurs.  
 A. 20.—Every day except Sundays.  
 A. 21 & 22.—Cannot tell; no account kept.  
 A. 23.—Nine hours.  
 A. 24.—Refer to A. 17. Never more than fourteen hours, this very seldom occurs.  
 A. 25.—To complete a foreign order when the vessel is to sail on a certain day.  
 A. 29.—It is sometimes necessary to work to complete a foreign order, that it may be ready in time for the vessel it is to sail by; this very seldom occurs. It is necessary that oven-men sit up all night when the kilns are firing, and only this man can finish it. This is regular through the trade.  
 A. 30.—No.  
 A. 31.—In cases of oven-men; refer to A. 29.  
 A. 32.—No, do not think it necessary, as it so seldom occurs.  
 A. 33.—No.  
 A. 35.—Sit up with the kiln in their turn, say one night a week.  
 A. 36.—In cases of oven-work it would spoil all our goods, as the kiln cannot be fired under seventeen hours, and sometimes twenty hours.  
 A. 37.—Working hours not too long, as the men are generally healthy.  
 A. 38.—Cannot tell, as the workmen regulate it themselves.  
 A. 40.—Eleven.  
 A. 46.—Yes, firing biscuit ovens.  
 A. 47.—Fifty-four hours, but are relieved every twelve hours.  
 A. 48.—From fourteen to sixty years.  
 A. 49.—Because goods cannot be fired in biscuit state without it.  
 A. 50.—By candles.  
 A. 51.—Casements and doors.  
 A. 52.—What is done is not injurious.  
 A. 53.—Half an hour to breakfast, and one hour to dinner.  
 A. 54.—Generally all.  
 A. 55.—All who stop do so for their own convenience.  
 A. 57.—Generally by discharging them.  
 A. 58.—Sometimes, but very slight and seldom.  
 A. 59.—By all.  
 A. 60.—Sometimes.  
 A. 61.—Yes.  
 A. 62.—No.  
 A. 65.—Some do live in the houses of their employers, but no control is exercised over them more than other tenants.  
 A. 66.—None.  
 A. 67.—Do not perceive any difference.  
 A. 68.—No, there is no necessity for it, as the men are generally healthy.

THOMAS GOODFELLOW.

Wiltshire.

No. 127.

J. Spiers.

## WILTSHIRE.

## ANSWERS of J. SPIERS, Silk Factory, Chippenham.

- A. 1.—Chippenham, in the county of Wilts.  
 A. 2.—Weaving, winding, and silk-throwing.  
 A. 3.—The building is eighty feet by twenty-one. No addition has been made to it since its first erection; it contains five floors; the ground floor has been occupied during the last two years with a silk mill; the second, third, and fourth are occupied with engine-loom for the manufacture of galloons, doubles, hat-bands, &c., and the fifth is used for weaving, winding, and warping.  
 A. 4.—The power employed is a six horse steam-engine, which has worked regularly twelve hours per day during the six summer, and eleven hours per day during the last six winter months.  
 A. 5.—There is a ventilator at both ends of each shop, the object of which is to admit the pure and eject the foul air.  
 A. 6.—Air is also admitted by the opening of windows.  
 A. 7.—The ventilation is regulated at the discretion of the persons employed generally.  
 A. 8.—Such parts of the machinery considered dangerous are fenced off.  
 A. 9.—The employ being perfectly clean and temperate, have no arrangements either for washing or changing clothes.

Wiltshire.

*J. Spiers.*

A. 10.—Ten years is the lowest age at which children are employed; have only two so young and two others, who are now more advanced, were previously employed in a cloth factory.

A. 11.—There is no actual necessity for the employment of children under twelve years of age; the employ being light, is very suitable; but the chief motive for their employment is, that they receive less wages than is given adults, and I apprehend a sufficient number of the latter could not always be obtained.

A. 12.—The recent application of new and improved machinery as regards the silk-trade affords opportunity of giving employment to more children than formerly, but this applies only to soft-silk-winding.

A. 13.—Formerly apprentices were employed; at present none.

A. 14.—Apprentices are not employed.

A. 15.—The children employed are none of them orphans, and are under the care and protection of their parents, by whom they are maintained.

A. 16.—All the children employed are under the care of their parents.

A. 17 & 18.—All persons employed in my factory, without regard to age, have worked twelve hours each day during the last six summer months, and eleven hours during the winter months, except Saturday, on which day the greater portion work only eleven hours either summer or winter.

A. 19.—During the last year, on no occasion has any person in my employ worked more than twelve hours in one day.

A. 20.—Three hundred and seven.

A. 21.—Three thousand five hundred and thirty.

A. 22.—The whole of my works are carried on at one and the same time each day.

A. 23.—Eleven and a half.

A. 24.—Twelve.

A. 25.—Under no circumstances have the usual or regular hours of work been exceeded.

A. 26.—Excess beyond the regular hours is always avoidable and always avoided by me.

A. 27.—Have formerly worked them twelve hours per day, but at no period more.

A. 28.—Were the persons employed to work a greater number of hours, and thereby produce a larger quantity, the cost would be something less.

A. 29.—If the persons employed are paid by the week, and no extra pay given for overtime, the motive must be to obtain a large produce at the least possible expense, and it is obvious it must have that effect should the works be carried on wholly or in part by apprentices; it will also save a great expense in machinery, as one third more will be required to produce the same should it be kept going but ten in lieu of fifteen hours.

A. 30.—From a limitation of working-hours an increase in the cost of production must of necessity follow, but the extent depends on the value and the quantity produced.

A. 31.—To have two sets of children the gain would not be equivalent to the extra expence, particularly where one set is kept to work fourteen or more hours per day; from the great expence of lights and various causes, night-work is never so profitable as that by day.

A. 32.—Relays or change of hands may have been tried, but never to my knowledge.

A. 33.—I employ only one set of hands, and that is a day set.

A. 34.—The interest of a manufacturer in working two sets of hands, where the nature of the work does not require it, is, I apprehend, with a view of obtaining the largest produce possible from a comparatively small portion of machinery.

A. 37.—The effect on a further reduction of working hours would be followed by an increased demand for hands, and probably an advance of wages.

A. 38.—My factory is heated by means of steam-pipes, running completely through each shop, which are used only for the purpose of warming the factory.

A. 39.—From fifty-five to sixty degrees in winter only.

A. 40.—From one hundred and twenty to one hundred and thirty.

A. 49 & 50.—None in my employ work by night.

A. 51.—A ventilator at both ends of each shop.

A. 52.—None in my employ work by night.

A. 53.—One hour is allowed for dinner; from one o'clock till two.

A. 54.—All persons leave if they choose.

A. 55.—If they remain in the factory it is for their own convenience.

A. 56.—Persons leaving the factory at meal-times do not on their return settle to their work so readily as when it has not been left.

A. 57.—In some cases slight correction, but in general, should they not be found attentive, dismissal.

A. 58.—Severe punishments are never inflicted.

A. 59.—When children are corrected it is either by the foreman or overlooker.

A. 60.—Slight correction has occasionally been inflicted, but never with such a degree of severity as to call for my interference.

A. 61.—My sanction is never given either prior or subsequently.

A. 62.—I at all times forbid corporal punishments, and very seldom hear of any, even the slightest correction, taking place.

A. 63.—My general instructions to my foreman and overlookers are, not to inflict corporal punishments, but if the children are not industrious to discharge them.

A. 64.—On no occasion have complaints been made or proceedings taken before magistrates, either against me, my foreman, or overlookers, on the subject of any punishments alleged to have been inflicted in my establishment, either during the last three years or any former period.

---

Wiltshire.

---

J. Spiers.

---

A. 65.—None of the persons employed live in my houses, and when they quit the factory are no longer under my control.

A. 66.—The skill of those taken in the factory at the age of from fourteen to fifteen years I think equal, after a period of four or five years, to that of those who have been trained to it from ten or eleven, and they are generally quite as tractable, with little or no difference as respects their moral character or conduct; but I must here remark, that having none but females in my employ, I am not perhaps so competent to give an opinion.

A. 67.—During the seven years that I have had the factory I have not perceived any material effect the employ has had on the health of the workpeople; many of them have been with me the whole time, whose health has always been and still is good; three have died, all of whom were of delicate health when they came to me, with strong tendency to consumption; one was with me but a short time, the other two married, had one child each, and had left some time prior to their decease. The confinement on these three persons I think might have had some injurious effect.

A. 68.—As regards the health of the workpeople, there is no necessity for changing their employment, every part being equally unobjectionable.

A. 69.—I consider my factory subject to the provisions of the present Act.

A. 70.—Never.

A. 73.—There is a clothing-factory in my neighborhood, but whether it is conducted in strict conformity to the provisions of the Act I have no means of knowing.

A. 74.—Not to my knowledge, but should think they have not.

A. 75.—I never heard, but think not.

A. 76.—I should think none was ever wanted.

A. 77.—Have no doubt that in factories where a strict discipline is kept up fear of the consequences operates most powerfully against the obtaining evidence.

### ANSWERS.

#### WRITTEN ANSWERS received to the QUERIES.

---

#### NOTTINGHAMSHIRE.

##### ANSWERS of EDWARD UNWIN, Ashfield.

- A. 1.—Sutton in Ashfield, and county of Nottingham.
- A. 2.—Spinning of cotton, and weaving.
- A. 3.—The manufactory has been erected sixty or seventy years.
- A. 4.—At present steam only is used; formerly wind, water, and steam.
- A. 5.—No; nothing but windows.
- A. 6.—The hands open and shut the windows whenever it suits them.
- A. 8.—There is no access to the dangerous parts of the machinery, except by the engineer.
- A. 9.—None.
- A. 10.—Generally about twelve years old; and none of them are previously employed at other trades, to our knowledge.
- A. 11.—No; the few we have under twelve years old are brought by their parents.
- A. 12.—A less number of children.
- A. 13.—No.
- A. 15.—We employ no orphan children, and the parents of the others visit them whenever they please.
- A. 16.—The overlooker in each room has the superintendence of the children.
- A. 17.—Twelve hours and a half.
- A. 18.—Twelve hours and a half for five days, and eleven and a half on Saturday.
- A. 19.—Twelve hours and a half.
- A. 20.—So many stoppages occurred last year from machinery breaking, that it is impossible to answer this question accurately; and the same will apply to the question which follows.
- A. 22.—The works are all carried on together.
- A. 23.—As near as can be ascertained, it did not exceed eleven hours.
- A. 24.—Twelve hours and a half.
- A. 26.—They are always avoidable, but at a considerable loss to ourselves, as we have always paid the full wages, although we have had frequent stoppages from the breaking of machinery, and have not made up the difference by working beyond the regular hours.
- A. 27.—We used to work a less number of hours than we do now.
- A. 29.—There can be no doubt that he will make a much greater profit if he pays no higher wages, and that of course would be his inducement to extend the hours of labour.
- A. 30.—The Commissioners will see that rent, taxes, the interest of capital, and all incidental expences (which in this neighbourhood are nearly equal to the wages) are always going on, and therefore a great limitation of the hours of labour must necessarily affect the cost of production.
- A. 31.—The wages required.
- A. 32.—We have had no necessity for working extra hours.
- A. 37.—It is very probable that if the hours of labour are reduced, the same quantity of work will be exacted, and paid for at the reduced ratio.
- A. 38 & 39.—We generally work at a temperature of 65 to 70 degrees, and that is about the average temperature of the mills.
- A. 41.—Never.
- A. 46.—None.
- A. 50.—Oil-lamps and candles, for the short time we work before day-light and after dark.
- A. 51.—The same as the day.
- A. 53.—Some of the mechanics and overlookers are allowed half an hour at breakfast, an hour at dinner, and half an hour at tea-time; the remainder, ten minutes at breakfast and twenty-minutes at dinner.

C. 1.

---

Nottinghamshire.

---

No. 1.

Edward Unwin.

---

Nottinghamshire.

Edward Unwin.

A. 54 & 55. Some of them do go home; but the greater part of them remain, and they do so for their own convenience, the distance being too far for most of them, in the short time allowed.

A. 56.—In our case it would make little or no difference.

A. 57.—No particular means.

A. 58.—Very rarely, and only in very gross cases.

A. 59.—By the overlookers.

A. 63.—We give no instructions to the overlookers to correct the children, unless in cases of gross lying or thieving; and we find very few require punishment.

A. 64.—None.

A. 65.—Some of them do, but the majority do not; their moral and social improvement is left in the hands of the parents, and to the various schools which are established in the town and its vicinity.

A. 66.—We have no doubt that they are quicker at their work.

A. 67.—The place has generally been very healthy, but has this year been partially subject to the epidemic which has so generally prevailed.

A. 68.—We have no particular processes.

A. 69.—Yes.

A. 70 & 71.—Never.

A. 73.—Not strictly; but they deviate in a very slight degree; so little, that it has never been thought necessary to enforce obedience.

A. 74.—No, not to our knowledge.

A. 77.—We have no reason for believing this; but it is natural to suppose that the workpeople are cautious not to offend those from whom they derive their subsistence.

A. 78.—There are certainly regulations which might be framed for the better observance of the present law; and the treatment of children might certainly be improved by diminishing the hours of labour, provided that limitation be grounded on fair and rational arguments, and not made to depend upon the morbid feelings of individuals who are only partially acquainted with the subject, or have some motive in magnifying those cases of abuse which may have fallen under their observation.

EDWARD UNWIN.

No. 2.

H. Hollins jun.

ANSWERS of HENRY HOLLINS jun., Partner of H. & C. Hollins and Co., Cuckling.

A. 1.—Cuckling, in the county of Nottingham.

A. 2.—Chiefly agricultural; only one manufactory in the place.

A. 3.—Erected altogether in the year 1783; employed for its present purpose nineteen years since.

A. 4.—Water-power entirely; very irregular; varies from ten to forty horse power.

A. 5.—Not any.

A. 6.—Upon the opening of windows alone.

A. 7.—Generally by the overlooker, and at the request of the workpeople, when the weather will permit.

A. 8.—Whenever it is possible.

A. 9.—The workpeople are at liberty to make any changes they like to their dress, either upon entering or leaving the mill; there is no particular accommodation for washing, further than a good supply of water.

A. 10.—Nine years of age; never have been employed at other trade.

A. 11.—Yes; their wages are lower. They can do some kinds of work quite as well as larger children; and they are preparing themselves to fill the situation to advantage.

A. 12.—A greater number.

A. 13.—No.

A. 15.—We have no children employed of this description.

A. 17.—Thirteen hours.

A. 18.—All the people work the same time.

A. 19.—Thirteen hours and forty minutes.

A. 20.—Three hundred and five days.

A. 21.—Three thousand eight hundred and forty-one hours twenty-three minutes.

A. 22.—All parts worked the same time.

A. 23.—Twelve hours and thirty-six minutes.

A. 24.—Thirteen hours and forty minutes.

A. 25.—A great part of the year, particularly October and November, making up time lost from shortness of water.

A. 26.—Unavoidable, because we could not afford to lose the time, nor the people their wages.

A. 27.—No, excepting last year.

A. 28.—Of course the cost of production is considerably enhanced by a diminution in the time of working.

A. 29.—To the manufacturer that he may produce more work from the same fixed capital, and by this means bring his article cheaper to the market; to the workpeople that they may obtain more wages than they could otherwise obtain: but it is impossible to continue the same set of hands through the night as well as the day.

A. 30.

A. 30.—Certainly, to a very considerable extent; almost all expences are increased in proportion, excepting wages.

A. 31.—Relays of hands could not be obtained in an agricultural district like this; but if the plan were practicable it would not suit, as the wages would be lower in proportion.

A. 33.—We have never employed a night set.

A. 34.—To produce more work from the same fixed capital.

A. 36.—Increased cost of production were we working in the night.

A. 37.—Materially increase the cost of production. Many manufacturers would cease to work, as loss would be the inevitable consequence; wages would fall considerably more than in proportion to the time reduced, and the trade would be driven from the country, as it is only by excessive labour we can compete with foreigners; loaded so tremendously as we are with taxation direct and indirect, and by the very high price of food, occasioned by the almost entire exclusion of foreign corn.

A. 38.—About sixty-five degrees, in all situations.

A. 41.—Not any.

A. 46.—No.

A. 50.—With oil and candles.

A. 51.—Windows.

A. 52.—Cannot say; never saw it tried.

A. 53.—Half an hour for each class at dinner; breakfast and tea are taken whilst the wheel is working.

A. 54.—All who choose to do so, at dinner, who are by far the greatest number.

A. 55.—Entirely their own convenience.

A. 56.—To cause all of them to reach home late at night, and considerable inconvenience to the manufactory, from such frequent stoppings.

A. 57.—Sometimes fine, but chiefly threat to discharge.

A. 58.—Slightly, at times.

A. 59.—Overlookers.

A. 60.—Occasionally.

A. 61.—No.

A. 62.—We have scarcely ever found it necessary.

A. 63.—They have had no particular instructions, further than to have recourse to corporal punishment as seldom as possible.

A. 64.—Not any.

A. 65.—Many of them do; no particular superintendence is exercised.

A. 66.—Very considerable. Those who enter a mill earliest make the best hands; those are scarcely ever good for any thing who enter late. Cannot refer.

A. 67.—Cannot suppose there is much difference.

A. 68.—If any situation does not agree with hands, they are generally removed to another, or leave, as it never answers to retain them in it.

A. 69.—Yes.

A. 70 & 71.—Never.

A. 73.—No; nor has any notice ever been taken of the right to do so.

A. 74 & 75.—No.

A. 77.—Certainly not.

A. 78.—No further than making the law more in accordance with the interest of man and master, and doing away with the necessity of such long hours, by a reduction of taxation.

A. 79.—The present inquiry can only show how hard the people are compelled to work in order to obtain a scanty subsistence, and masters, in order to procure a small return for capital. It is utterly impossible the workpeople can be relieved by any of the legislative enactments in contemplation. The legislature may limit the hours of working, but cannot compel manufacturers to give the same wages. Less hours of working must lead to less wages; less wages to a decrease of comforts; and a decrease of comforts to more immorality. The only effectual way to afford them relief is to reduce taxation; take the duty off corn, and do away with all other restrictions upon trade.

HENRY HOLLINS jun.

#### ANSWERS of JOHN CHAMBERS, Mansfield.

No. 3.

John Chambers.

A. 1.—Little Matlock, in the parish of Mansfield, in the county of Nottingham.

A. 2.—Doubling lace yarns.

A. 3.—Erected in 1800, for spinning hosiery yarn; commenced doubling by the present occupier in 1822.

A. 4.—Water and steam; together fifteen horses power.

A. 5.—The windows open opposite each other.

A. 6.—The windows are opened and shut at the discretion of the hands.

A. 7.—By all or any of the hands as they please.

A. 8.—The machinery is made secure and free from danger.

A. 9.—The employment is clean and healthy; a change of clothing is unnecessary; they are allowed to wash themselves.

A. 10.—From ten years and upwards.

(APP.—C.1.)

A 2

A. 11.

Nottinghamshire.

John Chambers.

- A. 11.—Children ten years old are capable of attending to our department, it being very simple.
- A. 12.—Within the last eight years the alterations in machinery have made it necessary to employ a greater number of children under twelve years of age.
- A. 13.—Not any.
- A. 14.—No parish apprentices.
- A. 15.—The hands lodge with their parents and guardians generally.
- A. 16.—Each goes to his or her respective home on leaving the mill.
- A. 17.—All are employed alike; say twelve hours per day.
- A. 19.—Fourteen hours and a half in January 1832, to complete some orders.
- A. 20.—Three hundred and ten days and six hours.
- A. 21.—Three thousand seven hundred and twenty-six hours.
- A. 22.—One and the same time.
- A. 23.—Say eleven hours and fifty-six minutes and a half.
- A. 26.—If all were restricted to, say twelve hours per day, it would be most beneficial to trade generally.
- A. 27.—Occasionally only.
- A. 28.—It would have the effect of equalizing the cost of production.
- A. 29.—Profit is the prevailing inducement; and the longer the mill is worked by the same set of hands, the greater will be the profit to the principals; for the hands will work for less wages generally in proportion to the number of hours they are allowed to work over the ordinary time, considering the greatest amount of wages at the end of the week, without reference to number of hours.
- A. 30.—When the steam-engine is once got to work it can be kept going at very little cost, consequently there must be some little additional expence of production from the limitation of hours.
- A. 31.—Extra hours are not required but by persons eager to gain extra profit; neither children or adults ought to work during the night.
- A. 32.—I have never tried night-work, and hope to be protected by the legislature from being compelled to it. If others are to be allowed to do it I shall be compelled to it, or else forced out of the market. I abominate the system of night-work as unnatural, immoral, and in every respect bad. It ought to be stopped immediately.
- A. 36.—While there are persons allowed to work in the night I am obliged to sell my goods at a less profit than I should do; if night-work was prohibited my goods would be enhanced by it.
- A. 37.—It would be objectionable to reduce labour below twelve hours per day, inasmuch as wages would have to be reduced to the workpeople, which, owing to provisions being higher, rents and taxes also higher, than in other countries, it would induce foreign competition.
- A. 38 & 39.—65°, and sometimes 60°.
- A. 40.—Eighty.
- A. 47.—From six o'clock in the morning till six or seven at night.
- A. 48.—From ten years of age to thirty years, or may be more.
- A. 49.—I do not consider it necessary to work beyond the ordinary hours.
- A. 50.—Candles in winter.
- A. 52.—I have not tried it; but there can be no doubt of their health suffering by it; I have seen some night hands who looked sickly and spiritless; I never saw any look well.
- A. 53.—A quarter of an hour, during which time, excepting for dinner, the mill is at work; the hands have time to get their meals comfortably.
- A. 54.—None leave the mill to go home to their meals.
- A. 55.—More for the convenience of the hands than for the manufacturer.
- A. 56.—An unnecessary loss both to the hands and the manufacturer, particularly to those mills situate a distance from the towns; to compel children to go one or two miles or more would be a hardship.
- A. 57.—To send for their parents or guardians, occasional forfeits, and threatening to discharge the most refractory.
- A. 58.—Very seldom, and but very slightly.
- A. 60.—If an occasional tap on the back of the children may be construed into corporal punishment, they have occasionally received it, but not to hurt them.
- A. 62.—I do not allow corporal punishments, except as before stated.
- A. 63.—Instructions have been given to overlookers to bring the hands into the counting-house, when they are talked to, sent home to fetch their parents, or threatened to be discharged, as the case may require.
- A. 64.—Not any complaint.
- A. 65.—They do not, generally; there may by the overlookers and their families; but those persons are moral, attend a place of worship generally, and are fond of domestic cleanliness.
- A. 66.—A child working in a mill, if attention is paid to it at home and on the Sabbath, is not lessened in intellect any more, nor perhaps not so much, as those children are who are allowed to stay at home unemployed; their habits are not so vicious.
- A. 67.—My mill is in an open airy situation, and generally the hands are in good health; I have observed no difference for the last ten years.

A. 68.

A. 68.—Not any change; there is nothing injurious in the work.

A. 69.—I am not in possession of an abstract of any Act affecting mills. In the country we have gone on as we liked, never interfering or complaining. Nottinghamshire:

A. 70 & 71.—Never.

*John Chambers.*

A. 77.—While in regular work they would not do a thing that would be sure to cause their discharge.

A. 78.—I do think that a limitation of working-hours to twelve per day would be mutually advantageous to the master, workpeople, and to the trading interest generally; it would be the greatest good that could be conferred on them, and place the man of principle and feeling on a par with the unprincipled and unfeeling, who are ever taking advantage of the poor workpeople and the fair tradesman.

JOHN CHAMBERS.

#### ANSWERS of JAMES FRANKS, Overlooker, Mansfield.

No. 4,

*James Franks.*

A. 1.—Mansfield, Nottinghamshire.

A. 2.—Bobbin-net manufactory.

A. 3.—August 1829.

A. 4.—Steam and water; water irregular; six horse power.

A. 5.—By fans placed in the windows.

A. 6.—A pane of glass taken out, and a ventilator or fan placed in.

A. 7.—The ventilator is always in action.

A. 8.—Yes.

A. 9.—No.

A. 10.—We have none under nine years.

A. 11.—I think not.

A. 12.—No.

A. 13.—Yes.

A. 14.—No.

A. 15.—No orphans; the children live at home with their parents.

A. 17.—Twelve, alternate.

A. 18.—Twelve.

A. 19.—Night and day.

A. 23.—The former part, and till within these few months, fourteen hours; we now work night and day.

A. 24.—They work twelve, alternate.

A. 25.—One hand never works above twelve hours.

A. 27.—No.

A. 29.—Bad trade. The hands change alternately. Power-frames generally work all hours.

A. 31.—They are relieved alternately.

A. 32.—Yes, it answers; twelve hours each, meals excepted.

A. 33.—From twelve till twelve.

A. 34.—One hand could not stand all hours.

A. 35.—Change weekly.

A. 38.—We require no heat only for the comfort of the hands.

A. 39.—We require none.

A. 41.—We have lately worked at night.

A. 42.—Eight or nine.

A. 43.—From twelve to twelve; meals taken out.

A. 44.—Eight or nine.

A. 45.—Twelve to twelve.

A. 50.—Candles and fat tallow.

A. 51.—The same as day.

A. 52.—Nothing particular, that I know.

A. 53.—Day hands two hours per day; lace-makers get theirs at work.

A. 54.—Lace hands get their meals at work; the children have two hours off.

A. 55.—Hands convenience.

A. 57.—Exhortation; we never use any punishments.

A. 58.—No.

A. 62.—Yes.

A. 65.—No.

A. 66.—We have no one that has been in the mill from childhood.

A. 68.—No occasion.

A. 69.—I suppose it is.

A. 70, 71, 72, 73, 74, 75, 76, & 77.—No.

We have omitted to answer several questions, but they are such as have not affected or do not affect us: we cannot answer them.

JAMES FRANKS.

Nottinghamshire.

No. 5.

Ric. Greenhalgh.ANSWERS of RICHARD GREENHALGH of the Firm of Leavers and Greenhalgh,  
Mansfield.

- A. 1.—Mansfield, Nottinghamshire.
- A. 2.—The manufacture of lace yarn only.
- A. 3.—Erected at three different periods; the original part of the building was built in 1790, and enlarged in 1792, and again enlarged in 1820; was first used for its present purpose in September last, 1832.
- A. 4.—A regular water-power of twenty-four horses.
- A. 5.—None, excepting the opening of windows, which are sufficiently wide to admit of such a quantity of fresh air as may be at any time required.
- A. 6.—Only on the opening of windows.
- A. 7.—Overlookers.
- A. 8.—Fenced off.
- A. 9.—We have no arrangement of this kind; but hands regularly wash themselves and put on additional clothing when leaving the mill.
- A. 10.—They generally exceed ten; a few of them have been previously employed running lace.
- A. 11.—We find children a little under or about that age more useful for one of our processes than young women.
- A. 12.—There has been no recent alteration in that part of our machinery where we employ children.
- A. 13.—Not any.
- A. 17.—Thirteen hours.
- A. 18.—Day hands thirteen hours, and night hands eleven hours; no difference excepting in children.
- A. 19.—Fifteen hours.
- A. 20.—We worked both days and nights, consequently are unable to say.
- A. 21.—Not able to say.
- A. 22.—All our machinery worked nearly the same time throughout the day, excepting that part where children were employed, which stopped sooner.
- A. 23.—The greater part of our machinery worked through the night; the remaining part about thirteen hours each day.
- A. 24.—Fourteen hours; very rarely more than twelve.
- A. 25.—In one of our processes the working-hours were regulated according to the work; the remaining part remained the same.
- A. 26.—Avoidable; but part of the machinery would be obliged to stop; the regular hours are only exceeded in the case of one hand supplying the place of another who may be absent through sickness, &c.
- A. 27 & 28.—Yes.
- A. 29.—It can only be to supply his demand.
- A. 30.—No, as wages are reduced accordingly; the only difference would be laid out in machinery, and by so doing wages must be reduced still lower, or the manufacturer would be a great loser on his dead capital.
- A. 31.—None; this is the plan we adopt with hands under twenty-one years of age; extra hours are not required from children.
- A. 32.—We do not require extra hours in the working of children; sometimes as much as one hour, but not more.
- A. 33.—Yes; the day-set commence work at six o'clock in the morning and give over at seven o'clock in the evening; the night-hands supply the intermediate hours.
- A. 34.—Because a smaller quantity of machinery is required to make the same quantity of yarn as a larger quantity of machinery working days only.
- A. 35.—They continue to work nights regularly, in preference to a periodical change.
- A. 36.—We should be compelled to increase our machinery very considerably, or the quantity of our production would be very much reduced.
- A. 37.—A reduction of the workpeople's wages, as we could not afford to give the same wages for less working-time.
- A. 38.—The same temperature pervades the whole mill, or nearly so, with one exception, where the temperature is between 75° and 80°, and there it is not necessary, but unavoidable.
- A. 39.—65°.
- A. 40.—In that process where we cannot avoid maintaining the heat, as above, (A. 38), about six hands are usually employed.
- A. 41.—Regularly throughout the year, with the exception of Saturday evening and holidays.
- A. 42.—None under thirteen or fourteen years of age, and very few at that age.
- A. 43.—The length of hours vary to the time of the year.
- A. 46.—No.
- A. 50.—By coal gas.
- A. 51.—The opening of windows.
- A. 52.—Not any, that we are able to judge of.

A. 53.

A. 53.—All (excepting joiners and mechanics, who have a longer time allowed,) have a quarter of an hour allowed for each of the three meals.

A. 54.—Only about four or six.

A. 55.—For both.

A. 56.—Loss of time.

A. 57.—Very little is required; but when necessary, correction or trivial punishment is used.

A. 58.—Only on children sometimes.

A. 59.—Overlookers.

A. 60.—Not with any severity.

A. 61.—In some cases.

A. 62.—Never found it necessary to interfere with overlookers on this head.

A. 63.—We have found corporal punishments so generally unnecessary, that we have never given ourselves the trouble to enact rules or give instructions respecting them.

A. 64.—No, never.

A. 65.—Only two families; we exercise no control over them as to their moral or social improvement.

A. 66.—When employed from infancy they are generally more acquainted with the nature of their work, and are quicker than those who are learnt when older; but if they are naturally apt to learn, after a few months practice they are nearly equal to those employed from infancy.

A. 67.—We are not aware that working in a factory causes any deterioration or improvement in the health of workpeople; a many of those we employ have never been absent from their work through sickness since we first employed them.

A. 68.—No.

A. 69.—No.

A. 70.—Never.

A. 73.—We have never heard of any conviction.

A. 74.—No.

A. 77.—Not in the least.

A. 78.—We should not attempt it, as we do not conceive that there is any necessity for any restrictions or enactments of this kind.

RICHARD GREENHALGH.

## ANSWERS of RICHARD HARDWICK, Mansfield.

No. 6.

*Richard Hardwick.*

A. 1.—Parish of Mansfield, in the county of Nottingham.

A. 2.—Cotton-spinning and lace-thread doubling.

A. 3.—Cannot say at what time the mill was erected; but has been occupied by me three years last Lady-day.

A. 4.—Considered about eight horse power, by water, which varies a little in wet or dry seasons.

A. 5.—There are four tin ventilators, with covers, on one side the room, and three on the other, to admit air and take away any dust that may arise from the cotton in its process of carding and spinning.

A. 6.—The hands open the windows whenever they think it necessary to do so.

A. 7.—By all or any of them.

A. 8.—They are.

A. 9.—My workpeople have the opportunity of changing their outer clothes on entering the mill and on leaving it, and washing as often as they think fit: this has been the practice since my commencement, which was three years Lady-day last.

A. 10.—I do not employ any under ten years of age.

A. 11.—I have work which children of ten years of age could manage very well, but do not like to take them so young; it has generally been the desire of the distressed parents which has induced me to take one at that age.

A. 12.—A less proportion, so far as I am concerned.

A. 13.—I do not.

A. 15.—I do not lodge nor maintain any.

A. 16.—Their parents.

A. 17 & 18.—Twelve hours each day.

A. 19.—Three or four hands have occasionally been employed fourteen hours and a half in the doubling of lace-thread.

A. 20.—Two hundred and ninety-five days and one quarter, from 1st January to 29th December 1832.

A. 21.—Three thousand five hundred and forty-three hours.

A. 22.—The lace-thread doubling has only commenced this year.

A. 23.—Eleven hours and thirty-five minutes; or in round numbers, eleven hours and a quarter each day.

A. 24.—Twelve hours, to the best of my knowledge.

(APP.—C.1.)

A 4

A. 25.

Nottinghamshire.

Richard Hardwick.

A. 25.—The usual hours of work were only exceeded with three and sometimes four hands in doubling lace-thread, from the pressing demands of this article; and that only these last few weeks.

A. 26.—Allowing time to be made up for accidents, and being at times short of water, I think it avoidable.

A. 27.—In the latter end of the year 1830 and the beginning of 1831 have worked twelve and a half and twelve and three quarter hours per day.

A. 28.—Undoubtedly so.

A. 29.—I do not know of any such case, therefore cannot give an opinion upon it.

A. 30.—There is undoubtedly an increased cost of production from the limitation of the hours of work. For instance, suppose the rent of a mill, with rates, &c. be £300 per year, this would be about £1 for every working-day; then, instead of twelve hours, if you say ten only, there would be a loss sustained of £1 each week in rent, by shortening the time of working, and so on in proportion.

A. 31.—There is certainly an objection to this, for should they be wanted only for one hour they would require extravagant wages for attending that time.

A. 32.—I have not tried it, having so seldom occasion for it.

A. 33.—I never did employ a night-set of hands.

A. 34.—One set of hands quite sufficient for the time I wish them to work.

A. 35.—No night-work.

A. 36.—No ill effects at all.

A. 37.—My opinion on this point is decided, that if the hours of working are reduced I shall be compelled, from the small profit derived from my business, to lower my work-people's wages in such proportion as the time is reduced.

A. 38.—60° to 65° is quite sufficient for my spinning, at all times.

A. 39.—Have no artificial heat in summer, and not more in winter than is quite sufficient for the comfort of the hands.

A. 40.—About twenty in cotton-spinning, and four in doubling lace-thread.

A. 41.—Not any.

A. 53.—Quarter of an hour at breakfast, and a quarter of an hour at dinner.

A. 54.—They either go out to their meals or get them in the mill, as suits themselves, as the works are standing during that time.

A. 56.—I cannot say.

A. 57.—Admonition.

A. 58.—Strictly discharged.

A. 60 & 61.—Never.

A. 62.—Immediately.

A. 63.—Instructions have been given, but not in writing, as I am generally in the mill myself.

A. 64.—Not any.

A. 65.—Two small families; who have their houses clean and comfortable, so far as I can see of them.

A. 66.—Those who have been employed from their youth are the most useful hands, being able to perform different kinds of work; whereas they who come in when grown up seldom can do more than one sort of work.

A. 67.—I have only had the mill three years last Lady-day, and my hands generally have enjoyed a good state of health.

A. 68.—The hands generally choose to be at such work as they have been most accustomed to, and seldom like to change.

A. 69.—I think it was not until within these last few weeks, having taken on more hands.

A. 70.—Never.

A. 73.—I cannot say, not knowing the nature and extent of the Act.

A. 74.—I do not know that they have.

A. 77.—I do not think mine are; cannot say for others.

A. 78.—I can suggest no other mode than that I act upon; viz. admonition; and if several times repeated, and no improvement, I discharge them my service; but have seldom occasion to resort to the latter.

RICHARD HARDWICK.

No. 7.

Francis Wakefield.

## ANSWERS of FRANCIS WAKEFIELD, Mansfield.

A. 1.—Mansfield, in Nottinghamshire.

A. 2.—Spinning of cotton.

A. 3.—In the year 1789.

A. 4.—Water only; irregular; sometimes in summer cannot work more than seven hours in the twenty-four.

A. 5.—Not any.

A. 6.—Depends upon opening the windows.

A. 7.—By foremen and overlookers.

A. 8.—All are fenced off.

A. 9.

- A. 9.—Not any.  
 A. 10.—Ten years; most have been employed in seaming or lace-work.  
 A. 11.—Our works do not require it; but the parents do.  
 A. 12.—A less proportion.  
 A. 13.—No.  
 A. 17.—Eleven hours to twelve hours and a half.  
 A. 18.—Eleven to twelve hours.  
 A. 19.—Thirteen hours.  
 A. 20.—Two hundred and ninety.  
 A. 21.—Three thousand four hundred and eighty.  
 A. 23.—Eleven hours.  
 A. 24.—Thirteen hours.  
 A. 25.—To make up time lost by want of water.  
 A. 26.—Cannot be avoided where water is irregular.  
 A. 27.—Yes, we have.  
 A. 28.—Certainly.  
 A. 29.—To decrease the cost of production.  
 A. 30.—Cost of production would be increased thirty per cent. by reducing the hours to ten, and eight and a half on Saturday.  
 A. 31.—I consider it impossible.  
 A. 32.—I am not aware it has or could be tried.  
 A. 33.—Not any night-work.  
 A. 37.—A reduction of working-hours must diminish the wages of all persons employed.  
 A. 38.—60° to 70°.  
 A. 39.—70°.  
 A. 40.—Thirty to forty.  
 A. 42.—Not any.  
 A. 53.—Twenty minutes to one hour.  
 A. 54.—Very few.  
 A. 55.—For the convenience of workpeople.  
 A. 56.—The distance would render it inconvenient.  
 A. 57.—Good advice.  
 A. 58.—Very seldom.  
 A. 59.—By overlookers.  
 A. 60 & 61.—Very seldom.  
 A. 62.—Yes.  
 A. 63.—Our instructions are to complain to the masters when any of the children behave improperly.  
 A. 64.—Not any.  
 A. 65.—Some of the men do; many do not.  
 A. 66.—Those make the best workpeople that begin early. I never knew a good spinner that came to work after thirteen or fourteen years of age; and those do best that come at ten or eleven.  
 A. 67.—I have not noticed any alteration.  
 A. 68.—The employment is so varied it is quite needless.  
 A. 69.—As far as we can; but not in all particulars.  
 A. 70.—Never.  
 A. 73.—They do not; not any.  
 A. 74 & 75.—I believe they have not.  
 A. 77.—I believe they have no fear of the masters; but they fear injuring themselves.  
 A. 78.—I am not aware of any means to enforce obedience to laws alike injurious to masters and servants.

FRANCIS WAKEFIELD.

Nottinghamshire.

Francis Wakefield.

## ANSWERS of ANN MORRIS, Nottingham.

No. 8.

Ann Morris.

- A. 1.—Parish of St. Peter, in the town of Nottingham. It is not a mill or manufactory; merely two large rooms used for the purpose of getting-up or dressing lace.  
 A. 2.—Getting-up of lace.  
 A. 3.—All erected about four years ago, and employed for the same purpose ever since.  
 A. 5.—Yes; by means of the windows on each side and at the ends, which are numerous, and all open; three casements in each window.  
 A. 6.—Depends on the opening of the windows and doors.  
 A. 7.—It depends entirely upon the state of the weather and of the work whether or not the windows are opened; in damp and wet weather they are generally kept shut.  
 A. 8.—There is no dangerous machinery.  
 A. 9.—There are places for putting on and off additional clothing, and for washing themselves, to which all have access; and has been so during all the time the getting-up rooms have been employed.  
 A. 10.—Twelve is the lowest age. Some few of them may have been previously employed in working lace.  
 (APP.—C. 1.)

B

A. 11.

Nottinghamshire.

Ann Morris.

- A. 11.—No.  
 A. 12.—Don't employ any under twelve.  
 A. 13.—No.  
 A. 15.—Do not lodge and maintain any of them; they all go to their respective homes to their meals and to sleep.  
 A. 16.—Yes; one forewoman.  
 A. 17.—Nine hours per day.  
 A. 18.—Nine hours per day; no difference with respect to age.  
 A. 19.—Twelve.  
 A. 20.—Three hundred and four.  
 A. 21.—Did not average more than ten hours per day; suppose about three thousand.  
 A. 22.—Always the same.  
 A. 23.—About ten; certainly not more.  
 A. 24.—Not more than twelve.  
 A. 25.—When trade is brisk.  
 A. 26.—I consider it is not avoidable, as I should not have sufficient employment for another set of hands.  
 A. 27.—No.  
 A. 29.—Never work through the nights.  
 A. 30.—No.  
 A. 31.—I have not work sufficient for two sets of hands, and sometimes not for one set.  
 A. 32.—I have heard that some one tried it, but it did not answer; the getting-up of lace is rather nice work, and requires care and attention, and is best done by day-light.  
 A. 33.—No.  
 A. 37.—I think it would make no difference in my business, for they are paid certain wages to work nine hours per day; if they work more they are allowed so much per hour for over-work; if they work less than nine hours per day, the same sum per hour is deducted.  
 A. 38.—About 65°; and might be done at about 55° or 60°.  
 A. 39.—Eighty degrees; but that is very seldom, and never more than one hour at a time.  
 A. 40.—All the hands are employed in the same process.  
 A. 41.—Never.  
 A. 42.—None.  
 A. 50.—In summer no lights are used; in winter, candles.  
 A. 53.—Half an hour at breakfast, one hour at dinner, and half an hour at tea.  
 A. 54.—All leave at meal-times.  
 A. 57.—Merely speaking to them; and if they will not do their duty they are discharged.  
 A. 58.—Never.  
 A. 60, 61, 62, 63, & 64.—No.  
 A. 65.—No; live at their own respective dwellings.  
 A. 66.—I consider those who have come to me in their infancy, and remained with me ever since, as better hands than those who came to me later in life; for instance, Ann Grace, in the annexed list.  
 A. 67.—They have always been healthy.  
 A. 68.—No.  
 A. 69.—No, I suppose not; never knew that it was.

ANN MORRIS.

No. 9.

John Hall.

ANSWERS of JOHN HALL, Acting Agent for the Firm of R. Foote and Co., New Rudford.

- A. 1.—New Rudford, county of Nottingham.  
 A. 2.—Bobbin net.  
 A. 3.—Built in the year 1830 and 1831.  
 A. 4.—Hand labour; neither steam or water power.  
 A. 5.—Ventilators in windows and roof.  
 A. 6.—No; upon tin ventilators placed in the windows.  
 A. 7.—At the control of the workmen.  
 A. 8.—No dangerous machinery employed.  
 A. 9.—No such arrangements are necessary, the work being clean, and the temperature of the rooms only such as the men would require in their own houses.  
 A. 10.—At eight years of age; cannot say if previously employed.  
 A. 11, 12, & 13.—No.  
 A. 17.—We employ two sets of hands; hours as follows; in winter the factory is open from five in the morning to one at night, and the men are expected to work from six to twelve; the shifts are as follows:
- |                     |                    |
|---------------------|--------------------|
| 1st set from 6 to 9 | 2d set from 9 to 1 |
| do. 1 to 6          | do. 6 to 12        |
- The sets change each week; and in summer the hours are from five to eleven instead of from six to twelve.

A. 18.

A. 18.—The boys are divided into two sets also; first set from six to eight at night; second set from eight to ten at night; half an hour for breakfast, an hour for dinner, half an hour for tea.

A. 19.—We never require the men to work extra hours; sometimes before holidays they beg for the factory to remain open an extra hour.

A. 20.—Cannot tell; the works stood six or seven weeks last spring, as the men turned out for an advance of wages.

A. 23.—From seventeen to eighteen hours per day for the two sets, or from eight and a half to nine hours each set.

A. 24.—Not more than twelve hours, regular hours; do not average more than from ten to eleven.

A. 25.—The machines occasionally come off six or eight together, in which case the children are kept an extra hour to put in the bobbins for them; but in this case (as there would be nothing to do previous to the machines coming off) the children are sent out to play (frequently as much as two or three hours together) on the green in front of the factory.

A. 26.—Cannot at all times be avoided, as if the children were not (when a number of machines are off together about nine o'clock at night) kept an extra hour, the machines would have to stand till next morning, and the men would lose several hours, which as they are paid per piece would cause great dissatisfaction; and it should be observed most of the children belong to the workmen.

A. 27.—No.

A. 29.—None.

A. 30.—Cannot tell.

A. 31.—None.

A. 32.—No; it has not been tried; we do not find the present hands make any complaint as regards hours; many of our hands would wish the factory to be open more hours if we would allow it.

A. 33.—No.

A. 34.—Because our machinery is very costly, many machines being worth from 500*l.* to 600*l.* each, and the rate of profit so small that unless we worked them the hours we do they would not pay interest for outlay of capital.

A. 36 & 37.—An incompetency to compete with the machine-holder in France and Germany, where lace-machines are increasing to such an extent that in a few years they will get the whole of our present foreign trade.

A. 38 & 39.—The temperature does not affect our manufacture or machinery, and the men regulate it to suit their own feelings.

A. 41.—Never all night.

A. 46.—None.

A. 50.—By gas.

A. 52.—Cannot say.

A. 53.—The men being off and on four to five hours each shift take what time they please; children, smiths, and overlookers, half an hour breakfast, an hour dinner, half an hour tea.

A. 54.—Yes, unless they prefer bringing their meals with them.

A. 57.—Dismissing them if not attentive.

A. 58.—No, except in cases of theft, or the like, in which case the parents are sent for, and it is then left to their option either to take them away or punish them as an example to the rest; in which case they either inflict the punishment themselves, or it is done in their presence, and is never severe.

A. 62.—Yes; no child is punished except as above, and the overlooker would be dismissed if he took the power into his own hands.

A. 63.—Yes; they are instructed to report to the principals if any boy is refractory, and the parents are then sent for.

A. 64 & 65.—No.

A. 66.—The lace-machines being very complex and delicate, we find men who are taken into the trade late in life never manage so well as those brought to it younger.

A. 67.—Cannot say.

A. 68.—No; have no unhealthy work whatever.

A. 69 & 70.—No.

A. 73 & 74.—Cannot say.

A. 77, 78, & 79.—No.

JOHN HALL.

#### ANSWERS of J. F. BOTTOM, Swenton, near Nottingham.

A. 1.—Swenton, near Nottingham.

A. 2.—Dressing silk and cotton lace.

A. 3.—The building at present occupied from September 1832.

A. 5.—No.

A. 6.—Depends on the opening windows.

(APP.—C. 1.)

B 2

A. 7.

No. 10.  
J. F. Bottom.

Nottinghamshire,

*J. F. Bottom.*

- A. 7.—Regulated by master.  
 A. 8.—No dangerous machinery used.  
 A. 9.—We have water laid into each room; two rooms are the girls, to change their clothes, and take their tea, &c.; introduced with the erection of the present building.  
 A. 10.—From twelve to fourteen years, all of whom have been employed in other branches of the lace-trade, such as running, &c.  
 A. 12.—No.  
 A. 17.—Thirteen, including two hours for meals.  
 A. 19.—Sixteen.  
 A. 20.—Two hundred and ninety-two.  
 A. 21.—Three thousand seven hundred and ninety-six.  
 A. 23.—Thirteen.  
 A. 24.—Sixteen.  
 A. 25.—Depends exclusively on the state of trade.  
 A. 26.—Unavoidable, because our business depends on punctuality in executing orders within a given time.  
 A. 37.—If restricted to hours we could not execute orders with sufficient dispatch, as we dress lace for various manufacturers, whose business depends on our punctuality to a certain extent.  
 A. 38.—From seventy to eighty degrees,  
 A. 39.—Eighty to ninety degrees.  
 A. 40.—Twenty.  
 A. 41.—Never all night,  
 A. 42.—None.  
 A. 50.—By gas,  
 A. 51.—Windows,  
 A. 53.—One hour for dinner, half an hour for breakfast and tea each,  
 A. 54.—At their own option.  
 A. 57.—If disobedient they are discharged.  
 A. 58, 65, 70, 78, 79.—No.

J. F. BOTTOM.

Yorkshire,

No. 11.

*Jeremiah Horsfall.*

## YORKSHIRE,

## ANSWERS of JEREMIAH HORSFALL, Addingham.

- A. 1.—In the parish of Addingham and county of York.  
 A. 2.—Mule-spinning and power-loom weaving.  
 A. 3.—The old mill was built about thirty years, and the new mill nine years ago.  
 A. 4.—The machinery is turned by two water-wheels equal to the power of forty horses.  
 A. 5.—Eight of the windows in each room are made to open, and the people employed are allowed to admit air whenever they please; besides there are at least forty holes in the floors through which the straps run, forming excellent ventilators; and the doors are frequently set open in hot weather.  
 A. 8.—All the dangerous parts of the machinery are guarded.  
 A. 9.—The hands, to my knowledge, never make a practice of changing their clothes on entering or leaving the mills; but they have at all times free access to abundance of clear water.  
 A. 10.—No children are employed under nine years of age; but some of the children are set to bind weft at home for the hand-loom weaver before they attain the age of nine years.  
 A. 11.—As piecers I should prefer children from ten to twelve years of age; they are quite as expert and better to manage than older children.  
 A. 13.—I do not employ any apprentices.  
 A. 17.—The hands generally, be their ages what they may, work twelve hours each day five days in the week, and nine hours on Saturday, beginning at six o'clock in the morning and ceasing at half past seven in the evening, allowing half an hour for breakfast and an hour for dinner.  
 A. 19.—An additional hour has occasionally been worked to make up lost time by an excess or scanty supply of water.  
 A. 20.—Three hundred and five days.  
 A. 21.—Three thousand five hundred and nineteen hours and a half.  
 A. 23.—Twelve hours a day for five days, and nine hours on Saturday,  
 A. 24.—I have only one set of hands, and many of those have been with me ever since I commenced business in 1824.  
 A. 25.—The works have been stopped two entire days by excess of water, and an additional hour has been worked each day to reduce the time so lost.  
 A. 26.—In water situations I conceive it will be necessary to work half an hour extra occasionally, to redeem time lost by too much or too little water.

A. 27.

A. 27.—At no time.

A. 29.—I believe the manufacturer who runs his mill an unreasonable length of time does so that he may have an advantage in the market.

A. 37.—I am fully convinced that no spinner or manufacturer can pay more in wages than he now does for a given quantity of work; and if the time of labour be reduced, a proportionate reduction must be made in wages.

A. 38.—The average temperature in the rooms is from 60° to 64°.

A. 39.—I never require the temperature more than 64°, as I never spin finer numbers than forty hanks in the pound.

A. 41.—Never during the night.

A. 42.—None.

A. 50.—Lighted by gas morning and evening during the winter season.

A. 53.—Half an hour is allowed for breakfast and one hour for dinner; the spinners, piecers, and mechanics have also half an hour for tea, but the card-room hands, the dressers and weavers, work during tea. All the people leave the mill for breakfast and dinner; the spinners, piecers, and mechanics at tea-time, being four o'clock, and resume at half past four o'clock.

A. 57.—When a child is inattentive or idle at work the parent is informed of his or her conduct.

A. 58.—Corporal punishments are not allowed.

A. 60.—Never with my knowledge or sanction.

A. 62.—I have always forbidden corporal punishments.

A. 63.—The instructions given by me to the overlookers are always to send a child home if it will not attend to its duty, but never to strike it.

A. 64.—Not one instance that I am aware of, either against myself or any of the overlookers.

A. 65.—About one fourth of the workpeople live in cottages near the mill, the rest in the village. A school was erected by me some years ago, in which the small children are taught daily, those that work to read every Sunday, and as many as will attend every evening after the mill stops.

A. 66.—The hands that are introduced early are much more expert and active than those introduced at a later period, and will always have a preference.

A. 67.—I believe the general health of workpeople is better than it was before the mill began to work, and in this opinion I am confirmed by the report of the surgeon, who accounts for it by the wages being better and the food more generous.

A. 68.—I have never found this necessary.

A. 69.—It is, and always has been.

A. 70.—Never in any instance.

A. 73.—I do not know.

A. 79.—I only regret in my case that the Commissioners could not come and inspect the mill, and interrogate the workpeople; I believe they would have found, on inquiry, no wish for any further reduction in the hours of labour.

JEREMIAH HORSFALL.

Yorkshire.

Jeremiah Horsfall.

#### ANSWERS of WM. T. MASON, on behalf of G. Mason and Sons, Barnsley.

No. 12.

W. T. Mason.

A. 1.—Barnsley, Silkstone parish, county of York.

A. 2.—Linens, and mixtures of linen and cotton, woven by hand-loom weavers at their own homes.

A. 3.—Our warehouse built, we believe, in 1828.

A. 4.—No power used in the warehouse; we hire about three or four horse power in a separate building, for the purpose of winding warp-yarns from the hanks upon bobbins; the engine is chiefly employed in a dye-house, and is, we believe, about twenty horse power.

A. 5.—The windows, which are numerous, opened at the discretion of the workmen; no interference on our parts at all: no artificial heat in our works.

A. 8.—No dangerous machinery in our winding-room; in the warehouse have no machinery at all.

A. 9.—There is no necessity for us to interfere with our workmen on this score, as they have at their own option plenty of ventilation, and have two hours allowed out of every twelve for three separate meals.

A. 10.—None employed in the warehouse under fourteen years of age; we have none employed by us that have been in any previous trade; we have two girls under fourteen employed in our winding-room.

A. 11.—It does not.

A. 13.—No.

A. 17.—Our regular hours at both the warehouse and the winding-room are from seven to seven, allowing two hours for meals. When we are very busy in the warehouse the men work over-hours; never more than two or three hours, for which they are paid over-work; the winding girls never exceed from seven to seven.

A. 18.—No difference made with respect to age.

(APP.—C. 1.)

B 3

A. 19.

Yorkshire.

W. T. Mason.

A. 19.—Having no necessity for a time account in our business, we cannot precisely state to half an hour; but we believe never longer than fifteen hours (the two meal-hours included), and that very rarely, only when very busy, at two seasons in the year.

A. 24.—Twelve, including the two hours for meals.

A. 26.—Were this excess required in the winding-chamber, it could easily be remedied by one or two additional winding-frames: with regard to the men employed in the warehouse, they prefer a few hours per week over-work to having an extra hand taken on temporarily.

A. 27.—No.

A. 29.—Generally speaking, we conceive that avaricious and unfair competition is the cause of extra labour among the mill-owners.

A. 30.—No difference, as our trade is conducted.

A. 37.—Creation of more machinery, furnishing employment to more workmen; and, as hands become more scarce, most probably a wholesome and salutary advance of the labour-market.

A. 41.—Never.

A. 50.—Warehouse with gas in the winter.

A. 51.—None required.

A. 53.—Two hours to all.

A. 54.—All, except a few winding-girls out of the country, who in bad weather, for their own convenience and at their own choice, take their meals in the winding-room.

A. 56.—None, as far as we are concerned.

A. 57.—Remonstrances only, accompanied with reasoning with them on the folly of disobedience; if admonitions fail, they are discharged.

A. 58.—No.

A. 62.—Always.

A. 63.—Verbal instructions to the foremen or overlookers not to punish children, but in case of disobedience or neglect to lodge a complaint to us.

A. 64.—None.

A. 65.—Our workmen all live apart from the warehouse, and we have no control over them beyond their actual hours of work in the warehouse.

A. 66.—Generally speaking, in the linen trade, little or no difference.

A. 67.—No difference.

A. 68.—Make use of no injurious processes.

A. 69.—Are not mill owners or occupiers.

A. 70.—Never.

A. 73.—We have one small flax-mill in the neighbourhood; know nothing respecting its regulations.

A. 74.—Never heard they were.

A. 77.—Should think so, if they have good situations; but as we know nothing of the factory system, except by report, don't feel competent to give a precise opinion.

A. 78.—Heavy penalties, a certain proportion to the informer, to be levied upon those masters whose cupidity tempts them to encroach upon the labour of children.

W. T. MASON.

No. 13.

Thomas Taylor.

#### ANSWERS of THOMAS TAYLOR, Barnsley.

A. 1.—Barnsley, in the parish of Silkstone, county of York.

A. 2.—Manufacturing linens by hand-loom at their own homes; the warps prepared at my warehouse.

A. 3.—My warehouse was built about fifty years since, and always employed for its present purpose.

A. 4.—One horse employed is the power for winding yarns upon bobbins from the hanks, in a large chamber over the warehouse.

A. 5.—No heat required; there are windows on each side, which are opened when found necessary.

A. 7.—Overlooker.

A. 8.—The machinery employed for this purpose not considered dangerous.

A. 9.—The work being clean, and the girls going home to their meals, I find no necessity for such provision.

A. 10.—Twelve years of age and upwards, and have generally been previously employed in hand-winding.

A. 11.—No.

A. 12.—No alteration made.

A. 13.—No.

A. 15 & 16.—I have no control after business hours.

A. 17.—My regular hours at the warehouse are twelve, half past six to half past six, allowing two hours for meals; at the winding-frames, from nine until five o'clock, allowing one hour for dinner.

A. 18.—No difference made.

A. 19.

A. 19.—The warehousemen are occasionally at work from half past six until nine o'clock. I keep no time-book.

A. 24.—Eight hours.

A. 25.—In case the men are wanted to pack goods, or prepare them for the press.

A. 26.—By occasional servants in the warehouse, and fitting up additional frames for the girls.

A. 27.—No.

A. 29.—To make the capital invested more productive; an intermediate change of hands would have the same effect, if they worked by the piece, and at the same rate of wages.

A. 30.—None.

A. 31.—I should conceive none; but this question has no reference to my business.

A. 37.—If working-hours are reduced, it would have the effect of advancing wages to the extent of the reduction of time.

A. 42.—None.

A. 46.—No.

A. 50.—My warehouse lighted in the winter months with candles, and the winding-room with gas.

A. 51.—No working in the night.

A. 52.—No night-work.

A. 53.—Two hours per day.

A. 54.—All.

A. 56.—They take their meals out of the warehouse.

A. 57.—To discharge them.

A. 58.—None.

A. 62.—Always.

A. 63 & 64.—None.

A. 65.—I have no control over them after business hours.

A. 67.—I know of no difference.

A. 68.—No injurious process carried on.

A. 70.—Never.

A. 77.—This depends upon the situation they hold, and the nature of their employment.

A. 78.—Heavy penalties on the proprietors; one half to the informer giving evidence.

A. 79.—I conceive the inquiry to be altogether unnecessary; that labour, like many other commodities, will find its own level, and requires no legislative enactments.

THOS. TAYLOR.

Yorkshire.  
Thomas Taylor.

#### ANSWERS of CHARLES TEE, Barnsley.

No. 14.  
Charles Tee.

A. 1.—Barnsley, in the parish of Silkstone, county of York.

A. 2.—Manufacturing linens by hand-loom weavers, at their own homes; the warps prepared at my warehouse.

A. 3.—My warehouse was built and first employed in 1825.

A. 4.—No power is employed in the warehouse. The only power I employ is hired for the purpose of winding yarns upon bobbins from the hank; it is a large chamber over a calender house; regular steam-power; I use about three horse; the remainder used in calendering and drawing water from a coal-mine.

A. 5.—No extra heat being required in any operation in my business, I make no specific provision for ventilation.

A. 6 & 7.—Only by opening windows, which is controlled by the overlooker.

A. 8.—I have worked the same frames sixteen years; have never had any accident, and do not consider the machinery employed for this purpose dangerous.

A. 9.—The work being clean, and the girls employed going home to their meals three times a day, I find no necessity for such provision.

A. 10.—Neither apprentices in the warehouse, nor girls at the winding-frames, under fourteen years of age. They have been generally employed before they come to me in hand-winding, at their own homes, under the inspection of their parents or friends.

A. 11.—No.

A. 12.—No alteration made.

A. 13.—Yes, at the warehouse, who receive a weekly wage, commencing at 8s. for the first year, and advancing 1s. per week each year for five or seven years, as we agree. They eat and sleep with their friends, and are clothed by them, and only under my control during warehouse hours.

A. 14.—I have never had any apprenticed by the parish.

A. 15.—I only employ, and have no control out of business hours.

A. 17.—My regular hours at the warehouse are twelve, from seven to seven, allowing two hours for meals; at the winding-frames, from six till seven, allowing the same time, viz. one hour for dinner, and half an hour each for breakfast and tea.

A. 18.—No difference made in the hours of employment to persons under twenty-one years of age.

A. 19.—My business does not require that I should keep a time-book, and I cannot possibly answer this question from memory.

(APP.—C. 1.)

B 4

A. 25.

Yorkshire.

Charles Tee.

A. 25.—The regular hours are seldom exceeded, except in the warehouse for the purpose of packing goods prepared in the course of the day, which may be in urgent demand.

A. 26.—Very easily, by employing at the warehouse a few occasional servants when there is a press of business, and at the winding-room by fitting up an additional frame or two.

A. 27 & 28.—No.

A. 29.—Generally the desire to make the capital invested in machinery as productive as time and toil can make it. Sometimes working extra hours has been commenced by individual manufacturers or spinners, for the purpose of under-selling their competitors, who, in self-defence, are compelled to have recourse to the same system.

A. 30.—With me it can make no difference; the warehousemen receive four-pence per hour for over-work, and the piece-workers have what they earn.

A. 37.—The first effect, after an additional creation of machinery, would be to furnish employment to a greater number of hands, probably at the same rate of wages per hour. If hands became scarce, an advance of wages would then ensue.

A. 42.—None.

A. 46.—No.

A. 50.—My warehouse and winding-room are lighted with gas in the winter months.

A. 51 & 52.—Not working during the night; none required.

A. 53.—Two hours per day to all.

A. 54.—All of them.

A. 57.—Pointing out to them the impropriety of disobedience, as contrary to their own interest; and if not improved by gentle means, discharged.

A. 58.—None.

A. 62.—Always.

A. 63.—My foreman has been always instructed not to strike, or permit any person under my superintendence to be struck or beaten.

A. 64.—None.

A. 65.—I have no control over my workpeople or tenants out of the warehouse or winding-room.

A. 66.—I can give no satisfactory data in reply to this question, so much depending on the capacity of the individual, whether young or old.

A. 67.—I know of no difference.

A. 68.—I have no injurious process.

A. 69.—I have no mill.

A. 73.—There is only one mill in the immediate neighbourhood, which has seldom been fully employed; it is a flax-mill, and not under the provisions of the Act.

A. 77.—If they have good situations or employment, or at times when work is very scarce, certainly.

A. 78.—Heavy penalties on the proprietors; and one half the penalty to the informer giving evidence.

CHARLES TEE.

No. 15.

G. S. Wells.

## ANSWERS of G. S. WELLS, Barkisland.

A. 1.—Barkisland, parish of Halifax, county of York.

A. 2.—Cotton spinning and twisting.

A. 3.—Erected forty years ago; first employed for the present purpose in 1830.

A. 4.—Water, and irregular; in some seasons very deficient, so as not to be able to work more than six hours per day.

A. 5.—None.

A. 6 & 7.—On the opening of windows; at the discretion of all or any of the persons employed.

A. 8.—Those parts of the machinery which from their nature would be dangerous are, from their situation, rendered perfectly harmless.

A. 9.—Although I have made no arrangements expressly for this purpose, nevertheless many of the workpeople are in the habit of changing part of their dress on coming to and leaving the mill.

A. 10.—Of course the last Act of Parliament is my limit as to the lowest age at which I employ any child.

A. 11.—The nature of my work is not such as to require the employment of children under twelve years of age, if a sufficient number at that age could be obtained.

A. 12.—I am not aware that any alterations in machinery recently has altered the requisition for children under twelve years of age.

A. 13.—None.

A. 17 & 18.—Twelve hours.

A. 19.—Thirteen and a half.

A. 22.—All my works are carried on simultaneously.

A. 23.—About eleven hours.

A. 24.—Thirteen and a half.

A. 25.—I do not consider I have ever exceeded the regular hours of work.

A. 26.

A. 26.—In mills where power is obtained from water it is desirable that the loss of time arising from a deficiency of water should be made up when there is plenty, or the work-people themselves would be great sufferers.

A. 27.—No.

A. 29.—I am not aware that such is the practice, nor do I see any inducement for it.

A. 30.—The cost of production would undoubtedly be increased by the limitation of the hours of work to ten instead of twelve, particularly where a large proportion of weekly hands are employed; and as the same capital would be required in the erection of buildings and necessary machinery, the cost of the produce of piece-work would also be increased, though not in the same degree.

A. 36.—I conceive the prohibition of night-work would be beneficial to the trade.

A. 37.—The effects likely to be produced by a further reduction of the hours of labour would be injurious to the labourers themselves, inasmuch as their wages would be reduced in proportion to the reduction of time; and to the employer, inasmuch as the cost of production would be increased considerably, without any probable improvement in price.

A. 38 & 39.—The usual temperature is about sixty degrees, below which I consider it desirable not to go; nor is it necessary it should ever be much higher.

A. 40.—The whole.

A. 53.—One hour and a half.

A. 54.—Most of them do.

A. 55.—Those who do not remain for their own convenience.

A. 56.—Inconvenience, certainly, to those who find it convenient to take them in the manufactory.

A. 57.—Such as parents generally take to secure obedience; sometimes by threatening, sometimes by encouragement.

A. 58.—Never.

A. 62.—I have had no need.

A. 63.—No.

A. 64.—Never.

A. 65.—Some in cottages of mine, others in those of other people; but all enjoy the privilege of controlling themselves in their domestic arrangements.

A. 66.—I have had no further reason to notice a difference, except that those who have been longest employed in any one process are generally most expert in it.

A. 67.—I have not observed any alteration.

A. 68.—No.

A. 69.—It is.

A. 70.—Never.

A. 73.—I have never interfered in my neighbour's business.

A. 74.—Not to my knowledge.

A. 77.—No.

A. 78.—I do not feel myself called upon to propose penalties to enforce my own obedience to what I conceive to be injurious; but I have no hesitation in stating, that if Mr. Sadler's Bill passes into a law as it has been printed, the wisest course for mill-owners will be at once to lock up their mills, and abandon the trade.

G. S. WELLS.

#### ANSWERS of J. WHITAKER for Messrs. Greenwood and Whitaker, Burley.

No. 16.

J. Whitaker.

A. 1.—Burley, in the parish of Otley, and county of York.

A. 2.—Spinning and weaving of cotton.

A. 3.—One mill erected in 1792, for spinning; and in December 1825 one hundred and eight cotton power-looms were added; and the mill called the New Mill begun to work in February 1811; spinning only.

A. 4.—Water only, and well supplied; but sometimes impeded with too much water, and sometimes stopped with floods: the river is called the Wharf.

A. 5.—None necessary, the windows sufficient, and mostly regulated by the hands; no artificial heat required, except in winter; the rooms are heated by steam only; in the dressing-rooms additional heat is required, where four adults and one young man of eighteen are employed.

A. 7.—Generally regulated by the persons employed.

A. 8.—All dangerous parts have been fenced off upwards of twenty-five years.

A. 9.—All the rooms are supplied with water, and many of the hands change their clothes and wash themselves before leaving the mill.

A. 10.—None under nine years; not in any trade before coming into the mill.

A. 11, 12, 13, & 14.—No.

A. 15.—We have only three, and one is lodged with a respectable family, and the other two with their sisters, who are of age.

A. 16.—(See the Petition appended to this, with regard to morality). Their masters and those with whom they live.

(APP.—C. 1.)

C

A. 17.

Yorkshire.

J. Whitaker.

A. 17.—Twenty-one years and upwards mostly work by piece, and never work more in the average than thirteen hours each day.

A. 18.—From eighteen to twenty-one years, as above, A.17; under eighteen years, agreeably to Act of Parliament.

A. 19.—Never more than allowed by Act of Parliament for children under eighteen; and the hands above that age will average less than thirteen hours per day. See A. 22.

A. 20.—Three hundred and eleven days. We avoid as much as we can the interruptions from feasts, having experienced its bad effects on the workpeople. (See the Petition, which justifies us in this.)

A. 21.—Four thousand and forty-three hours, in which adults and young people of eighteen years and upwards only employed; those under never exceed sixty-nine hours per week, except boys employed as mechanics, joiners, and filers, who, from necessity, have been employed in repairing the water-wheels and machinery in the night, and not often; and a few weavers occasionally.

A. 22.—Spinners and weavers 18 years and above, by the piece, average 13 hours.

|                     |                     |   |   |       |   |       |     |   |
|---------------------|---------------------|---|---|-------|---|-------|-----|---|
| Ditto               | under 18            | - | - | ditto | - | ditto | 11½ | — |
| Some of the weavers | under 18            | - | - | -     | - | ditto | 12  | — |
| Carders and drawers | 18 years and above, | - | - | -     | - | ditto | 11½ | — |
|                     | under 18            | - | - | -     | - | ditto | 10½ | — |
| Reelers             | 18 and above,       | - | - | ditto | - | ditto | 11  | — |
|                     | under 18            | - | - | -     | - | ditto | 11  | — |
| Cotton-cleaners     | 18 and above        | - | - | -     | - | ditto | 11  | — |
|                     | under 18            | - | - | -     | - | ditto | 10  | — |

A. 24.—Only one set; children under eighteen never exceed twelve hours, except mechanics and a few weavers; see A. 21; or in making up lost time, as allowed by Act of Parliament.

A. 25.—Never, except to make up lost time from floods, and in that case only as allowed by Act of Parliament; but last year was the best we ever remember for not having too much or too little water.

A. 26.—We never exceed the regular hours, except to make up lost time occasioned by floods or accidents, and then only as allowed by Acts of Parliament.

A. 27.—None, except upwards of twenty years ago, when we worked day and night by two sets of hands.

A. 28.—Certainly; interest of money invested in the mills, machinery, and other permanent charges not being reduced by a less produce.

A. 29.—We cannot answer this from our own experience, but have heard that the manufacturers in woollen and worsted mills take orders to execute in a given time, which obliges them to work longer than the usual hours; unfortunately for us, the depôt in Manchester is always sufficient to supply every demand instantly.

A. 30.—If we should be subjected to the Ten Hours Bill we should suffer at least 1,000*l.* a year, and our workpeople 1,500*l.*, besides the consequent increase of the poor-rates.

A. 31.—The great objection, where a sufficient supply of hands can be obtained, would be from the parents, who would receive only as much for two children as they do now for one; but in this village two sets could not be had. In weaving and spinning it would be difficult to find which set had been guilty of bad work, and this would be a most serious evil.

A. 32.—Not here.

A. 33.—Not for the last twenty-two years.

A. 34.—One better than two. See A. 31.

A. 35.—No night-work here, but occasionally by mechanics in repairing machinery, and by four adults in cleaning machinery, and two night-watches.

A. 36.—None to us, except we should be obliged to discharge a number of young mechanics, and take adults, a most serious injury to many promising boys; most of those who have been so employed here have become good joiners, filers, smiths, machine-makers, foundry-men, and have obtained great wages.

A. 38.—No artificial heat required in any of our rooms, only steam for the comfort of the hands in winter, except in the dressing-rooms for sizing warps; and in these rooms there are only four adults and one young man of eighteen.

A. 39.—Never tried.

A. 40.—Five. See A. 38.

A. 41.—None.

A. 42.—None but mechanics.

A. 43.—Mechanics four or five times from seven to eleven o'clock, and twice all night.

A. 46.—No.

A. 50.—By gas, mornings and evenings.

A. 51.—None; we consider the windows sufficient.

A. 52.—When we worked night and day no apparent difference.

A. 53 & 54.—The Act of Parliament allows one hour and a half; and all under eighteen have half an hour for breakfast and one hour for dinner; the adults take their breakfasts while the mills are running, but the speed is mostly reduced, which enables them to sit down to their meals, and this they prefer to leaving their work: always stop an hour for dinner.

A. 55.—All the adults working by the piece prefer having their breakfasts brought into the rooms where they work; also their drinkings.

A. 56.—It would be difficult to get the parents to be punctual in having their meals ready at the same time; many have to go a considerable distance for milk; at present the breakfasts are brought into the mills from seven to nine o'clock; and the children complain, particularly in winter, that they cannot have their meals same as the adults.

A. 57, 58, & 59.—Upwards of twenty years since orders were given to the overlookers not to inflict corporal punishments, but to send refractory children to their parents to be punished; and the consequence is, that now the parents reprove their children, instead of hardening them against their overlookers. For bad work fines are sometimes imposed. About eleven years ago one overlooker struck a boy, for which he paid 10s. 6d. to the marriage fund.

A. 60.—Never with our permission.

A. 63.—Yes, but not in writing.

A. 64.—No, nor the last thirty-seven years. (See Petition.)

A. 65.—Mostly in houses belonging to this establishment; for morals, see the Petition; cleanliness is particularly attended to; and the houses and mills frequently whitewashed, lime being found by the proprietors, and frequently applied hot.

A. 66.—From ten to twelve years are the best ages for making good weavers and spinners.

A. 67.—No apparent difference, except fever has prevailed more in Burley, particularly amongst families, since March 1831, when Charles Hindle, a man, was brought from York in a dangerous state, and died soon after; and also last month (May) more sickness, from the influenza, than ever was known in Burley; but only two deaths.

A. 68.—Sometimes, but not frequently.

A. 69.—Yes.

A. 70.—Never.

A. 77.—We really cannot tell; masters are mostly satisfied with their servants, and we have great reason to believe the servants are with their masters.

A. 78.—As applies to this establishment, we conceive none necessary; Sir John Hobs-knight's Bill quite sufficient; but the penal parts of which we object to, as a dissatisfied servant might, for the sake of a fine, give a great deal of trouble to proprietors, without any blame attaching to them.

A. 79.—We believe the contemplated Ten Hours Bill would be exceedingly injurious to the cotton-trade; the legislature no doubt wish to encourage health and morals, but if this Bill becomes a law the effects would be to destroy many water-mills entirely in rural situations in the country, and drive the trade into large populous towns, where the proprietors have little or no control over their hands, and where health cannot be so well promoted as in rural scenes. Steam-power is mostly in large towns, and can be set to work at any moment; water-mills are subject to many interruptions for want of water, and frequently impeded and totally stopped by floods. Our opinion on this subject may be taken as impartial, because we have a regular supply; but we know that if the hours were confined to from half past five o'clock in the morning to seven in the evening, as stated in the Ten Hours Bill, that many mills in summer could not run more than from six to eight hours a day, as it frequently happens that the water from the highest mill cannot reach the lowest till about noon, and if the proprietors were to apply steam to obviate this inconvenience they would be subjected to a great expence of coal, water-mills being mostly at a considerable distance from collieries. The great expence of carriage we now feel to be a most serious charge, being forty-four miles from Manchester, the great cotton-mart, and all the way land carriage; and from Liverpool we have to pay freight and carriage for one hundred and twelve miles. In addition to this, the cotton-spinners have a most alarming competition in Germany, France, Belgium, and even America, where (except America) wages are less than half price; and in the latter country they have cotton cheaper, by the commissions, freight, and duty which we have to pay, and which enables them to send cotton-twist to the East Indies on much easier terms than we can from this country.

J. WHITAKER.

COPY of a PETITION presented to the House of Commons in June 1832, by Lord Morpeth.

To the Honourable the House of Commons in Parliament assembled.

The humble petition of the working people employed in the cotton-factories belonging to Messrs. Greenwood and Whitaker at Burley, in the West Riding of the county of York;  
Sheweth,

That your petitioners humbly represent to your Honourable House, that there are three hundred and seventy-six persons employed in the cotton-factories above mentioned, which are worked by water only, and that they work only such hours as are laid down in the Acts of Parliament.

That your petitioners have hitherto lived in comfort, have always been employed, and had regular wages, whether trade was good or bad; are fully satisfied with the hours of working

(APP.—C. 1.)

C 2

as

Yorkshire.

J. Whitaker.

Yorkshire.

*J. Whitaker.*

as now established; and that the general state of health of your petitioners is as good as any other class of persons who have to earn their daily bread by labour.

That by way of experiment your petitioners have been employed one week ten hours a day; and should the legislature in future compel us to work those hours only, a great many of your petitioners must have aid from the poor-rates and be degraded by pauperism, to which unhappy resource not one of your petitioners is at present subjected; being well assured that our masters cannot afford to give us even a proportionate rate of wages to what we are now receiving.

That your petitioners have always been treated with kindness and humanity, which kind treatment has been duly appreciated by your petitioners, and, by attending to the good advice given us, have been preserved from committing those immoralities, crimes, and misdemeanors which too many of our fellow-creatures are guilty of.

That it can be satisfactorily proved to your Honourable House, that not one of your petitioners, or those who have been employed before them in these factories, have ever been charged with any felony, poaching, or any crime or misdemeanor whatever, nor one person ever absent from work on account of intoxication.

That out of three hundred and seventy-six persons employed in these factories a great number have been employed from fifteen to forty years, whose savings have been considerable; and that out of this number only three deaths took place in the year 1831; and during the same year, out of one hundred and sixty-six marriageable young women, only two were delivered of illegitimate children.

That your petitioners, in corroboration that the hours employed by them in working in these factories are not injurious to their health, subjoin a statement of a number of your petitioners who have been employed in these factories a great number of years, and the hours and days they were absent on account of illness, which statement they are fully prepared to prove; whereby your Honourable House will perceive that their health has been so good as to require no further legislation for restricting the hours of labour employed in these factories.

Your petitioners therefore most earnestly, but respectfully, entreat and implore that your Honourable House will not pass any measure which will restrict their present hours of labour, and thereby deprive your petitioners from living in that comfort they have hitherto enjoyed, and subjecting many of them to the miserable and degrading alternative of becoming paupers.

No. 17.

*Thomas Cook.*

#### ANSWERS of THOMAS COOK, Dewsbury.

A. 1.—Dewsbury Mills, parish of Dewsbury.

A. 2.—Blankets and coarse woollens manufactured, good broad and narrow cloths dressed, fulling cloths for hire, and dye-woods ground.

A. 3.—Some part of the mills, those for fulling cloth, was erected many centuries ago; those parts of the works in which children are employed were, some of them, erected about forty years ago, but a good deal within the last twenty years.

A. 4.—Entirely water-power; stream powerful. The whole power, in times of a full, and not too much water, one hundred and sixty to two hundred horses power may be used; but the works are subject to stoppages by flood-waters to the extent of from fifteen to twenty days a year, in that part in which children are employed; and in dry seasons a tithe of time will be lost by deficiency of speed, occasioned by want of water. At the fulling and dying-wood mills one-sixth of the year is lost by flood and want of water.

A. 5.—Ventilation left entirely with the workmen, each of whom having windows near to him, can admit what air he may choose; no heat being required but enough to warm the children's fingers in winter.

A. 6.—On the opening of windows and doors; the former the men regulate entirely.

A. 8.—All the heavy gear is; and there is not any danger where proper care is exercised. Accidents, however, have occurred; but they may generally be traced to carelessness and want of attention, and not to lassitude produced by over-exertion.

A. 9.—None; but occasional gratuities of small sums of money to the children, at the great holidays, for cleanliness, is apportioned to their deserts.

A. 10.—Parents bring their children so early as eight years old to be taught to piece cardings; this, however, is not common, but it has occurred in our works. The work is not severe, but it demands attention, and the child is mostly on its legs. The children have no employment till they come to the mill.

A. 11.—It does not; but children under twelve, and from nine to that age, would be more active than above twelve, and some branches of work would also be done with greater ease to the child.

A. 12.—Not to any extent, to reduce the labour of children. A little reduction has taken place with us, from using a new machine of questionable utility, by which a few more

hands are saved. But there are machines at work in the United States which no doubt will be ultimately adopted here, and by which one stout child will do the work of four, as the same work is prepared here. We have seen a similar machine at work in England, and have no doubt of its being adopted, in time, in England.

A. 15.—All children employed by us live with their parents, or natural guardians; some years ago we had two or three from the town's poor-house; none at present.

A. 17.—From six A.M. to seven P.M.; half an hour for breakfast, an hour for dinner, and half an hour for refreshment in the afternoon, are allowed out of those hours. Sometimes we work till eight o'clock P.M., which is paid for at the rate of half a day each week to all hands other than those working by the piece.

A. 18.—The same as those above twenty-one years of age.

A. 19.—Our fulling-mills have worked night and day, but men only work in them, and all at piece-work; but six A.M. to seven P.M. has been the common time of labour, and it has not been exceeded in many instances; in some few, arising from particular circumstances, it may have occurred.

A. 20.—We cannot answer this accurately. If from fourteen to sixteen days be deducted for holidays at Christmas, Easter, Whitsuntide, the feasts, &c., and from twelve to twenty for stoppages by flood-water, perhaps our manufactory would be at work, on the average, about eleven hours each day for the rest of the working-days of the year.

A. 25.—Flood-water, prospective holidays, or press of business.

A. 26.—There does not appear to be an absolute necessity for working more than regular hours, and we are friendly to their being fixed at fifty-eight hours the week; men and master being empowered to make stoppages up to fifty-eight hours the week: for water-mills this appears nothing but justice to both. Water-power is variable, and stoppages frequent, and not to be controlled; and if some provision be not made to obviate the hindrances occasioned to water-mills by flood and scarce times of water, gross injustice will be inflicted upon the owners of such property, as well as upon the workmen employed in the mills driven by water-power.

A. 27.—Occasionally. Some years ago, in the summer and busy months, we did, so long as from five o'clock A.M. to nine P.M., for short periods.

A. 28.—No; long hours do not answer the mill-owners purpose, in our trade, nor cover the extra wages in the same relative proportion. When the hands are at short time, making but four days the week, the earnings of the mill are the largest for the same number of hours.

A. 29.—There is no inducement for extra hours of work, because experience has told us that there is not an equivalence of profit in them. A momentary press of business may render a few weeks of longer hours apparently advantageous; and the time has been when it was necessary to work, for a short time, longer hours.

A. 31.—Relays of children are not called for at Dewsbury; there are more mills than there is employment for; one with the other they have not worked eight, we are sure not more than nine, hours a day on the average for the last fifteen years. Night-working, as a system, is not known here, and ought not to be allowed where children are employed.

A. 32.—We never tried it but for eight weeks some years ago; we were at that time building a new water-wheel; two-thirds of our works were stopped by the interruption this occasioned; this was done to please the men, and to divide the wages among them. They divided themselves into three sets for the twenty-four hours; by which plan all had eight hours work a day, abating, of course, time for taking their meals.

A. 37.—We now work eleven hours a day; we neither think eleven hours tyrannical, nor do we consider the time inhuman. We, however, think ten hours enough; and these being the number of hours many workmen advocate, we cordially fall into the ten hours scheme; and if trade can be found to give all hands ten hours employment a day, all would have the means of living well who are employed in the blanket trade.

A. 38.—Excepting in winter and very cold weather, the temperature of the atmosphere. Our mill is heated by steam; the hands turn the steam on and off as they like.

A. 39.—The temperature of the atmosphere; excepting drying-houses, where for a few minutes at each time, thrice in the twenty-four hours, men are employed in tentering goods, or spreading wool to be dried by artificial heat.

A. 40.—At six tenters, two men to each tenter, and fifteen minutes twice or thrice a day.

A. 41.—None, excepting fulling-mills; men only employed, and paid by the piece.

A. 50.—Well lighted by gas; heated by steam.

A. 54 & 55.—All; excepting when we are busy, the children at the scribbling-machines remain at the machines, or relieve each other, during part of the meal-times. We are short of scribblers, and the hands might be stopped in some work if this were not done. Directions have, however, been given for putting a stop to this, by the removal of one billey from the mill, and by the replacing of the carding-engine of that billey by a scribbling-machine, which will prevent the necessity. If the Commissioners will look at the situation in which the children are, they will see that there is no want of opportunity for reposing themselves. The children are paid for this work over and above their wages.

Yorkshire.  
 Thomas Cook.

A. 56.—They ought to be taken at home; and stopping one man's work, as named in A. 54, would enable every hand in our place, that wished to do so, to go home to dinner; breakfast and drinking they could not.

A. 57.—They work under their parents, or other men, who exact such obedience from them as the work requires.

A. 58.—Never, with our knowledge; but both parents beat their own children, and those men who do not employ their own children beat them the same; it is not often cruelly done. We disapprove of beating children at all, and have discharged hands when it has been grossly done.

A. 63.—Our foreman has had, for many years, instructions to discharge any workman who may beat a child improperly, even if that child should be the workman's own.

A. 64.—We have, in more instances than one, pressed the parents of children who have been beaten by workmen to take the offenders before a magistrate. Cannot say that this has occurred during the last three years.

A. 65.—Not many; but in houses promiscuously rented.

A. 66.—The best hands are those brought up to the trade; ours are nearly all such; one spinner was not; he was brought up a miner, and might have been fully as good a workman if he had been brought up to the trade he is now employed at.

A. 67.—We look at the health of our children as good, and that it has always been such, neither much better nor much worse than formerly; perhaps the balance is rather in favour of the former, inasmuch as for the last dozen years the loads of grease with which the floors were covered have been removed, and the floors kept as clean as is compatible with the nature of the work.

A. 68.—We have no process in our works injurious to health, unless the men's tenting in the drying-house be such; but as the lads get up to manhood we remove them to other jobs, at which higher wages can be obtained.

A. 69.—No; nor any in the town, nor immediate neighbourhood.

A. 78.—We hope not, and we do not think they are; ours cannot, or ought not to be, because we are for the Ten-hour Bill, subject to a reservation for making good stoppages by flood-water, on some reasonable plan of half an hour, not exceeding an hour a day, till the lost time be redeemed; and at the same time agreeing that all children and men at day-work shall be paid for all stoppages by flood-water at the same rate as if they were at work, which would be meeting the matter equitably.

In addition, I wish to add that I trust any thing so monstrously unjust as that would be, which would not allow of time lost at water-mills by flood and deficiency of water to be redeemed in a reasonable manner and under proper limitation, will not be allowed to become law. The children ought to be paid for stoppages by flood, water, &c., and be allowed to redeem the time, not exceeding one hour a day. It would be troublesome to the Committee, or I think it can be proved there is fully as little of crime, bastardy, &c. at Dewsbury, and less, than in many farming districts.

THOS. COOK.

No. 18.  
 John Halliley.

#### ANSWERS of JOHN HALLILEY, Dewsbury.

A. 1.—In the town of Dewsbury, county of York.

A. 2.—Manufacturing of blankets and other coarse woollens.

A. 3.—The first mill was erected in 1790, which is now used as a warehouse, the present mill was built in 1803 and 1804.

A. 4.—Steam-power; steam-engine fifty horse power.

A. 5 & 6.—Ventilation by numerous windows and doors; heated in cold weather by steam. The workmen regulate the heat and ventilation as they find agreeable to themselves, the work requiring no heat, but as a matter of comfort to the workmen. The mill is three stories or floors high, one hundred and eighty feet long, thirty-nine feet wide, from floor to ceiling twelve to fourteen feet each in height. Thirty-two persons employed over eighteen years of age, and seventy-six under.

A. 8.—All dangerous parts of the machinery are fenced off as much as possible; there is no more danger than in the wheels of road carriages, and accidents can only happen to the wilful and careless.

A. 9.—We have no room solely appropriated for the purpose of washing and dressing, nor is any required.

A. 10 & 11.—Very rarely less than nine years of age; forty-eight, employed as carding pieceners, are from nine to thirteen; bigger children could not perform the work; such would have to stoop or bend, the work being from two to three feet only above the floor they stand and move upon.

A. 12.—No alterations that have required any change since the commencement of the works.

A. 13.—No apprentices are employed.

A. 17 & 18.—All persons are employed the same number of hours; adults cannot work without the aid of children. The regular working-hours are eleven each day, half an hour allowed for breakfast, one hour for dinner, and half an hour for afternoon, exclusive of the eleven hours required for actual work.

A. 19.

A. 19.—In order to make up for lost time arising from casualties in machinery, cleansing of boilers and flues, holidays, and not unfrequently want of employment (of late years), the workpeople are permitted to work over-time, to make seven days a week, or thirteen hours each day, but more frequently only twelve hours; but this is only done when the employers have plenty of orders.

A. 20, 21, & 22.—The want of employment, the casualties already referred to in A. 19, will reduce the working-days to about two hundred and thirty days of eleven hours each; which deficiency is permitted to be made up as explained in A. 19.

A. 28, 29, 30, 31, 32, 33, 34, & 35.—Our experience is, that when we work thirteen hours per day the workmen who follow the machinery earn less per day by three-pence to sixpence than when they work four, five, or six days of eleven hours each. We have never tried or required relays of any fresh sets of any description of workpeople. There is not a sufficient demand of goods in our line to induce masters to try the plan of working day and night; and if there were, generally, hands could not be got in our trade, or in the district, for such a purpose.

A. 37.—To reduce the hours of work below eleven per day, or to restrict labour to ten or eleven hours per day only, each and every day, would inflict a most arbitrary injustice on the workpeople, as explained in answers to queries 19 to 22; such restriction would deprive the workmen of one eleventh part of their wages, and of course reduce their expenditure in the same proportion.

A. 50.—Lighted by gas, brilliantly, and in every part.

A. 54, 55, & 56.—A great majority live near the mill, and go home to meals; those who live at a distance have their meals brought to them at the regular periods.

A. 57.—As masters, we use no means for enforcing obedience but suitable reprimands, threatening to discharge them, and sometimes doing so.

A. 58.—Corporal punishments are not inflicted, they are expressly forbidden. Parents who have children working with them are not interfered with in this respect; generally there is little need of any punishment in our factory, all obey with alacrity, and apparently are cheerful, content, and happy.

A. 64.—No such case has ever occurred.

A. 65.—Very few, or none.

A. 66.—The boys brought up in our factories from infancy make the best workmen.

A. 67.—No alteration has taken place in the health of the people within the last ten years; the general health has been always good.

JOHN HALLILEY.

#### ANSWERS of JOHN BALDWIN, Halifax.

A. 1.—Southowram, in the parish of Halifax, county of York.

A. 2.—Manufacturing of stocking-worsted and yarn.

A. 3.—Erected in 1820; employed same year.

A. 4.—All steam; twelve horse power.

A. 5.—By windows made to open in each room, and which gives a ventilation through the rooms.

A. 6.—By opening of windows.

A. 7.—By overlooker.

A. 8.—All made secure by being fenced off with wood and iron.

A. 9.—None.

A. 10.—Eight years. The children we have at present have not been employed at any employment before.

A. 11.—It does, for expedition and low wages.

A. 12.—Much the same as before.

A. 13.—None in our mill.

A. 17.—In the mill eleven hours and three quarters per day; in the warehouse ten hours.

A. 18.—In the mill eleven hours and three quarters per day; in the warehouse ten hours.

A. 19.—Twelve hours and three quarters.

A. 20.—Three hundred and two days.

A. 21.—Three thousand five hundred and eighty-seven hours and a quarter.

A. 23.—Eleven hours and a half per day.

A. 24.—Twelve hours and three quarters.

A. 25.—For repairs of steam-engine and for working shorter hours on a Saturday.

A. 26.—We think it is not avoidable, from engine getting out of working order from various causes.

A. 27.—We have worked a quarter of an hour per day more.

A. 28.—The reduction of time being so little that we do not find much difference.

A. 29.—Profit.

A. 31.—The extra hours we work are so few that we cannot afford to employ two sets of hands.

A. 33.—We have not employed any hands at night.

A. 37.—If the reduction of hours be too great it will so increase the value of production as too greatly to increase foreign competition, and also to reduce the amount of labour for the adult comber and weaver.

(APP.—C. 1.)

A. 38.

Yorkshire.

John Halliley.

No. 19.

John Baldwin.

Yorkshire.

*John Baldwin.*

A. 38 & 39.—About 65° is required for airing the rooms and making them warm in winter. We do not want any heat in the summer for the process of manufacturing, except for two combing-machines, for which about 75° is required; but they being on a ground-floor, and the room well aired, the body of the room is about 65°.

A. 40.—One only.

A. 41.—None.

A. 50.—By gas.

A. 53.—For nine months in the year one hour and a quarter, and for three months in the year, during the winter season, one hour.

A. 54.—The greater part leave the works; a small part remain for their own convenience.

A. 55.—For the convenience of both, the time allowed for breakfast being only fifteen minutes.

A. 56.—Many of the persons live at so great a distance that it would stop the machinery too long.

A. 57.—Reproof, and dismissal from our service.

A. 58.—Not any.

A. 63.—We have repeatedly given instructions never to use any corporal punishments to the children.

A. 64.—None.

A. 65.—Our workpeople live in houses rented from others, and not ourselves.

A. 66.—Those employed from infancy have greater skill, and more obedient and industrious.

A. 67.—Much the same.

A. 68.—We have no particular processes.

A. 69.—It is not.

A. 78.—We cannot.

A. 79.—None.

JOHN BALDWIN.

No. 20.

*Robert Crossley.*

## ANSWERS of ROBERT CROSSLEY, Halifax.

A. 1.—Northowram, parish of Halifax, county of York.

A. 2.—The carding and spinning of woollen yarns for the manufacture of carpets and low cloths, &c.; and also worsted machinery for the manufacture of carpet-warps and stuff-goods; also stocks for milling and scouring yarns.

A. 3.—The mill was built about 1794; it was employed for its present purpose about the year 1808.

A. 4.—The mill is worked both by steam and water, the water-wheel being of sixteen horses power when well supplied with water, and a small steam-engine, erected about four years ago, of three and a half horses power. The stream of water is irregular, being in some parts of the year so scarce that it would not turn the machinery more than four hours per day.

A. 5 & 6.—The only provision for the ventilation of my factory is lifting up the sash-windows, and when the state of the weather is such as to permit of their being thrown up they are generally done so. The children employed in my factory enjoy the fresh air a many times each day during the hours of work, having to go out for their convenience, there being no such accommodations for them in the mill as in most newly-built factories, a plan which I disapprove.

A. 7.—The opening of the windows is at the discretion of all.

A. 8.—There is, I believe, no parts in the gear of my mill which may be said to be at all dangerous; but in the worsted machinery there are wheels working at the end of each frame which could not, I believe, be fenced off; I do not think such a thing could be attempted. Some children working in a mill for a period of fourteen years have not, perhaps, the least accident.

A. 9.—I have no convenience for my workpeople mentioned in this query, save an opportunity for washing themselves, which they have enjoyed since I took the mill.

A. 10.—The lowest age is nine years; some few may have previously been employed in other branches, but the number is very limited.

A. 11.—The nature of my work requires children under twelve years of age, for this reason, that those from nine to twelve learn quicker than those above, and are equally as useful; perhaps the manufacturers in this neighbourhood would not be able to get a sufficient number of hands were those under twelve to be excluded.

A. 12.—The alteration in machinery and in goods now in request require a greater number of children than formerly.

A. 13.—No.

A. 17.—It depends upon the supply of water, but when the water is plentiful the time they are employed is from six in the morning to eight at night.

A. 18.—All work alike; but when they are playing one half of their time in the mill-yard or at their homes, no abatement is made; it is understood that when the water is plentiful they shall work over-hours.

A. 19.—Fourteen hours per day, out of which three quarters of an hour for dinner, making thirteen hours and a quarter work.

A. 20.

Yorkshire.

Robert Crossley.

A. 20.—Three hundred and five days.

A. 21.—Uncertain.

A. 22.—The works have been carried on altogether, excepting in times of drought, when a part of the men and children employed in the woollen branch have worked with the steam-engine during the night.

A. 23.—Uncertain.

A. 24.—Thirteen hours and a quarter.

A. 25.—When regularly supplied with water, thirteen hours and a quarter are, I believe, the extent.

A. 26.—I think a regular quantum of hours the best, if it is possible, and might be avoided were the masters to consider their ability of supply previous to taking their orders for goods.

A. 27.—Ten years ago (but not since) my mill was worked from six in the morning to nine at night, to make up for the scarcity of water.

A. 28.—The cost of production is doubtless enhanced.

A. 29.—His inducement is to do the most business with the least capital, though I believe where cases of over-working are practised the wages are paid according to the number of hours, taking twelve hours the maximum of a day's labour.

A. 30.—I find the cost of production increased in every branch to the extent of the reduction, having the same rent to pay, the same capital in machinery, as when I work the longest hours.

A. 31.—The system of relays of children could not possibly be carried into effect, as, suppose I wanted to do more business than I could obtain by one set of hands, I would engage to say that if it was for a limited period of a few months, or even otherwise, I should be at more expence in obtaining hands, and having the work mixed and spoiled, than I could make profit by the whole concern, as a many of them would be to learn.

A. 32.—I never knew the system of relays to be tried; and I believe every practical man is too much aware of the loss that would attend even to make the experiment.

A. 33.—I have employed a night-set of hands. The way I arrange the work is as follows; the woollen concern which I have can be divided into two, each requiring the same number of hands; the half of the machinery is worked by the steam-engine night and day; those hands working at night attend eleven hours, those in the day thirteen hours each, stopping three quarters of an hour for dinner. This is only done when short of water.

A. 34.—I never found night-work profitable, as burning gas, also two sets of hands coming to the same machinery, do their work in different ways, that I have great loss from it.

A. 35.—They invariably change weekly.

A. 36.—Partly in consequence of the Bill now before the House of Commons, and the inconvenience of night-work, I am at present erecting a larger steam-engine to propel the concern, without stoppages for water, or having to work in the night. I want no night-work.

A. 37.—To reduce and restrict the hours of labour is to raise the price of goods in a material degree, and would no doubt in course of time prove injurious to the manufacturers, and consequently to the labouring population of this country. It must be recollected that immense quantities of our long wool is exported to France at a duty of, I believe, only five shillings per cwt., and also that workmen are going from this country to establish new concerns there; therefore, to reduce the hours of labour as proposed is to grant a premium of magnitude to the manufacturers and labourers of other countries, while at present the stuff trade is a business naturally our own.

A. 38.—No degree of heat is required, only for the comfort of those employed.

A. 41.—Perhaps four or five times.

A. 42.—Five children about ten or twelve, and about four eighteen or twenty years of age.

A. 43.—Ten hours and a quarter.

A. 44 & 45.—About nine; from seven at night to six next morning, allowing three quarters of an hour for dinner.

A. 46.—No.

A. 50.—By gas.

A. 51.—There are air panes in the windows, also a door communicating with the water-wheel.

A. 52.—They are superintended by the billy-spinners, and I believe the habits are unquestionable, for any thing I know.

A. 53.—Three-quarters of an hour for dinner.

A. 54.—A large majority leave them at meal-times; but a few, who are perhaps a mile from home, bring their dinners with them.

A. 55.—For the convenience of the workpeople.

A. 56.—The mill must stand until they return.

A. 57.—If they are refractory or idle they are punished or discharged.

A. 58.—Yes.

A. 59.—By overlookers and foremen.

A. 60 & 61.—I was aware that corporal punishments were inflicted; but never gave any orders that they should or should not be inflicted,

(App.—C. 1.)

D

A. 62.

Yorkshire.

Robert Crossley.

A. 62.—The good management of a mill is not better secured, as we all know, by greatly punishing a child, as those who do it have children of their own. I have reprimanded the overlooker when I have heard or seen punishments; if they will not do their duty without so much trouble we discharge them.

A. 63.—No instructions have been given by me, pro or con.

A. 64.—There never was a proceeding taken against me or my men, to my knowledge, ever since I commenced business.

A. 65.—In some cases the workpeople live in the houses of their employers, but no control exercised over them in any way.

A. 66.—Those persons who have been employed from their childhood are invariably better hands than those who have commenced working in factories at a later period; they are generally more industrious.

A. 68.—No.

A. 73.—The mills in this neighbourhood are chiefly employed in the stuff branch or the woollen department, and consequently not subject to the present Act of Parliament.

A. 74 & 75.—I am not aware of one instance.

A. 76.—If evidence was wanted to establish a fact of hardship against any individual, it would be obtained, as they would soon get employment if discharged for any thing of that kind.

A. 78.—If we are to have a restriction of the hours of labour, I would suggest that there shall be some permanent provision made that the measure shall be to us all alike, both in town and country; without this it would be a great grievance, the treatment of children in my factory is such that I believe no legislative enactment can improve it.

A. 79.—I would say let the restriction be for sixty-six hours per week, and no less; as, if you restrict the children you restrict at the same time the men also.

ROBERT CROSSLEY.

No. 21.

R. & J. Ingham.

#### ANSWERS of RICHARD and JOSEPH INGHAM, Haugh, near Halifax.

A. 1.—Township of Erringden, parish of Halifax, county of York.

A. 2.—Cotton yarn from No. 14<sup>s</sup> to No. 40<sup>s</sup>.

A. 3.—They were erected all at one time, in the year 1826.

A. 4.—Water-power; the regularity of working varies according to the seasons being more or less dry; in a considerable portion of all the summer seasons we work short time, say eight hours and a half a day.

A. 5.—By slide-panes; in this way no injury is done by currents of air.

A. 7.—Any person in the mill is allowed to open or close a pane.

A. 8.—Such parts as are in dangerous situations are cased off.

A. 9.—The principal number of the hands resides within the distance of one hundred yards of the mill, and have dry shoes in the manufactory.

A. 10.—At nine years old; but we had rather not have them so young, and would have none so young if we did not feel obliged to take them in consequence of having the older in the family; their parents, rather than employ them at hand-loom weaving, almost force them upon us; they expect us to employ young and old in one family.

A. 11.—We had rather have none under twelve years old; we should be inclined to believe, so far as relates to cotton-mills respectably conducted, the parents of children want to get them in as early as possible.

A. 12.—We do not think that any recent alterations render it more needful to employ children under twelve years; but in most cases where they are employed they are employed by operative spinners, and are generally their own children, therefore are always under the sole control of parents.

A. 13.—None.

A. 15.—Such as are in lodgings, and work for us, are from eighteen years old and upwards.

A. 16.—The operative spinner is master or overlooker over such children as are employed at his mules.

A. 17 & 18.—Twelve hours, and nine hours on Saturdays.

A. 19.—Twelve hours and a half when making up for short water.

A. 20.—About three hundred days.

A. 21.—We cannot tell, having lost time by short water at a deal of different times, which has not been made up.

A. 22.—This has not been the case, as one part depends on another in the process.

A. 23.—We cannot say, as we have not been over particular in making up lost time.

A. 24.—Twelve hours and a half.

A. 25.—When making up for short water.

A. 26.—Water-mills are liable to loss of time by drought and by back water of floods; this is unavoidable and certain to occur; it has also hitherto been thought reasonable, and we may say a matter of right, that at least a part of the time so lost should be regained; this right of regaining (in a limited and reasonable way), in our opinion, constitutes a part of

Yorkshire.

R. & J. Ingham.

of the proper worth of the property, and ought not to be taken away; if this hitherto acknowledged right of regaining is taken away, the result will be that such property will in part be unduly and improperly sacrificed. Now, in regard to the loss of time by the breaking-down of the machinery and of the moving-power, and the loss of time thereby,—to accidents of this sort water-power and steam-power are reciprocally liable, and the same law, so far as this goes, may justly apply to both; but loss of time by short water, and back water by floods, occurs to water-mills only, and ought not to be confounded with accidents to machinery.

A. 27.—We were not spinners previous to the passing of the Bills, and we have complied with them as far as possible.

A. 28.—The cost price of the yarn will be greater; even if the wages fall as much as the time reduced there is the capital invested to sustain to the same extent as before.

A. 29.—The love of money is the inducement; there can be no other; the supply of goods to the markets is so ample that the evil cannot be justified on the ground of fitting-up orders; it is true a man may wish to do all the business, and use all time, and leave his neighbour without business and orders.

A. 30.—We think that too great a diminution of the hours of labour will cause many spinners to increase the speed of their machinery, which would distress the hands and be fatiguing to them. Even with a considerable increase of speed of the machinery less work will be done than heretofore, and if no diminution takes place in the wages, the yarn will cost more by the same wages on a less quantity, and also by a less quantity having the same amount of capital to sustain.

A. 31.—In our opinion relays of hands would cause the laws to be evaded by one set of hands going in twice, or mixed with others; and therefore, so far as any enactment goes, impracticable.

A. 32.—It would be a cumbrous method of conducting business, and would not be resorted to unless for evasion.

A. 33.—We think there ought to be no night-working whatever under any circumstances, except in case of repairs by mechanics.

A. 34.—It would be useless, in our opinion, to attempt to legislate for the employment of two sets of hands, as it would lead to endless evasion.

A. 35.—We don't spin in the night.

A. 36.—We consider night-work unnatural, and a thing which ought on no occasion to be allowed to any manufactory; and we consider its effect on trade is to glut the market, and that evil and cruelty attend it in all ways.

A. 37.—Wages will ultimately be lower in the same proportion as you lessen the hours of labour; surely no man will dispute this, unless he conceives that the value of labour can be regulated by an Act of Parliament. The value of labour in this country must assimilate itself with the value of labour in foreign countries. The money returns for labour in this country, and the money returns for it in other countries, are always tending to a par; in no other way could they do business with us, without ruin to themselves; therefore, admitting this, we cannot make ten hours labour of ours of as much value as twelve hours has previously been.

A. 38.—The temperature at which we work varies from 60° to 70°.

A. 39.—70°.

A. 40.—Temperature all alike.

A. 41.—None.

A. 50.—Lighted morning and evening by candles in winter; we have no work through the night.

A. 52.—The effects are immorality and ill-health.

A. 53.—Half an hour at breakfast, and one hour at noon.

A. 54.—They have their choice; we require no work from them at those times.

A. 55.—If they remain, it is for their convenience, as shelter in bad weather.

A. 56.—It would in some cases be a hardship on the hands to drive them away.

A. 57.—We have discharged them, or told them we would do if they did not amend.

A. 58.—We on no occasion suffer corporal punishments; and if an overlooker was guilty of it we would discharge him. No one can prove punishment of this sort in respect to almost any of the mills in this neighbourhood.

A. 64.—None at any time, neither by the parents or guardians of children.

A. 65.—In some cases they live in our houses; we exercise no superintendence; the children attend a Sunday-school; our observation leads us to conclude that in general they are cleanly in proportion as they are well off.

A. 66.—In respect to those occupations where young persons are employed it makes little or no difference.

A. 67.—It is our deliberate and dispassionate opinion, that the children employed in the cotton-factories in this neighbourhood look better, are more healthy, are better used, and live better than the poor sallow-looking children of the hand-loom weavers; there is really no even prejudiced person could resist conviction on this subject; let the grocer and butcher be asked, who are their best customers? they will say, the factory-people. If humanity did not take fancies, one would have expected the hand-loom weaver would have been most lamented over; but it would be difficult to legislate for them; they are cut up by the power-loom,

Yorkshire.

R. & J. Ingham.

loom, which is a glorious invention; perhaps their usefulness consists in glutting markets, and increasing something of which there was too much before.

A. 68.—None.

A. 69.—Yes.

A. 70.—Yes, once, by an informer who informed against all the mills in the neighbourhood; a man of low character; he did not succeed in any instance.

A. 73.—We know not, at least nothing to the contrary.

A. 74.—Yes, some of them have.

A. 75.—The magistrates are twelve miles from here, therefore it is a chance to hear what passes; we know no instance here.

A. 76.—We cannot speak to any case.

A. 77.—We do not think there is more in this than is found in any instance of life where persons have to do with one another.

A. 78.—We think the last Act of Parliament on this subject the best in these respects that can be made: it would be a great hardship if the regulations are made so severe as almost to put the masters of factories out of the pale of society. The penalties and regulations in Lord Ashley's Bill, from their severe character, seem to point at a class of persons who have forfeited all claim to beneficent government.

A. 79.—In the observations we make on the factory question, none apply to such establishments as are not included in the Act now in force. We condemn the masters of some of those factories not under the Bill as guilty of the most tyrannical conduct; and we have seen no pretence made, to account for the woollen and silk mills being left out of the Act. Some of those factory masters have taken orders they could not execute without working almost day and night; they have done this rather than divide the orders with others; and it deserves to be called nothing but unrestrained grasping cupidity.

Allow us to ask, what is the test by which the Ten Hour Bill is to be judged? The labourers in factories are either better or worse off than the labourers in other employments: if they are better off in the quantity of labour and remuneration, then there is no need of other than the present Bill; if worse, let us have shorter time. It is the duty, therefore, of the Commission to compare the comforts of the working-classes one with another, in the various forms of employment (say working in cottages, &c.); if then it is found that the present law does not bring the factory-labourer up to the average standard of health and comfort, there is need of an alteration.

Now, we may, with some degree of assurance, say, that the country is speaking, and does speak, for itself; we employ hand-loom weavers, and they are continually asking, Can you make room in your factory for us? we cannot do as we are. The cottages in the neighbourhood of factories, not belonging to the owners of the factories, will let for twenty-five per cent. more rent than others at a distance from them, and the rents are also better paid. It would be improper to set up a standard to determine what is humane and what is otherwise, and apply it to factories alone; this would be setting experience at nought, and judging on abstract principles. If legislation is necessary to restrict the hours of labour in any particular employment, such restriction should be governed by what, on a summing-up from actual observation of the hours of labour in various employments, is found to be a fair average, always having reference to the ages of the workers and the fatigue in each particular occupation; an average so obtained would make an enactment safe. Humanity must be exercised with discretion; and we wish we could say that misery and want do not exist to a great degree among the labouring classes: still, persons undertaking to make laws should not apply an impracticable quantity of humanity, or increase an evil by professing to mend it.

The evidence given before the Committee as to the beating of children in the cotton-factories (at least so far as we know) is most unfounded; and the inference drawn from that evidence cannot apply to any of the factories here; and it is so at variance with the experience of persons here, that it looks like a hobby dressed in high colours by an indulged fancy, or of agitation in fashionable attire.

The Ten Hour Bill would lower the rate of wages in factories, first, by drawing more strongly the competition of the hand-loom weavers against the factory workers, in the desire of the former to leave the looms and get into the factories. The factory labour at ten hours and the present wages would be enviable, and there would be a constant competition to obtain that sort of employment: the inevitable result of the competition would be a lowering of the mill wages, and they would be brought down in the scale of comforts by that fatal thing, competition; and you would only still have the same number of factory hands employed, but reduced in circumstances, and no other class benefited. It would be an outrage on reason to say that an Act of Parliament can make ten hours labour worth as much as twelve hours; this will be taken for granted. Third, as regards the price of labour generally, our opinion is, that, in a time of peace, the value of the labour of countries trading together has a tendency to approach to an equality in remuneration; we can only have returns from other countries of what they can spare to us, and the quantity will be regulated by the condition of the labourers; and the quantity so wanted, being more or less, will operate on wages here, to increase or diminish them in amount; but it must be remarked, that, for some years, slight causes have lowered wages, and it must be a permanent and pressing demand that can raise them. Other arguments might be adduced to prove that

that wages will ultimately fall in the same proportion as the time is shortened, and that competition would do its fatal work on the factory worker; its operations would begin both at home and abroad. We cannot raise ourselves up at the expence of foreigners; they would soon, if we attempted it, show us that they also could spin, and would, rather than buy our dear yarn; then, being once enabled to supply themselves, we should show the first symptom of a decline in greatness. It is a most dangerous thing "to tamper" with the commerce of this country; if we once suffer a radical shake from foreign competition, the matter will be settled, and we shall have to go to war to destroy their commerce and communications.

The Corn Bill has a baneful effect on the labouring classes; whilst they have to compete with the price of labour in foreign countries, and to eat Corn Bill bread, can we expect any thing else than misery and want? The labourer has a choice of evils set before him—he must either work an undue quantity of work to buy his bread, or else, doing a reasonable quantity of work, have too little bread: some choose to be short of bread, or commit crime; and others, to do too much work; and in both cases there is misery, and an inroad made on the feelings of persons of humanity. Can those persons having the power to alter or repeal the Corn Laws charge the factory system with inhumanity, or do they consider the situation of the hand-loom weavers under the Corn Bill?

Enactors of the Corn Bill have thrown the first stone at the comforts and independence of the labouring classes, and now it is presumed to remedy the evil by an Act of Parliament on effects, instead of causes of evil. The labourer is beset on every hand,—one abridges labour, and thinks it great merit, even though the labourer is standing idle for scarcity of the very work that is to be cut down and lowered in value; and another sells him produce governed in price by legislative restrictions. The Ten Hour Bill would at first raise the price of yarn, by a less quantity going into market; the advance would only be temporary, and it would scarcely operate any on the piece-market, because the merchants, both home and foreign, would immediately lessen their purchases of goods: experience would dictate to them, that before they could obtain sale for the dear goods cheap ones would be poured into the market. The above effects, when the markets have advanced, and when the merchants have bought goods at higher prices, have so often resulted, that they will no longer take the risk. These are the effects of an overwhelming production. Admitting, then, that goods will scarcely improve in prices, that yarns will for a time advance,—admitting also that the hand-loom weaver is in a state of destitution, and that the hand-loom manufacturer is gaining nothing (who can dispute this?), and that the power-loom manufacturer is in these circumstances gaining a handsome profit, what then? an advance of yarn takes place, the power-loom manufacturer can still go on by yielding a little of his profit; but there being no profit on hand-loom manufacturing, and surely no room to reduce the wages, the weavers will at once, two thirds of them, be thrown out of employment. We fear we have more than complied with your 79th question, and given you more observations than you will like to read.

R. & J. INGHAM.

Yorkshire.

R. & J. Ingham.

#### ANSWERS of GEORGE NAYLOR and Co., Halifax.

No. 22.

G. Naylor & Co.

A. 1.—Jail Lane in the borough of Halifax, in the west riding of the county of York.

A. 2.—Cotton, wool, and silk card making; wire-drawing; currying and dressing of leather.

A. 3.—The premises have been erected a many years, and have been employed for the present purposes since we occupied them.

A. 4.—Three horse power steam-engine, worked generally from half past six in the morning to half past seven at night.

A. 5.—No particular provision for ventilation; the rooms are lofty, and besides have six sash windows into each story of the building, which the workmen open at their pleasure.

A. 6.—Depends on the opening of the windows principally.

A. 7.—Any of the persons employed regulate it at their own discretion.

A. 8.—The dangerous parts are fenced.

A. 9.—Having a plentiful supply of good water the workmen have free access to it for washing, either hot or cold, as may be preferred.

A. 10.—We have none under fourteen upon the premises, but children are employed by our workmen at their own houses in setting cards, as soon as they can be got to labour.

A. 11.—The nature of the work does not require the employment of children, but the earnings are so small that persons above twelve years of age could not be maintained by it, consequently it is principally done by children.

A. 12.—No alteration in that respect.

A. 13.—No.

A. 15.—We do not lodge and maintain any; they reside with their parents.

A. 17.—Thirteen hours, allowing two hours off for meals; say from half past six o'clock to half past seven.

A. 18.—The same as those above twenty-one years; only two persons on the premises under twenty-one years.

(APP.—C. 1.)

D 3

A. 19.

Yorkshire.

G. Naylor & Co.

A. 19.—Eleven (working-hours for all that labour by the day), and occasionally twelve hours for wire-drawing, being piece-work.

A. 20.—Three hundred and five days (exclusive of eight days given as holidays).

A. 21.—Three thousand three hundred and fifty-five, or eleven per day, for those who work by the day, and unable exactly to state the time of those who work by the piece in wire, occasionally being eleven and a half to twelve per day.

A. 22.—The works are in general employ regularly during the entire working-hours.

A. 23.—Eleven hours for time actually worked, having eight days given as holidays.

A. 24.—We have no children in our own direct employ; the children are employed by our workmen at their own homes, partly at work by the piece, and partly at daily wages; those by the day generally work nine hours and a half on the average of the week.

A. 25.—During the middle of the days in the hot weather, in summer months, when the nature of the trade will not allow of their working, owing to the wire becoming rusty by the perspiration of the children's hands.

A. 26.—Except as stated in A. 25, may be avoided.

A. 27.—We have not.

A. 28.—Our hours are the same as heretofore.

A. 29.—We have no inducement to continue work through the night, or either irregular or extra hours, except as stated in A. 25.

A. 30.—Our hours being as usual, the cost of production is the same.

A. 31.—We do not work extra hours; all we require is as stated in A. 25, when the time requires to be varied by working the early part and cool of the morning (resting during the heat of the day), and making up the time in the evening of the days.

A. 32.—We believe it has never been resorted to in the card trade; considerable part being piece-work, at their own homes, relays are not practicable.

A. 33 & 34.—We have not; one set, working regular hours, being equal to the work, it would be an injury both to employer and employed to have two sets to perform the same quantity of work.

A. 37.—Our opinion is, that so long as our workmen are satisfied with the hours, knowing that if government interfere to reduce the working-hours, consequently there will be a reduction in wages also, which may excite unpleasant feelings; on those grounds we are decidedly opposed to any alteration, or the making the card trade subject to any Factory Bill regulations.

A. 38.—We are not particular as to the temperature of any parts of our premises, except for the drying of leather, which is in a building distinct from the rest; in that the temperature is varied according to the weather, and is used as a drying chamber, not as a working chamber.

A. 39.—Cannot state, never having noticed what heat the drying of leather may require.

A. 40.—Two occasionally.

A. 41.—None.

A. 47.—May be discontinued at pleasure.

A. 48.—From fourteen years of age upwards.

A. 50.—Not lighted.

A. 53.—Half an hour for breakfast, one hour for dinner (oftener an hour and a quarter), half an hour in the afternoon.

A. 54.—All the persons leave except three.

A. 55.—The three workmen who take their meals in the manufactory reside two miles from the town, and request to be allowed to do so, being more convenient to them than going to an inn.

A. 56.—Would make no difference to us; the injury would be sustained by the workmen if compelled to go away.

A. 57.—The youngest person on the works is fourteen years old; we enforce obedience on the part of any one in our employ by acting on this principle, "that if they will not conduct themselves in a steady, sober, and consistent manner they will be dismissed."

A. 58.—Never.

A. 64.—Never.

A. 65.—They do not.

A. 66.—We have none that have been employed from infancy.

A. 67.—The workmen are generally in the enjoyment of good health; we had not one case of fever when so prevalent last year; and although five of the workmen have had the influenza this month, only two of them were absent from their piece-work one day each.

A. 68.—We make no change; each person has his own department; we are not aware of any injurious processes connected with our trades.

A. 69.—It is not.

A. 73.—Cannot say.

A. 77.—We have no reason to suppose they are.

A. 78.—We are not prepared to suggest any.

GEORGE NAYLOR & Co.

## ANSWERS of W. H. RAWSON, Halifax.

Yorkshire.

No. 23.

W. H. Rawson.

A. 1.—Sowerby, parish of Halifax.

A. 2.—Woollen-manufactory; carding, spinning, fulling, finishing, and dyeing.

A. 3.—About one thousand seven hundred and eighty-seven, with small additions at various periods.

A. 4.—Water only; suppose about thirty to forty horse power. The supply irregular, occasionally from frost in winter, but more frequently from drought in summer, during which the wheels are sometimes not able to work more than four hours out of twenty-four, but this extreme only in very dry summers.

A. 5 &amp; 6.—Well ventilated by large windows, doors, &amp;c.

A. 7.—At the discretion of the persons employed, merely with regard to their own comfort.

A. 8.—Every care is used to make the machinery as safe as possible.

A. 9.—No particular arrangements, and none such are required. The children have free admission to a washing-place when they wish it, but this is more frequently attended to by their parents at home. There is a room with a fire for the purpose of drying wet clothes if required; and the factory is regularly whitewashed.

A. 10.—None under seven, and very few under eight. These young children are almost exclusively under the care of their own parents, for whom they work; scarcely ever previously employed at any other trade.

A. 11.—Yes; the best and most expert pieceners or assistants to the spinners are from eight to ten years of age; at twelve and upwards they become less adapted for this operation, nor could higher wages be afforded for increased age.

A. 12.—No; the difference very immaterial.

A. 13.—No.

A. 15.—No; nor do I lodge or maintain any of any sort.

A. 17.—The usual time in summer, and with a supply sufficient of water, is from 6 A.M. to 8 P.M., allowing one hour at dinner, and half an hour at breakfast and drinking. As the winter approaches the hours are less, as the workmen don't commence till daylight and leave at dark, except during about four months in winter, when the work is continued till 8 P.M. The children work the same time. On Saturdays the mill is stopped about four o'clock.

A. 19, 20, 21, 22, &amp; 23.—I keep no time-book, that I cannot answer these questions except generally. The manufacture is carried on regularly every week-day, as above (A.17.), excepting in case of repairs, and a few of the principal holidays.

A. 24 &amp; 25.—During last year I believe there was no excess, but occasionally, when manufactures are required in great haste, and when there has been a considerable stoppage of the works from an insufficient supply of water, some extension of time is required when the rains have produced a sufficient supply, but seldom more than one or two hours per day.

A. 26.—I consider that in water-mills, depending on an uncertain supply of water, this is unavoidable, and that in such cases the hours cannot be regular. In a great scarcity of water the dams or reservoirs at the heads of the streams or rivulets collect the water during the night, and, beginning to use it at six in the morning, the water does not reach the mills situate at the lower ends of the stream till late in the day; and if both mills were obliged to stop at the same hour, one half the water would be lost to the lower.

A. 27.—Not as a general rule. Under particular circumstances, when manufactures were much required, it may have been the case for short periods.

A. 28.—Certainly it would be.

A. 29.—Profit, I presume.

A. 30.—The wages paid to the workmen bear but a small proportion to the general cost of production; and as rent, taxes, interest on capital expended in machinery are continually going on, the more work done by any manufactory the less the cost of production for any given quantity.

A. 31.—If the extra hours were excessive, or for night-work, then relays would be desirable, but for one or two hours per day occasionally, it would, I think, be inapplicable, and exceedingly difficult of arrangement.

A. 32.—No, and not tried, as in any extra work in my manufactory it appears to me quite unnecessary.

A. 36.—None to my manufacture, as far as children were concerned. A general prohibition would be of serious loss to me occasionally. I have one machine which is indispensable, and which, during a great part of the year, requires all the power I have; this I am obliged to work frequently in the night, or all the other machinery would be stopped; it is worked by one adult and two young men of fifteen to eighteen years of age. After working in the night they have any rest they require in the day.

A. 37.—A further considerable reduction of working-hours would be felt severely by the workmen and the parents of the children, and would be a source of great dissatisfaction and complaint, because the wages would be unquestionably reduced in proportion. I have spinners in my employ who would lose six shillings or eight shillings per week for themselves and their own children by a reduction of two hours per day.

(APP.—C. 1.)

D 4

A. 38,

Yorkshire.

W. H. Rawson.

A. 38, 39, & 40.—Nothing beyond the usual temperature is required in my manufacture. The buildings are warmed by fires or steam-pipes in cold weather, but only for the purpose of promoting the comfort of the workmen.

A. 41.—None, except as A. 36.

A. 42.—None, except as A. 36.

A. 46.—None.

A. 50 & 51.—No night-work (except as explained in A. 36). Oil and Argand lamps, where light is required.

A. 53.—One hour for dinner, from half past twelve to half past one, and half an hour for breakfast and drinkings; the time for the latter left mostly to the discretion of the workmen.

A. 54.—All at dinner; but their other meals are generally brought or sent to them from home.

A. 55.—Entirely as suits the convenience of the workpeople, and that only.

A. 56.—For breakfast and drinking the time would be wholly consumed in going home and returning.

A. 57.—None; sure dismissal in case of continued disobedience, and this would be punishment enough.

A. 58.—No, not to my knowledge or belief.

A. 64.—Never, either during the last three years or at any former time, as far as my knowledge goes.

A. 65.—A portion of them occupy cottages belonging to me. Quick-lime is always gratuitously offered and strongly recommended for whitewashing the cottages of any of my workmen; I cannot enforce cleanliness beyond the recommendation and an offer of giving what will make the houses clean. I should dismiss from my employ any person notoriously uncleanly, or guilty of habitual drunkenness or other immorality, which operates in most cases as a sufficient check.

A. 66.—A great part of my workmen have lived with me nearly all their lives.

A. 67.—I am not aware of any difference, nor can there be much, being convinced that the general health and soundness of constitution of my workpeople is quite equal to that of an equal number taken promiscuously from any part of the kingdom or from any employment.

A. 68.—No selection required, as the general health of all the adults as well as children proves that there are no injurious effects from any process.

A. 69.—I do not know to what Act this refers, but I presume the Act relating to cotton-factories; my mill is therefore not subject to that Act.

A. 78.—No.

A. 79.—In mills driven by water only, and where the supply is very precarious and irregular, as in my own, I am of opinion that no legislative interference could be adopted as to the particular hours of working, without producing great depreciation of property, and a great inconvenience and loss as well to the occupier as to those employed under him. I may add, that I have read many portions of the evidence given before the Committees of the Honourable House of Commons, and of the speeches made at public meetings by the advocates of the measures now contemplated, and that the statements therein made are totally inapplicable to this mill, or any mill in this neighbourhood with which I am acquainted, and are most gross exaggerations as far as any case which has come under my own personal knowledge.

W. H. RAWSON.

No. 24.

J. Royston, Son, & Co.

## ANSWERS of JAMES ROYSTON, SON, &amp; Co.

A. 1.—Borough of Halifax, westriding of the county of York.

A. 2.—Wire-drawing, wire-covering, and card-making.

A. 3.—Principal part erected about the year 1804, and an addition in 1814, since which periods employed as above.

A. 4.—Steam-power.

A. 5.—None particular.

A. 6.—Depends entirely on the opening of windows.

A. 7.—By the overlooker in each room.

A. 8.—All fenced off.

A. 9.—Not any.

A. 10.—Eleven years and a half.

A. 11.—Does not.

A. 13.—Yes.

A. 14.—None from parishes.

A. 15.—None.

A. 17 & 18.—Eleven hours per day for five days, and nine hours on the Saturdays.

A. 19.—Eleven hours.

A. 20.—Three hundred and thirteen days.

A. 21.—Three thousand three hundred and thirty-five hours.

A. 23.—Ten hours and a half.

A. 24.—Eleven hours.

A. 27.—Very seldom, and then only adults employed the extra hours.

A. 29.

A. 29.—We can assign no other reason than the manufacturer wishing to produce as large a quantity of goods as possible, to meet the great competition in trade.

A. 30.—Of course the less produced by the machinery the greater the cost, is the only answer we can give to this question.

A. 37.—We think that a further reduction in the hours would also cause a reduction of wages, and increase the price of goods, to pay for the capital invested in machinery, and thereby the labouring classes would be the sufferers.

A. 38 & 39.—No artificial heat required in the process of manufacturing. In winter some of the rooms are simply warmed by steam for the comfort of the workpeople, and others by common fires.

A. 41.—None.

A. 53.—All allowed half an hour for breakfast, one hour for dinner, half an hour for drinking.

A. 54.—All leave at meal-times, except those who bring them for their own convenience.

A. 57.—Principal part work by the piece, and therefore it is their interest to be industrious, and if not, they are dismissed.

A. 58.—None allowed.

A. 65.—Some few, but control or interference not found necessary.

A. 67.—State of health generally good.

A. 68.—Not any change found requisite.

A. 69.—Not subject.

A. 73.—Have never interfered with any factory; do not know any factory subject to the provisions of the present Act.

A. 78.—Cannot suggest any, as the subject does not affect us, nor have we even thought necessary to consider the matter.

JAMES ROYSTON, SON, & Co.

Yorkshire.

J. Royston,  
Son, & Co.

#### ANSWERS of Messrs. WALKER and EDMONDSON, Halifax.

No. 25.

Messrs. Walker  
and  
Edmondson.

A. 1.—Our mill is situated in the township of Wadsworth, parish of Halifax, and county of York.

A. 2.—Preparing and spinning worsted.

A. 3.—The mill was erected about the year 1792, since which time it has been carried on in the above branch.

A. 4.—We have about thirty horse power of water, and forty-six horse power of steam; the water is very irregular, being soon dried up in summer, and in winter we are very much troubled with excess; when the water is regular we only require about half the steam-power.

A. 5.—None.

A. 6.—Doors at each end of the mill, and opening of the windows.

A. 7.—The ventilation is regulated by the manufacturers, foreman, and overlookers.

A. 8.—They are.

A. 9.—We have no specific arrangements.

A. 10.—About seven years old; we are of opinion that they have not been employed at any other kind of work.

A. 11.—It does require them under twelve years of age, and we think they are better adapted for spinners than those above that age.

A. 12.—A less proportion of children under twelve years of age is required.

A. 13.—None.

A. 17.—Fourteen hours per day, including the time for meals, which is generally about two hours.

A. 18.—Fourteen hours, including the time for meals, which is one hour at noon.

A. 19.—Thirteen hours.

A. 20.—Two hundred and eighty-eight days.

A. 21.—Three thousand seven hundred and forty-four hours.

A. 22.—All carried on together.

A. 23.—Twelve hours the average for each day, including meals.

A. 25.—Never exceeded during the last year.

A. 26.—We think any excess above our statement ought to be avoided.

A. 27.—We have not.

A. 32.—They have never been tried.

A. 33.—We had about thirty-two hands employed twelve weeks during the last year in the night, which commenced at seven o'clock in the evening and left off at six o'clock in the morning, when the day-spinners commenced.

A. 34.—We do not conceive that much good is derived from night-spinning; but sometimes we have an excess of hands in one department, which, rather than discharge, we prefer employing them in the night-time until they are wanted in their original employment.

A. 35.—The night and day spinners don't exchange.

A. 36.—None worth noticing.

(APP.—C. 1.)

E

A. 37.

Yorkshire.

Messrs. Walker  
and  
Edmondson.

A. 37.—We are of opinion that if the hours of labour for children, &c. in factories are reduced too low it will operate against their wages, particularly in a slack time. If thirteen hours per day were fixed upon, say eleven for working, half an hour for breakfast, one hour for dinner, and half an hour for drinking, the children would get both fresh air and a little recreation, as well as a little time for reading, &c. for such as might be disposed.

A. 38.—About sixty degrees.

A. 50.—By gas.

A. 51.—The same as in the day-time.

A. 52.—We have not observed any difference of those employed by night or by day.

A. 54.—All the mill-people leave at noon.

A. 57.—For fifteen or twenty years back our express orders to foreman and overlookers have invariably been, that if any children under their care were unruly or disobedient, not to beat or misuse them improperly, but to send them home, which we have always found to answer our expectations, as it had the effect of deterring others.

A. 65.—The principal part of our mill-people live in our own houses, and are in general clean; if any case comes to our knowledge to the contrary, we remonstrate with them.

A. 66.—Those who have been brought up in factories from their infancy generally make better spinners and overlookers.

A. 67.—We cannot say that any alteration in the health of the children has taken place in any given time, and as they have not been troubled with much sickness, of course we never gave it a consideration.

A. 68.—None.

WALKER and EDMONDSON.

No. 26.

Watts Wrigley.

#### ANSWERS of WATTS WRIGLEY, Halifax.

A. 1.—In the township of Ovenden, parish of Halifax, county of York.

A. 2.—Dressing, boiling, carding, spinning, and twisting waste silk.

A. 3.—The whole of the works are just completing, though some of the particulars given in these returns have reference to the details of other mills just left.

A. 4.—Have employed steam-power regularly.

A. 5.—The ventilation is provided by swing sash windows.

A. 7.—The ventilation has hitherto been at the regulation of the hands themselves, so as to suit their own comfort.

A. 8.—The dangerous part of the machinery has been in the old mills, and will all be in this mill fenced off.

A. 9.—No arrangements have hitherto been made to this effect, though the hands have the boiling-house to go to, if wet, and soap found there for washing.

A. 10.—See list and description of workpeople. Messrs. W. and Sons would rather not take any children under twelve years of age, but occasionally admit them at a less age, to accommodate parents who work for them.

A. 11.—No.

A. 12.—In silk-spinning the tendency, from the improvement of machinery, is to render a less number of young hands necessary.

A. 13.—In the dressing department only.

A. 14.—Have no parish apprentices.

A. 15.—Lodge no children; they receive a weekly wage, and live with their friends or parents.

A. 17.—Twelve hours per diem.

A. 18.—Twelve hours per diem, no difference being made, the adults not being able to work without children, in most cases.

A. 19.—Twelve hours.

A. 20.—Every day, with the exception of Sundays and the usual holydays.

A. 21.—Make seventy-two hours a week, with the exception of holydays.

A. 22.—Every department has been carried on at the same time.

A. 23 & 24.—Twelve hours per diem.

A. 25.—None.

A. 27.—Previously to having a set of night-hands, have occasionally, on pressing demands, worked longer than twelve hours.

A. 28.—Undoubtedly so.

A. 29.—Have no knowledge of work being continued through the night without change of hands; and the inducement to working longer hours is generally to make up pressing orders rather than lose them.

A. 30.—The silk trade not coming under the operation of any Act of Parliament, cannot answer this question from practical knowledge.

A. 31.—For children of twelve years of age there could be no objection to having relays; but for older hands it would not be practicable, on account of it not being worth their while to work for that proportion of wages.

A. 32.—See Answer 30. Do not know that it has been tried.

A. 33.—Have employed a day and a night set of hands; the former make twelve hours per diem, the latter ten hours.

A. 34.

Yorkshire.

Watts Wrigley.

A. 34.—There is no interest in working during the night; have been obliged to do so on account of limited premises.

A. 35.—The dressing and carding departments have worked alternate weeks by night.

A. 36.—Having built a new mill on a much larger scale, shall in future discontinue any night-work.

A. 37.—A further reduction of the hours of labour will be followed by a proportionate reduction in wages; and in the waste silk manufacture prohibiting the labour of the young hands will cause inconvenience, as the adults cannot continue the process without their assistance.

A. 38.—The usual temperature by artificial heat is about 65° Fah.

A. 39.—No higher degree of temperature than about 65° Fah. is required in any process.

A. 41.—Regularly, by a night-set of hands.

A. 43.—Ten hours.

A. 45.—From half past seven P.M. to six A.M., with forty minutes rest.

A. 46.—None.

A. 47.—Twelve hours.

A. 50.—By the improved Liverpool lamp in the card-room, and by mould candles in the other departments.

A. 52.—Have not noticed any particular change.

A. 53.—Twenty minutes breakfast, sixty minutes dinner, twenty minutes afternoon drinking.

A. 54.—The hands generally arrange to live near their work, and consequently go home to meals.

A. 55.—Not adopted for any convenience to the manufactory.

A. 56.—Make no difference to the master.

A. 57.—Admonition or dismissal.

A. 58.—No, except by parents.

A. 62.—Yes.

A. 63.—The general orders are not to beat any one, but dismiss them from the works.

A. 64.—Never.

A. 65.—Do not interfere in the domestic arrangements of the workpeople, some of whom live in houses of their employers.

A. 66.—As regards the skill of the operative it is undoubtedly much greater in those who have been employed from early age; it is next to impossible to make a first-rate spinner unless he had been brought up as a piecer.

A. 67.—See succeeding answer.

A. 68.—There is no necessity to make any change on account of any injurious effects upon the health of the operative, the whole process being healthy. See the list.

A. 69.—No.

A. 73.—To the best of our knowledge.

A. 77.—Have no reason to believe it.

A. 78.—We view any legislative enactment between master and operative respecting hours of labour or wages injurious to both.

A. 79.—In answer to question 79, Messrs. Wrigley and Sons take the liberty of appending to these returns, for the notice of the Commissioners, a copy of a petition to Parliament, which was presented by Lord Althorp during the agitation of the factory question in the last session, and signed by the whole of their operatives, as containing their opinions on that subject, the eliciting of which it is presumed was the object of the 79th question:

“ To the Honourable the House of Commons, in Parliament assembled :

“ The humble Petition of Watts Wrigley and Sons, and the whole of the operatives employed by them in the dressing and spinning waste silk ;

“ Showeth,

“ That your petitioners are deeply impressed with the conviction that any legislative interference, restricting the hours of labour in factories is subversive of the best interests of trade, seeing that such a measure will decrease the productive powers, and hence the general wealth and happiness of the community : That the principle of legislating betwixt the master and operative, if once allowed, will render mercantile investments uncertain and precarious, will infringe upon the labourers rights, and finally destroy that reciprocity of interest which, as essential to prosperity, should exist betwixt the master and operative.

“ That your petitioners, and others engaged in the same trade, have, by an enormous outlay of capital and much skill and industry, perfected the manufacture of spun silk, so that a valuable article of commerce is obtained from materials formerly useless, being the refuse of the process of throwing silk : That from the cheapness of the raw material, the low price of labour, the facilities afforded for the manufacture, and the ready market on the Continent, any restriction in the hours of labour at home will operate as a premium for the removal of this business to foreign countries : Moreover, from the extreme uncertain and fluctuating nature of the demand for this article in the home market, the manufacturer will be unable to meet a sudden demand, without the danger and inconvenience of keeping a large amount of capital inactive in stock.

“ That this business employs nearly two hundred operatives, of whom many are between the ages of twelve and twenty-one years ; and the unavoidable consequence of the passing of

Yorkshire.

Watts Wrigley.

of the ten hours labour restriction bill will be, the reduction of the wages of the operative at least one sixth, and also rendering unproductive one sixth of the capital invested; That for certain processes of this complex manufacture each adult operative requires a complement of young hands, and if the hours of labour of the latter be shortened, the former also must be reduced to the same period; that is, the whole establishment must, from the very dependent nature of the processes, be placed on the same footing, or a double set of hands must be kept at a great increase of expence, to realize the same profit.

"That the learning of the processes of dressing and spinning waste silk requires a regular apprenticeship, which, to make skilful workmen, must commence at an early age; and any restrictions in the hours of labour will cause great embarrassment, on account of the indentures and contracts entered into for a certain amount of labour.

"That the dressing and spinning of waste silk is not at all detrimental to the health of the operative; the temperature of the mills is regular and low, admitting of free ventilation of air; the labour light and cleanly, and the machinery of delicate and therefore harmless structure; and in general the children are employed under their parents in the piecing department, which requires little labour.

"That your petitioners will hail with the greatest satisfaction any legislative measures which will effectually ameliorate the condition of the working-classes, reduce the price of corn, and thus remove the necessity (on the part of parents) for children being employed at all in factories; but they view with great apprehension and alarm any measures which will restrict the hours of labour, consequently reduce the amount of wages, without at the same time reducing the price of corn.

"That your petitioners will ever pray," &c. &c. &c.

Halifax, Yorkshire, 3d May 1832.

Signed by near two hundred operatives, giving the ages along with the signatures.

WATTS WRIGLEY.

No. 27.

J. Greenwood.

#### ANSWERS of JAMES GREENWOOD, Halifax.

- A. 1.—Township of Langfield, parish of Halifax, and west riding of the county of York.
- A. 2.—Carding, preparing, and spinning of cotton-weft.
- A. 3.—Erected in 1811, and has been employed for the same purpose ever since.
- A. 4.—Water-power, not regular; say about four horse power.
- A. 5.—In the card-rooms by opening of windows.
- A. 6.—In the spinning-rooms not any particular means of ventilating, except that of opening doors, and in the scutch-room by fans.
- A. 7.—All or any of the persons employed.
- A. 8.—Not any unfenced.
- A. 9.—Not any arrangements of our making; but the females do in general make some change in their dress previous to going out.
- A. 10.—Eleven years. We believe that the working spinners sometimes employ their own children to put rovings in when under nine years of age, say for two or three hours per day, because they cannot afford to pay wages.
- A. 12.—A greater proportion.
- A. 13.—No.
- A. 15.—We do not lodge or maintain any children, or have any orphans in our employ; children's parents seldom visit them, excepting those who work at the mill.
- A. 16.—The principal part of the children are employed by the spinners, and are superintended by them.
- A. 17.—Persons of all ages work the same time.
- A. 19.—Twelve hours and a half, in order to make up the deficiency (as far as the law allows) of the previous loss, for the want of water.
- A. 20.—Having to stop sometimes for partial repairs, we cannot say as to the number of whole days that we have worked.
- A. 21.—Three thousand four hundred and twenty-four hours thirty-seven minutes; this is for twelve months previous to 12th May 1833.
- A. 22.—The whole of the works have in general been carried on at the same time, excepting that sometimes the spinners, or part of them, have been stopped a short time for the want of rovings.
- A. 23.—In consequence of the loss for the want of water, and other casualties, the weekly average is rather less than eleven hours per day.
- A. 24.—We employ but one set of children, and we work twelve hours and a half per day for five days a week, and nine on the Saturday, when we have the means, in order to make up the loss of time for the want of water.
- A. 26.—If the hours of work were restricted to twelve hours per day, and not allowed to work in the night, it would have the effect of distressing the workpeople for a time, or till more factories could be built.
- A. 27.—No.
- A. 28.—Have not had the means of ascertaining experimentally; but theory tells us the cost of production will be enhanced by reducing the hours for working.
- A. 29.—A continuance of more than twelve hours per day, the master spinner's inducement

ment is his own emolument, and to the injury of those who only work twelve hours per day; but working day and night without a change of hands we imagine has not been attempted.

A. 30.—We cannot answer any part of this question, as we have always worked an average of twelve hours per day, so far as we have had water for so doing.

A. 31.—No objection, were it practicable; but factory workers are not so numerous as to have a double set to each factory.

A. 33.—We do not employ any night-hands.

A. 34.—We employ only one set of hands, which we think suits our and their purpose the best.

A. 36.—It would lessen the production of yarns, and benefit the persons who work in the day only.

A. 37.—We think that if the ten-hours bill pass, the landlord should be compelled to return the tenant £8 6s. 8d. per cent. on the payment of his half year's rent, or the tenant should be authorized to retain that sum, as we believe there are many persons who cannot pay the twelve hours rent with ten hours working.

A. 38.—Ours being the spinning of 40<sup>s</sup> weft, we have not found it necessary to have a thermometer for that purpose, and therefore cannot answer this question; but in the winter time we keep the rooms comfortably warm by steam.

A. 40.—Twenty-eight persons.

A. 41.—None.

A. 47.—Twelve hours.

A. 50.—In the evenings, by oil.

A. 51.—Not any but that of opening the doors.

A. 53.—Half an hour at breakfast, and one hour at dinner.

A. 54.—All.

A. 56.—We should recommend people to have their meals in their own houses, if not too far from the factory.

A. 57.—To endeavour to get the work done by kind treatment.

A. 58.—Very seldom.

A. 59.—The little that has been done has generally been done by the parents.

A. 60.—No.

A. 61.—With our subsequent sanction; yes.

A. 62.—Had we sufficient reason for forbidding, we should have done so.

A. 63.—We have not given any instructions.

A. 64.—No complaint the last three years, or ever before.

A. 65.—Some of our workpeople live in our houses, others do not. We do not interfere with their domestic concerns.

A. 66.—There is a difference of intellectual powers, of course; as to general character, we are not aware that we employ one person of bad character. Those whom we employ have entered at different times, and have in general worked in factories ever since they commenced working.

A. 67.—We have not kept any account on this point, but believe that the workpeople's has not deteriorated.

A. 68.—No.

A. 69.—Yes.

A. 70.—Never.

A. 73.—The mills in our immediate neighbourhood (we believe) do conform to the Act.

A. 74.—No.

A. 77.—Has not been tried in this neighbourhood, but if tried it is probable the workpeople would be backward in giving evidence.

A. 78.—This would, perhaps, be done the best by appointing a factory warden or inspector in each district where factories are worked.

JAMES GREENWOOD.

#### ANSWERS of BENYON and Co., Leeds.

No. 28.

Benyon & Co.

A. 1.—Holbeck, in the parish of Leeds, in the county of York.

A. 2.—Spinning of flax-yarns and manufacture of linens, including also the dressing of flax required for the purpose.

A. 3.—The fire-proof buildings, in which the hackling and spinning departments are carried on, were erected at one and the same time, and were finished so as to allow the works to begin on or about the 1st July 1803. Since that period a range of weaving-shops has been added, erected in or about the year 1804 to 1805. A small addition has also been made to the length of the mill, in or about the year 1817. A building for holding the apparatus necessary to supply the premises with gas was erected in or about the year 1815.

A. 4.—The mill is worked altogether by steam. We have two engines, one of sixty horse power and one of thirty; the power is regular.

A. 5.—We have not.

A. 6.—We ventilate the factory by opening the windows and allowing a current of air to pass through; and in the colder parts of the year a fresh current of heated air continually passes into the rooms for the purpose of warming them.

(APP.—C. 1.)

E3

A. 7.

Yorkshire.

Benyon & Co.

A. 7.—The ventilation is regulated by the foreman of the room and his assistants, be in still subject to the superintendence of the general foreman of the mill.

A. 8.—The dangerous parts of the machinery are fenced off. Every precaution considered necessary in this respect has long been taken, in order to avoid accidents.

A. 9.—We have no particular arrangements of the nature here adverted to. The work-people, in bad weather, secure themselves by outer clothing, umbrellas, &c.; and they dry their clothes in the drying-house whenever they feel it necessary, for which purpose permission is always freely given.

A. 10.—We do not employ any child under nine years of age, if we know it, and instruct our overlooker to give preference to those who are ten or eleven years old. We find that the greater part of our hands have not been previously employed before they commenced with us, except two girls, aged thirteen years, who were employed at eleven years old in a woollen-mill, and ten boys, aged from ten to thirteen years, six of whom were employed previously in a cloth-mill, one in a coal-pit, two in a ropery, and one as a bobbin-winder for weavers.

A. 11.—It does not necessarily.

A. 12.—As before stated, our business does not require the employment of any child under twelve years of age.

A. 13, 14, 15, & 16.—We do not employ apprentices, and therefore are not applicable.

A. 17.—Our usual hours of labour are, for the first five days in the week, from six o'clock in the morning till five minutes past seven o'clock in the evening, and on Saturday, from the same time in the morning till five minutes past five o'clock in the evening, with the allowance for meals as stated in A. 53. Time of real labour sixty-nine hours and forty minutes, independent of meals. This is the standard week; and we pay at this rate whether we work more or less time. Adults and younger persons, at weekly wages, employed alike in time.

A. 19.—The greatest number of hours that our works were kept on in one day during the last year, 1832, is twelve hours and fifty minutes.

A. 20 & 21.—Three hundred and three days, or three thousand four hundred and twenty-three hours and twenty minutes.

A. 22.—All work or stop together with the engines.

A. 23.—The average number of hours we worked each day during the last year, 1832, is eleven hours eighteen minutes.

A. 25.—The regular hours of labour were exceeded during the last year in the months of May, June, July, October, November, and December, seventy-six days in all, from five to twenty-five minutes per day, except seven days, when the time exceeded was fifty-five minutes per day. The time was exceeded in consequence of having lost it previously by holidays and necessary repairs of steam-engines, &c.

A. 26.—We consider the time lost in the repairs of engines, &c. unavoidable; some part of it might have been saved if we had allowed it to be done on Sunday, but this we have for some years strictly forbid. The time lost by holidays might be avoided, if agreeable to the workpeople to abandon them; but we do not generally stop on these occasions unless we consider that it is their wish, as the time is deducted from their wages.

A. 27.—We have worked our present number of hours about one year and a half. For some years previous our working week was seventy-two hours, as we did not stop the spinning-rooms for the morning and evening meal. During the last war the hours were often longer than that.

A. 28.—It is obvious that a reduction in the hours of working, where machinery is chiefly employed, must enhance the cost of production, unless the effect can be counteracted by other circumstances; and if we compare former times with the present it is probable that the great improvements made in machinery have more than made up the loss consequent on reduced hours, by the increased power given to production.

A. 29.—We have no protracted night-work, and cannot speak to the motives which may influence those who have.

A. 30.—As a general rule there must be an increase in the cost of production by limitation of hours, unless corrected by circumstances stated in A. 28, to which we refer.

A. 31.—We do not ourselves require any relays or fresh set of hands, not requiring many over-hours. We cannot speak to the objections which others may have on this point.

A. 32.—It has not been tried by us. From the hours we are in the habit of working, it has not occurred to us that a necessity existed for it.

A. 33 & 34.—We have not.

A. 35.—We do not work our mill at night.

A. 37.—It is our opinion that a further reduction in the hours of labour will end ultimately in a reduction in the price of labour itself, for increased cost is the inseparable attendant of decreased production, all other circumstances remaining the same; and if to an extent that cannot be counterbalanced by reduction in wages and increased speed of machinery, increased cost, and consequently diminished consumption, will ensue, and our power of competition with other countries be reduced.

A. 38.—Our manufacture, with the exception of one part of it, the fine spinning, of recent introduction, does not require any warmth beyond what is necessary for the comfort of the hands. In the rooms in which the fine spinning is carried on, the temperature is from five to ten degrees higher than the others, according to the weather, &c. The general temperature

temperature of the mill is from fifty-five to sixty-five degrees, and in the fine spinning rooms from sixty to seventy degrees. The increased heat proceeds from the introduction of steam, but the process does not require any additional heat in the room itself, and we are in hopes shortly to mitigate the evil considerably.

A. 40.—Number of persons, eighty-eight.

A. 41, 42, 43, 44, & 45.—None.

A. 46.—Not any.

A. 50.—By gas light.

A. 53.—On the first five days in the week the mill-hands are allowed fifteen minutes for breakfast, forty-five minutes for dinner, and ten minutes for afternoon meal (called drinking), with the same allowance on Saturday, except the ten minutes for the afternoon meal, which is not allowed, the works stopping at five minutes past five o'clock. The mechanics, and others not engaged in superintending machinery, are allowed half an hour for breakfast, three quarters of an hour for dinner, and half an hour for drinking each day in the week, except Saturday, on which day no allowance is made for drinking. Hands working by piece-work (such as reelers, weavers, hacklers, &c.) take their own time.

A. 54.—At present we find one hundred and nineteen persons take their dinner in the mill, chiefly in consequence of living at too great a distance to go home. All the rest go home to dinner. All engaged in superintending machinery are not allowed to leave the mill at the morning and afternoon meal, on account of the time allowed being too short. Those engaged in other employments leave the premises if they please at these times.

A. 56.—It matters not to us as employers whether the workpeople take their meals in or out of the premises, so that they are not absent above the time allowed. If the time allowed for every meal was sufficiently long to allow them all to go home to partake of them it would probably add, in many cases, to their comfort; but if the time to be worked remained the same as at present, it would cause the mill to be kept open to a very late hour, which would be particularly objectionable in winter, when we are obliged to work several hours by gas light, and would cause many to reach home very late who reside some distance from the mill.

A. 57.—Small fines are occasionally deducted from their wages, but our greatest dependence is placed upon the vigilance of the overlookers, and in the power we have of dismissing refractory or disobedient hands.

A. 58.—We have made diligent inquiry into this point. In our directions to our overlookers we have always forbid corporal punishment or any other harsh treatment to be used, and this direction seems to have been generally well observed, though we do not mean to say that in some instances children have not been corrected by slight blows; but we have reason to believe that this very rarely happens, and to no improper extent, as during the last three years we can only hear of one complaint being made to the head overlooker, and that was by a girl of fourteen years of age, in consequence of being struck by one of the under overlookers; but it never reached our ears before the present inquiry.

A. 59.—By overlookers.

A. 60 & 61.—Corporal punishment beyond the extent named in A. 58. has not been inflicted with our knowledge or prior or subsequent sanction.

A. 64.—Not one within the last three years, nor against ourselves personally at any time since we have been in business. We only remember, in a period of thirty years, one instance of any of our foremen being summoned by the magistrates to answer a complaint of this description, and that is very long ago.

A. 65.—We do not lodge or board any person in our employment. A few of our workpeople live in houses belonging to us, for which they pay us rent, in the same manner they would do to any other landlord. We see that these houses are kept in proper repair, but our control does not extend further.

A. 66.—As a general rule the most expert hands always commence at a very early age; and in the spinning-department, which requires most activity and quickness, we do not find that we have any hands that commenced at a late period. In the preparing rooms, where older and stronger hands are more used, we find our best hands generally commenced early, though we must observe that in two instances, Elizabeth Secker and Susannah Bannister did not commence till seventeen years of age, and are among our best hands. We have not observed any difference as to general character. See list No. 5.

A. 67.—Not having kept any account of the health of the people, we feel a difficulty in answering this question. We consider that many improvements have been made to render the work both less unpleasant and less laborious, but we cannot give any opinion further.

A. 68.—We are not able to make much change in the employment of our hands, as good ones do not like to be moved from their particular work, and generally refuse to be changed to others less agreeable. When an occupation does not seem to agree with the health of a person, we sometimes allow them to change to another.

A. 78.—Not having seen any restrictive regulations on the hours of labour in operation, we cannot say any thing on this point. We consider the excessive labour to which young children can be subjected may be very properly restrained within moderate bounds by legislative enactment, if found to be frequently practised.

BENYON & Co.

Yorkshire.

No. 29.

J. Brown & Co.

## ANSWERS of JAMES BROWN and Co., Leeds.

- A. 1.—Bagby mill, in the township and parish of Leeds, county of York.
- A. 2.—Finishing woollen cloths.
- A. 3.—The original workshops for finishing by hand were erected prior to our knowledge of them. The mill, dryhouse, and press-shop were built in 1825 and 1826, when the finishing by machinery first took place.
- A. 4.—Steam engine of thirty horse power.
- A. 5.—The greater part of the windows are made to open, to allow the rooms to be ventilated to any degree the workpeople may require.
- A. 6.—By the opening of windows.
- A. 7.—The ventilation in each room is regulated by the workmen themselves, in such manner as they find most for their own convenience and comfort.
- A. 8.—The machinery, as far as practicable, and all the dangerous parts in particular, are boxed off, to the best of our knowledge.
- A. 9.—We have no particular department wholly appropriated to the purposes specified, but we consider all necessary conveniences and comfort for the work-people are supplied, and have been since the mill commenced working. We have had no complaints from the workpeople, and we consider them comfortable and satisfied.
- A. 10.—We have occasionally taken a child at nine years of age, as stated in A. 11. We generally take them between ten and twelve from our workmen, but not always.
- A. 11.—Children under twelve years of age are not necessarily required in the finishing department; but to oblige some of our workmen who have large families, or when one of them dies, leaving a widow and a family of children, we sometimes take them earlier, for carping teazles and pruning, neither of which is laborious.
- A. 12.—We employ more children in finishing cloth by machinery than we did previously, when we finished by hand.
- A. 13.—We do not employ any apprentices at present.
- A. 15.—We neither lodge nor maintain any of our children or workpeople; the young persons generally live with their parents, who have the care of them.
- A. 16.—The masters or overlookers have no superintendence over the children, only during working hours.
- A. 17.—Our regular hours of work are from six in the morning to seven in the evening, allowing two hours for refreshment; but in a press of business we sometimes extend the time, with the concurrence of the workpeople.
- A. 18.—The boys who work with the men work the same number of hours; the younger boys seldom exceed the regular hours.
- A. 19.—Twenty working hours, with two sets of workpeople, and that only in the steaming department.
- A. 20.—Four hundred and forty-four days eight hours and a half (calculating eleven hours a day) in the steaming department, including both day and night work; three hundred and twelve days at the gigs; two hundred and ninety-five days ten hours at the machines; two hundred and ninety-five days three hours at the shears.
- A. 21.—Four thousand eight hundred and ninety-two hours and a half in the steaming department; three thousand four hundred and thirty-two hours with the gigs; three thousand two hundred and fifty-five hours and a half with the machines; and three thousand two hundred and forty-eight hours with the shears.
- A. 23.—Thirteen hours and a half for two managers in the steaming department; ten hours and three quarters in the gig room; ten hours and a quarter in the machine room; and ten hours and a quarter in the shear room.
- A. 24.—The children in the steaming department work ten hours each set; in the machine department they average ten hours and a quarter each. We have not the exact time they work each day, occasionally they may have worked from eleven to twelve hours.
- A. 25.—Under a press of business, when goods have been required for foreign markets at specific periods, and the time limited, we have been under the necessity of exceeding the regular hours, or decline to execute the orders.
- A. 26.—Not without increasing our mills and machinery to an extent that would not always be required.
- A. 27.—We have sometimes worked longer hours than we did last year, when business required it.
- A. 28.—As we have not uniformly worked very long hours, we have made no calculation on this question; our opinion is short hours will increase the expence.
- A. 29.—Our inducement in working extra hours is to accommodate our customers, by having their orders executed in sufficient time for the markets they are intended for. We seldom work through the nights, except in the steam department, when we have two sets of children.
- A. 30.—We have made no particular calculation on this question, and cannot state in what branch or to what extent short hours would increase the cost of production.
- A. 31.—Whenever excessive long hours are required we have not nor ever had any objection to a second set of children.

A. 32.

A. 32.—In the steaming-department, where we employ two sets of children, we find it to answer.

A. 33.—Where we employ two sets of children the day-set is at work from six o'clock in the morning till six in the evening; and the night-set from six in the evening till six in the morning; each set has two hours allowed for refreshment and rest.

A. 34.—Our business not being regular, sometimes we are pressed to execute orders within a given time, and sometimes we prepare goods in anticipation, to keep our workpeople employed, which are the causes of extending or reducing our working-hours.

A. 35.—In working two sets of hands they change weekly, the day-set one week is the night-set the next week.

A. 36.—The effects of having no night-work would be to compel us to reduce our business to what could be accomplished within the time allowed, or to extend our works.

A. 37.—We suppose the reduction of the hours of labour would decrease business generally, and the comforts of the workpeople too.

A. 38.—There is no particular temperature necessary to carry on our business. In the winter season the mill is aired with steam for the comfort of those employed.

A. 39.—The dryhouse, where the cloth is dried, averages from ninety to ninety-five; the workmen can open the windows and reduce the heat at pleasure; it is filled morning and evening with wet cloth, and the workmen are employed about eight hours a day in that department.

A. 40.—About twenty.

A. 41.—Seventy-three times throughout the night, and that only in the steaming-department.

A. 42.—Twenty boys.

A. 43.—Ten hours for a full night; but the average of our night-work in steaming last year is five hours and a half.

A. 44.—Twenty.

A. 45.—From six at night to six in the morning.

A. 46.—We have no processes in our business indispensably continuous.

A. 50.—With gas.

A. 51.—The same as in the day, by the windows opening at the pleasure and convenience of the workmen.

A. 52.—We have not noticed any unfavourable appearance in the workpeople who have occasionally worked through the night.

A. 53.—Half an hour for breakfast, about eight o'clock; one hour for dinner, from twelve to one o'clock; and half an hour for drinking, about five o'clock.

A. 54.—The workmen take their meals at the mill or elsewhere, to suit their own convenience; there are no inquiries made where or how they have been engaged, provided they are ready to commence work when the time allowed expires.

A. 55.—The distance some of the workmen reside from the mill precludes them from taking their meals at their own homes within the time allowed.

A. 56.—Many of our workpeople would be obliged to leave our employ, and to endeavour to provide themselves with work nearer their dwellings.

A. 57.—Discharging them if they do not conduct themselves properly.

A. 58.—Not by our orders nor with our knowledge.

A. 62.—We have had no complaints from parents, children, or overlookers, consequently we have given no instructions.

A. 64.—Never.

A. 65.—Only eight occupy houses belonging to their employers, and they are principally overlookers.

A. 66.—We generally prefer those who have been brought up with us from infancy, although we have a few who came strangers to us that are good workmen.

A. 67.—During the last eight years, namely, since the mill commenced, our workmen, we believe, have enjoyed as good health as at any former period.

A. 68.—We are not aware that any department in our works is particularly injurious to health, consequently we do not frequently make changes in the employment of our workmen.

A. 69.—Our mill being employed in the finishing of woollen-cloth, we suppose it is not subject to the provisions of the Act referred to.

A. 70.—No, never.

A. 77.—We suppose the workpeople can have no fear that their masters would be displeased by their giving true and correct evidence.

20th May 1833.

JAMES BROWN & Co.

Yorkshire.

J. Brown & Co.

#### ANSWERS of BRUCE and DORRINGTON, Leeds.

No. 30.

Bruce & Dorrington.

A. 1.—Leeds, in the county of York.

A. 2.—Manufacturing and finishing of woollen-cloth.

A. 3.—Built in the years 1825 and 1826.

A. 4.—Steam-engine of forty horse power and upwards.

(APP.—C. 1.)

F

A. 5.

Yorkshire.

Bruce & Dorrington.

- A. 5.—No distinct provision.
- A. 6.—The ventilation depends upon the opening of doors or windows.
- A. 7.—At the discretion of any of the workpeople.
- A. 8.—All the gearing and upright shafts are fenced off, as well as every other part of the machinery that is considered dangerous.
- A. 9.—No particular arrangement, except for the tenterers on coming out of the dry-house. The workpeople have the privilege of washing themselves before leaving the mill, of which many avail themselves.
- A. 10.—Only one at eight years and a half, one at nine years, twelve at ten years; the others are eleven years and upwards.
- A. 11.—Children from ten to twelve years of age are the most suitable for pieceners.
- A. 12.—No difference.
- A. 13.—Yes.
- A. 14.—We have no parish apprentices.
- A. 15.—All the children are lodged and maintained by their parents or guardians.
- A. 17.—Eleven hours, and occasionally twelve; nine hours on the Saturday.
- A. 19.—The regular hours for working the engine are from six in the morning 'till eight in the evening, and occasionally longer for fulling and dressing.
- A. 20.—Three hundred and five days and seven nights.
- A. 21.—Three thousand seven hundred and forty-nine hours.
- A. 22.—The average time for scribbling and slubbing is ten hours and a half a day; for fulling and dressing twelve hours and a quarter a day.
- A. 24.—Twelve hours.
- A. 25.—After the engine has been standing for repairs.
- A. 26.—It is sometimes necessary that the dressing-machinery should work longer for the execution of orders where only a very limited time is allowed by the purchaser.
- A. 27.—No.
- A. 28.—If less time than eleven hours is worked, profit is diminished, and the cost of production increased in proportion.
- A. 29.—The unavoidable expences of a mill are nearly the same for six hours as for working twelve hours a day, such as rent, interest on machinery, taxes, insurance, overlookers salaries, wear and tear of gear, and numerous other expences.
- A. 31.—We have not any objection.
- A. 32.—We have not tried it.
- A. 33.—Yes. The day-set of hands have worked from six in the morning until seven in the evening; and the night-set from seven in the evening 'till six in the morning.
- A. 34.—When the works are continued day and night for a length of time a relay of hands is unavoidable.
- A. 35.—The night-hands change periodically with the day-set.
- A. 36.—If we could not occasionally work all night in the dressing of woollen-cloth, we should frequently have to decline orders which could not be executed in the time required.
- A. 37.—If the working-hours were reduced from eleven to ten per day, the manufacturer would require ten per cent. less wool to employ his machinery, and a corresponding reduction of his hands must follow, such as spinners, weavers, burlers, &c., for whom there would be no employment until an increase of engine-power and machinery took place; and owing to the consequent reduction in the value of mill-property there would be little inducement for a greater outlay of capital, particularly in the woollen-department.
- A. 38.—The temperature varies from 60 to 65 degrees.
- A. 39.—The dry-house is heated to 90 degrees.
- A. 40.—Four.
- A. 41.—Seven.
- A. 42, 43, 44, & 45.—No children.
- A. 46.—The process of fulling is best effected when it goes on without intermission.
- A. 47.—Twelve to fourteen hours for common milled cloths; double-milled cloths frequently require three or four successive days and nights.
- A. 48.—Strong able-bodied men.
- A. 49.—When the process of fulling is interrupted, the cloth cools, and the process is retarded until it has regained the necessary warmth by working.
- A. 50.—Gas.
- A. 53.—Half an hour for breakfast, one hour for dinner, and half an hour in the afternoon.
- A. 54, 55, & 56.—All, except two or three millers and nine scribbler-feeders; the machines require their attention one minute in three: all the others take their meals where it suits them.
- A. 57.—None.
- A. 58, 59, 60, & 61.—Not to our knowledge.
- A. 62.—We do not think corporal punishments necessary.
- A. 66.—None brought up from infancy.
- A. 67.—The health of the workpeople is generally very good, as will be seen from the report. We are of opinion that the oil used in preparing the wool is conducive to the health of the children.
- A. 68.—No regulation.

A. 69.

A. 69.—No.

A. 77.—No.

A. 78.—We are of opinion that legislative enactments and restrictions are unnecessary, and that they will prove alike injurious to masters and workmen.

Scribbling-machinery, in the borough of Leeds, will require eight millions five hundred thousand pounds of foreign wool to keep it employed eleven hours per day; value, upwards of one million sterling. One thousand children, twelve years of age and under, will perform the above. One thousand three hundred and fifty children would perform the same work in eight hours per day.

8th June 1833.

BRUCE & DORRINGTON.

Yorkshire.

Bruce & Dorrington.

#### ANSWERS of PETER FAIRBANK, Leeds.

No. 31.

Peter Fairbank.

A. 1.—In the parish of Leeds in the west riding of the county of York.

A. 2.—Brass and iron founding, and the manufacture of flax and tow machinery.

A. 3.—The foundry, I believe, was erected in 1824 or 1825, but not being the proprietor at that time I cannot speak accurately. The present machine-shop was erected in 1829, and occupied since in the manufacturing of the above-mentioned machinery.

A. 4.—A six horse power engine. There are no irregularities, excepting any time which may have been lost arising from a breakage of the steam-engine, which rarely occurs if it be carefully looked after.

A. 5.—Almost every window has a sliding casement; there are also ventilations in the roof.

A. 6.—Besides the constant ventilation in the roof the casements may be opened.

A. 7.—Each individual is left at liberty to open the casement in the window opposite to him, should he feel so disposed.

A. 8.—Where there are any parts of the machinery deemed dangerous, and about which the persons employed are likely to come in contact, they are always boxed or fenced off.

A. 9.—There are no arrangements for the purpose mentioned.

A. 10.—The lowest age at which I employ is from thirteen to fourteen. Sometimes they have been at other trades, but in many instances they have not.

A. 11.—In the manufacture of machinery none but males are employed, and in all instances they are preferred above fourteen years of age to any other.

A. 12.—In the manufactory of machinery, though more machinery has been introduced, which has greatly improved the accuracy and finish of the work, yet I am of opinion the demand for workpeople in this line is at least equal now to what it has been at any former period.

A. 13.—I do not indenture any young men; men that I take to teach.

A. 17.—Ten hours per day commonly is their day's work; but being fully employed we generally work twelve hours.

A. 18.—The same as those above twenty-one years of age.

A. 19.—Not more than fourteen hours, and I do not think that has occurred half a dozen times during the last year.

A. 20.—Three hundred and seven days.

A. 21.—Three thousand three hundred and seventy-seven.

A. 22.—They generally go together, one being dependent upon the other. I do not remember at one period during the last year.

A. 23.—After deducting for holidays, lost time, &c. I should think that the average number of hours of work each a day would not be more than eleven hours.

A. 24.—Having no people in my employ coming under the denomination of children this question does not apply to me.

A. 25.—This question I deem answered by the foregoing.

A. 27.—I have never at any former period worked longer hours on the average than I do at present.

A. 29.—I believe the object in working many hours to be to make the best of the capital invested.

A. 30.—I find the cost of production to be increased when my men work above twelve hours, and that I sustain a loss if they work below, or less than ten hours.

A. 33.—I have never more than one set of hands, and they have always worked during the day and not at night.

A. 36.—With me it would produce no effect at all.

A. 37.—My opinion on this head may be seen by my answer to Q. 30.

A. 38.—The temperature best suited to the manufactory of machinery is not required higher than from 54° to 60°, which I consider to be a fair average of the different rooms in my works throughout the year.

A. 39.—Not higher than the temperature stated in answer to Q. 38.

A. 40.—I deem this question to be comprehended in the answer to the last.

A. 41.—I never had the works working all night through during the last year.

A. 46.—No process in my manufactory requires to be continuous.

(APP.—C.1.)

F 2

A 50.

Yorkshire.  
 Peter Fairbank.

- A. 50.—By candles and oil.  
 A. 51.—No more provision is made or supposed requisite than that already mentioned.  
 A. 52.—I do not know, but should consider the effects on the habits and constitutions of the people to be very bad.  
 A. 53.—From eight in the morning to half past eight, from twelve at noon to one, and from four in the afternoon to half past four o'clock.  
 A. 54.—About nine tenths of them go to their meals.  
 A. 55.—It is owing to their living at a distance from the works.  
 A. 56.—I would prefer their going, and they are perfectly at liberty to do so, if inclined.  
 A. 57.—Not having any children in my works I do not require to use any coercive measures.  
 A. 58.—I conceive corporal punishment oppressive and degrading, and never inflicted any.  
 A. 62.—I have always done so, and have taken every precautionary measure I knew of to prevent its infliction.  
 A. 63.—I have never given any written instructions, as I have never had any occasion during the last four years to do so.  
 A. 64.—Not in any one instance.  
 A. 65.—None of my workpeople live in any house belonging to me.  
 A. 66.—All persons employed in my manufactory have, in the majority of instances, gone to the business within a year or two of the same age, viz. fourteen years; I cannot adduce any particular instances among my workpeople.  
 A. 67.—In my manufactory I do not know any perceptible difference in the health of those employed.  
 A. 68.—Having no process of work coming within the comprehension of this query, no selection or change of employment is required.  
 A. 69.—I consider my mill as not coming under the provisions of the present Act.  
 A. 73.—I am not aware whether they do so, nor have I ever heard that the Act for regulating the hours of labour had been in force in this district.  
 A. 76.—By no proceedings having been instituted in this district under the Act, no evidence could be required.  
 A. 77.—There may be instances, but I think that they are of rare occurrence.  
 A. 78.—Not being in a district where a law of this kind has been in operation, I feel myself unable to suggest any remedies for evils which may exist in the districts where such an Act has been in force.

PETER FAIRBANK.

No. 32.  
 T. W. George.

#### ANSWERS of T. W. GEORGE, for Thomas George and Sons, Leeds.

- A. 1.—Leeds, Yorkshire.  
 A. 2.—Dyeing and finishing of worsted stuff goods.  
 A. 3.—Counting-house, engine, cleaning, crabb, singeing, grease, ware, making-up, drying, rolling, scalding, quirking rooms, black and copperas dye-houses, in 1825; press-shop and pattern dye-house in 1829; additional grease-room and stables in 1833.  
 A. 4.—One twelve horse power engine.  
 A. 5.—The stock and crabb houses are ventilated by wood tunnels being placed directly over the machines from which the steam proceeds; the dye-houses have ventilators in the centre of the roof, and in some cases immediately over the dyeing-vessels, which take away all the steam in clear weather, but not sufficiently so when the atmosphere is cloudy.  
 A. 6.—The opening of windows and doors.  
 A. 7.—Left to the general discretion.  
 A. 8.—All carefully fenced off.  
 A. 9.—The workpeople have always a supply of hot and cold water at command for that purpose, an oven to cook their dinner, and three fires during eight months in the year, round which they sit when at their meals.  
 A. 10.—Seldom under twelve, and generally have been employed at other trades.  
 A. 15.—Do not lodge or maintain any children.  
 A. 17.—Ten hours; all above are paid for as extra time.  
 A. 18.—The children usually work the same time as the men.  
 A. 19.—On one occasion from six o'clock in the morning to half past twelve the next morning, allowing two hours and a half for meals.  
 A. 20.—Three hundred and five days.  
 A. 21.—Four thousand one hundred and sixty-seven hours and forty minutes.  
 A. 22.—Those parts dependent on machinery are generally longer employed; they all commence at the same time.  
 A. 23.—Thirteen hours and forty minutes; there are seldom more than two or three men occupied to this extent; it arises from the roll-scalding department being continued necessarily later than any other.  
 A. 24.—Sixteen hours in a few cases; the youngest of these fourteen years of age.  
 A. 25.—Generally from July to October and January to April inclusive, from an increased demand; in those months we have during the last busy season worked later in our cleaning-department

department than in any others, from the circumstance of our millwright having failed to complete a machine used for that purpose at the time agreed upon. We frequently work later to complete shipping orders; and even those for the home trade are sometimes wanted at so short a notice as to require our utmost exertions to accomplish them.

A. 26.—It can only be avoided by a large extension of our works; we should then have great difficulty in obtaining workpeople during the busy season, and if we succeeded they would be thrown out of employ immediately on the demand decreasing.

A. 27.—Not more than we have during the last year since 1824; at present we do not exceed ten hours.

A. 28.—Where machinery is employed the cost is reduced by enhancing the hours of working; when manual labour only, the cost is not materially changed.

A. 29.—From a desire to meet the demand at a particular season, and from the difficulty of obtaining workpeople to work changes during the busy season.

A. 30.—If the amount of wages is regulated by the hours of labour, the only increase of cost arises from paying the same rent, poor's rate, and taxes on a decreased production.

A. 31.—It is probable a sufficient number of children could not be obtained to work double sets where adults only worked single, and if that were accomplished, much difficulty would arise in finding employment for them as they became adults.

A. 32.—We have not employed relays of children except when adults were so employed.

A. 33.—We have not employed two sets since 1824; the day-set then worked from six o'clock in the morning to six o'clock in the evening, the night-set the intermediate hours; on the Saturday the night-set stopped at midnight, and commenced at one o'clock on Monday morning.

A. 34.—We do not conceive it to be our interest, except in times of extraordinary demand; if we had a regular increase of business, should prefer enlarging our premises.

A. 35.—It is usual to change them periodically; we adopted that plan.

A. 36.—We have occupied since 1824 premises so large as to render two sets unnecessary.

A. 37.—An attempt on the part of the manufacturers to reduce wages in proportion to the decreased time of working, which would be resisted by the workpeople, and a general strike ensue; and unless the masters were to unite, the workmen would certainly succeed; consequently increase the cost of manufactured articles, and thereby endanger our foreign trade. If, on the other hand, the manufacturer succeeded, wages would be reduced, and the situation of the workpeople materially injured. The manufacturer would then extend his factory in order to keep up the supply; this in busy seasons would attract an additional number of workmen to the manufacturing district, and they, as soon as the demand decreased, would be thrown out of employment.

A. 38.—Our processes are not much affected by the temperature of the atmosphere, except in cases of severe frost.

A. 39.—Drying is the only process which requires the room to be heated, and that seldom exceeds 150° Fah.

A. 40.—One man.

A. 41.—Not once.

A. 50.—By lamps.

A. 51.—The same as during the day.

A. 52.—We have not had opportunity sufficient of observation to form an opinion.

A. 53.—All our workmen, except those who work in the black dye-house, thirty minutes at breakfast, one hour at dinner, and thirty minutes at drinking; those in the black dye-house, twenty minutes at breakfast, forty minutes at dinner, twenty minutes at drinking; they, however, leave work forty minutes earlier in consequence, or are paid for the time; they have likewise about twenty minutes leisure time each in the course of the day.

A. 54.—Fifty-six stay; the remainder leave.

A. 55.—It is entirely optional with the workpeople, and they of course suit their own convenience.

A. 56.—None.

A. 57.—If they persevere in disobedience after remonstrance we turn them off.

A. 58.—Not as a system.

A. 59.—No person has such instructions.

A. 60.—Not at the time.

A. 61.—We have on one or two occasions had complaints of men chastising the boys, but have always disapproved of it.

A. 62.—Have reprimanded the men; it has occurred so seldom as not to require any particular steps to prevent it.

A. 63.—No instructions have been given, except generally to avoid it.

A. 64 & 65.—No.

A. 66.—One year is amply sufficient for a man of ordinary capacity to become fully acquainted with any one of our processes. We do not observe any difference between those who have been with us from children and those who have at more advanced age become dyers.

A. 67.—We have not observed any material change; the workpeople are generally healthy.

Yorkshire.

T. W. George.

A. 68.—We have had a few instances of a particular employment not agreeing with some of our men, and have then found them work in other processes.

A. 69.—Suppose not.

A. 73.—We are not aware which Act is alluded to; have not heard of any infringement.

A. 77.—Certainly not.

A. 78.—We are persuaded very few penalties will be required to enforce any law the legislature may enact, if its provisions are calculated to deal fairly with both manufacturer and workmen; we believe, on the contrary, that no rate of penalties would ensure strict obedience to a law limiting the hours of labour to ten.

A. 79.—We consider there is much danger in fixing a maximum rate of daily labour in a business, the extent of which varies, as in our concern, at different seasons of the year as one to two; and a great part of which being dependent on foreign markets, the utmost possible exertion is requisite to complete our orders in the time allowed us, even with our present facilities in extending the usual time of working; we believe if that time were limited to ten hours, the consequence would be ruinous both to ourselves and to our workpeople.

17th May 1833.

T. W. GEORGE.

No. 33.

Thomas Turner.

## ANSWERS of THOMAS TURNER, for James Holdforth, Leeds.

A. 1.—Borough of Leeds, east division, Mill Street, Banklow Mills.

A. 2.—Cotton throstle-spinning and silk waste-spinning.

A. 3.—Cotton-mill built 1790; silk-mill built 1822.

A. 4.—Steam-engine, regularly worked.

A. 5.—The upper part of the window opens; and the windows, which are large, each twenty-two square feet, are opposite each other, so that the rarified air is carried off.

A. 6.—On opening the windows.

A. 7.—Orders are given to each overlooker to open the windows, and the workpeople are requested to open them whenever they please, as no artificial warmth is required, except in winter, and for the comfort of the workpeople.

A. 8.—All dangerous parts are fenced off and safe.

A. 9.—The hands usually change some part of their dress when they come to work, and put on working aprons, &c.; they are provided with warm water, soap, and towels to wash twice a day if they wish it; and if they come with dirty hands or face, they are reprimanded and sent to wash themselves: on going out of the mill they are requested to guard themselves against cold.

A. 10.—Ten years; but some mule-spinners have employed their own children at eight or nine, at which I have expressed my disapprobation, but I could not control it.

A. 11.—I don't think the nature of the work requires it, but the parents are anxious to have their children taken on younger than twelve; I presume the reason is, they earn some money and are out of the way.

A. 12.—Not necessary; but younger children can be advantageously employed.

A. 13.—No.

A. 17.—The regular hours of working are from six to seven, allowing forty-minutes at dinner, half an hour breakfast, half an hour afternoon, for all hands, except silk card-room and cotton throstle-room; Saturday from six to five.

A. 18.—All ages work the same time.

A. 19.—The silk-mill last year was worked day and night, with two sets of hands.

A. 21.—1832, January to 31st December, 3,273 hours.

1831, - do. - 2,956 —

A. 22.—All alike.

A. 23.—Five days ten hours and fifty minutes; Saturday, nine hours.

A. 24.—Fourteen hours; six or eight doublers were employed seven or eight weeks.

A. 25.—About two months, in consequence of an extra demand for double-spun silk at that period; and during that time I put up additional machinery to render such extra work unnecessary.

A. 26.—It was unavoidable, as the article is suddenly required at times in large quantities; at other times but little is wanted.

A. 27.—I have in some years past, when the price of cotton-twist was higher, and the demand brisk, permitted the hands to work an extra hour each day (Saturday excepted) during part of the summer season; they solicit this to be continued, and regret it is not allowed.

A. 29.—In such trades where the demand is irregular, large orders may be received to be executed in a limited time, which the manufacturer must either decline or employ his workpeople extra hours.

A. 30.—The cost of production will be much increased in my concern from a limitation of hours of work. Suppose I work ten instead of twelve, the fixed expences, such as rent, interest on capital, taxes, permanent salaries, will be the same on ten as twelve; hence the extra cost of production will be about twenty per cent.

Yorkshire.

*Thomas Turner.*

A. 31.—Two sets of hands may be engaged to work sixteen hours, that is, eight each; but in brisk times or in places where hands are not plentiful, they could not be got to work eight hours and be paid in the proportion of eight to twelve, for at this rate they could not obtain the necessary comforts, and discontent would soon exist unless they could be paid twelve hours wage for eight hours work; and I presume there are not many trades profitable enough to do so.

A. 32.—I tried it last year from August to December, but abandoned it from reasons above.

A. 33.—I have employed a night-set of hands as well as day for two years; the day-hands come at six A.M. and leave at seven P.M.; night come at seven P.M. and leave at six A.M.; on Saturday night leave at eleven o'clock, and come on Monday morning at one; stopping forty minutes at midnight for supper.

A. 35.—At one period I worked with two distinct sets of hands, but latterly the day and night hands changed alternately week for week; some preferring day, others night, they were permitted to change as a mutual accommodation.

A. 36.—The cost of production will be increased, but the quality improved. On the 6th of April I gave up night-work.

A. 37.—If wages are not reduced in proportion to the reduction of the hours worked, the cost of production will be so much increased that if ten hours are to be paid for with twelve, the wages and incidental expences will annihilate some trades, and particularly low numbers of cotton-spinning.

A. 38.—Average  $66\frac{1}{2}^{\circ}$  from October to April; seldom so high as  $70^{\circ}$ ; in summer no artificial heat; my manufacture, particularly silk, does not require warmth, and I only produce it for the comfort of the workpeople.

A. 42.—Ninety to a hundred.

A. 50.—Gas.

A. 51.—Same as day. (See A. 5.)

A. 52.—They are equally moral and regular, with the advantage of attending to domestic duties; but if from any cause they don't get their regular sleep, they complain of weariness and headache.

A. 54.—All leave for dinner, both in cotton and silk; in the silk-mill all leave for breakfast, &c., drinking, afternoon, except about thirty in card-room; in the cotton-mill, all, except card-room and spinners.

A. 55.—Those hands who live at a distance from the mills bring their meals, and prefer to take them in the mill, where they have them warmed if they wish, and find comfort and convenience in doing so.

A. 56.—Explained in last query.

A. 57.—Reprimanded first, by the overlooker of the department; secondly by the manager, who will represent to the parents; or if persevered in, complaint is made to me; I then expel or threaten to do so, which they fear more than any thing.

A. 58.—No.

A. 63.—No instructions to punish otherwise than by complaint and turning off. (See A. 57.)

A. 64.—For thirty years or more no proceedings have been taken against me or my overlookers.

A. 65.—Many of the workpeople live in my houses adjoining the mill, and I take every opportunity to make them sensible of the advantage of cleanliness and order. They are furnished with lime to whitewash, and are supplied with hot suds to wash and clean at a halfpenny a pail; they have also pure soft water given out to them three times a week.

A. 66.—Those employed from infancy are not only more skilful but more orderly; this remark applies generally.

A. 67.—I am not sensible of any difference.

A. 68.—I do not make any change, as I am not aware that any department is injurious.

A. 69.—Cotton-mill is.

A. 70.—No.

A. 77.—I think they are independent enough to do as they please.

A. 78.—If a master has been taught his duty to God and to man, he requires no legislative enactment; but if not, penalties will not enforce obedience.

THOMAS TURNER.

## ANSWERS of JOHN HORSFALL, Leeds.

No. 34.

*John Horsfall.*

A. 1.—Leeds, in the county of York.

A. 2.—Dyeing and finishing worsted stuffs.

A. 3.—The whole have been erected since the beginning of 1824, and the principal part during that year.

A. 4.—Steam-power.

A. 5.—Such of the rooms as require it are ventilated by openings in the roof, covered with frames of open trellis-work, or bent revolving cylinders open at the ends.

A. 6.—All the rooms may likewise be ventilated by the windows at the pleasure of the workmen.

(APP.—C. 1.)

F 4

A. 7.

Yorkshire.

John Horsfall.

A. 7.—Such modes of ventilation as admit of discretionary regulation are under the control of the workmen at large.

A. 8.—All the dangerous parts are effectually fenced off.

A. 9.—There are no specific arrangements, but all the workmen have ample conveniences for the purposes mentioned in the question.

A. 10.—I have no particular regulation; the foreman of the department where boys are employed engages such as from size and strength appear likely for the work, without reference to age.

A. 11.—Not necessarily; the youngest boy I have now in my employment is upwards of fourteen years old.

A. 12.—No difference in this respect.

A. 13.—No.

A. 15.—I do not lodge or maintain any.

A. 17 & 18.—No difference is made on account of age; the regular stated time for work is from six o'clock in the morning to six in the evening, including two hours allowed for meals. In winter the time seldom averages more than ten hours, including meals; but no deduction from wages is made on this account. From spring to autumn the trade is usually more brisk, and the hours will average from fourteen to fifteen, including meals; for this extra time additional wages are paid.

A. 19.—During the last twelve months one particular department (the black dye-house) has been at work fourteen nights in addition to the day-work; these fourteen nights work extended over eight consecutive weeks, and engaged fifteen men and five boys, who had each sixpence per night allowed for drinkings; the same time for meals was allowed during the night as in the day.

A. 20.—Three hundred and ten days.

A. 21, 22, & 23.—These questions I cannot answer exactly, for the following reasons; first, the work, excepting some portion of the piece-work, is almost independent of the machinery, and from the nature of the employments in the day-work there are scarcely two persons who work the same number of hours in the same day; second, when the works are going less than the regular time, which is generally the case in winter, and sometimes at other periods of the year, no account is kept of the workmen's time, because no deduction is made from the stated wages for a regular week's work. The following particulars may be considered as very close approximations, being obtained by taking the average day's work during three months of winter at eight hours (exclusive of meals), and for the rest of the year, dividing the actual ascertained time of the whole of the workmen by the number of persons employed; that is, whole number of hours in the last twelve months, three thousand four hundred and seven; average duration of actual work per day, eleven hours. The greatest average number of hours worked in any one week occurred in the week ending 8th June, and was short of fourteen hours per day.

A. 24.—Twenty hours, which occurred in the cases mentioned in answer to query 19 with respect to five boys, three of whom were thirteen and two fourteen years of age.

A. 25.—The times are usually during the latter part of spring, through summer and autumn; there are frequently, however, intervals of several weeks when the regular hours are not exceeded; for causes see answer below.

A. 26.—I consider an excess beyond the regular hours unavoidable, because every dyer has his particular customers (the merchants), whom of course he is anxious to keep, which he would not be able to do if he could not do their work at times when trade was most brisk; in that case the merchants would send their work elsewhere both at those times and others.

A. 27.—The time of working, as stated in answers to previous questions, is very variable, but the average time has been much the same for some years, excepting for the last twelve months, in which it has exceeded any former year to a small extent.

A. 28.—I have always found the cost of turning out a certain quantity of work to be greater in proportion as less was done in the same time, and for very obvious reasons.

A. 29.—As I can only speak with respect to my own business, I would observe, that I know of no law, regulation, or mutual understanding which at all affects the hours of working, excepting as to those for a regular day's work; and I have always found the workpeople anxious to make as much over-time as they could be allowed. As to inducement for not changing hands when working extra hours, it is sufficiently obvious that hands could not be engaged for two or three hours per day, neither would it otherwise be convenient.

A. 30.—I am not subjected to any limitation; but, as stated in answer to query 28, the cost of production must necessarily be increased in proportion as the quantity in the same time is diminished, because there are many expences, such as interest of capital sunk in land, building, machinery, utensils, &c. &c., likewise taxes, cost and keep of horses, wages of clerks, foremen, and others, which must be incurred whether little business is done or much; as to the precise proportion, I cannot form any probable estimate.

A. 31.—I know of no objection where night-work is customary; but where, as with me, the extra hours seldom average more than three or four, it would not be easy to procure fresh sets of hands, neither would it from the nature of the processes be convenient.

A. 32.—Has not been tried for reasons given in answer to query 31.

A. 33.—No.

A 34.

A. 34.—If I were accustomed to employ workmen during the nights, I should certainly have two sets of hands, because it is impossible in my business that so much work should be done in the same time, or done so well, by hands who have been at work during the day also: for these reasons, and because there are additional expences incurred in night work I always avoid it where I possibly can. These reasons do not apply where the hours of actual work extend to only twelve or thirteen.

A. 36.—It would occasionally produce some inconvenience, but on the whole would not have much effect, as my night work last year exceeded all the night work previously.

A. 37.—If this refers to adults, and I were prohibited from employing them more than twelve hours (including meals) in any one day, it would oblige me to increase my work, at least one third, to do the same amount of business, for reasons stated in answer to query 26., otherwise the whole quantity of work done during the year would be reduced in proportion. In either case it is obvious that the profits must be considerably reduced, if not annihilated. Besides, the principal processes being necessarily continuous for from one to four hours, many hands would in that case be unemployed for some time before the fixed hour for leaving off work; and I should, therefore, either have to pay them for doing nothing, or deduct from their wages. So far as the boys are concerned, any restrictions would oblige me on occasions where over-time was required, to put men to work, which can be quite as well performed by the boys.

A. 38.—Except the dry-house, press-shop, and singeing-house, the usual temperature is that of the atmosphere. In the last two, the extra heat arises from the necessary use of hot iron plates, and varies greatly in the same day; the dry-house is the only room where the air is purposely heated.

A. 39.—The dry-house, which is the only room in which the temperature of the air is of any importance, is heated from 90° to 130°.

A. 40.—Five.

A. 41.—The department called the black dye-house has been at work fourteen nights during the last twelve months, as stated in answer to query 19.

A. 42.—Five.

A. 43.—Ten.

A. 44.—Five.

A. 45.—From six in the evening to six in the morning, with allowance of two hours for meals.

A. 46.—No.

A. 50.—By gas made from rosin.

A. 51.—The same as mentioned in answer to query 5.

A. 52.—I have not tried it to an extent that would justify me in giving an opinion on the subject.

A. 53.—All are allowed the same, viz. half an hour for breakfast, the same for the afternoon meal, and one hour for dinner.

A. 54.—Most of the work people get dinner away from the works; at other meals, probably one half remain on the premises.

A. 55.—The workmen are at entire liberty in this respect; and in remaining on the premises at meal times, or going away, consult their own convenience.

A. 57.—If not attentive and obedient, they are discharged from employment.

A. 58.—No.

A. 66.—In the dyeing department, which includes the principal part of the workmen who are paid by time, the greater number of hands have not been brought up to any regular business; some have left other employments for various reasons, and several are pensioners, who have been in the army, &c. Very few in this department have been brought up to the business, except those who were intended for foremen. In the other departments (preparing and finishing), which are almost entirely piece work, the workmen are usually brought up to the employment, and commence at fourteen years old and upwards.

A. 67.—I have no means of forming an opinion on this point, as in all similar works the workmen are frequently changing situations, especially those who have not piece work; it may, however, be mentioned, that no person in my employment was fatally attacked with the cholera, when it was so prevalent in Leeds last year (1832).

A. 68.—No.

A. 69.—It is not subject to any present act.

A. 78.—Not being subject myself to any legislative enactments as to the hours of labour, &c., I cannot offer any suggestions on the subject of this question.

JOHN HORSFALL.

Yorkshire.

John Horsfall.

#### ANSWERS of JOHN HOWARD, Leeds.

No. 35.  
John Howard.

A. 1.—Leeds, Yorkshire.

A. 2.—Woollen and cotton yarn.

A. 3.—The old mill, first employed by me for woollen and cotton in 1820. The new mill, built in 1823.

(APP.—C. 1.)

G

A. 4.

Yorkshire.

John Howard.

- A. 4.—Steam. Twenty-four horse.
- A. 5.—The windows are, during the summer time, open on each side the mills; in winter they are closed by the men working in each room agreeable to their own inclination.
- A. 6.—Windows.
- A. 7.—By the workmen.
- A. 8.—All fenced off.
- A. 9.—There are piggins, buckets, and dishes, with soap for washing themselves; and a great many change their clothing on entering and leaving the mills.
- A. 10.—Nine years. They either come from other mills, or have not been employed in any thing previous.
- A. 11.—Children at twelve years of age are seldom employed as piecers; at that age they are generally employed as fillers, &c.
- A. 12.—No alterations in my works.
- A. 13.—None.
- A. 15.—They live with their parents and relations.
- A. 17.—Eleven hours.
- A. 18.—Eleven hours, except a few of the scribbler fillers, which are required to work an hour extra at times. They are in general fourteen years of age and upwards.
- A. 19.—The engine runs from six to seven; and should there have been any lost time, it never exceeds eight o'clock.
- A. 20.—The engine has wrought nearly its regular time.
- A. 21.—Nearly regular time with part of the machinery, and not half time with the others. None extra time.
- A. 22.—I have no different periods for carrying on different parts of my works.
- A. 23.—Eleven hours.
- A. 24.—Eleven hours, with the exception as before, which very seldom occurs.
- A. 25.—A misfortune in the machinery.
- A. 26.—I have no excess beyond the regular hours, except as above; and not then, except I am run short in yarn.
- A. 27.—The regular hours have been more than I have had occasion for, for some years back: part of my machinery is in general standing.
- A. 28.—If the hours of working are reduced it must necessarily cause an advance in the price of the article produced, as rent, taxes, capital, and expence of overlookers and foremen, &c. &c. would be equally the same for ten as they would for eleven hours.
- A. 29.—To realize as much of the manufactured article as possible from the same quantity of machinery, having only the same rent, taxes, and capital employed as for a shorter number of hours. No manufacturer can work night and day with one set of hands.
- A. 31.—There can be no objection to having relays of hands when work is required; when the machinery works night and day there must be two sets of hands. The children do not require to be relieved within the ordinary time, and they would rather work two or three hours over-time, being paid for it, than two or three hours under-time, being deducted for it.
- A. 32.—I have not employment for the regular time, nor have I had this some years back.
- A. 34.—I can see no reason for working two sets of hands; nor can I see any interest in it, when one will do.
- A. 35.—I have no night-work.
- A. 37.—I am of opinion that eleven hours are not too long. I have had thirty years' experience, and I have never known any bad effects arise from that cause. If the ten hours' bill was to pass, in case of an urgent demand, I think it might become matter of consideration whether two sets of workmen would not in some instances be the consequence; in which case the labourer would be the loser.
- A. 38.—They are heated by steam, so as to make the rooms comfortable for the work-people.
- A. 39.—No heat is required further than what will make the work-people comfortable during the winter months.
- A. 48.—I have no particular works requiring any specific time.
- A. 50.—In the winter season by gas nights and mornings.
- A. 53.—Three quarters for dinner, and half an hour for breakfast and drinking.
- A. 54.—A very few bring their meals with them; all are at liberty to go if they choose.
- A. 56.—None.
- A. 57.—A little correction with a small strap, sometimes by the slubber, is unavoidable with the piecers.
- A. 61.—I cannot help knowing, but the children are sometimes chastised as above.
- A. 62.—I have forbidden the workmen different times from ill-using the children, and would discharge any man if I found him making a practice of so doing.
- A. 63.—I have not had occasion to give any written orders on this subject.
- A. 64.—I have had no complaints from the magistrates, nor has there been any made against my overlookers.
- A. 65.—They occupy houses where they answer their private ends the best, there is no control over them.
- A. 66.—I do consider those brought up in mills more ready and active than those who come in at a more advanced age.

A. 67.

A. 67.—I can see very little difference in the health of my mill-people; they are in general very healthy.

A. 68.—I have no process that is in any particular detrimental or injurious to health.

A. 69.—It is not.

A. 78.—I do not think any alteration could be made, nor do I think it is necessary, if the masters allow only a small strap, which I believe is pretty general. In case of abuse the magistrate is appealed to, which in my opinion is a sufficient guarantee.

JOHN HOWARD.

Yorkshire.

John Howard.

#### ANSWERS of Messrs. MACLEA and MARCH, Leeds.

No. 36.

Messrs. Maclea & March.

A. 1.—The township of Holbeck, in the parish of Leeds.

A. 2.—Iron and brass foundries, and manufacturers of flax and tow machinery, &c.

A. 3.—Built in 1825, and the fitting-up shop enlarged in 1831.

A. 4.—Six horse power steam-engine.

A. 5 & 6.—The foundries are ventilated by large wooden ventilators fixed upon the roof; the other buildings are ventilated by opening the windows. Generally each man has the control of the window he works at.

A. 8.—All the dangerous parts are boxed off, such as the first-motion wheels and upright shaft.

A. 9.—No; some of the hands keep a spare pair of shoes in the works, to change on entering.

A. 10.—We do not profess to take any under fourteen years; sometimes they have only just left school, but generally they have been employed at some of the spinning-mills.

A. 13.—We do.

A. 14.—We never take apprentices from the parishes, but from their parents or friends with whom they live.

A. 15.—We pay them a weekly wage, beginning at five shillings per week, and advancing one shilling per week each successive year.

A. 17.—We work ten hours for a day, and for any extra hours the workmen are paid in proportion.

A. 18.—We do not often employ persons under twenty-one years of age for any extra hours beyond seven o'clock in the evening.

A. 19.—Fourteen hours.

A. 20.—Three hundred and fifteen days five hours at ten hours per day.

A. 21.—Three thousand one hundred and fifty-five hours.

A. 22.—All carried on simultaneously.

A. 23.—Sixty hours and a half per week, or rather more than ten hours per day.

A. 27.—At present we are working sixty-five hours a week, or six days and a half, and have not often worked longer hours.

A. 28.—The cost of producing a given quantity of work would be enhanced by shortening the hours, as many expences, such as taxes, &c. would remain the same, and the ratio of interest upon the fixed capital to the amount of work done would be increased.

A. 29.—There can be no inducement, as very long hours, we think, cannot benefit the masters, inasmuch as the hands grow tired, and do not perform their work with alacrity.

A. 30.—We have never been limited in the hours of working.

A. 36.—We only work at night when something breaks down in the mill gearing, so as to get it to work again if possible the next day, to prevent the hands from losing a day's employment.

A. 37.—Our hours of working are very satisfactory both to workmen and masters.

A. 38.—The temperature of the atmosphere, except in cold weather, when we warm the rooms by steam to a genial heat.

A. 39 & 40.—None of our manufactures require any extra heat, excepting melting the metals, and only a few hands are engaged in it.

A. 41.—Twice.

A. 42.—We do not employ children at night-work.

A. 53.—We begin at six o'clock in the morning, allow half an hour for breakfast, an hour for dinner, and half an hour for drinking or tea; or in the whole, two hours a day.

A. 54.—All our work-people go at the same time, and have the option of getting them in the works, or of going home; some stay, but the majority go home.

A. 57.—No other means than talking to them.

A. 60 & 61.—Only in one instance, when two boys were found fighting in the workshop.

A. 62.—We have.

A. 63.—The very few young people we employ render unnecessary any other than verbal instructions.

A. 64.—No.

A. 65.—No; they all select houses for themselves.

A. 66.—Our workmen are brought up to the business by serving a regular apprenticeship.

A. 67.—We are not able to ascertain any alteration in the general health.

A. 68.—The change of employment to different jobs is frequent.

CHARLES G. MACLEA.  
JOSH. OGDIN MARCH.

Yorkshire.

No. 37.

John Sayner.

## ANSWERS of JOHN SAYNER, Hunslet, near Leeds.

A. 1.—Hunslet, in the parish of Leeds, in the county of York, on the banks of the river Aire.

A. 2.—Dyeing, scribbling, and fulling mill; cloth dressing, ware grinding, calenderer and cylinderer.

A. 3.—Building erected about the year 1792. Used as a dye-house since that time to the present. The scribbling, fulling, and dressing for about the last twenty years.

A. 4.—A steam-engine of twenty horse power. No water power.

A. 5.—None.

A. 6.—Opening of windows.

A. 7.—By the foreman of each separate room.

A. 8.—All.

A. 9.—None.

A. 10.—Eight years. None but one girl at cotton.

A. 11. Yes; because they can do the work equally well, and can be obtained at lower wages: this applies to slubbing.

A. 12.—Cannot speak to this with any correctness.

A. 13.—None.

A. 17.—From six o'clock in the morning until seven o'clock in the evening; two hours each day allowed for meals and recreation, making eleven hours each day. Saturday only nine hours.

A. 18.—The same as above; no difference as to age or otherwise.

A. 19. & 24.—Eleven hours.

A. 25.—None.

A. 27. & 33.—No.

A. 50.—By oil lamps.

A. 51.—None but the opening of windows.

A. 53.—Half an hour for breakfast, one hour for dinner, and half an hour for drinkings. All.

A. 54.—All that choose do; we have no restriction.

A. 56.—Cannot speak to the effects.

A. 57.—Nothing but kind means, which if not obeyed, are discharged.

A. 65.—Partly. Domestic cleanliness, &c. regulated by their parents.

A. 69.—No.

A. 77.—None.

JOHN SAYNER.

## ANSWERS of HENRY SKELTON, of the Firm of Hirst, Bramley, and Co., Leeds.

No. 38.

Henry Skelton.

A. 1.—In the township and parish of Leeds, and county of York.

A. 2.—Manufacture and finishing of woollen cloths.

A. 3.—The principal part in 1819; additional weaving and spinning rooms in 1824, 1825.

A. 4.—By steam.

A. 5.—No; except common ventilators in two rooms.

A. 6.—Yes.

A. 7.—At the discretion of the persons employed.

A. 8.—Yes; all.

A. 9.—As regards the specific arrangements here mentioned, it is left entirely to their own discretion so far as relates to change of clothes, nor is there any general provision for washing. We have introduced several plans, rules, &c. for benefiting our work-people in a moral and religious point of view.

A. 10.—Our wish is to employ none under ten years of age; but if they are more than nine, we permit the men to engage them in the slubbing department.

A. 11.—The principal, almost the only department in which children under twelve years of age are employed, is in the slubbing department. Their work is most easily performed by those whose height is the usual one of children about or under twelve years of age.

A. 12.—In a woollen manufactory there has been little or no variation. In our particular case, we employ a less number of children under twelve years of age than formerly.

A. 13.—We have one in the dressing department; three in the drawing department.

A. 14, 15, & 16.—We have no parish apprentices.

A. 17 & 18.—Our regular time is eleven hours per day, except Saturdays, which is nine hours and a half. There are extra hours worked in some departments, as circumstances require. Those in which children are employed, are the scribbling, spinning, and dressing departments. In the scribbling and spinning departments, the extra hours occur as stated in first part of answer 25, except the scribblers' fullers, ten in number, from the ages of about fourteen to twenty-three, who sometimes work during meal times, but their work is not

not considered fatiguing nor injurious. In the dressing department, which is divided into two branches, the raising and the shearing, part of the hands in the former often work about three extra hours per day (one day they worked four hours extra). The remainder form two sets, who work as stated in answer 33. In the shearing department, the extra hours are often two per day. As we stated in latter part of answer 25., it is in this dressing department the extra hours most frequently occur; for reason given, see latter part of answer 26. The remainder of the men weavers, dyers, &c. sometimes work over-hours, but we cannot state correctly.

A. 19.—The milling or fulling, which employs nine men, forming two sets, has been kept on twenty-four hours. There is only one in attendance at meal times, who can get his meals either at the usual time or afterwards.

A. 20 & 21.—Our manufactory is worked regularly (subject to variations as to extra hours). The usual holydays are, half a day at Easter, Whitsuntide, two Leeds fairs, the whole of Good-Friday and Christmas day. Last year we had a partial stoppage in part of the works, in consequence of some necessary repairs. We also stopped one day for the national fast, and one day for the local thanksgiving.

A. 22.—Our works are carried on in all parts at the same time.

A. 23.—Impossible to tell.

A. 24.—One day three men and six children, about sixteen or seventeen years old, worked from six o'clock in the morning till half past nine at night; and one day, one man and one boy worked fifteen hours and a quarter.

A. 25.—It is our general practice in the manufacturing department (where the greatest number of children are employed), that if there be any lost time, to make it optional either to have it deducted from the weekly wage, or to make it up by working one hour extra per day: this seldom occurs. But in the dressing department, where our children are, with five exceptions, above thirteen years old, they also occasionally work extra hours on account of a pressure of business.

A. 26.—In the manufacturing department we have endeavoured to avoid it, and preferred getting any additional work, that we require, done at other mills to working our own hands extra hours, and this we are in the regular habit of doing. But in the dressing department, where the children are generally above thirteen years old, we cannot pursue the same course without being subject to loss and inconvenience, on account of not getting work done to our satisfaction at other places.

A. 27.—Yes.

A. 28.—We believe it is.

A. 29.—As regards extra hours worked by adults, we consider masters and men are at liberty to please themselves, particularly if doing so enables a manufacturer to complete an order in a given time, which is often of immense consequence. This is a great inducement. But where children are necessary, especially under thirteen years of age, extra hours, particularly protracted ones, we disapprove of.

A. 30.—A manufacturer, who, by the aid of a certain quantity of machinery executes a certain quantity of work, finds that, with the same machinery, he can execute a larger quantity by working longer hours; he is induced then to do this by the consequent saving of interest on a further outlay of capital to increase his works, and necessarily by a saving of taxes, insurance, overlookers' wages, &c. But another may not have it in his power to make this outlay of capital, therefore he must decline some of his orders or work extra hours. (It may be alleged, that he can get his extra work done by some other house; but the question is, can he get it done so as to give satisfaction to his friends who gave the order?) Should a curtailment of the hours of labour lead to an advance of wages, by masters being compelled to give twelve or eleven hours wage for ten hours' work, it is needless to state that this must materially increase the loss, and thus have a tendency to produce results inimical eventually to the interests of the men, in consequence of masters being partially or totally obliged to give up their trade for fear of total ruin.

A. 31.—Where are the children to come from? they would be frequently changing, which is not a pleasant thing. We think it might lead to a system of deception, and still greater oppression: children, who worked a certain number of hours in one mill, might be sent to another in a different part of the town. It would necessarily lessen the amount of a child's earnings, except where the two sets worked day and night. For if two sets worked, say twelve hours, they each would only receive wages after the rate of six hours per day; and if each set worked longer than that, it must increase the labour of the men very greatly who might have to work these long hours.

A. 32.—We have had two sets in the dressing department, but it was only when we have been working all night, in consequence of a pressure of business for a short time. We have not adopted it as a system, nor shall we probably ever do it again. We, therefore, do not feel competent to give an opinion on it from actual observations.

A. 33.—In two departments, the milling and part of the raising, comprising together twenty-two men and one boy aged fifteen, the day-set work from six o'clock in the morning until six o'clock at night, then the night-set come on, who work until six o'clock at morning; each set having one hour allowed for meals. They make eleven hours per day, and nine hours and a half on Saturday.

A. 34.—As regards the milling, see answers 46 and 47. In the case of the raising, we conceive it to be our interest so to do, as stated in the latter part of answer 26 (no children are employed at night in either of these departments, except one boy aged fifteen).

(APP.—C. 1.)

G 3

A. 35.

Yorkshire.

Henry Skelton.

Yorkshire.

Henry Skelton.

A. 35.—They change. One set work one week at night; the following week by day.

A. 36.—We consider we need only refer to our answer, latter part of No. 26, as regards our particular case, and in general to answers 29 and 30.

A. 37.—We presume no alteration in the law is contemplated as regards the labour of adults. The proposed reduction in the hours of labour, therefore, applies only to children, and such adults as depend on the labour of children. We beg leave to observe, before considering the effects in a commercial point of view, that we are of opinion, that for children of thirteen years old and under, any time exceeding ten hours per day actual labour is too long; and that, for children above this age, extra hours beyond that time ought to be avoided as much as possible, whether we regard their welfare in a physical, moral, or religious point of view. When we consider the effects merely in a commercial or pecuniary point of view, there can be no doubt but loss and inconvenience must ensue; whatever tends to increase the expence of producing an article has a tendency to lessen the consumption, but at present the supply (or what would be supplied) is, generally speaking, greater than the demand; consequently, to make sales, a manufacturer is obliged to sell for the least amount of profit possible, often to a loss. In such a state of things, whatever further expence he may incur (in interest on capital and machinery, taxes, insurance, &c.), by erecting new works to carry on the same amount of business at reduced hours, as he did formerly when working extra hours, must be deducted from his present small amount of profit, which may produce ruinous consequences to himself (in not enabling him to meet his engagements), and therefore to his work-people, for his interests and theirs are, truly speaking, inseparably united. But the inconvenience may also be great. Perhaps a manufacturer gets an order which is required in a given time; if he cannot engage to do it in such time, it is given to another; or should he undertake it and not be able to finish it, he may have it returned on his hands. Now, if he were allowed to work a few hours extra, he might have had it, and thus benefited himself and his work-people. As regards the amount of wage to be paid for working short-time, it cannot be expected that the same wage can be afforded as for working the longer hours; therefore, this would tend to diminish the comforts of a workman's family. Such are some of the effects in a pecuniary point of view; but, as we before said, we think they do not justify working children longer hours than we mentioned above.

A. 38.—We do not require more than the usual temperature of the atmosphere, except as regards the dry-houses.

A. 39.—About 100° in the dry-houses.

A. 40.—Two men are employed about eight hours per day in one dry-house, and two men and four boys about two hours per day in another.

A. 41.—The milling and part of the raising regularly.

A. 42, 43, 44, & 45.—One night, one man and five children, and one man and two children worked all night. We did not require it; it was even unknown to us, it was done to forward some particular order. There was also, we understand, one night during which three men and five boys worked in the shearing department.

A. 46 & 47.—None. It is of great advantage to continue the milling or fulling, inso-much as there is a saving of expence in soap, and the work is more speedily and better done.

A. 48.—Men.

A. 49.—We do not allege them to be indispensable.

A. 50.—By gas.

A. 51.—None; except as stated in answers 5, 6, 7.

A. 52.—Generally injurious; at any rate they have that tendency.

A. 53.—Our regular hours are, half an hour each for breakfast and drinking, and an hour for dinner.

A. 54 & 55.—All may leave at meal times, except when the scribbler fullers work, as mentioned in answers 17, 18. (the nature of their work allows them to get their meals easily), and except one man who attends the milling department, as in No. 19.

A. 64 & 65.—No.

A. 66.—We have not sufficient data on which we can give a correct opinion, but, generally speaking, the skill and character combined may be estimated from the length of time any man, woman, or child has been in our employ.

A. 67.—We have no specific accounts to refer to, so as to give a complete or correct answer. We think there has not been any material variation, and should say that the health of our work-people, especially that of the children, has been good. We have had no instance of any infectious or other dangerous disease being generally prevalent among them. During the time the town was afflicted with cholera, we took all the precautions in our power, and had great reason for thankfulness to God that so few of our people were attacked (only two men and one boy died).

A. 68.—No; for we have not any that we consider particularly injurious.

A. 69, 70, 71, & 72.—We are not aware that we are liable to come under the provisions of any act at present in force.

A. 77.—We have no reason to believe that they are, and we should hope they have no reason to believe so.

A. 78.—We consider it too extensive a subject to engage in, and as regards the treatment of children, we refer to our rules, &c.

HENRY SKELTON.

## ANSWERS of T. W. STANSFIELD, Burley Mills, Leeds.

Yorkshire.

No. 39.

*T. W. Stansfield.*

A. 1.—Headingley-cum-Burley, in the parish of Leeds and West Riding of the county of York.

A. 2.—Weaving of worsted stuffs by power looms, and the different operations connected therewith.

A. 3.—Burley Mill was erected about thirty-two years ago; raised two stories higher about ten years ago; and was first employed for its present purpose about eleven years ago.

A. 4.—Steam and water. The steam-engine is one of thirty-five horse power; the water power, when at the best, is about the same: frequently, from either too much or little water, it is of no use at all, when, as well as in the intermediate state, the engines supplies the deficiency; but when at about the best, the water-wheel is capable of working the whole mill.

A. 5.—There are twenty-six windows in each room, pretty near the ceiling, which are left open at meal times; and partially, so as to cause ventilation, during the working hours. The mill is forty-five yards long by fourteen; and, lying north and south in a valley running east and west, a current of air is almost continually passing through the mill, and in the hottest days in summer the temperature is generally only from two to four degrees hotter in the mill than out of doors in the shade. There is a necessary in each room, in a trunk built outside the main wall, and leading perpendicularly into the stream which turns the wheel. These necessities are well cleaned and whitewashed every morning.

A. 7.—There are four under overlookers in each room, who attend to their respective windows, and who are responsible to one upper overlooker in each room, and he to the head overlooker and to myself. When at home, I pay particular attention to this point.

A. 8.—The dangerous part of the machinery has always been fenced off. During the eleven years which I have worked the mill, there has not been a single serious accident on the premises which has been attended with loss of limb or injury whence the individuals have been prevented from resuming their usual employment.

A. 9.—There are no arrangements in the mill for enabling the work-people to change their clothes, but the greater part live in the immediate neighbourhood; and the bonnets, shawls, &c. of the women and children are taken off in the mill, and have time to become dry before they are again wanted. The nature of the employment allows the children to be cleanly, and they appear to take a pride in being so. There is a vapour bath in the engine-house for the use of the work-people; and in the warm season there is a convenient bathing place in the river, hard by, for the boys, who are accompanied by the person who has the general superintendence of the health of the work-people. About an acre of land is appropriated as a playground for the children, besides an extensive yard. In case of illness, the work-people are admitted as patients at the General Infirmary, which, as well as several other similar institutions, I contribute, with this view, to the support of. There is a cook-house with a woman to attend to the ovens, where those who come from a distance have their meals prepared and take them.

A. 10.—The rule of the mill is to employ no children under ten years of age, but occasionally one is taken under peculiar circumstances. There are now eight under that age out of about five hundred. They have very rarely had other employments before their present, except weaving by hand.

A. 11.—Unless children under twelve years old were employed at Burley Mills, its capability could not be made available. There is almost always a deficiency of hands. The appearance of the children will probably show that it has not been injurious to their health.

A. 12.—Greater; but much less exertion of strength is requisite at a power-loom than at a hand-loom.

A. 13.—No; except occasionally, and then seldom but in the mechanical departments.

A. 14.—There is only one parish apprentice at present, put out from Leeds. He is an under overlooker, and his time is nearly out.

A. 15.—The one just mentioned is an orphan. He is the only one whom I lodge and maintain.

A. 16.—He lives with and is under the superintendence of the head overlooker.

A. 17.—Eleven hours and three quarters; except in some departments, principally mechanical, where the employment is more laborious, and the time only eleven hours.

A. 18.—The same. The difference is not regulated by the age.

A. 19.—Eleven hours and three quarters; where children have been employed, occasionally some of the men and a very few of the young women have been employed in auxiliary departments to keep up machinery and supply it with work; and once, when the whole of the machinery was stopped for a few days, by the breaking of a main wheel, and then there were nearly always mechanics at work night and day.

A. 20.—Three hundred and ten days.

A. 21.—Three thousand four hundred and seventy-four hours and a quarter.

A. 22.—The mill opens regularly at six o'clock in the morning, and closes at seven in the evening, except in March and September, when, to save gas light, it opens before six and closes before seven. The weavers, which comprise very nearly all the children, have one hour and a quarter for their meals. The mechanics have two hours for theirs.

A. 23.—The average of weaving hours, of the days in which there has been any weaving going on in the last year, was eleven hours and one fifth; but the general weaving time was

(APP.—C. 1.)

G 4

eleven

Yorkshire.

T. W. Stansfield.

eleven hours and three quarters per day. The difference arises from holydays and stoppages under one day each.

A. 24.—Eleven hours and three quarters.

A. 25.—Before last year we had, in conformity with the usual practice in the neighbourhood, worked occasionally half an hour later, to make up for holydays. Since then we have reduced the number of holydays, and no longer worked up the lost time.

A. 26.—I consider working above twelve hours as avoidable. It is too long a time for young children, who, it is probable, would not, in the long run, turn out more work than in the shorter time.

A. 28.—I have probably produced more in twelve hours and a quarter than in eleven hours and three quarters, but not in so great a proportion.

A. 29.—In similar manufactories to that at Burley, which is probably the largest of the kind, and of the longest standing, twelve hours have, I believe, seldom been exceeded. The inducement with other manufacturers, who do not employ so large a proportion of children, is probably the making their machinery as productive as possible, or supplying extraordinary demand for particular goods, or making up lost time.

A. 30.—Should the working time in the weaving department be reduced from eleven hours and three quarters to eleven hours, the production would not, I think, be reduced in quite so great a ratio.

A. 31.—If I were compelled to have two sets of children, I could not carry on the mill. As it is, although my work, in point of cleanliness and good wages, is as desirable as any in the neighbourhood, I have generally some looms unoccupied for want of weavers. The plan of two sets might suit woollen and other manufactories, where but a small proportion of children is required. The masters of some of these are, I understand, wishing to have two sets, to work seven hours each; by which they would be enabled to work their mills longer hours than ever: but my mill, which has been the main support of the neighbourhood during a long period of distress, would, in such case, be of necessity discontinued. The woollen manufacturers would benefit in another way by this plan at my expense. My best weavers, young women, having only about half wages, would, as burlers, get full wages, as they might be employed out of factories, without limit as to time.

A. 32 & 33.—The relay system has not been tried, except part of last year, for night-work, and once, some years ago, for the same for a very short period.

A. 34, 35, & 36.—We were compelled last year to work part of our looms in the night, owing to a sudden increase in the demand for goods of double width, and the difficulty of selling the former kinds; but my orders were, not to allow any to work at night under the age of sixteen. There were seventy night weavers, and the working time ten hours. It was discontinued at the end of the year, and I am making new machinery, which will render the resumption of night-work unnecessary. These broad-weavers were in two sets of seventy each, and took the night-work and day-work alternately, week and week about.

A. 37.—If the working hours were reduced considerably, it would occasion a good deal of spare time to children, who, it is to be feared, would employ it improperly. Their wages too must necessarily be reduced.

A. 38.—No particular temperature is requisite for the manufacturing process. The mill is warmed throughout by steam pipes, and all that is necessary is to attend to the health and comfort of the work-people.

A. 41.—From 3d of September to 31st of December.

A. 42.—Seventy weavers, young men and young women.

A. 43.—Ten.

A. 44.—Seventy young men and young women.

A. 45.—From seven to twelve and from one to six.

A. 46.—No.

A. 50.—By gas.

A. 51.—The same as in the daytime.

A. 52.—When young persons are not accustomed to it, and do not take the necessary repose in the daytime, it produces languor and occasional illness; but this, by proper regulation and care, might in general be prevented.

A. 53.—Weavers one quarter of an hour for breakfast, three quarters of an hour for dinner, and one quarter of an hour for tea. Mechanics half an hour for breakfast, one hour for dinner, and half an hour for tea.

A. 54.—All.

A. 57.—Reduction of their wages by forfeits; giving them better or worse work; pecuniary rewards weekly for industry; and occasional rewards of moral and religious tracts for general good behaviour; and, above all, the fear of being dismissed from the mill.

A. 58, 59, 60, 61, & 62.—Corporal punishment is not permitted in the mill; the overlookers occasionally, but very rarely, use a broken strap if at hand at the moment, and apply it to the backs of the children, but only in the way it would be at a school. My orders are, not to use it so as to leave a mark; rather to dismiss the child at once. I make a point of hearing myself all complaint of ill usage of this kind, from children and their parents: they are exceedingly rare; but if well grounded, the offender is either severely reprimanded, or, in case of not making satisfactory compensation to the aggrieved party, dismissed.

A. 63.—No instructions respecting corporal punishment are in writing, but they have been too long acted upon not to be generally known.

A. 64.

A. 64.—Not one.

A. 65.—About seventy cottages belonging to the concern are occupied by the work-people and their children who are employed in it; they have each a garden. There is a committee of some of the most respectable of the cottagers, whose duty it is to see from time to time that the whole are well ventilated, and kept whitewashed, and in every respect clean. A library is attached to the mill. An evening school has been only temporarily discontinued; and an infant school, conducted by the wife of the individual who has always had, and not without some knowledge, a kind of general superintendence over the health and welfare of the children, and whom I have always considered as one of the most valuable appendages to the concern. There are Sunday schools of different denominations in the neighbourhood, and at one or other of which nearly all the children attend.

A. 66.—Those who have been employed from childhood excel, as well in point of general character as of skill, those who have been taken into employment at later periods, and more particularly those who have been brought from a district where hand weaving in the domestic system has prevailed. The following families, as well as many others, might be referred to:—Longbottoms, Taylors, Turners, Hodgsons, Normantons, Murgatroyd, Robertshaw, Roberts, Ackroyd, Halls, Sitrons, Holgate.

A. 67.—No sensible alteration; the most decided improvement which ever took place with respect to health in this mill, I have understood, under former occupiers, was when gas light was substituted for oil lamps.

A. 68.—A few weavers, who cannot bear standing, have been sent to the dry-house, where they can sit.

A. 73.—There are none, that I am aware of, subject to the provisions of the present act.

A. 79.—In conclusion, I beg to call the attention of the commissioners to two facts which they will probably think afford a fair criterion whereby to judge of the state of Burley Mill with respect to health and morals. I have taken (for which see the List No. 19.) out of the whole of the lists the thirty-nine individuals who have from youth or childhood worked the longest, none of them less than ten years, at the mill. Out of these I have rejected four, who have had long and severe illnesses not attributable to their employment. The average loss of employment from illness sustained by the remaining thirty-five for the whole period is four days and a quarter a year; the average for the last year, including the influenza now prevailing, is only one day and three quarters; from which the inference may be drawn that the last year the mill has been more healthy than on an average of preceding ones. I would respectfully suggest to the Commissioners that they should see and question these thirty-nine individuals. The other fact is, that out of above two hundred and fifty young women of sixteen years of age and upwards, a great proportion of whom have been brought up in the mill almost from childhood, there is not one of bad character, and that if one should be found she would not be tolerated by the rest.

THOMAS WOLRICH STANSFELD.

Yorkshire.

T. W. Stansfeld.

ANSWERS of JOHN WILKINSON, for the Firm of Wilkinson and Co., Flax Spinners, Leeds.

No. 40.

John Wilkinson.

A. 1.—Township of Leeds, in the county of York.

A. 2.—Flax spinning.

A. 3.—The mill built in 1825, and first used for its present purpose in April, 1830. An addition to the mill took place in 1832.

A. 4.—Steam power.

A. 5.—In the carding room we have a ventilator, being what is termed a blowing-machine, which causes a strong current of air to pass out of the room and takes the dust with it; and in all the rooms we have slides in the windows, to be opened when required.

A. 6.—The ventilator in the card room does not depend on the opening of windows, being driven by the engine.

A. 7.—By the overlooker generally, and sometimes by the persons employed.

A. 8.—Yes.

A. 9.—Our arrangements have always allowed them to wash and clean themselves, where necessary, previous to leaving their work.

A. 10.—We have not generally taken any children under ten years of age, except in a very few instances, where they happen to be nearly ten, and have older brothers or sisters in our employment.

A. 11.—The nature of some parts of our work requires children to learn before they are twelve, but we do not think it necessary to have any under ten.

A. 12.—We do not think that the recent alterations have made much difference in this respect; but, if any, more are required under twelve.

A. 13.—No.

A. 14.—None.

A. 15.—We have only two or three orphans, who are under the care of their relations.

A. 16.—Their relations act the part of parents.

A. 17 & 18.—Eleven hours thirty-six minutes.

A. 19.—Longest time thirteen hours twenty-five minutes, for two several days only.

(APP.—C. 1.)

H

A. 20.

Yorkshire.

John Wilkinson.

A. 20.—Total days, two hundred and eighty-seven.

A. 21.—Total hours two thousand eight hundred and seventy-four and twenty minutes.

A. 22.—The parts are so connected that one cannot work without the other.

A. 23.—Average day's work, ten hours one minute.

A. 24.—Thirteen hours twenty-five minutes, as per question 19.

A. 25.—Having had to stop our work a few days, to connect the newly built part with the old mill, we paid our work-people their wages in advance, and worked up the time by an hour per day afterwards.

A. 26.—Not altogether; for, owing to the liability to accidents and repairs, some time will necessarily be lost in the course of the year, as will be seen by the above average of day's work, which is only ten hours one minute, whereas we profess to run eleven hours and a half; and it is generally the wish of the persons employed to work up such lost time.

A. 27.—No.

A. 29.—Having never worked protracted hours, nor through the night, we cannot give an opinion.

A. 30.—We find an increased cost on our manufactures by the diminution of the hours of labour, by many of the expenses of our establishment being the same, viz. rent, taxes, interest of capital sunk in machinery, and all other fixed capital, we believe to the extent of about one and a half per cent. for every hour less in the day's work, though we only pay wages according to the time we work.

A. 31.—Men must necessarily work along with the children, and could not work the time of two sets, nor would be sufficiently remunerated by the time of one. In addition to this, with us there is absolutely a scarcity of hands for one set of the children.

A. 32.—We have never tried, for the above reason.

A. 33.—Never.

A. 36.—It has never been much practised in our trade, and no evil could arise by a prohibition of it.

A. 37.—For the reasons given in answer to No. 30., we think it would cause a reduction in wages proportionate to the diminished time.

A. 38.—About 70° in summer and 60° in winter. It is not so well to have our temperature under 60°, nor do we require it above 70°.

A. 39.—65°.

A. 40.—About 70°.

A. 41.—None.

A. 46.—No.

A. 47.—There is no maximum.

A. 50.—By gas lights in the mornings and evenings during winter.

A. 51.—The windows are generally open.

A. 52.—We never work all night.

A. 53.—We allow to all the persons in the mill fifteen minutes at breakfast, forty minutes at dinner, and ten minutes at tea, and to some men two hours per day.

A. 54.—Very few go out of the yard except to dinner.

A. 55.—There is no restriction on their going out of the mill; and if they stop in it, it is to suit their own convenience.

A. 56.—An extension of time would be necessary, as many live at a distance from the mill; but if more were given, a great proportion would still stop on the premises.

A. 57.—Small fines, or we discharge them if refractory.

A. 58.—Seldom or never, and not by our authority.

A. 59.—We have no authority over the parents.

A. 60.—Seldom, with our knowledge.

A. 61.—Never.

A. 62.—Yes.

A. 63.—We have always given general verbal orders to forbid corporal punishments.

A. 64.—Never.

A. 65.—None of our work-people live in our houses.

A. 66.—We always find those persons the most skilful who have begun at an early age, and in some processes it is almost impossible to instruct them thoroughly if they begin so late as fourteen years of age.

|                       |                  |           |                                                                                |
|-----------------------|------------------|-----------|--------------------------------------------------------------------------------|
| Elizabeth Wainwright, | 15 years of age, | wages 6s. | } These had been some<br>time in other employ-<br>ment before coming to<br>us. |
| Hannah Wainwright,    | 13               | Do. 6s.   |                                                                                |
| Ann Foster,           | 16               | Do. 6s.   |                                                                                |
| Ann Gilpin,           | 14               | Do. 6s.   |                                                                                |

A. 67.—We do not think there is much alteration in our trade, but we should say certainly not deteriorated.

A. 68.—When we find any process of our work to disagree with the health of the persons employed, we exchange them to some other, or discharge them.

A. 69.—No.

JOHN WILKINSON.

ANSWERS of P. WILLANS, for the Firm of O. Willans and Son, Leeds.

Yorkshire.

No. 41.

P. Willans.

- A. 1.—Holbeck, in the parish of Leeds, in the county of York.
- A. 2.—Altogether woollen.
- A. 3.—At different times. The first material part about forty years since.
- A. 4.—All steam power. About seventy horse.
- A. 5.—No.
- A. 6.—Windows and doors.
- A. 7.—At the discretion of all.
- A. 8.—Yes.
- A. 9.—No.
- A. 10.—We have three children between seven and a half and eight lately set on; the rest are eight years and upwards. Some have been employed in flax mills.
- A. 11.—There is no absolute necessity to employ children at an earlier age than twelve years. But in one branch of our manufactory children called pieceners are generally preferred at eight or ten years, because they do the work quite as well, and at a less price than those at twelve years.
- A. 12.—We think not.
- A. 13.—Yes.
- A. 14.—We have not any parish apprentice.
- A. 15.—We have orphans in our employ, but they are lodged and maintained by their guardians.
- A. 16.—Regular overlookers.
- A. 17.—Our regular day is eleven hours.
- A. 18.—Eleven hours.
- A. 19.—The fulling stocks were sometimes required to work all night, in which case we employed two sets of hands.
- A. 20.—Three hundred and seven days.
- A. 21.—Two thousand nine hundred and ninety hours.
- A. 22.—None to specify. Our moving power being steam, we have no occasion to vary.
- A. 23.—Average, nine hours and three quarters per day.
- A. 24.—Fourteen hours; and this only for eighteen scribbler feeders, whose ages are from eleven to fifteen years.
- A. 25.—During a part of the meal-times the eighteen scribbler feeders are required to work.
- A. 26.—We think it might be avoided by an increase of machinery.
- A. 27 & 28.—Yes.
- A. 29.—When shipping or other particular orders have to be executed, manufacturers often find it absolutely necessary to work extra hours to enable them to finish such orders within the given time; and as these instances only occur occasionally, it would be extremely inconvenient and difficult to be compelled to employ a change of hands for such extra work.
- A. 30.—By limiting the hours of working to ten per day, we consider that the cost of production would be increased at least ten per cent.
- A. 31.—No objection.
- A. 32.—No. We have had no occasion to try it.
- A. 33.—In the milling department we have. The time is equally divided, one set for night and another for day work.
- A. 34.—In our manufactory we do not require it, except in fulling.
- A. 35.—They change periodically.
- A. 36.—The only bad effects would be in the milling department, particularly when making double-milled cloths, when a suspension of the fulling process during the night would be injurious.
- A. 37.—We think the probable effects would be, to enhance the price of goods, and lower the rate of wages; because more machinery would be required by a reduction in the working hours; and as most of the woollen mills are now wrought to the full extent of their power, new steam-engines would be required by such addition of machinery.
- A. 38.—General house temperature, except in the dry-houses.
- A. 39.—The usual temperature of our dry-houses is about 88° or 90°. The heat is always regulated by the workmen.
- A. 40.—Four men in the cloth and wool dry-houses, and two men in teasel dry-house, with four boys at fourteen to fifteen years old.
- A. 41.—Forty-one nights in the fulling department.
- A. 42, 43, 44, & 45.—None.
- A. 46.—None, except the fulling department.
- A. 47.—Uncertain.
- A. 48.—Adult males, twenty-one years of age and upwards.
- A. 50.—By oil and candles.
- A. 51.—The same as by day. See No. 6.
- A. 52.—We know of no bad effects.
- A. 53.—Two hours. Breakfast, half an hour; dinner, one hour; afternoon, half an hour.
- A. 54.—All except scribbler feeders, see No. 25., and one man and three boys at the steaming mills occasionally.

Yorkshire.

P. Willans.

- A. 55.—If any others remain, it is for their own convenience.  
 A. 56.—It would be no inconvenience to us.  
 A. 57.—We threaten them with a discharge.  
 A. 58.—No punishments whatever are allowed.  
 A. 60 & 61.—No.  
 A. 62.—Yes.  
 A. 63.—We have no written instructions, but it is well understood throughout our manufactory that corporal punishments are not allowed.  
 A. 64.—None.  
 A. 65.—None, except overlookers.  
 A. 66.—We consider those who have been employed in our works from infancy to maturity quite as skilful as those who have been taken into our service at later periods. We refer to Francis Spence in No. 13. list, and Michael Spence in No. 15., who have been in our employ since the year 1823 (and two years previously were employed in a flax mill). These young men are now overlookers.  
 A. 67.—We think that the health of our work-people during the last ten years has been uniformly good.  
 A. 68.—No.  
 A. 69.—We are not aware of any act applying to woollen mills.  
 A. 70 & 71.—No.  
 A. 72.—None.  
 A. 73, 74, 75, & 76.—Don't know.  
 A. 77.—We have not.  
 A. 78.—No suggestion to make.  
 A. 79.—No.

P. WILLANS.

No. 42.

William Ackroyd.

## ANSWERS of WILLIAM ACKROYD, Otley.

- A. 1.—Town of Otley, county of York.  
 A. 2.—Wool sorting, combing, and worsted spinning.  
 A. 3.—Part of the works erected about fifty years ago for a cotton mill; enlarged forty years since, and again seven years ago. A new erection three years ago. The works have been used for their present purpose since 1810.  
 A. 4.—Water, occasionally scarce in a drougthy season, and in a very wet one the works are frequently stopped by floods; the work-people have always cheerfully made up the loss of time. Power about thirty horse.  
 A. 5 & 6.—The ventilation depends on the opening of windows. In the new mill, where there are sixty-two persons, 150 superficial feet of ventilation. In the old mill, seventy-six people, 212 feet. The size of the new mill is 1605 cube yards, the room for each person being  $25\frac{5}{8}$  cube yards. The size of the old mill is 2601 cube yards, the room for each person being  $34\frac{1}{6}$  cube yards.  
 A. 7.—By the overlooker, or any of the work-people.  
 A. 8.—All the dangerous parts are fenced off.  
 A. 9.—There are seats in the windows, and nails in the walls to hang up hats, cloaks, and aprons in the old works, which have been used for this purpose since 1817, the time of the present occupier. In the erection of the new building seats were made in the windows, and boxes under them, which have always been used for the same purpose. There is a wash-house at the end of the old mill, erected in 1817.  
 A. 10.—Of late years none have been admitted under eight years and a half, and very few have been previously employed at any other trade.  
 A. 11.—Yes; they are more active for spinning.  
 A. 12 & 13.—No.  
 A. 14.—Having no apprentices, questions 14, 15, 16. require no answers.  
 A. 17.—Twelve hours and a half.  
 A. 18.—They are all employed twelve hours and a half.  
 A. 19.—Thirteen hours and a half (when a stoppage had occurred) for five days.  
 A. 20.—Three hundred and eight.  
 A. 21.—Three thousand eight hundred and six.  
 A. 22.—All begin and stop at the same time, except those who work by the piece.  
 A. 23.—Twelve hours and a half for five days in the week, and twelve for Saturdays.  
 A. 24.—Thirteen hours and a half for five days, when a stoppage had occurred.  
 A. 26.—Unavoidable, owing to the irregularity of water power, the mills being sometimes obliged to stand a whole day for floods; and without provision be made in the Factory Bill for the making up of lost time, the masters will be obliged to abate the wages of the work-people, or ruin themselves.  
 A. 27.—Yes.  
 A. 28.—No.  
 A. 29.—In working extra hours to oblige their customers; but I know from experience that the plan is unprofitable. I do not know of any mills that work the same hands through the night.

A. 30.

A. 30.—Never having worked less than the usual time, viz. twelve hours and a half per day, I cannot answer this from experience; but should have no objection to Sir J. C. Hobhouse's bill being extended to all mills.

A. 31.—No objection.

A. 32.—It has never been tried, as the work-people have always been anxious to continue at their work, in order to obtain extra wages.

A. 33.—Yes; during the erection of the new building I worked one room in the old mill day and night. The hands employed in the day came at six in the morning, and worked till seven in the evening; when another set came, and worked till six in the morning.

A. 34.—I only worked during the night for five months, I did not think it my interest to continue night-work.

A. 35.—No night-work.

A. 36.—No bad effect, except some accident should occur to stop one of the mills: under such circumstances, it would be highly desirable to work the other day and night, or the work-people would be thrown out of employment, in one of the mills; but in no other case do I approve of children being employed during the night.

A. 37.—My opinion is, that if the hours of work were less than sixty-nine per week, it would have the effect of reducing wages.

A. 38.—About sixty.

A. 39.—No heat is required in the mills except for the warmth and comfort of the hands.

A. 41.—Never.

A. 49.—No reason.

A. 50.—In winter mornings and evenings by mould candles.

A. 51.—None.

A. 53.—Half an hour for dinner.

A. 54.—When the weather is fine, the children play in a field adjoining the mills.

A. 55.—In wet weather they do not; for the convenience of the work-people.

A. 56.—In cold wet weather, as most of the work-people live at a distance from the mills, they would be liable to take cold.

A. 57.—Dismissal.

A. 58.—Slightly, when the parents prefer it to dismissal.

A. 59.—By overlookers.

A. 60.—Yes.

A. 62.—Severe punishment has been forbidden.

A. 63.—When very disobedient, orders have been given to send them home.

A. 64.—Never since I commenced business.

A. 65.—No; they do not live in the houses of their employer, but they have the advantages of Sabbath schools, and also those of a week evening school, which I have established for their benefit and gratuitous instruction.

A. 66.—I am not aware of any particular difference.

A. 67.—The general health has always been good.

A. 68, 69, 70, & 71.—No.

A. 72.—None to state.

A. 73.—Messrs. Greenwood's and Whitaker's mills are all we have in the neighbourhood under the present act, and I believe they strictly conform to its regulations.

A. 74.—Not that I am aware of.

A. 78.—No.

A. 79.—I disapprove of Lord Ashley's Bill, but I should be glad to see Sir J. Hobhouse's passed for mills of all descriptions.

WILLIAM ACKROYD.

Yorkshire.

*William Ackroyd.*

#### ANSWERS of JOHN B. SIDGWICK, Skipton.

No. 43.

*John B. Sidgwick.*

A. 1.—In the township of Skipton, in the parish of Skipton, in the West Riding of the county of York.

A. 2.—In spinning of weft and twist on throstles, and in power-loom weaving. All cotton.

A. 3.—The part turned by water was built about 1782, and that part turned by steam in 1825; and the buildings have always been used for spinning, &c. of cotton wool.

A. 4.—Both steam and water are employed. The water power varies from thirty horses' power to fifteen horses' power.

A. 5.—The ventilations is by fans, so placed as to draw the air from the top of the rooms.

A. 6.—The ventilation continues as long as the mill works.

A. 7.—The ventilation is not under the control of any of the workmen.

A. 8.—All dangerous parts are fenced off.

A. 9.—We have no arrangements of this kind, but allow the hands to change their clothes or not, as they please.

A. 10.—We employ none under nine years old, and generally they have not been employed in any other way.

(APP.—C. 1.)

H 3

A. 12.

Yorkshire.

*John B. Sidgwick.*

A. 12.—A greater number of children are now employed in proportion to the adults than used to be, both from machinery being better and profits being less.

A. 13.—We do not employ any apprentices.

A. 17 & 18.—Twelve hours for five days, and eight hours and a half on Saturdays.

A. 19.—Twelve hours and a half.

A. 20.—Two hundred and ninety-three days.

A. 21.—Three thousand three hundred and seventy hours.

A. 22.—They all run the same time.

A. 23.—Eleven hours and five minutes.

A. 24.—Twelve hours and a half.

A. 25.—From damage to millwright work, and the whole time thus worked during the year will not exceed twenty half hours.

A. 26.—It is not avoidable, as with the greatest care accidents may occur.

A. 27.—Not since the acts of parliament were passed, and before that time we had not the mills, except for one fortnight, when the dams were carried away by a flood, at which time the hands in the part turned by water worked at night in the part turned by steam.

A. 29.—I never knew or heard of any mill being worked through the night by the same hands who had worked it during the day.

A. 30.—The cost will be increased more than in proportion to the diminution of the time.

A. 31.—I believe they always are relieved.

A. 33.—We never did it but for one fortnight. See No. 27.

A. 34.—We do not work at night.

A. 36.—None.

A. 37.—It will cause a reduction of wages at least, if not more than, in proportion to the loss of time. When the time was shortened from six days to five and three quarters, it caused a reduction to that amount or more.

A. 38.—The weaving shop will vary from 65° to 85°, and is the hottest when the gas lights are lighted in a winter's evening. The other rooms will vary from 65° to 80°; but it is our interest to keep them at about 70° to 75°, which we endeavour to do by ventilation.

A. 39.—About 100° or 120° for dressing.

A. 40.—Three men and one boy.

A. 41.—Never.

A. 53.—We do not begin to work the mill till seven o'clock in the morning, allowing half an hour from half past six to seven for breakfast, though we allow the hands to have their breakfasts in the mill when they choose, and in fact boil them for as many as wish it. From twelve to one we allow for dinner.

A. 54.—All who choose go home, except a few who are above the age limited by act of parliament, and are generally overlookers.

A. 55.—Those who remain in the mill remain for their own convenience, except as above. See No. 53.

A. 56.—Very little to us, except the inconvenience of stopping the mill, at which there is always some little loss of time, and a great inconvenience to the hands, who would have to begin work so much earlier, many of whom live so far distant from the mill that they could not go and return and breakfast in half an hour.

A. 57.—Every means we can think of.

A. 58.—Yes.

A. 59.—By overlookers.

A. 60 & 61.—Yes.

A. 62.—No; nor do I intend to do so, as I think it would be to the injury of the child to be allowed to do wrong and not be punished; and to the injury of the parent, as he must then be dismissed from the mill.

A. 63.—None, except that if a child requires frequent correction, that he should be turned away rather than cause any uneasy feeling between their parents and the overlookers.

A. 64.—No proceedings or complaints before magistrates have ever been made.

A. 65.—Only five families live in cottages belonging to me in the town of Skipton.

A. 66.—There is very little difference; but if any, it is in favour of the younger child.

A. 67.—It has improved. The cause, better ventilation and lighter work.

A. 68.—There are no injurious processes.

A. 69.—It is.

A. 70.—We have never been informed against.

A. 73.—They do not, and no steps have been taken to make them conform.

A. 77.—They will naturally wish to be on as good terms as may be with their employers.

A. 78.—None. But that proper persons should be appointed to see that the acts of parliament are carried into effect.

JOHN B. SIDGWICK.

ANSWERS of JOHN HOLDSWORTH, of the Firm of John Holdsworth and Co., Skircoat.

Yorkshire.

No. 44.

*John Holdsworth.*

- A. 1.—Township of Skircoat, parish of Halifax, and county of York, West Riding.  
 A. 2.—Worsted spinning.  
 A. 3.—Erected at one time; first employed in August, 1831; rooms eleven to twelve feet high.  
 A. 4.—Steam only. Forty horse engine.  
 A. 5.—Four squares open in the top of every window. When opened, their effects must be such as is caused by the admission of fresh air into any room.  
 A. 6.—On the opening of windows only.  
 A. 7.—By the overlooker in each room, or any person working in the same, that feel a necessity for fresh air.  
 A. 8.—They are fenced off.  
 A. 9.—The mill is always kept clean; there is no necessity for changing their dress. When rainy or cold, they can come in a cloak or shawl, or top coat, which they hang up, or put aside, to suit themselves, till they are again wanted.  
 A. 10.—Seven years old is the youngest; only one at that age. They cannot have been employed at any other trades, unless card-setting, of which we are not certain.  
 A. 11.—They are useful under twelve. We could dispense with them. We are sometimes obliged to employ them to accommodate their parents, having other hands at the place.  
 A. 12.—We have not any machinery that can make any difference.  
 A. 13 & 14.—None.  
 A. 15.—We lodge none nor maintain any.  
 A. 16.—The overlooker, principally during work only, for we do not lodge any.  
 A. 17.—Thirteen hours; except Saturday, that day only ten hours.  
 A. 18.—Thirteen hours; we make no difference, except Saturday only ten hours.  
 A. 19.—Thirteen hours and a quarter, except Saturday, as above.  
 A. 20.—Cannot answer this, not having particularly noted down every holyday and stoppage which have been paid for as if worked.  
 A. 22.—All at one time.  
 A. 23.—Twelve hours and a half.  
 A. 24.—Never more than what is stated above.  
 A. 25.—A quarter of an hour each day, Saturday excepted, to make up for a stoppage.  
 A. 26.—Avoidable.  
 A. 27.—No.  
 A. 28.—Not applicable to us.  
 A. 29.—We have not any night-work; that is, through the night.  
 A. 30.—We are under no limitation.  
 A. 31.—No extra hours required by us except under a stoppage; and then only a quarter of an hour, five days out of every six days.  
 A. 32.—We have not any extra hours to require such a change.  
 A. 33.—Day set only.  
 A. 37.—If the hours of labour were shortened, the wages would, no doubt, in many branches of our business, be reduced also; but there would be a still greater inconvenience to some of our piece hands, such as reelers, warpers, wool-sorters, and combers: in consequence of the mill doing less, there would be less for those hands to do also.  
 A. 38.—The temperature depends much upon the state of the weather. Such a temperature as makes the children comfortably warm whilst at work, is more than sufficient for our work even in a severe frost: from 60° to 65° would be warm enough at all times. During the hot days of May, 8th and 9th, the thermometer ranged from 72° to 75° with open windows.  
 A. 39.—Hot frame is the warmest, but being in a cold room the warmth does not exceed any other: during the hot days of May, 8th and 9th, the thermometer stood at 72° when placed about a yard from it.  
 A. 40.—One only.  
 A. 49.—We have no such work.  
 A. 50.—By coal gas in the winter mornings and evenings.  
 A. 51.—Same as by day, before specified.  
 A. 52.—Having no night-work, we are not judges.  
 A. 53.—No stopping for meals, excepting three quarters of an hour for dinner.  
 A. 54.—We have no control over them; they either go home to dine, or bring their dinners, as suit the parties best.  
 A. 55.—They either stop or not, to suit their own conveniency.  
 A. 56.—Those who bring their dinners, chiefly get them in the mill. They are not bound to do so. It would make no difference whether they dined in the mill or out.  
 A. 57.—If not obedient, they are discharged.  
 A. 58.—None allowed.  
 A. 60 & 61.—No.  
 A. 62.—Have had no occasion.  
 A. 63.—No instructions given.

Yorkshire.

*John Holdsworth.*

- A. 64.—No complaints have been made.  
 A. 65.—Overlookers only. No control exercised.  
 A. 66.—We have observed no difference.  
 A. 67.—We have not observed any difference either way.  
 A. 68.—We have no occasion.  
 A. 69.—Is not.

JOHN HOLDSWORTH.

No. 45.

*J. & W. Priestly.*

ANSWERS of JOHN and WALKER PRIESTLY, Sowerby, Halifax.

- A. 1.—Sowerby, in the parish of Halifax, county of York.  
 A. 2.—Woollen manufactory, carding, spinning, weaving, and also fulling and finishing of woollens.  
 A. 3.—In 1782 and 1814; but a fulling mill existed previous to 1782 on the present site.  
 A. 4.—Water only; probably thirty or forty horses' power; the supply irregular, occasioned by droughts in summer, so that sometimes the wheels can run only seven or eight hours out of twenty-four.  
 A. 5 & 6.—Sufficiently ventilated by large windows and doors.  
 A. 7.—At the discretion of the workmen, who suit their own comfort.  
 A. 8.—The parts considered dangerous are rendered as safe as possible.  
 A. 9.—Those children who work in the card rooms are provided with canvass frocks to cover their dress, at our expense; and have access to a place where they can wash themselves; but their parents should attend to that when they get home. They have means of drying their clothes if they get wet, and the factory has been whitewashed annually for many years past.  
 A. 10.—At about eight years of age; and mostly employed under the superintendence of their parents, seldom having been employed at any other trade.  
 A. 11.—Yes; for most purposes in our manufactory where children are required; those under twelve years are more expert, nor could sufficient wages be afforded for children of the age of twelve years and upwards.  
 A. 12 & 13.—No.
